Full Title: Spatial Analysis and the Environment. The statistical methods behind analyzing spatial datasets are covered in detail, with a strong emphasis on environmental sciences and human populations. This course complements courses in remote sensing, geographic information systems, and geographic principles and is designed to quantitatively evaluate the relationships between objects and their surroundings. (S)
Prerequisite(s): GEOL 305 or ESCI 305 or GEOL 340 or ENST 340 or GEOL 302 or GEOG 202 or GEOG 305
Restriction(s):
Can enroll if College is Engineering and Computer Science or Education, Health, and Human Services or Business or Arts, Sciences, and Letters

ESCI 490 Topics in Environmental Sci 1 to 3 Credit Hours
A course in special topics of current interest in environmental science. Topics and course format may vary; see current Schedule of Classes for availability. (OC)

ESCI 490A Topics in Environmental Sci 3 Credit Hours
Topic: Conservation Biology. A scientific study of the concept of conservation biology, including its ecological, economic, ethical, and cultural components. Lectures, assigned readings, and class discussions will explore the major threats to biodiversity, the complexities of conservation issues, and the tools, strategies, and techniques conservation biologists use to implement policies for the protection and preservation of ecosystems from local to global and short to long-term scales.
Prerequisite(s): BIOL 130
Restriction(s):
Can enroll if Class is Junior or Senior

ESCI 490B Sustainable Cities 3 Credit Hours
Topic Title: Sustainable Cities. In 2007, for the first time in human history, the world became an urban one with more than 50 percent of its population living in cities. The unseen influx of people into cities socio-ecological challenges of increasing scale. This course is a discussion of sustainability and resilience efforts (solution-focused) in cities around the world and follows a multi-disciplinary approach by integrating urban-focused concepts from history, sociology, ecology, geography, and architecture and planning. Topics include, for example, air pollution and climate change, sprawl and smart growth, alternative energy, public transportation, waste management, water management, green architecture, environmental and social (in)justice, cultural diversity, and forestry and farming. (OC)

ESCI 492 Capstone Research Experience 3 Credit Hours
An approved research experience with a full-time Environmental Science faculty member. Research results are reported in a seminar presentation and in a poster, thesis, or a manuscript submitted for publication. (F, W, S)
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore or Junior

ESCI 497 Seminar in Environmental Sci. 1 Credit Hour
Readings, discussion, and presentation of research in selected areas of study. One hour seminar. Permission of instructor. (OC).

ESCI 498 Indep Study in Environ Sci 1 to 3 Credit Hours
Library research and independent study performed under the guidance of a faculty member. Four to twelve hours readings. Permission of instructor. (F,W,S).

ESCI 499 Lab Research in Environ Sci 1 to 3 Credit Hours
Directed laboratory or field research performed under the guidance of a faculty member. Four to twelve hours laboratory. Permission of instructor. (F,W,S).

Environmental Studies (ENST)

ENST 201 Cultural Geography 3 Credit Hours
Overview of the major components of culture such as language, religion, agriculture, settlement patterns, and related landscape features in a spatial context. Emphasis on how various cultures perceive and interact with the environment. (F).

ENST 203 Weather and Climate 3 Credit Hours
The controls and conditions of Earth's weather and climate including atmospheric circulation, precipitation processes, severe weather, climatic regions, and climatic change. (F).

ENST 204 Landforms 3 Credit Hours
Processes and agents that shape the landscapes and landforms of the Earth's surface. The discussion of landforms is divided into two parts: (1) constructive processes and their spatial distribution and (2) gradational processes and their spatial distribution. (W).

ENST 300 Urban Geography 3 Credit Hours
The geography of human settlement and urbanization. Particular emphasis is placed on human transformation of the physical environment, and resource use throughout history from ancient civilizations to modern megalopolises. Universal urban challenges such as sprawl, pollution, congestion, crime, poverty, etc., are addressed. (W).

ENST 301 Concepts of Environmentalism 3 Credit Hours
Designed to identify the underlying concepts of any environmental issue. The course will demonstrate the interdisciplinary nature of environmental problems solving through current readings, classical monographs and films. Students will conduct a system analysis of a household and a local community. This course will not be open to students who take ENST 105. (W).

ENST 305 Env Instrumentation and Analys 3 Credit Hours
This course will survey the parameters which must be measured in order to properly assess the environment. Methods for the analysis of the biophysical as well as the social, psychological, and political environment will be studied. (W).
Prerequisite(s): ENST 301

ENST 310 Economic Geography 3 Credit Hours
Spatial aspects of the ways people make their living. Discussion of the spatial distribution of resources and wealth at various scales. Introduction of site selection and location analysis. (W).

ENST 312 Environmental Ethics 3 Credit Hours
The relationship of human beings to the non-human environment raises pressing moral and political issues. This course will use the theories and concepts of philosophical ethics to explore such questions as human obligations to non-human animals; the preservation of wilderness; balancing economic, aesthetic, and spiritual values; and the problems of pollution, urban sprawl, and ecological justice. Prerequisite or permission of instructor. (YR).
Prerequisite(s): PHIL 100 or PHIL 233 or PHIL 240* or CRJ 240 or ENST 105 or ENST 301

ENST 320 Global Climate Change 3 Credit Hours
This course explores concepts and current thinking on global climate change and environmental impacts. It covers the history of Earth's climate, causes of climate change and current research attempting to forecast change. The biotic, economic, and social implications of climate change are discussed. (AY)
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
ENST 325  Environmental Politics  3 Credit Hours
This course will examine the process of policy making on environmental and energy problems at the global level, at the national level, and at the local level. (AY).

ENST 326  Anth of Health and Environment  3 Credit Hours
Cultural conflicts over pollution, disease etiology, development and natural resources often originate and are played out in local ecosystems. Anthropologists are increasingly becoming involved as researchers, developers, and activists in these cultural strifes. This course reviews the work of environmental and medical anthropologists as well as other critical scholars who unravel the values, meanings and ideologies associated with ecological issues in given localities. Drawing on theoretical advances in critical medical anthropology, environmental anthropology and applied anthropology, the course seeks to improve the knowledge and abilities of student anthropologists in their environmental health work.

ENST 327  Michigan Geography  3 Credit Hours
A geographic study of the landforms, waterways, natural resources, landmarks and economic activities that contribute to the physical and cultural landscapes of Michigan. Population, industry, agriculture, recreation and tourism will all be considered. (W,S,VR)

ENST 330  Land Use Planning and Mgmt  4 Credit Hours
Environmental aspects of land use planning, park planning, and site planning. Consideration of soils, groundwater, topography, and sensitive natural features and their role in determining land-use suitability. Examination of the mechanics and effectiveness of the planning process. Lecture and recitation. (AY).
Prerequisite(s): ESCI 275 or (BIOL 130 and GEOL 118)

ENST 334  Science and Environmental Journalism  3 Credit Hours
This course introduces the practice and theory of science and environmental journalism. Students report and write short science and environmental articles across a variety of media. They also examine the history, ethics and politics of environmental and science journalism and isolate a relevant issue as the focus of a research project, which will later generate a longer science/environment feature story. After instructor critique, students revise all work and submit a final ePortfolio. (W, YR).

ENST 340  Remote Sensing  3 Credit Hours
This course explores the acquisition, processing, and visualization of remotely derived data, with a particular emphasis on local and environmental applications. ENST 340 covers concepts and foundations of aerial and orbital remote sensing, visual interpretation, reflectance and emission spectroscopy, active and passive sensors, topography, and digital image processing software and techniques.
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

ENST 351  Environmental Economics  3 Credit Hours
This course examines the economic aspects of pollution problems. Topics covered include the economic theory of externalities, the theory of the commons, the theory of public goods, and the optimum use of depletable natural resources. The role of cost-benefit analysis as an intricate part of the decision-making process will also be thoroughly examined. (AY).
Prerequisite(s): ECON 202

ENST 352  Economic Theory  3 Credit Hours
An introduction to the economic systems of the world and their environmental impacts. This course provides an economic background for ENST 301 Environmental Systems. (AY).
Prerequisite(s): ECON 102 and ECON 201* or ECON 202* and ENST 301*
Restriction(s):
Can enroll if Class is Junior or Senior

ENST 353  Environmental Systems  3 Credit Hours
This course explores the systems and processes that contribute to the physical, chemical, and biological conditions of the environment and the likely implications for human survival. Insights derived from psychology, anthropology, and computer sciences are discussed. Major topics include overpopulation, overconsumption, “future shock,” cognitive limitations in our understanding of ecological-political systems, and the use of Skinnerian behavior control. (AY).
Prerequisite(s): PSYC 170 or PSYC 171

ENST 354  Environmental Internship  1 to 9 Credit Hours
A field assignment relating to the student’s environmental interests. The student will work in an off-campus government or private business for a prescribed number of hours each week to be arranged by the advisor and employer. May be repeated up to three times. Written permission of instructor.
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

ENST 355  Topics in Environmental Stds  1 to 9 Credit Hours
Examination of problems and issues in selected areas of environmental studies. Title listed in the Schedule of Classes will change according to the content. Course may be repeated for credit when specific topics differ.

ENST 356  Environmental Law  3 Credit Hours
A survey of common law theories and analysis of environmental statutes as well as the public trust doctrine and public lands. Student cannot receive credit for both ENST 350 and ENST/POL 445.
Restriction(s):
Can enroll if Class is Freshman or Sophomore
Can enroll if Level is Undergraduate

ENST 357  Environmental Internship  1 to 9 Credit Hours
A field assignment relating to the student’s environmental interests. The student will work in an off-campus government or private business for a prescribed number of hours each week to be arranged by the advisor and employer. May be repeated up to three times. Written permission of instructor.
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

ENST 358  Topics in Environmental Stds  1 to 9 Credit Hours
Examination of problems and issues in selected areas of environmental studies. Title listed in the Schedule of Classes will change according to the content. Course may be repeated for credit when specific topics differ.

ENST 359  Environmental Internship  1 to 9 Credit Hours
A field assignment relating to the student’s environmental interests. The student will work in an off-campus government or private business for a prescribed number of hours each week to be arranged by the advisor and employer. May be repeated up to three times. Written permission of instructor.
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

ENST 360  Topics in Environmental Stds  1 to 9 Credit Hours
Examination of problems and issues in selected areas of environmental studies. Title listed in the Schedule of Classes will change according to the content. Course may be repeated for credit when specific topics differ.

ENST 361  Topics in Environmental Stds  1 to 9 Credit Hours
Examination of problems and issues in selected areas of environmental studies. Title listed in the Schedule of Classes will change according to the content. Course may be repeated for credit when specific topics differ.

ENST 362  Topics in Environmental Stds  1 to 9 Credit Hours
Examination of problems and issues in selected areas of environmental studies. Title listed in the Schedule of Classes will change according to the content. Course may be repeated for credit when specific topics differ.

ENST 363  Topics in Environmental Stds  1 to 9 Credit Hours
Examination of problems and issues in selected areas of environmental studies. Title listed in the Schedule of Classes will change according to the content. Course may be repeated for credit when specific topics differ.

ENST 364  Topics in Environmental Stds  1 to 9 Credit Hours
Examination of problems and issues in selected areas of environmental studies. Title listed in the Schedule of Classes will change according to the content. Course may be repeated for credit when specific topics differ.

ENST 365  Environmental Psychology  3 Credit Hours
A survey of the contributions of the behavioral sciences to the understanding and solution of environmental problems that threaten our survival. Insights derived from psychology, anthropology, and computer sciences are discussed. Major topics include overpopulation, overconsumption, “future shock,” cognitive limitations in our understanding of ecological-political systems, and the use of Skinnerian behavior control. (AY).
Prerequisite(s): PSYC 170 or PSYC 171

ENST 385  Environmental Internship  1 to 9 Credit Hours
A field assignment relating to the student’s environmental interests. The student will work in an off-campus government or private business for a prescribed number of hours each week to be arranged by the advisor and employer. May be repeated up to three times. Written permission of instructor.
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

ENST 390  Topics in Environmental Stds  1 to 9 Credit Hours
Examination of problems and issues in selected areas of environmental studies. Title listed in the Schedule of Classes will change according to the content. Course may be repeated for credit when specific topics differ.

ENST 393  Topics in Environmental Stds  1 to 9 Credit Hours
Examination of problems and issues in selected areas of environmental studies. Title listed in the Schedule of Classes will change according to the content. Course may be repeated for credit when specific topics differ.

ENST 395  Topics in Environmental Stds  1 Credit Hour
Readings, discussions, and presentations which examine current environmental issues. One hour seminar. Written permission of instructor. (VR).

ENST 436  Human Ecology  3 Credit Hours
Deals with the forms and modes of change of social structure and culture, as affected by interactions with environment, population, and technology. Emphasis is given to territorially based social structures.

ENST 445  Environmental Law  3 Credit Hours
A survey of common law theories and analysis of environmental statutes from a functional perspective. The course also includes environmental law aspects of constitutional law, administrative law and criminal law, as well as the public trust doctrine and public lands. Student cannot receive credit for both ENST 350 and ENST/POL 445.
Restriction(s):
Can enroll if Class is Freshman or Sophomore
Can enroll if Level is Undergraduate

ENST 456  Ecological Economics  3 Credit Hours
A review of major theories and issues concerning the relationship between ecological and economic systems. Topics include these questions: What is the purpose of economics activity? How important is the preservation of the natural world compared to the production of economic goods? How do principles of social and intergenerational equity affect the use of resources and choice of goods to be produced? The course utilizes a transdisciplinary approach in the development of new models where conventional economics and ecology alone have been ineffective in addressing questions of sustainability and equity. (AY).
Prerequisite(s): ECON 201* or ECON 202* and ENST 301*
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

ENST 467  Food Politics and Policy  3 Credit Hours
How do politics affect our food at the global, national, and urban/local scale? This course examines close historical relationships between politics and food; the politics of conventional agriculture and food policy; and alternative agricultural movements and food systems, with a particular emphasis on urban food policy and urban food systems. (AY)
ENST 474  Environmental Education  2 to 3 Credit Hours
An analysis of environmental education at elementary and secondary levels, particularly stressing the environment as a teaching resource. Community resources as they relate to environmental education are also investigated. (AY).

ENST 483  Justice, Crime and Environment  3 Credit Hours
This service-learning course focuses on environmental justice and law. Environmental Justice is defined as the fair treatment of all people with respect to the development, implementation, and enforcement of environmental laws. In the classroom, students learn the theory, history, and enforcement of environmental laws and regulations in Detroit, Michigan, and nationwide. In a required civic engagement project, students apply their substantive knowledge to solve local environmental problems. Through classroom learning and projects with community organizations, students connect law and justice concerns to Detroit’s environmental problems.

Restriction(s): Can enroll if Class is Junior or Senior

ENST 485  Seminar in Environ Topics  2 Credit Hours
A seminar course taken during the student’s senior year to provide an opportunity for students with diverse environmental interests to interact and synthesize the information and skills acquired during their previous studies. (W).

ENST 486  Environmental Interpretation  2 to 3 Credit Hours
Course deals with the interpretation of the environment, its characteristics, and its presentation to school groups as well as to the general public. Intended to acquaint students with a variety of skills and techniques necessary for interpreting the environment to others. Extensive use is made of the UM-Dearborn Environmental Study Area. (AY).

ENST 487  Comparative Enviro Policy  3 Credit Hours
This course explores environmental policy as a result of political processes involving diverse participants and entailing movement through several stages—from defining an issue as an environmental problem to placing it on political agendas and then receiving a response at domestic governmental or international levels. This course analyzes environmental issues from a cross-cultural and comparative perspective, with a particular attention given to political institutions, political change, levels of development, political culture, public participation, and international commitments that shape the nature and dynamics of environmental politics and policy in different countries. Course POL 101 is recommended before taking this course.

Restriction(s): Cannot enroll if Class is Freshman or Sophomore

ENST 488  Env Lit & Reps of Nature  3 Credit Hours
An interdisciplinary study of the ways in which the relationship between "nature" and humankind has been represented in literature and other forms of cultural expression. Emphasis on American and British texts of the 19th centuries, but assigned materials may include readings from other cultures and historical periods.

Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 200 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 205 or ENGL 206 or ENGL 238)

ENST 490  Dir Research in Envir Studies  1 to 6 Credit Hours
This course will provide students with an opportunity to conduct an independent research investigation on topics in environmental studies under the direction of various faculty members. The results will be presented in a paper and public seminar. May be repeated.

ENST 491  Topics in Environmental St  3 Credit Hours
The examination of problems and issues in selected areas of environmental studies. The title listed in the Schedule of Classes will change according to the content. The course may be repeated for credit when the specific topic differs. Also offered for graduate credit. (OC).

ENST 491B  Topics in Environmental Studies  3 Credit Hours
TOPIC: Comparative Environmental Policy. This course explores environmental policy as a result of political processes involving diverse participants and entailing movement through several stages—from defining an issue as an environmental problem to placing it on political agendas and then receiving a response at domestic governmental or international levels. This course will analyze various levels at which environmental issues occur and are being addressed politically.

ENST 491C  Sustainable Cities  3 Credit Hours
In 2007, for the first time in human history, the world became an urban one with more than 50 percent of its population living in cities. The unseen influx of people into cities presents socio-ecological challenges of increasing scale. This course is a discussion of sustainability and resilience efforts (solutions-focused) in cities around the follows a multi-disciplinary approach by integrating urban-focused concepts from history, sociology, ecology, geography, and architecture and planning. Topic include, for example, air pollution and climate change, sprawl and smart growth, alternative energy, public transportation, waste management, water management, green architecture, environmental and social (in)justice, cultural diversity, and forestry and farming.

ENST 497  Seminar in Environmental Sci  1 Credit Hour
Readings, discussions and presentation of research in selected areas of study. One hour seminar.

ENST 498  Independent Study  1 to 3 Credit Hours
Readings or analytical assignments in accordance with the needs and interests of those enrolled and agreed upon by the student and instructor, which shall not duplicate a formal course offering. Permission of instructor.

ENST 499  Independent Study  1 to 3 Credit Hours
Readings or analytical assignments in accordance with the needs and interests of those enrolled and agreed upon by the student and instructor, which shall not duplicate a formal course offering. Permission of instructor.

Exploratory Studies (EXPS)

EXPS 218  Topics in Exploratory Studies  1 to 3 Credit Hours
An examination, at the freshman and sophomore level, in the selected areas of general study. The title as listed in the Schedule of Classes may change according to content. Course may be repeated for credit when specific topics differ.

EXPS 220  Science in the Elem School  2 to 3 Credit Hours
This course is designed for people intending to become elementary school teachers and who have had little or no previous experience in science. The course utilizes a laboratory approach to the study of the concepts, processes, and value of elementary and middle school science.
EXPS 250  Elem Ed Vis & Perf Arts  3 Credit Hours
This course will teach the elementary education student how to incorporate the various visual and performing arts into everyday elementary education curricula. The course will cover the fundamental and formal elements, the major periods, styles and philosophies, as well as the functions and processes of the visual and performing arts, and how to effectively employ those creative processes through collaboration, communication, cooperation and interaction in the elementary classroom.

Restriction(s):
Can enroll if Level is Undergraduate

EXPS 270  Inclusion & Cultural Immersion  1 Credit Hour
The seminar is modeled after New Detroit's Multicultural Leadership Series. The format offers a highly innovative approach to building competences to address (ethnic, racial, gender, and sexual orientation) topics relevant to the metropolitan Detroit region. Students attend off-campus sessions where they spend the day immersed in that culture. Each session offers an in-depth look at (but not limited to) the history, culture, and socioeconomic issues that are germane but also transcend regional barriers. Goals of the course: 1) Bridge communication gaps; promote better understanding and appreciation among all people. 2) Develop a greater understanding of the distinctive and subtle differences within our community. 3) Explore various tools to enhance communication and collaborations geared towards closing our regional divide.

Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

EXPS 282  History & Civics Elem Schools  3 Credit Hours
A survey of Michigan and United States history and government through Reconstruction. U.S. historical and political topics taught in grades K-8 are explored. Students also examine families, schools, and local communities.

Restriction(s):
Can enroll if Level is Undergraduate

EXPS 283  Geography & Econ Elem Schools  3 Credit Hours
A survey of the geography and economics taught in grades K-6. Particular attention will be paid to the geography of Michigan and the Great Lakes region. Market and other types of economies will be examined in the light of core economic principles. (F,W,S)

Restriction(s):
Can enroll if Level is Undergraduate

EXPS 298  Exp Writing-Comm Learn&Tch  3 Credit Hours
This course provides a theoretical foundation for using writing to communicate and learn for personal and professional purposes. Emphasis will be placed on learning effective instructional strategies including modeling, using mentor text (high-quality writing examples to emulate), conferencing with others about one's writing, and peer and self-assessing writing to support all writers' development. For the first half of the course, students will focus on developing their own writing skills using the writing process with three genres (narrative, informational/explanatory, and argumentative). Additional application of course knowledge will be demonstrated during the second half of the semester through an academic service learning project designed to tutor elementary writers. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent). (F).

Prerequisite(s):
Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1

EXPS 360  Effective Comm with Eng Lng Lrn  1 Credit Hour
This course provides students with a structured experience with an international student in the University of Michigan-Dearborn's English Language Proficiency (ELP) Program. Students are paired with an ELP student to meet on a weekly basis to provide opportunities to engage in conversation appropriate for academic settings. In this course students will have the opportunity to develop their understandings of the complexity of aural/oral language communication for English language learners.

Restriction(s):
Can enroll if Level is Undergraduate

EXPS 400  STEM2 Teaching and Learning  3 Credit Hours
The content of this course and the pedagogy employed will provide students with experiences in topics related to the integration of science, technology, engineering, health and mathematics (STEM2). Students will experience examples of STEM2 activities and will explore how STEM2 disciplines impact society. (YR)

Prerequisite(s):
EXPS 220 and MATH 385
Corequisite(s):
EXPS 401

Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate NCFD or Post-baccalaureate Cert only or Junior or Senior

EXPS 401  STEM2 Teach/Learn Internship  1 Credit Hour
This internship will provide students an opportunity to gain experience with K-8 students in an educational setting such as a K-8 classroom, an afterschool program, museums, etc. Requires a minimum of 45 clock hours spread over the semester at the placement site working with the students and the assigned instructor/supervisor on STEM2 activities. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent). (YR).

Prerequisite(s):
EXPS 220 and MATH 385 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1

Corequisite(s):
EXPS 400

Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate NCFD or Post-baccalaureate Cert only or Junior or Senior

Can enroll if College is Education, Health, and Human Services

EXPS 407  Inquiry-based Math and Science  3 Credit Hours
This inquiry-based laboratory course intends to support the learning of early childhood educators (birth to grade 2) in foundations of science and mathematics. The course integrates concepts and processes that arise in both disciplines, such as classification; units and measurements; shapes and structures and their properties; patterns; problem solving; representation; cause and effect; use of evidence (three credits). Required for Early Childhood Comprehensive Major. Elective for Elementary Education Certification Students. Elective for Children and Families Students. Students cannot receive credit for both EXPS 407 and 507. The required lab fee is to cover course materials.

Prerequisite(s):
EXPS 220 and MATH 385

Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Sophomore or Junior or Senior

Can enroll if College is Education, Health, and Human Services

Can enroll if Major is General Studies, Early Childhood
EXPS 410  Multicult in School and Soc  3 Credit Hours
Examines ways to address the needs of diverse student populations. Issues of race, ethnicity, class, gender, and language are explored. Historic and ongoing issues of equity, particularly in school settings, are considered. The focus is on providing an education of high quality to all students.
Restriction(s):
Cannot enroll if Class is Freshman

EXPS 415  Evolution for Teachers  1 to 3 Credit Hours
Course is designed to meet the needs of grade K-12 teachers teaching about evolution. The Michigan Department of Education requires students to be able explain how scientists construct and scientifically test theories concerning the origin of life and evolution of species.
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters

EXPS 420  Science Capstone  3 Credit Hours
A capstone course for pre-service elementary teachers with a laboratory component designed to assist students in achieving deep understanding of a broad scientific concept and a discussion component designed to introduce and provide practice in classroom research. Students will use the classroom research to prove misconceptions about the scientific concept explored in the laboratory. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): NSCI 231 and NSCI 232 and NSCI 233 and EDD 485* and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Can enroll if Level is Undergraduate

EXPS 443  Family/School/Community Collab  2 Credit Hours
Characteristics, roles, and functions of contemporary families are described. Various communication and training strategies designed to promote collaboration and teamwork within and between the school staff, the families, and community are described and practiced through discussion, problem-solving activities, and role playing. Family effectiveness assessment instruments and strategies are also described and practiced.
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Can enroll if Level is Undergraduate

EXPS 450  Issues in STEM2 and STEM2 Ed  3 Credit Hours
The content of this course will provide students with experiences in issues related to STEM2 education (STEM2: Science, Technology, Engineering, Mathematics and Medicine). Topics addressed will include definitions of STEM2, the value of STEM2 to society, the integration of STEM2 fields, developmentally appropriate STEM2 activities for K-12 students, misconceptions of STEM2, STEM2 careers and local issues related to STEM2 in Michigan. Students will experience examples of STEM2 activities and will explore how STEM2 disciplines impact society.
Prerequisite(s): (MATH 104 or MATH 105 or MATH 113 or MATH 114 or MATH 115 or MATH 116 or MATH 131) and (NSCI 101 or NSCI 120 or NSCI 121)
Restriction(s):
Can enroll if Level is Undergraduate

EXPS 460  Capstone: Tmds & Iss Literacy  3 Credit Hours
This course is for pre-service teachers in the elementary certification program majoring in reading. In this course students will explore topical issues relevant to the teaching of literacy in preparation for becoming participating members in the professional community of literacy teachers.
Prerequisite(s): EDD 468 and EDD 471 and EDD 467
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Can enroll if College is Education, Health, and Human Services

EXPS 493  Simulation and Gaming  1 to 3 Credit Hours
This course focuses on simulation and gaming as approaches to learning which are fundamentally different from methods traditionally used in education, industry, business, and psychology. Students will have the opportunity to examine many different types of simulations and games and to participate in selected ones. They will also be able to design one to use in their own area of interest.
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Can enroll if Level is Undergraduate

EXPS 498  Exploring Writing/Chld&Yng Ad  3 Credit Hours
This course provides a theoretical foundation for writing instruction of children/adolescents in grades K-8. Emphasis is placed on modeling, instructional strategies, and assessment for supporting student writers that pre-service and in-service teachers can use to facilitate students' development of written language across various genres. TB clearance, criminal background check, and bloodborne pathogens/infectious diseases training required.
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore or Graduate

EXPS 499  Individ Res in Lit in Educ  1 to 3 Credit Hours
Requires the student to initiate and carry to completion a literature-based research project under the supervision of a faculty member. May be elected more than once for a total of not more than 3 credits as approved by advisor. Written permission of instructor. (F,W,S).
Restriction(s):
Can enroll if Class is Undergrad Certification only or Junior or Senior
Can enroll if Level is Undergraduate

Frequency of Offering
The following abbreviations are used to denote the frequency of offering: (F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Finance (FIN)

FIN 200 Personal Finance 3 Credit Hours
To survey financial planning for the individual. Topics include: bank relations, credit, borrowing money, savings, budgeting, investments, stocks and bonds, mutual funds, insurance, real estate, annuities, social security, income taxes, wills, trusts and estate planning.
Restriction(s):
Cannot enroll if Class is Graduate
Can enroll if College is Business

FIN 401 Corporate Finance 3 Credit Hours
Introduces the financial goals of a corporation with particular attention to the creation of value. The time value of money and the valuation of financial and real assets receive particular attention. Additional topics include risk and return, market efficiency, short-term financial management, and the domestic and international economic environments.
Prerequisite(s): ACC 298 and ECON 201 and ECON 202 and (DS 300* or DS 301* or HHS 410* or STAT 305* or STAT 325* or MATH 325*)

FIN 402 Advanced Corporate Finance 3 Credit Hours
To provide the study of advanced topics, with particular attention to capital structure and dividend policy. Additional topics such as hedging, option pricing, agency theory, methods of financing, and corporate control will be presented. Global aspects of these topics will be addressed where appropriate. (YR).
Prerequisite(s): FIN 401 and (DS 300 or DS 301 or MATH 325 or STAT 305 or STAT 325)

FIN 406 Fin Mkts and Institutions 3 Credit Hours
This course will introduce students to the financial markets, institutions, and instruments. The contents consist of the role and importance of the financial markets, interest rate determination and security valuation, the functions of money, bond, mortgage, stock, foreign exchange and derivative securities markets, the activities of financial institutions such as insurance companies, securities firms and investment banks, hedge funds, and pension funds, and management of credit and interest rate risks on the balance sheet of financial institutions. Familiarity with these topics is necessary for students to be competent in their future professional career in finance. (YR)
Prerequisite(s): FIN 401 and (DS 300 or DS 301 or MATH 325)

FIN 407 Investment Fundamentals 3 Credit Hours
To study the current investment scene and analyze the characteristics of securities and the role in investment strategies. Topics include: securities markets, bonds, stocks, options, investment strategies, portfolio theories and management.
Prerequisite(s): FIN 401 and (DS 300 or DS 302)

FIN 411 Financial Planning 3 Credit Hours
This course introduces students to the primary areas of personal financial planning and helps them prepare for the professional financial planning examinations. Topics include overview of the financial planning process, analysis of clients' needs; principles of personal income taxation; investment analysis and planning; retirement and estate planning; insurance planning and major types of insurance, ethics and standards of professional practice; and quantitative methods used in the analysis and derivations of decision rules. This course is designed for students who consider a career in financial advising, as well as those who are interested in managing their own personal finances. Students will practice critical thinking and business communication through written presentation of case analysis and recommendations. (YR)
Prerequisite(s): FIN 401 and (DS 300 or DS 301 or MATH 325 or STAT 305 or STAT 325)

FIN 412 Retirement Planning 3 Credit Hours
This course introduces students to the nature of retirement planning analysis and the functions of major retirement plans and other investment-oriented employee benefits, as well as discusses advantages and disadvantages of the various wealth accumulation and tax deferral alternatives. Topics include the administration, characteristics and distributions of qualified corporate retirement plans such as pension and profit sharing plans; non-corporate retirement programs such as IRAs and Simplified Employee Pension (SEPs) plans. In addition, stock options, non-qualified deferred compensation plans, and other non-pension related benefits, as well as recent legislation will be examined. This course prepares students for career pursuit in financial advising or human resources management, as well as for the professional financial planning examinations. Students will practice critical thinking and business communication through written presentation of case analysis and recommendations. (YR)
Prerequisite(s): FIN 401 and (DS 300 or DS 301) and FIN 411*

FIN 443 Com Bank: Functn and Operatns 3 Credit Hours
The topics to be included in the course are: commercial bank management, loan portfolio management and international banking. Specific aspects of the commercial banking environment, such as legislation and regulation, are also covered.
Prerequisite(s): FIN 401 and (DS 300 or DS 301 or MATH 325)

FIN 445 Corporate Fin Models and Apps 3 Credit Hours
This course focuses on the analysis of financial decisions by applying theories and models to practical problems and cases. The subject coverage includes capital budgeting and financing (cost of capital, capital structure, dividend policy, etc.), working capital management (credit, inventory, bank relations, etc.), and other special topics (e.g., mergers and acquisitions). The coursework is appropriate for students seeking careers in corporate financial management, commercial lending, and investment banking.
Prerequisite(s): FIN 402 and (DS 300 or DS 302)

FIN 447 Derivative Markets 3 Credit Hours
Going beyond investment fundamentals, the focus of this course is on the more speculative aspects of investment. Speculative securities (such as options, warrants, and convertible bonds) and commodity futures (including financial and currency futures) are covered. The structure of the speculative markets and the role of speculation, such as hedging, risk-shifting, and the establishment of future-spot price relationship are analyzed in the context of a competitive market environment.
Prerequisite(s): FIN 401 and (FIN 402 or FIN 407 or FIN 443) and (DS 300 or STAT 325* or DS 302*)
FIN 448 Real Estate Financing 3 Credit Hours
The purpose of this course is to introduce the student to the different types of mortgages, the sources of real estate loans and the workings of the secondary mortgage markets. It will also cover the application, loan processing, underwriting, and closing processes as well as closely related topics such as property appraisal and insurance, title insurance, and foreclosures.
Prerequisite(s): FIN 401
FIN 456 Fixed Income Securities 3 Credit Hours
The fixed income market, accompanied by the introduction of sophisticated financial engineering techniques, has grown enormously over the last two decades. Today, the fixed income market has been a vital segment of the global financial market. This course covers major topics associated with this market, including bond pricing, yields, and volatility; term structure of interest rates and yield curve; market structure and analytical techniques for Treasury, municipal, corporate bonds, mortgage-backed securities, asset-backed securities, and bond with embedded options. The fundamental objective of this course is to help students develop analytical skills for pricing fixed income securities and managing interest rate risk. In addition, materials covered in this course are compatible with the Common Body of Knowledge in Analysis of Debt Investments that is required by the Chartered Financial Analysts (CFA) examination. Students will not receive credit for both FIN 456 and FIN 656.
Prerequisite(s): FIN 407 and FIN 447 and (MATH 113 or MATH 115 or Mathematics Placement with a score of 116)
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if College is Business
Can enroll if Major is Finance
FIN 457 Investment Fund Management 3 Credit Hours
This course introduces finance students to investing approaches and analytical techniques including both Intrinsic and Relativistic analyses used for security analysis employed and implemented by professional money managers. The course is recommended for finance students seeking to develop careers related to money management, investment analysis, financial analysis, portfolio management and related financial services careers. The main focus of the course is to gain the experience and skills of equity securities analyses through the Student Managed Investment Fund. The course requires application of fundamental and intrinsic analyses valuation. Students cannot receive credit for both FIN 457 and FIN 657. (FW,OC)
Prerequisite(s): FIN 407
FIN 484 Seminar: Financial Management 1 to 3 Credit Hours
To provide students with an opportunity for intensive study in current selected areas related to the research activities and/or professional activities of faculty members. Permission of College of Business.
Prerequisite(s): FIN 401
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business
FIN 494 Research:Financial Mgt 1 to 3 Credit Hours
To provide the advanced student with the opportunity to undertake a research project under the supervision of a faculty member. At least two weeks prior to the term when such a course is to be elected, an interested student must submit to the dean of the school a written request for permission to elect a research course, on a form available in the school office. The request will include a description of the proposed research project. The dean will review the proposal with faculty members to ascertain availability of relevant faculty supervision and to establish appropriate credit. Permission of College of Business.
Prerequisite(s): FIN 401
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

Foundations (FNDS)

FNDS 1201 Shakespeare on Page, Stage and Screen 3 Credit Hours
What has made the plays of Shakespeare so relevant to a well-rounded education in universities around the world? How do Shakespeare's plays transcend his period making him, in Ben Jonson's words, "not of an age, but for all time"? From comic books to live performance, Slings and Arrows to Kenneth Branagh, this course explores how Shakespeare's plays are performed, adapted, and sampled in contemporary culture and the cultural significance of Shakespeare today. We shall discuss the literary, stage and film traditions of Shakespeare's plays as well as the wholesale borrowings from, echoes and parodies of them in popular culture, such as Dr. Who, graphic novels like Kill Shakespeare, or TV commercial for products such as Levis jeans and H&M. This course challenges students to consider how the medium of the artistic work (e.g. film, play, TV commercial) affects interpretation and how we re-make Shakespeare in contemporary culture. Students will have the creative opportunity to 're-make' Shakespeare themselves as part of this course. Note: the course will include an excursion to see a play at the Stratford Shakespeare Festival in Ontario, Canada. (F, YR).

FNDS 1202 Democratizing Democracy: Expanding, Suppressing, Idealizing, & Ignoring the Right to Vote in Amer 3 Credit Hours
This course will explore voting in America, examining both historical and contemporary perspectives on the fundamental right of "the franchise" for American citizens. The course will emphasize the debates, reforms, practices, ideals and actualities of voting, which is widely regarded as an exemplar of citizenship enactment even while history illustrates clear exclusionary practices. (F).

FNDS 1203 Because Internet: The Language of Digital Media 3 Credit Hours
This course examines new forms of language resulting from the digitization of communication. Email, texting, the internet, and social media have changed the English language. The course introduces the field of sociolinguistics, which tracks these language adaptations and interprets associated social meanings. Students will examine formal and informal language practices, learning about academic and other styles and interpreting the significance of their language choices in different contexts. Studying language choices in this way creates an awareness of language that has widespread application to the speaking and writing tasks of academic and professional life, but even more importantly, to how individuals define themselves through their language. (YR).
FNDS 1204  Fearing the Unknown: Horror Fantasy in Hispanic Fiction  
3 Credit Hours
A good horror story incites fear, one of the strongest emotions that we as an audience seek. Horror offers the possibility to talk about our irrational human fears through dark narratives. It makes a space for the inexplicable, the supernatural, the undead, while allowing the appearance of troubled characters: the non-normal, the bizarre, the other. While fear is universal, what are the contexts in which Hispanic horror is produced? What or who is the other in these contexts? What makes it different than other artistic productions in English? This course offers the opportunity to explore major Latin American and Spanish short stories, novellas, and films. It considers how religion and superstition, violence, and doubt inform Hispanic horror while intertwining it with other genres from the early 19th through early 21st centuries. (F, OC).

FNDS 1205  Understanding Global Cultures  
3 Credit Hours
Globalization is the predominant interpretative concept through which we analyze the state of the planet in general, and the intermingling of cultures in particular. This course proposes a comprehensive examination of cultures around the world to first-year university students. A transdisciplinary approach (history, political science, economics, geography, and anthropology) will introduce students to a wide breadth of content and depth of contextualization, and enhance their understanding of the complexities of the (post)modern world. In addition to readings on the main groups of world cultures, we will analyze several films that address the issues of cultural identity and globality. The question of stereotyping cultures will be discussed through examples of parodic representations of cultures. The course will also address the tensions between local ways of life (historical, linguistic, ethnic, and religious) and today's pressures for transnational and multiple identities, intensified by the communication of ideas and the movement of people around the world. Thus, we will also look at how the cultures of immigrant communities in southeast Michigan have contributed to the local cultural configuration. (YR).

FNDS 1301  Trauma, Text, & the City  
3 Credit Hours
An exploration of how artists and writers represent urban trauma (terror, violence, destruction, absence) to describe indescribable suffering. In the wake of urban chaos, how do writers make urban community possible? To answer this question, we will examine traumatic events in New York City (9/11) as well as London and Detroit to understand how emails, photographs, novels, documentaries, and films try to narrate chaos and stabilize urban history. In addition to films that experiment with narrative (such as _Memento_ [2000] and documentaries), texts may include writings by psychologists (Freud), urban historians (Sugrue), cultural theorists (Baudrillard), and novelists (Joseph Conrad). (F, YR).

FNDS 1302  Art, Power, and Persuasion  
3 Credit Hours
Do you ever see election and political ads on TV or on apps and websites? What images do these ads use? How do they use visual media to draw your attention and influence your opinions? Can you detect the strategies they use? Do you think these attempts to persuade through imagery and words are effective? Learn about the use of imagery and words as means of political influence and persuasion while you develop your skills in critical thinking, writing, and research in this course. This course focuses on the historical examples of the “heretic king” Akhenaton in Egypt, the ideology of the Persian empire, the imperialist democracy of classical Athens, and the autocratic rule of the first Roman emperor, Augustus. We will investigate the visual and literary strategies that have been used for thousands of years to define difference, signal virtue, and garner public support. By the end of the semester, you will look at the images and words around you today with new eyes. (F).

FNDS 1303  ART/France--ART/Japan  
3 Credit Hours
We would be lost without our personal technology devices that allow us to chat with friends around the world, listen to music that has just dropped, or search/download high resolution images to study the culture of others every minute of our lives. Have you wondered how the exchange of ideas and images was possible prior to the digital revolution? This course focuses on cultural exchange in Japan and France during the second half of the 19th century. New technologies like photography, color lithography and ready-made art supplies allowed artists to explore their creativity in new ways. This period also was a time of increased international travel, international expositions, thriving private art exhibitions, and a flourishing print culture; all of these elements facilitated the rapid spread of information and images between Paris and Tokyo. We examine this dynamic flow of culture and ideas through the study of texts, photographs, paintings (Impressionist/Yoga/Nihonga), prints, advertisements, and fashion. Using the frame of Orientalism, we will study how some artists appropriated motifs, but we also will examine how others were inspired to change the way they represented the world because of an encounter with art or artists from the opposite side of the world. (F).

FNDS 1304  American Horror Stories  
3 Credit Hours
This course analyzes American culture through the lens of its horror industry—in film, literature, art, and other forms of artistic and popular culture. Horror, because of its nature as an extreme form of representation and its association with the imagination rather than reality, has the ability to reveal certain truths and theories about history, culture, and ways of being that are difficult to access through other modes of expression. This course explores these truths and theories by studying American horrors in a way that contextualizes film, stories, art, and other forms of popular culture within particular social, political, and historical moments. Examples include: Cold War horror productions (the short stories of H.P. Lovecraft and Richard Matheson) and the use of aliens and other invaders as a stand in for outsiders and “others,” domestic horrors like The Nightmare on Elm Street and Beloved and the ways in which violence, gender, race and the home intersect, and a study of post-feminist heroines in Buffy the Vampire Slayer and Pretty Little Liars. (F, YR).

FNDS 1305  Gothic Monsters Next Door  
3 Credit Hours
This course traces how English and American Gothic writing casts others—particularly neighbors in both the country, suburbs, and cities—as monstrous threats to the control of one’s “Home.” The villains of supernatural gothic stories frequently embody fears related to gender, race, and sexuality that threaten a community’s fictions of normalcy. We will particularly read gothic horror fiction to understand how fiction shapes the fears and anxieties about nationality and tries to reimagine “community” for its readers. Readings may include Dracula, Carrie, The Strange Case of Dr Jekyll and Mr Hyde, and Linden Hills. (YR).

FNDS 1306  Crossing Boundaries: ‘Passing’ and Social Identity in American History  
3 Credit Hours
Have you ever thought that life would be easier if you had been born a different person? This course examines the stories of boundary crossers: individuals who choose to ‘pass’ for a member of a different social group. People who have lived on different sides of social identities offer a unique opportunity to understand the meaning of race, class, gender, and sexual orientation in American society. Their experiences can help us understand social categories – both what they mean and how they have changed over the course of time. What, for example, can a person who lived as both a woman and a man tell us about the significance of gender in our society? Ultimately, the course seeks to answer the question, what is the nature and significance of identity? (AY, F).
FNDS 1307  You Call Them Nobel Prize Laureates? A Worldwide Perspective  3 Credit Hours
This course will empower you to be a better reader and a better judge of what you read! We will learn to "close read" international Nobel Prize bestsellers from various regions of the world. We will discuss the role of an author and that of the reader, what makes an author "a Nobel Prize winner" in Literature, and what these authors and books might have in common. By reading, discussing and critiquing, we will also learn their historical, geographical and cultural backgrounds. Finally, we will attempt to answer the question of which books deserve the Nobel Prize. (F, OC, W, YR).

FNDS 1308  Comics, Graphic Novels, Manga and What They Can Do: Understanding Visual Narratives  3 Credit Hours
Comics, Graphic Novels, Manga and What They Can Do studies this wonderful blending of literature and art of the world of comic books. Reading American comics, the Franco-Belgian comics known as bande dessinée, and Japanese manga, all in English, we will explore the significance of visual storytelling, examine approaches to visual analysis, and discuss their themes and styles. We will follow the history of visual-textual narratives from referring to them as "the funnies" in the early 20th century, limiting them to young people, to controversial issues of censorship, to graphic novels that are now increasingly treated as serious literary works worthy of Pulitzer Prizes and other prestigious awards. Produced across cultures, this is a mode of expression that ranges widely from an inspiration to major blockbusters such as superhero movies to sophisticated literary works such as Maus and Persepolis. We will discuss the controversies over colonialist-era works such as Tintin and contemporary graphic journalism such as in graphic novels about war and asylum in Rwanda and Bosnia. No artistic tendencies, prior knowledge of comics, or second language proficiency are required. (OC).

FNDS 1309  Let's Talk about Talk!  3 Credit Hours
This course explores different types of talk we engage in on a daily basis and discusses features, motivations, rules, and functions of everyday interaction. The wonderful thing about studying talk and conversation is that it is important in almost every major and career following from the university experience. Why do we talk? What types of talk do we routinely have? Do we have the same goals and purposes for these interactions? Why do people interrupt? Do we have rules to follow in conversation? What happens if we break or violate rules? Is swearing always bad? What is the purpose of gossiping? Should gossiping be discouraged? Is linguistic politeness a universal concept? Can one be funny in one culture but not in another culture? Is talking always better than silence? These are some of the questions we will discuss in this class. (AY).

FNDS 1501  Physics for 21st Century Citizens - the Science Behind the Headlines  3 Credit Hours
Does it surprise you that the GPS on your phone needs to know about Einstein's special and general relativity to work properly? Are you confused by the claims and counter-claims in the current debate over global warming? Have you ever wondered whether a nuclear power plant can explode like an atomic bomb? About how spy satellites work? If you answer "yes" to questions like these, then Physics for 21st century citizens is for you. This is a mixed-format lecture/seminar course that takes a mathematics-free approach to everyday applications of physics. We focus on understanding the physics behind today's headlines. Students learn to describe the world around them in physical terms, without extensive mathematics, and to use their new-found physics skills to critically assess issues in the headlines, through the eyes of a physicist. Three credit hours. (F).

FNDS 1601  OK Boomer: Gen Z and Civic Engagement  3 Credit Hours
Climate change, violence, racism, sexism, and consumerism are among the concerns of young people born after 1996. How will this generation define the most important challenges in today's society, set about fixing these problems, and ensure they don't fall to the next generation? How is Gen Z going building a political community through civic engagement to ensure justice, safety, health, and sustainability? We will consider these topics using the tools of Political Science, Sociology, and History while exploring activism happening on campus and in the surrounding community in order to better understand the particular worldview of Gen Z, effective tools for social change, and the key factors that contribute to lasting activism and significant change. (YR).

FNDS 1602  Hope and Joy in Queer and Trans Lives  3 Credit Hours
Hope and joy are important tools, particularly for groups that experience oppression and violence. This course does not shy away from the more difficult dimensions of queer and trans lives. But our focus is centrally and emphatically on the ways that queer, trans, and other sexually and gender-diverse people produce hope, joy, healing, pleasure, and community. Perspectives of queer and trans people of color are integral to the course. The material is appropriate for students of all levels of preparation, including those with little or no prior knowledge of lgbtq issues. As part of the Foundations program, this course will also support students in acclimating to campus and to college-level work. (F, YR).

FNDS 1603  When Nature Strikes: Dealing with Natural Disasters  3 Credit Hours
Natural disasters kill on average 60,000 people per year. The vulnerability to disastrous events is influenced by physical factors as well as hazards perception and behavior, public policy, and economic factors. This course will draw from the physical, social, and behavioral sciences to examine the interplay between physical mechanisms and human dimensions of natural disasters. (W).

FNDS 1604  Biology is Not Destiny: Exploring the Role of Culture on Human Biology  3 Credit Hours
This is a course that will deal with some very "big questions" about human nature. This course is rooted deeply in anthropology, and anthropologists love asking questions about the nature of human existence. What does it mean to be human? How variable are humans from one another? What causes that variation? Are men and women really all that different from one another? Do races exist in biology? Are men born to be more aggressive than women? We're going to approach these important questions through the lens of "myth busting", where we'll tackle one theme at a time and see what anthropology and related sciences have to say about it. My goal is that you will leave the course with not only some understanding of anthropology and human existence (which should have a profound impact on how you view and interact with people around you), but that you'll have developed some critical thinking and communication skills that will set you up for success in your college career and beyond. (F, W).

FNDS 1605  DIY in Detroit  3 Credit Hours
This course examines Do It Yourself (DIY) cultures in Detroit. Detroit’s larger story — of migration, cars, growth, shrinkage, revitalization — hides smaller stories of community, resilience, and people who have decided not to wait on societal structures and instead do for themselves. We will look at both historical and contemporary communities who have established their own structures of support and cultural production in the face of resistance and disregard. What social and economic conditions encouraged or required them to do it themselves? What are the benefits of do it yourself culture — ownership, control, connective communities, etc? (F).
explore the beauty of mathematics, see how it relates to anyone, and how exclusive for a selected group of people? In this course, we want to do you need in life? Is it relevant to non-mathematicians? Is it something Mathematics: Queen and Servant of Science. How much mathematics tries to solve a murder mystery, and perhaps one of earliest anthologies for this course is drawn from a diverse set of works including a satirical and philosophers. In addition to the the Maor text, the subject matter exist; not all infinities are created equal; there are beautiful tangible objects that live in neither two nor three dimensions. More, we discuss when and why of various concepts. The number zero did not always mean that no number exists; not all infinities are created equal; there are beautiful tangible objects that live in neither two nor three dimensions. More, we discuss the implications of these ideas on scientists and artists, on theologians and philosophers. In addition to the Maor text, the subject matter for this course is drawn from a diverse set of works including a satirical novel by an English schoolmaster, a novel about a boy with autism who tries to solve a murder mystery, and perhaps one of earliest anthologies to include only mathematical poetry. (YR).

FNDS 1607 Real Housewives of Crime: Crime, Law, & Reality TV 3 Credit Hours
As a wise woman once said, “until mankind is peaceful enough not to have violence on the news, there’s no point in taking it out of shows that need it for entertainment value” (Cher, Clueless, 1995). Or is there? In this class we will ask and answer the following: what does reality TV teach us about crime, law, and justice? In doing so, we will explore issues of crime and law through the lens of reality television (including “true crime” shows and docuseries). Along the way, we will: analyze media constructions of crime, criminals, and the criminal justice system; examine the effects media has (and doesn’t have) on the way we think and act; and engage in “newsmaking criminology.” Skills acquired in this course—in particular, the ability to evaluate media representations of crime, law, and justice, to synthesize content across disciplines, and to produce informative digital content for the public—will serve students on campus and in future careers. (YR).

FNDS 1701 To Infinity and Beyond 3 Credit Hours
Many people have a love-hate relationship with mathematics. This stems largely from the fact that society treats mathematics as a tool to enable the sciences and engineering. Collectively we do not think of mathematics as a subject that is interesting in its own right, not as a subject that has evolved as humans have evolved, over thousands of years. This is a course aimed not at engineers nor scientists (though they would enjoy the ideas very much). It is designed for the rest of us. In this course, we treat mathematics with curiosity, asking questions about the when and why of various concepts. The number zero did not always exist; not all infinities are created equal; there are beautiful tangible objects that live in neither two nor three dimensions. More, we discuss the implications of these ideas on scientists and artists, on theologians and philosophers. In addition to the Maor text, the subject matter for this course is drawn from a diverse set of works including a satirical novel by an English schoolmaster, a novel about a boy with autism who tries to solve a murder mystery, and perhaps one of earliest anthologies to include only mathematical poetry. (F, OC).

FNDS 1702 Infinity Plus One 3 Credit Hours
Mathematics: Queen and Servant of Science. How much mathematics do you need in life? Is it relevant to non-mathematicians? Is it something exclusive for a selected group of people? In this course, we want to explore the beauty of mathematics, see how it relates to anyone, and how useful it is for all of us. (F).

FNDS 1703 Foundations (FNDS) 3 Credit Hours
Past! Guess what? You’re already aging! In fact, everyone around you is aging. So what? Well, the more we understand aging and the sooner we start applying what we learn, the better our life (and the lives of those around us) will be! In this course, we’ll skim the surface of gerontology—the study of aging—by exploring research and experiences related to the aging brain, the aging self, and the implications of an aging society. We’ll tackle topics ranging from Ageism to Zzzz’s (sleep!), equipping you with an understanding of gerontology that you can apply to your own life decisions, to your interactions with aging friends and family, and to your roles in the workplace and society at large. We’ll do all of this while building skills and highlighting resources that will equip you to make the most out of your UM-Dearborn journey (and beyond). Let’s go! (YR).

FNDS 1606 The A to Z of Aging and Why it Matters NOW 3 Credit Hours

FNDS 3001 Restless Women 3 Credit Hours
This class invites you to reflect on the lives of select women from very different historical periods. Some of the women played the roles that the society prescribed for them. Some of them stepped outside of — or even deviated from — the social norms that defined their lives. Yet many others were put in very difficult life situations in which they had to make — what we would define today as — choices, and yet choices that they had to make. In this class, we will call them ‘restless’ — women who searched for solutions in desperate situations, for ways to express themselves, for ways to find satisfaction and redefine their own lives. Their lives can teach us about the importance of the individual in history, but they also show how our lives are defined by the context in which we live: the place and time, historical events, social norms, and the ethnicity, class, race, and gender we are born into. This means that looking at individual lives provides us with lenses to have a closer look at societies at various historical junctures and places: at norms that organize them as well as various subtle changes that they undergo. (F, OC).

FNDS 3201 Weeds, Wastelands and the Salvation of the World 3 Credit Hours
What are the connections between cities, weeds, social problems and the climate crisis? This class considers the dynamic, evolving relationship between cities and nature in light of the challenges presented by climate change. We begin with 19th century ecologists and sociologists contemplating changes wrought by urbanization and corresponding shifts in attitudes towards nature. We then consider 20th century conservation and environmentalist movements in relation to globalized trade patterns, habitat fragmentation and accelerating urban inequality. Finally, we consider the concepts of green infrastructure, patch dynamics and novel ecosystems and the prospects of urban life on a disturbed planet. And we will take a lot of walks. (AY, F).

FNDS 3301 Real Housewives of Crime: Crime, Law, & Reality TV 3 Credit Hours
As a wise woman once said, “until mankind is peaceful enough not to have violence on the news, there’s no point in taking it out of shows that need it for entertainment value” (Cher, Clueless, 1995). Or is there? In this class we will ask and answer the following: what does reality TV teach us about crime, law, and justice? In doing so, we will explore issues of crime and law through the lens of reality television (including “true crime” shows and docuseries). Along the way, we will: analyze media constructions of crime, criminals, and the criminal justice system; examine the effects media has (and doesn’t have) on the way we think and act; and engage in “newsmaking criminology.” Skills acquired in this course—in particular, the ability to evaluate media representations of crime, law, and justice, to synthesize content across disciplines, and to produce informative digital content for the public—will serve students on campus and in future careers. (YR).

FNDS 3401 Restless Women 3 Credit Hours
This class invites you to reflect on the lives of select women from very different historical periods. Some of the women played the roles that the society prescribed for them. Some of them stepped outside of — or even deviated from — the social norms that defined their lives. Yet many others were put in very difficult life situations in which they had to make — what we would define today as — choiceless choices, and yet choices that they had to make. In this class, we will call them ‘restless’ — women who searched for solutions in desperate situations, for ways to express themselves, for ways to find satisfaction and redefine their own lives. Their lives can teach us about the importance of the individual in history, but they also show how our lives are defined by the context in which we live: the place and time, historical events, social norms, and the ethnicity, class, race, and gender we are born into. This means that looking at individual lives provides us with lenses to have a closer look at societies at various historical junctures and places: at norms that organize them as well as various subtle changes that they undergo. (F, OC).

FNDS 3102 Multimedia Art 3 Credit Hours
How does something new in art emerge? How do artists use their own body as a medium for art? How is the body augmented by film, video, and sound equipment in multimedia art? This course examines the interconnected histories of multimedia and performance art from the 1910s to now. Multimedia art is an innovative twentieth century genre that combines elements from film, literature, music, drama, visual art, and design. We consider the many ways in which the body and technology intersect as we trace how new imaging and sound technologies have changed the ways in which we perceive the world and express ourselves. This course allows you to better understand our contemporary media landscape: no artistic skills are required. (W, YR).

FNDS 3201 Weeds, Wastelands and the Salvation of the World 3 Credit Hours
What are the connections between cities, weeds, social problems and the climate crisis? This class considers the dynamic, evolving relationship between cities and nature in light of the challenges presented by climate change. We begin with 19th century ecologists and sociologists contemplating changes wrought by urbanization and corresponding shifts in attitudes towards nature. We then consider 20th century conservation and environmentalist movements in relation to globalized trade patterns, habitat fragmentation and accelerating urban inequality. Finally, we consider the concepts of green infrastructure, patch dynamics and novel ecosystems and the prospects of urban life on a disturbed planet. And we will take a lot of walks. (AY, F).

FNDS 3301 Restless Women 3 Credit Hours
This class invites you to reflect on the lives of select women from very different historical periods. Some of the women played the roles that the society prescribed for them. Some of them stepped outside of — or even deviated from — the social norms that defined their lives. Yet many others were put in very difficult life situations in which they had to make — what we would define today as — choiceless choices, and yet choices that they had to make. In this class, we will call them ‘restless’ — women who searched for solutions in desperate situations, for ways to express themselves, for ways to find satisfaction and redefine their own lives. Their lives can teach us about the importance of the individual in history, but they also show how our lives are defined by the context in which we live: the place and time, historical events, social norms, and the ethnicity, class, race, and gender we are born into. This means that looking at individual lives provides us with lenses to have a closer look at societies at various historical junctures and places: at norms that organize them as well as various subtle changes that they undergo. (F, OC).

FNDS 3401 Reporting on the Middle East: Revising First Drafts of History 3 Credit Hours
Western journalists reporting on the Middle East are part of a larger group of diverse travelers to the region that have shaped narratives about it for global audiences. Journalists from the Middle East are part of a larger group of modern professionals that influence trends of political and social change at home and also aim to represent their home societies to global audiences. In this course, we will use the tools of today’s Middle East specialists to investigate the narrative frames used to simplify the complexities of past and contemporary events. As a final project, student research teams will do scholarly revisions of press accounts that they select from among today’s headlines and “breaking news” segments. (YR).
FNDS 3402 Modern Crime: Jack the Ripper 3 Credit Hours
During the summer and fall of 1888, five prostitutes were gruesomely murdered in Whitechapel, a district in the East End of London. The killer, who identified himself as "Jack the Ripper" was never identified and the unsolved case has been the focus of amateur sleuths and detectives (known as "Ripperologists") for over 100 years. It has also been the topic of media attention and sensationalism, both then and now. It has spawned numerous tabloid articles, books (both non-fiction and fiction), movies, websites and blogs. There is even a Jack the Ripper musical. Jack the Ripper was, in many ways, the first modern serial killer and the case provides students with a unique view of issues of class, gender and race as they relate to society, crime and the media, both then and now. (AY).

FNDS 3403 American Voices: Exploring Language and Identity 3 Credit Hours
Is American English a kind of Pirate English? Is it what your teachers told you to write in school? Is it a linguistic melting pot or a word salad? How do movies and other kinds of culture use these differences to create characters? How do language differences express different identities? In this course you will learn how to analyze the social meanings of different kinds of English. You will develop practical skills through researching and presenting ideas about American English. (AY).

FNDS 3901 Cultures in Contact: The Arab Near East and the West 3 Credit Hours
Arab Near East-West relations were not always frayed and confrontational. We look beyond colonialist legacies for sustained cultural contacts and their lasting effects. As such, we examine Arab contributions to humanity from late antiquity through the the age of European explorations and Arab cultural awakening thanks to introduction of printing presses by the French in Egypt and the Americans in the Levant. (F).

FNDS 3902 Who Owns the Past? 3 Credit Hours
The past is not neutral. This class explores this idea, recognizing how representations of and stories about the past play a role in modern discussions and conflicts. Issues such as race, religion, national sovereignty, and both individual and group rights to self-determination, education, and property are all deeply entwined with how we learn about and tell each other about the past. We consider archaeological and historic sites and controversies in Asia, Africa, the Mideast, and the US, and focus on discussion and argumentative writing skills. (F, OC).

FNDS 3903 Rules of the Game: How Institutions Work 3 Credit Hours
Topic Title: Rules of the Game: How Institutions Work All transactions/economic activity occurs under an underlying framework. This can range from: if I bash your head with a rock I get your wooly mammoth to going to the grocery store to buy food to dating to the gig economy. In this class we will discuss a wide range of institutions; that is the framework under which exchange happens. We will begin with formal institutions of government rule of law, patents and foreign development. Next we will analyze informal institutions that deal with common pool resources, the market for body parts and culture. At the end we will discuss various criminal organizations. While there are no prerequisites for this course an introduction to economics class is highly recommended. (AY, W).

French (FREN)

FREN 101 French Language & Culture I 4 Credit Hours
Full Course Title: Introduction to French Language and Culture I - First course in a two-course elementary French sequence. Listening comprehension, speaking, reading, writing, and culture are emphasized. Course materials promote the use of language to communicate with others and to function in the French-speaking world. (F).

FREN 102 French Language & Culture II 4 Credit Hours
Full Course Title: Introduction to French Language and Culture II - Second course in the two-course elementary sequence. Continued emphasis on culture and the four skills of listening, speaking, reading, and writing. (W).

Prerequisite(s): FREN 101 or French Language Placement with a score of 102 or French Language Placement with a score of 201 or French Language Placement with a score of 202 or French Language Placement with a score of 301 or French Language Placement with a score of 302

FREN 201 Intermediate French Language and Culture 4 Credit Hours
An intermediate language course designed to increase the student's ability to read, speak, and write French. The course will utilize a wide range of reading selections representative of modern French prose as the basis for class discussions and written assignments. A systematic review of grammar and oral exercises should enable the student to make definite progress in conversation and composition. (F).

Prerequisite(s): French Language Placement with a score of 201 or French Language Placement with a score of 202 or French Language Placement with a score of 301 or French Language Placement with a score of 302 or FREN 102

FREN 202 Intermediate French II 4 Credit Hours
Continuation of FREN 201. Further readings in modern French prose, extensive practice in conversation and composition. An intermediate language course designed to increase the student's ability to read, speak, and write French. The course will utilize a wide range of reading selections representative of modern French prose as the basis for class discussions and written assignments. A systematic review of grammar and oral exercises should enable the student to make definite progress in conversation and composition. (W).

Prerequisite(s): FREN 201 or French Language Placement with a score of 202 or French Language Placement with a score of 302 or French Language Placement with a score of 301 or French Language Placement with a score of 302

FREN 234 French Conversation 1 to 2 Credit Hours
Development of conversational skills through discussion of contemporary readings and the use of communicative activities and games. Emphasis will be placed on vocabulary acquisition by students, on improving their pronunciation, and on increasing their overall fluency in French. (S).

Prerequisite(s): FREN 102

FREN 235 Fren Conversation and Culture 2 Credit Hours
Intensive practice in developing conversational skills through a coordinated program of classroom and field activities in France. Students will read and discuss current materials of various sorts and will perform skits and other oral exercises designed to increase their fluency in French. A series of planned, extracurricular activities (visits to museums and historical monuments, viewing of plays, interviews of average Frenchmen) will enable students to profit from direct contact with the French and their culture.

Prerequisite(s): FREN 102
FREN 290  Topics in French  1 to 3 Credit Hours
Examination of problems and issues in selected areas of French. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

FREN 301  Advanced Conversation and Comp  3 Credit Hours
An advanced course in conversation, composition, and syntax. Numerous oral reports and weekly written assignments based on readings from current sources; discussion of a recent French motion picture; translation exercises and the study of specific topics in French grammar. (F).
Prerequisite(s): FREN 202 or French Language Placement with a score of 301 or French Language Placement with a score of 302

FREN 302  Advanced Conversation and Comp  3 Credit Hours
Continuation of FREN 301. (W).
Prerequisite(s): FREN 301 or French Language Placement with a score of 302

FREN 305  Language of Business  3 Credit Hours
A systematic presentation of the vocabulary and conventions of business French. Students will receive extensive training in composing business letters, reports, vitas, and similar texts. They will be exposed to French practices in correspondence, accounting and record keeping. They will also be required to translate various business documents from English to French (and vice versa) and to familiarize themselves with the specialized vocabulary of computers. (OC).
Prerequisite(s): FREN 301

FREN 306  Cult Intro to French Business  3 Credit Hours
An introduction to the practices and organization of the French business world. Students will learn how a typical French firm is structured and how business is normally conducted in France. Special attention will be given to those differences in organization and operation which contrast French businesses with our own. The class will also examine the impact of history and general cultural attitudes on French business practices of today. (OC).
Prerequisite(s): FREN 301

FREN 308  Advanced Writing  3 Credit Hours
Intensive practice in writing expository prose in French. Students will complete a wide variety of writing assignments (resumes, critical analyses, explications de texte, and the like) over the course of the semester. Class sessions will be devoted to the discussion of student papers and technical issues related to effective writing. Students should expect to prepare several drafts of each assignment under the close supervision of the instructor. (OC).
Prerequisite(s): FREN 301

FREN 330  Frnch Lit: Md Ages-18 Century  3 Credit Hours
A survey of French literature through the Enlightenment based on the study of individual masterpieces of principal French authors: Villon, Rabelais, Montaigne, Pascal, Moliere, Racine, Montesquieu, Voltaire, and Rousseau. (OC).
Prerequisite(s): FREN 301

FREN 331  French Lit: 19th-21st Century  3 Credit Hours
The sequel to FREN 330. A survey of French literature from Romanticism to the present. Writers studied will include Balzac, Stendhal, Baudelaire, Flaubert, Colette, Proust, Gide, Camus, Sartre, de Beauvoir, Beckett, Sarraute, as well as contemporary authors. (OC).
Prerequisite(s): FREN 301

FREN 332  French Cinema  3 Credit Hours
A survey of French films from the experiments of the turn of the century to the trends of the present day. Representative silent films, "classic" and "new-wave" movies of the 1930's and 50's, as well as contemporary productions will be presented in their cultural context and the contributions of major French directors to filmmaking will be highlighted. Attention will also be given to the basic elements of film as a means of expression: camera angle, distance, movement, and editing. (OC).
Prerequisite(s): FREN 301

FREN 334  Workshop in French Theater  3 Credit Hours
This course will provide a brief survey of representative masterpieces of the French theater. Students will be required to read and analyze a number of celebrated plays and then to perform selected scenes from them. (OC).
Prerequisite(s): FREN 301

FREN 336  French Civilization of Past  3 Credit Hours
An introduction to the civilization of France (from the Middle Ages to the 20th Century). This course will examine the social and historical developments and the accomplishments in the arts and literature that have combined to shape the French nation. (OC).
Prerequisite(s): FREN 301

FREN 337  France in the 20th Century  3 Credit Hours
An introduction to France of the Third, Fourth, and Fifth Republics. This course will examine the major political, social, and economic issues of France of the 20th Century as well as its contributions to literature and the arts. (OC).
Prerequisite(s): FREN 301

FREN 338  France of Today  3 Credit Hours
An exploration of various facets of contemporary French civilization. Although students will consider historical and political developments since World War II, special attention will be given to the values and attitudes of the French, to the contrasting modes of life in Paris and the provinces, and to important forms of popular culture. (OC).
Prerequisite(s): FREN 301

FREN 339  Francophone Lit and Civil  3 Credit Hours
An introduction to twentieth-century award-winning texts from the Caribbean, Canada, North Africa and West Africa. Students will analyze the strategies through which these powerful, dramatic, post-colonial writers address such issues and themes of universal relevance as love and the search for identity, while also expressing the experience and culture realities of his or her own country. Representative authors include Birago Diop, Simone Schwartz-Bart, Arlette Couse, Anne Hebert, Roch Carrier, Michel Tremblay, and Tahar Ben Jelloun. (OC).
Prerequisite(s): FREN 301

FREN 340  France's Sites of Memory  1 Credit Hour
This course complements French 336, Civilization of the Past. Students will travel to France to visit the "sites of memory" that have shaped France’s collective memorial heritage, from the Roman Empire to the French Revolution, to today. Visits to the Catacombs, Roman ruins in the South of France, Roman and Gothic cathedrals, Renaissance castles, museums, royal palaces, and the Place de la Bastille will bring France's history and civilization alive, and help crystallize a material memory of France’s rich culture. (OC).
FREN 355 Introduction to Translation 3 Credit Hours
French 355 is designed as an introduction to the art of translation from English to French and French to English. The course will enhance students’ ability to translate fluently from the source language to the target language. Students will study the theory of translation; practice translating a variety of genres; improve their knowledge of written French; increase their vocabulary, sociolinguistic register, and idiomatic expressions. (YR)
Prerequisite(s): FREN 202
FREN 375 Parisian Itineraries 3 Credit Hours
“Parisian Itineraries” follows cultural developments in Paris, and literary responses to the specific nature of urban development in France in the 19th and 20th century in France. Students consider urban planning and expansion in Paris through cultural, historical, social and literary approaches, and analyze the connections between cultural voices and urban progress. The object of this course is thus the lived experience of Parisian urbanization through the various artistic representations.
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
FREN 385 French Across the Curriculum 1 Credit Hour
Course is attached to an upper-level course in another discipline and taken concurrently with it. Course materials in French are related to the subject matter of the second course and are discussed with a French-area faculty member. Materials are also integrated into the assignments of the second course. (F,W).
Prerequisite(s): FREN 202
FREN 388 Socio-Cltrl Iss Contemp France 3 Credit Hours
The course concentrates on a series of socio-cultural issues that are debated in France today, as well as on a number of contemporary cultural and artistic phenomena. Particular attention is given to discourses on otherness and on the ways in which French cultural production and media constructions have reflected, reinforced, reshaped and, in some instances, contested the country’s past and current dominant ideologies, and identities.
Prerequisite(s): FREN 301
FREN 390 Topics in French 3 Credit Hours
Examination of problems and issues in selected areas of French. Title as listed in schedule of classes will change according to content. Course may be repeated for credit when specific topics differ.
FREN 399 Independent Studies 1 to 3 Credit Hours
Readings or analytical assignments in the humanities in accordance with the needs and interests of those enrolled and agreed upon by the student and advising instructor. May be repeated for a maximum of 6 credit hours. (F,W).
FREN 408 Writing and Translating 3 Credit Hours
A course designed to increase the written fluency of students who have already assimilated the advanced grammatical concepts introduced in the 301-302 sequence. Students will prepare weekly written assignments and will translate and analyze passages written in various styles. (OC).
Prerequisite(s): FREN 301 and FREN 302
FREN 490 Topics in French 1 to 3 Credit Hours
Examination of problems and issues in selected areas of French. Title as listed in the Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).
Prerequisite(s): FREN 301

Geography (GEOG)

GEOG 201 Cultural Geography 3 Credit Hours
Overview of the major components of culture such as language, religion, agriculture, settlement patterns, and related landscape features in a spatial context. Emphasis on how various cultures perceive and interact with the environment. (F).
GEOG 203 Weather and Climate 3 Credit Hours
The controls and conditions of Earth’s weather and climate including atmospheric circulation, precipitation processes, severe weather, climatic regions, and climatic change. (F).
GEOG 204 Landforms 3 Credit Hours
Processes and agents that shape the landscapes and landforms of the Earth’s surface. The discussion of landforms is divided into two parts: (1) constructive processes and their spatial distribution and (2) gradational processes and their spatial distribution. (W).
GEOG 205 Geography of the United States 3 Credit Hours
A regional analysis of the United States that stresses the difference in the physical elements of landscapes that explain differences in economic development, cultural attainment, and land use and which, in turn, motivate regional interdependencies and interrelationships. (W).
GEOG 206 World Regional Geography 3 Credit Hours
World Regional Geography includes a systematic study of the world’s geographic realms and regions, including Europe, Russia, Australia-New Zealand, East Asia, South Asia, Southwest Asia, N Africa, Subsaharan Africa, Middle and South America. Geographic concepts, such as map reading and spatial analysis, are first introduced. Then, the world is classified into geographic realms and regions using both physical and social criteria. Each region results from a unique interaction between the human societies and the physical environment. The physical, cultural, political, economic and social features of each region are studied, along with any special regional concerns or problems.
GEOG 300 Urban Geography 3 Credit Hours
The geography of human settlement and urbanization. Particular emphasis is placed on human transformation of the physical environment, and resource use throughout history from ancient civilizations to modern megalopolises. Universal urban challenges such as sprawl, pollution, congestion, crime, poverty, etc., are addressed.
GEOG 302 Mapping Our World 3 Credit Hours
Mapping Our World provides an introduction to geospatial techniques and the important roles spatial data play in today’s world. This course introduces the students to basic concepts of geographic information systems, remote sensing and cartography. A focus of the course is on map analysis and map design.
GEOG 305 Intro to GIS 4 Credit Hours
The basic elements of geographic information systems, map interpretation and map design. Principles and methods of spatial data collection, analysis, and display are introduced. (W)
Prerequisite(s): GEOG 302
Corequisite(s): GEOG 305L
GEOG 305D Intro to GIS & Cartogrphy Dis 0 Credit Hours
Required discussion session for GEOG 305.
Corequisite(s): GEOG 305
GEOG 307 Geography of Western Europe 3 Credit Hours
An analysis of the strengths, weaknesses, interrelationships, and interdependence of selected countries of this economically advanced region. (OC).
GEOG 310   Economic Geography  3 Credit Hours
Spatial aspects of the ways people make their living. Discussion of the spatial distribution of resources and wealth at various scales. Introduction of site selection and location analysis.

GEOG 315   Political Geography  3 Credit Hours
The spatial dimensions of political activity from the local to the global scale. Themes include: control of territory, relations among political entities, and political ideology.

GEOG 320   Global Climate Change  3 Credit Hours
This course explores concepts and current thinking on global climate change and environmental impacts. It covers the history of Earth’s climate, causes of climate change and current research attempting to forecast change. The biotic, economic, and social implications of climate change are discussed. (AY)
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

GEOG 325   Global Cities  3 Credit Hours
The course focuses on comparing the urban form, economies, and social life in cities around the world. The societies of the westernized, developed world are already highly urbanized. Cities outside of this sphere are generally growing much faster and experiencing greater social and economic upheaval as a result. Understanding non-North American urbanization is a vital part of understanding cities in general. (F)

GEOG 327   Michigan Geography  3 Credit Hours
A geographic study of landforms, waterways, natural resources, landmarks and economic activities that contribute to the physical and cultural landscapes of Michigan. Population, industry, agriculture, recreation and tourism will all be considered. (S, W, YR)

GEOG 390   Topics in Geography  1 to 3 Credit Hours
Selected topics to be announced. (OC).

GEOG 390B  Topics in Geography  1 to 3 Credit Hours
TOPIC TITLE: Global Climate Change. This course explores concepts and current thinking on global climate change and environmental impacts. It covers the history of Earth’s climate, causes of climate change and current research attempting to forecast change. The biotic, economic, and social implications of climate change are discussed.

GEOG 399   Independent Study  1 to 3 Credit Hours
Readings or analytical assignments in accordance with the needs and interests of those enrolled and agreed upon by the student and the advising instructor.

Geology (GEOL)

GEOL 118   Physical Geology  4 Credit Hours
An introduction to the study of geologic processes at work in the earth’s interior and on its surface. Rocks and minerals, the origin and evolution of the continents, and the gradual and catastrophic processes that shape surface and bedrock features. Three hours lecture, three hours laboratory. (W).
Corequisite(s): GEOL 118L

GEOL 218   Historical Geology  4 Credit Hours
A generalized study of the history of the earth, with emphasis on the fossil record of life development, the stratigraphic sequence of deposits and paleogeography. Laboratory work will include the study of geologic and topographic maps and fossils of prominent invertebrate phyla. (YR).
Corequisite(s): GEOL 218L

GEOL 303   Geodesy & Cartog. Principles  3 Credit Hours
Understanding the shape, texture, and structure of the Earth’s surface and interior is of critical importance for studying and visualizing the physical world around us. This course focuses on the physical and geographical properties of the Earth’s surface, how these properties are measured, and how they are effectively displayed as maps and other visual representations. Surveying, Global Positioning Systems (GPS), and cartographic design both macroscales (e.g., meter) and macroscales (e.g., light year) are heavily emphasized. (F, YR)

GEOL 305   Intro to GIS  4 Credit Hours
An introductory course that examines the digital representation, manipulation, and analysis of geographic data, with the emphasis on the analytical capabilities that GIS brings solutions to geographic problems. Students will explore and learn GIS principles using ESRI’s mapping software, as well as complete a major GIS project.
Corequisite(s): GEOL 305L

GEOL 305D  Intro to GIS  0 Credit Hours
Required discussion session for GEOL 305.
Corequisite(s): GEOL 305

GEOL 313   Earth Materials  4 Credit Hours
This course provides a detailed look at the physical and chemical components that constitute the Earth’s surface and subsurface. Critical elements of mineralogy, igneous and metamorphic petrology, sedimentology, and stratigraphy are covered. Laboratory sessions allow students to master the use of a petrographic microscope and sedimentary processes, among other related topics. Field sessions allow for students to identify geologic materials in their natural exposed settings. (W, AY)
Prerequisite(s): CHEM 134 and GEOL 118

GEOL 332   Hazardous Waste Management  3 Credit Hours
Environmental problems associated with solid and hazardous waste. Regulations governing the generation, transport, and disposal of hazardous waste. Waste management techniques, including reduction, reuse, recycling, treatment, incineration, and land disposal. Three hours lecture.
Prerequisite(s): GEOL 118 or ESCI 275

GEOL 340   Remote Sensing  3 Credit Hours
This course explores the acquisition, processing, and visualization of remotely derived data, with a particular emphasis on local and environmental applications. ENST 340 covers concepts and foundations of aerial and orbital remote sensing, visual interpretation, reflectance and emission spectroscopy, active and passive sensors, topography, and digital image processing software and techniques.

GEOL 342   Physical Oceanography  3 Credit Hours
An introduction to physical and chemical oceanography, fundamental marine processes and plate tectonics. Interactions between the oceans and atmosphere and the effect of greenhouse gases on the oceans and the role of physical processes in global climate change will be studied.
GEOL 350  Geomorphology  4 Credit Hours
This introductory course is designed to familiarize students with the fundamentals of river behavior and the general principles in fluvial morphology, sedimentation, and hydraulics and stream bank erosion. Applications of these principles are shown utilizing a stream classification system. Problem solving techniques for watershed management, stream restoration, non-point source pollution and integration of ecosystem concepts in watershed management are presented. A combination of both lecture and field applications are provided. (F, AY)
Prerequisite(s): GEOL 118 or (GEOG 203 and GEOG 204)
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

GEOL 370  Environmental Geology  3 Credit Hours
Interactions between people and the physical environment. Geological hazards and natural processes, such as earthquakes, volcanism, floods, landslides, and coastal processes. Relationships between geology and environmental health, including chronic disease, water use and pollution, waste disposal, mineral resources, and energy use. Three hours lecture. (AY)
Prerequisite(s): GEOL 118

GEOL 372  Energy Resources  3 Credit Hours
Origin and development of fossil fuels (petroleum, coal, natural gas) and of radioactive ores used in nuclear power. Renewable and alternative energy sources, including hydro, solar, wind, biomass, and geothermal power. Environmental impacts of energy use. Three hours lecture. (AY)
Prerequisite(s): GEOL 118 or ESCI 275 or ESCI 301

GEOL 375  Groundwater Hydrology  4 Credit Hours
Prerequisite(s): GEOL 118

GEOL 377  Field Methods  1 Credit Hour
A week-long intensive field course dealing with geological field methods and analysis of geological terrains. Use of Brunton compass and clinometer, recognition and identification of geological structures, preparation and interpretation of geological maps, and use of aerial photographs. May be repeated for credit when destination varies. Organizational meeting followed by one-week trip. (YR)
Prerequisite(s): GEOL 118

GEOL 390  Current Topics in Geology  1 to 3 Credit Hours
A course in special topics in the field of geology. Topics and format for the course may vary. See current Schedule of Classes. (OC)
Prerequisite(s): GEOL 118

GEOL 440  Advanced GIS Applications  3 Credit Hours
This course offers an opportunity for students with a background in the fundamentals of geographic information systems (GIS) to apply the analytical capabilities of geospatial technology to model real-world situations in support of decision making. Particular emphasis is given to data development and management, spatial and statistical analyses, customization, and effective visualization.
Prerequisite(s): GEOL 305 or ESCI 305 or GEOG 305

GEOL 460  Structural and Engineering Geology  4 Credit Hours
GEOL 460/560 is the application of structural geology and stratigraphy to the practice of geology and civil engineering. Emphasis is placed on the application of geologic analysis to facilitate the understanding of dynamic Earth processes such as faulting and folding as well as the successful completion of engineering projects. Case histories will be used to evaluate how geologic knowledge has been used in both successful and unsuccessful engineering projects. (AY, W).
Prerequisite(s): GEOL 118

GEOL 470  Geodatabase Design & Mgmt  3 Credit Hours
Full Title: Geodatabase Design & Management This course focuses on the design, creation, and management of geodatabases. Topics include database theory, database models, spatial data standards, the collection and pre-processing of geospatial data, topology and topological relationships, metadata creation and storage, and cloud computing. (AY, F)
Prerequisite(s): GEOL 305 or ESCI 305 or GEOG 305

GEOL 475  Contaminant Hydrogeology  3 Credit Hours
Advanced lecture treatment of selected topics in subsurface hydrology including contaminant transport and fate of organic and inorganic constituents, aquifer test analysis, and the use of modeling in the analysis of selected case histories. (AY).
Prerequisite(s): GEOL 375
Restriction(s):
Can enroll if Class is Junior or Senior

GEOL 478  Geology of the National Parks  3 Credit Hours
Study of the geology (stratigraphy, structure and geomorphology) of major national parks. Specific parks to be visited varies from year to year, enabling the course to be repeated once for credit. Emphasis is placed on taking field notes, describing rock sequences in outcrop, geologic map reading and aerial photograph interpretation. Special attention is focused on the understanding and development of cratonic sequences, particularly the regional correlation (both lithostratigraphic and time-stratigraphic) of sandstone, shale and limestone facies, and small and large scale geologic features such as folds and faults. Depending on the national park being visited the students may explore paleographic and paleoclimatic evidence from fossils as well as sedimentary structures. This is a field-oriented course requiring a significant amount of physical exertion. (YR)
Prerequisite(s): GEOL 118 and GEOL 218
Restriction(s):
Can enroll if Class is Junior or Senior

GEOL 487  Groundwater Modeling  3 Credit Hours
Lecture and laboratory applications of two- and three-dimensional groundwater flow and contaminant transport problems. Visual Modflow, Modpath (PLOT and SUTRA), MT3D and Surfer will be used to evaluate remedial alternatives (e.g. pump and treat, funnel and gate, or trench and drain systems). EPA’s Basins software combined with ESRI’s GIS software ArcView will be used to evaluate and compare the Rouge River watershed with other small-scale watersheds in Michigan. (AY)
Prerequisite(s): GEOL 375
Restriction(s):
Can enroll if Class is Junior or Senior

GEOL 490  Advanced Topics in Geology  3 Credit Hours
Current topics from various areas in pure and applied geosciences will be reported upon by students, faculty and guest speakers. May include extended field trips. (OC).
Prerequisite(s): in German. (OC).

on improving their pronunciation, and on increasing their overall fluency. Emphasis will be placed on vocabulary acquisition by students, contemporary readings and the use of communicative activities and games. Development of conversational skills through discussion of GER 201 or German Language Placement with a score of 302.

GER 201 or German Language Placement with a score of 301 or German Language Placement with a score of 202 or German Language Placement with a score of 302.

GER 301 or German Language Placement with a score of 302.

GER 305 or German Language Placement with a score of 301 or German Language Placement with a score of 302.

GER 306 or German Language Placement with a score of 301 or German Language Placement with a score of 302.

GER 371 or German Language Placement with a score of 301 or German Language Placement with a score of 302.

GER 372 or German Language Placement with a score of 301 or German Language Placement with a score of 302.

GER 301 or German Language Placement with a score of 301 or German Language Placement with a score of 302.
GER 374  The History of German Cinema  3 Credit Hours
In this course, we explore the history of German cinema through primary and secondary texts on films from the silent period through unification. Concomitantly, we will read a Mary Fulbrook's history of Germany in order to place these films within the proper historical contexts and in order to enable us to examine the ways in which German history has insinuated itself in all film genres. The film section highlights the major movement in German cinema since its inception and gives particular attention to the representations of German history and the ways in which German history makes itself apparent in a variety of genres. The class will also consider the interactions between German cinema and Hollywood through clips highlighted in lectures and student presentations. (OC). 
Prerequisite(s): GER 301
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if Level is Undergraduate

GER 376  Contemporary German Cultures  3 Credit Hours
An exploration of the assumptions which underlie everyday life in German-speaking countries (Federal Republic of Germany, Austria, Switzerland). Topics include social intercourse, school systems, medicine, citizens' understanding of nation, and individuals' relationship to space. (YR).
Prerequisite(s): GER 301

GER 377  German Culture & Civilization  3 Credit Hours
Full Course Title: German Culture and Civilization-From the Romans to the Reformation- An introduction to the civilization of the German-speaking countries of Europe from the Middle Ages to the 20th Century. The course examines the arts, history, culture, and institutions that have shaped the Germanic societies.
Prerequisite(s): GER 301

GER 380  Praktikum  1 Credit Hour
This course will be offered in conjunction with a 300- or 400-level German literature, film, or cultural course in translation taught by a member of the German faculty. The one-credit course will be conducted entirely in German. Students will develop their language skills dealing with the topics of the course in translation. They will also be required to read related texts in German. Students who successfully complete the Praktikum and the corresponding German in translation course can receive four credits of German. The topics will vary depending on the English language content course. Students must be concurrently registered in appropriate 300- or 400-level courses taught by a German instructor. (OC).
Prerequisite(s): GER 301

GER 385  German Across the Curriculum  1 Credit Hour
Course is attached to an upper-level course in another discipline and taken concurrently with it. Course materials in German are related to the subject matter of the second course and are discussed with a German-area faculty member. Materials are also integrated into the assignments of the second course. (F;W).
Prerequisite(s): GER 202

GER 390  Topics in German  3 Credit Hours
Examination of problems and issues in selected areas of German. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

GER 398  Ind Studies in German Lit  1 to 3 Credit Hours
Readings or analytical assignments in German selected in accordance with the needs and interests of those enrolled. (F;W).

GER 399  Ind Studies in German Lit  1 to 3 Credit Hours
Readings or analytical assignments in German selected in accordance with the needs and interests of those enrolled. (F;W).

GER 490  Topics in German Lit and Civ  3 to 4 Credit Hours
Examination of problems and issues in selected areas of German studies. Title as listed in the Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

GER 499  Adv Individual Proj in German  1 to 4 Credit Hours
Advanced individual study project in German language, literature, or civilization may be pursued under the direction of a faculty supervisor. (OC).
Restriction(s):
Can enroll if Class is Senior or Graduate

Global Cultures (GLOC)

GLOC 234  Japanese Economy & Business  3 Credit Hours
In this course, students can obtain fundamental knowledge on stylized facts of Japanese economy as compared with those in the US and some other countries, and understand economic theories to put profound interpretations on them. Stylized facts seem to be old and some of them may have been obsolete, although they contain essential logical points. However, they are still useful for understanding Japanese economic systems. Thus, students are required to discuss current conditions on Japanese economy and firm system, considering stylized facts and theoretical backgrounds. It is essential to distinguish between changing phenomena and unchanged principles. Students have an opportunity to take a tour to a factory in a leading company. In the final class, students have to give team presentations and individually submit a short essay on the topics provided or the ones they come up with. As for the structure of the classes, we cover fundamental stylized facts, economic theories (or theoretical frameworks), and data analyses (historically and currently). This course is composed of three parts: (1) Japanese economic system, (2) Japanese firm system and (3) Japanese macroeconomic conditions.
Restriction(s):
Can enroll if Class is Senior or Graduate

GLOC 301  Intro to Global Cultures  3 Credit Hours
The course introduces students to the various concepts and notions attached to the phenomenon known as globalization from several disciplinary approaches including history, political science, economic, cultural geography, environmental sciences, and anthropology. It, then, delves in to an in-depth examination of globalization and its ideologies, particularly the consensus as well as the controversies it engenders. The course particularly focuses on the relation between globalization and culture. (YR).
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
Can enroll if Level is Undergraduate

GLOC 325  Political Islam  3 Credit Hours
This course is designed as an introduction to the main issues and themes in the study of political Islam and Muslim Politics, providing a broad overview of the pertinent key concepts and issues. It provides a historical approach to the study of political Islam, and touches upon the nineteenth century Islamic revivalism. It also explores diversity in contemporary Islamic thought and global Islamist movements.
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
Health and Human Service (HHS)

HHS 100  Personal Health and Wellness  4 Credit Hours
In this course, students will examine the core concepts, conceptual frameworks, and epidemiological data related to personal health and wellness. Students will learn to apply the scientific method to the systematic study of common health problems. Students will gain a better understanding of their own health-related attitudes, beliefs, and behaviors and learn strategies to manage their stress and improve their health and wellness. (F,S,W)

HHS 101  Intro to Health Education  3 Credit Hours
This course is designed to introduce students to the principles and practices of health education. Students will explore the theoretical and practical issues of health education and will identify and apply health education principles to health challenges facing individuals, groups and communities. (F,W,S)

HHS 200  Introduction to Public Health  3 Credit Hours
Introduction to Public Health (HHS 200) is the introductory professional course in the Public Health undergraduate program. This course identifies and explores the theoretical and practical issues in public health. Students successfully completing the course will have an understanding of the goals of public health. Students will receive a fundamental understanding of epidemiological study design and the role of data for public health research. They will also understand the impact of individual behaviors and the environment on health. Lastly, students will receive an introduction of the role of governmental agencies and policy on public health practice.

HHS 201  Medical Terminology  3 Credit Hours
This course will focus on an in-depth presentation of medical language to serve as a solid foundation for students interested in health care, medicine, nursing, pharmacy, physical therapy, or related careers. Medical terminology for both health and disease is presented in relation to human structure and function. Understanding of the course content builds a framework by introducing the key terms as they are applied to specific body systems. (F,W,S)

HHS 202  Mental Health Terminology  3 Credit Hours
Mental Health Medical Terminology orient students to mental health disorders. A brief clinical overview from a lay perspective orient students to the various mental disorders including mental retardation and learning disorders, behavioral disorders, anxiety disorders, substance abuse disorders, impulse control disorders and sleep disorders. A special emphasis will be made on the relationship between substance abuse problems and mental illness, as well as the physical aspects of drug use. Students learn the specific criteria for mental illness classification through use of The Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM 5). (OC)

HHS 210  Intro to Social Work  3 Credit Hours
Introduction to Social Work is intended to provide a basic introductory course to assist professionals in related and relevant fields in the theories, approaches, and practices of social work. Students will be exposed to the art and science of the social work discipline through academic research and case studies, experiential learning, group discussion, and supporting activities. (F,W,S)

HHS 225  Stress Management  3 Credit Hours
This course is a systematic examination of the stress process and its management. We will explore what stress is, its major components and psychophysiological processes, as well as the connection between stress and health outcomes. Students will employ self-reflective and active learning techniques to examine in detail the range of options that may be employed to minimize the impact of stressors and their health consequences. These options include perception interventions and spirituality, multiple relaxation techniques, and physiological interventions such as exercise. (F, S, W).

HHS 230  Research Methods in Human Srvc  3 Credit Hours
This course focuses on developing student’s ability to understand and influence scientific inquiry in health and human services. Students will learn how research methodology frames inquiry and, subsequently, how knowledge is built and used to make evidence-based decisions in practice.

HHS 250  Intro to Environmental Health  3 Credit Hours
This course introduces students to environmental health as a core discipline within the field of public health. It is for any student interested in how the environments where we live, work, and play may affect our health, and it is particularly applicable for those pursuing careers in public health, clinical health, or allied fields. Specifically, the course provides students with an introduction to environmental health science, communication, and policy. Students will examine many case studies to understand the patterning and implications of environmental risks and protective factors in communities through Metro Detroit and the U.S. related to several key pathways (e.g., air, water, climate, built environment). Throughout the semester, considerable attention will be given to causes and consequences of local and national environmental justice issues. Students will gain exposure to methods and resources they may use to assess and address environmental health concerns as scholars, activists, or practitioners. (W)

HHS 260  Global Health  3 Credit Hours
In this course, students will examine the core concepts, major actors and organizations, and functions of public health on a global scale. Students will gain knowledge of comparative health care systems, as well as global challenges, such as climate change, nutrition, and maternal and child health. We will analyze historic and contemporary case studies to better understand current disease burden and health inequities, ethical considerations, and potential policy or programmatic solutions to global health issues. (YR)

HHS 300  Intro to Health Policy  3 Credit Hours
The aim of this course is to provide students with an overview of the U.S. health care system, its components, and the policy challenges created by its organization. We will focus on the major US governmental and non-governmental political and policy players, health policy institutions and important issues that cut across institutions, including private insurers and the federal/state financing programs (Medicare and Medicaid/SCHIP) (F,W,S)

Restriction(s):
Cannot enroll if Class is Freshman
HHS 305  Introduction to Play  3 Credit Hours
This course introduces the concept, theory, and experience of play, including methodological approaches to the research and study of play in therapeutic, clinical, medical, and educational environments. Students will develop strategies for observing, engaging, and supporting play in a variety of settings, and will gain an understanding of the principles, applications, and limitations of play therapy and the role of play in the practice of professionals in human services and education. (F,W,S)
Prerequisite(s): SWK 200 or HHS 210
Restriction(s): Cannot enroll if Class is Freshman

HHS 306  Program Plan Implementation  3 Credit Hours
Full Course Title: Program Planning and Implementation This course introduces students to program planning in health and human service settings. In these settings, leaders must be able to develop, implement, and monitor programs that are informed by theory and evidence. Such plans equip organizations to improve individual, family and community well-being through programmatic interventions, as well as to advocate for local or national policy changes. Students will examine existing programs designed to promote health and well-being in diverse settings locally and nationally. They will learn components of effective program plans and work through a stepwise process to build their own plan for a real or imagined intervention. Prior or concurrent coursework in theory of health behavior or social work and research methods is highly recommended.
Prerequisite(s): COMP 106
Restriction(s): Can enroll if Class is Junior or Senior

HHS 308  Intro to Macro Social Work  3 Credit Hours
This course provides a foundation for working with groups, communities, and social systems. We will examine macro-level interventions to address planned change in diverse settings. A culturally-sensitive, person-centered approach as well as the NASW Code of Ethics will be integral to the techniques and practices employed in this course. We will utilize a social justice framework throughout the course for exploring issues of inequality, oppression, and equity-focused social change. (F, S, W).
Prerequisite(s): SWK 200 or HHS 210

HHS 309  Theories & Pract. Social Wk.  3 Credit Hours
Full Course Title: Theories & Pract. Social Wk. This course is designed to develop the knowledge and skills necessary for students to begin understanding of the practice of social work. The course provides an overview of general practice and theory. Students are introduced to the value, philosophy and knowledge base considerations of social work practice. Generalist social work practice is presented as a process of planned change with various clients and systems as well as the application of ethical and technical principles of practice. Specific emphasis will be given in this course to the integration of material from the student’s knowledge of human behavior, social policy, research, life experience, and professional skills. Lessons and exercises are offered to emphasize understanding and relating to persons of diverse backgrounds including oppressed groups, populations-at risk and racial or ethnic minorities. (F,W,S)
Prerequisite(s): SWK 200 or HHS 210
Restriction(s): Cannot enroll if Class is Freshman

HHS 310  System of Care  3 Credit Hours
This course introduces students to the ways that health and human service organizations work individually and collectively to improve the lives of individuals, families, groups, and communities. Health and human services professionals work collaboratively to help persons with a variety of physical, mental, social, emotional, educational, and developmental needs. Systems of care is a service delivery approach that builds partnerships to create a broad, integrated process for meeting clients’ and target populations’ multiple needs. (YR)
Prerequisite(s): SWK 200 or HHS 210
Restriction(s): Cannot enroll if Class is Freshman

HHS 311  Work w/Vulnerable Populations  3 Credit Hours
Full Course Title: Working with Vulnerable and Hard-to-reach-Populations Successful community-based engagement, outreach activities, and intervention research often involves working with vulnerable and hard-to-reach populations. This course examines some of the personal, social, institutional, legal and environmental factors that create disparities and vulnerabilities in certain individuals and groups. Underlying theories, effective strategies, and best strategies for working with persons in great need for improved health and the provision of appropriate human services are also presented. (F,W,S)
Prerequisite(s): SWK 200 or HHS 210
Restriction(s): Cannot enroll if Class is Freshman

HHS 312  Family Preservation & Recovery  3 Credit Hours
Current methods for family preservation and helping families cope with family problems are the focus of this seminar style course. Through lectures, written assignments and classroom activities, students learn and practice family intervention technique. Emphasis on families with diverse structures is undertaken and diverse practice settings including home, school, child welfare, mental health, family court, corrections and other community environments are explored in detail. Students are instructed in the special issues in work w/families, e.g. minority status, gender and sexual orientation, disabilities, family violence, trauma and addiction. (F,W,S)
Prerequisite(s): SWK 200 or HHS 210
Restriction(s): Cannot enroll if Class is Freshman

HHS 313  Metro Impact of HHS  3 Credit Hours
Full Course Title: Metropolitan Impact of Health and Human Services This course focuses on health and human service provision and the impacts of these professions within the metropolitan Detroit area. The course addresses working with multiple populations and multiple service providers. A significant component of the course consists of significant guest speakers who have experience working in this area. The class will often meet off-campus at various social service agencies; students will be responsible for their own transportation.
Prerequisite(s): SWK 200 or HHS 210
Restriction(s): Cannot enroll if Class is Freshman

HHS 315  Case Management for Change  3 Credit Hours
Students learn step-by-step processes of case management from intake and initial referral for services, determination of eligibility for services, writing a formal plan for services, case documentation techniques, and techniques for monitoring a clients progress through the service delivery system, to case closure/follow-up activities. The course instructs on access to community resources, interpreting and utilizing information from other professionals, and development of interviewing, intervention, case recording, and caseload management skills. Legal and ethical issues in service delivery are integrated throughout the course. (F,W,S)
HHS 325  Death, Dying, and Bereavement  3 Credit Hours
This course focuses on working with children, adolescents, and families experiencing dying, death, and grief. The course emphasizes the role of families, culture, and healthcare settings, as well as the social meanings of dying and death, developmental perceptions, and the impact of culture, religion, and ethnicity. Specific attention is given to grief reactions in children, the application of developmental level in response to loss, role of human services professionals in clinical and non-clinical settings, as well as the tasks of grief. Strategies and tools relating to communicating with bereaved children, as well as the potential impact on academic, behavioral, and emotional development are addressed. Students will explore and develop familiarity with strategies and tools such as legacy building, memento creation, and the identification and utilization of resources that promote coping skills in relation to death or impending death. (F,W,S)
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HHS 330  Health Behavior Theory  3 Credit Hours
This course provides an overview of social and behavioral science theories that are currently used to: 1) understand health related behaviors and 2) guide development of interventions designed to prevent, reduce, or eliminate major public health problems. Fundamentals of Health Behavior and Health Education is grounded in the recognition that public health is in its nature, an interdisciplinary field aimed at reducing preventable morbidity and premature mortality, and promoting a higher quality of life in populations and groups through health intervention. While it is acknowledged that population and individual level health outcomes are influenced by biological, physical, and medical care factors, this course focuses on the relationship of behaviors as well as social and political structures to health outcomes. The course highlights the importance of both local contexts and global practice for understanding and improving health. Using a social ecological framework, we will consider the interaction of four levels of factors: individual, interpersonal, community, and population. The course provides students with a broad survey of current health behavior and education practices, and is not intended to result in an in-depth understanding of any particular theories, specific practice models, or selected research methods. Rather, the purpose is to introduce students to the conceptual and methodological approaches currently adopted in the social and behavioral sciences that inform public health research and practice. (F, S, W).

HHS 336  Perspectives in Women's Health  3 Credit Hours
This course examines women's health issues across the human lifespan, using feminist and sociocultural perspectives. Topics to be explored include the social construction of women's sexuality, reproductive options, health care alternatives and risk for physical and mental illness. Attention to the historical, economic, and cultural factors that influence the physical and psychological well-being of women is an underlying theme. (F, S, W, Y).
Restriction(s):
Cannot enroll if Class is Freshman

HHS 350  Comm Organizing for Health  3 Credit Hours
Community organizing is a process by which communities and organizations work together to identify common problems and objectives, acquire and mobilize resources, and create and implement actions to achieve their goals. Community organizing is of interest to sociologists, organization theorists, political scientists, health educators, and social psychologists, among others, as scholars who contribute to our knowledge of working in and with communities. Drawing on these various disciplines and real world case studies, this course examines community organizing theories, models, and principles and how they are used to improve community health and address health inequities. Several practical tools, strategies, and skills are also introduced, including: community assessment, coalition-building, participatory research and evaluation, media advocacy, and policy advocacy. A primary component of this course is the field experience, in which students are partnered with community-based organizations to identify, apply, and reflect on course concepts, while contributing to local community building efforts related to various health issues in the Detroit Metropolitan region.
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HHS 360  Responsible Drug Policy  3 Credit Hours
A study of the fundamentals needed for identifying both the appearance and effects of controlled substances. Students receive guides to controlled substances; their color, trade names and drug codes. Topics include a critical examination of the physiological, sociological and legal aspects of drug abuse and the many complexities which have developed as a direct or indirect result of drug policy in society. (OC)

HHS 364  Health Policy and Admin  3 Credit Hours
A survey of the structure and processes of health administration in America, including analysis of current issues in health policy.

HHS 370  Medicine and Addiction I  3 Credit Hours
Medicine and Addiction I is part one in the sequence of introductory coursework in the Addiction Studies Certificate Program. This course provides the clinical orientation for addiction that frames much of the activities associated with screening and assessment of client behaviors as well as aspects of intervention and management of clients with addiction. Students successfully completing the course will identify and apply the assessment principles for individuals and families dealing with addiction. (OC)

HHS 371  Medicine and Addiction II  3 Credit Hours
Medicine and Addiction I is part two in the sequence of introductory coursework in the Addiction Studies Certificate Program. This course provides the clinical orientation for addiction that frames much of the activities associated with screening and assessment of client behaviors as well as aspects of intervention and management of clients with addiction. Students successfully completing the course will identify and apply the treatment principles for individuals and families dealing with addiction. (OC)
Prerequisite(s): HHS 370

HHS 380  Religion, Medicine, and Health  3 Credit Hours
This interdisciplinary discussion course examines topics and research methods in the historical, sociological, psychological, and anthropological intersections between religion, medicine, and health for its effects on the understanding of illness and disease, health agency, death and dying, and other aspects of the illness experience. (YR)
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
HHS 400  Health Policy and Politics  3 Credit Hours
This course will examine the politics of the health policy process, through a critical review of the roles, relationships, motivations, and strategies of key political actors, structures, and institutions that comprise the policymaking process in the United States. The objective is to prepare students to serve as effective policy or political advocates. We will review and discuss conceptual models of policymaking and politics in order to contextualize real-life health policy processes and decisions. (YR)
Prerequisite(s): HHS 300

HHS 401  Methods of Health Promotion  3 Credit Hours
This course is designed to prepare students with skills necessary to implement health education programs within the context of community health settings. Emphasis will be placed on a variety of community health education methods and strategies including but not limited to educational presentations and material development, mass media and media advocacy, legislative action and involvement, community organization, and working with groups. (F,W,S)
Prerequisite(s): HHS 100 and HHS 200
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HHS 402  Health and Human Services Internship  3 Credit Hours
This internship provides students the opportunity to apply classroom learning and gain hands-on experience working in health or human services. Students are matched to internship sites in government, health care, and non-profit organizations. Students build valuable networking connections and explore career options across a range of professional fields. Through mentorship, reflective writing, students develop marketable job skills and core health and human service competencies. (F,W,S)
Prerequisite(s): HHS 200 or HHS 210
Restriction(s):
Cannot enroll if Class is Freshman
Cannot enroll if Level is
Cannot enroll if Program is

HHS 403  Medical Information Systems  3 Credit Hours
Medical Information Systems deals with how information is created, stored, and used in health care settings. Areas of interest for this course include fundamentals of computers and data management, medical information documentation in the form of paper and electronic medical records, health data privacy issues, disease classification and scoring systems, quality assurance in health care delivery, commonly used health care statistics, reimbursement methodologies, health care monitoring by internal processes and external review agencies, and vital statistics and disease surveillance systems. The course also includes some hands-on computer applications instruction to familiarize students with commonly used software platforms utilized in health care administration. (F,W,S)
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HHS 404  Financing Health & Medical Sys  3 Credit Hours
The American health care system faces two problems: access to health services and high and rising costs. This course looks at the problems of uninsured citizens as well as the strains placed on health care facilities in providing services for them. Europeans have dealt with problems of access and cost controls through universal health care coverage and the course takes up various models in use today. The course also looks at American health insurance and "managed care" programs such as HMOs and PPOs as methods of providing health coverage as well as controlling costs. The course introduces students to services provided by the government including Medicare, Medicaid and State Children's Health Insurance Program (SCHIP). Students will learn the basics of creating a budget under constraints such as contractual limitations and Diagnosis-Related Groups (DRGs).
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HHS 405  Population Health  3 Credit Hours
Population Health is defined as encompassing the health outcomes of a group of individuals as well as the distribution of those outcomes as related to the social determinants of health. Lectures, discussions, and group exercises focus on the impact of composite indicators in relation to population health including medical and health care, policy, genetics, behavior, social structures, and environmental factors. (F,W)
Prerequisite(s): HHS 200 or CHE 101
Restriction(s):
Cannot enroll if Class is Freshman

HHS 406  Program Evaluation  3 Credit Hours
This course will provide an introduction to key concepts in program evaluation. Students will learn about the systematic steps involved in evaluating public programs for efficiency and effectiveness. The course will rely on case studies, text examples, and discussion.

HHS 407  Fundraising & Grantwriting  3 Credit Hours
Full Course Title: Fundraising & Grant-writing in Health & Human Services
This course introduces students to the ways that health and human service programs secure resources to expand and improve their services, reach vulnerable or marginalized populations, and address existing or emerging social conditions. The primary focus of the course is on the development of grantseeking skills, but students will also gain exposure to a variety of fundraising approaches that may be relevant over the course of their career. Students will learn components of effective grant proposals and gain technical knowledge on designing supporting fundraising documents, such as budgets and project timelines. Students will work through a stepwise process to build their own grant proposal for a real or imagined program. Recommended pre-requisites include HHS 360 and/or HHS 460. (YR)
Prerequisite(s): COMP 106
Restriction(s):
Can enroll if Class is Junior or Senior

HHS 410  Quantitative Research and Statistics  4 Credit Hours
Full Course Title: Quantitative Research and Statistics
An introduction to methods of data collection and analysis. Elementary statistical data are analyzed using computerized statistics programs. A discussion of research design and the philosophy of social science applied to answering health and human service questions.
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore
HHS 412  Principles of Epidemiology  3 Credit Hours  
The study of the frequency and distribution, as well as the causes and control, of disease in human populations. Using data analysis tools, one can identify causes of disease and the effects of prevention and treatment. This course is an application of research design to determine the extent of which environment (toxins, for instance), heredity, childhood development, and lifestyle influence morbidity and mortality rates. (F,W,S)  
Prerequisite(s):  SOC 410 or HPS 410 or HHS 410 or CRJ 410  
Restriction(s):  
Cannot enroll if Class is Freshman or Sophomore  

HHS 415  Healthcare Administration  3 Credit Hours  
This course introduces students to administrative models and skills that can be used at a supervisory level. These conceptions include strategic planning, marketing, organizational communications, quality assurance, project management and team skills, supervision and evaluation, conflict resolution and office cultures and politics. A critical and historical perspective is used to understand the origins and meanings of these conceptions and the extent to which they correspond with the service mentality of health and human services. Applications to the health and human services will be central to the course. (F,W,S)  
Restriction(s):  
Cannot enroll if Class is Freshman or Sophomore  

HHS 425  Work w/Child in Health Setting  3 Credit Hours  
Full Course Title: Working with Children in Healthcare Settings This course is essential for students interested in working in health care settings, with children or pediatric populations, and in particular for persons seeking to become a Certified Child Life Specialist. The course is taught by a Certified Child Life Specialist and focuses on children in the health care environment. Topics of study include: Child Life documents, scope of practice, impact of illness, injury and health care on patients and families, family-centered care, therapeutic play and preparation. (F,W,S)  
Restriction(s):  
Cannot enroll if Class is Freshman or Sophomore  

HHS 430  Hlth Behavior & Hlth Education  3 Credit Hours  
This course provides an overview of social and behavioral science theories that guide the development of health education and promotion interventions aimed at preventing, reducing, and eliminating public health problems. Part one of the course describes the relationship between behavior and health, through a review of several current health problems faced by people in the United States. Part two presents a survey of health behavior theories ranging from those aimed at individual behavioral change to community health education promotions. The final part of the course looks at the application of theory to real-world health promotion and education interventions. Students will learn how social and behavioral theory informs intervention design, implementation, and evaluation. (F,W,S)  
Restriction(s):  
Cannot enroll if Class is Freshman or Sophomore  

HHS 433  Race/Ethnic Health  3 Credit Hours  
Full Course Title: Race, Ethnicity and Community Health This course provides a broad overview of health disparities in the United States, with a focus on the three types of social inequity-race ethnicity (and nativity status), socioeconomic status (SES), and gender. Epidemiological issues, health behaviors, health care services, and health and social issues specific to various minority populations in the U.S are covered. The underlying position of the course is that understanding groups that are at higher risk of developing poor health outcomes is crucial to developing better health care and health policy. (OC)  

HHS 435  Obesity and the Lifecourse  3 Credit Hours  
This course aims to introduce students to the fundamentals of the lifecourse perspective on health, while using “obesity” as a unifying example to illustrate its theoretical linkages to individual and population health, the practical implications for the administration and financing of the health care system, and for framing policy options. The course highlights the differential impact of obesity on (1) the health and socioeconomic achievement of individuals at various stages in the lifecourse; (2) the population health and economic needs or opportunities, as derived from the lifecourse profile of a specific population (i.e., age distribution and aging trends) and in the context of a changing structure of society; and (3) the demand for healthcare services and other stressors on the healthcare system. The course identifies the rationale, goals, scope, design, and potential for successful implementation of obesity-reducing policy interventions at different points during the lifecourse. (W).  
Restriction(s):  
Cannot enroll if Class is Freshman or Sophomore  

HHS 436  Reproductive Health Policy  3 Credit Hours  
This course provides a comprehensive introduction to the field of reproductive health in the US. Understanding women’s reproductive health requires consideration of the intersections of gender, race, class, culture, geography, economic status, and nation within a sociopathical context. The course introduces students to the historical trends in the regulation of women’s fertility and reproductive health. Readings draw from a number of different disciplines, including: law, medical studies, history, social sciences, and personal narratives to critically examine the intent and impact of current standards for reproductive health policy and practice. Topics include: reproductive justice, contraception, pregnancy, reproductive control, and family leave. Course discussions include a focus on health policy and activism to affect change related to women’s reproductive health, all within a framework of reproductive justice. A major emphasis is on developing critical thinking skills that can be applied to issues of women’s reproductive health in order to educate and empower students to become proactive healthcare consumers. (F,W,S)  
Prerequisite(s):  SOC 200 or SOC 201 or ANTH 303 or HUM 303 or SOC 303 or PSYC 303 or WGST 303  
Restriction(s):  
Cannot enroll if Class is Freshman or Sophomore  

HHS 440  Medical Sociology  3 Credit Hours  
An analysis of health and illness behavior from the point of view of the consumer, as well as medical professionals, the structure, strengths and weaknesses of the medical care delivery system in the U.S.; the impact of culture and personality on illness behavior, and a study of the institution of medicine and activities of health care professionals.  
Prerequisite(s):  SOC 200 or SOC 201  
Restriction(s):  
Cannot enroll if Class is Freshman or Sophomore
HHS 442 Medical Ethics 3 Credit Hours
An examination of moral issues in medicine. Among the problems to be considered are truth-telling and paternalism in the doctor-patient relationship, psychosurgery and behavior control, death and euthanasia, the allocation of scarce resources, and genetic counseling and control. Specific attention will be given to ethical theories and to philosophical concepts such as rights, autonomy, and justice. Students cannot receive credit for both PHIL 442 and PHIL 542. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 445 or PHIL 490
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HHS 448 Comparative Health Care System 3 Credit Hours
An introduction and overview of the English, Swedish, and People’s Republic of China health care systems. Focus on cultural and other organizational characteristics, unique features, approaches, and ability to solve problems. Emphasis on how three systems help us understand the American health care system.
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HHS 456 Health Care and the Law 3 Credit Hours
A comprehensive study of legal issues in health care, including regulation of hospitals, consent for treatment, confidentiality, experimentation, family planning, children’s rights, access to health care. The emphasis will be on the organizational and personal consequence of legal requirements. Junior/Senior standing is a requirement. Students cannot receive credit for both HHS/HPS 456 and HHS/HPS 556.
Prerequisite(s): SOC 201 or SOC 200 or POL 364
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HHS 470 Information Science and Ethics 3 Credit Hours
Technological innovations in how individuals, organizations, and governments collect and share personal information have raised myriad concerns regarding how that information can be best protected. Today’s highly networked world, individuals must acquire the knowledge and skills to engage with technologies in a safe and secure manner. This course provides an interdisciplinary exploration of the social, legal, ethical, and design challenges that arise when it comes to securing personal information and helping individuals maintain desired levels of privacy at home, work, and everywhere in between. (YR)

HHS 475 Soc Construct Mental Illness 3 Credit Hours
Diversity Issues in Mental Health explores varied cultural descriptions and models of mental illness. By focusing on the ways that culture shapes how people experience, and respond to, mental illness this class explores cultural representations of mental illness, ranging from discrete illness resulting from a chemical imbalance to a profound threat to order. We seek to understand the cultural, personal, and political underpinnings of mental illness and medical practices in societies throughout the world. The course utilizes an interdisciplinary perspective, drawing from multiple sources of information regarding mental health issues, including feminism, psychiatry, history, sociology, and literature. Issues raised throughout the course include the ways gender, race, culture, religion, and stigma influence the diagnosis of mental illness, patterns of help-seeking behavior, formation of comprehensive mental health policy, and treatment options. (F, W).
Prerequisite(s): SOC 200 or SOC 201 or ANTH 303 or HUM 303 or SOC 303 or PSYC 303 or WGST 303

HHS 480 Arab American Health 3 Credit Hours
This course explores health issues, practices, risk factors, and disease in the Arab world and MENA region, as well as in Arab American communities in the United States and in the State of Michigan. The course focuses on the interaction of culture, geography, and health in the Arab world and the impact of cultural commonalities on the health of the generations of Arab immigrants to the United States. (W)

HHS 490 Topics in Health 1 to 3 Credit Hours
Examination of problems and issues related to Health. Title as listed in Schedule of Classes will change according to specific content. Course may be repeated for credit when specific topics differ.

HHS 490C Topics in Health 3 Credit Hours
This course provides an overview of health education efforts with women and families, informed by a Maternal and Child Health framework and a life course perspective. Students successfully completing the course will be able to: 1) describe the field of maternal and child health, 2) describe health issues prevalent among both women of childbearing age and children, 3) understand interventions developed to address maternal and child health, and 4) understand how women are engaged in health education efforts targeted to women, children and men. This course will also provide students with means of applying principles in maternal and child health and the life course perspective in health education practice. This course is appropriate for students in Community Health Education, Public Health, Child Life, and Health Policy Studies.

HHS 491 HHS Senior Seminar 3 Credit Hours
Focus on current issues and practical problems faced by persons working in public health, health care organizations, human services delivery, and financing. Use of the case method (where appropriate) to demonstrate and discuss real problems and approaches in functioning institutions in Southeastern Michigan. Taught primarily from the point of view of individuals responsible for administering or advising such institutions. (F,W,S)
Prerequisite(s): (HPS 440 or HHS 440) and (HPS 336 or HHS 336 or HPS 364 or HHS 364 or HPS 390 or HPS 401 or HHS 402 or HPS 403 or HHS 403 or HPS 404 or HHS 404 or HPS 405 or HPS 415 or HPS 410 or HHS 410 or HPS 412 or HPS 412 or HPS 430 or HPS 430 or HPS 442 or HHS 442 or HPS 448 or HHS 448 or HPS 456 or HHS 456 or HPS 475 or HHS 475 or HPS 498 or HHS 498)
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore or Junior
HHS 495 Off-Campus Research 1 to 3 Credit Hours
Participation in ongoing research, and/or field experience at an off-campus laboratory, clinical, health, healthcare facility, or field site. Arrangements are made between the site, the student, the pre-health advisor, faculty member, and/or the academic advisor(s). Four to twelve hours laboratory or site experience attendance per week. Permission of advisor required. (F,W,S)

HHS 498 Independent Study 1 to 3 Credit Hours
Readings or analytical assignments in accordance with the needs and interests of those enrolled and agreed upon by the student and instructor, which shall not duplicate a formal course offering. (F,W,S)

HHS 499 Independent Study 1 to 3 Credit Hours
Readings or analytical assignments in accordance with the needs and interests of those enrolled and agreed upon by the student and instructor, which shall not duplicate a formal course offering. (F,W,S)

History (HIST)

HIST 101 The World to 1500 CE 3 Credit Hours
This course is an introductory survey of world history from the close of the Ice Age to the beginnings of globalization, ca. 1500 CE. We will compare world civilizations and examine the connections among them.

HIST 102 Medieval and Renaissance World 3 Credit Hours
An introductory survey of world civilizations from c.1000 CE to 1750 CE. The course explores global patterns of trade, technology and expansion, the role of geography, climate and catastrophe in shaping human societies, and the relationship between warfare and the rise of the nation state. Topics include the rediscovery of classical traditions in the Renaissance, the rise of the Gunpowder Empires in Asia and the Middle East, and cross-cultural interactions between the European West and the American ‘New World’.

HIST 103 The World Since 1500 CE 3 Credit Hours
This course is survey of world history since 1500 CE. It emphasizes global social, political and economic trends, including the impact of nationalism, imperialism, industrialization, dictatorships, and democratic institutions.

HIST 104 Chinese Civilization 3 Credit Hours
A broadly based introductory study of China that exposes the student to a culture very different from our own and helps that student to understand Chinese institutions and values. It explores essential elements of Chinese civilization in comparative reference to the development of western civilization. Recommended for freshmen and sophomores. (YR).

HIST 105 Japanese Society and Culture 3 Credit Hours
A survey of Japanese society and culture in the traditional and modern periods, treated within the comparative framework of the history of the western world. It examines the development of traditional culture under Chinese influence and the subsequent interaction with modern western nations. Recommended for freshmen and sophomores. (YR).

HIST 106 An Intro to the African Past 3 Credit Hours
Survey of the social, economic, political, intellectual and cultural heritage of the African peoples from prehistory to the present. Emphasis on internal dynamics of African society through five millennia, as well as the impact of external forces on African life. Themes of particular interest: the roots of African culture, the trans-Atlantic slave trade and the African diaspora in the New World, the European Conquest, and the character of the colonial order and the ongoing struggle to end the legacy of alien domination. (YR).

HIST 108 Latin America: The Colonial Era 3 Credit Hours
This course will examine the colonial period in Latin American history from the Spanish and Portuguese contact and conquest to the early nineteenth-century wars for independence. It will focus on the background of European colonization, the process of interaction between Natives and Europeans, the growth and development of colonial society, the shifting uses of land and labor, and the roots of the nineteenth-century revolutionary movements. (OC).

HIST 109 Latin America: The Modern Era 3 Credit Hours
This course examines the modern era in Latin American history from the early nineteenth-century wars for independence to the present day. The course will focus on the formation of the Latin American states, the development and growth of Latin American culture and society, the legacy of slavery, the transition to capitalism in the region, the growth of export economies and dependency, and the rise of nationalism and revolutionary movements in the region. (OC).

HIST 111 The American Past I 3 Credit Hours
A survey of the economic, social, and political developments in America from the colonial era to the Civil War.

HIST 112 The American Past II 3 Credit Hours
A survey of the economic, social, and political developments in America from the conclusion of the Civil War through the present.

HIST 290 Topics in History 3 Credit Hours
Problems and issues in selected areas of history. Title listed in Schedule of Classes changes according to content. Courses may be repeated for credit when specific topics differ. (OC).

HIST 291 Topics in History 3 Credit Hours
Problems and issues in selected areas of history. Title listed in Schedule of Classes change according to content. Courses may be repeated for credit when specific topics differ. (OC).

HIST 300 The Study of History 3 Credit Hours
A study of the theories of historical analysis, styles of historical writing, and approaches to historical research. For history majors who should elect it as soon as they declare their concentration. (F,W).

Prerequisite(s): HIST 101 or HIST 102 or HIST 103 or HIST 104 or HIST 105 or HIST 111 or HIST 112 or HIST 113 or HIST 114

HIST 302 Russian Intellectual History 3 Credit Hours
Examines the historical myths that supported traditional Russian institutions, the literature that expressed these myths in symbolic form, the relationships between the social classes, and the conflict of values and goals in 19th-century Russia. Through the literature of the period the course explores social, intellectual, and political movements. The material is organized to consider both revolutionary and reactionary ideologies, origins of each, and the dynamics between them. (AY).
This interdisciplinary course explores the modern and contemporary cultural history of Detroit, examining the ways in which various population groups have been creative from the nineteenth century to the present. The course highlights the work of architects, designers, photographers, visual artists, poets, and musicians, and situates them in the broader cultural context of American art and history. (OC).

**Restriction(s):**
Can enroll if Class is Freshman or Sophomore or Junior or Senior

**HIST 3125 Modern East-Central Europe 3 Credit Hours**
This class offers introductory knowledge about the history of 19th and 20th century East-Central Europe – often called the lands-in-between – in particular Poland, Hungary, Czechoslovakia, and Romania. It helps us understand major European phenomena from the perspective of smaller European states. We will focus on important historical moments, ideologies, and concepts that formed the area and affected the local identities.

**HIST 3130 Armenia Ancient Medieval World 3 Credit Hours**
The course is a general survey of Armenian history and culture from the pre-historic period to the early sixteenth century, with emphasis on Armenia's political, economic and cultural interrelationships with other countries and peoples in the Near and Middle East, Europe and Central Asia. The course analyzes how the major political and demographic shifts in world history impacted Armenia and the Armenians. Each era of Armenia history is discussed in terms of developments in the surrounding countries. Attention is given to politics, international relations, trade, religion, literature, art, and architecture.

**Restriction(s):**
Can enroll if Class is Freshman or Sophomore or Junior or Senior

**HIST 3131 Armenia in the Soviet Period 3 Credit Hours**
HIST 3131 will study the history of the Soviet Republic of Armenia, when it was ruled by Communists and was part of the USSR in 1920-1991. It will chronicle the broad political, economic, social and cultural developments throughout 70 years of Soviet history and will then study in detail how these developments affected life in Armenia, one the fifteen union republics of the USSR, and relations between Soviet Armenia and the Armenian Diaspora outside the USSR, including the Armenian American community. The course will help students to better understand the Soviet experience by focusing on developments not only in the political center in Moscow, but in the southernmost and territorially the smallest of all the Soviet republics. It will also help students to better comprehend the historical background to some contemporary developments in Transcaucasia (the South Caucasus), Turkey, Iran and the Arab states of Western Asia.

**HIST 3132 Armenians in the Modern World 3 Credit Hours**
The course is a general survey of Armenian history and culture from the early sixteenth century to the present, with emphasis on political, economic and cultural interrelationships with other countries and peoples in the Near and Middle East, Europe and the Americas. The course analyzes how the major political shifts in world history impacted Armenia and the Armenians. Therefore, each era of Armenian history covered in this course is discussed in terms of developments worldwide and especially in the surrounding countries. Studying Armenia and the Armenian people gives students an understanding of what happens to, and around small countries as they find themselves in a regularly changing international political environment. Attention is given to politics, international relations, economics, religion, literature, art, and architecture. Modern Armenian history and culture is discussed in relation to Ottoman, Iranian, Russian, West European, North America, and other civilizations.

**Restriction(s):**
Can enroll if Class is Freshman or Sophomore or Junior or Senior

**HIST 314 England: Tudors and Stuarts 3 Credit Hours**
A political, economic, and social survey of England from 1485 to the end of the 17th century. Focus is on the interrelation of society and politics as well as on the rise of England to major international status. (AY).
HIST 315  Modern Britain  3 Credit Hours
Course focuses on Great Britain from the time of the Industrial Revolution to the present. Major problems considered are industrialization, the British empire and its disintegration, the democratization of British political life, the creation of the welfare state, and Britain's role in the contemporary world. (AY).

HIST 316  African American History  3 Credit Hours
This course traces the experience of African Americans from their first landing in Virginia in 1619 through slavery and the Civil War. Emphasis will be placed on the origins of racism, the development of the slave system in the United States and the historical developments that led to the Civil War. (YR).

HIST 318  Early American Republic  3 Credit Hours
This course examines the history of the United States from the ratification of the Federal Constitution through the Presidency of Andrew Jackson. Particular attention is given to the process of political party formation, the impact of the "market revolution" upon life, the origins and ramifications of the Second Great Awakening, the antebellum reform movements, and slavery. (YR).

HIST 319  Civil War & Reconstruction  3 Credit Hours
This course examines America's pivotal middle period, a period of rising sectional tensions, bloody civil war, and protracted debate about the promise and limits of equality in the United States. Among the topics covered are the meaning of freedom in antebellum America, territorial expansion and the development of slavery as a political issue, the collapse of the national party system and the secession crisis, the meaning of the American Civil War, and the postwar settlement of reconstruction. (YR).

HIST 321  Late Imperial China  3 Credit Hours
Explores key issues in Chinese society and culture from around 900 CE to around 1800 CE, considering demography, family life and lineage organization, gender relations, farming and handicraft industries, intellectual trends, ethnic relations, popular culture, education, social stratification, and social control under imperial bureaucracy. (AY).

HIST 3211  Untold Caribbean: Field Course  3 Credit Hours
Full Course Title: Dark History and Untold Stories: Field Class in Caribbean Historical Archaeology. Field Class: involves international travel and required costs in addition to tuition. This class explores the story behind Caribbean "paradise." We use the analytical methods of historical anthropology to "read" sites of enslavement and resistance, as well as modern museum interpretations of Caribbean heritage, and engage in the production of new archaeological knowledge through excavation. We will ask how negative or "dark" history should be remembered, what life was like on Caribbean plantations, and how histories of slavery are relevant now. Throughout, we will examine how archaeology can tell the untold stories of the many people-black, white, free, and enslaved-who never made it into the history books. We will also contribute new voices with a "mini-field session" of archaeological excavation: students can gain a glimpse into scientific archaeology, and get to try out fieldwork to see if they would gain from a full field school. (S,OC)

HIST 322  Traditional China  3 Credit Hours
Examines Chinese history from ancient times to around 900 CE, stressing key developments in society, culture, and government that produced enduring cultural traditions, bureaucratic government, and distinctive patterns cultural exchange in Eastern Eurasia. (AY).

HIST 323  History of Modern China  3 Credit Hours
Studies China's historical evolution from around 1800 to recent events in the People's Republic; assesses China's distinctive path to modernity from traditional ideals and patterns of order, including demographic transformations, Western impact, rebellions and wars, nationalism and revolutions, and recent economic growth and social change. (YR).

HIST 325  Traditional Japan  3 Credit Hours
Traditional Japan from ancient times to around 1800; emphasis is placed on the evolution of Japanese institutions under the cultural influences of China. (AY).

HIST 326  Modern Japan  3 Credit Hours
Japan from around 1850 to present. The course considers the impact of foreign contacts on the Tokugawa system, the emergence of Japan as a modern state, Westernization and nationalistic reaction, the rise of militarism, the Pacific War, economic growth and social changes after the war, and changes in the U.S.-Japan relations. (OC).

HIST 329  Medieval Society  3 Credit Hours
An analysis of social institutions and ideas from the High Middle Ages through the discussion of original sources. (AY).

HIST 330  The Renaissance  3 Credit Hours
This interdisciplinary study of Renaissance culture focuses on its preeminent center, Italy, in the 15th and 16th centuries. The course investigates major aspects of art, music, literature, and philosophy and their relationships to social, economic, and political structures.

HIST 331  The Reformation Era: 1500-1648  2 to 3 Credit Hours
A study of the nature, course, and impact of the Protestant Reformation in Europe, Humanism, the Counter-Reformation, and the cultural and social implications of Protestantism also receive attention. (YR).

HIST 332  The Age of Revolution in Europe and the World  3 Credit Hours
This course examines revolution in an era of global imperialism, considering connections and drawing comparisons among world revolutions in the late eighteenth and early nineteenth centuries. (AY).

HIST 333  The Age of Revolution in Europe and the World  3 Credit Hours
Europe in the age of nationalism, industrialism, imperialism, and democracy; background and origins of World War I. (YR).

HIST 334  Europe in Age of Imp:1815-1914  3 Credit Hours
Europe in the age of nationalism, industrialism, imperialism, and democracy; background and origins of World War I. (YR).

HIST 335  20th-Century Europe, 1890-1945  3 Credit Hours
Europe before, during, and after World War I; the rise of communism and fascism; World War II. (AY).

HIST 336  The Contmp World, 1945-Present  3 Credit Hours
The post-war world, U.S.-Soviet rivalry, European/Japanese renaissance, the Chinese Revolution; decolonization and the emergence of the Third World. (OC).

HIST 337  Germany Since 1945  3 Credit Hours
This course covers the history of Germany since World War II. It examines 1) the postwar period and the legacy of Allied occupation; 2) the process by which Germany was divided and the period of its division, tracing the histories and divergent characters of East and West Germany; 3) the different ways in which both the Cold War context and the legacy of the Third Reich shaped the German experience of twentieth-century revolutions of society, culture, and sexuality; 4) Germany's re-unification after 1989; and, finally, 5) the subsequent challenges in identifying a newly united but increasingly multicultural Germany's place in a unified Europe, focusing on issues of immigration, national identity, and citizenship.
HIST 337  Islamic Movemnts Mid East Hist  3 Credit Hours
Will compare several Islamic movements in Middle Eastern history, starting with the rise of Islam in Mecca and Medina. Later impulses toward Islamic revival all looked back to the first movement, and hoped to capture both its spirit and its success. With this as background, the course will move to address two questions: How did later Islamic movements understand the history of the rise of Islam? How have later Islamic movements had to adapt their methods and their ideology to different historical circumstances? (AY).

HIST 338  Women&Islam Mid East to 1900  3 Credit Hours
This course covers the historical development of Islam's normative stance towards women and gender roles in the Middle East from the rise of Islam to the earliest stirrings of feminist activism.

HIST 3380  The European City, 1750-2000  3 Credit Hours
As a novel form of social and spatial organization, the rise of the modern industrial city transformed the European landscape. This course tracks the growth and development of the city in modern Europe, focusing particularly on London, Paris and Berlin. The course considers the physical landscape of the industrial city and the infrastructural challenges of rapid urbanization, political revolution, the exercise of political power and social control in urban space, as well as intellectual and artistic responses to the urban environment. In the final two units of the course we consider 20th-century challenges to the model of urban modernity that has carried over from the nineteenth century, and which remains so powerful today.

HIST 3385  Sex, War, and Violence  3 Credit Hours
Full Title: Sex, War, and Violence: Gender and Sexuality in the 20th Century European History. This course centers the often overlooked role of gender and sexuality in the 20th century European mobilizations of state violence such as the Holocaust, Armenian Genocide, and conflicts in the former Yugoslavia. It emphasizes the clashes that occurred between gains in gender and sexual rights during the century and projects of state violence that were frequently aimed at dismantling these gains. Attention is paid to the intersection of race, class, religion and gender in the (re)construction of new gender and sexual hierarchies in conflict and post-conflict contexts in the region. (OC)

HIST 339  Ottoman Empire in 19th Century  3 Credit Hours
The course is general survey of the history of the Ottoman Empire from the treaty of Kucuk Kaynarca in 1774 until the abolition of the caliphate in 1924. The course will examine such topics as modernization; imperialism; the rise of ethnic nationalisms among the empire's Christian and Muslim subjects; democracy; ideologies like Ottomanism, pan-Islamism, Islamic modernism, and pan-Turkism; and changing ideas about gender.

HIST 3390  20th c European Women's Hist  3 Credit Hours
This course focuses on selected events on the 20th century that illustrate the defining experiences of women in both Western and Eastern Europe. These include women's war experiences, women and 20th century ideologies (e.g., communism, nationalism, and fascism), women and the welfare state, and the state control of women's bodies.

HIST 343  Germany Before Hitler  3 Credit Hours
This course considers the history of Germany in the nineteenth and early twentieth centuries. Topics covered include the changing nature of German national identity, the creation and fall of the German Empire, colonialism, immigration, World War I, and the Weimar Republic. (AY).

HIST 345  West Africa Since 1800  3 Credit Hours
A history of the West African peoples since 1800, which focuses on their unique cultural heritage. Themes include: West Africa before the advent of alien domination, the European Conquest, West Africa under the Colonial regimes, and the liquidation of colonial rule and the reassertion of West African independence. (AY).

HIST 3502  The Middle East 570 to 1800 CE  3 Credit Hours
This course covers the social and political history of the Middle East from the rise of Islam through several key transformations to 1800. We will examine the Middle East as the center of caliphal empires, as a place of political fragmentation, as a home to increasingly diverse ethnic and religious groups, as a region within an expanding Islamic world, and as the domain of the three so-called “gunpower empires” (the Ottoman, Safavid, and Mughal dynasties). (YR)
Prerequisite(s): COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107

HIST 3512  Modern Middle East, 1918-1945  3 Credit Hours
This course surveys the history of major political events and social changes in the Middle East from 1918 to 1945. Among the topics covered are the struggle of Arab States for independence, the rise of Kemalism, and the rise of the Pahlavi Dynasty.
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

HIST 3520  Lebanon in Modern Middle East  3 Credit Hours
HIST 3520 studies the modern history of Lebanon and the country's involvement in broader Arab and Middle Eastern politics from the period when Lebanon's modern boundaries were established in 1920 to 2005 when Syrian troops were forced to leave the country. The course focuses on the relations of the Lebanese state, its various ethno-confessional communities and political groupings with the Great Powers like France, the United Kingdom, the Soviet Union and the United States of America, as well as with the influential Arab states in the region, in particular Egypt, Syria, Saudi Arabia and Iraq. Particular attention is paid to the impact of the Arab-Israeli conflict and the presence of Palestinian refugees on internal Lebanese politics. The course also analyzes the diverse, sometimes contrasting, visions among Lebanon's various local elites towards the country's place in the region and the world and how these visions underwent change in light of evolving internal social and external political developments. (YR)

HIST 354  The United States and Vietnam  3 Credit Hours
The Vietnam War was a major turning point in U.S. history. This course focuses on French rule in Indo-China; U.S. interests in the region; U.S. involvement after 1945; the military, economic, and social nature of that intervention; and the consequences of the war. (OC).
Prerequisite(s): COMP 106 or COMP 270 or COMP 280
HIST 355  Eng Colonies in Amer, 1607-1763  3 Credit Hours
European expansion into North America; colonial societies, ideas, and institutions; imperial policy and administration, and accompanying changes in Amerindian and African cultures, and New World ecologies. (YR).

HIST 356  American Revolution, 1763-1815  3 Credit Hours
The causes, character, and consequences of the American Revolution, and the shaping of a new nation through the War of 1812. (YR).

HIST 358  Emerg of Modern U.S., 1876-1916  3 Credit Hours
An intensive study of the history of the United States from the end of Reconstruction to America's entry into World War I. Particular attention is paid to the social, economic, and intellectual aspects of the period and to the origins of 20th-century America. (OC).

HIST 359  Era of World Wars: 1916-1946  3 Credit Hours
An intensive study of the history of the United States from 1916 to 1946. Topics include World War I and its aftermath, the Depression, the New Deal, World War II, and post-war settlements and problems. (AY).

HIST 360  The U.S. Since 1946  3 Credit Hours
This course focuses on the period from the end of World War II through the early twenty-first century and covers political, social, cultural, foreign policy, and economic history. Particular attention is given to the Cold War, civil rights movements, and the problems of contemporary America. (AY).

HIST 361  Michigan History  3 Credit Hours
This course covers some of the major trends and developments in the history of the state of Michigan from its aboriginal past to the present day. The course will focus upon placing the state's history within a broader national and international context and will focus upon such topics as aboriginal settlement and culture, colonization, American settlement and statehood, industrialization, immigration and political development. (YR)

HIST 362  Eur and Intern'l Econ History  3 Credit Hours
A survey of the processes of industrialization in the major non-American industrial economies, with a focus on their relevance and implications. (AY).

HIST 363  Rel in Amer Hist: 1607-1865  3 Credit Hours
A survey of the religious movements and trends in America from the 17th century to the Civil War, with emphasis on Puritanism, 18th-century revivalism, and 19th-century denominationalism and social reform. (AY).

HIST 3632  The US in the Middle East  3 Credit Hours
HIST 3632 will examine the involvement of the US in the Middle East from the late 18th Century to modern times. The relationship between domestic politics and foreign policy (both in the US and in the Middle East) will be examined as US involvement in the Middle East grows from irregular missionary and commercial activity in the 19th century, to the establishment of full diplomatic relations, to the complexities related to the globalization of the oil industry, Cold War interventions and, ultimately, the establishment of US hegemony in the region. Students will examine a number of "case studies" in US-Middle East relations as a platform for their own research into other episodes of American involvement in the Middle East. (YR).

HIST 3634  History of Islam in the US  3 Credit Hours
This course traces the long history of Islam and of Muslims in the United States (1730s-present), paying careful attention to the interaction among Muslims across the dividing lines of race, gender, immigrant generations, sect, political orientation, and class, and between Muslims and other Americans.

HIST 3635  The 1960s in America  3 Credit Hours
This course aims to interweave the civil rights movement, the Vietnam War, the student movements, the women's movement, and other developments of the period to place them in an historical context of a complicated era of change. The course compels students to critically evaluate social movements, political developments, cultural trends, and foreign policies by close examination of primary documents as well as critical evaluations of the various ways that scholars have interpreted the period. (AY).

HIST 364  Rel in Am Hist II: 1865-Present  3 Credit Hours
A survey of American religion from the Civil War to the present, with emphasis on ethnicity and religion and post-World War II revivals of religion. (AY).

HIST 365  Black Intellectual History  3 Credit Hours
Full Course Title: Black Intellectual History: From Africa to the Diaspora
This course will bridge thinkers in Africa and the African Diaspora, i.e., North America, the Caribbean, and South America. It examines African and Diasporic intellectual movements from Ancient Egypt and Ethiopia to the present. Authors studied will include C.L.R. James, Frederick Douglass, Mary McLeod Bethune, Ida B. Wells-Barnett, Julius Nyerere, David Walker, Nelson Mandela, W.E.B. DuBois, Franz Fanon, Martin Luther King, Jr., and Cornel West. (YR)
HIST 3651  Women Leadership/Social Change  3 Credit Hours
The purpose of this seminar is to examine women's leadership in movements for social change. We will approach this topic through the study of historical examples, drawn primarily from the twentieth-century United States, and including movements for economic justice, race relations, sexual identity, peace, gender equality, public health, and social welfare. HIST 112 and WGST/ANTH/HUM/SOC/PSYC 303 recommended as prerequisites. (W)
Restriction(s):
Cannot enroll if Class is Freshman

HIST 3665  Automobile in American Life  3 Credit Hours
The course will explore a wide array of distinct, though interconnected, subjects such as: the manufacturing, engineering and design of the automobile and its relation to industrial and technological developments and consumer trends; the automobile's role in America's industrial growth and the impact that industrialization had upon American society; the automobile's role in urbanization and urban sprawl; the mass marketing of the automobile and its connection to broader social constructions of class, race, and gender; the environmental impact of the automobile; and the automobile's use and meaning as a cultural symbol and its relation to the American identity. Through the use of diverse mediums such as personal recollections, popular music, film, photographs, advertisements, automobile ephemera, literature, poetry and more traditional written sources the course will examine America's ongoing fascination with the automobile. (OC)

HIST 3666  Henry Ford and His Place  3 Credit Hours
Using the biography of Henry Ford as a touchstone, the course will examine the trajectories of historical change and regional development between 1870 and 1950. Of fundamental concern will be southeastern Michigan's transformation from a 19th century outpost on the Great Lakes to the nation's "engine of change" in the 20th century. Henry Ford was the major player in that revolutionary transformation. This course examines his role in history and mythology as well as the causes and implications of that transformation. (OC)

HIST 3671  Intro to Arab American Studies  3 Credit Hours
This course explores the local, national, and global conditions through which Arab American identity and its alternatives take shape. It introduces students to humanities and social science approaches to the field of Arab American Studies.
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

HIST 3672  Public Cultural Work  3 Credit Hours
Full Course Title: Public Cultural Work in Arab Detroit This course explores the field of public humanities work while providing a topical focus on metro-based Arab American history and culture. Roughly half of the course will be used to explore different approaches to public humanities work undertaken by scholars. The second half of the course will provide the historical and social context for understanding a particular research question to be examined jointly by the instructor, students, and a local cultural institution. Students will engage in intensive research and work with a cultural institution to represent their findings to the public. (OC)

HIST 3673  Arabs & Muslims in Media  3 Credit Hours
This course examines how perception of Arabs and Muslims took shape in the U.S. from the late nineteenth century through the present. Using historical developments as a conduit, we explore the treatment of Arabs and Muslims in news outlets, print media, film, and T.V. productions. For example, we analyze the motivation, plot construction, casting, and content of big budget Hollywood movies for patterns of stereotypes and representations/misrepresentations. (FAY)

HIST 3676  Arab Americans Since 1890  3 Credit Hours
This is a survey of immigration from the Arab Middle East from 1890 to the present. Readings from available scholarship, discussions, and reports facilitate exploring the Arabic-speaking immigrants’ early and recent experiences as art of U.S. society, including settlement, work, worship, military service, leisure, intellectual life, and primary and formal affiliations across the U.S.

HIST 368  African American History II: 1865-Present  3 Credit Hours
The history of blacks in America is traced from the Reconstruction era and the rise of Jim Crow segregation to the Civil Rights movement of the 1960's and the current period. Special attention is paid to the migration of blacks to the north and the social-economic situation which they encountered there. (AY).

HIST 369  Civil Rights Movement in Amer  3 Credit Hours
A survey of race relations and civil rights activity from the late 19th century to the present. The principal focus, however, is on the period since World War II, especially on the mass-based Southern civil rights movement (1955-1965) and the various policy debates and initiatives of the past thirty years, most notably affirmative action and busing. We also examine critiques of non-violence and integrationism. (AY).

HIST 3695  American City  3 Credit Hours
This course examines the development of urban America from the European-style port cities of the colonial period through the edge cities of today. The bulk of the course will focus on the late 19th and 20th century urban environment with an eye towards understanding the diverse residents, cultures, economies, and geographies that have shaped American cities. We will cover everything from developments in transportation, architecture, business, and technology to immigration, politics, and urban culture. Broad concerns and constituencies have shaped the urban public sphere, the physical development of cities and the experience of living as an urbanite and, consequently, they will receive much of our attention. American patterns of development will then be placed in context with those of other nations and cultures. (AY).

HIST 370  Women in Am-Hist Perspective  3 Credit Hours
A survey of women's role in American society from colonial times to the present, emphasizing both change and continuity in women's experience. (YR).

HIST 3730  Bible in History  3 Credit Hours
In this course we will try to examine the historical circumstances and contexts surrounding the writing of The Hebrew Bible. Roughly speaking, we will begin by exploring three aspects of the subject: Historical context of the writing of the Bible-i.e. during the organizing and communicating of each segment. History of the canonization: the ideas and rationale behind including some books but not others. History in the Bible. In more specific terms, this will entail examining who wrote the Bible, when and why. The narrative incorporates the movement from an oral tradition to a written one and will demand some focus on certain pivotal moments, e.g., Ezra's reading (cf. Ezra-Nehemiah), or the historical events in Kings and Chronicles, or the defeat of the northern kingdom of Israel in 722 B.C.E. (BC) and of the southern kingdom of Judah in 589 B.C.E.
HIST 3735  Inside-Out Reading Prison Narr  3 Credit Hours
Full Title: Inside-Out Prison Exchange: Reading Camp and Prison Narratives The course invites students to reflect on various prison narratives from select European countries. We will investigate how men and women of different races and ethnicities experienced oppression and how they used their bodies and developed skills to remain human in dehumanizing conditions. This provides students with an opportunity to reflect on the circumstances that led to their imprisonment, but also with a way to examine how they narrated their life stories. While doing the course will examine the concept of agency as something that frames life stories. Finally, it will allow students to reflect on various ways individuals in various circumstances struggle to remake their lives inside as well as outside of prison. Various categories, such as gender, art, resistance, body and space will help us navigate through rich primary source material, which includes memoirs, drawings, paintings, and poems created within a constrained space of prisons and camps. The course is part of the Inside-Out Prison Exchange Program, which combines a theoretical knowledge with practical understanding and experience by holding class inside Macomb Correctional Facility throughout the semester. The class has roughly equal numbers of UMD students and incarcerated students, and utilizes a variety of active learning techniques, leading to the production of one or more class projects by the end of the course.

HIST 374  Hist of Industrial Technology  3 Credit Hours
Focusing on western Europe and the United States since the Industrial Revolution, this course will examine the history of manufacturing technologies and will include the following topics: mechanization and the rise of the factory; mass production; the process of innovation; design and diffusion of new technologies; technologies; technology and the changing nature of work; automation and lean production systems. Through readings, class discussions, and examination of artifacts (actual tools and machines), students will consider the central role played by technology in the making of modern society. (OC).

HIST 375  Heterodox Economics  3 Credit Hours
This course introduces students to alternative perspectives on economic theory and method. These alternatives include: Post Keynesian, Marxian and radical political economics, Austrian and feminist economics. (OC).
Prerequisite(s): ECON 201 or ECON 202 or ECON 2001

HIST 3750  Modern Warfare  3 Credit Hours
A chronological overview of the major military conflicts occurring between 1775 and 2001, with an emphasis on the technological, political, international and social changes that shaped the course of modern warfare. Designed to explore the connections between “total war,” the rise of mass society and the relationship between modern warfare, revolution and decolonization.

HIST 381  Intell Hist of Modern Europe  3 Credit Hours
An examination of the intellectual currents from the scientific revolution, the Enlightenment, the currents of 19th and 20th century thought including romanticism, conservatism, liberalism, socialism, Darwinism. Includes analysis of the reactions to World War I, the Russian Revolution, and World War II. Readings include works by Descartes, Rousseau, Marx, Darwin, Zola, Freud, Kafka and Koestler. (AY).

HIST 383  Labor in America  3 Credit Hours
A survey of urban workers from colonial times to the present. Among the topics covered are changing standards of living, the experiences of industrial work, labor organization, and working-class politics. (YR).

HIST 384  Immigration in America  3 Credit Hours
A survey of the "immigrant experience" in the United States, from the early 19th century to the present. Particular attention is given to enduring problems of economic adjustment and cultural assimilation, and to the impact of immigration on the host society. (AY).

HIST 385  Modern France  3 Credit Hours
A history of France from the French Revolution to the present. The major emphasis is on the political evolution of France with some attention to social and economic development. (AY).

HIST 386  Compar History of Technology  3 Credit Hours
This course will examine the history of technology from a comparative perspective: studying the development and impact of technology in different societies during various historical eras. Topics include: irrigation control and the rise of ancient empires; technology’s role in the industrial revolution; technological innovation and the pace of social change. Current issues and various analytical perspectives in the history of technology will also be examined. (OC).

HIST 387  Aspects of the Holocaust  3 Credit Hours
A survey of how and why millions of Jews, Gypsies, Slavs, and political and “racial” enemies of the Reich were so quickly and determinedly slaughtered. (YR).

HIST 389  Nazi Germany  3 Credit Hours
History of National Socialism, its goals and structure. Also addressed are the nature of the dictatorship; the role of the historian in interpreting the era and the use and evaluation of historical documents. (YR).

HIST 390  Topics in History  3 Credit Hours
Problems and issues in selected areas of history. Title as listed in Schedule of Classes changes according to content. Course may be repeated for credit when specific topics differ. (OC).

HIST 390D  Topics in History  3 Credit Hours
Schedule of Classes changes according to content. Course may be

HIST 390D  Topics in History  3 Credit Hours
Schedule of Classes changes according to content. Course may be

HIST 390E  Topics in History  3 Credit Hours
TOOLTIP TITLE: Reconstructing Historical Memory: The Second World War and the America Cinema.
Prerequisite(s): HIST 365 and HIST 261 and HIST 262 and HIST 263
Restriction(s):
Cannot enroll if Class is freshman
Can enroll if Level is Undergraduate

HIST 3900  Topics in History  3 Credit Hours
Topic: The Native American Past. This course introduces students to the long and rich history of America’s First Peoples from earliest times to the present. Although the topics covered in class will be wide-ranging, the course emphasizes certain unifying themes: the diversity of indigenous peoples and cultures; the agency of First Peoples; the political, economic, and cultural dimensions of European/Indian accommodation and resistance; the evolution of government Indian policies and Native American responses to them; and contemporary issues confronting native peoples. The course examines the Native American Past from native people’s perspectives, by including the unfamiliar voices of those peoples in more familiar accounts of America’s past, and by introducing students to ways of studying neglected parts of the past and to some of the varied ways that historians (both Native and non-Native) have interpreted the Native American past.

HIST 391  Topics in History  3 Credit Hours
Examination of problems and issues in selected areas of history. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

HIST 398  Independent Studies in History  1 to 3 Credit Hours
Readings or analytical assignments in history in accordance with the needs and interests of those enrolled and agreed upon by the student and instructor. (OC).

HIST 399  Independent Studies in History  1 to 3 Credit Hours
Readings or analytical assignments in history in accordance with the needs and interests of those enrolled as agreed upon by the student and instructor. (FW).

HIST 4200  History and Trauma  3 Credit Hours
This research seminar focuses on the key problems related to the concept of trauma and history. It covers in-depth examples of historical events, such as genocides and natural and man-made disasters that affected societies in a deeply traumatic way. While analyzing the nature of these events, we also ask about the ways individuals and societies remember, how various generations deal with the difficult past, and what strategies they employ as a response. We ask about the sociological and cultural significance of memory and oblivion; suffering and heroism; repression and any sense of guilt. In addition to examining various repercussions of a difficult past, we also ask about how historians approach the questions of historical trauma – what questions they ask, what sources they use, and which tools allow them to connect the complex past with the present. (OC).
Prerequisite(s): HIST 300
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HIST 4312  European Encounters, 1400-1800  3 Credit Hours
During the early modern period, merchants, explorers and travelers set out from the European West in unprecedented voyages of discovery, intensifying interaction between cultures and initiating contact with previously unknown civilizations. In this advanced seminar we examine original documents (in English) as well as current scholarship about encounters between groups of Europeans and inhabitants of other parts of the world from the perspective of both sides. Comparing these contradictory (and often incompatible) accounts of the same events, provides a more comprehensive understanding of the process of European expansion, and of the strengths (and limitations) of historical sources. Additional assignments will distinguish the undergraduate and graduate versions of this course.
Prerequisite(s): HIST 300
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if College is Arts, Sciences, and Letters

HIST 4401  Seminar: African Diaspora  3 Credit Hours
Research seminar on the history of the African Diaspora in the Atlantic World. This course covers examples of classic texts in the field, as well as significant new scholarship, with an emphasis on critical reading, analysis, and the development of an independent research project. Students gain a deeper understanding of the significance of the African Diaspora in the New World, derived from lectures and discussions providing an overview of this subject, as well as the micro views gleaned from sharing classroom presentation about students’ individual research topics. The graduate version of this course includes weightier readings and assignments, with a research paper for potential publication.
Prerequisite(s): HIST 300 or AAAS 275 or HIST 345 or AAAS 345
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore or Graduate

HIST 4505  Feminism & Mod. Mid. East  3 Credit Hours
This course provides an analysis of the history, historiography, and sources for the study of feminism in the Middle East since 1800.
Prerequisite(s): COMP 106 or HIST 101 or HIST 300
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HIST 4515  Culture& Hist. in Mod. Iran  3 Credit Hours
Alongside the most influential academic studies of Iran, this course uses cultural sources (such as literature and film) as windows on the pivotal social and political movements in Iranian history since 1800. This study of cultural change factors in cultural debates inside Iran, the growth of the Iranian Diaspora, and the increased presence of Iranian culture in electronic media. Additional assignments distinguish the graduate version of this course from the undergraduate version.
Prerequisite(s): (HIST 101 or HIST 103) and (COMP 106 or COMP 220 or COMP 270 or COMP 280) and (HIST 337 or HIST 338 or HIST 339 or HIST 3130 or HIST 3132 or HIST 3502 or HIST 3511 or HIST 3512 or HIST 3520 or HIST 3632 or HIST 4505 or AAST 3150 or AAST 3151 or AAST 3634 or AAST 3673 or AAST 3676 or AAST 373 or AAST 381 or AAST 4676 or AAST 4677 or AAST 4678 or AAST 473 or ANTH 373 or ARBC 301 or ARBC 302 or ARBC 305 or ARBC 331 or ARBC 332 or ARBC 350 or ARBC 351 or ARBC 390 or ARTH 384 or ARTH 385 or COMM 430 or ECON 444 or GLOC 301 or PHIL 306 or POL 385) or HIST 300
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore
HIST 4600  U.S. Cultural History  3 Credit Hours
The seminar concentrates on scholarly interpretations of U.S. history through a cultural lens. It features close analysis of classic texts in American cultural history as well as significant new works of scholarship, with an emphasis on critical reading, analysis, and historiography of the field. Students gain a deeper understanding of the cultural aspect of U.S. history and a familiarity with this mode of analysis, its guiding theories, newest trajectories and scholarly debates, and impact on the field of history as a whole. Additional assignments will distinguish the undergraduate and graduate versions of this course. Cannot receive credit for both HIST 490A and HIST 4600.
Prerequisite(s): HIST 300
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HIST 465  The Family in History  3 Credit Hours
An analysis of the emergence of the modern family from the 16th century to the present with focus on the history of childrearing, family size and structure, intra-familial and inter-generational relationships and population patterns. (OC).

HIST 4650  Sem in US Women's History  3 Credit Hours
Seminar on the historiography and key primary sources related to U.S. Women's History. The course covers examples of classic texts in the field as well as significant new works of scholarship, with an emphasis on critical reading, analysis, and historiography of the field. Students gain a deeper understanding of the field, its guiding concepts, foundational texts, newest trajectories, and impact on the field of history as a whole. The graduate version of this course includes weightier readings and assignments.
Prerequisite(s): HIST 300
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HIST 4677  Arab American Identities  3 Credit Hours
Beginning with an overview of the contemporary history and social developments in the Arab Near East, we survey immigration from the region to the U.S., and examine a range of evidence for understanding how Arab immigrants became an integral part of U.S. society. We examine immigrant narratives and immigration paradigms, to appreciate the successes and challenges Arabs and Arab Americans encountered. Readings and discussions explore various disciplinary approaches for understanding Arab Americans’ experiences with race/ racialization, ethnicity, national attachments, sex, and gender. (OC).
Prerequisite(s): HIST 300 or (AAST 3676 or HIST 3676) or (AAST 3150 or HIST 3671)
Restriction(s):
Cannot enroll if Class is Freshman
Can enroll if Level is Undergraduate

HIST 4680  Middle Eastern Diasporas  3 Credit Hours
This course explores the diasporas of Arabs, Turks, Assyrians, and Iranians living in Europe and the Americas that have occurred since the 1880s. It pays careful attention to how “aspects of diaspora” shape, mimic, transect, and undermine the political and economic regimes of which they are part. The reception of Middle Eastern communities in different national contexts and historical periods receive special attention as do their adaptive strategies as religious, ethnic, gendered, and racialized minorities. Those enrolled in the graduate level of the course pursue additional readings and assignments.
Prerequisite(s): AAST 3150 or HIST 300
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

HIST 4690  Borderlands History  3 Credit Hours
In this advanced reading seminar, students explore major themes and historiographical approaches to the study of borderlands history. Borderlands history is a growing historical field that focuses on interactions of peoples and empires across present day national boundaries. Borderlands history is a historical approach that originated among historians of the United States, so a majority of our readings focus on North America. Many of the insights of the U.S. borderlands history, however, have influenced historians of borderlands regions worldwide, and so we also read borderlands histories focusing on other regions of the world, particularly China and Central Eurasia.
Prerequisite(s): HIST 300

HIST 497H  History Seminar  3 Credit Hours
This course is unlike other courses offered by the history discipline in that its primary function is to introduce students to the process of intensive historical inquiry with its end being the production of a high-quality, original research paper. As a seminar, it is intended for advanced concentrators who will research their own specialized topics within the intellectual community of the seminar?providing support and enrichment for the other class members. The general theme for the semester is ? Microhistory.? Within this general rubric we will be focusing upon three major issues: 1) Microhistory as a tool of historical investigation/analysis [i.e., what is microhistory?], 2) the advantages/disadvantages of this approach to historical inquiry [what can it reveal for us?], and 3) employing the technique to produce a discrete microhistorical study [how do we do it?]. The overall purpose of this micro-level approach is to provide a distinct, readily accessible medium through which to consider broader historical trends.

HIST 498  Senior Honors Thesis  3 Credit Hours
Two successive semesters of independent work on a major research paper under the direction of a member of the discipline and the program coordinator. (F,W).
Restriction(s):
Can enroll if Class is Senior or Graduate
Can enroll if Major is History

HIST 499  Advanced Ind Studies in Hist  1 to 4 Credit Hours
Readings and analytical writing in history, in accordance with the interests of the student and approval of the instructor. Students must submit a written proposal of study for approval. (OC).
Restriction(s):
Can enroll if Level is Undergraduate
History of Music (MHIS)

MHIS 100  Intro to Music  3 Credit Hours
A study of Western classical music and its historical development up to the present, through examination of representative musical works.

MHIS 120  History of Jazz  3 Credit Hours
The course provides an introduction to jazz styles within their cultural context. Major figures (Louis Armstrong, Duke Ellington, Charlie Parker, and others) and styles (New Orleans, Big Band, Bebop, Cool Jazz, etc.) will be studied through recordings. Ideas about jazz as the expression of African American culture will be studied. (OC).

MHIS 130  Intro to World Music  3 Credit Hours
This course is designed as an introductory survey of non-western music traditions within the field called ethnomusicology. The music is studied in terms of sounds, musical instruments, forms and their functions in the society and culture that supports them. Music studied includes that of the Middle East, India, Australia, China, Korea and Japan. (YR).

MHIS 311  Music Before Bach  3 Credit Hours
A survey of the early history of music with emphasis on sacred and secular monophonic forms, the rise of part-singing and the opposition to it in the 17th century. (AY).
Prerequisite(s): MHIS 100 or MTHY 100 or MHIS 120 or MHIS 130 or MHIS 312 or MHIS 331 or MHIS 340 or MHIS 341 or MHIS 342 or MHIS 390 or MTHY 100 or MTHY 101 or MTHY 102 or MTHY 301 or MTHY 302 or MTHY 390

MHIS 312  Music from Bach to Brahms  3 Credit Hours
A survey of music in the 18th and 19th centuries with emphasis on the styles and forms of the major composers. (AY).
Prerequisite(s): MHIS 100 or MHIS 120 or MHIS 130 or MHIS 311 or MHIS 313 or MHIS 331 or MHIS 340 or MHIS 341 or MHIS 342 or MHIS 390 or MTHY 100 or MTHY 101 or MTHY 102 or MTHY 301 or MTHY 302 or MTHY 390

MHIS 313  Music Since 1900  3 Credit Hours
A survey of developments in musical styles (especially concert and popular music) and uses of music (film, theater, and recording technologies) in the 20th and 21st centuries.
Prerequisite(s): MHIS 100 or MHIS 120 or MHIS 130 or MHIS 311 or MHIS 312 or MHIS 331 or MHIS 340 or MHIS 341 or MHIS 342 or MHIS 390 or MTHY 100 or MTHY 102 or MTHY 301 or MTHY 302 or MTHY 390 or MTHY 101

MHIS 331  Music of America  3 Credit Hours
An historical and cultural study of American music in both the written and unwritten traditions. Content of the course includes not only the various forms of classical music produced in the new world but also primitive, popular, and vernacular genres. (OC).

MHIS 332  Hist of Popular Mus in the USA  3 Credit Hours
An introduction to popular music in the United States. This course will include music of the westward movement, ragtime and blues, the roots and growth of jazz, folk music, country music, music of Broadway and Tin Pan Alley, the roots of and development of rock music, as well as the historical, political and sociological background of the United States as pertinent to music history. (YR).
Prerequisite(s): MTHY 100 or MHIS 120 or MHIS 130 or MTHY 100 or MTHY 101 or MTHY 102

MHIS 333  Intro to Gospel Music  3 Credit Hours
This course explores the history and aesthetics of Black sacred music within cultural context. Major figures (Thomas A. Dorsey, Mahalia Jackson, The Winans Family, Kirk Franklin), periods (slavery, Great Migration, Civil Rights movement), and styles (folk and arranged Negro spirituals, congregational songs, and gospel songs - traditional to contemporary) will be studied through recordings, videos, film, and at least one field experience. Underlying the course is the theory (Mellonie Bunnim and Pearl Williams-Jones) that gospel music is an expression of African American culture that fuses both African and European elements into a unique whole. (OC).

MHIS 335  Multimedia and Music  3 Credit Hours
In this course, students will explore case studies of music created, performed, and distributed in combination with other media from the 1960s to the present. Multimedia is understood as any context in which several media are integrated, but particular focus will be paid to technological and creative innovations (such as video games, computers, and phones). The use of music will be considered in such media as film and television, multimedia performance and installation art, and international developments in multimedia production and distribution. (AY).

MHIS 336  Film and Music  3 Credit Hours
In this course, students will be introduced to the varieties of music used in film from c. 1900 to the present. Topics covered include a basic introduction to the musical features of Western European dramatic music; the role of music in the early decades of the 20th century; the growth of film and musical sound in the "classic era" of Hollywood film; the use of music in specific genres such as film noir, science-fiction, epic, and musicals; and the use of popular song in film. (AY).

MHIS 337  Women Musicians/West Mus Hist  3 Credit Hours
Through a historical survey of female musicians from the Middle Ages to the present day, this course takes a critical look at theories of creativity and professionalism as they relate to female musical production. The course deals with women in European "art music" traditions and also in jazz and poplar music. Social and cultural norms dictating appropriate female involvement with music are examined. The historical approach will serve to reveal ways in which terms such as professionalism and virtuosity have continually shifted and changed in reference to female musical performance. The course challenges students to re-think many of the commonly accepted gender-based descriptions of particular genres and elements of music through listening and musical analysis.
Prerequisite(s): MHIS 100 or MHIS 120 or MHIS 130 or MTHY 100 or WGST 275 or PSYC 275 or HUM 275 or SOC 275 or ANTH 275 or WGST 303 or ANTH 303 or SOC 303 or PSYC 303 or HUM 303 or WST 275
Restriction(s): Cannot enroll if Class is Freshman
MHIS 341  Symphony and Symphonic Poem  3 Credit Hours
The symphony and symphonic poem developed from their origins to their more complex later forms. Comparative analysis of similar forms in different periods. (OC).
Prerequisite(s): MHIS 100 or MHIS 120 or MHIS 130 or MHIS 311 or MHIS 312 or MHIS 313 or MHIS 340 or MHIS 342 or MHIS 390 or MTHY 100 or MTHY 102 or MTHY 301 or MTHY 302 or MTHY 390

MHIS 343  Opera  3 Credit Hours
A study of selected examples of music theater from the late 16th century to the present, including a comparison of the qualities of sung versus spoken drama, with emphasis on the achievements of such composers as Monteverdi, Mozart, Wagner, and Verdi. (AY).
Prerequisite(s): MHIS 100 or MHIS 120 or MHIS 130 or MHIS 311 or MHIS 312 or MHIS 313 or MHIS 331 or MHIS 340 or MHIS 341 or MHIS 342 or MHIS 390 or MTHY 100 or MTHY 101 or MTHY 102 or MTHY 301 or MTHY 302 or MTHY 390

MHIS 388  W. African Music: Trad.& Glob.  3 Credit Hours
West African popular music contains a unique mixture of African, Cuban, European and American influences. With the advent of radio and recording, music that was once locally based is now part of a national and international popular music industry. This course offers an overview of modern West African music, both traditional and popular. The course begins with an introduction to traditional West African instruments and musical genres. Next, there is an exploration of the fusion of traditional African styles with European, Cuban and American styles during and after the colonial era. The course culminates with an examination of the contributions of West African musicians to the World Music scene, focusing on issues of representation and Fair Trade.
Prerequisite(s): MHIS 100 or MHIS 120 or MHIS 130 or MTHY 100 or AAAS 106 or AAAS 275 or HUM 100 or HUM 270

MHIS 390  Topics in Music History  3 Credit Hours
Examination of problems and issues in selected areas of music history. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specified topics differ. (OC).

MHIS 399  Independent Study  1 to 3 Credit Hours
Advanced readings or analytical assignments in a particular area of music. Not more than three hours of independent study will be accepted toward the concentration. (FW).

Honors (HONS)

HONS 300  Four Trials  3 Credit Hours
To teach habits of informed criticism based on critical analysis of primary and secondary texts. This course will give Honors students the opportunity to learn reflective, critical listening and inquiry skills, which are essential to informed discussion of the Honors core course material. The content of specific courses will vary from semester to semester according to individual instructors.
Restriction(s):
Can enroll if Attribute is Honors Program

HONS 301  Western Culture I: Classical and Religious Traditions  3 Credit Hours
Full Course Title: Western Culture I: Classical and Religious Traditions First of series of four courses. An interdisciplinary course on the nature of the Western classical and religious traditions. It examines Western values, attitudes, history, art history, the roots of scientific thought, logic and social institutions such as the family and the state. Included are works of literature, history, philosophy, and art history.
Restriction(s):
Can enroll if Attribute is Honors Program

HONS 302  Western Culture II  3 Credit Hours
Second of four courses on Western Civilization required of all Honors Students. The course covers the period of the Middle Ages, Renaissance, and Reformation. Focus is on the ways in which Biblical and Classical traditions are preserved, adapted, transformed, or discarded under the pressures of new social and political formations. Materials are drawn from literature, philosophy, political theory, art. (F).
Restriction(s):
Can enroll if Attribute is Honors Program

HONS 303  Western Culture III  3 Credit Hours
Full Course Title: Western Culture III: Age of Enlightenment This course covers the period from the 17th to 19th centuries. Focus is on the emergence of scientific thought, enlightenment political theory, romantic individualism, and the great 19th-century intellectual revolutions of Darwinism, Marxism, and feminism. Materials are drawn from literature, philosophy, and political and scientific writings. Third of four courses on Western Civilization required of all Honors Students.
Restriction(s):
Can enroll if Attribute is Honors Program

HONS 304  Western Culture IV  3 Credit Hours
Full Course Title: Western Culture IV: Modern Era Fourth of four courses required of all Honor Students. This course covers the period from late 19th century to the present. Focus is on selected major issues of Western civilization in the modern era: science and human values, bureaucratic and totalitarian societies, psychoanalytical thought, feminism, nihilism, and existentialism.
Restriction(s):
Can enroll if Attribute is Honors Program

HONS 390  Honors Topic Course  3 Credit Hours
Full Course Title: Honors Topic Course Shell (F,W,S,OC)
Restriction(s):
Can enroll if Attribute is Honors Program

HONS 390C  Honors Topics Course  3 Credit Hours
Topic Title: Democracy, Division, and Hate: Democracy has been understood as a setting where equal citizens collectively make decisions about law and public policy in an environment of equality, fairness, and mutual respect. Political theorists from JS Mill to Rawls have attempted to define the conditions that make a democratic civil society possible. Today the world’s democracies are challenged by powerful political movements based on intolerance and division. How should democratic theory respond to the challenge of hate-based political movements? The course reexamines classic ideas in democratic theory, current sociological research.
Prerequisite(s):
HIST 365 or HONS 300
Restriction(s):
Can enroll if Attribute is Honors Program

HONS 400  Honors Advanced Seminar: Inter-Cultural Explorations  3 Credit Hours
In this advanced seminar, students in the Honors Program explore a topic in depth that connects various academic disciplines and cross-cultural contexts. (F, W).
Prerequisite(s): COMP 110 and COMP 220 and HONS 300
Human Centered Engineering Design (HCED)

HCED 220  Engineering Design Communication  2 Credit Hours
This course examines the fundamentals of researching, writing, and presenting technical information for diverse audiences and purposes. Students learn to plan, analyze and prepare for different types of communications; differentiate between audience types and their needs for information; conduct research, understand authority of sources, and provide citations; develop effective listening techniques in business and technical situations. Techniques for writing communication documents, developing and delivering effective presentations and design portfolio, along with the media and technologies commonly used for design communication is also covered in this class. (F, W).
Prerequisite(s): COMP 105

HCED 370  Needfinding and Research Methods in Design  3 Credit Hours
This course surveys qualitative and quantitative need finding and research methods in human-centered engineering design including usability engineering. Different data collection and measurement techniques are covered for different types of data, including subjective, behavioral, and physiological data. Human subject involved experiment design is also covered in this course. Students learn to formulate research questions and hypotheses, design and conduct a design related research study, and present research results through various case studies. (W).
Prerequisite(s): ENGR 360

HCED 380  Product Prototyping: Tools and Methods  4 Credit Hours
This course introduces the techniques and toolset necessary for developing low and medium fidelity prototypes to support the human-centered engineering design process. This includes CAD modeling, rapid prototyping, 3D printing, inventive problem solving techniques, sketching, storyboards, role-playing, visualization, virtual reality, and interaction prototyping techniques. Prototype testing techniques and tools are also covered in this course. Students work on individual and semester-long team based design projects in the Design Studio Lab by developing various product prototypes that fulfill customer needs using knowledge, methodology and skills obtained in the class. (W).
Prerequisite(s): ENGR 360 and HCED 370

HCED 450  Product Realization: Design and Making  4 Credit Hours
Students will build on the foundation created in HCED 380 and will work on a single semester long project that executes the entire design process from conceptualization through presentation of a customer ready prototype, and creation of a project based portfolio. Different high fidelity engineering design and prototyping tools and techniques will also be covered in this class, including CAD/CAE, microcontrollers, process simulation, software platforms, risk analysis methods, virtual reality, data visualization, and 3D printing. (W).
Prerequisite(s): IMSE 4425 and HCED 380 and ENGR 250 and (ME 260 or ME 265) and ECE 210 and (CIS 150 or CIS 1501 or ECE 270 or IMSE 255 or ENGR 216)

HCED 4951  Capstone Project in HCED: Needfinding and Conceptualization  2 Credit Hours
Summary project using knowledge, methodology, and skills obtained in Human Centered Engineering Design major. Students implement an original design concept and present it to a professional jury. (F, W).
Prerequisite(s): HCED 450

HCED 4952  Capstone Project in HCED: Design and Implementation  2 Credit Hours
This course is a continuation of HCED 4951. Students will complete the development process to conceive a functional product. Students present their final design to a professional jury. (F, W).
Prerequisite(s): HCED 4951

Humanities (HUM)

HUM 170  Studies in Humanities  3 Credit Hours
An interdisciplinary examination of selected key ideas in contemporary western thought. Emphasis will be placed upon how the issues and problems in question manifest themselves in popular and high culture. (YR).

HUM 171  Styles in 19th Century  3 Credit Hours
An introduction to the two principal styles of the 19th century, romanticism and realism, viewed within the general evolution of European civilization. After reading works of the classical tradition, the class will study masterpieces that illustrate the romantic and realist movements. (OC).

HUM 200  The Human Condition  3 Credit Hours
The human condition as seen in selected works of philosophy and literature. Typical issues: the meaning of life, the existence of God, moral responsibility for human actions, and the role of society in promoting or hindering human excellence. (YR).

HUM 201  Religions of the World  3 Credit Hours
A study of religion in essence, in manifestation, and in relationship with the other dimensions of culture; a treatment of man's religious interests and the various ways in which he has sought to pursue these interests. Surveys major world religions. (OC).

HUM 221  Great Books I: Ancient World  3 Credit Hours
Introduction to masterpieces of Western world literature from the ancient world. Readings include the Bible, Iliad, Odyssey, Greek drama, and Roman authors. (YR).

HUM 240  Film and Society  3 Credit Hours
A survey of the major genres of film, chiefly in historical and political perspective, but also in light of important intellectual frameworks (e.g., feminism, psychoanalytical theory). The films selected, both Western and non-Western, will be examined both for their visual codes of meaning and for their wider role in developing a powerful social language in various cultural contexts. (OC).

HUM 248  Introduction to Screen Studies  3 Credit Hours
This course will introduce students to the development of world cinema by integrating the aesthetics of film with its technology, and its social and economic milieu. It will train the students in analyzing the formalist qualities of the medium, and in understanding the evolution of its various genres and styles. (YR).

HUM 290  Topics in Humanities  1 to 3 Credit Hours
Examination of problems and issues in selected areas of the humanities. Title as listed in Schedule of Classes will change according to content. Course may be repeated when specific topics differ. (OC).
HUM 300  Intro to AAAS  3 Credit Hours
This gateway course in the African and African American Studies Program introduces students to the intellectual debates, historical perspectives and cultural issues central to the field of African and African American Studies. The course readings draw from the disciplinary strengths of the Humanities as well as the Social and Behavioral Sciences. Course materials include selections from literature, film, music, art, drama, folk and popular culture. The course content is supplemented by attendance at off-campus events and visits to institutions featuring significant aspects of African and African American history and culture.
Restriction(s):
Cannot enroll if Class is Freshman

HUM 303  Intro to Women's & Gender Stud  3 Credit Hours
This course provides an interdisciplinary overview of the key theories and topics in Women's and Gender Studies. Special attention is given to how gender intersects with class, race, nationality, religion and sexuality to structure women's and men's lives. Students are also introduced to methods of gender analysis and will begin to apply these methods to topics such as women and health, gender roles in the family, violence against women, and gendered images in the mass media.
Restriction(s):
Cannot enroll if Class is Freshman

HUM 304  Studies in Det.Hist. & Culture  3 Credit Hours
This interdisciplinary course explores the political, social, and cultural history of Detroit by examining ways various groups and classes have interacted with and been shaped by structures of power and influence. The course highlights trade and commerce, newcomers, and the influence of organizations and institutions within the contexts of labor, race, ethnic, and religious histories and current affairs, and examines how these fit into the evolution of Detroit from the 19th century to the present. Where pertinent the influence of national and international movements included.

HUM 305  The Arts & Culture of Detroit  3 Credit Hours
This interdisciplinary course explores the modern and contemporary cultural history of Detroit, examining the ways in which various population groups have been creative from the nineteenth century to the present. The course highlights the work of architects, designers, photographers, visual artists, poets, and musicians, and situates them in the broader cultural context of American art and history. (OC).

HUM 311  Art of China  3 Credit Hours
An introduction to the civilization of traditional China through the historical presentation of its art forms, literary achievements, and philosophical structures. The course will survey the Buddhist, Daoist, and Confucian content of Chinese art and culture from the Shang to the Qing dynasties.

HUM 312  Art of Japan  3 Credit Hours
An introduction to representative works of art produced in Japan from the Neolithic era down to modern times. The artifact's cultural context will be supplemented by attendance at off-campus events and visits to institutions featuring significant aspects of African and African American history and culture.
Restriction(s):
Cannot enroll if Class is Freshman

HUM 315  Early Chinese Art and Culture  3 Credit Hours
This course covers the art and material culture of China from the Neolithic through the Han dynasty. Topics include the visual arts used in palaces and tombs, religious art, and the rise of new technologies. It incorporates archaeological discoveries that have fundamentally transformed our understanding of Chinese history and culture, including evidence of people who lived at the center and also those at the periphery. Students will analyze literary and philosophical texts in translation to enhance understanding of the cultural context. (OC).

HUM 321  Popular Culture  3 Credit Hours
This course examines the art forms of contemporary popular culture, including rock ‘n roll, movies, television, advertising design, and commercial architecture. Our critical inquiry emphasizes the development of the aesthetics and the myths of our modern mass media environment, as well as relationships between popular and "high" culture. (AY).

HUM 3335 Intro to Gospel Music  3 Credit Hours
This course explores the history and aesthetics of Black sacred music within cultural context. Major figures (Thomas A. Dorsey, Mahalia Jackson, The Winans Family, Kirk Franklin), periods (slavery, Great Migration, Civil Rights movement), and styles (folk and arranged Negro spirituals, congregational songs, and gospel songs - traditional to contemporary) will be studied through recording, videos, film and at least one field experience. Underlying the course is the theory (Mellonee Burnim and Pearl Williams-Jones) that gospel music is an expression of African American culture that fuses both African and European elements into a unique whole. (OC).

HUM 335 Women in Medieval Art  3 Credit Hours
Women have often been regarded as the second sex of the middle ages due to the misogynistic attitudes of that era. Recent scholarship, however, has unearthed a significantly more complex picture. Through a study of visual representations of women in medieval art, this course will examine women's roles in the creation and patronage of art and literature, economic and family issues, and women's participation in new and innovative forms of religious piety.

HUM 335 Women Musicians/West Mus Hist  3 Credit Hours
Through a historical survey of female musicians from the Middle Ages to the present day, this course takes a critical look at theories of creativity and professionalism as they relate to female musical production. The course deals with women in European "art music" traditions and also in jazz and poplar music. Social and cultural norms dictating appropriate female involvement with music are examined. The historical approach will serve to reveal ways in which terms such as professionalism and virtuosity have continually shifted and changed in reference to female musical performance. The course challenges students to re-think many of the commonly accepted gender-based descriptions of particular genres and elements of music through listening and musical analysis.
Prerequisite(s): MHIS 100 or MHIS 120 or MHIS 130 or MTHY 100 or WGST 275 or PSYC 275 or HUM 275 or SOC 275 or WGST 303 or ANTH 303 or SOC 303 or PSYC 303 or HUM 303 or WST 275
Restriction(s):
Cannot enroll if Class is Freshman

HUM 343 Opera  3 Credit Hours
An introduction to the study of the musical genre of opera through consideration of major operas based upon literary and dramatic works. Covers examples of operas of all eras, from the time of Monteverdi to present. (OC).
Prerequisite(s): MHIS 100 or MHIS 120 or MHIS 130 or MHIS 311 or MHIS 312 or MHIS 313 or MHIS 331 or MHIS 340 or MHIS 341 or MHIS 342 or MHIS 390 or MTHY 100 or MTHY 101 or MTHY 102 or MTHY 301 or MTHY 302 or MTHY 390
HUM 345 Adaptations of Literary Texts  3 Credit Hours
This course explores the adaptation of literary texts in a variety of literary genres (poetry, drama, fiction) to other artistic mediums (film, graphic novels/comics, paintings, etc.). Moving beyond limited comparisons of "good" or "bad" adaptations, this course focuses on the dialogue among multiple versions of the same story across a range of historical periods, asking how and why adaptations modify their sources in a particular manner. This course addresses the difference between adaptation and appropriation as well as imitation, quotation, allusion, pastiche, and parody.
Prerequisite(s): (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239) and (COMP 106 or COMP 220 or COMP 270 or COMP 280)
Restriction(s):
Cannot enroll if Class is Freshman

HUM 346 Bible and Western Tradition  3 Credit Hours
An examination of Biblical literature in various English translations, with emphasis on genres and the use of Biblical materials in European and American literature, art, and music. (OC).

HUM 348 Warriors, Lovers, and Saints  3 Credit Hours
An in-depth examination of various personalities of the Middle Ages, both historical and fictional, who are distinctive for their martial prowess, their reputation as lovers, their piety, or some combination of these traits. Attention to these figures (e.g., Roland, Tristan, St. Augustine, and Abelard) will enable the class to consider important medieval norms of behavior, such as chivalry, courtly love, and Christian faith.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

HUM 349 The Bible in/As Literature  3 Credit Hours
This course will study selected readings from the Bible, first in regard to their own literary, historical, and cultural contents, and then in regard to their reception, interpretation, and reapplication by later literary tradition. Biblical selections may cover both the Old and New Testaments as well as Apocryphal traditions, while readings from later non-biblical texts will be drawn from various literary periods.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

HUM 355 Urban Voices: France and Italy  3 Credit Hours
This course is an interdisciplinary approach to the concepts of urban development and literary, visual and cultural responses to the process of urbanization mainly in Rome and Paris. The readings will illustrate how the city shaped the writers' creativity, as well as how their works interpret urbanization.
Restriction(s):
Can enroll if Class is Freshman

HUM 356 Reading Urban Monstrosity  3 Credit Hours
This course questions the literary techniques and forms the English writers developed between 1660 and 1900 to characterize and imagine London to be a unified community and to counter the growing perception of London as a "monstrous city." This image of "the English-speaking City" as an uncontrollable monster may be explored in writings by Daniel Defoe, Jane Austen, Elizabeth Gaskell, Robert Louis Stevenson, Charles Dickens, Thomas Hardy, and Joseph Conrad.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or COMP 220 or COMP 280 or COMP 270) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

HUM 357 National Cinemas  3 Credit Hours
This course will introduce students to the national cinema of a select country. In contrasting the evolution of global cinema with the dominant genres and conventions of Hollywood, the course will enable students to critically examine non-Hollywood narratives; the interaction of various nationalist movements within the institution of cinema; and the ways in which world cinema has been inflected by various indigenous performance practices and other visual representations. (OC).
Prerequisite(s): FILM 240 or HUM 240 or FILM 248 or HUM 248 or ENGL 248

HUM 358 Shakespeare on Film  3 Credit Hours
The course examines the adaptation of Shakespeare’s play-scripts for the screen. It goes beyond a discussion of the relative merits of plays and their respective film adaptations, examining the complex exchanges between the two artistic mediums (e.g., how stage convention such as soliloquies or off-stage action are adapted to the screen; how early silent films were used to market stage productions, etc.) It will approach the issue of adaptation by examining the works of key directors, multiple films of a single play, silent films, foreign language adaptations, mass market and art house films, and films which deal with fictive or actual productions of Shakespeare’s plays. Special emphasis will be placed on specific stage productions that are later adapted in to films. In this course, students will explore a broad range of responses to and interpretations of Shakespeare’s works. The class will stress the idea that each staging is an interpretation of the play, its point of view conditioned by the times, the medium, and the director’s vision.

HUM 366 Sexualities, Genders, & Bodies  3 Credit Hours
This course introduces key questions and debates in lesbian, gay, bisexual, transgender, and queer studies. Through engagement with multidisciplinary sources, students explore how sexualities, genders, and bodies are constructed and contested, how these constructions vary in diverse contexts and historical moments, and what gaps remain in our knowledge of LGBTQ lives. (YR)

HUM 371 Philosophy in Literature  3 Credit Hours
An exploration of philosophical problems as they are encountered in works of literature. Students electing this course must have successfully completed a previous course in philosophy or have permission of the instructor. (OC).
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 411 or PHIL 442 or PHIL 485 or PHIL 490
HUM 385  Black Cinema  3 Credit Hours
The course will examine selected films from African American and
African film traditions in order to analyze how their cultural production
is responsive to the conditions of social oppression, economic
underdevelopment, and neo-colonialism. How film traditions define “Black
aesthetics” will also be discussed. (AY).
Prerequisite(s): ENGL 240 or HUM 240 or ENGL 248 or HUM 248 or FILM
240 or FILM 248

HUM 388  W. African Music: Trad.&Glob.  3 Credit Hours
West African popular music contains a unique mixture of African,
Cuban, European and American influences. With the advent of radio and
recording, music that was once locally based is now part of a national
and international popular music industry. This course offers an overview
of modern West African music, both traditional and popular. The course
begins with an introduction to traditional West African instruments and
musical genres. Next, there is an exploration of the fusion of traditional
African styles with European, Cuban and American styles during and
after the colonial era. The course culminates with an examination of the
contributions of West African musicians to the World Music scene, focusing
on issues of representation and Fair Trade.
Prerequisite(s): MHS 100 or MHS 120 or MHS 130 or MTHY 100 or
AAAS 106 or AAAS 275 or HUM 100 or HUM 270

HUM 389  Nazi Germany  3 Credit Hours
History of National Socialism, its goals and structure. Also addressed are
the nature of the dictatorship; the role of the historian in interpreting the
era and the use and evaluation of historical documents. (YR).

HUM 390  Topics in Humanities  1 to 3 Credit Hours
This course offers upper division students an intensive study of the
works and lives of three poets who are considered among the greatest in
their respective cultures and in the world: Pablo Neruda, Aime Cesaire,
and T. S. Eliot. This will be an exploration of the artistic and aesthetic
sensibilities of these poets, their development as intellectuals, the
experiences that shaped their worldviews, and their engagement with
significant historic movements or moments of the 20th Century.

HUM 395  Japanese Art I  4 Credit Hours
Japanese art from prehistoric Jomon period to end of Edo period,
including painting, sculpture, architecture, and applied arts. Cultural
developments on Asian mainland will be treated to provide proper
placement of Japanese art within greater East Asian cultural context.
Taught at the Japan Center for Michigan Universities, Hikone, Shiga
Prefecture, Japan. (F).

HUM 396  Japanese Art II  4 Credit Hours
Continuation of Japanese Art I. Historical development of Japanese
painting from Asuka to Edo periods. Approach both chronological and
thematically. Secular and religious painting will be discussed.
Taught at the Japan Center for Michigan Universities, Hikone, Shiga,
Prefecture, Japan. (W).
Prerequisite(s): HUM 395

HUM 398  Independent Studies in Hum  1 to 3 Credit Hours
Readings or analytical assignments in the humanities in accordance with
the needs and interests of those enrolled and agreed upon by the student
and advising instructor. (F,W).

HUM 399  Independent Studies in Hum  1 to 3 Credit Hours
Readings or analytical assignments in the humanities in accordance with
the needs and interests of those enrolled and agreed upon by the student
and advising instructor. (F,W).

HUM 409  Feminist Theories  3 Credit Hours
This course examines the different perspectives that feminist theorists
have offered to analyze the unequal conditions of gendered lives. Students
taking this course will develop an understanding of how theory
functions as a way to know, understand and change the world. They
will also be provided with a lens for comparing the assumptions and
implications of alternative theoretical perspectives. A particular emphasis
of this course is on theorizing the interrelationships among gender, race,
class, sexuality and nationality. Course material includes applications of
feminist theory to issues such as gender identity formation; sexuality;
gender, law and citizenship; women and work; and the history and politics
of social movements. Students will not receive credit for both WGST 409
and WGST 509. (AY).
Prerequisite(s): WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or
HUM 303

HUM 415  Existentialism and Its Sources  3 Credit Hours
An exploration of existentialism through the study of literary and
philosophical texts. Particular themes such as freedom, commitment,
alienation, and death will be considered in an attempt to formulate an
existential conception of the human condition. (OC).
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or
PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or
PHIL 310 or PHIL 315 or PHIL 320 or PHIL 355 or PHIL 340 or PHIL 350 or
PHIL 365 or PHIL 369 or PHIL 370 or PHIL 375 or PHIL 380 or PHIL 390 or
PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

HUM 433  Writing Women in Renaissance  3 Credit Hours
This course will be taught in English, and will focus on the influence of
Italian literary models for the construction of female literary types as
well as female voices in France and Italy from 1300 to about 1600. Italian
authors studied include three very influential Florentines, Dante, Petrarch
and Boccaccio, as well as Castiglione and Ariosto. We will read women
poets, patrons, prostitutes and queens from Italy and France such as
Veronica Gambara, Isabella di Morra, Vittoria Colonna, Christine de Pizan,
Louise Labe, and Marguerite de Navarre. At issue will be women's roles
and women's images in city and court culture during the early modern
period, and the interaction of their writings with the literary canons of
Italy and France. (OC).
Restriction(s):
Can enroll if Level is Undergraduate

HUM 434  Renaissance and Baroque Rome  3 Credit Hours
The return of the papacy in 1420 initiated the reemergence of Rome
as a major cultural center. This course examines painting, sculpture,
arquitecture, and urban planning in Rome from the 15th to the 17th
century, including the work of Raphael, Michelangelo, Bernini, Borromini,
and Caravaggio. Topics to be explored include the birth of Renaissance
archaeology and antiquarianism; humanism and the papal curia; urban
renewal and conservation; pilgrimage and sacred topography; the "myth
of Rome"; architecture of churches, villas, and palaces; tourism and the
city as spectacle. This course is structured as a seminar that is writing
and research-intensive. It is an interdisciplinary course that includes
readings in literature, religion, urbanism history of art and architecture,
and intellectual history.
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or
ARTH 106
HUM 457  American Cinema  3 Credit Hours
This course will analyze how Hollywood as the nation’s dream factory has manufactured fantasies and cultural myths that have constructed the image of American citizenship, both for Americans and non-Americans. It will establish the ideological function of Hollywood texts as providing unifying symbols for a fragmented society. (YR).
Prerequisite(s): ENGL 248 or HUM 248 or FILM 248 or JASS 248

HUM 467  Script-Writing Workshop  3 Credit Hours
This writing intensive course will train students to compose a film script, focusing on the substance, structure, and style of an original screenplay. The course will be conducted as a workshop in which students will first study classic scripts (and films based on these) of the film-school generation of directors, then model scenes and sequences of their own scripts on the principles of the above texts, and finally, write their own respective film stories in accordance with an appropriate narrative structure and design. (YR).
Prerequisite(s): JASS 310 or COMM 310 or COMP 310 or ENGL 310

HUM 4705  Black Women / Lit, Film, Music  3 Credit Hours
This course will examine works produced by Black women authors, activists, filmmakers and musical performers in order to determine the methods they have incorporated in order to challenge and eradicate the prevailing stereotypes about Black women while advancing their own personal and racial agendas. It will also focus on the extent to which race, gender and class have shaped the creative work of Black women. Students will be required to read, discuss, analyze and write their own responses to the works of such firebrands as author Zora Neale Hurston, activist Ida B. Wells, filmmaker Julie Dash, and singer Billie Holliday.
Prerequisite(s): FILM 240 or FILM 248 or FILM 385 or AAAS 239 or AAAS 275 or HUM 303 or HUM 221 or HUM 222 or HUM 223 or HUM 248 or ENGL 200 or ENGL 205 or ENGL 206 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 237 or ENGL 238 or ENGL 239 or ENGL 248 or JASS 248 or ANTH 303 or PSYC 303 or SOC 303 or WGST 303
Restriction(s):
Cannot enroll if Class is Sophomore or Junior or Senior

HUM 477  Ethnographic Film  3 Credit Hours
This course will analyze ethnographic films as a medium for the construction of meaning in and across cultures. It will teach students to understand how the putatively "real" content of documentary film creates a mixture of fantasy, news and "science." Covering texts as varied as National Geographic photographic layouts, traditional ethnographic films made by anthropologists, and auto-ethnographies of cultural groups such as native Americans and the Trobriand Islanders of Papua, New Guinea, the course will aim to deconstruct such oppositions as indigene vs. alien, us vs. them, and self vs. other. Students cannot receive credit for both HUM 477 and HUM 577. (YR).
Prerequisite(s): FILM 248 or ENGL 248 or HUM 248 or ANTH 301 or JASS 248

HUM 485  Internship  3 to 6 Credit Hours
The Humanities Internship offers students experience in types of work available to liberal arts graduates. Attendance at individual conferences with the director and regular meeting of the Humanities/History Internship seminar is required. Credit applies to the degree as general elective and does not apply to concentrations, with the exception of Communications (3 credits if internship required toward major), Journalism and Screen Studies (3 credits if internship required toward major, with an additional 3 credits accepted as partial fulfillment of requirements in genres, modes and contexts), International Studies (3 credits of internship count toward cognate requirement), and Museum Studies (3 credit of internship count toward cognate requirement). Maximum total hours credit: 12. Graded Pass/Fail, (F, W, S)
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

HUM 490  Topics in Humanities  3 to 4 Credit Hours
Examination of problems and issues in selected areas of the humanities. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

HUM 497  Independent Studies in Hum  1 to 3 Credit Hours
Readings or analytical assignments in humanities in accordance with the needs and interests of those enrolled and agreed upon by student and advising instructor. (YR).

HUM 499  Directed Research  1 to 3 Credit Hours
See Humanities Concentration Advisor for more information.

Human Resource Management (HRM)

HRM 305  Human Resource Policy/Admin  3 Credit Hours
To examine personnel policy making and administration relative to the achievement of the objectives of the firm through the eyes of general management. Topics include: recruitment and selection, wage and salary administration training, evaluation, discipline and industrial relation activities. Cases are analyzed.
Restriction(s):
Cannot enroll if Class is Sophomore or Junior or Senior
Can enroll if Level is Undergraduate

HRM 406  Talent Sourcing & Acquisition  3 Credit Hours
The course examines how to design, administer, and evaluate talent sourcing and selection activities that support organizational strategies. The course is geared both toward those who are or will be (a) current HR managers who develop and administer staffing programs and (b) managers in other functional areas who want to improve their personal effectiveness in recruiting and selecting employees. Key topics to be covered include: staffing strategy and planning; job design and analysis; external and internal recruiting; employee testing and assessment methods; interviewing; measurement, validation, and decision-making issues in selection; laws and regulations affecting staffing and evaluation methods for staffing.
Prerequisite(s): HRM 405 or HRM 305
HRM 407 Compensation & Performance Mgt 3 Credit Hours
The course examines how to design, administer and evaluate compensation and performance appraisal programs that support organizational strategies. The course is geared both toward those who are or will be (a) HR managers who will develop and administer pay and appraisal programs and (b) managers in other functional areas who want to improve their personal effectiveness in administering pay performance appraisals. Key topics to be covered include: merit and incentive pay, methods for internally valuing jobs, external labor markets and job pricing, design and administration of pay structures, employee benefits, compensating executives and expatriates, purposes and measurement methods for performance appraisals, performance criteria, rater processes and biases, performance reviews, and team-based pay and performance. (YR).
Prerequisite(s): (HRM 405 or HRM 305) and OB 354

HRM 408 Legal Issues in Human Resource 3 Credit Hours
The course examines employment law pertaining to human resource management including such areas as selection, compensation, performance appraisal, training, labor relations, and occupational safety and health.
Prerequisite(s): HRM 405 or HRM 305

HRM 409 Talent & Leadership Develop 3 Credit Hours
Training and leadership development are key elements of the human resource function. This course will teach students how to design and evaluate formal training programs and employee development programs, and how to conduct performance improvement interventions. Topics include needs assessment, adult learning and learning transfer theories, program design, and evaluation. (YR)
Prerequisite(s): HRM 305

HRM 485 Seminar:Human Resource Mgmt 1 to 3 Credit Hours
To provide students with an opportunity for intensive study in current selected areas related to the research activities and/or professional activities of faculty members. Permission of College of Business.
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

HRM 495 Research:Human Rsch Mgmt 1 to 3 Credit Hours
To provide the advanced student with the opportunity to undertake a research project under the supervision of a faculty member. At least two weeks prior to registration in the term when such a course is to be elected, an interested student must submit to the dean of the school a written request for permission to elect a research course, on a form available in the school office. The request will include a description of the proposed research project. The dean will review the proposal with faculty members to ascertain availability of relevant faculty supervision and to establish appropriate credit.
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

Indust & Manufac Sys Engin (IMSE)

IMSE 255 Computer Programming for Eng 3 Credit Hours
Intermediate topics in computer programming: arrays, files, structured data types, pointers, functions. Overview of digital computer hardware and system software components: machine architecture, operating systems, computer networks, data security, and performance evaluation.
Prerequisite(s): ENGR 100 or MATH 105 or Mathematics Placement with a score of 113

IMSE 299 Internship/ Co-Op 1 Credit Hour
This is a Cooperative Education course. Students wishing to experience a work experience before graduation may elect to participate in the Cooperative Education Program (minimum of two terms). (F,W,S).
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

IMSE 3005 Intro to Operations Research 4 Credit Hours
This course introduces some basic techniques or operations research used in decision making and system performance evaluation in both deterministic and probabilistic environments. Topics in linear programming, especially the simplex method with duality theory and sensitivity analysis is included. Other topics include integer programming, deterministic dynamic programming, network problems, PERT-CPM, discrete-time and continuous-time Markov chain models of random processes, queuing theory and applications. (YR)
Prerequisite(s): (MATH 217 or MATH 227) and IMSE 317*

IMSE 317 Eng Probability and Statistics 3 Credit Hours
Set theory, combinatorial analysis, probability and axioms, random variables, continuous and discrete distribution functions, expectations, Chebychev’s inequity, weak law of large numbers, central limit theorem, sampling statistics and distributions, point and interval estimation and linear regression. Three hours lecture.
Prerequisite(s): MATH 116 or Mathematics Placement with a score of 215 or MATH 114

IMSE 334 Org of Hospital Systems 3 Credit Hours
The fundamental concepts of organizational behavior are explored. The interrelationships among personnel in an organization, and the functions and responsibilities of individuals are discussed. Topics studied include decision-making theory, organizational authority and adjunct responsibility, leadership and supervision. Particular emphasis is placed upon hospitals and the health care industry. Lectures are supplemented with actual case studies from the health care industry in which the student has the opportunity to apply problem-solving techniques to true-to-life situations. Three hours lecture.
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

IMSE 350 Data Structures 4 Credit Hours
This course focuses on data design and algorithm designs. Data design topics include object-oriented discussions of hashing, advanced tree structures, graphs and sets. Algorithm design topics include the greedy, divide-and-conquer, dynamic programming, backtracking, and branch-and-bound techniques. A significant discussion of algorithm complexity theory, including time and space trade-off and elementary computability theory is included.
Prerequisite(s): MATH 115 and (CIS 200 or IMSE 200) and CIS 275

IMSE 351 Data Struc & Algorithm Anlysis 3 Credit Hours
Object-oriented design, programming, and analysis techniques review; structured programming concepts; data structures; algorithm design and analysis; lists, stacks, and queues; heaps, sorting, trees, graphs, and algorithm development utilizing modern languages, such as C++, Java.
Prerequisite(s): IMSE 255 or CIS 150 or IMSE 150 or CCM 150

IMSE 352 Intro to File Processing 3 Credit Hours
File processing environment, storage media, sequential, random and indexed sequential files, inverted lists, multilists, tree structures, file control systems. Three hours lecture.
Prerequisite(s): IMSE 200 and CIS 175
IMSE 356  Real Time Computing  3 Credit Hours
Introduction to real time computing concepts applicable to discrete systems. Fundamentals of real time hardware, operating systems and C programming language. Selected coverage of instrumentality, input/output modes, data conversion, single task and multitask programming. Two hours of lecture and three hours of laboratory per week.
Prerequisite(s): IMSE 150 or IMSE 255

IMSE 381  Industrial Robots  4 Credit Hours
The course introduces students in engineering and computer science to fundamentals of robotics technology, programming and their applications in industrial environment. The emphasis will be on robotics anatomy and configurations, robotostics kinematics, end effectors, use of sensors in robotics, robotics programming, design of robot workcell, robotics applications to production problems, cost justifications and robotics safety, rather than on the extensive theory of robotics. Three-hour lecture and three-hour laboratory per week.
Prerequisite(s): MATH 115
Restriction(s):
Can enroll if Class is Junior or Senior

IMSE 382  Manufacturing Processes  4 Credit Hours
This course introduces the students to the fundamentals and principles of manufacturing processes for engineering materials. It seeks to transfer an understanding of the application of principles of engineering materials and their influence on manufacturing processes. Topics covered include structure and manufacturing properties of metals, casting, heat treatments, bulk deformation processes, sheet metal working processes, processing of polymers and composites, surfaces and coating, powder metallurgy, machining and joining. Case studies of design for manufacturing and measurement of product quality; economical aspects and cost considerations in manufacturing systems will be studied. Three lecture hours and three laboratory hours.
Prerequisite(s): ENGR 250 and (ME 265 or ME 260)
Corequisite(s): IMSE 382L

IMSE 390  Selected Topics I  3 Credit Hours
Study of topics selected from any of the areas of Industrial and Systems Engineering. May include design or laboratory research.

IMSE 391  Selected Topics II  3 Credit Hours
Study of Advanced topics selected from any of the areas of Industrial and Systems Engineering.

IMSE 398  Independent Study in IMSE  1 to 3 Credit Hours
Individual study design or laboratory in an area of interest to the student. Contents may be chosen from any of the areas of Industrial and Manufacturing Engineering. The student will submit a report on his or her project at the end of the term. Written permission of the instructor is required. (F,W,S).
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore or Graduate
Can enroll if College is Engineering and Computer Science

IMSE 399  Internship/Co-Op  1 Credit Hour
A four-month professional work experience period of the Engineering Internship Program, integrated and alternated with the classroom terms.
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

IMSE 400  Programming Languages  4 Credit Hours
Systematic study of programming languages with regard to their implementation, structures, and use. Languages are compared with regard to their various data types, data structures, operations, control structures, programming environments, and ease of use in solving various programming problems.
Prerequisite(s): IMSE 350 or CIS 350 or CCM 350
Restriction(s):
Can enroll if Level is Undergraduate

IMSE 421  Eng Economy and Dec Anlys  3 Credit Hours
Study of the concepts involved in the analysis of engineering management decisions, both short and long term. Time valued investments and the effects of depreciation and taxes in comparing alternatives are discussed. Specific attention is devoted to deterministic and probabilistic replacement policies for single and chain replacements of equipment. Basic elements of utility theory are introduced. Applications of decisions under risk, uncertainty, and of game theory to capital investment, bidding, and to competitive decisions are included.
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

IMSE 437  Health Care Management  3 Credit Hours
This course is intended for those who have to deal with the administrative aspects of health care systems and not only the technical. The goal of the course is to provide the hospital staff member with an understanding of operations of the total hospital system. Topics covered include functions, problems, and organization of the medical agencies and their effect upon hospitals; methods of nursing staff organization; techniques of determining nursing staff levels; development of staff schedules; financial reimbursement and governmental regulations.
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

IMSE 440  Applied stat models in engin  3 Credit Hours
Full Course Title: Applied statistical models in engineering. The course provides students with considerable experience to flexibly work with Linear Regression Models and Design of Experiments. With the growth of automated systems, data analysis became an essential tool in engineering. The first part of the course introduces students to Simple Linear Models, Multiple Linear Models, Model Evaluation, Model Selection. The second part of the course introduces students to Design of Experiments and commonly used designs such as the Completely Randomized Design, Randomized Complete Block Design, and Latin Squares Design. The course also provides the students with experience handling data for engineering applications via in-class activities and assignments. Student teams complete a major data analysis project to answer a set of engineering questions and challenges. (YR)
Prerequisite(s): IMSE 317 or BENG 364 or ME 364
Restriction(s):
Can enroll if College is Engineering and Computer Science
IMSE 4425 Human Factors and Ergonomics 4 Credit Hours
The course integrates the elements of traditional methods of engineering and time-motion studies with ergonomics and human factors concepts. Methods improvement, work measurement, and work design, applied to manufacturing and service industries, so as to increase productivity and improve worker health and safety. The topics covered include: problem solving tools; operation analysis; time-motion analysis; work sampling; manual and cognitive work design; workplace, equipment, tool and work environment design; allowances; and lean manufacturing. Lectures and laboratory. (YR)
Prerequisite(s): IMSE 317 or BENG 364
Restriction(s):
Can enroll if Level is Undergraduate

IMSE 450 Operating Systems 4 Credit Hours
Introduction to computer operating systems. Process management, CPU scheduling, memory management, file systems and I/O devices. Advanced topics, e.g., multiprogramming and multitasking, virtual memory, deadlock, I/O, job scheduling, and performance analysis using queueing models, will be introduced. Case studies of modern operating systems. A design project is required.
Prerequisite(s): (CIS 350 or CIS 3501 or IMSE 350) or (ECE 370 and MATH 276) or (ECE 276 and ECE 370) and IMSE 317

IMSE 451 Computer Graphics 3 Credit Hours
Basic geometrical concepts: graphics output primitives, two-dimensional transformations, windowing and clipping, three-dimensional viewing, visible surface detection methods, and graphical user interfaces. (F)
Prerequisite(s): (MATH 217 or MATH 227 or MATH 228) and ((CIS 350 or CIS 3501 or IMSE 350) or (ECE 370 and MATH 276) or (ECE 276 and ECE 370))

IMSE 453 Data Comm/Distributed Process 4 Credit Hours
Study of the technical and management aspects of computing networks and distributed systems. Topics include network architectures (ISO/OSI, TCP/IP/ATM), communication hardware (transmission media, network adapters, switches), encoding, framing, error detection and correction, reliable transmission, data link control and LAN technology, internetworking, routing/congestion control, network design/management.
Prerequisite(s): CIS 350 or CIS 3501 or IMSE 350 or (ECE 370 and MATH 276) or (ECE 370 and ECE 276)

IMSE 454 Information Systems Design 4 Credit Hours
Role of information systems in organizations. Economic factors and social impact of information systems. Phases to design an information system: systems objectives and criteria establishment, fact investigation and analysis, feasibility study, output-input design, processing design, file and database design, safety and reliability considerations, detailed systems description, programming specifications, testing analysis and design skills will be assigned. A series of cases will be used in developing an information system. SQL will be used to develop data tables and access information. Three lecture hours and one three-hour laboratory. (W)
Prerequisite(s): IMSE 255 or CIS 205
Restriction(s):
Can enroll if Level is Undergraduate

IMSE 456 Intro to Data Base Systems 4 Credit Hours
An introduction to database system concepts and techniques. Topics covered include database environments, ER modeling, relational data model, object-oriented database, object-relational database, database design theory and methodologies, database languages, query processing and optimization, concurrency control, database recovery, and database security.
Prerequisite(s): CIS 350 or CIS 350A or IMSE 351 or (ECE 370 and MATH 276)

IMSE 457 Compiler Design 3 Credit Hours
The design and construction of compilers and programming systems. Lexical scan; parsing techniques; code generation and optimization. Run-time organization; storage allocation. Applications of formal language theory in compiler design. Translator writing systems; XPL. Three one-hour lectures.
Prerequisite(s): IMSE 350 or CIS 350 or CCM 350

IMSE 458 Simulation in Systems Design 4 Credit Hours
This course introduces digital simulation as a design and modeling tool. The fundamental techniques of constructing a simulation model and evaluating the results are studied. A computer simulation software is used (such as ARENA, ProModel, Witness, Simul8). Topics include random number and random variate generation, input and output data analysis, design of experiments and optimization of simulated systems, verification and validation, discrete and continuous simulation models, comparison of simulation modeling software, and applications of simulation in different industries. Students are asked to select problems of interest and present final project reports. Four lecture hours. (YR)
Prerequisite(s): IMSE 317 and IMSE 3005*
Restriction(s):
Can enroll if Level is Undergraduate

IMSE 4675 Six Sigma & Stat Proc Improv 4 Credit Hours
Review of graphical methods, probability theory and statistics (stem-and-leaf plots, histograms, scatter diagrams, counting methods, axioms of probability, common discrete and continuous probability models, expectation, linear combinations, estimation, sampling distributions, confidence intervals, hypothesis testing, and A vs. B type of experimentation for both unpaired and paired data); introduce quality terminology in manufacturing and service industry contexts, study the theory, design and application of common statistical process control models for variables and attributes; study process capability and gauge and measurement capability methods; study the design and analysis, both graphical and analytic, of statistically designed experiments (one-way completely randomized designs, and randomized, complete block designs); study the application and analysis of two-level, factorial and fractional factorial designs. Learn to apply and interpret analysis of variance to above situations. Extensive analytic homework and applications used throughout course to motivate material. Each student complete an individual project of his/her own design, subject to instructor approval, entailing a modeling application or controlled experiment where the student collects the data. Four hours lecture. (YR)
Prerequisite(s): IMSE 317
Restriction(s):
Can enroll if Level is Undergraduate
IMSE 4745  Facilities Design  4 Credit Hours
Analysis, planning and design of physical facilities utilizing research, engineering and economic principles. Synthesis of physical equipment and workers into an integrated system for either service or manufacturing activities. Design of material handling and storage systems. Layout of lean manufacturing facilities. Design of atmospheric, electrical, lighting, and life safety systems for a facility. Students are required to select problems of interest and present design project reports. (F)
Prerequisite(s): IMSE 3005*
Restriction(s): Can enroll if Level is Undergraduate

IMSE 477  Human Computer Interaction for UI & UX Design  3 Credit Hours
This course introduces current theory and design techniques concerning how user interfaces (UI) and user experience (UX) should be designed and assessed to be easy to learn and use, in terms of human-centered design. The course includes four general modules: 1) Introduction of HCI & UX, 2) Interface/Interaction Design Strategy, 3) Advanced Issues in HCI; and 4) Evaluation Methods. (F)

IMSE 4795  Prod, Inven Control & Lean Mfg  4 Credit Hours
Study of concepts involved in forecasting demand, inventory control, MRP, JIT production, lean manufacturing, aggregate scheduling, and project management. The application of mathematical programming techniques, bottleneck analysis, and lean techniques such as value stream mapping, error proofing, cellular manufacturing, etc. are used in design and analysis of production systems. Use of the computer programs in the design and analysis of such systems. Students are asked to select problems of interest and present final project reports. (OC)
Prerequisite(s): IMSE 317
Restriction(s): Can enroll if Level is Undergraduate

IMSE 4815  Manufacturing Process II  4 Credit Hours
This course introduces the students to machining processes, metal forming processes and molding and forming of plastics. Metal cutting theory is emphasized including the mechanics of metal cutting, cutting tools, measurement of tool life, selection of cutting conditions, and chip control; theory and applications of non-traditional manufacturing processes. Metal forming theory is emphasized including formability of metals; analysis of bulk and sheet metal forming processes as applied to practical cases such as automobile manufacturing. Basic principles of plastic molding and forming processes of plastics, ceramics and composites. (W)
Prerequisite(s): IMSE 382 or ME 381
Corequisite(s): IMSE 4675
Restriction(s): Can enroll if Level is Undergraduate

IMSE 4825  Industrial Controls  4 Credit Hours
This course introduces the basics of calibration, error analysis, and dynamic response characteristics of instrumentation. Fundamentals of metrology include linear and angular measurements, standards, gauges, machine tool accuracy, and automation of inspection processes. The course also introduces the principle aspects of computers and their applications in system control, as well as principles of automation with emphasis on manufacturing industries. Discussion of the hardware and software associated with this task and other topics such as integrated systems modeling, sensor technologies, digital and analog signal processing and control, and information communication are also included. Laboratory exercises and projects are required. (F)
Prerequisite(s): ME 265
Corequisite(s): ECE 305
Restriction(s): Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science

IMSE 4835  Comp.-Aided Prcs Design & Mfg  4 Credit Hours
This course focuses on the fundamentals of component and system designs through the use of Computer-Aided Design (CAD) tools. Issues related to the manufacture of molds, jigs and fixtures are also introduced and Computer-Aided Manufacturing (CAM) tools are used as means for the production of these machine components. The principles of design for manufacture and assembly as applied to tool and machine design are also discussed. Computer-Aided Process Planning (CAPP) tools, flexible manufacturing systems, and information flow in manufacturing systems are also presented. Hands-on experiments and course projects are required. (W)
Prerequisite(s): IMSE 382 or ME 381
Restriction(s): Can enroll if Class is Senior
Can enroll if Level is Undergraduate

IMSE 484  CA Machine and Tool Design  3 Credit Hours
Study of the fundamentals of machine tool design, cutting tools, metal forming dies, and jig fixtures for practical applications in machining and assembly. Principles of design for manufacture and assembly as applied to tool and machine design. Laboratory exercises and projects are required using computer-aided design software. Two lecture hours and three laboratory hours.
Prerequisite(s): IMSE 382 or ME 381
Restriction(s): Can enroll if Level is Undergraduate

IMSE 486  Design for Assembly & Mfg  3 Credit Hours
This course will cover topics in manufacturing with emphasis on the parallel product design and selection of specifications for processes. Topics included are the principles of concurrent engineering, geometric dimensioning and tolerancing (GD&T), process engineering, process planning, cost estimating, and design for manufacturing. Projects using computer tools are required on a team-oriented basis.
Prerequisite(s): IMSE 382
Restriction(s): Can enroll if Level is Undergraduate
IMSE 488  Metal Forming Processes  3 Credit Hours
This course focuses on fundamentals of metal forming processes; mechanics of metal forming; formability of materials; tool and die design; design for manufacture; and economic aspects of the process. Emphasis is placed on analysis of bulk and sheet metal forming processes as applied to practical cases such as automobile manufacturing. Laboratory and course project are required.
Prerequisite(s): IMSE 382
Restriction(s):
Can enroll if Level is Undergraduate

IMSE 489  Robotics Systems Simulation  3 Credit Hours
The course emphasizes the fundamentals of the design of robotics systems with the aid of robot simulation technology; structure and basic components of robots and robotics manufacturing workcells; control, kinematics, and dynamics of robots and manufacturing devices; robot accuracy and calibration of robot motion; applications of robots in manufacturing such as spot welding, arc welding, machining, assembly and CMM; robot simulation software such as ROBCAD or IGRIP. Course project is required. Available for graduate credit. (YR)
Restriction(s):
Can enroll if Class is Senior or Graduate

IMSE 490  Selected Topics  3 Credit Hours
Individual or group study, design or laboratory research in a field of interest to the student. Topics may be chosen from any of the areas of industrial and systems engineering including management, work measurement, methods, organization, industrial sciences, industrial mathematics, systems and procedures. If preliminary arrangements are made, the work internship periods can be used to formulate the problem and gather data. Completion of the analysis and submission of a report shall be done during the academic periods under the supervision of a faculty member or members. The student should be prepared for both a written and oral presentation of the report. This course is highly recommended as a technical elective. Permission of department.

IMSE 491  Directed Studies in IMSE  1 to 3 Credit Hours
Group study of contemporary topics in industrial and systems engineering and general systems design. Course may be elected for credit more than once under different instructors. Permission of department.

IMSE 4951  Design Project I  2 Credit Hours
Design of a system to produce or service using the knowledge gained in previous courses in the program. Two two-hour lecture/lab periods.
Prerequisite(s): ENGR 400* and (COMP 270* or COMP 106* or COMP 220*)
Restriction(s):
Can enroll if Class is Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Manufacturing Engineering, Industrial & Systems Engin

IMSE 4952  Design Project II  2 Credit Hours
Design of a system to produce or service using the knowledge gained in previous courses in the program. It is the continuation of the project started in Design Project I course. (F,W,S)
Prerequisite(s): IMSE 4951
Restriction(s):
Can enroll if Class is Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Manufacturing Engineering, Industrial & Systems Engin

IMSE 4953  Design Project in Mfge  1 Credit Hour
Design of a manufacturing system to produce product using the knowledge gained in previous courses in the program. (F,W,S)
Prerequisite(s): ENGR 400*
Corequisite(s): ME 4671
Restriction(s):
Can enroll if Class is Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Manufacturing Engineering, Mechanical Engineering

IMSE 498  Guided Study in IMSE  1 to 3 Credit Hours
Individual study, design, or laboratory research in a field of interest to the student. Content may be chosen from any of the areas on industrial and manufacturing engineering. The student will submit a report on his or her project at the close of the term. Permission of department. (F,W,S)

IMSE 499  Internship/Co-Op  1 Credit Hour
A four-month professional work experience period of the Engineering Internship Program, integrated and alternated with classroom terms.
Restriction(s):
Can enroll if Class is Senior
Can enroll if Level is Undergraduate

Information Systems Management (ISM)

ISM 120  Bus Prob Solving w/ Comp Apps  3 Credit Hours
Full Course Title: Business Problem Solving with Computer Applications-
This course introduces students to business problems, processes, and professional practices with an emphasis on structuring and solving business problems using computer applications. Drawing on problems from a range of business disciplines such as accounting, finance, marketing, and operations management, students will define, model, and solve business problems using spreadsheet and database software. They will practice critical thinking and business communication through oral and written presentation of problem analysis and results. Credit cannot be given for ISM 120 and any of ITM 120, MIS 120, CIS 121, 122, 123. (F,W,S)
ISM 301  Bus Application Programming  3 Credit Hours
This course is an introduction to basic concepts in computer programming with an emphasis on business applications. In the course, students will develop an understanding of fundamental programming logic and learn to use basic programming structures to solve business problems. Students are introduced to program development cycle and programming principles. The course covers principles of program design, programming structures, data types and structures, program testing, and debugging. Emphasis is placed on the implementation of programs with procedural structures, along with graphical user interfaces and event driven code. Upon completion, students should be able to design, code, test, and debug programs based on business requirement using a selected programming language. Credit cannot be given for both ISM 301, ITM 301 and MIS 301.

ISM 302  Object-Oriented Programming  3 Credit Hours
This course introduces the basic concepts of object-oriented programming with an emphasis on business applications. Students will develop an understanding of object-oriented modeling and learn to use object-oriented analysis and design techniques to solve simple business problems. Students are introduced to OO application development methodology and environment. The course covers principles of object-oriented programming, objects and classes, abstract data types, implementation of inheritance and polymorphism, database access, and graphic user interfaces. Upon completion, students should be able to design, code, test, and debug programs based on business requirements using a selected object-oriented programming language. Credit cannot be given for both ISM 302, ITM 302 and MIS 302.

Prerequisite(s): ITM 301 or MIS 301 or ISM 301
Restriction(s):
Can enroll if Level is Undergraduate

ISM 303  iCreate: Mobile Apps  3 Credit Hours
In this course, the technologies of mobile computing are introduced. Prior knowledge of programming logic and object-oriented concepts are applied in building mobile applications. Topics include mobile development environment, user interface elements of a mobile device, gesture, location awareness, and file operations. Creative thinking and entrepreneurship are introduced and fostered via creating a student-initiated mobile application from idea to sale.

Prerequisite(s): ITM 301 or ISM 301
Restriction(s):
Can enroll if Level is Undergraduate

ISM 310  Info Systems in Management  3 Credit Hours
This course provides an overview of information systems in the business world. It presents an organizational view of how to use information technology to create competitive firms, manage global organizations, and provide useful products and services to customers. Topics include hardware, software, databases, telecommunications systems, the strategic cuse of information systems, the development of information systems, and social and ethical issues involved with information systems. Credit cannot be given for ISM 310, ISM 310 and MIS 310.

Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

ISM 311  Mgmt Information Sys Lab  1 Credit Hour
ISM 311 is a lab component of ISM 310. Students will complete weekly laboratory assignments to reinforce the concepts of ISM 310 to use information technology to solve business problems. In addition, the use of several common applications (e.g., Word, Excel, Access, and PowerPoint) will also be covered at the beginning to advanced levels.

Prerequisite(s): ITM 310* or ISM 310*
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
Can enroll if College is Business

ISM 321  Database Systems I  3 Credit Hours
This course examines the processes and tools used to design and implement database systems in business. The goal of this course is to provide adequate technical detail while emphasizing the organizational and implementation issues relevant to the management of computerized data in an organizational environment. A class project involving the design and implementation of a database using a microcomputer database management system is performed. Topics include concepts of database systems, conceptual database design, logical database design, physical database design, database implementation, and data retrieval. Credit cannot be given for ISM 321, ITM 321, MIS 321 and CIS 421.

Prerequisite(s): ITM 310 or MIS 310 or ACC 380 or ISM 310

ISM 331  Info Systems Development  3 Credit Hours
This course provides a foundation in systems analysis and design concepts, methodologies, techniques, and tools. Students will learn to analyze an organizational problem, define user requirements, design an information system, and plan an implementation. Methodologies covered will include the traditional life cycle approach as well as newer methodologies such as object-oriented approach, joint applications development (JAD), and prototyping. A semester-long project gives students the opportunity to apply these techniques to a business problem. This project will use technologies such as a computer-aided software engineering (CASE) tool, a database management system (DBMS), or a fourth-generation language. Credit cannot be given for ISM 331, ITM 331 and MIS 331 (FWS).

Prerequisite(s): (ITM 310 or ISM 310 or MIS 310 or ACC 380) and (ITM 321 or MIS 321 or ISM 321*)
Restriction(s):
Can enroll if Level is Undergraduate

ISM 347  Information Visualization  3 Credit Hours
Full Course Title: Information Visualization: Business Insight via Storytelling Information visualization has been used greatly in various disciplines including media, business, and engineering. It is valuable in helping people analyze and understand information to lead to better solutions and decisions. This course will introduce students to the field of information visualization via a hands-on approach. Readings and lectures will provide an overview of the field. Students will learn visualization design and evaluation principles and learn how to acquire, parse, and analyze large datasets. Students will also learn tools and techniques for visualizing multivariate, temporal, text-based, geospatial, hierarchical, and network/graph-based data. (FWS)

Prerequisite(s): ITM 310 or ISM 310 or MIS 310 or ACC 380
ISM 351 Networking and Collab Comp 3 Credit Hours
This course provides an introduction to data communication, networks, distributed processing and collaborative computing. The course will study the technical and management aspects of computing networks and distributed systems supporting a wide range of organizational functions from organizational process to managerial strategic decision making, from personal to group to organizational computing. The applications of telecommunications in the work settings and management issues of telecommunications will be addressed. The social and organizational implications of the telecommunications technology are also examined. Credit cannot be given for ISM 351, ITM 351 and MIS 351.
Prerequisite(s): ITM 310 or ISM 310 or MIS 310 or ACC 380

ISM 371 IT Strategy: Disrupting Norms 3 Credit Hours
Full Course Title: IT Strategy: Disrupting Industry Norms, Practices, and Structures: Businesses are in the early stages of an information revolution whereby IT is transforming industries, generating whole new human communities, creating new markets, and redefining basic business models. These disruptions, driven by IT, are becoming more and more common and have resulted in the emergence of new regulations, behaviors, and norms. When IT disrupts an industry, the fundamentals of the business models change in ways which are not immediately obvious. The emphasis of this course is on managerial and industry issues with a focus on the transformations of business models over the last ten years. Throughout this course you will be exposed to how these changes in business models are put into practice through specific features in the technology. Topics include platform competition, network effects, pricing models for digital goods, the sharing economy, the wisdom of crowds, the long-tail effect, the social network perspective, and technology adoption. (YR).
Prerequisite(s): ISM 310 or ITM 310 or MIS 310 or ACC 380

ISM 381 Info Systems Project Mgmt 3 Credit Hours
This course examines the management of information system projects in business organizations as well as human and organizational reactions to the changes brought about by new information systems. Topics include project planning, project controls, project reporting, information system projects and organizational changes, factors affecting project success and failure, and project management software.
Prerequisite(s): ITM 310 or ISM 310 or MIS 310 or ACC 380

ISM 382 Advanced Computer Applications 3 Credit Hours
This is an advanced course in computer applications, decision modeling, and business problem-solving. Topics will include Visual Basic for Applications (VBA), pivot tables, user interfaces, and application manipulation techniques for both spreadsheet and database applications. Complex formulae will be introduced to enable students to create sophisticated models for solving nested and complex business problems. Credit cannot be given for ITM 382, ISM 382 and MIS 382.
Prerequisite(s): ITM 120 or ISM 120 or MIS 120 or ITM 311 or ACC 381 or CIS 123
Restriction(s):
Can enroll if Level is Undergraduate

ISM 383 Info Technology Security 3 Credit Hours
This course provides a foundation of IT security, methodologies, techniques, and tools. This course will cover both the managerial and technical sides of IT security. Topics include: security costs and benefits, information assets, security threats, network attacks, security planning, incident response, disaster recovery, and training. Hands-on lab sessions, interactive lectures, discussions, and guest speakers will be used throughout the course.
Prerequisite(s): ITM 310 or ISM 310 or MIS 310 or ACC 380

ISM 387 Digital Security 3 Credit Hours
Full Title: Digital Security: Threat Prevention and Management The ability to secure information within a modern enterprise-large or small-is a growing challenge. Threats to information security are global, persistent, and increasingly sophisticated. This course provides the practices and methods currently used by information security professionals to manage and secure an information environment. Topics includes security strategy and policies, security operation center (SOC), network security, physical security, malware countermeasures, operational systems security, risk analysis and incident response practices. (F,W,S)
Prerequisite(s): ITM 383 or ISM 383

ISM 431 Database Systems II 3 Credit Hours
This capstone course will provide an opportunity for students to work as a member of a project team on a complex, real-world information systems project. The course examines the processes and tools used to develop, implement and administer database systems in business. A class project involving the development of a database using a client/server database management system is performed. Project management methodologies and tools used to manage complex information systems projects are also applied in the course.
Prerequisite(s): ITM 321 or ISM 321 or MIS 321

ISM 491 Seminar: Manag Info Systems 3 Credit Hours
To provide students with an opportunity for intensive study in current areas related to the research activities and/or professional activities of faculty members. Permission of College of Business.
Restriction(s):
Can enroll if Class is Senior

ISM 492 Research: Manag Info Systems 3 Credit Hours
To provide the advanced student with the opportunity to undertake a research project under the supervision of a faculty member. At least two weeks prior to registration in the term when such a course is to be elected, an interested student must submit to the dean of the school a written request for permission to elect a research course, on a form available in the school office. The request will include a description of the proposed research project. The dean will review the proposal with faculty members to ascertain availability of relevant faculty supervision and to establish appropriate credit. Permission of College of Business.
Restriction(s):
Can enroll if Class is Senior

International Business (IB)

IB 441 International Financial Mgmt 3 Credit Hours
The objective of this course is to orient students to the increasingly internationalized financial environment in which business operates. As such, it attempts to broadly survey topics that frequently confront decision makers in financial management. These topics include the balance of payment mechanism, international capital flow, international monetary system and financial institutions, the mechanics of foreign exchange markets, international credit and capital markets, and financial problems of multinational business.
Prerequisite(s): FIN 401 and (DS 300 or DS 302*)
IB 446  International Business  3 Credit Hours
Designed as a survey course, International Business attempts to broadly cover the essential elements of international business. Topics will include: business in an international environment, theories of international trade and investment, international finance, corporate policy and strategy, functional management and operations, and international business relations.

Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

IB 486  Seminar: International Bus  1 to 3 Credit Hours
This course explores issues of major importance to international banking. Topics discussed include the global banking environment, the operations of international commercial and investment banks, regulatory issues affecting the global banking industry, and international money and foreign exchange markets. The role, successes and weaknesses of multinational institutions for economic development are discussed along with the recently proposed reform measure. Students taking this course should expect to learn about the various categories of international lending and loan syndication, asset-related and project financing, international retail and private banking. They will gain skills in the various lending techniques practiced in global banking, and will obtain a better grasp of the problems facing international banking institutions today as a result of the continuous globalization of financial markets and the ever increasing consolidation of the industry.

Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

IB 496  Research: Int Business  1 to 3 Credit Hours
To provide the advanced student with the opportunity to undertake a research project under the supervision of a faculty member. At least two weeks prior to registration in the term in which such a course is to be elected, an interested student must submit to the dean of the school a written request for permission to elect a research course, on a form available in the school office. The request will include a description of the proposed research project. The dean will review the proposal with faculty members to ascertain availability of relevant faculty supervision and to establish appropriate credit. Permission of College of Business.

Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

Japanese (JPN)

JPN 128  Beginning Japanese I  5 Credit Hours
Japanese instruction at the beginning level. Taught at the Japan Center for Michigan Universities, Hikone, Shiga, Japan. Seven contact hours per week. (F).

JPN 129  Beginning Japanese II  5 Credit Hours
Continuation of JPN 128. Taught at the Japan Center for Michigan Universities, Hikone, Shiga, Japan. Seven contact hours per week. (W).

JPN 178  Accelerated Japanese I  5 Credit Hours
A demanding course that brings a student with little or no knowledge of Japanese through the beginning level into the intermediate level. Taught at the Japan Center for Michigan Universities, Hikone, Shiga, Japan. Seven contact hours per week. (F).

JPN 225  Accelerated Japanese II  5 Credit Hours
Continuation of JPN 128. Taught at the Japan Center for Michigan Universities, Hikone, Shiga, Japan. Seven contact hours per week. (F).

JPN 228  Intermediate Japanese I  5 Credit Hours
Japanese instruction at the intermediate level. Taught at the Japan Center for Michigan Universities, Hikone, Shiga, Japan. Seven contact hours per week. (F).

JPN 229  Intermediate Japanese II  5 Credit Hours
Continuation of JPN 228. Taught at the Japan Center for Michigan Universities, Hikone, Shiga, Japan. Seven contact hours per week. (W).

JPN 230  Contemp Iss Japanese Politics  3 Credit Hours
This course introduces students to modern Japanese politics. It combines a comprehensive survey of Japanese political systems and structures with an introduction to some of the key areas of controversy and debate in Japan today ranging from debates about the environment to Japan's place in the world.

JPN 231  Intro. to Japanese Lang. & Cul  3 Credit Hours
During the first three weeks of the program, students participate in a beginner-level Japanese language and culture course. This course integrates classroom learning with practice of new language skills and cultural knowledge during cultural activities, field trips and other activities.

JPN 232  Comparative Health Care  3 Credit Hours
This course acquaints students with Japan's unique health care system and how it compares to other models. Team-taught by professionals from Japan and the U.S., the course is augmented with a variety of site visits and guest lecturers.

JPN 233  Observ. Health Care Exp.  2 Credit Hours
Coordinated and supervised by the Shiga University of Medical Science (SUMS), students will spend a week in the SUMS teaching hospital observing and learning from doctors, nurses, graduate students, researchers and professors in their field of interest. Past observational studies have included experiences in nursing, radiology, physical therapy, intensive care, surgical units and more.

JPN 234  Japanese Economy & Business  3 Credit Hours
In this course, students can obtain fundamental knowledge on stylized facts of Japanese economy and Japanese firm systems as compared with those in the US and some other countries, and understand economic theories to put profound interpretations on them. Stylized facts seem to be old and some of them may have been obsolete, although they contain essential logical points. However, they are still useful for understanding Japanese economic systems. Thus, students are required to discuss current conditions on Japanese economy and firm system, considering stylized facts and theoretical backgrounds. It is essential to distinguish between changing phenomena and unchanged principles. Students have an opportunity to take a tour to a factory in a leading company. In the final class, students have to give team presentations and individually submit a short essay on the topics provided or the ones they come up with. As for the structure of classes, we cover fundamental stylized facts, economic theories (or theoretical frameworks), and data analyses (historically and currently). This course is composed of three parts: (1) Japanese economic system, (2) Japanese firm system and (3) Japanese macroeconomic conditions.

JPN 395  Japanese Society & Culture  4 Credit Hours
Focused on modern Japan, the course will include Japanese geography and ethnography, with an emphasis on the Japanese idea of homogeneity. Japan's role in the international context will also be examined. Classroom work will be combined with field trips, in a writing-intensive approach. Taught at the Japan Center for Michigan Universities, Hikone, Shiga Prefecture, Japan.
**Journalism and Screen Studies (JASS)**

**JASS 2015  Fundamentals of Journalism  3 Credit Hours**
Study and practice in newspaper reporting and news gathering, interview techniques, and basic newswriting skills. Students will also discuss libel law, ethics, and the use of the Freedom of Information Act. (F, W).

**Prerequisite(s):** COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

**JASS 240  Film and Society  3 Credit Hours**
A survey of the major genres of film, chiefly in historical and political perspective, but also in the light of important intellectual frameworks (e.g., feminism, psychoanalytical theory). The films selected, both Western and non-Western, will be examined both for their visual codes of meaning and for their wider role in developing a powerful social language in various cultural contexts. (YR).

**JASS 248  Introduction to Screen Studies  3 Credit Hours**
This course will introduce students to the development of world cinema by integrating the aesthetics of film with its technology, and its social and economic milieu. It will train the students in analyzing the formalist qualities of the medium, and in understanding the evolution of its various genres and styles. (YR).

**JASS 301  Advanced Reporting  3 Credit Hours**
Advanced study and practice in news reporting and writing. Students will gain experience with in-depth reporting through coverage of developing news stories. Longer articles of publishable quality are required. (OC).

**Prerequisite(s):** COMP 2015 or JASS 2015

**JASS 302  Media Law and Ethics  3 Credit Hours**
The basis of reportorial journalism is its foundation in the First Amendment. This course examines the legal restrictions and freedoms governing print media and explores the ethical responsibilities of print journalists. Specific topics covered include First Amendment law, the clear and present danger standard, defamation and libel, privacy, obscenity, free press/fair trial, access, shield laws, and journalism ethics.

**JASS 303  Media Design & Animation  3 Credit Hours**
This course will introduce students to the fundamentals of graphic design in a convergent media landscape, with an emphasis on animation and motion graphics. Students will develop skills in the fundamentals of color, typography and layout, as well as build practical skills in animation technique. Animation projects may include animated lower thirds, motion graphics, kinetic typography or 2d/3d character animation, with applications for film, television and the web. Students may not receive credit for both JASS 303 and JASS 250 (F,W,S).

**Restriction(s):**
Cannot enroll if Class is Undergraduate NCFD or Post-baccalaureate NCFD or Specialist or Undergrad Certification only or Post-baccalaureate Cert only or Graduate or Doctorate

**JASS 307  Copy Editing  3 Credit Hours**
Course covers manuscript and electronic editing of news and feature stories, editing for libel and taste, fact-checking, writing headlines and captions, and use of reference books. Includes a review of grammar and work usage, punctuation, spelling, and style.

**Prerequisite(s):** COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

**JASS 310  Narrative Journalism  3 Credit Hours**
Students learn to identify, understand and use the techniques of fiction in the service of nonfiction material. While studying the texts as literature, students are also encouraged to view them as models for writing. Assignments include the writing and revising of articles, based on research and interviews, and writing in story form, drawing on literary techniques. (YR).

**Prerequisite(s):** COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

**JASS 312  Media Performance  3 Credit Hours**
This course focuses on voice, diction, and movement for the various media of electronic and digital production. The emphasis is on developing skills in announcing, news reading, on-camera stand ups, voice-overs as well as dramatic interpretation and performance. Students will be exposed to a variety of projects and assignments, along with strategies for developing on-air personalities, voices, and characters. Basics of professional dress and makeup will also be discussed. Students will be expected to submit a professional portfolio of their on-air work at the end of the semester. (AY)

**JASS 315  Media Productn for Metro Comm  3 Credit Hours**
This community-based course partners with a community organization to produce media projects that serve the needs of the organization. Students will build skills in intermediate aspects of media production including concept development, research, proposals and pitching, scriptwriting, producing, shooting, editing, and sound design, as well as professional and organizational communication skills. Students will also develop a broader understanding of community engagement, citizenship, and issues impacting the Detroit Metro community. Productions will include both studio experience and fieldwork.

**Prerequisite(s):** COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
JASS 330 feature writing 3 credit hours
An introduction to the writing of feature stories for newspapers and magazines. Students study methods of gathering information and preparing a manuscript for publication. (AY).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

JASS 331 online reporting, research, writing 3 credit hours
Course introduces the technical, social, legal and ethical practice of online research, focusing specifically on reporting (i.e. research and interview) skills required by journalists and others. Students use new media technology to generate ideas, to research subjects, and to develop general-audience writing projects in their areas of interest. Course covers the use of Web search engines, directories and databases; finding sources and interviewing people online; evaluating the credibility of online sources and information; using Lexis-Nexis to access archives and public records; and using spreadsheet and database programs. (F, W).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

JASS 332 creating the graphic novel 3 credit hours
This course focuses on the creation of an original graphic novel from inception to fully developed story. Students work on character, plot development, dialogue, drawing style, and layout planning, and are encouraged to introduce any cross-disciplinary techniques such as digital applications when appropriate. Lectures and readings consider contemporary media. (OC).
Prerequisite(s): ART 202 or ART 206
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

JASS 333 sports reporting and writing 3 credit hours
In this course, students not only learn how to write a sports story and report it across a variety of media, they also examine and write about relevant issues, from race and gender to sportsmanship and hero worship. In addition to assigned class readings, students read and report on one sports-related film and one book, chosen from a list of classics posted on CTools, and write a final paper in which they address an issue relevant to sports reporting. Local and national practitioners contribute their thoughts on a variety of subjects throughout the term.
Prerequisite(s): JASS 2015
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

JASS 334 science and environmental journalism 3 credit hours
This course introduces the practice and theory of science and environmental journalism. Students report and write short science and environmental articles across a variety of media. They also examine the history, ethics and politics of environmental and science journalism and isolate a relevant issue as the focus of a research project, which will later generate a longer science/environment feature story. After instructor critique, students revise all work and submit a final ePortfolio. (W).
Prerequisite(s): JASS 2015
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

JASS 335 multimedia and music 3 credit hours
In this course, students will explore case studies of music created, performed, and distributed in combination with other media from the 1960s to the present. Multimedia is understood as any context in which several media are integrated, but particular focus will be paid to technological and creative innovations (such as video games, computers, and phones). The use of music will be considered in such media as film and television, multimedia performance and installation art, and international developments in multimedia production and distribution. (AY).

JASS 336 film and music 3 credit hours
In this course, students will be introduced to the varieties of music used in film from c. 1900 to the present. Topics covered include a basic introduction to the musical features of Western European dramatic music; the role of music in the early decades of the 20th century; the growth of film and musical sound in the “classic era” of Hollywood film; the use of music in specific genres such as film noir, science-fiction, epic, and musicals; and the use of popular song in film. (AY).

JASS 338 business/automotive reporting 3 credit hours
This course covers two inter-related areas: finance and automotive journalism. Students learn how to cover the economy and business community, focusing on areas such as Wall Street, economic indicators, stocks and bonds. Since the University of Michigan-Dearborn is located in the heart of the world automotive industry, the course also emphasizes the skills necessary for a career in automotive journalism, specifically how to read and report auto-related financial, environmental, safety, labor, finance and manufacturing documents. An introductory course in Economics is recommended.
Prerequisite(s): JASS 2015

JASS 345 audio production 3 credit hours
This hands-on course will introduce students to the basic theories of audio and audio program production, including the fundamentals of digital audio and studio and remote recording. The course is designed to instill upon students the importance of sound in the electronic media and how its use or misuse can enhance or detract from media productions. Readings, lectures and projects are designed to teach students how to discern good audio from bad and how to avoid pitfalls media producers and directors commonly make. Through the practical application of audio concepts in the radio laboratory and through critiques of radio projects and programs, students will gain the insight and experience they will need to successfully design and execute audio strategies for the electronic media.
Prerequisite(s): ENGL 248 or HUM 248 or JASS 248 or FILM 248

JASS 350 digital film & television 3 credit hours
Digital Film & Television is a practical, applied course that emphasizes professional production skills in the context of the history, aesthetics and technology of the film/video arts. The purpose of the course is to provide students with a working knowledge and critical awareness of the medium through classroom instruction and studio training. Course counts toward minor in Communications. (YR).
Prerequisite(s): (ENGL 248 or HUM 248 or JASS 248 or FILM 248)
JASS 357 National Cinemas 3 Credit Hours
This course will introduce students to the national cinemas of a select country in contrasting the evolution of cinema in the East, with the dominant genres and conventions of Hollywood, the course will enable students to critically examine non-Hollywood narratives; the interaction of various nationalist movements within the institution of cinema; and the ways in which world cinema has been inflected by various indigenous performance practices and other visual representations. (OC).
Prerequisite(s): HUM 240 or JASS 240 or FILM 240 or ENGL 248 or HUM 248 or JASS 248 or FILM 248

JASS 370 Narratives of Film and Lit 3 Credit Hours
Explores the narrative conventions of literary and filmic fictions in a cultural, historical and psycho-analytical context. The course goes beyond a discussion of the relative merits of novels and their respective film adaptations and examines the more complex interchanges between the two narrative forms; the ideological function of narrative in contemporary society; and the effect of the medium of a fictional text on the reader/viewer. (OC).
Prerequisite(s): ENGL 248 or HUM 248 or JASS 248 or FILM 248

JASS 378 History of U.S. Broadcasting 3 Credit Hours
A survey of the history of broadcasting in the United States, from the development of radio at the turn of the 20th century to the rise of cable television in the late 20th century. The course focuses on the business, political and demographic factors guiding the various broadcast industries; the development and shifts of programming genres over time; and a wide look at the social impact of broadcasting in the country. (F).

JASS 380 History of American Journalism 3 Credit Hours
This course surveys the history of American journalism from the Colonial period to the present. Topics explored include the development of print journalism, the rise of the reading public, the growth of advertising, photojournalism, and the tabloid press, and the evolution of electronic journalism from radio and television through the computer age. (YR).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

JASS 381 Postwar European Cinema 3 Credit Hours
The course will concentrate on a series of films from various European countries with a focus on the socio-political issues, historical events and cultural preoccupations that have defined and also challenged European societies from WWII to the present. Zeroing in on the construction of European identities, the course will analyze and compare modes of narrating national, class, racial, sexual and social differences in different European nations. Themes such as memories of war and the Holocaust, new conflicts, class, immigration, women’s rights, gender, and East-West relations will be addressed. The course will thus privilege a cinema that offers a “récit,” a story. Particular attention will be given to discourses on otherness and on the ways in which film culture has reflected, reinforced, reshaped and, in some instances, contested Europe’s past and current dominant ideologies, and identities. Readings by cultural historians and analysts will provide the context for an understanding of the films. The course will conclude with a discussion of the possible existence of a specific postwar European Cinema.
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

JASS 385 Black Cinema 3 Credit Hours
This course will examine selected films from African American and African film traditions in order to analyze how their cultural production is responsive to the conditions of social oppression, economic underdevelopment, and neo-colonialism. How film traditions define "Black aesthetics" will also be discussed. (AY).

JASS 387 Gender, Sex, Power Screen Studies 3 Credit Hours
This course examines representations of gender and sexuality across multiple screens, with a particular emphasis on Hollywood, independent, and non-Western cinema. In addition, the course explores intersections of gender with race, class, and ability to further investigate power structures in contemporary screen studies. The course will engage with a range of debates in film theory and women’s and gender studies, and enable students to apply concepts and theories to specific media texts.
Prerequisite(s): HUM 240 or JASS 240 or ENGL 248 or HUM 248 or JASS 248 or FILM 248 or WGST 275 or WGST 303 or ANTH 275 or ANTH 303 or PSYC 275 or PSYC 303 or SOC 275 or SOC 303 or WST 275 or HUM 275 or HUM 303

JASS 390 Topics in JASS 3 Credit Hours
Examination of problems, issues, technology and critical issues in advanced subject areas in journalism and screen studies. Title as listed in schedule of classes changes according to content. Course may be repeated for credit when specific topics differ.
Restriction(s):
Can enroll if Class is Junior or Senior

JASS 398 Independent Study in JASS 1 to 3 Credit Hours
Readings, supervised practice or analytical assignments in Journalism and Screen Studies, determined in accordance with the needs and interests of those enrolled. May count toward JASS minor.
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if College is Arts, Sciences, and Letters

JASS 402 Investigative Reporting 3 Credit Hours
A course in investigating a subject and writing a publishable story. Course covers the rudiments of investigative reporting: preliminary research, story selection, investigative strategies and resources, interviewing, and evaluation of material. Examines the history and current status of investigative reporting, including its ethics and politics. Students write and edit several articles and focus on two longer investigative pieces. (YR).
Prerequisite(s): COMM 2015 or JASS 2015

JASS 403 Issues in Cyberspace 3 Credit Hours
This course will explore some of the current social, political, legal, and technological issues associated with the use of new media technology to move ideas and information in a democratic society. Examples of areas to be explored include the Internet and World Wide Web, privacy, the future of the mass audience, and the meaning of the First Amendment in the 21st Century. Students cannot receive credit for both COMM 403 and COMM 503. (OC)
Restriction(s):
Cannot enroll if Class is Graduate

JASS 404 Video Game Studies & Criticism 3 Credit Hours
This course will explore some of the current social, cultural, legal, and aesthetic issues associated with video games as an immensely popular new media technology that has sparked a dynamic user culture. Examples of areas to be explored include ludology and narratology, narrative architecture and game spaces, ethical questions and controversies, and player experience and communities. (YR)
JASS 405 New and Emerging Media 3 Credit Hours
This workshop-oriented course focuses on expanding conceptual and technical skills in emerging forms of media storytelling in an online context, including interactive-based media, collage, apps for mobile devices. The course integrates a range of software and interfaces with an emphasis on the conceptual and creative applications of these tools. Students may not receive credit for both JASS 405 and COMM 405. Students who have taken JASS 405 under the course title "Web Design" are not allowed to take the course for credit again under the title "New and Emerging Media."
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (JASS 345 or JASS 350)

JASS 406 History&Theory of Documentary 3 Credit Hours
This course surveys the history of European documentary and explores its ethical, legal and economic issues. Students study documentary's central moments, forms and artists; the changing theoretical approaches to documentary making; and the range of documentary purposes (informational, educational, propagandistic, entertainment). The course also provides historical and theoretical background for those students who wish to pursue their interest in documentary in the script-writing and production courses also offered in the Journalism and Screen Studies Discipline.
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

JASS 410 Advanced Media Production 3 Credit Hours
The course covers advanced concepts in media production and provides a pre-professional opportunity to direct. Elements include scripting and organization, producing, and post-production editing techniques. Emphasis is placed on individual and small group work in both field and studio settings, leading to the creation of a professional broadcast-quality portfolio program or segment. May be repeated once for credit.
Prerequisite(s): JASS 350 or COMM 350 or JASS 405 or JASS 406 or JASS 345

JASS 413 Photojournalism 3 Credit Hours
A hands-on digital imaging course in which students learn the basics of photojournalism and photography, including subject selection, composition, cropping, retouching and caption writing.
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

JASS 421 Environmental Filmmaking 3 Credit Hours
Environmental Filmmaking combines theory and practice in the examination of issues related to the environment and ecology as represented in film and television. Students will analyze the medium's ability to effectively communicate and integrate scientific and technical information about the natural world to target a audience. The course will include online screenings selected from a variety of eras and genres, readings in the field of eco-criticism, the development of a documentary treatment and the production of an original multimedia project focusing on an environmental issue. (F; AY)
Prerequisite(s): JASS 248 or ENST 301

JASS 436 Memoir and Travel Writing 3 Credit Hours
A course in narrative non-fiction that focuses on memoir and travel writing. Reading involves several books as well as classic essay-length examples. Assignments include both short analytical papers and the writing and revising of three original articles, based on research, interviews, memory, and observation, and drawing on literary techniques. (YR).
Prerequisite(s): (JASS 345 or JASS 350 and JASS 300) or (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280)
Restriction(s):
Can enroll if Level is Undergraduate

JASS 440 Theory of the Screen 3 Credit Hours
A study of the art, technology, language and theory of the screen arts through an analysis of their formalist elements and medium-specific codes. Film language, representations of art and reality, authorship, spectatorship and globalization are among the core concepts that will be examined. The course includes extensive online screenings of a variety of films encompassing a number of different forms and genres. (F)
Prerequisite(s): JASS 248 or ENGL 248 or HUM 248 or FILM 248

JASS 457 American Cinema 3 Credit Hours
This course will analyze how Hollywood as the nation's dream factory has manufactured fantasies and cultural myths that have constructed the image of American citizenship, both for Americans and non-Americans. It will establish the ideological function of Hollywood texts as providing unifying symbols for a fragmented society. (YR).
Prerequisite(s): ENGL 248 or HUM 248 or JASS 248 or FILM 248

JASS 467 Script-Writing Workshop 3 Credit Hours
This writing intensive course will train students to compose a film script, focusing on the substance, structure, and style of an original screenplay. The course will be conducted as a workshop in which students will first study classic scripts (and films based on these) of the film-school generation of directors, then model scenes and sequences of their own scripts on the principles of the above texts, and finally, write their own respective film stories in accordance with an appropriate narrative structure and design. (YR).
Prerequisite(s): JASS 310 or COMP 310 or ENGL 310 or COMM 310

JASS 477 Ethnographic Film 3 Credit Hours
This course will analyze ethnographic films as a medium for the construction of meaning in and across cultures. It will teach students to understand how the putatively "real" content of documentary film creates a mixture of fantasy, news and "science." Covering texts as varied as National Geographic photographic layouts, traditional ethnographic films made by anthropologists, and auto-ethnographies of cultural groups such as Native Americans and the Trobriand Islanders of Papua, New Guinea, the course will aim to deconstruct such oppositions as indigene vs. alien, us vs. them, and self vs. other. Students cannot receive credit for both FILM 477 and FILM 577. (AY).
Prerequisite(s): ENGL 248 or HUM 248 or JASS 248 or ANTH 101 or FILM 248
JASS 497  JASS Thesis  3 Credit Hours
A thesis project that is the culmination of the Journalism and Screen Studies major. Students choose the project area and write a thesis (40-50 pages) under the direction of a JASS faculty member. The thesis option is available only to students with substantial practical experience in the field of journalism or screen studies, and requires the approval of the JASS faculty. This course is available only to Junior/Senior students majoring in the JASS program.
Prerequisite(s): JASS 2015 and JASS 248 and JASS 310
Restriction(s):
Can enroll if Class is Junior or Senior

Latin (LAT)

LAT 101  Beginning Latin I  4 Credit Hours
An introduction to reading and translating Latin. The strong influence of Latin on the formation and meaning of English (as well as French, Spanish, and Italian) will be used to illuminate the importance of Latin for understanding western languages and thought. Literature appropriate for the level will be read. (F).

LAT 102  Beginning Latin II  4 Credit Hours
A sequel to Beginning Latin I. Literature appropriate for the level will be read. (W).
Prerequisite(s): LAT 101

Law & Environment (LE)

LE 252  Personal Business Law  3 Credit Hours
This course is designed for the non-business student and includes business law topics of direct interest in the management of personal business affairs. Topics covered are: product safety regulation, contracts, personal property, real estate, mortgages, landlord-tenant, wills and estates, insurance, employer-employee relations, unfair business practices, and an introduction to the lawmaking and enforcement processes.
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior or Graduate

LE 253  Business Law  3 Credit Hours
To introduce students to laws and regulations that impact the business environment. Topics include business litigation, the regulatory environment, contracts, sale of goods, and legal considerations in dealing with employees, competitors, suppliers and customers. (F,W,S)
Restriction(s):
Cannot enroll if Class is Freshman

LE 452  The Legal Environment of Bus  3 Credit Hours
To introduce the management student to the functioning of legal systems and the effect of regulation on the business environment. Topics covered include an exploration of legal and ethical forces that impact the policy and practice of business in dealing with customers, employers, owners, and competitors.
Prerequisite(s): COMP 106 or COMP 270 or COMP 280 or COMP 220 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107
Restriction(s):
Can enroll if Class is Junior or Senior

LE 453  Business Law: Advanced Topics  3 Credit Hours
To study advanced topics in business law, including sales, secured transactions, and other portions of the Uniform Commercial Code; advanced topics in contract law; the legal advantages/disadvantages of various types of business entities, and legal steps in formation and governance; aspects of corporate law; the law of agency; and other selected topics.
Restriction(s):
Can enroll if Class is Junior or Senior

Liberal Studies (LIBS)

LIBS 101  Foundations of Academic Success  1 Credit Hour
This course is intended to introduce students to the nature and purpose of higher education, and of academic inquiry. Academic planning, information literacy, bibliographic search techniques and the evaluation of electronic information are discussed.

LIBS 112  Car Culture  3 Credit Hours
A study of the impact of the automobile on contemporary American culture and society using the concepts and approaches of the multidisciplinary field of Science and Technology Studies. The course examines the social contexts and consequences of how cars are designed, assembled, marketed, driven, and regulated; their role in shaping individual, group, and national identity; and their place in the American imagination. (F).
Corequisite(s): COMP 105
Restriction(s):
Can enroll if Class is Freshman

LIBS 113  The World in a Grain of Sand  3 Credit Hours
From a single artifact (an object or a text), students will learn to build an understanding of an entire culture in a given historical moment. First by analyzing the artifact and then by building a larger context in which to interpret the significance of that artifact, students will also build their own academic community. By the end of the course, each student will have mastered the use of all library research resources and have developed a specific expertise in an area of research related to the artifact. By the end of the course, the class will have organized its own academic conference on the artifact in which they will share their research and insights. The professor will be a specialist in the area from which the artifact is selected and will guide you in your mastery of research skills and acculturation to academic life. (F).
Corequisite(s): COMP 105, COMP 106
Restriction(s):
Can enroll if Class is Freshman

LIBS 114  The Roots of American Activism  3 Credit Hours
This course examines the history, rhetoric, and social context of American citizen activism in the nineteenth and early twentieth centuries. Topics will include African American abolitionist and civil rights activism, women’s suffrage, the home economics movement, the labor movement, educational reform, and student political involvement on college campuses. We will also pay special attention to how these movements played out locally. Our goal throughout will be to understand how ordinary citizens used language to effect social change - and how we today might do the same. (F)
Corequisite(s): COMP 105
LIBS 115  **Shakespeare: Stage/Page/Screen**  3 Credit Hours
What has made the plays of Shakespeare so relevant to a well-rounded education in universities around the world? How do Shakespeare's plays transcend his period making him, in Ben Jonson's words, "not of age, but for all time"? In this course we shall discuss the literary, stage and film traditions of Shakespeare's plays as well as the wholesale borrowings from, echoes and parodies of them in popular culture, from Dr. Who to graphic novels, and the commercialization of Shakespeare in such unlikely mediums as Levis jean commercials. This course challenges students to consider how the medium of the artistic work (e.g. film, play, illustration) affects interpretation and how the artistic work is conditioned by the social contexts of its time. From comic books to live performance, Slings and Arrows to Kenneth Branagh, this course explores the textual, performance and visual history of a selection of Shakespeare's plays and the cultural significance of Shakespeare today. Note: the course will include an excursion to see a play at the Stratford Shakespeare Festival in Ontario, Canada.
Corequisite(s): COMP 105
Restriction(s): Can enroll if Class is Freshman

LIBS 116  **Fast Food Nation**  3 Credit Hours
This course explores the role of fast food in our society. Fast food is something we take for granted, yet it has helped shape our culture as well as our economy and is a key symbol of the American lifestyle to the rest of the world. In this course we will examine the history of the fast food industry, the nature of work in the fast food sector, the global reach of corporations like McDonald's and Starbucks, the environmental impact of food production, and the rise of the "slow food" movement. The course will introduce students to perspectives from the social and behavioral sciences including economics, sociology, anthropology, environmental studies, science and technology studies, politics, and history. (F)
Corequisite(s): COMP 105
Restriction(s): Can enroll if Class is Freshman

LIBS 117  **The Conscious Brain**  3 Credit Hours
This course will use visual perception and its organization in the brain and related phenomena such as attention and memory as tools to explore the issue of where in the brain consciousness is located, and what the necessary and sufficient criteria for consciousness are. A central premise is that consciousness, formerly the sole province of philosophers, can now be studied empirically using scientific methodologies. (F)
Corequisite(s): COMP 105
Restriction(s): Can enroll if Class is Freshman

LIBS 118  **Gender & Relationships**  3 Credit Hours
This course will focus on gender and close relationships. We will examine how pop culture (including popular movies and self-help psychology books) tend to construct gender as a naturally occurring dichotomy, emphasizing the "vast" differences between women and men. For example, John Gray's relationship self-help book titled "Men are from Mars, Women are from Venus" has sold millions of copies and has helped to perpetuate the idea that women and men are so different as to be considered different species. The course will introduce students to perspectives from various disciplines including psychology, sociology, communications and gender studies. Using theory and scientific research from these various disciplines, students will learn to critically examine the ways that gender and close relationships are portrayed in our society.
Corequisite(s): COMP 105
Restriction(s): Can enroll if Class is Freshman

LIBS 119  **Culture Wars**  3 Credit Hours
This course explores the aspects of the conflict between religion and science in America using the Scopes Trial of 1925 as the primary case study. The trial centered on the teaching of certain ideas generally thought to be part of Charles Darwin's theory of evolution via natural selection. These claims will be evaluated by examining the science of Darwin's "On the Origin of Species". The political debate will be examined first in the context of Thomas Jefferson's writings on democratic policy and science, and then from the perspective of early populist and fundamentalist reaction to Darwinism. The subsequent development of Darwinism patterns in American social, ethical, and literary thought will also be explored, as will the rise of the modern creationist movement. The course will conclude with an analysis of the political, educational, and scientific response to that movement.
Corequisite(s): COMP 105
Restriction(s): Can enroll if Class is Freshman

LIBS 120  **World War II and the Cinema**  3 Credit Hours
This course seeks to explore how the Second World War has been depicted to American audiences during the previous half century. It focuses on ten major films. The first half of the course examines a series of themes uppermost in the minds of directors during the conflict; the second half of the course will explore how the legacy of the war has been remembered during the previous half century.
Corequisite(s): COMP 105
Restriction(s): Can enroll if Class is Freshman

LIBS 121  **East Meets West: Global Conn**  3 Credit Hours
This seminar will introduce students to the following: (1) key primary sources for China and East Asia that focus on global interconnections and exchanges; (2) key theoretical issues tied to thinking about global interconnections; and (3) suggested further readings in secondary sources. Upon completion, students will be familiar with some of the basic ways to think and to find out about exchanges and interactions in world history, and to incorporate Chinese and East Asian materials (in translation) into their research.
Corequisite(s): COMP 105
Restriction(s): Can enroll if Class is Freshman

LIBS 122  **Writing about College Life**  3 Credit Hours
In this class we will look at how our own experiences conform to or challenge popular myths and narratives about the historical and contemporary college experience in America. We will study how college life is constructed in novels, newspapers, diaries, letters, personal interviews, essays, textbooks and films. While reading and writing about the college experience, we will address the intersection between fact and fiction and explore how print and visual representations might shape our perceptions of our world. Overall, students' own stories as college students will be crucial to the class's investigation, assessment and production of college life narratives.
Corequisite(s): COMP 105
Restriction(s): Can enroll if Class is Freshman
LIBS 123  Cognitive Science Fiction  3 Credit Hours
What does it mean to be human? Can machines fall in love? Can our consciousness be transmitted to another human being or substance? Is language fundamental to communication of thought? If so how would communication with other life forms proceed? These questions have traditionally been the domain of science fiction. However, given advances in technology, scientists are asking these questions with increasing frequency. This course explores the interplay between science and fiction. Each week we will examine a particular question through both science and fiction (book, film, etc) and see to what extent the science coincides with, or deviates from, the fiction. There will be a heavy emphasis on topics in cognitive science - an interdisciplinary science of mind and intelligence encompassing fields such as cognitive psychology, philosophy, linguistics, neuroscience and artificial intelligence.
Corequisite(s): COMP 105
Restriction(s):
Can enroll if Class is Freshman

LIBS 124  Wireless World  3 Credit Hours
An examination of the impact of current Internet-based services on such fields as journalism, publishing and research. By critically examining such phenomena as blogs, social networking systems (MySpace and FaceBook), and Wikipedia, students will develop critical literacy and become more effective readers, writers and researchers.
Corequisite(s): COMP 105

LIBS 125  Apathy 2 Action: Amer Citznsnph  3 Credit Hours
An examination of American citizenship as understood and practiced in a variety of arenas of public life. We will examine both historical and contemporary perspectives on citizenship, including the ways in which public discourse helps situate Americans? understanding of the idea of citizenship, and by extension, the practice of democracy. In addition to exploring citizenship as it operates in the political arena and civil society, we will emphasize the role of higher education in nurturing active citizenship. This seminar includes an academic service learning requirement. Academic service learning is an educational method that integrates volunteer community service with course material to enhance the learning objectives of the course. Students will be expected to participate in a carefully-chosen and instructor-approved civic activity (e.g., volunteerism, democratic participation, public advocacy) that will highlight different models of citizenship in practice.
Corequisite(s): COMP 105
Restriction(s):
Can enroll if Class is Freshman
Can enroll if College is Arts, Sciences, and Letters

LIBS 126  Anthropologists on Campus  3 Credit Hours
Anthropology professors have studied the lives of university students (My Freshman Year; Coming of Age in New Jersey). This course turns the tables, inviting new students to conduct field work on the ?hidden lives? of professors, university staff and other students. Through guided practice in ethnographic skills-interviewing and participant-observation-students will come to understand what culture means to anthropologists while exploring the multiple cultures of UM-Dearborn and gaining insights on meanings and functions of higher education.
Corequisite(s): COMP 105
Restriction(s):
Can enroll if Class is Freshman
Can enroll if College is Arts, Sciences, and Letters

LIBS 127  Oceans of Data  3 Credit Hours
This course will pursue two distinct themes. The first is the triumphs of modern statistical methodology in science during the last hundred years. Definitive studies such as the Salk Vaccine Field Trials and those involving the smoking and lung cancer controversy will be examined in depth. The second theme is the awareness and use of public access databases, which are also used by researchers and policymakers. These include the National Health and Nutrition Examination Survey (NHANES), the Surveillance Epidemiology and End Results (SEER) database of cancer registries, the Statistical Abstract of the United States, and SearchSystems.net Public Records Directory. The course will involve a number of readings and the interpretations of data that will form the basis of classroom discussion and written reports.
Corequisite(s): COMP 105
Restriction(s):
Can enroll if Class is Freshman
Can enroll if College is Arts, Sciences, and Letters

LIBS 128  Exploring Race and Identity  3 Credit Hours
This seminar will examine a variety of models of mental health in African Americans and racial, ethnic and self-identity development. The impact of Black society, culture, family, racism and poverty on personality growth of African Americans will be explored. The history of Black psychology and the pioneer theorists who have made significant contributions to foundation and continuing study of the thoughts, feelings, behaviors and mental health of African Americans will be discussed.
Corequisite(s): COMP 105
Restriction(s):
Can enroll if Class is Freshman
Can enroll if College is Arts, Sciences, and Letters

LIBS 129  Trauma, Text, & the City  3 Credit Hours
An exploration of how artists and writers represent urban trauma (terror, violence, destruction, absence) to describe indescribable suffering. In the wake of urban chaos, how do writers make urban community possible? To answer this question, we will examine traumatic events in New York City (9/11) as well as Detroit to understand how emails, photographs, novels, documentaries, and films try to narrate chaos and stabilize urban history. In addition to films that experiment with narrative (such as Memento [2000] and documentaries about 9/11 and Detroit), texts may include writings by psychologists (Freud), urban historians (Sugrue), cultural theorists (Baudrillard), and novelists (Joseph Conrad).
Corequisite(s): COMP 105
Restriction(s):
Can enroll if Class is Freshman
Can enroll if College is Arts, Sciences, and Letters

LIBS 130  Liberal Arts & the Professions  3 Credit Hours
A liberal arts perspective on careers and professions. Topics include the historical relationship between a liberal arts education and professional training, the development of the concepts of ?career? and ?profession,? sociological and psychological understandings of professions and workplaces, and accounts of work in several different professions (such as journalism, teaching, and medicine). Assignments focus on enhancing the connections between academics and career preparation. Students enrolled in Libs 130 must also enroll in Exploratory Studies 102, a one-credit career-planning course that assists students in assessing their interests, skills, and values and in identifying and researching careers.
Corequisite(s): EXPS 102
LIBS 131  Understanding Global Cultures  3 Credit Hours
Globalization is the predominant interpretative concept through which we analyze the state of the planet in general, and the intermingling of cultures in particular. This course proposes a comprehensive examination of cultures around the world to first-year university students. A transdisciplinary approach (history, political science, economics, geography, and anthropology) will introduce students to a wide breadth of content and depth of contextualization, and enhance their understanding of the complexities of the (post)modern world. In addition to readings on the main groups of world cultures, we will analyze several films that address the issues of cultural identity and globality. The question of stereotyping cultures will be discussed through examples of parodic representations of cultures. The course will also address the tensions between local ways of life (historical, linguistic, ethnic, and religious) and today’s pressures for transnational and multiple identities, intensified by the communication of ideas and the movement of people around the world. Thus, we will also look at how the cultures of immigrant communities in southeast Michigan have contributed to the local cultural configuration.
Corequisite(s): COMP 105
Restriction(s):
Can enroll if Class is Freshman

LIBS 132  Engaging Communities  3 Credit Hours
This course studies concepts of community and service within American culture. It traces the development of civic life in the U.S. by examining the promises and challenges of community and citizenship, especially questions of inclusion and exclusion in American civic life. Students are expected to engage in some form of active citizenship with this question in mind: What individual and collective actions are most effective in making our communities into places in which each person can thrive?
Corequisite(s): COMP 105
Restriction(s):
Can enroll if Class is Freshman
Can enroll if College is Arts, Sciences, and Letters

LIBS 133  Jesus and the Gospels  3 Credit Hours
Who is Jesus of Nazareth? For centuries people seeking and answer have turned to the four gospels of the New Testament. But how reliable are these texts? Were they written as biographies, histories, or to fulfill other purposes? This course will address these and other questions associated with the quest for the historical Jesus. Students will be introduced to a variety of approaches involved in the literary-historical study of the gospels and New Testament backgrounds, and learn about the methods scholars employ to move from these texts and contexts to an historical portrait of Jesus. Attention will also turn to wide range of gospels not found in the New Testament to see what light they can shed on the Jesus’ identity.
Corequisite(s): COMP 105
Restriction(s):
Can enroll if Class is Freshman
Can enroll if College is Arts, Sciences, and Letters

LIBS 134  Nano-fiction  3 Credit Hours
Students in this seminar will explore a collection of extremely short stories-weird and wonderful stories that manage to ignite the imagination and evoke complex realities in just a few pages. Discussion of the stories, guided by provocative questions and thought experiments, will help students develop ways to navigate texts, subtexts, and contexts at a college level; to write more critically and analytically; and to read with more confidence and passion. The seminar will incorporate a series of short, focused writing assignments and some creative research projects. The goal is to discover rich worlds in tiny packages....and return safely, if somewhat altered, to the real world.
Corequisite(s): COMP 105
Restriction(s):
Can enroll if Class is Freshman
Can enroll if College is Arts, Sciences, and Letters

LIBS 135  Urban Monsters/Suburb Angels  3 Credit Hours
If cities are the centers of human civilization, then why have we inherited such horrific stereotypes of urban environments? This course analyzes how writers (screenwriters, dramatists, urban theories, architects, novelists, and poets) tried to reimagine cities (both in America and Britain) as both a unified community of English-speaking individuals and a globalizing model of “civilized” social organization between 1660 and the present. In doing so, the course argues that our understanding of the “monstrous” connotations of cities depends upon our imagining the simultaneous creation of morally “angelic” middle-class suburbs in both gothic and horror writing and visual art. Reading may include Dracula, Journal of a Plague Year, The Strange Case of Dr Jekyll and Mr Hyde, Linden Hills, and The Jungle.
Corequisite(s): COMP 105
Restriction(s):
Can enroll if Class is Freshman
Can enroll if College is Arts, Sciences, and Letters

LIBS 136  Bad Decisions  3 Credit Hours
The course is based on a recent book by Daniel Kahneman, entitled "Thinking, Fast and Slow". The book is based on the premise that the human brain supports two different modes of thought: (a) a largely unconscious mode that is capable of processing large amounts of information quite quickly, and (b) a slower mode that operates more on the basis of logic. The goals of the course would be to (a) make sure students understand these two modes and the accompanying data and rationale that support the two modes, (b) understand and be able to apply the fairly simple methodology that underlies many of the related experiments, (c) improve one’s own thinking by learning when to rely on each of the two systems and how to avoid the pitfalls associated with each, and (d) be able to extend the literature by performing novel follow-up experiments based on those already performed.
Restriction(s):
Can enroll if Class is Freshman
Can enroll if College is Arts, Sciences, and Letters
**LIBS 137  American Horror Stories  3 Credit Hours**
This course analyzes American culture through the lens of its horror industry in film, literature, art, and other forms of artistic and popular culture. Horror, because of its nature as an extreme form of representation and its association with the imagination rather than reality, has the ability to reveal certain truths and theories about history, culture, and ways of being that are difficult to access through other modes of expression. This course explores these truths and theories by studying American horrors in a way that contextualizes film, stories, art, and other forms of popular culture within particular social, political, and historical moments. Examples include: Cold War horror productions (the short stories of H.P. Lovecraft and Richard Matheson) and the use of aliens and other invaders as a stand in for outsiders and “others,” domestic horrors like The Nightmare on Elm Street and Beloved and the ways in which violence, gender, race and the home intersect, and a study of post-feminist heroines in Buffy the Vampire Slayer and Pretty Little Liars.

**Corequisite(s):** COMP 105

**Restriction(s):**
- Can enroll if Class is Freshman
- Can enroll if College is Arts, Sciences, and Letters

**LIBS 138  Wild Thing: Attitudes-Animals  3 Credit Hours**
This course is an interdisciplinary study of the concepts of what it means to be human and how that compares with other animal species. By examining the various ways in which nonhuman animals are objectified in their relationship to humans through religious teachings, portrayed in the media sometimes anthropomorphically, and the ways in which humans make use of animals, students will engage in their own academic inquiry leading to in-depth class discussions about the concept of what it means to be a human and a nonhuman animal. These investigations and discussions will be based on readings and other sources to guide students’ understanding of their own and other’s attitudes to human and nonhuman animals within societies and cross-culturally.

**Corequisite(s):** COMP 105

**Restriction(s):**
- Can enroll if Class is Freshman
- Can enroll if College is Arts, Sciences, and Letters

**LIBS 140  Hispanic Fantasy and Horror  3 Credit Hours**
Full Course Title: Fearing the Unknown: Horror Fantasy in Hispanic Fiction. This course is an introduction to horror fantasy in Latin America and Spain, through short stories, novellas, and films from the early 19th through early 21st centuries. Students will explore major literary and visual texts translated into English from Spanish and several countries. This is an interdisciplinary course that will also deal with topics such as racial, ethnic, gendered/sexual, cultural, and ethno-geographical diversities and differences in Latin America and Spain. This course will provide students with the basic tools for text and film analysis, and seeks to engage students in critical discussions. (OC)

**LIBS 180  Talk & Text  3 Credit Hours**
Full Title: Talk and Text: Language Myths and Language Facts An overview of fundamental language issues. Commonly-held beliefs about speaking and writing will be critically examined by comparing and contrasting language myths and linguistic theories, placing strong emphasis on practices of researching, writing, and speaking about language issues in an academic setting. Separate modules will deal with the origin and development of language, the importance of language rules and structures, the relationship between language, society and gender issues, and mental aspects of language, including bilingualism. (OC)

**Restriction(s):**
- Can enroll if Class is Freshman

**LIBS 191  Returning Adult Learners  1 Credit Hour**
LIBS 191 is designed to provide returning adult students with the support, skills, and knowledge needed for academic success at the University of Michigan-Dearborn. Students will discover productive learning strategies, build a supportive network of peers, and explore campus resources by examining, through selected readings and assignments, the broader social, cultural, and individual context of being a non-traditional student on a university campus.

**LIBS 200  Computer Literacy  1 to 3 Credit Hours**
An introductory course in computing for students who do not intend to become computer programmers or designers. The course explores the nature and origins of computing, and examines its uses and limitations in such applications as teaching/learning, buying/selling and information storage/retrieval. The social implications of the computer revolution will be examined and limited programming will be provided with a small, home computer.

**LIBS 275  GIEU: Global Intercultural Exp  3 Credit Hours**
Global Intercultural Experience for Undergraduates. LIBS 275 is an interdisciplinary experiential introduction to intercultural learning that prepares diverse undergraduate students from various colleges for field experience interactions, and then helps students bring these experiences back to campus in socially and academically productive ways. It is a series of concentrated seminars of orientation, debriefing, and symposium.

**Restriction(s):**
- Cannot enroll if Class is Specialist or Graduate or Doctorate

**LIBS 276  GIEU: Leadership  2 Credit Hours**
The Global Intercultural Experience for Undergraduates (GIEU) Leadership Seminar provides leadership training and experience for exceptional students nominated by faculty from those having completed LIBS 275. In addition to participating in a group seminar, each student will be matched with a faculty mentor in preparing for and leading an upcoming GIEU field experience. These peer leaders will have two primary responsibilities: to help in team formation for the new field site; and to assist faculty members on site with logistics, peer communication, and organization. In addition to their practical experience, each participant will complete reflection exercises and essays.

**Restriction(s):**
- Cannot enroll if Class is Specialist or Graduate or Doctorate

**LIBS 290  Pandemic Perspectives  1 Credit Hour**
Pandemic diseases may have biological origins but their effects cut across all dimensions of human life, from the dynamics of families and workplaces to the highest levels of politics, the economy, and the environment. This series of six concentrated lectures will feature faculty from across the UM-Dearborn campus applying their disciplinary perspectives to understanding the sources, consequences, implications and precedents of the Coronavirus/COVID-19 pandemic. (OC)

**LIBS 320  Library Research Skills  1 Credit Hour**
This course is designed to teach and strengthen the information competency and research skills of college students. This course provides students with life-long learning skills needed to access, evaluate, and utilize information resources, including full-text article databases, internet resources, online catalogs, as well as materials traditionally located in the library.
LIBS 329  Jesus and the Gospels  3 Credit Hours
Full Course Title: Jesus and the Gospels: Between Fact and Fiction- Who was Jesus of Nazareth? For centuries people seeking an answer have turned to the four gospels of the New Testament. But how reliable are those texts? Were they written in biographies, histories, or to fulfill other purposes? This course will address these and other questions associated with the quest for the historical Jesus. Students will be introduced to a variety of approaches involved in the literary historical study of the gospels and New Testament backgrounds, and learn about the methods scholars employ to move from these texts and contexts to an historical portrait of Jesus.

LIBS 330  Innovators-Project Development  3 Credit Hours
This course is an introduction to the theory and practice of the Honors Transfer Innovators (HTI) Experience. HTI is a project based, collaborative learning community with a focus on self-transformation, creativity, diversity, leadership, and reflection. We explore these themes through readings, small group projects, and mentorship from senior students in the 400 level course, as well as the use of educational technology, and community engagement. This course is only open to students admitted into the HTI learning community.

Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
Can enroll if Attribute is Honors Transfer Innovators

LIBS 351  Critical Food Studies  3 Credit Hours
This course is about revealing the powerful ways that food shapes our lives. Food is rapidly becoming a focal point for pedagogy and research because it lies at the nexus, and intersects multiple disciplines. It is essential to life and our health is heavily reliant upon adequate nutrition. The production and distribution of food is also deeply political and under strain from economic and social forces. This course uses a holistic approach to better investigate the complex ways that food impacts our lives and how food insecurity contributes to income, social, and political inequality in the US. (FWS)

Prerequisite(s): COMP 106 or COMP 270 or COMP 280 or COMP 220

LIBS 364  The European Union  3 Credit Hours
This course examines the history and politics of European integration, notably institutional development, decision-making procedures and dynamics, and policy formulation in the European Union. The course will concentrate on the intergovernmental conferences and treaty reform, the relationship between European politics at the subnational, national and supranational levels; the role of national, institutional, and non-state actors; problems of accountability and legitimacy; the economic and monetary union; and enlargement. The course will also address questions of globalization and technology, and the American perception of the EU. (OC)

Prerequisite(s): COMP 105
Restriction(s):
Can enroll if Level is Undergraduate

LIBS 395  Co-op Education Work Assignment  1 to 3 Credit Hours
Student is eligible to compete for job openings listed with the co-op office by employers. After application and interview, employers hire the student best suited to employer’s job needs. Study/career-related paid positions are either alternating full-time or parallel part-time. Under a cooperative work agreement the student submits academic learning objectives and evaluations to co-op faculty advisor, who, upon review of employer evaluation, determines credit for co-op learning experience. Students must fulfill the seminar and study term requirements of the program.

LIBS 396  Adv Co-op Work Assignment  1 to 3 Credit Hours
Students who have completed two terms of LIBS 395 may move on to LIBS 396, which offers advanced training in career-related topics, especially leadership. In addition to fulfilling the work-site terms of the placement, students are required to submit leadership goals as part of their Learning objectives and leadership assessment as part of their end of term evaluation. Oral report on how leaderships objectives fared in the workplace will be presented to members of the seminar, LIBS 300. LIBS 395 is a prerequisite for LIBS 396.

Prerequisite(s): LIBS 395

LIBS 397  Adv Co-op Work Assignment II  1 to 3 Credit Hours
Students who have completed two terms of LIBS 395 and two terms of LIBS 396 may move on to LIBS 397, in which students assess their placement in the light of research on the topic of good work. In addition to fulfilling the work-site terms of the placement, students are required to conduct informational interviews of professionals in their field, including people on the work site, with special focus on that aspect of professionalism where excellence and ethics intersect. The results of interviews will be reported in the end-of-term placement evaluation.

LIBS 395 and LIBS 396 are prerequisites for LIBS 397.

Prerequisite(s): LIBS 395 and LIBS 396

LIBS 430  Innovators Capstone  3 Credit Hours
LIBS 430 is a three-credit hour practicum based course that serves as the capstone for the Honors Transfer Innovators (HTI) Experience. Students will engage in theoretical, collaborative, and project based learning experiences focused on peer mentoring, project completion, and creative leadership. Based on these experiences, students will identify best practices that are applicable to mentoring HTI 300 level students and develop a set of principles to guide their mentoring relationship. Students in this course will mentor HTI 300 students who will be crafting their project proposals. In addition students in this course will complete an M-Portfolio documenting their HTI experience.

Prerequisite(s): LIBS 330
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
Can enroll if Attribute is Honors Transfer Innovators

LIBS 442  Medical Ethics  3 Credit Hours
An examination of moral issues in medicine. Among the problems to be considered are truth-telling and paternalism in the doctor-patient relationship, psychosurgery and behavior control, death and euthanasia, the allocation of scarce resources, and genetic counseling and control. Specific attention will be given to ethical theories and to philosophical concepts such as rights, autonomy, and justice. Students cannot receive credit for both PHIL 442 and PHIL 542. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.

Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 445 or PHIL 490
LIBS 450  Integrative Learning  3 Credit Hours
The value of interdisciplinary studies is the ability to cope with issues of contemporary urgency and global significance from multiple points of view. The purpose of this course is to address issues that are relevant to a student's field of study, and that can be investigated by applying knowledge from several disciplines. Each student will compose a rationale for their programs of study; will identify issues related to their chosen programs of study; will choose research a topic or issue. The several assignments of the course build up to the completion of a research project to investigate, analyze, evaluate and attempt to provide a solution for a complex issue. (F,W)

Library Science (LIBR)

LIBR 465  Literature for Children  3 Credit Hours
The evaluation of books for children aged three to twelve. Fiction, folklore, poetry, illustration, and informational books are considered with emphasis on the development of standards for selecting materials with reference to the interests, needs, and abilities of children and the enrichment of the school curriculum. Designed for librarians, supervisors, and teachers in the elementary school. Students will also carry out assignments with children and therefore must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent). For more information access the Field Placement Office website at https://umdearborn.edu/cehhs/cehhs_fpo/.
Prerequisite(s): Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Sophomore or Junior or Senior

LIBR 470  Literature for Young People  3 Credit Hours
Surveys and develops criteria for appropriate literature for young people in junior high school. Fiction, non-fiction, folklore, poetry and fantasy are considered with reference to the interests, needs and abilities of adolescents. Designed for librarians, supervisors, and teachers in the secondary school.
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Sophomore or Junior or Senior

LIBR 475  Issues Lit Child/Yng People  3 Credit Hours
This course is designed to heighten the awareness and sensitivity of teachers to the treatment of issues in modern and traditional literature for elementary and middle school children. Among these issues will be justice, ethics, abuse, conformity, aging, death, sibling problems, alienation, friendship, prejudice, gender, and other areas of concern. Techniques and activities for fostering discourse and open inquiry in the classroom, relative to the literature, will be explored and presented. (OC).
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services

Other Content
* An asterisk denotes that a course may be taken concurrently.

Frequency of Offering

The following abbreviations are used to denote the frequency of offering:
(F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Linguistics (LING)

LING 280  Introduction to Linguistics  3 Credit Hours
The basic concepts, scope, and methodology of the descriptive and historical study of the English language. (F,W,S).

LING 375  Psychology of Language  3 Credit Hours
The nature of human language as seen from the perspective of experimental psychology. The course will also introduce the student to current developments in linguistic theory. (AY).
Prerequisite(s): PSYC 170 or PSYC 171 or LING 280 or PSYC 101

LING 383  American English  2 to 3 Credit Hours
The development of American English and its dialects interpreted in the light of cultural history and processes of language change.
Prerequisite(s): LING 280 or LING 281

LING 385  Language and Gender  3 Credit Hours
Examines theories of differences between male and female speakers of English, focusing on phonological, syntactic, semantic, stylistic, and conversational features, with analyses of differences in speaking strategies and agendas of male and female speakers, as well as split-gender language situations in the workplace, home, and social settings.
Prerequisite(s): LING 280 or LING 281

LING 390  Topics in Linguistics  3 Credit Hours
Examination of problems and issues in selected areas of linguistics. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

LING 391  Independent Study  3 Credit Hours
****NO DESCRIPTION AVAILABLE****

LING 399  Independent Studies in Ling  1 to 6 Credit Hours
Readings or analytical assignments in linguistics in accordance with the needs and interests of those enrolled and agreed upon by the student and advising instructor. May be repeated for a maximum of 6 credit hours. (F,W).

LING 422  Language and Popular Culture  3 Credit Hours
This course provides an overview of popular culture theories and communication models along with research methods. It offers an accessible, in-depth presentation of popular culture including music, film, television, magazines, comics, animation, and advertising in the US and the beyond. The main focus of the course is to highlight the functions of language, particularly, dialects, accents, and foreign languages, in producing and consuming local and global pop culture texts.
Restriction(s):
Can enroll if Level is Undergraduate

LING 425  Language and Society  3 Credit Hours
An examination of the social functions of speech through readings and exercises, emphasizing schools and other applied settings. Topics include ethnic and social class dialects, codeswitching, and the organization of conversation. Students cannot receive credit for both LING 425 and LING 525. (YR).
Prerequisite(s): ANTH 101 or LING 280 or LING 281

LING 461  Modern English Grammar  3 Credit Hours
The morphological and syntactic analysis of the structure of present day English considered in the light of modern linguistic science. Students cannot receive credit for both LING 461 and LING 561.
Prerequisite(s): LING 280 or LING 281 or LING 480
LING 464  Contemporary Rhetorical Theory  3 Credit Hours
An examination of contemporary rhetorical theories through study of representative practitioners and related developments in linguistics, philosophy, psychology, communication, and composition and rhetoric. Students may not receive credit for both COMP 464 and COMP 564.
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
Restriction(s):
Cannot enroll if Class is Undergraduate

LING 465  Discourse Analysis  3 Credit Hours
An examination of the syntactic and semantic devices and structures underlying communication in written texts and oral interaction. Material to be analyzed will vary from term to term (technical reports, scholarly articles, newspaper stories) but examples will be drawn primarily from the written language. Students cannot receive credit for both LING 465 and LING 565. (OC)
Prerequisite(s): LING 280 or LING 281
Restriction(s):
Cannot enroll if Class is Graduate

LING 474  Second Lang Acquisition: Engl  3 Credit Hours
A survey of fundamental concepts and major concerns in the study of English as a Second Language (ESL). The course examines a variety of psycholinguistic and sociolinguistic issues related to second language acquisition (SLA), ranging from theoretical to pedagogical. A primary focus is on developmental patterns and cognitive processes of SLA and individual variation in ESL speakers in terms of their social motivations and learning strategies. Implications for practical concerns such as the ESL teaching profession, instructional materials and curriculum development will be addressed where relevant.
Prerequisite(s): LING 280 or LING 281 or LING 480

LING 475  Lang Diversity: Arab Amer Comm  3 Credit Hours
The study of the development, features, and significance of varieties of English in southeastern Michigan, with a focus on the Arab American community. A range of sociolinguistic approaches are explored and applied to the subject matter. Topics to be addressed include code switching, language shift and maintenance, style shifting, and the role of language in identity formation. Students cannot receive credit for both LING 475 and LING 575.
Prerequisite(s): LING 280 or LING 281 or LING 480

LING 476  Sociolinguistics  3 Credit Hours
An examination of sociolinguistic approaches to the issue of variation in language. Areas to be considered include ways of defining and constructing language, different types of language varieties, how variation is structured in language, the role of sociolinguistic variation in linguistic change, and the significance of linguistic acts of identity. (YR)
Prerequisite(s): LING 280 or LING 480
Restriction(s):
Cannot enroll if Class is Graduate

LING 477  African American English  3 Credit Hours
An examination of the structure, history and use of African-American English. Topics will include the pronunciation, grammar and vocabulary of African-American English, theories of origin, linguistic repertoire and code-switching in African-American communities, the Ebonics controversy, and the role of this variety in education and identity formation. Students cannot receive credit for both LING 477 and LING 577.
Prerequisite(s): LING 280 or LING 281 or LING 480
Restriction(s):
Can enroll if Level is Undergraduate

LING 480  Concepts in Linguistics  3 Credit Hours
An examination of foundational concepts in linguistic and sociolinguistic theory, which explores the intellectual and philosophical problems raised by these concepts. Issues covered include the metalinguistic nature of language studies, the relation of language to the communication systems of other species, the physiological basis of language, language variation, language function and instrumentality, and innate versus learned behavior. Designed for students pursuing the Endorsement in ESL Teaching. (YR)
Prerequisite(s):
Cannot enroll if Class is Graduate

LING 482  History of the English Lang  3 Credit Hours
A thorough grounding in the history and structure of the English language. At issue are the linguistic and ideological origins of the concept of Standard English, and the strengths and limitations of different methods of analyzing the history of the language. The course will emphasize sound change, grammatical change, and their sociolinguistic context. (YR)
Prerequisite(s): LING 280 or LING 480
Restriction(s):
Cannot enroll if Level is Undergraduate

LING 484  World Englishes  3 Credit Hours
A study of the origin and significance of different forms of English throughout the world. Contact with other languages, pidginization, creolization, standardization, and the formation of the three circles of English are examined. (YR)
Prerequisite(s): LING 280 or LING 480
Restriction(s):
Cannot enroll if Class is Graduate

LING 490  Topics in Linguistics  3 Credit Hours
Examination of problems and issues in selected areas of linguistics. Titles as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC)

LING 499  Advanced Independent Studies  1 to 3 Credit Hours
Advanced research project in accordance with the needs and interests of those enrolled and agreed upon by the student and advising instructor.
Prerequisite(s): LING 280 or LING 480

Marketing (MKT)

MKT 352  Mkgt Principles and Policies  3 Credit Hours
An introductory course in the marketing activities associated with the free market system. The various components and functions of the marketing activities will be discussed in an integrated framework to provide insight into the role and scope of marketing in the business environment. The components and functions include: product development, pricing, promotion, distribution, consumer behavior and target market analysis.
Prerequisite(s):
Cannot enroll if Class is Freshman
MKT 360 Marketing and Society 3 Credit Hours
This course explores the social scientific theories on consumption and consumer culture as well as ethical/public policy issues related to consumption and marketing. Topics will include: economic and sociological perspectives on consumer culture; the origins of consumer tastes, trends, and fashions; the psychology of happiness and how personal well-being is influenced by wealth, consumption, and materialism; and public policy concerns related to marketing and advertising. (YR).

Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

MKT 363 Digital Consumer Srch&Mktg 3 Credit Hours
This course is dedicated exclusively to digital marketing issues. Topics include: keyword research; search engine optimization which covers (a) how to design websites and other digital assets so they are highly ranked by search engines, and (b) "off site optimization" which is establishing linking partners; and Pay per click advertising.

Prerequisite(s): MKT 352

MKT 382 Understanding Customers 3 Credit Hours
Students in this course will improve their ability to understand what customers want right now, what they are going to want in the future, and how to adjust the marketing mix to build lasting relationships with consumers. To do this, students will learn more advanced models of market segmentation, targeting, and product positioning. This course utilizes concepts developed in the behavioral sciences (economics, marketing, psychology, sociology, and anthropology) and qualitative research techniques to understand and predict consumer behavior, and enhance students' ability to communicate effectively with target market segments.

Prerequisite(s): MKT 352

MKT 402 Marketing Management 3 Credit Hours
A case-oriented course in which the understanding and insights of the various components and functions of marketing learned in MKT 352 are applied to practical situations. Marketing decisions will be evaluated and decided for a series of real-life cases in a number of areas including: general marketing, pricing, promotion, distribution and market research.

Prerequisite(s): MKT 352

MKT 434 Sales Mgmt & Personal Selling 3 Credit Hours
The purpose of this course is to provide a general understanding of the practice of sales management. The course is designed to provide a basic framework of what sales managers actually do and how they solve problems they may encounter. Team presentations, case analyses and class discussion are used throughout the course to describe and explain the skills required of sales managers to achieve their objectives.

Prerequisite(s): MKT 352

MKT 436 Business to Business Mktg 3 Credit Hours
To develop an understanding of that area of marketing that addresses the needs of the organizational customer in industry, government and institutions. The special challenges of the industrial market that confront the marketing manager and sales personnel are discussed in the course. Topics include: assessing industrial marketing opportunities, the organizational buying process, formulating industrial marketing strategy and evaluating industrial marketing strategy and performance.

Prerequisite(s): MKT 352

MKT 454 Marketing Research 3 Credit Hours
To introduce marketing research concepts and techniques for collection, analysis and interpretation of data for marketing decisions. Topics include: problem definition, research design, questionnaire construction, sampling, attitude scaling, statistical analysis, presentation and evaluation of research findings. A field research project may be included.

Prerequisite(s): (DS 300 or DS 301) and MKT 352

MKT 455 E-tailing and Retailing 3 Credit Hours
This course introduces students to significant issues and analysis frameworks of 21st century retailing strategy and management, including retailing over the Internet, or "E-tailing". E-tailing and retailers are challenged to enhance customer experience, customer service and customer satisfaction. The students will learn the complexities and nuances of shopper behavior, shopper demographics, and how shopper decisions are influenced by store design, store environment, store atmosphere and merchandising, in brick-and-mortar and Internet stores. The course will elevate and enhance students' readiness and advancement in retail, brand management and marketing careers.

Prerequisite(s): MKT 352

MKT 456 Advg and Sales Promotion 3 Credit Hours
A survey of the principles of advertising and sales promotion, which examines problems related to advertising management. Topics include: the scope of the advertising business, determination of objectives, strategy formulation, creating effective advertising programs, media planning with emphasis on integrating new media into the mix, the role of dealers in promotion, establishing the advertising budget, advertising research and the social and legal aspects of advertising in society.

Prerequisite(s): MKT 352

MKT 457 Globl Mrktng&Consuwr Cultre 3 Credit Hours
To provide students with an understanding of the components of marketing in the international environment. A working knowledge of the environment and the complex inter-relationship between different components of marketing will be developed. The focus is on evolving a logical and integrated framework for international marketing decisions.

Prerequisite(s): MKT 352 and ((ECON 2001 or (ECON 201 and ECON 202) or MKT 402))

Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

MKT 458 Advertising 3 Credit Hours
This course covers the principles of integrated brand advertising and promotion and digital strategies. Incorporated into this course are needed skills by both traditional and online marketing majors. Students will learn to allocate resources against a wide variety of communications and promotions vehicles, so as to effectively implement a brand strategy. We examine the current state of the business and problems related to advertising and promotion in the 21st Century. Topics include: determination of promotion objectives, strategy formulation, creating effective advertising programs, media planning, roles of client and agency, establishing the advertising budget, advertising research and the social and legal aspects of integrated brand promotion.

Prerequisite(s): MKT 352
MKT 460  Digital Comm Strategy  3 Credit Hours
This course is an in-depth survey of the principles of digital advertising/communication and promotion. We examine the issues, particularly what is a brand today, the current state of the business and problems related to advertising and management in the 21st Century. Topics include the scope of the digital advertising business, determination of objectives, strategy formulation, creating effective digital advertising programs, media planning, roles of client and agency, establishing the advertising budget, advertising research and the social and legal aspects. (YR)
Prerequisite(s): MKT 352 and MKT 458

MKT 463  Digital Analytics&Content Mktg  3 Credit Hours
This course is dedicated exclusively to digital marketing issues. Topics include: using digital analytics platforms to (a) understand the flow of traffic to your website and other digital assets, and (b) conversion design, i.e. creating websites and other digital assets that both attract visitors and effectively monetize those visits and working with web programmers, i.e. this topic provides students with basic vocabulary and concepts needed to work effectively with technical experts.
Prerequisite(s): MKT 363

MKT 471  Innovation, Entrepreneurship, and Creativity  3 Credit Hours
This course applies the marketing mix: product development, pricing, promotion, and distribution to an entrepreneurial enterprise. It will explore marketing-related issues faced by entrepreneurs, such as: new product innovation, development, and testing; promoting the product with scarce resources and gaining market acceptance; raising capital, forecasting market demand, and projecting profit and loss; satisfying the many stakeholders, creating pricing strategies, and cultivating channels of distribution. This course aims to be a multidisciplinary seminar that requires students to explore a potentially profitable business idea and to develop an appropriate business plan. This interactive business laboratory will lead students from the assessment of their business idea to the definition of a detailed market research and the description of a trustable strategic planning. Finally, students will be also required to devise an accurate budget in order to give accounting consistency to the business idea describe in the first part of their business plans. Topics covered include: market analysis, strategic planning and organizational structure, cost definition and analysis, break-even point, budgeting and performance representation.
Prerequisite(s): MKT 352

MKT 488  Seminar: Marketing  1 to 3 Credit Hours
To provide students with an opportunity for intensive study in current selected areas related to the research activities and/or professional activities of faculty members. Permission of School of Management.
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

MKT 488A  Seminar: Marketing  3 Credit Hours
TOPIC TITLE: Introduction to Entrepreneurship. This course describes the entrepreneurial process and explores issues, concepts, and procedures involved in conceiving of, planning for and creating a new business. It emphasizes the need for careful identification of products or services to be offered, specification of the target market(s) and the benefits the enterprise will provide to prospective customers, determining resource requirements, locating resource providers, and developing essential operating and administrative systems. Students will identify an actual business venture they are considering, develop a business plan, and present that plan at the end of the term.
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

MKT 498  Research: Marketing  1 to 3 Credit Hours
To provide the advanced student with the opportunity to undertake a research project under the supervision of a faculty member. At least two weeks prior to registration in the term when such a course is to be elected, an interested student must submit to the dean of the school a written request for permission to elect a research course, on a form available in the school office. The request will include a description of the proposed research project. The dean will review the proposal with faculty members to ascertain availability of relevant faculty supervision and to establish appropriate credit.
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

Mathematics (MATH)

MATH 080  Introductory Algebra  3 Credit Hours
The Developmental Mathematics sequence (MATH 080, MATH 090) is offered as a service to students who need extra preparation in mathematics. MATH 080 is for students who are likely to need two semesters of additional preparation in mathematical computation and symbol manipulation, communication, and conceptual understanding. Topics in the two-course sequence include: arithmetic readiness, real numbers and expressions, linear equations and inequalities, lines and functions, systems of linear equations, rational expressions and equations, radicals and complex numbers, quadratic equations and functions, function operations and inverses. Students are required to have Internet-ready devices available for each class meeting. Skill development takes place online and outside scheduled class meetings. The course is graded on an A, B, C, NC (not completed) basis. This course is offered for additive credit.
Prerequisite(s): Mathematics Placement with a score of 080

MATH 090  Intermediate Algebra  3 Credit Hours
The Developmental Mathematics sequence (MATH 080, MATH 090) is offered as a service to students who need extra preparation in mathematics. MATH 090 is for students who (1) have successfully completed MATH 080 or (2) are likely to require only one semester of additional preparation in mathematical computation and symbol manipulation, communication, and conceptual understanding. Topics in the two-course sequence include: arithmetic readiness, real numbers and expressions, linear equations and inequalities, lines and functions, systems of linear equations, rational expressions and equations, radicals and complex numbers, quadratic equations and functions, function operations and inverses. Students are required to have Internet-ready devices available for each class meeting. Skill development takes place online and outside scheduled class meetings. The course is graded on an A, B, C, NC (not completed) basis. This course is offered for additive credit. (F, W).
Prerequisite(s): MATH 080 or Mathematics Placement with a score of 090
MAT 104  College Algebra  4 Credit Hours
Primary purpose of this course is to prepare students for success in MATH 113. Topics include equations and inequalities, linear, quadratic, polynomial, rational, logarithmic, exponential and trigonometric functions along with their graphs; application of these functions, systems of linear inequalities. This course does not cover trigonometric functions and cannot be used as a prerequisite for MATH 115. Students electing this course should have at least taken two years of High School Algebra and one year of High School Geometry or MATH 090. Students cannot receive credit for both MATH 104 and MATH 105. *(F, W, S)*
Prerequisite(s): MATH 090 or Mathematics Placement with a score of 105

MAT 1045  Trigonometry  2 Credit Hours
The primary purpose of this course is to prepare students to take MATH 115 (Calculus I) after successfully completing MATH 104 (College Algebra). It also meets students’ demand to refresh or enhance their Trigonometry knowledge. Topics to be covered include: Trigonometric Functions, Acute Angles and Right Triangles, Radian Measure and the Unit Circle, Trigonometric identities, Inverse Circular Functions and basics of Functions. *(YR)*
Prerequisite(s): MATH 104

MAT 105  Pre-Calculus  4 Credit Hours
Primary purpose of this course is to prepare students for success in Calculus. Topics include equations and inequalities, linear, quadratic, polynomial, rational, logarithmic, exponential and trigonometric functions along with their graphs; application of these functions. Students electing this course should have taken at least two years of High School Algebra and one year of High School Geometry or MATH 090. Students cannot receive credit for both MATH 104 and MATH 105. *(F, W, S)*
Prerequisite(s): MATH 090 or Mathematics Placement with a score of 105

MAT 113  Calc I for Biology & Life Sci  4 Credit Hours
This course develops basic concepts of Calculus from the perspectives of Biology and Life Sciences. Topics include differential and integral calculus of algebraic/logarithmic/exponential functions of one variable, limits, continuity, differentiation, integration, graphing, optimization, related rates and area. Applications include modeling biological problems of medicine, genetics, Biomechanics, ecology, population growth and decay. *(This course does not fulfill the calculus requirements for concentration in chemistry, physics, biochemistry, engineering, or mathematics)* Student cannot receive credit for both Math 113 and Math 115.
Prerequisite(s): MATH 105 or MATH 104 or Mathematics Placement with a score of 115

MAT 114  Calc II for Biology & Life Sci  4 Credit Hours
The topics of this course include advanced methods of integration (integration by parts, partial fraction), modeling with differential equations, some elementary differential equations, matrix algebra, systems of linear equations using matrix method, introduction to probability, conditional probability, discrete and continuous random variables (exponential and normal random variables). Problems in biology, medicine and physiology are used to illustrate how computation and mathematics can improve and enhance the understanding of these problems. Students cannot receive credit for both Math 114 and Math 116.
Prerequisite(s): MATH 113 or MATH 115 or Mathematics Placement with a score of 116

MAT 115  Calculus I  4 Credit Hours
Calculus is the study of change and accumulation in continuously variable quantities. This course covers limits and continuity, derivatives and their applications, and integrals, with algebraic, exponential, and trigonometric functions and their inverses. Students cannot receive credit for both MATH 113 and MATH 115. *(F, S, W)*
Prerequisite(s): MATH 105 or (MATH 104 and MATH 1045) or Mathematics Placement with a score of 115

MAT 116  Calculus II  4 Credit Hours
This course continues the study of Calculus from MATH 115, including applications and techniques of integration, improper integrals, parametric equations, polar coordinates, and sequences and series, including Taylor series. Students cannot receive credit for both MATH 114 and MATH 116. *(F, S, W)*
Prerequisite(s): MATH 115 or Mathematics Placement with a score of 116

MAT 131  Conceptual Mathematics  4 Credit Hours
The purpose of Math 131 is to develop an awareness of the use of mathematics in the world around us. Students are encouraged to understand organizational tools of mathematics, including set theory and the use of deductive logic. Areas of application may include: consumer Mathematics, Probability, Statistics, social decision making, apportionment, graph theory, and mathematical modeling. Students intending to elect this course should have taken the equivalent of one year of high school algebra and one year of high school geometry. This course is not open to mathematics concentrators. *(F, W, S)*

MAT 205  Calc III for Engin Students  3 Credit Hours
Vectors in the plane and space, topics from multivariable calculus including partial differentiation and multiple integration, with an emphasis on applications, and line integrals and Green’s theorem. This course includes computer labs. Students cannot receive credit for both MATH 205 and MATH 215. *(F, W, S)*
Prerequisite(s): MATH 116 or Mathematics Placement with a score of 215

MAT 215  Calculus III  4 Credit Hours
Vectors in the plane and space, vector-valued functions and curves, functions of several variables including limits, continuity, partial differentiation and the chain rule, multiple integrals and coordinate transformations, integration in vector fields, and Green’s and Stokes’ theorems. This course includes computer labs. Students cannot receive credit for both MATH 205 and MATH 215. *(F, W, S)*
Prerequisite(s): MATH 116 or Mathematics Placement with a score of 215

MAT 227  Introduction to Linear Algebra  3 Credit Hours
An introduction to the theory and methods of linear algebra with matrices. Topics include: systems of linear equations, algebra of matrices, matrix factorizations, vector spaces, linear transformations, eigenvalues and eigenvectors, science and engineering applications, and computational methods. Students cannot receive credit for both MATH 227 and MATH 217. *(F, W, S)*
Prerequisite(s): MATH 116 or Mathematics Placement with a score of 215
MATH 228  Diff Eqns with Linear Algebra  4 Credit Hours
Full Title: Differential Equations with Linear Algebra This course provides an introduction to ordinary differential equations. Emphasis is placed on the development of abstract concepts and applications for first-order and linear higher-order differential equations, systems of differential equations, introductory numerical methods, matrix algebra, and Laplace transform techniques. It is recommended that students complete MATH 215 or MATH 205 before enrolling in this course. Students cannot receive credits for both MATH 228 and MATH 216 and MATH 217 (F, S, W).
Prerequisite(s): MATH 116

MATH 276  Discrete Math Meth Compr Engr  4 Credit Hours
An introduction to fundamental concepts of discrete mathematics for computer engineering. Topics will be chosen from: set theory, partially ordered sets, lattices, Boolean algebra, semi-groups, rings, graphical representation of algebraic systems, graphs and directed graphs. Applications in various areas of computer engineering will be discussed. (F,W,S).
Prerequisite(s): MATH 116 or Mathematics Placement with a score of 215

MATH 300  Math Lang Proof & Struct  3 Credit Hours
A required course for students completing a Mathematics concentration, this course is also a prerequisite for many upper-level Mathematics courses. The course focuses on developing the following: an understanding of, and facility with, the logic and syntax of mathematical statements; and ability to recognize and propose appropriate strategies and outlines for proving given statements; facility in writing mathematical proofs; a knowledge base/toolbox of foundational material including basic concepts and terminology related to naive set theory.
Prerequisite(s): MATH 217 or MATH 227

MATH 325  Probability  3 Credit Hours
Brief overview of summary and display of data, probability concepts, discrete and continuous random variables and associated probability models, expectation, independent random variables, probability generating functions and moment generating functions, sampling distributions, the central limit theorem, the t-distribution, properties of estimators, and interval estimation. Previously taught as Mathematical Statistics I. (F).
Prerequisite(s): MATH 114 or MATH 116

MATH 331  Survey of Geometry  3 Credit Hours
A development of Euclidean geometry as a formal axiom system and an introduction to non-Euclidean geometries and to Transformational Geometry. Geometric models and the history of geometry are stressed. Development of students' geometric intuition as well as their ability to work in a formal axiom system are emphasized. (F).
Prerequisite(s): MATH 116 and (MATH 200 or MATH 300)

MATH 335  Mathematical Interest Theory  3 Credit Hours
This course will cover introductory topics in the mathematical theory of interest with a focus on types of interest rates, annuities, bonds and loans. These topics will be studied deterministically by applying of a variety of finite and infinite sum formulae. Theoretical derivations of topics, including duration, portfolio immunization and interest rate swaps will be studied. Financial derivatives and stochastic methods will be introduced. Students cannot receive credit for both Math 335 and IMSE 421. (YR)
Prerequisite(s): MATH 116

MATH 385  Math for Elemen Teachers I  3 Credit Hours
The purpose of this course and the Math 386 and Math 387 courses is to provide future teachers with foundational knowledge of mathematics they will teach. An inquiry approach is emphasized involving problem solving, problem posing, pattern seeking, reasoning, justification, representations, and communications. Topics in Math 385 include number theory, meaning of operations, the reasoning behind procedures, and the rational number system, including fractions and decimals. (F,W)
Restriction(s):
Can enroll if College is Education, Health, and Human Services

MATH 386  Math for Elem Teachers II  3 Credit Hours
The purpose of this course and the Math 385 and Math 387 courses is to provide future teachers with foundational knowledge of mathematics they will teach. An inquiry approach is emphasized involving problem solving, problem posing, pattern seeking, reasoning, justification, representations, and communications. Topics in Math 386 include number theory, proportional reasoning, the geometry of two-dimensional shape and measurement, integers, and the real number system. (F,W)
Prerequisite(s): MATH 385
Restriction(s):
Can enroll if College is Education, Health, and Human Services

MATH 387  Math for Elem Teachers III  3 Credit Hours
The purpose of this course and the Math 385 and Math 386 courses is to provide future teachers with foundational knowledge of mathematics they will teach. An inquiry approach is emphasized involving problem solving, problem posing, pattern seeking, reasoning, justification, representations, and communications. Topics in Math 387 include data analysis; probability; the geometry of three-dimensions including shape, spatial visualization, and measurement; geometric concepts of similarity and congruence; coordinate geometry; and transformational geometry. Algebraic reasoning is integrated throughout. (F,W)
Prerequisite(s): MATH 386
Restriction(s):
Can enroll if College is Education, Health, and Human Services

MATH 390  Topics in Mathematics  1 to 3 Credit Hours
A course designed to offer selected topics in different areas of mathematics. The specific topic or topics will be announced together with the prerequisites each term. Course may be repeated for credit when specific topics differ.

MATH 390E  Topics in Mathematics  3 Credit Hours
TOPIC TITLE: Preparation for Industrial Careers PIC Math prepares mathematical science students for industrial careers by engaging them in research problems that come directly from industry. A strong component of PIC Math involves students working as a group on a semester-long undergraduate research problem from business, industry, or government. Undergraduate research is a high impact teaching and learning practice and has been shown to improve students abilities in Problem solving. Critical thinking, Independent thinking, and Communicating.
Prerequisite(s): MATH 200 or MATH 205 or MATH 215 or MATH 216 or MATH 217 or MATH 227 or MATH 276

MATH 391  Topics in Mathematics Edu  1 to 3 Credit Hours
A course designed to offer selected topics in mathematics related to K-12 education. The specific topic or topics will be announced together with the prerequisites each term. Course may be repeated for credit when specific topics differ. (OC).
MATH 391B  Topics in Mathematics and Statistics  1 to 3 Credit Hours
Topic: Number and Proportional Reasoning in Middle School Mathematics. This course is designed to deepen the teachers of middle school mathematics understanding of the rational number system and its extension to the real number system in a way that models appropriate pedagogy and raises curriculum issues relevant to teaching number concepts for conceptual understanding and computation fluency. A particular emphasis will be on understanding and applying concepts of proportional reasoning. Topics related to this emphasis include analyzing connections between fraction concepts and ratios and proportions; describing the relationship between proportions and direct and indirect variation; analyzing and applying the connections between proportions and similar figures, probability and sampling; and modeling and solving problems involving ratios and proportions. Other major topics include analyzing number theoretic concepts such as prime numbers and divisibility; and comparing and contrasting models of operations across number systems. Calculator and computer technology will be used as problem solving tools and for support in conceptual understanding. Curriculum resources and materials that support conceptual understanding are considered.

MATH 395  Elementary Number Theory  3 Credit Hours
Properties of the integers, the division algorithm, Euclid's algorithm, Fermat's theorems, unique factorization of integers into primes, congruences, arithmetic functions, Diophantine equations, continued fractions, quadratic reciprocity. (W).
Prerequisite(s): MATH 205 or MATH 215 or MATH 216 or MATH 217 or MATH 227 or MATH 228 or MATH 276

MATH 396  Introduction to Cryptography  3 Credit Hours
This course discusses ways of encrypting information, a function which is vital to economics, defense and the empowerment of society. It is more crucial now than ever before to be able to securely transfer information in this age of electronic communication. After discussing primitive ways of encrypting information and explaining the need for more sophisticated encoding methods, this course explores the mathematics (number theory, finite fields and probability) behind both historic and more recent cryptosystems that have been developed for the secure transmission of data along non secure channels. This course continues with symmetric and public key cryptosystems, elliptic curves, digital signatures, zero knowledge protocols and other more advanced methods. This course does not assume any prior knowledge of number theory or probability. (YR)
Prerequisite(s): MATH 205 or MATH 215 or MATH 216 or MATH 217 or MATH 227 or MATH 228 or MATH 276

MATH 400  Capstone in Mathematics  3 Credit Hours
Math 400 is the Capstone course in Mathematics, covering an advanced topic in Mathematics determined by the instructor. Topics may include, but are not limited to, algebraic geometry, functional analysis, functions of several complex variables, and aspects of the study of numerical analysis, partial differential equations, combinatorics, probability, number theory, or topology. Students are expected to complete a research project in the area of the particular topic. (F, W)
Prerequisite(s): MATH 217 or MATH 227
Restriction(s):
Can enroll if Class is Junior or Senior
MATH 442  Geometry for Teachers  3 Credit Hours
Properties of two and three-dimensional figures are covered, including congruence, symmetry, transformation, and measurement. Trigonometry from a geometric perspective and the use of trigonometry in problem solving are included. Topics also include coordinate geometry and visualization as well as the nature of axiomatic reasoning and the role it has played in the development of mathematics. An investigative approach involving problem solving, reasoning and proof, connections, and communication will be emphasized. Calculator and computer technology will support the investigation of these topics. Classroom resources and materials are considered. Different levels of geometric thinking will be explored. No credit for CASL concentration, minor, or area of focus. Open only to certified teachers or elementary education students. Student cannot receive credit for both MATH 442 and MATH 542.
Prerequisite(s): MATH 387
Restriction(s):
Cannot enroll if Level is
Can enroll if College is Education, Health, and Human Services

MATH 443  Algebra for Teachers  3 Credit Hours
Algebraic structure is emphasized, especially as it relates to arithmetic. Emphasis is on the development of algebraic reasoning and generalizations with the appropriate pedagogy. Curriculum issues relevant to teaching algebra for conceptual understanding are included. Major topics include algebraic representations of linear, exponential, power and quadratic patterns, systems of equations, and applications. An investigative approach involving problem solving, reasoning and proof, connections and communications will be emphasized. Classroom resources and materials are considered as well as calculators and computer technology as problem-solving tools to aid in algebraic thinking. No credit for CASL concentration, minor or area of focus. Students cannot receive credit for both MATH 443 and MATH 543. (F, W, S).
Prerequisite(s): MATH 386
Restriction(s):
Cannot enroll if Level is
Can enroll if College is Education, Health, and Human Services

MATH 444  Data Anlys,Prob&Stat for Tchrs  3 Credit Hours
Concepts of probability using both experimental and theoretical models are considered with an emphasis on the use of probability models to describe physical phenomena and to make and interpret predictions. Topics in data analysis and statistics include drawing inferences from visual displays of data, applying techniques of inferential statistics, sampling and simulations to generate solutions to problems, and making appropriate inferences using best fit techniques. Evaluating data and arguments to establish validity, interpreting, calculating and solving problems related to correlation, distributions, percentiles and standard scores are also included. An investigative approach involving problem solving, reasoning and proof, connections, and communication will be emphasized. Calculator and computer technology will support the investigation of these topics. No credit for CASL concentration, minor, or area of focus. Open only to certified teachers or elementary education students. Student cannot receive credit for both MATH 444 and MATH 544.
Prerequisite(s): MATH 387
Restriction(s):
Cannot enroll if Class is
Cannot enroll if Level is
Can enroll if College is Education, Health, and Human Services

MATH 445  Number & Prop'l Rsng for Tchrs  3 Credit Hours
This course deepens previous work on rational number ideas and applications, and explores the concepts of ratio and proportion. Content includes a variety of situations involving proportions, for example, real-world problems involving ratios, rates, and percents, geometry involving similarity, algebra involving linearity, probability involving assigning a probability to an event, and trigonometry involving slope. Distinguishing proportional situations from those that are not and reasoning proportionally in appropriate situations are emphasized. The course includes problem solving, reasoning and proof, connections, communication, and multiple representations. No credit for CASL concentration, minor, or area of focus. Open only to certified teachers or elementary education students or by permission of instructor. Students cannot receive credit for both MATH 445 and MATH 545. (AY).
Prerequisite(s): MATH 442 and MATH 443
Restriction(s):
Cannot enroll if Class is
Cannot enroll if Level is

MATH 446  Discrete Math/Modeling for Tch  3 Credit Hours
This course interweaves the ideas of discrete mathematics with the approaches and strategies of mathematical modeling. It gives pre- and inservice teachers opportunities to deepen their understanding and use of mathematical models based on the concepts of discrete mathematics. Topics include recurrence, induction, permutations, combinations, binomial distributions, circuits, critical paths, minimal spanning trees, adjacency matrices, algorithm design and optimization. Systems thinking and multiple representations are emphasized. No credit for CASL concentration, minor, or area of focus. Open only to certified teachers or elementary education students. Students cannot receive credit for both MATH 446 and 546. (AY).
Prerequisite(s): MATH 442 and MATH 443
Restriction(s):
Cannot enroll if Class is
Cannot enroll if Level is

MATH 449  Concepts of Calc for Teachers  3 Credit Hours
Concepts of Calculus for Teachers focuses on calculus concepts appropriate for middle school mathematics teachers and teacher-candidates. The course provides a deep understanding of the major concepts of calculus: rates of change, accumulation (net change), area, and limits. Students will experience concrete approaches to the various topics using problem solving, manipulatives and technology as appropriate, with the intent being to help the learners discover how the ideas of calculus are useful in a variety of settings. Visual, numeric and commonsense approaches are used. No credit for CASL concentration, minor, or area of focus. Open only to certified teachers or elementary education students. Students cannot receive credit for both MATH 449 and 549. (AY).
Prerequisite(s): MATH 442 and MATH 443
Restriction(s):
Cannot enroll if Class is

MATH 451  Advanced Calculus I  3 Credit Hours
Properties of the real number system; point set theory for the real line including the Bolzano-Weierstrass theorem; sequences, functions of one variable: limits and continuity, differentiability, Reimann integrability. Students cannot receive credit for both MATH 451 and MATH 551. (F).
Prerequisite(s): MATH 300 and (MATH 216 or MATH 228) and (MATH 227 or MATH 217)
MATH 452 Advanced Calculus II 3 Credit Hours
Includes the rigorous study of functions of two and more variables, partial differentiation and multiple integration. Special topics include: Taylor Series, Implicit Function Theorem, Weierstrass Approximation Theorem, Arzela-Ascoli Theorem. Students cannot receive credit for both MATH 452 and MATH 552. (AY, W).
Prerequisite(s): MATH 451

MATH 454 Fourier and Boundary 3 Credit Hours
Fourier series and integrals. Their use in solving boundary value problems of mathematical physics by the method of separation of variables. Sturm-Liouville theory and generalized Fourier series, including those involving Bessel functions and Legendre polynomials, with applications. Students cannot receive credit for both MATH 454 and MATH 554. (F).
Prerequisite(s): (MATH 216 or MATH 228) and (MATH 205 or MATH 215)

MATH 455 Func of a Complex Var with App 3 Credit Hours
Complex number system. Functions of a complex variable, their derivatives and integrals. Taylor and Laurent series expansions. Residue theory and applications, elementary functions, conformal mapping, and applications to physical problems. Students cannot receive credit for both MATH 455 and MATH 555. (W).
Prerequisite(s): (MATH 216 or MATH 228) and (MATH 205 or MATH 215)
Restriction(s):
Can enroll if Level is Undergraduate

MATH 458 Introduction to Wavelets 3 Credit Hours
This course will introduce the students to theory and application of wavelets using linear algebra. Topics will include the discrete Fourier transform, the fast Fourier transform, linear transformations, orthogonal decomposition, discrete wavelet analysis, the filter bank, Haar Wavelet family, Daubechies's Wavelet family, and applications. Students cannot receive credit for both MATH 458 and MATH 558. (OC)
Prerequisite(s): MATH 217 or MATH 227
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

MATH 462 Mathematical Modeling 3 Credit Hours
The processes of constructing, implementing, and evaluating mathematical models of "real world" phenomena are investigated. Models involving continuous and discrete mathematical constructs are considered. Deterministic and stochastic models are compared. Examples are taken from genetics, epidemiology, queuing theory, and other fields. Students cannot receive credit for both MATH 462 and MATH 562. (F).
Prerequisite(s): (MATH 205 or MATH 215) and (MATH 228) or (MATH 216 and MATH 227) or (MATH 216 and MATH 217)

MATH 472 Intro to Numerical Analysis 3 Credit Hours
Solution of linear systems by Gaussian elimination, solution of non-linear equations by iterative methods, numerical solution of ordinary differential equations, data fitting with spline functions, numerical integration, optimization. Students cannot receive credit for both MATH 472 and MATH 572. (F).
Prerequisite(s): MATH 217 or MATH 227

MATH 473 Matrix Computation 3 Credit Hours
A study of the most effective methods for finding the numerical solution of problems which can be expressed in terms of matrices, including simultaneous linear equations, orthogonal projections and least squares, eigenvalues and eigenvectors, positive definite matrices, and difference and differential equations. Students cannot receive credit for both MATH 473 and MATH 573. (AY, W).
Prerequisite(s): MATH 217 or MATH 227

MATH 476 Sec School Math for Teachers 3 Credit Hours
Basic concepts, relationships, generalizations, and applications from the secondary school mathematics curriculum are discussed both from an advanced viewpoint and from the standpoint of the learner. Included are the roles of technology, problem solving, and current thinking on the teaching of secondary mathematics topics. Students cannot receive credit for both MATH 486 and MATH 586. (F).
Prerequisite(s): MATH 217 or MATH 227

MATH 492 Introduction to Topology 3 Credit Hours
Metric spaces, topological spaces, continuous maps, connectedness, compactness, separation axioms. Students cannot receive credit for both MATH 492 and MATH 592. Prior experience in a proof based course is recommended. (OC)
Prerequisite(s): MATH 300

MATH 499 Independent Studies in Math 1 to 3 Credit Hours
Independent study in mathematics for topics at the senior level. Topics and objectives chosen by agreement between student and instructor. (OC)

Mechanical Engineering (ME)

ME 230 Thermodynamics 4 Credit Hours
Prerequisite(s): PHYS 150 and (MATH 116 or Mathematics Placement with a score of 215) and (CHEM 134 or CHEM 144)
Corequisite(s): ME 230R
Restriction(s):
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is

ME 230R Thermodynamics 0 Credit Hours
Recitation component for ME 230. Must be taken concurrently with ME 230.
Corequisite(s): ME 230

ME 260 Design Stress Analyses 4 Credit Hours
Vector treatment of static force and moment equilibrium of particles, rigid bodies and plane structures. Fundamental mechanics of materials: stresses and deformation in axial loading; torsion; bending; shear. Combined loadings. Stress and strain transformations. (F.W.S).
Prerequisite(s): PHYS 150 and (ENGR 250* or ECE 385*) and (MATH 205* or Mathematics Placement with a score of 215 or MATH 215*)
Corequisite(s): ME 260R
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 260R Design Stress Analysis 0 Credit Hours
Recitation component of ME 260. Must be taken concurrently with ME 260.
Corequisite(s): ME 260
ME 265  Applied Mechanics  4 Credit Hours
A comprehensive introduction to the science of applied mechanics, encompassing a study of forces and the stresses, deflections, and motions which they produce. Topics include the concept of equilibrium and static force analysis; the mechanics of deformable bodies (internal stresses, constitutive relationships, strains, deflections, failure); statics of indeterminate systems; kinematics; kinetics of particles, systems of particles, and rigid bodies. Four hours lecture. This course is not open to ME majors (F, S, W).
Prerequisite(s): PHYS 150 and (MATH 205* or Mathematics Placement with a score of 215 or MATH 215*)
Restriction(s):
Cannot enroll if Major is Mechanical Engineering.

ME 290  Spec Topics in Mech Engin  1 to 3 Credit Hours
Special topics in mechanical engineering selected according to students' interest and availability of instructors and equipment.

ME 299  Internship/Co-op  1 Credit Hour
This is a Cooperative Education course. Students wishing to experience a work experience before graduation may elect to participate in the Cooperative Education Program (minimum of two terms). (F,W,S).
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

ME 325  Thermal Fluid Sciences I  4 Credit Hours
Prerequisite(s): ENGR 216 and ME 230 and ME 260
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 345  Engineering Dynamics  4 Credit Hours
Vector treatment of the kinematics and kinetics of particles, systems of particles and rigid bodies. Newton's laws, work/energy and impulse/momentum principles. Introduction to mechanical vibrations. (F, S, W).
Prerequisite(s): ENGR 216* and ME 260 and (MATH 216 or MATH 228)
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 349  Instrument & Measuremt Systems  3 Credit Hours
Modern instrumentation systems are considered beginning with generic issues such as calibration, error analysis, and dynamic response characteristics of instrumentation. Specific transducer systems (temperature, force and pressure, etc.) are presented, as well as interfacing techniques and elementary signal processing. (F,W,S).
Prerequisite(s): (ME 265 or ME 345) and ECE 305
Corequisite(s): ME 349L
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science

ME 3601  Design and Analysis of Machine Elements  4 Credit Hours
Application of mechanics of materials to analysis and design of elementary mechanical components and systems. Topics include: stress and strain analysis; stress concentration; failure theories; safety factor; fatigue; fracture; combined loading; impact; buckling. Components considered: fasteners; springs; bearings; gears; shafts and other power transmission components. Numerical techniques. (F, S, W).
Prerequisite(s): (ENGR 216 or ME 215) and (ME 260 or ME 265)
Restriction(s):
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is

ME 364  Prob, Stats, and Rel in Mach D  3 Credit Hours
Introduction to probability, statistics, and reliability with emphasis on mechanical engineering applications. The course covers basic probability, descriptive statistics, probability distributions of discrete and continuous variables, statistical inferences, DOE (design of experiments), ANOVA (analysis of variance), regression, and correlation. (F, S, W).
Prerequisite(s): ME 260 and ENGR 216

ME 375  Thermal Fluid Sciences II  4 Credit Hours
Prerequisite(s): ME 325 and ECE 305*
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 379  Thermal-Fluids Laboratory  3 Credit Hours
An experimental investigation of thermodynamic, fluid mechanic, and heat transfer principles. Students will learn about thermal-fluids instrumentation and conduct experiments. In addition, they will design their own experiments to demonstrate their understanding of the principles. (F,W,S).
Prerequisite(s): ME 325 and (ME 349 or BENG 351) and ME 375* and (COMP 270 or COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220) Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 381  Manufacturing Processes I  4 Credit Hours
This course introduces the students to the fundamentals and principles of manufacturing processes for engineering materials. It seeks to transfer an understanding of the application of principles of engineering materials and their influence on manufacturing processes. Topics covered include structure and properties of materials, various conventional shaping processes viz. solidification, powder and particulate, deformation, and material removal processes; heat treatment and surface processing, and materials joining. Topics on recent advancements including but not limited to microfabrication, nanofabrication, additive manufacturing is also covered. Case studies of design for manufacturing and measurement of product quality; economical aspects and cost considerations in manufacturing systems will be studied. Three lecture hours and three laboratory hours. (F, S, W).
Prerequisite(s): ENGR 250 and (ME 249 or ME 254) and (ME 349 or ENGR 300) and (ME 350 or ENGR 355) or (ENGR 216 or ME 215) Restriction(s):
Can enroll if College is Engineering and Computer Science
ME 399  Internship/Co-op  1 Credit Hour
This is a Cooperative Education course. Students wishing to experience a work experience before graduation may elect to participate in the Cooperative Education Program (minimum of two terms)
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

ME 410  Finite Element Method wth Appl  3 Credit Hours
A presentation of the basic concepts and fundamentals of the Finite Element Method of Analysis in general, followed by applications to both continuum and field problems. Selected areas of application: dynamics and vibration including wave propagation; acoustics; fluid mechanics including film lubrication and ground water flow; heat transfer; elasticity and stress/strain analysis including structures; electrical field problems including electrostatics and electromagnetics (YR).
Prerequisite(s): (ME 345 and ME 3601 and ME 375*) or (BENG 370 and BENG 325*)
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 4191 Structural Mech & Design 4 Credit Hours
A presentation of the methods of plane elasticity to solve a variety of problems arising in the analysis and design of structures. Review of the concepts of plane stress and strain, basic equations of plane elasticity and problems, energy methods approximate/numerical techniques, elastic-plastic bending and torsion, fracture and fatigue. (YR).
Prerequisite(s): ME 345 and ME 3601
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science

ME 4202  Design Turbo. and Wind Gen. 4 Credit Hours
Principles of turbomachinery design and practices with emphasis on wind power generation. Euler's equation for energy transfer calculations. Two- and three-dimensional velocity diagrams. Aerodynamics of wind turbines. Wind turbine design and control. Power generation of wind turbines, wind energy system economics and environmental impacts. Design procedures and characteristics of compressors, fans and blowers. Basic design calculations and selection of pumps. A turbomachinery design project by using the theory learned from the course may be required. (YR).
Prerequisite(s): ME 375
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 423  Thermal Sys Des & Optimization 4 Credit Hours
Design, analysis, and optimization of thermal fluid systems using principles of thermodynamics, fluid mechanics, and heat transfer. Application of thermal sciences in component and system design. Optimized design methodology for improving operations of thermal systems to minimize energy consumption and/or operating costs. (OC)
Prerequisite(s): ME 375*
Restriction(s):
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is

ME 4301  Computational Thermo-Fluids 3 Credit Hours
Prerequisite(s): ME 325 and ME 375*
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 4361  Design of HVAC Systems 4 Credit Hours
A comprehensive treatment of the design principles and practices in the heating, ventilating, and air conditioning. Psychrometrics, design loads, distribution systems, equipment selection. (YR).
Prerequisite(s): ME 325 and ME 375*
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 440  Intro to Mechanical Vibrations 3 Credit Hours
This introductory course on mechanical vibrations covers theories with applications, which include free and forced vibration analysis of damped and undamped, discrete (ranging from single to multi-degree-of-freedom), and simple continuous structures (such as strings, shafts, and beams), and design of vibration absorbers. Students may not receive credit for both ME 440 and ME 4461. (YR)
Prerequisite(s): ME 345 and ME 349
Restriction(s):
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is

ME 442  Control Systems Analysis and Design 4 Credit Hours
Prerequisite(s): ECE 305 and ME 345
Corequisite(s): ME 442L
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 445  Sound and Noise Controls 4 Credit Hours
Full Course Title: Introduction to Sound and Noise Controls This course covers basic topics in sound theory, applications, and noise control system design. Topics include sound generation, radiation and transmission, human hearing system mechanism, sound quality metrics, design of silencers, mufflers and resonator, audio system and speaker design, building acoustics, acoustical material properties and material testing, sound measurement, and Octave band analysis. The student is required to conduct a course project related to noise control system design. Students may not receive credit for both ME 445 and ME 4461. (YR)
Prerequisite(s): (ME 265 and BENG 351) or (ME 345 and ME 349)
Restriction(s):
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is
ME 4461 Mech Vibration & Noise Control 4 Credit Hours
Fundamentals of mechanical vibration and principles of noise control. Use of transducers and instruments to conduct sound and vibration measurements. Free and forced vibration in single and multiple degrees-of-freedom systems, damping, eigenvalues, eigenvectors, frequency response function, modal analysis, description of sound fields, acoustical materials and material testing, acoustics of rooms and enclosures, sound quality, and principles of noise control. Students will be required to conduct either a vibration or a noise control project. Two one-and-one-half hour lectures and one three-hour laboratory. (YR).
Prerequisite(s): (ME 345 or ME 265) and (ME 349* or BENG 351*)
Corequisite(s): ME 4461L
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 4471 Solar Energy Sys Analy&Design 4 Credit Hours
The course introduces students to the fundamentals of solar energy conversion and solar energy systems. Principles in thermodynamics and heat transfer required to understand the solar energy use is reviewed. Design of different types of solar energy systems are explored and assessed. Issues relating to the practical implementation of solar energy will also be considered. (OC).
Prerequisite(s): ME 325 and ME 375*
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 452 Sustainable Energy & Environ 4 Credit Hours
This course introduces students to fundamentals of energy sources. It covers a wide range of conventional and alternative, (including renewable) sources, and presents tools for assessing their sustainability and environmental impacts. It also reviews issues related to energy storage, transportation and distribution, challenges, and future opportunities. A course project is completed involving the design and plan for practical implementation of a sustainable energy technology. (YR).
Prerequisite(s): ME 325 and ME 375*
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 460 Design for Manufacturing 3 Credit Hours
Prerequisite(s): ME 3601 and ME 381
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 4671 Senior Design I 4 Credit Hours
A guided design project course with emphasis on the decision-making process associated with establishing alternatives and evaluation procedures to synthesize designs. Students propose design projects and work in teams to produce analytical designs, and conduct evaluative experiments, and/or construct a physical design prototype. Engineering ethics and responsibility. At the end of the semester, the students are required to submit written reports and give oral presentations with a demonstration of their projects. (F,W).
Prerequisite(s): ME 345 and ME 3601 and ME 375 and ME 379*
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Major is Mechanical Engineering

ME 4681 ME/BENG Dual Senior Design 4 Credit Hours
Full Title: Interdisciplinary Senior Design for ME/BENG Dual Degree Students A guided interdisciplinary design project course where student teams propose design projects, design a device, system or process related to mechanical-and bio-engineering and conduct evaluative experiments and/or construct a physical prototype. Engineering ethics and responsibility. At the end of the semester, the students are required to submit written reports and give oral presentations with a demonstration of their projects. Credit can only be awarded for one of the following courses: BENG 4671, ME 4671, and ME 4681. (F, W).
Prerequisite(s): BENG 351 and BENG 370 and BENG 364 and ME 375 and (BENG 375 or BENG 381)
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Major is

ME 469 Senior Design II 1 to 4 Credit Hours
Student teams develop mechanical or interdisciplinary design projects, or continue projects begun in ME 4671. Work includes mechanical engineering design, and could possibly include fabrication and testing. Projects can involve efforts by interdisciplinary teams. Written and oral presentations are required. 
Prerequisite(s): ME 4671
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 472 Prin & Appl of Mechatronic Sys 4 Credit Hours
This course provides the student with hands-on interdisciplinary experience of mechatronic systems, which integrate mechanical, electrical/electronic components with microprocessors to design a high-performance system. Subjects include Mechanical and Electrical Actuators, Digital Transducers and Modulators, Microcomputers and Microcontrollers. Laboratory projects cover robotic programming, materials handling, and fluid power systems. Student will be required to perform a course design project with mechatronic application in nature. (OC)
Prerequisite(s): (ME 265 or ME 345) and (ME 442 or ECE 460*)
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore
Can enroll if College is Engineering and Computer Science

ME 481 Manufacturing Processes II 3 Credit Hours
A study of casting, welding, plastic forming, and machining of materials; analysis of forces, energy requirements, and temperature effects; design specifications economically obtainable in terms of dimensional accuracy, surface finish, and material properties, functional characteristics of equipment. Two lectures and a laboratory. (OC).
Prerequisite(s): ME 381
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 483 Dsgn Cons in Poly & Comp Mat 3 Credit Hours
Physical and mechanical behavior of unreinforced and reinforced (composite) polymeric materials in relation to their applications in modern technology. Emphasis is given to the design considerations with these materials in contrast to those with metallic materials. Time-dependent properties, such as creep and stress relaxation, are considered. (OC).
Prerequisite(s): ME 360 or ME 3601
Restriction(s):
Can enroll if College is Engineering and Computer Science
ME 490  Directed Design Project   1 to 3 Credit Hours
Directed design project involving not only design but also analysis, fabrication, and/or testing. Topics may be chosen from any of the areas of mechanical engineering. The student will submit a report on their project and give an oral presentation at the end of the term. Enrollment in this course requires approval from the ME department. Registration for more than 1 credit is only permitted in special cases and will be considered on an individual basis. (F, S, W).
Restriction(s):
Cannot enroll if Class is Senior or Graduate
Can enroll if College is Engineering and Computer Science

ME 491  Directed Research Problems   1 to 3 Credit Hours
Special problems selected for laboratory or library investigation with intent of developing initiative and resourcefulness. Enrollment in this course requires approval from the ME department. Registration for more than 1 credit is only permitted in special cases and will be considered on an individual basis. (F, S, W).
Restriction(s):
Cannot enroll if Class is Senior or Graduate
Can enroll if College is Engineering and Computer Science

ME 492  Guided Study in Mechanical Engineering   1 to 3 Credit Hours
Individual study, design, or laboratory research in a field of interest to the student. Topics may be chosen from any of the areas of mechanical engineering. The student will submit a report on their project at the end of the term. Enrollment in this course requires approval from the ME department. Registration for more than 1 credit is only permitted in special cases and will be considered on an individual basis. (F, S, W).
Restriction(s):
Cannot enroll if Class is Senior or Graduate
Can enroll if College is Engineering and Computer Science

ME 493  Advanced Vehicle Energy Sys   3 Credit Hours
This course will introduce the advanced energy conversion systems in automotive vehicles and cover the fundamentals, characteristics, and design consideration of the energy systems. The topic includes using alternative fuels in internal combustion engines, advanced power train systems in hybrid electric, and fuel cell vehicle, and exhaust energy recovery systems. (YR).
Prerequisite(s): ME 325 and ECE 305
Restriction(s):
Can enroll if College is Engineering and Computer Science

ME 494  Directed Study in Mechanical Engineering   1 to 3 Credit Hours
Individual study, design, or laboratory research in a field of interest to the student. Topics may be chosen from any of the areas of mechanical engineering. The student will submit a report on their project at the end of the term. Enrollment in this course requires approval from the ME department. Registration for more than 1 credit is only permitted in special cases and will be considered on an individual basis. (F, S, W).
Restriction(s):
Cannot enroll if Class is Senior or Graduate
Can enroll if College is Engineering and Computer Science

ME 496  Internal Combustion Engines I   3 Credit Hours
Comparison of several forms of internal combustion engines including Otto and diesel-type piston engines; performance parameters and testing; thermodynamic cycles and fuel-air cycles; combustion in SI and Diesel engines; charge formation and handling; ignition; elements of exhaust emissions. (OC).
Prerequisite(s): ME 325

ME 4981  Automotive Engineering   4 Credit Hours
The course covers the basic topics in automotive engineering: a) fundamental vehicle dynamics; b) Engine-transmission compatibility and matching; c) analysis of vehicle performance in acceleration, gradability, speed, fuel economy, ride comfort, stability and safety; d) computer modeling and simulation of vehicle systems by numerical techniques; e) transmission design and analysis; f) design of vehicle systems such as brakes, suspensions, steering mechanisms and other subsystems. (YR).
Prerequisite(s): ME 345 and ME 3601
Restriction(s):
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is

ME 499  Internship/ Co-Op   1 Credit Hour
A four-month professional work experience period of the Engineering Internship Program, integrated and alternated with the classroom terms.
Restriction(s):
Can enroll if Class is Senior or Graduate

**Microbiology (MICR)**

MICR 309  Introduction to Mycology   4 Credit Hours
An introduction to the biology of the fungi. Classification, structure, industrial use, gastronomic qualities, and disease-producing ability of macroscopic and microscopic forms are studied. Laboratories include microscopic and macroscopic examinations of fungi, and their growth and field studies on the occurrence and classification of edible and poisonous varieties. Three hours lecture, four hours laboratory. (OC).
Prerequisite(s): BIOL 130 and BIOL 140

MICR 380  Epidemiology   3 Credit Hours
Introduces the methods for infectious disease epidemiology (occurrence and spread in population) and case studies of important disease syndromes and entities. Methods include definitions and nomenclature, outbreak investigations, disease surveillance, case-control studies, cohort studies, laboratory diagnosis, molecular epidemiology, dynamics of transmission, and assessment of vaccine field effectiveness. Case-studies focus on acute respiratory infections, diarrheal diseases, hepatitis, HIV, tuberculosis, sexually transmitted diseases, malaria and other vector-borne diseases. This course emphasizes methods of study that would contribute to understanding disease etiology.
Prerequisite(s): BIOL 140

MICR 385  Microbiology   4 Credit Hours
The biology of microorganisms is considered through study of the properties of bacteria, fungi, algae, protozoa, and viruses. Microbial structures are discussed and correlated with their function. Aspects of cellular metabolism pertinent to microorganisms are emphasized. The interaction of microorganisms and their environment, animate and inanimate, is discussed with respect to the beneficial or harmful effects of the different microbial groups. Laboratory exercises introduce the student to basic, practical microbiological techniques and illustrate various principles of microbial life. Three hours lecture, four hours laboratory. (F,S).
Prerequisite(s): BIOL 140 and (CHEM 134* or CHEM 144*)
Corequisite(s): MICR 385L

MICR 390  Topics in Microbiology   1 to 6 Credit Hours
Current topics in microbiology will be presented through a lecture, discussion and/or laboratory format. Topics will vary, as appropriate, and may cover any area of microbiology including studies on bacteria, algae, fungi, protozoa, viruses, biotechnology, mechanisms of pathogenesis and immunology. (OC).
Prerequisite(s): BIOL 385 or MICR 385

MICR 405  Applied & Environ Microbiology   4 Credit Hours
The study of the diversity, structure and function of microorganisms as they interact with their environment. Emphasis will be placed on soil microbiology (fungi, bacteria, microalgae) and plant-microbe interactions (pathogens, symbioses). Ecological topics include decomposition, nutrient cycling, bioremediation and agroecosystems. Three hours lecture, four hours laboratory. (W).
Prerequisite(s): BIOL 385 or MICR 385
Restriction(s):
Can enroll if Class is Senior
MICR 406  Microbial Genetics  3 Credit Hours
A course that emphasizes the genetics and molecular biology of bacteria and their viruses. Topics include DNA structure and replication, recombination, DNA repair, genetic mapping, mechanisms of gene transfer, regulation of gene expression, mutagenesis, and recombinant DNA techniques. (YR, W).
Prerequisite(s): MICR 385 or BIOL 385 or BIOL 306

MICR 430  Medical Virology  3 Credit Hours
The course provides a general description of the history and nature of animal virus disease. Emphasis is placed on the pathogenesis and clinical description of specific diseases. Three hours lecture.
Prerequisite(s): MICR 385 or BIOL 385

MICR 440  Micro Genetics & Physi Lab  1 Credit Hour
This course emphasizes the use of advanced microbiological techniques for understanding the genetics and physiology of microorganisms. Experiments focus on the understanding of general microbial phenomena, such as nutrition, metabolism and biochemistry; protein and nucleic acid synthesis; energy generation, enzyme regulation, membrane transport, motility, differentiation, cellular communication and the behavior of populations.
Prerequisite(s): BIOL 385* or MICR 385* or BIOL 301* or BIOL 406* or MICR 406* or BIOL 485* or MICR 485*
Restriction(s):
Cannot enroll if Class is Freshman
Can enroll if Level is Undergraduate

MICR 450  Virology  4 Credit Hours
The first half of this course deals with bacterial viruses, with emphasis on classical events in this field. The second half surveys the field of animal viruses, with emphasis on recent discoveries, including replication, pathogenesis, and viral association with cancers. Three hours lecture, four hours laboratory. (AY,W).
Prerequisite(s): (BIOL 385 or MICR 385) and CHEM 226

MICR 455  Immunology  4 Credit Hours
A detailed study of the field of immunology. Among the topics covered are various aspects of the immunological response, such as humoral or cell-mediated immunity, cell-cell interactions, and immunology as related to the cause and prevention of disease. Three hours lecture, four hours laboratory. (AY,F).
Prerequisite(s): BIOL 385 or BIOL 301 or MICR 385

MICR 459  Pathogenic Microbiology  4 Credit Hours
An introduction to pathogenic microorganisms and mechanisms of microbial pathogenicity. Disease-causing bacteria, fungi, viruses, and protozoa are studied. Laboratories emphasize clinical approaches to isolation, identification, and treatment. Three hours lecture, four hours laboratory. (AY,F).
Prerequisite(s): BIOL 385 or MICR 385

MICR 485  Physiology of Microorganisms  3 Credit Hours
An in-depth examination of the physiology of microorganisms. Areas of emphasis include the growth and nutrition of microorganisms, the development of viruses, the microbial degradation of organic compounds, the regulation of degradation reactions, and the biosynthesis of uniquely microbial compounds and secondary metabolites, such as antibiotics and toxins. Consideration is given to the natural environments of specific microorganisms. (YR, W).
Prerequisite(s): (BIOL 385 or MICR 385 or BIOL 370 or CHEM 370 or BCHM 370) and CHEM 225*

MICR 495  Off-Campus Research  1 to 3 Credit Hours
Participation in ongoing experimental research at an off-campus laboratory (or in the field). Arrangements made between the research laboratory, (director of field study), the student, and the microbiology concentration advisor. No more than 6 hours combined from MICR 495, 498, and 499 may be credited toward the 120 hours required for a degree. Four to twelve hours laboratory. Permission of concentration advisor. (F,W,S).

MICR 497  Seminar in Microbiology  1 Credit Hour
Topics of current interest in microbiology will be presented by guest lecturers, faculty members or students. Topics chosen will vary from term to term. Can be elected up to three times. One hour seminar. Permission of instructor. (W).

MICR 498  Ind Study in Microbiology  1 to 3 Credit Hours
Library research and independent study performed under the guidance of a faculty member. Four to twelve hours readings. (F,W,S).

MICR 499  Lab in Micro Research  1 to 3 Credit Hours
Directed laboratory research performed under the guidance of a faculty member. Four to twelve hours laboratory. Permission of instructor. (F,W,S).

Military Science (MILS)

MILS 101  Introduction to Officership  1 Credit Hour
This course focuses on introduction to the Army and critical thinking. It introduces students to the Army and the Profession of Arms. Students will examine the Army Profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a complete understanding of the Reserve Officers’ Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Students also learn how resiliency and fitness supports their development as an Army leader.

MILS 102  Introduction to Leadership  1 Credit Hour
This course introduces students to the personal challenges and competencies that are critical for effective leadership. Students will learn personal development of life skills such as critical thinking, time management, goal setting, and communication. Students learn the basics of the communication process and the importance for leaders to develop the essential skills to effectively communicate in the Army. Students will begin learning the basics of squad level tactics.
Prerequisite(s): MILS 101

MILS 201  Innovative Tactical Leadership  2 Credit Hours
This course focuses on leadership and decision making. The course adds depth to the students’ understanding of the Adaptability Army Learning Area. The outcomes are demonstrated through critical and creative thinking and the ability to apply Troop Leading Procedures (TLP) to apply innovative solutions to problems. The Army Profession is also stressed through leadership forums and a leadership self-assessment. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment.
Prerequisite(s): MILS 102
MILS 202  Leadership in Changing Env  2 Credit Hours
This course places students in an experiential learning environment which provides participants the opportunity to 'experience' their learning, rather than simply being told what they are to learn. Students participate in a wide variety of group exercises designed to emphasize various professional leadership competencies and insights. These events, which range from physically challenging to mentally stimulating, are held both inside the classroom and in outdoor settings. The instructor acts as a facilitator, helps guide student processing through after action reviews of the events to facilitate student understanding of leadership principles, group dynamics, and problem solving methods. In addition to military skills, practical 'life skills' are emphasized. Lessons are designed to maximize student participation, inspire intellectual curiosity and introspection, as well as group interaction.

MILS 301  Leading Small Organizations  3 Credit Hours
This course focuses on training management and the warfighting functions. Students will study, practice, and apply the fundamentals of Training Management and how the Army operates through the warfighting functions. At the conclusion of this course, students will be capable of planning, preparing, and executing training for a squad conducting small unit tactics. Includes peer facilitation overseen by MSL IVs, supervised by ROTC Cadre.
Prerequisite(s):  MILS 202
Restriction(s):  Can enroll if Class is Junior or Senior

MILS 302  Leading Small Orgs 2  2 Credit Hours
MSL 302 uses increasingly intense situational applying team leadership challenges to build cadet awareness and skills in leading tactical operations at the small unit level. Cadets review aspects of full spectrum operations. They also conduct military briefings and develop proficiency in the operation orders process. The focus is on exploring, evaluating, and developing skills in decision-making, persuading, and motivating team members in the contemporary operating environment (COE). MSL 302 cadets are evaluated on what they know and do as leaders as they prepare to attend the ROTC summer Leader Development Assessment Course (LDAC).
Restriction(s):  Can enroll if Class is Junior or Senior

MILS 401  Leadership & Management  4 Credit Hours
This course focuses course places significant emphasis on preparing students for a military officer's first assignment. It uses the philosophy of mission command in case studies and scenarios to prepare students to face the complex ethical demands of serving as a commissioned officer in the United States Army.
Prerequisite(s):  MILS 302

MILS 402  Military Prof & Prof Ethics  2 Credit Hours
This course is designed to present a forum for discussion of Military and Leadership issues which will impact most directly on the newly commissioned officer. Its purpose is to discuss items of particular concern to the Junior officer. Much of the thrust of the seminar will come from student concerns and perceptions. It will include some outside readings. The student should also register for the 90 minute military skills laboratory which is taught once weekly.

Other Content

* An asterisk denotes that a course may be taken concurrently.

Frequency of Offering

The following abbreviations are used to denote the frequency of offering:
(F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Modern & Classical Language (MCL)

MCL 103  First-Year Swedish I  3 Credit Hours
A beginning course in the Swedish language. Open only to CECS undergraduate students taking part in the College of Engineering and Computer Science?s study abroad program with the Jonkoping School of Engineering in Sweden. The Course meets in Jonkoping, Sweden.

MCL 104  First-Year Swedish II  3 Credit Hours
A second course in the Swedish language. Open only to CECS undergraduate students taking part in the College of Engineering and Computer Science?s study abroad program with the Jonkoping School of Engineering in Sweden. The Course meets in Jonkoping, Sweden.

MCL 105  Beginning Ancient Greek I  4 Credit Hours
Ancient Greek I is designed for students wishing to begin the study of Ancient Greek and will include a study of grammar and vocabulary with readings of simple Attic prose. Attention will also be given to the Greek roots of English words, including scientific and medical terms. No previous foreign language study is required as a prerequisite. (OC).

MCL 106  Beginning Ancient Greek II  4 Credit Hours
Ancient Greek II completes the study of Ancient Greek syntax and morphology and puts greater emphasis on reading connected passages in ancient Greek. Passages from selected classical authors, such as Herodotus, Sophocles, Aristophanes, and Plato will be read. MCL 105 is required as a prerequisite. (OC).

MCL 111  Armenian I  4 Credit Hours
Introduction to basic construction and vocabulary of the Armenian language. Lab to be arranged. Completion of this course prepares the student for Armenian II. (OC).

MCL 112  Armenian II  4 Credit Hours
Continuation of Armenian I. Introduction to basic construction and vocabulary of the Armenian language.
Prerequisite(s):  MCL 111

MCL 205  Intermediate Ancient Greek  4 Credit Hours
An intermediate language course in ancient Greek designed to increase the students’ ability to read Greek with accuracy and speed and improve their skill in comprehension and translation. A wide range of reading selections of Greek prose and poetry will serve as the basis for translation, class discussion, and written assignments. Although the course includes a partial review of accidence and syntax as well as assigned translations from English to Greek, primary emphasis will be placed upon reading and translating Greek texts, whether prose (e.g., Xenophon, Herodotus, Lysias, Plato) or poetry (e.g., Euripides, Aristophanes). (OC)
Prerequisite(s):  MCL 106
MCL 206 Intermediate Ancient Greek II 4 Credit Hours
MCL 206 is the second course in intermediate ancient Greek and is designed to provide knowledge and familiarity with the language and style of the Homeric epics, as well as an introduction to related topics. We will learn Homeric Greek and how it differs from Attic, read extensive selections from the Iliad or the Odyssey in Greek, and discuss Homer's works as poetic, literary, and cultural texts. The selections read will serve as the basis for translation, class discussion, and written assignments. Related topics to be presented include: the archaeological excavations of Troy, the scope of ancient epics, the Homeric Question and oral composition, and the nature of the Greek hero. (OC)
Prerequisite(s): MCL 205

MCL 233 Second-Year Swedish 3 Credit Hours

MCL 234 Second-Year Swedish II 3 Credit Hours

MCL 299 Independent Studies in MCL 1 to 3 Credit Hours
Reading or analytical assignments in Modern and Classical Languages in accordance with the needs and interests of those enrolled and agreed upon by the student, instructor, and endorsed by the department chair. Also can be elected when a student is studying language as part of a study-abroad program.

MCL 302 Arabic and Comparative Literature in English 3 Credit Hours
This course examines the intersectionality of Arabic literature and world literature in a comparative context. Students study Arabic literary works and compare them to works in the European and other literary traditions. The comparative analyses highlight similarities and differences among cultures, literary styles, and themes, that at once unite and diversify the human condition. The course places Arabic literature as a significant contributor to world literature and culture. Classes are conducted in English. Students who wish for this course to count for language credit can do the required writing in Arabic. (F, OC, S, W).

MCL 303 The Arabic Novel and Short Story in Translation 3 Credit Hours
This course examines the robust tradition of Arabic fiction, offering examples of short stories, novellas, and novels. The course is designed for non-speakers of Arabic as all the texts are translated in English. The survey of narratives relies on three considerations. First, the analysis that the novels lend themselves to, including narrative strategies, feminism, psychoanalysis and postcolonialism. Second, the novels cover some of the recurrent themes of Arabic fiction, such as war, memory, class struggle, migration, and childhood. Third, the novels and short fiction writers represent the national and cultural diversity of the region, ranging from Morocco, to Egypt, Lebanon, Sudan, Iraq, and Yemen. Classes are conducted in English. Students who wish for this course to count for language credit can do the required writing in Arabic. (F, OC, S, W).

MCL 325 Political Islam 3 Credit Hours
This course is designed as an introduction to the main issues and themes in the study of political Islam and Muslim Politics, providing a broad overview of the pertinent key concepts and issues. It provides a historical approach to the study of political Islam, and touches upon the nineteenth century Islamic revivalism. It also, explores diversity in contemporary Islamic thought and global Islamist movements.
Restriction(s): Can enroll if Class is Sophomore or Junior or Senior

MCL 335 Arabic Culture in Class Texts 3 Credit Hours
This course gives students an appreciation of Arabic civilization through the study of excerpts from masterworks of the literary and intellectual Arabic heritage. It provides practice in reading pre-modern and modern classical texts from a variety of intellectual disciplines. Students may not receive credits for both MCL 3350 and ARBC 335. (W)

MCL 353 Italian Culture Civilization 3 Credit Hours
This course is an exploration of various facets of Italian culture and civilization. We will examine the major historical, political, social, economic, artistic and literary aspects of Italy, from its beginnings to the 21st century, through the close study of key persons, events and documents which shaped Italy's culture and civilization, and promoted the many accomplishments and contributions of this country.

MCL 365 Introduction to the Qur'an 3 Credit Hours
This course is an introduction to the Qur'an. This class will cover the historical and the cultural factors in which the Quran appeared. The class will also examine some of the major themes covered in the Qur'an such as gender, science, pluralism, worldview and so forth. Also, it will cover major schools of interpretations and methodologies ranging from the literary to the scientific. The class will be conducted in English and knowledge of Arabic is desired but not required. No prerequisites. The class will consist of lectures, discussions, and movies.

MCL 381 Postwar European Cinema 3 Credit Hours
The course will concentrate on a series of films from various European countries with a focus on the socio-political issues, historical events and cultural preoccupations that have defined and also challenged European societies from WWII to the present. Zeroing in on the construction of European identities, the course will analyze and compare modes of narrating national, class, racial, sexual and social differences in different European nations. Themes such as memories of war and the Holocaust, new conflicts, class, immigration, women's rights, gender, and East-West relations will be addressed. The course will thus privilege a cinema that offers a “récit,” a story. Particular attention will be given to discourses on onetherness and on the ways in which film culture has reflected, reinforced, reshaped and, in some instances, contested Europe's past and current dominant ideologies, and identities. Readings by cultural historians and analysts will provide the context for an understanding of the films. The course will conclude with a discussion of the possible existence of a specific postwar European Cinema.

Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

MCL 390 Topics in Arabic in Translation 3 Credit Hours
Examination of problems and issues in selected areas of Modern & Classical Languages. Title as listed in the Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ.

MCL 399 Independent St in Mod & Class Lang 1 to 3 Credit Hours
Reading or analytical assignments in Modern and Classical Languages, including Arabic, in accordance with the needs and interests of those enrolled and agreed upon by the student, instructor, and endorsed by the department chair.

MCL 401 Images of Women in Germany 3 Credit Hours
This course will focus on the position of women in Germany after WWII and up to and after the unification of East and West Germany. Particular attention will be given to the gendered history of working through the National Socialist past, the division and reconstruction of the two nation-states, and the terrorism in West Germany in the 1970’s. Students will examine images of women in films and tie them to the ideologies of gender and status of women in these larger issues of German history. Course readings will be in English. Students wishing to receive German credit for the course must enroll concurrently in GER 380: Praktikum. Students cannot receive credit for both MCL 401 and MCL 501.

Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
MCL 455  This American Life  3 Credit Hours
The course "This American Life: Immigrant Literature and the American Dream" is a literary and cultural analysis of the literature of immigration. The readings are from works of fiction in a variety of genres, and are written by American and non-American prize-winning authors. Their common denominator is the pursuit of the American Dream and its many multifaceted aspects. The themes explored include: assimilation, acculturation, diversity, language, subculture, intertextuality, nostalgia, belonging, and double identity. Student wishing to take this course for graduate credit should sign up for MCL 555. Students cannot receive credit for both MCL 455 and MCL 555.
Restriction(s):
Cannot enroll if Class is Freshman or Graduate

MCL 490  Topics in Modern & Class Lang  3 to 6 Credit Hours
An examination of various theoretical or practical concerns of the field of foreign language. Title as listed in the Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

Music Theory (MTHY)

MTHY 100  Fundamentals of Music  3 Credit Hours
This course presents the fundamentals of Western music theory through practical experience, including music notation, sight-singing, and ear training. Prerequisites: none.

MTHY 101  Music Theory I  3 Credit Hours
Writing and analysis of melodic lines, alone and in counterpoint, leading to writing and analysis of harmony. Emphasis on being able to hear the sounds symbolized by notation. (F).
Prerequisite(s): MTHY 100

MTHY 102  Music Theory II  3 Credit Hours
Continuation of MTHY 101 including harmonic analysis, layer analysis, and beginning formal analysis. (W).
Prerequisite(s): MTHY 101

MTHY 390  Topics in Music Theory  3 Credit Hours
Examination of problems and issues in selected areas of music history. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specified topics differ. (OC).

MTHY 399  Independent Study Music Theory  1 to 3 Credit Hours
Readings, analytical assignments and/or compositions in music selected in accordance with the needs and interests of those enrolled and agreed upon by the instructor and the student.

Natural Science (NSCI)

NSCI 120  Matter, Energy, and Life I  4 Credit Hours
A general science course with emphasis on basic principles and their applications. Includes basic life processes, the fundamentals of chemistry and physics, and human systems and genetics. NSCI 120 is complementary to but not a prerequisite for NSCI 121. Students cannot use both NSCI 120 and BIOL 100 to satisfy the natural sciences distribution requirements. Three hours lecture, three hours laboratory. (OC).
Corequisite(s): NSCI 120L
NSCI 332  Inquiry: Mich Earth Science  3 Credit Hours
This course develops a strong conceptual understanding of earth science as it applies to the state of Michigan. Prospective K-8 teachers will participate in the same kind of inquiry-based experiences that they will use in their own teaching. Topics will include landforms, water, weather and seasons in Michigan. This is a hybrid course with weekly meetings as well as an online component. Students who do not attend the first class meeting may be requested to drop per the instructor request drop policy.
Prerequisite(s): NSCI 232 or GEOL 118
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Sophomore or Junior or Senior
Can enroll if Degree is Bachelor of Science, Bachelor of Arts
Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters

NSCI 333  Inquiry: PBL in Life Science  3 Credit Hours
A problem-based learning course suitable for prospective or practicing elementary and middle-school teachers who major or minor in integrated science studies. This course builds on and reinforces content learned at the introductory level by applying life science concepts to complex real-world problems presented in class. Students will work in small groups to identify and research concepts and principles they need to know in order to progress through the real-world life science problems. The case studies used will require the understanding and application of concepts in cell structure and function, genetics, animal and plant physiology, and ecology.
Prerequisite(s): NSCI 233 or BIOL 130
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Sophomore or Junior or Senior
Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters

NSCI 390  Topics in Natural Sciences  1 to 3 Credit Hours
A course in special topics current to natural sciences. Topic and format (seminar, lecture and laboratory) for the course may vary. See current Schedule of Classes. (OC).

NSCI 390C  Topics in Natural Sciences  1 Credit Hour
Topic Title: Applied Restoration and Conservation Ecology Laboratory-This is a field based lab course that will take place in the field where students will conduct restoration, stewardship and conservation planning. Students will be exposed to and interact with professionals from a variety of organizations in southeast Michigan that are dedicated to managing and protecting the globally endangered oak-openings landscape. Some course time will be devoted to reading and discussing literature on landscape, restoration and conservation ecology. Topics and papers will emphasize local and regional ecology (lakeplain prairies, oak openings, wetlands, Great Lakes) and methods for managing, maintaining and restoring these ecological systems (e.g. fire ecology). Classroom discussion will emphasize the importance of these systems and their conservation to human health, well-being, and culture.

NSCI 490  Topics in Natural Sciences  1 to 3 Credit Hours
A course in special topics current to natural sciences. Topic and format (seminar, lecture and laboratory) may vary. See current Schedule of Classes. (OC).

NSCI 490A  Topics in Natural Science  1 Credit Hour
Topic: Workshop Science Teaching in Elementary/Middle School, This course will help you identify and correct weaknesses in your scientific knowledge so that your will be prepared to successfully complete the Michigan Teacher Test for Teacher Certification General and Integrated Science.

NSCI 497  Natural Sciences Colloquium  1 Credit Hour
A series of colloquia on selected topics representing frontier areas of current research in the natural sciences. Lectures by guest speakers invited by the department constitute a major component of the course. One hour seminar. (F).

NSCI 498  Independent Study in NSCI  1 to 3 Credit Hours
Provides an opportunity for students to pursue independent library-based research or readings under the direction of a faculty member. For students who wish to study an area that is interdisciplinary rather than an area focused on a single science. The student and the faculty member must complete a contract outlining the area to be studied and the product of the research.
Restriction(s):
Can enroll if Class is Undergraduate NCFD or Undergrad Certification only or Junior or Senior
Can enroll if College is Arts, Sciences, and Letters

Operations Management (OM)

OM 300  Intro to Operations Management  3 Credit Hours
Concerned with the strategic, tactical and short-term managerial issues relating to the efficient production of services and products. Examples of such issues are: manufacturing technology selection, facility location, strategic, tactical and operational planning and control and quality. (F.W.S)
Prerequisite(s): MATH 104 or MATH 105 or MATH 113 or MATH 115 or Mathematics Placement with a score of 115
Restriction(s):
Cannot enroll if Class is Freshman

OM 460  Supply Chain Management  3 Credit Hours
This course explores the basic concepts of managing flow of materials in a typical enterprise supply chain. Students will examine a complete overview of material flow, for internal and external suppliers, to and from the enterprise.
Prerequisite(s): OM 300 or OM 400
Restriction(s):
Can enroll if Level is Undergraduate

OM 465  Strategic Sourcing  3 Credit Hours
This course provides an in-depth analysis of the procurement process and supplier management with strong analysis placed on managing a supplier base for both products and services. Both theoretical and quantitative perspectives will be offered. In addition, topics will be addressed from strategic, financial and global perspectives.
Prerequisite(s): OM 300 or OM 400
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
OM 470  Analys & Desgn of Supply Chain  3 Credit Hours
The purpose of this course is to equip the student with the ability and the tools necessary to recognize, analyze, and resolve significant problems in the operation of a supply chain system through the application of quantitative techniques. This course focuses on the strategic role of the supply chain, key strategic drivers of supply chain performance, and the tools and techniques for supply chain analysis.
Prerequisite(s): OM 300 or OM 400
Restriction(s):
Can enroll if Level is Undergraduate

OM 475  Supply Chain Logistics Mgmt  3 Credit Hours
The overarching course objective is to develop an in-depth understanding of integrative managerial issues and challenges related to developing and implementing a firm’s logistics strategy. Attention is directed to the logistical mission confronted by varied types of business organizations. Logistics is positioned as a value-adding process that achieves time and place synchronization of demand stimulation and operations fulfillment. Emphasis will be placed on challenges related to providing logistical support for procurement, manufacturing and market-distribution.
Prerequisite(s): OM 300 or OM 400
Restriction(s):
Can enroll if Level is Undergraduate

OM 480  ERP in SCM  3 Credit Hours
This course provides in-depth coverage of the role and impact of enterprise resource planning (ERP) concepts in managing a supply chain. The design of a supply chain information system (SCIS) and its various components is explored utilizing ERP concepts in matching supply and demand through the implementation of an integrated enterprise. Both theory and applications are emphasized in the course. Hands-on experience in the development of some components of SCIS utilizing ERP systems is provided.
Prerequisite(s): (OM 300 or OM 400) and (ISM 310 or ITM 310 or MIS 310)
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

OM 483  Seminar: Operations Management  1 to 3 Credit Hours
To provide students with an opportunity for intensive study in current selected areas related to the research activities and/or professional activities of faculty members. Permission of School of Management.
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

OM 483B  Supply Chain Management Case Study Analysis  3 Credit Hours
The purpose of this experiential learning course is to teach students how to understand, analyze, and solve business case studies in the field of operations and supply chain management. The business case study is a powerful learning tool used in many business schools. In this course, we cover different approaches for effectively analyzing, discussing, and presenting business case studies. Topics include how to classify different types of cases and quickly establish a base of knowledge about a case. Strategies and templates for case analysis are covered in addition to how to persuasively present case-analytical solutions. Analysis and presentation of multiple business case studies are explored throughout the term. (OC).
Prerequisite(s): OM 300 and OM 460*

OM 493  Research:Operations Management  1 to 3 Credit Hours
To provide the advanced student with the opportunity to undertake a research project under the supervision of a faculty member. At least two weeks prior to registration in the term when such a course is to be elected, an interested student must submit to the dean of the school a written request for permission to elect a research course, on a form available in the school office. The request will include a description of the proposed research project. The dean will review the proposal with faculty members to ascertain availability of relevant faculty supervision and to establish appropriate credit. Permission of College of Business.
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

Organizational Behavior (OB)

OB 354  Behavior in Organization  3 Credit Hours
A survey course addressing the theory and practical application of organizational behavior concepts at the individual, group, and organizational levels. Topics include: personality and attitudes, motivation, groups and teams, leadership, power, ethics, structure and organizational design, culture, and decision-making.
Restriction(s):
Can enroll if Class is Junior or Senior

OB 401  Management Skills Development  3 Credit Hours
This course provides an opportunity to study the concepts, problems and techniques of managing the human resources of an organization with emphasis on application and skill building. Topics include: skills development for interviewing, counseling and appraising employees; work team leadership and development; group problem solving and decision making; management of intergroup relationship and conflict resolution.
Prerequisite(s): OB 354
Restriction(s):
Can enroll if Class is Junior or Senior

OB 402  Organizational Change & Devlp  3 Credit Hours
This course will explore the theories, methods and practice of organizational change and development and to provide a conceptual framework for examples of planned change. Topics will include: processes of organizational change, intervention methods, sequencing and integration of change processes, change roles and role relations, change objectives and criteria for change.
Prerequisite(s): OB 354

OB 403  Negotiation and Conflict Mgt  3 Credit Hours
This course will explore negotiation, power, and conflict, outlining the components of effective negotiation. Distributive, integrative, multi-party, and cross-cultural negotiation situations will be considered. Students will gain experience in preparing and implementing negotiation through in-class negotiations.
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

OB 404  Intl Dimensions of Org Behav  3 Credit Hours
This course examines the international dimensions of organizational behavior, including topics such as organizational and national culture, cross-cultural communication, and global aspects of leadership, motivation, and team management.
Prerequisite(s): OB 354
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore
OB 485 Seminar: Organizational Behavr 1 to 3 Credit Hours
To provide students with an opportunity for intensive study in current selected areas related to the research activities and/or professional activities of faculty members. Permission of College of Business.
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

OB 485A Seminar: Organizational Behavr 3 Credit Hours
TOPIC TITLE: Industrial Training. To explore as completely as time will allow the Management/Corporate training function. To experience various different methods of training and if time permits to visit on-site training locations. To conduct a group training program, one individual paper and two group projects will be required.
Restriction(s):
Can enroll if Class is Senior or Graduate

OB 495 Research: Organizational Behavr 1 to 3 Credit Hours
To provide the advanced student with the opportunity to undertake a research project under the supervision of a faculty member. At least two weeks prior to registration in the term when such a course is to be elected, an interested student must submit to the dean of the school a written request for permission to elect a research course, on a form available in the school office. The request will include a description of the proposed research project. The dean will review the proposal with faculty members to ascertain availability of relevant faculty supervision and to establish appropriate credit. Permission of College of Business.
Restriction(s):
Can enroll if Class is Senior or Graduate

Philosophy (PHIL)

PHIL 100 Introduction to Philosophy 3 Credit Hours
An introduction to philosophical thinking through an examination of some timeless human problems such as the existence of God, the problem of freedom, and the attempt to find an ethical foundation for life. (FW).

PHIL 120 Philosophy and Religion 3 Credit Hours
An examination of how basic concerns of philosophy impinge on questions of religious beliefs. Using philosophical texts, the course will explore such questions as the following: Does God exist? Does human life have a purpose? How can we know whether religious claims are true?

PHIL 200 The Human Condition 3 Credit Hours
The human condition as seen in selected works of philosophy and literature. Typical issues: the meaning of life, the existence of God, moral responsibility for human actions, and the role of society in promoting or hindering human excellence. (OC).

PHIL 233 Critical Thinking 3 Credit Hours
A study of the nature and justification of reasoned arguments, both deductive and inductive, as they occur in natural language. A consideration of topics in language that promote an understanding of ways of reasoning, including definitions and fallacies. (FW).

PHIL 234 Symbolic Logic 3 Credit Hours
This course will examine the central themes in modern symbolic logic including consistency, truth-functionality, sentential first-order predicate logic, and the logic of identity and possibility. These themes and their relation to the wider philosophical context will be discussed. (FW).
Prerequisite(s): PHIL 233

PHIL 240 Ethics 3 Credit Hours
A study of ethical concepts and theories. Typical questions: Is the morality of an action based on its results or on the intent of the person acting? Is ethics purely rational? What makes a good person? Ethical principles may be applied to such issues as abortion, capitalism, war, and capital punishment. (FW).

PHIL 253 Death and Dying 3 Credit Hours
An examination of the philosophical issues surrounding death and dying. Among the problems to be considered are: the reasons why we should talk about death; the nature of persons and personal identity; arguments for and against the existence of a soul; the nature of death and what it means to die; whether death is bad and what might make it so; the possibility and value of immortality; the nature and epistemic significance of near-death experiences; suicide; and what might make a life meaningful and valuable. (F, W).

PHIL 301 Ancient Philosophy 3 Credit Hours
An examination of the metaphysical, epistemological, ethical, and political theories of the ancient Greek philosophers with particular attention paid to Plato and Aristotle and to the influence of their ideas on Western culture. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

PHIL 302 Modern Philosophy 3 Credit Hours
A study of 17th and 18th century European philosophers including such philosophers as Descartes, Spinoza, Hume, and Kant with emphasis on their metaphysical and epistemological theories and how those theories provided a foundation for science and a bedrock for modern thought. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

PHIL 303 Kant and the 19th Century 3 Credit Hours
The development of philosophical thought from Kant through the 19th century. In addition to Kant, figures discussed may include Hegel, Schopenhauer, Marx, Kierkegaard, and Nietzsche. Readings in selected texts. (OC).
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490
PHIL 304  Twentieth-Century Philosophy  3 Credit Hours
A study of selected topics, movements, and figures in the philosophy of the twentieth century, including such representative subjects as continental philosophy, contemporary philosophy of mind, and analytic philosophy. Designed to meet the needs of students in literature and the history of ideas as well as philosophy students. Students electing this course must have successfully completed a previous course in philosophy or have permission of the instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

PHIL 305  Marxism  3 Credit Hours
This course is an introduction to the philosophy of Marxism which emphasizes Marx's theories of human nature, alienation, class struggle, and revolution through readings of classical and contemporary texts. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor. (OC).
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 310 or PHIL 315 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

PHIL 306  Islamic Philosophy  3 Credit Hours
The course covers the development of Islam, basic Islamic doctrine, and a selection of issues that have been debated within the Islamic philosophical tradition. Students read original texts by Muslim philosophers and think critically about the issues in them and the arguments raised about them. All readings in English; no knowledge of Arabic required.

PHIL 307  Medieval Philosophy  3 Credit Hours
This course is an introduction to Medieval Philosophy and is structured around the ideas and works of key philosophers in the Christian, Islamic and Jewish religious traditions. It attempts to answer the question of what 'Medieval Philosophy' is and how it fits into the larger context of the Western philosophical tradition. The course is roughly divided into four sections based on the chronological development of philosophy through the Middle Ages – (I) Early Medieval Christian Philosophy, (II) Islamic Philosophy, (III) Jewish Philosophy and (IV) Latin Christian Philosophy in the Thirteenth and Fourteenth Centuries. We will look at what some famous Christian, Muslim and Jewish philosophers, such as Augustine, Boethius, Anselm, Peter Abelard, Al-Ghazali, Ibn Rushd, Saadia, Maimonides, Aquinas, Scotus and Ockham had to say about a diverse range of philosophical issues and topics, including the existence and nature of God, free will, morality, reason and revelation, human nature and the problem of universals. (YR)
Prerequisite(s): PHIL 100 or HUM 200 or PHIL 200 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 350

PHIL 310  Darwinism and Philosophy  3 Credit Hours
Darwinism represents a challenge to the traditional view of human life as radically separate from the rest of the natural world. This course will examine the philosophical implications of this world view. It will address questions such as these: Is Darwinism compatible with traditional religion? Does Darwinism imply that human life and the cosmos are without purpose? Can human life be meaningful if it is the result of evolution and natural selection? Does Darwinism require us to change our view of nature? What are the ethical implications of a Darwinian view of life and the universe?
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 306 or PHIL 309 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 345 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490
Restriction(s):
Cannot enroll if Class is

PHIL 312  Environmental Ethics  3 Credit Hours
The relationship of human beings to the non-human environment raises pressing moral and political issues. This course will use the theories and concepts of philosophical ethics to explore such questions as human obligations to non-human animals; the preservation of wilderness; balancing economic, aesthetic, and spiritual values; and the problems of pollution, urban sprawl, and ecological justice. Prerequisite or permission of instructor. (YR).
Prerequisite(s): PHIL 100 or PHIL 233 or PHIL 240* or CRJ 240 or ENST 105 or ENST 301

PHIL 315  Ethics of War & Peace  3 Credit Hours
A philosophical exploration of ethical issues underlying war and peace. The course will treat such questions as the following: what wars, if any, are just? Are there moral restrictions on the methods that may be used? What individuals are morally responsible for wartime decisions, and to what degree? Discussion of these issues will be used to elucidate larger problems in ethical theory. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 306 or PHIL 309 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 345 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

PHIL 320  The Problem of Human Freedom  3 Credit Hours
A critical examination of the idea of freedom: the free will/determinism debate, moral and legal responsibility, punishment, and the relationship between metaphysical and social freedom. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 306 or PHIL 309 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490
PHIL 327  Kierkegaard & Nietzsche  3 Credit Hours
This course will explore the philosophical views of Kierkegaard and Nietzsche, examining the interconnections and differences between these two thinkers as well as each one's contributions to philosophy and psychology. The course will focus on both philosophers' emphasis on the individual and how that emphasis arose as a response to the social, political and economic changes in the 19th century and anticipated and influenced philosophical developments in the 20th century, in particular existentialism.

PHIL 335  Philosophy of Law  3 Credit Hours
An examination of some of the important philosophical issues relevant to law and legal theory, including legal punishment, legal responsibility, and the relationship between law and morality. Both classical and contemporary writings will be studied. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

PHIL 340  Analytic Philosophy  3 Credit Hours
An introduction to philosophy as the analysis and evaluation of fundamental concepts and principles occurring in ordinary life and in the sciences. While analytic philosophy in the twentieth century is emphasized, its antecedents in the history of western philosophy will be examined. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor. (OC).
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

PHIL 350  Symbolic Logic  3 Credit Hours
This course will examine the central themes in modern symbolic logic including consistency, truth-functionality, sentential first-order predicate logic, and the logic of identity and possibility. These themes and their relation to the wider philosophical context will be discussed. (F,W).

PHIL 360  Philosophy of Technology  3 Credit Hours
A study of both the history of, and current issues in, the philosophy of technology. This course will examine the deeper meaning and implications of our modern technological society. Questions examined include: What is the definition and nature of technology? How did the concept originate in Western thought? What is the relationship between modern industrial technology and the 'mechanistic' worldview? How do Western religious beliefs influence our attitudes about technology? Is technological progress socially determined, or is it culturally independent? In what ways has our technological society been supportive of, or detrimental to, overall human well-being? Students will cover both classic and contemporary readings.

PHIL 365  Philosophy of Religion  3 Credit Hours
A philosophical examination of basic religious problems, such as the nature and grounds of religious belief, the existence and nature of God, human immortality, the relations of religion and science, and the nature of religious language. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 355 or PHIL 340 or PHIL 350 or PHIL 369 or PHIL 301 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

PHIL 369  Philosophy of Art  3 Credit Hours
An examination and critique of both traditional and contemporary theories of art as well as an examination of theories of the aesthetic including theories of beauty, taste, and the aesthetic attitude. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor. (OC).
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 370 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490 or PHIL 371

PHIL 370  Philosophy of Mind  3 Credit Hours
A study of current philosophical work in the area of consciousness studies examining the nature and function of human consciousness and the problem of reconciling an objective, scientific view of consciousness with our subjective experience of it. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

PHIL 371  Philosophy in Literature  3 Credit Hours
An exploration of philosophical problems as they are encountered in works of literature. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

PHIL 375  Problems of Human Knowledge  3 Credit Hours
A study of issues and problems that arise in considering the nature of knowledge: an examination of traditional theories of knowledge and recent critiques of those theories. Readings of classical and contemporary texts. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490
PHIL 380  Theories of Reality  3 Credit Hours
A critical examination of philosophical positions that claim to distinguish between what is real and what is apparent; an evaluation of the basic principles of philosophy and of extra-philosophical disciplines. Readings of classical and contemporary texts. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

PHIL 384  Feminist Philosophy  3 Credit Hours
Feminists working in philosophy, most notably in the 19th and 20th centuries, have altered the traditional philosophical canon by first, recovering women philosophers who were essentially erased from the history and secondly, by extending and contributing to the standard questions of philosophy. For example, one central question of philosophy: “What can we know with certainty?” has been transformed through a feminist lens and reinterpreted as “What does one’s gender, social location, and cultural framework contribute to what one knows?” In this course we will look at the variety of feminist philosophical theories with a focus on epistemology, metaphysics, and ethics.
Prerequisite(s): PHIL 100 or WST 275 or WGST 275 or WGST 303 or HUM 275 or ANTH 275 or PSYC 275 or SOC 275 or HUM 303 or ANTH 303 or PSYC 303 or SOC 303

PHIL 390  Topics in Philosophy  3 Credit Hours
Examination of problems and issues in selected areas of philosophy. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. Typical topics: Philosophy of Language, Minds and Machines, Moral Responsibility. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

PHIL 390Q  Topics in Philosophy  3 Credit Hours
In this course students will explore the ways that cognitive and affective aspects of social identities (race, gender, socio-economic class, sexual orientation, dis/ability) intersect with issues of social power and privilege to make critical thinking and critical dialogue particularly challenging. We will consider how the history of ‘argument’ in Western philosophy has contributed to the challenges of social identity debates and we will explore a variety cognitive biases and logical fallacies as well as strategies for effectively countering these biases and fallacies.

PHIL 390R  Topics in Philosophy  3 Credit Hours
Topic Title: Eastern Philosophy: Confucianism, Daoism, and Buddhism-
The purpose of this course is to examine the roots and development of the three main strands of thought in Eastern Philosophy: Confucianism, Daoism, and Buddhism. We will do this by first working through the foundational ideas and arguments as they are found in the work Kogzi (Confucius) and Laosi, analyzing the basic arguments and disagreements, which pave the way for subsequent thinkers. We will then look at the development of these ideas in the followers of these two schools of thought. We end by examining the original development of Buddhism in India, and its subsequent transformation to Zen or Chan Buddhism as it encounters Daoism in China. Given the significant emphasis on praxis (as opposed to theory) in both Daoism and Zen tradition, it will often be the case that the distinction between philosophy and religion becomes blurred. Eastern Philosophy has a long and rich tradition, often beginning with radically different starting points and concerns from its Western counterpart (although there are certain overlaps and similarities). As such, this course will offer a window into a set of philosophical discourses that have only recently been seriously examined in the West.
Prerequisite(s): PHIL 100 or PHIL 200 or PHIL 233 or PHIL 234 or PHIL 240

PHIL 390S  Topics in Philosophy  3 Credit Hours
Topic Title: Philosophy of Race- The concept of “race” remains controversial. The controversy concerns two broad issues: first, whether “race” is a legitimate way to demarcate human groups, as opposed to, say ethnicity, or simply seeing all persons as individuals; and, second, whether the continued use of the category of race exacerbates racism. Contemporary philosophers have been making important contributions to these issues, addressing such questions as: what is the true meaning of the concept of “race”? Is the concept of race a mere myth or fiction? Does the use of racial categories exacerbate racism? What race is a mixed race person? What is the race of Latinos or Arabs? How can racism best be reduced and resisted? This course will explore recent philosophical work on the concept of race and the political effects of racial identities. Students will gain an understanding of how philosophers analyze and use concepts, especially as they apply to the politics of race in the U.S. Students will also gain a better understanding of the underlining causes of the rash of police lynching that has galvanized the Black Lives Matter Movement.
Prerequisite(s): PHIL 100 or PHIL 200 or PHIL 233 or PHIL 234 or PHIL 240

PHIL 399  Independent Studies  1 to 3 Credit Hours
Readings or analytical assignments in philosophy in accordance with the needs and interests of those enrolled and agreed upon by the student and instructor. (FW).

PHIL 415  Existentialism and Its Sources  3 Credit Hours
An exploration of the literary sources of existentialism and a critical study of selected philosophical texts. Particular themes - death, subjectivity, alienation, commitment, and freedom - will be considered in an attempt to formulate an existential conception of the human condition. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 355 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490
PHIL 441 Social and Political Phil 3 Credit Hours
An analysis of some fundamental problems of political and social philosophy, with special attention to the way in which theory may function as a guide to specific policies. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 485 or PHIL 490

PHIL 442 Medical Ethics 3 Credit Hours
An examination of moral issues in medicine. Among the problems to be considered are truth-telling and paternalism in the doctor-patient relationship, psychosurgery and behavior control, death and euthanasia, the allocation of scarce resources, and genetic counseling and control. Specific attention will be given to ethical theories and to philosophical concepts such as rights, autonomy, and justice. Students cannot receive credit for both PHIL 442 and PHIL 542. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 445 or PHIL 490

PHIL 445 Contemporary Ethical Issues 3 Credit Hours
An intensive study of a topic in recent ethical theory. Topics will vary with each offering. Among the topics: ethics and law, utilitarianism, virtue theory, theories of justice, morality and emotion, ethics and partiality. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 490

PHIL 448 Philosophy of Science 3 Credit Hours
A critical study of the foundations of the sciences, natural and social, with emphasis on the following topics: the nature of scientific method, theories and explanation, probability and determinism, the unity of the sciences. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 490

PHIL 495 Great Thinkers in Dialogue 3 Credit Hours
This course is designed to serve as a capstone experience for students in philosophy. Research in philosophy at all levels of inquiry, beginning with undergraduate and moving toward advanced senior scholars, focuses on increasingly more and more in-depth takes on specific thinkers and problems. That is, we begin with large surveys and progressively zero in, adding complexity and nuance all along. This course looks to do precisely that at the advanced undergraduate levels by looking at two thinkers in conversation with each other over specific perennial issues in philosophy. The thinkers and topics will shift depending on the faculty member teaching the course. (YR).
Prerequisite(s): PHIL 100 and PHIL 301 and PHIL 302

PHIL 496 Independent Studies 1 to 3 Credit Hours
Topics in philosophy not ordinarily included in other courses in philosophy. Selected in accordance with needs and interests of those enrolled.

PHIL 497 Independent Studies 1 to 3 Credit Hours
Topics in philosophy not ordinarily included in other courses in philosophy, selected in accordance with the needs and interests of those enrolled.

PHIL 498 Independent Studies 1 to 4 Credit Hours
Topics in philosophy not ordinarily included in other courses in philosophy, selected in accordance with the needs and interests of those enrolled. Credit hours will vary. (F,W).

PHIL 499 Independent Studies 1 to 4 Credit Hours
Topics in philosophy not ordinarily included in other courses in philosophy, selected in accordance with the needs and interests of those enrolled. Credit hours will vary. (F,W).

Physics (PHYS)

PHYS 100 Perspectives in Physics 3 Credit Hours
An introductory look at the concepts and methods of physics as well as the role of physics in society today. Examines some of the problems facing physicists and the ways they go about tackling them. Problem solving includes the use of mathematics in physical situations. The course is designed for non-concentrators interested in physics. Three hours lecture. (S).

PHYS 125 Introductory Physics I 4 Credit Hours
Part I of a non-calculus, introductory, survey of physics. The concepts of physics are presented with an emphasis on the methods of solving physical problems. Topics are drawn from mechanics, waves, and thermal physics. This course and PHYS 126 are normally taken by students in biological science, preprofessional and computer science programs. Three hours lecture, one hour discussion, three hours laboratory. (F).
Prerequisite(s): MATH 105* or Mathematics Placement with a score of 113
Corequisite(s): PHYS 125L

PHYS 126 Introductory Physics II 4 Credit Hours
A continuation of PHYS 125. Topics are drawn from electricity and magnetism, optics, and modern physics. Three hours lecture, one hour discussion, three hours laboratory. (W).
Prerequisite(s): PHYS 125 or PHYS 150
Corequisite(s): PHYS 126L
PHYS 150  General Physics I  4 Credit Hours
Part I of an integrated, two-semester, calculus-based treatment of physics, with emphasis on the solution of physical problems through the understanding of a few basic concepts. Topics are drawn from mechanics. This course and PHYS 151 are normally taken by concentrators in physics, chemistry, biochemistry, mathematics, and engineering. Three hours lecture, one hour discussion, three hours laboratory. (FW).
Prerequisite(s): MATH 115* or Mathematics Placement with a score of 116
Corequisite(s): PHYS 150L

PHYS 151  General Physics II  4 Credit Hours
A continuation of PHYS 150. Topics are drawn from electricity and magnetism, and optics. Three hours lecture, one hour discussion, three hours laboratory. (FW).
Prerequisite(s): PHYS 150 and (MATH 116 or Mathematics Placement with a score of 215)
Corequisite(s): PHYS 151L

PHYS 305  Contemporary Physics  3 Credit Hours
An introduction to contemporary topics in physics of interest to science, mathematics and engineering students. Topics include relativity, and quantum mechanics and their applications to atoms, molecules, nuclei, solid state phenomena, and cosmology. Three hours lecture. (W).
Prerequisite(s): (PHYS 126 or PHYS 151) and (MATH 116 or Mathematics Placement with a score of 215)

PHYS 314  Computational Physics  3 Credit Hours
An introduction to numerical and computational techniques in physics and astronomy. Topics include an introduction to scientific computing, fitting data to a model, visualizing results, plotting, error analysis, and writing software to solve physical problems. Applications will be selected from a variety of subfields, including: classical mechanics, statistical physics, quantum physics, electromagnetism, chaos, biophysics, and astrophysics. Three hours lecture.

PHYS 320  Environmental Physics  3 Credit Hours
A survey of the applications of physical principles to the environment, and to the conversion, transfer, and use of energy. Problems of transportation, meteorology, and thermal pollution are included. Three hours lecture. (OC).

PHYS 360  Instrumentation for Scientists  4 Credit Hours
An introduction to the principles of electronic instrumentation used in scientific research. Methods of converting physical measurements into electronic signals by means of electrical circuits, transistors, digital and analog integrated circuits will be discussed. Digital computers as general purpose laboratory instruments will be explored. Students will complete individual projects. Three hours lecture, four hours laboratory. (F).

PHYS 370  Intro to Mathematical Physics  3 Credit Hours
As introduction to those mathematical methods that are widely used in understanding the physical phenomena exhibited by Nature. Topics include vector analysis, linear algebra, complex variables, Fourier analysis, and differential equations. Emphasis is on the application of these techniques to physical problems of interest to students in mathematics, engineering, and the physical sciences. Three hours lecture. (AY).

PHYS 390  Current Topics in Physics  3 Credit Hours
A lecture course in a topic of current interest in physics. Topics vary and are announced in the current Schedule of Classes. Three hours lecture. (OC).

PHYS 401  Mechanics  3 Credit Hours
A study of the classical physics of the motions of single particles, systems of particles, and rigid bodies. Topics include central force laws and planetary motion, collisions and scattering, rigid body motion, oscillations, Lagrange's equations, and Hamilton's principle. Three hours lecture. (F)
Prerequisite(s): (MATH 205 or MATH 215 or Mathematics Placement with a score of 215) and PHYS 151

PHYS 403  Electricity and Magnetism  3 Credit Hours
The study of electrostatics, magnetostatics and electrodynamics using Maxwell's equations. Of interest to engineers and physical scientists, the course focuses on the logical development of Maxwell's equations from experimental laws and on their application to electromagnetic phenomena. Three hours lecture. (W).

PHYS 405  Optics  3 Credit Hours
An introduction to wave and ray optics for students in engineering, mathematics, and the physical sciences. Topics of discussion include reflection and refraction at dielectric surfaces, lenses and mirrors, fiber optics, polarization, interference, and Fraunhofer and Fresnel diffraction. Additional material on coherence, Fourier optics and spatial filtering, and holography is presented as dictated by students' needs and interests, and as time permits. Three hours lecture. (AY).

PHYS 416  Biological Physics  3 Credit Hours
A course based on the methodology of physics with particular emphasis from experimental laws and on their application to electromagnetic phenomena. Three hours lecture. (AY).

PHYS 421  Astrophysics  3 Credit Hours
A study of thermodynamic phenomena using the methods of statistical mechanics. Designed for engineering students and concentrators in mathematics and the physical sciences; extensive application is made to physical, chemical and biological systems and phenomena, including solids, liquids, gases, paramagnets, thermal radiation, DNA, hemoglobin, semiconductors, heat engines, chemical reactions, and phase transitions. Three hours lecture. (F).

PHYS 446  Biological Physics  3 Credit Hours
A course based on the methodology of physics with particular emphasis on the applications of theoretical models and experimental methods to biological objects and systems. Topics may include bioelectricity, membranes, polymers, and physical chemistry of macromolecules. Three hours lecture. (OC).

PHYS 421  Astrophysics  3 Credit Hours
A calculus-based introduction to several major areas of modern astrophysics for students concentrating in the physical sciences, mathematics, and engineering. Topics to be covered include observable properties of stars and star systems, stellar structure and evolution, binary systems and galactic x-ray sources, galaxies and quasars, and cosmology. Three hours lecture. (AY).

PHYS 421  Astrophysics  3 Credit Hours
A calculus-based introduction to several major areas of modern astrophysics for students concentrating in the physical sciences, mathematics, and engineering. Topics to be covered include observable properties of stars and star systems, stellar structure and evolution, binary systems and galactic x-ray sources, galaxies and quasars, and cosmology. Three hours lecture. (AY).

Prerequisite(s): (PHYS 305 or ASTR 301 or ASTR 330) and (MATH 205 or MATH 215)
PHYS 453  Quantum Mechanics  3 Credit Hours
Concepts of quantum mechanics with applications of the Schrodinger wave equation to the simpler atoms, molecules, and nuclei. Topics of current interest to physicists, chemists, and biologists are discussed. Three hours lecture. (F).
Prerequisite(s): PHYS 305 and MATH 216

PHY 457  Atomic and Nuclear Physics  3 Credit Hours
Topics in modern atomic physics such as optical and radio-frequency spectroscopy and scattering of atoms and electrons are considered. An introduction to nuclear physics, including nuclear interactions and structure, radioactive decay, fission, and fusion. Three hours lecture. (AY).
Prerequisite(s): (MATH 205 or MATH 215 or Mathematics Placement with a score of 215) and PHYS 305

PHYS 460  Advanced Physics Laboratory  3 Credit Hours
Experiments in both classical and modern physics using contemporary techniques. Commercial apparatus is used in several experiments. Advanced students are encouraged to initiate and conduct their own experiments. Instruction in the planning of experiments and the presentation of oral and written reports is included. One hour recitation, six hours laboratory. Course may be repeated for credit. (W).
Prerequisite(s): PHYS 305* and PHYS 360

PHYS 463  Solid State Physics  3 Credit Hours
A study of the structure and properties of the solid state of matter with emphasis on crystalline solids, crystal structures, lattice dynamics, electrons in metals and semiconductors, and dielectric and magnetic properties of solids. Three hours lecture. (AY).
Prerequisite(s): (MATH 205 or MATH 215 or Mathematics Placement with a score of 215) and PHYS 305

PHYS 490  Topics in Physics  1 to 3 Credit Hours
A lecture course in a topic of current interest in physics. Topics vary and are announced in the current Schedule of Classes. One to three hours lecture. (OC).

PHYS 495  Off-Campus Research  1 to 3 Credit Hours
Participation in ongoing experimental research at an off-campus laboratory. Assignments made by cooperative or internship agreement between the research laboratory, the student, and the physics concentration advisor. Course may be repeated for credit. Four to twelve hours laboratory. Permission of concentration advisor. (FW,S).

PHYS 497  Seminar in Physics  1 to 3 Credit Hours
Current topics from various areas in pure and applied physics are reported upon by students, faculty, and guest lecturers. Topics presented will vary from year to year. Course may be repeated for credit. One to three hours seminar. (W).

PHYS 498  Directed Studies in Physics  1 to 3 Credit Hours
Special topics in physics chosen by agreement between student and instructor. Course may be repeated for credit. Permission of instructor. (FW,S).

PHYS 499  Laboratory Studies in Physics  1 to 3 Credit Hours
Experimental studies in physics selected by agreement between student and instructor. Four to twelve hours laboratory. Course may be repeated for credit. Permission of instructor. (FW,S).

Political Science (POL)

POL 101  American Politics  3 Credit Hours
This course examines the national institutions and political processes of American government. Potential topics include: the Constitution, the Founding, Congress, the Presidency, the Supreme Court, federalism, elections, voting, public opinion, interest groups, political parties, civil rights, civil liberties, or public policy. (F, W).

POL 201  Politics Around the World  3 to 4 Credit Hours
This course examines the world's major forms of government: democracies and non-democracies, their institutions, and the processes that affect their stability and the transitions between them. (F, W).

POL 205  Intro to Public Administration  3 Credit Hours
Introductory study of the administrative phase of public policy development. Such aspects of administration as personnel and fiscal management are considered and related to issue of accountability, public responsibility, and notions of public interest. (FW).

POL 250  Intro to Political Theory  3 Credit Hours
This course examines the role of political theory as a tool for the critical analysis of political reality. It analyzes several dominant political conceptions such as justice, equality, democracy, civility, and authority. (YR).

POL 260  The Arms Race and War  3 Credit Hours
An examination of the courses and consequences of the contemporary arms race. Special attention is given to nuclear weapons, the risk of war, and the prospect for arms control and disarmament. (YR).

POL 300  Political Analysis  3 Credit Hours
Introduction to research design, data collection and analysis, sampling, and statistics for social scientists. (FW).

POL 302  The Theory of the Law  3 Credit Hours
A comprehensive introduction to the theoretical foundations and the political functions of law, with special emphasis on the different moral justifications of law; the relation between law and justice; the relation between law and freedom; due process and fairness in any legal system. This course is designed to have special relevance for those considering law as a career. (OC).

POL 303  Justice  3 Credit Hours
An analysis of theories of justice. The relation between morality and political power is considered. (AY).

POL 304  American Political Thought  3 Credit Hours
The principal American contributions to political theory. (OC).

POL 305  Race/Justice/Freedom in Amer  3 Credit Hours
This course examines the social and political thought of selected African American political thinkers. Its focus will be to assess the origins, development and implications of their ideas in the context of the changing dynamics of racial politics in America and the world. (AY).

POL 306  Political Ideologies  3 Credit Hours
An examination of significant modern ideologies, especially liberalism, conservatism, and Marxism. (YR).

POL 307  Marxist Thought  3 Credit Hours
The theories of selected communist thinkers and the implications that these ideas have for the contemporary world. (OC).
POL 308 Moral and Political Dilemmas 2 to 3 Credit Hours
The course focuses on the tensions and relations between personal morality and political action by examining the moral aspect of contemporary policy issues such as the right to life, environmental policy, and discrimination. (YR).

Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

POL 309 Ancient Political Theory 3 Credit Hours
An examination of seminal ancient and classical thinkers and texts such as Socrates, Plato, Aristotle, and the Bible on significant themes pertaining to justice, government, religion, and philosophy. (YR).

POL 310 Modern Political Theory 3 Credit Hours
The course studies the origins of modern political theory and practice, and the development of "modern" democratic liberalism. (YR).

POL 311 Int Group and Pol Process 3 Credit Hours
An examination of the structure, techniques, and internal politics of interest groups, their role in policy making and relationship with political parties, legislative and executive bodies, and administrative agencies. (AY).

POL 312 Legislative Process 3 Credit Hours
An analysis of legislative systems with emphasis on the changing realities of congressional and state power and policy making. (YR).

POL 313 American State Government 3 Credit Hours
A comparative analysis of politics, political processes, and governmental institutions in American state and local governments. (AY, W).

POL 314 Issues in Amer Pol Thought 3 Credit Hours
Fundamental and recurring issues in American political thought, as they appear in the most influential and representative works on public affairs since the end of the Civil War. Topics may include Social Darwinism and its progressive critics, "revisionist" critiques of the Constitution, political aspects of philosophic pragmatism, the "revolt against formalism" in law, political doctrines of Progressivism and the New Deal, mid-century changes in progressive liberalism, the revival of classical liberalism and its "fusion" with traditional conservatism, political-philosophical aspects of environmentalism, the political thought of the civil rights movement and its critics, feminism and its diversification, and the capacities of American political culture and institutions to conduct a sustained opposition to terrorism. The course concentrates on analyzing extended works of reasoning in books, essays, judicial opinions and other public documents. POL 304, American Political Thought, is recommended as a forerunner to this course.

Restriction(s):
Can enroll if Level is Undergraduate

POL 315 The American Presidency 3 Credit Hours
The course examines the expansion of presidential powers, focusing on the constitutional and political development in the president's role as chief executive, legislative leader, and administrative head of state. Topics include: separation of powers, presidential selection, impeachment, relations with Congress and bureaucracy, emergency powers, presidential character, and leadership. (YR).

POL 316 The American Judicial Process 3 Credit Hours

POL 318 Criminal Law 3 Credit Hours
A survey of landmark Supreme Court decisions in the field of criminal law and related issues of criminal justice. State court decisions when applicable may also be included. (AY).

POL 320 Politics and Human Nature 3 Credit Hours
An analysis of the political process in terms of the attitudes, values, and behavior of human beings. (OC).

Prerequisite(s): POL 101

POL 322 Michigan Government, Politics, & Public Policy 3 Credit Hours
We will use contemporary policy debates in Michigan as a lens for understanding the institutions, processes, and individuals driving Michigan government and politics. We will examine both the formal structural dimensions of Michigan government and the informal environmental elements affecting how those structural elements function. (YR).

POL 323 Urban Politics 3 Credit Hours
A survey of the political process in urban areas giving special attention to the changing role of cities in American politics. (YR).

POL 325 Environmental Politics 3 Credit Hours
An examination of policy making about problems affecting the environment, at a global, national, and local scale. (AY).

POL 326 Presidential/Congress Election 3 Credit Hours
This course will focus on the most recent and upcoming presidential and congressional elections from the perspective of how they fit into and help illustrate the broad theoretical frameworks and findings on elections and voting behavior in political science. Topics will include nominating and general election campaigns, campaign financing, participation, party coalitions, and news media. (OC).

Prerequisite(s): POL 101

POL 327 Pol Parties and Elections 3 Credit Hours
A basic survey of American political party organization and the American election system. The course sometimes includes an examination of parties and elections in comparative perspective. (YR).

POL 328 Pub Opinion and Press Groups 3 Credit Hours
A study of the nature and formation of public opinion, the techniques for its measurement, and its role in the political system. (AY).

POL 329 Politics and the Media 3 Credit Hours
This course investigates the relationships between the news media and our major political institutions; the structure of the modern media; their influence on public opinion; their effects on our party and electoral system; their role in defining political reality and agenda setting; and their influence upon our political institutions and the policy-making process. (YR).

POL 333 Citizens and Bureaucrats 3 Credit Hours
The focus of this course is citizen participation in administrative behavior. Attention is paid to the perspectives of both citizens and bureaucrats. The course uses broad concepts of political participation and organization behavior. (YR).

POL 334 Organizing and Leadership 3 Credit Hours
The purpose of this course is to introduce students to the theory and practice of local democratic action. The course draws on the history, practices, and lessons of the American community organizing tradition and the civil rights movement and relates those past experiences to current issues. In collaboration with local community partners, students learn about effective methods of civic engagement and leadership, as currently practiced in metropolitan Detroit. (YR).

POL 340 Federalism 3 Credit Hours
Federalism is considered from both legal and operational perspectives. Students examine traditional views of Federalism as well as empirical and technical studies about intergovernmental relations at national, state, and metropolitan levels. (YR).
POL 341 Canadian Politics 3 Credit Hours
A survey of Canadian politics and government. It provides an understanding of the Canadian political tradition and some of the concerns of contemporary Canada; includes a focus on the cultural and socioeconomic bases of the political system, the development of constitutional structures, the scope of public policy and the dynamics of policy process. (OC).

POL 350 Pol of the Developing Areas 3 Credit Hours
A comparative study of political development, political and governmental structures, and conflict patterns, especially of an ethnic nature. (AY).

POL 355 Religion and Politics 3 Credit Hours
The primary focus of the course is on political movements or systems that take a religious form or have a religious base or use a religiously-rooted ideology. Possible themes or cases covered include the Catholic Church as a political system, Evangelical politics in America, religious uprisings, and Islamic political movements. (AY).

POL 360 American Policy Process 3 Credit Hours
Using real-world examples and the insights of experts in the field, this course explores how public policy is made in the federal government. We will examine deeply the interaction of people, institutions, rules, and contextual variables that determine what policies are enacted and how. We will seek to understand the complex, often maddening, process of decision-making in the federal government and the policies that result from it. (YR).

POL 361 American Foreign Policy 3 Credit Hours
Survey of American foreign policy in various regions of the world. Instances of policy making, such as the Cuban missile crisis, are explored in detail. (YR).

POL 362 Women, Politics, and the Law 3 Credit Hours
An examination of the political behavior of women in American politics. Included is an analysis of the legal and legislative demands of American women. (AY).

POL 363 Cr Just Policy and Admin 3 Credit Hours
The structure and processes of criminal justice administration in America, including analysis of current issues in police behavior, courts, and corrections. (AY).

POL 364 Health Pol and Administration 3 Credit Hours
Structure and processes of health administration in America, including analysis of current issues in health policy. (AY).

POL 365 Energy Policy 3 Credit Hours
The course reviews the important elements in energy policy and a brief history of that development. It also considers what factors have been important in those developments. Finally, there is discussion of the potential for policy developments at all levels of government. (OC).

POL 367 Fiscal Policy and Budgeting 3 Credit Hours
This course is intended to introduce students to the fundamental elements of the federal budget. During the class we will examine the budgetary process and how it has evolved over time. Contemporary proposals to reform the budget process will be considered as well. Careful attention will also be paid to important components of the federal budget including entitlements, defense spending, and discretionary non-defense spending. We will consider various policy reforms as legislators seek to find ways of maintaining popular programs while controlling costs. Finally, the course will conclude by examining some famous budgetary conflicts in recent American history.

Restriction(s):
Can enroll if Level is Undergraduate

POL 370 Communist & Post-Communist Sys 3 Credit Hours
China and Russia are the focal points of this course. Among questions explored are: How are Russia and China ruled? Are their forms of government and their economic systems "moderating" and becoming more like those of the United States? How successful have these governments been in meeting the needs of the people? (OC).

POL 371 Problems in Intl Politics 3 Credit Hours
Present-day problems in world politics, with particular emphasis on the great powers and on areas and events of political conflict in the contemporary world. (YR).

POL 375 Great Pwrs Comp and Conflict 3 Credit Hours
This course focuses on the foreign policies of major international powers, such as China, Russia, and the Western European democracies. Attention is also paid to the causes of the rise and decline of major powers. (YR).

POL 385 Israeli-Palestinian Conflict 3 Credit Hours
The course focuses on the Israeli-Palestinian conflict in its domestic, regional, and world-wide dimensions. (W, YR).

POL 390 Topics in Political Science 3 Credit Hours
Examination of problems and issues in selected areas of political science. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

POL 390J Topics in Political Science 3 Credit Hours
Topic: Freedom of Religion in America. This course is designed to explore a variety of historical and contemporary issues dealing with freedom of religion as guaranteed in the First Amendment of the Bill of Rights. Special attention will be given to the landmark decisions of the Supreme Court interpreting the Establishment and Free Exercise clauses of the First Amendment and the legal and political controversies raised by these decisions. The course is designed to lead to a greater understanding of the symbiotic relationship between religion and politics, the importance of religious liberty to democracy, and the inevitable tensions between religious groups, and between church and state in a free society.

Prerequisite(s): HIST 365

POL 398 Independent Studies 1 to 3 Credit Hours
Readings or analytical assignments in Political Science in accordance with the needs and interests of those enrolled and agreed upon by the student and instructor.

POL 399 Independent Study 1 Credit Hour
Readings or analytical assignments in political sciences in accordance with the interests and needs of students enrolled and agreed upon by the instructor and student. Written permission of instructor required.

POL 413 American Constitutional Law 3 Credit Hours
A major theme of this course is the development of the Constitution as shaped by the Supreme Court, Congress, and the president. The course examines the constitutional interpretation of government authority which includes such topics as judicial review, appointments, executive privilege, war power, federalism, commerce power, taxing and spending power, and substantive due process. (AY).

Restriction(s):
Cannot enroll if Class is
POL 414  Civil Rights and Liberties  3 Credit Hours
An analysis of the Bill of Rights and the 14th Amendment, with particular
emphasis upon recent landmark or controversial Supreme Court
decisions dealing with freedom of speech and religion, rights of criminal
defendants; cruel and unusual punishment, right to privacy; civil rights
and equal protection clause; and apportionment. (YR).
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

POL 415  Problems in Constitutional Law  3 Credit Hours
Selected areas of constitutional law of current interest. Topics to be
announced. (AY).
Restriction(s):
Can enroll if Class is Junior or Senior

POL 416  Criminal Law  3 Credit Hours
A survey of the major judicial, executive, and legislative decisions in the
field of criminal law. (AY).

POL 417  Constitution & National Security  3 Credit Hours
This course focuses on the issue of national security and how the federal
government has used power to protect its citizens. It analyzes relevant
national security issues in order to understand how government action is
constrained by the Constitution and social norms. The course examines
the historical development of national security in the United States
including habeas corpus, wiretapping, military tribunals, state secrets,
and extraordinary rendition. Particular close attention is paid to the
modern development of national security. The emphasis in reading will
be on cases, executive orders, congressional hearings, and statutes. For
graduate credit elect POL 517.
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

POL 418  Supreme Court and Religion  3 Credit Hours
A study of the major landmark decisions of the Supreme Court
interpreting First Amendment guarantees of religious liberty. The course
emphasizes case law defining the meaning of the Establishment Clause
and the Free Exercise Clause and their significance for religious liberty in
America.
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

POL 445  Environmental Law  3 Credit Hours
A survey of common law theories and analysis of environmental statutes
from a functional perspective. The course also includes environmental
law aspects of constitutional law, administrative law and criminal law, as
well as the public trust doctrine and public lands. Student cannot receive
credit for both ENST 350 and ENST/POL 445.

POL 450  Revolution  3 Credit Hours
A consideration of violent political change and the conditions which
promote it. The course covers both revolutionary theories and empirical
research. Specific revolutions are considered. (YR).
Restriction(s):
Cannot enroll if Class is

POL 451  Peace and War  3 Credit Hours
An examination of the causes of war and the means of securing peace.
(YR).
Prerequisite(s): HIST 365 or HONS 300
Restriction(s):
Cannot enroll if Class is
Can enroll if Attribute is Honors Program

POL 460  Science, Tech & Pub Policy  3 Credit Hours
This course explores the intersection of science, technology, and
public policy. Scientific knowledge and technological innovations are
exceptionally powerful resources for policy-makers and for societies;
they also pose great challenges and risks. This course will look at how
science and technology affect the pursuit of policy goals in areas such
as public health, environmental sustainability, economic growth, and
national security. Students will not receive credit for more than one of
POL 460, POL 560, and PPOL 560.
Restriction(s):
Cannot enroll if Class is Graduate

POL 466  Politics & Policies Soc Welfare  3 Credit Hours
The course examines the relationship between politics and public policy
as related to the provision of social welfare programs in the United
States.
Restriction(s):
Cannot enroll if Class is Freshman

POL 467  Food Politics & Policy  3 Credit Hours
How do politics affect our food at the global, national and urban/local
scale? This course examines close historical relationships between
politics and food; the politics of conventional agriculture and food
policy; and alternative agriculture movements and food systems, with a
particular emphasis on urban food policy and urban food systems.

POL 471  American Foreign Policy I  3 Credit Hours
American foreign policy in Western Europe, Russia, and Latin America.
(OC).
Restriction(s):
Can enroll if Class is Junior or Senior

POL 472  American Foreign Policy II  3 Credit Hours
American foreign policy in the non-western world. (OC).
Restriction(s):
Can enroll if Class is Junior or Senior

POL 473  International Security Affairs  3 Credit Hours
International Security is the branch of world politics concerned with
the threats, primarily military in nature, to the peace and security of the
nation, states, and the international community. (AY).
Restriction(s):
Can enroll if Class is Junior or Senior

POL 481  Terrorism & US Natl Security  3 Credit Hours
The United States responded to the events of September 11, 2001 with a
series of unprecedented action under the umbrella of homeland security
and the War on Terror. This course examines American National
security policy by asking a few key questions: What is terrorism and how
does it threaten the United States? How has the United States responded
to the threat of terrorism over time? What have the consequences of US
policy been to date? Finally, how would we balance a desire for security
with our desire for civil liberties and ethical action?
Prerequisite(s): CRJ 468
Restriction(s):
Can enroll if Level is Undergraduate

POL 484  Revitalizing Cities  3 Credit Hours
What have we done to address decline in city neighborhoods and
downtowns? Why? How has it worked? Why? What’s the hope for the
future? This course uses a public policy lens to engage students in a
quest for answers to these questions. (YR)
POL 487 Comparative Enviro Policy 3 Credit Hours
This course explores environmental policy as a result of political processes involving diverse participants and entailing movement through several stages - from defining an issue as an environmental problem to placing it on political agenda and then receiving a response at domestic governmental or international levels. This course analyzes environmental issues from a cross-cultural and comparative perspective, with a particular attention given to political institutions, political change, levels of development, political culture, public participation, and international commitments that shape the nature and dynamics of environmental politics and policy in different countries. Course POL 101 is recommended before taking this course.
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

POL 489 Seminar in Urban Politics 3 Credit Hours
Selected topics in urban politics.

POL 490 Sem in Public Administration 2 to 3 Credit Hours
Selected topics in public administration.

POL 491 Seminar in Political Science 3 Credit Hours
Selected topics in political science. Title as listed in Schedule of Classes changes according to content. Course may be repeated for credit when topics differ. (AY).

POL 4910 Capstone in Political Science 3 Credit Hours
This course provides students with a culminating and integrative experience within political science. In particular, it is designed to ensure students discuss, critically evaluate, and actively engage with important issues and questions within the discipline. Students will be required to design and carry out significant research project(s).
Restriction(s):
Can enroll if Class is Junior or Senior

POL 492 Seminar in Political Analysis 3 Credit Hours
An advanced in-depth look at the problems and techniques of empirical research. Gives special attention to research design, data collections, measurement, and validity. Statistics for social scientists will also be covered. (OC).

POL 494 Politics, Policy, and Law Internship Seminar 3 Credit Hours
This is the academic part of the internship. Students meet with other interns once a week to analyze political dynamics within their placements. Students are required to keep journals, prepare papers and reports, and do other written work. Anyone taking POL 495 or 497 is required to take POL 494. It may not be taken by itself. Only six hours of internship credit is allowable toward concentration requirement. (F, S, W, YR).

POL 495 Politics, Policy and Law Internship 3 to 6 Credit Hours
Field study placements in national, state, county, local government or private agencies. Primarily for junior or senior political science concentrators or other qualified applicants. Maximum of 20 students selected each term. Students must also register for POL 494. Only six hours of internship credit is allowed toward concentration requirement. (YR).

POL 496 Canada Internship 3 or 6 Credit Hours
Field study placements in Canada at national, provincial, or local levels, or in private agencies. Course is offered only in spring semester. Primarily for junior or senior political science concentrators, or other qualified applicants. Students must also register for POL 494. Only six hours of internship credit is allowed toward concentration requirement.

POL 497 Washington, D.C. Internship 3 to 6 Credit Hours
Field placements in Washington, D.C. Course is offered only in summer semester. Primarily for junior or senior political science concentrators or other qualified applicants. Only six hours of internship credit is allowed toward concentration requirement.

POL 498 Directed Studies 1 to 6 Credit Hours
Directed individual study of any subject agreed upon by the student and the instructor. May not duplicate a formal course offering. (OC).

POL 499 Directed Studies 1 to 6 Credit Hours
Directed individual study of any subjects agreed upon by the student and the advising instructor, which shall not duplicate a formal course offering.

Professional Education (PDED)

PDED 318 Topics in Education 1 to 3 Credit Hours
An examination, at the undergraduate level, of selected problems, practices or issues in education. The title as listed in the Schedule of Classes may change according to content. Course may be repeated for credit when specific topics differ.
Restriction(s):
Can enroll if Class is Junior or Graduate

PDED 405 Sp Ed Legisltn and Litigation 3 Credit Hours
Content traces the historical development of special education through landmark legislation and litigation, parent advocacy, and national economic and social needs. The provisions of federal and state special education mandates, judicial interpretations, and Michigan state guidelines regulating the delivery of educational and vocational services to persons with handicaps will also be addressed.
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate NCFD or Post-baccalaureate Cert only or Junior or Senior

PDED 415 Museum Resources for Teaching 3 Credit Hours
Explores the use of museums as educational resources by elementary and secondary teachers. Various museums in the greater Detroit metropolitan area will be visited and studied. Students will review how to plan educational trips and how to use museum resources in meeting their own particular individual needs. (OC)
Restriction(s):
Can enroll if Class is Undergrad Certification only or Junior or Senior Can enroll if College is Education, Health, and Human Services

PDED 416 Internship in Museum Education 2 or 3 Credit Hours
The museum education internship will prepare students with the knowledge and skills they need to plan, implement, and evaluate educational and interpretive programs in the context of museums. The educational functions of museums will be explored. The students will apply their knowledge and experiences to K-12 instruction in the core content areas.
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters
PDED 418  Topics in Education  1 to 3 Credit Hours
This course is intended to introduce students to the characteristics and assessment of persons with ASD, as well as the best practices related to educating students with Autism Spectrum Disorders (ASD). Specifically, students will learn evidence based practices for assessing students with ASD, creating an appropriate educational environment for students with ASD, and providing academic instruction and behavioral interventions to students with ASD in special education and general education settings. Instruction will emphasize specific assessment and teaching tools and behavior management principles and practices associated with educating K-12 student with ASD.  
Restriction(s):  
Can enroll if Level is Undergraduate

PDED 418BJ  Topics in Education  1 Credit Hour  
TOPIC TITLE: Transdisciplinary Teaming to Support students with Challenging Behaviors This course explores the concept of transdisciplinary teaming for the purpose of supporting children/youth with challenging behaviors. Topics of study in this course include multi-level systems for preventing and remediating inappropriate behaviors, school-wide, class-wide, and individual research-based interventions including Functional Behavior Assessment (FBA).

PDED 418BN  Gamifying your Classroom  1 Credit Hour  
Participants will learn a variety of strategies that can be used to "gamify" learning experiences with students. This includes learning how to provide students with a more customizable learning experience and focusing on mastery learning rather than just assignment completion. Participants will be introduced to a gamified learning management system that can be used to facilitate their own gamified classroom. (OC)  
Restriction(s):  
Can enroll if Level is Undergraduate

PDED 418BO  Intro to Google Apps for Education  1 Credit Hour  
Participants will be introduced to the suite of Google Apps for Education including Google Classroom, Drive, Docs, Sheets, Presentations, Hangouts, Blogger, Picasa, Sketch-Up, and Google Earth. Participants will learn how to utilize these various applications to design technology enhanced learning activities and enhance their overall productivity. (OC)

PDED 418BS  The Educational Escape Room  1 Credit Hour  
Topic Title: The Educational Escape Room: Participants will learn how to develop educational escape rooms that can be used to engage students in different content areas. Focus will be placed on crafting a relevant scenario, creating logical hints, and integrating the escape room activity into the curriculum. Participants will be introduced to a variety of tools and technologies that can be used to create escape room activities. (OC)

PDED 418BT  Tech Tools for the College Student  1 Credit Hour  
Participants will learn about a wide range of technologies that can be used to help them be successful college students. Topics covered in this class will include technologies for writing, research, time management, stress reduction, presentations, group collaboration and communication. As a result of this course, participants will be better prepared to meet the rigorous demands of college. (OC)  
Restriction(s):  
Can enroll if Level is Undergraduate

PDED 418BU  Creating a Maker Space  1 Credit Hour  
Topic Title: Creating a Maker Space: Participants will learn how to create a Maker Space within their own school or classroom. A variety of resources will be shared to help reduce the cost of developing a Maker Space. Participants will also learn about ways to design learning activities that utilize a Maker Space in order to advance the curriculum in different content areas. (OC).

PDED 418CA  Topics in Education- Technology for the Flipped Classroom  1 Credit Hour  
Participants will learn how to use a variety of different technologies in order to flip* their current or future classroom. This will include using a learning management system (LMS) to create an online learning space and learning to create a variety of multimedia elements (screen capture tutorials, animations, digital videos) for instructional purposes. *In the context of this course, a flipped classroom is one in which in instructional content is provided by the teacher online through multimedia elements such as videos and podcasts and classroom time is devoted to students working on assignments that would normally be given as homework. The classroom is considered "flipped" because the instruction happens outside of class and homework is completed in class where students have easy access to the teacher. (OC).

Restriction(s):  
Can enroll if Class is Undergrad Certification only or Post-baccalaureate NCFD or Post-baccalaureate Cert only or Freshman or Sophomore or Junior or Senior

PDED 425  Educator and the Law  1 to 2 Credit Hours  
Designed to familiarize classroom teachers with school law and its implications for educators, pupils, and parents. Consideration will be given to the legal aspects of such matters as physical threats, teacher liability, codes of conduct, discipline, and student rights. (OC)

Restriction(s):  
Can enroll if Level is Undergraduate

Other Content  
* An asterisk denotes that a course may be taken concurrently.

Frequency of Offering  
The following abbreviations are used to denote the frequency of offering: (F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally.
Psychology (PSYC)

PSYC 101 Introduction to Psychology 3 Credit Hours
Psychology 101 introduces students to theories and research in the field of psychology. This course focuses on the scientific underpinnings of the field from both the social and natural science perspectives. (F, S, W).

PSYC 170 Intro to Psych as a Nat Sci 3 Credit Hours
A treatment of the principles of sensation, perception, maturation, learning, motivation, memory, thought, language, and physiological bases of behavior. (F, W, S).

PSYC 171 Intro to Psych as a Soc Sci 3 Credit Hours
A treatment of the principles of human development, intelligence, motivation, personality theory, social and abnormal psychology, and psychotherapy. (F, W, S).

PSYC 200 Introduction to Developmental Psychology 3 Credit Hours
Developmental Psychology represents one of the sub-fields of Psychology as a whole; other sub-fields include Social Psychology, Cognitive Psychology, Clinical Psychology, and Biological Psychology. Although each sub-field shares the core goal of psychology—to scientifically study the mind and behavior—each sub-field has its own "lens." In developmental psychology, the focus is on how we become who we are—how various genetic and environmental factors interact over time to influence how we think and how we behave. In this course, students will be introduced to the field of developmental psychology, gaining a basic understanding of what it is, how it is studied, and how it applies to "real life." This course uses readings written for a general audience to draw out and discuss selected topics in each developmental "stage"—infancy, childhood, adolescence, emerging adulthood, middle adulthood, and later life. A basic exposure to research methods, statistics, APA format, peer-review, and ethics also prepares students to succeed in upper-level psychology courses. (YR).
Prerequisite(s): PSYC 101

PSYC 215 Research Skills BScI 1 Credit Hour
Full Title: Research Skills for the Behavioral Sciences: This course teaches foundational research and critical-thinking skills necessary for the success of Behavioral Sciences students (including Anthropology, Psychology, and Sociology) in conducting university-level research projects, papers, and other research assignments. Students will learn important research skills like distinguishing between scholarly and non-scholarly sources of information, using library search tools to find peer-reviewed and scholarly sources, evaluating and analyzing information sources and using them to build informed opinions and arguments, integrating and synthesizing sources, and using sources ethically. Students will learn these skills through lectures, practice and by applying them through a series of assignments. (F, W, S).
Restriction(s):
Can enroll if Level is Undergraduate
Can enroll if College is Arts, Sciences, and Letters

PSYC 220 Introduction to Social Psychology 3 Credit Hours
Students will be introduced to the field of Social Psychology, which considers how individuals affect and are affected by other people and by their social and physical environments. Basic research methods in social psychology, as well as foundational social psychological theory and research will be covered. (F, YR).
Prerequisite(s): PSYC 101

PSYC 240 Introduction to Mental Health and Adjustment 3 Credit Hours
This course is designed to help students continue to develop a foundational knowledge about psychology through the exploration of mental health. Building on the key concepts students learned in other psychology courses (e.g., introduction to psychology), this course will examine scientific approaches to the study and treatment of mental health issues and general human adjustment. The course will cover topics related to clinically based research, defining and classifying mental health and illness, general types psychological distress, and introductory treatment considerations for individuals with mental health problems. (YR).
Prerequisite(s): PSYC 101

PSYC 260 Introduction to Brain and Behavior 3 Credit Hours
Students will be introduced to the scientific study of human behaviors and mental processes (such as attention, memory, language, emotion and motivation), and the underlying brain mechanisms. Topics on basic brain anatomy and research methods will also be introduced. (YR).
Prerequisite(s): PSYC 101

PSYC 299 Careers in Psychology 1 Credit Hour
This one-credit course for psychology majors provides students with information and skills to help pursue a career in psychology or in a related field. The course focuses on career options within each of the major sub-fields of psychology. Psychological research on resumes, interviewing and negotiation skills, and networking is incorporated into the course. Students develop a career plan, write a resume, and complete an e-portfolio. (F)(W)

PSYC 300 Life-Span Developmental Psych 3 Credit Hours
Theoretical issues of psychological development from birth through late adulthood are emphasized, along with issues regarding research methods. Topics include cognitive, intellectual, personality, and social development through the life-span. (YR).
Prerequisite(s): PSYC 101 or PSYC 170 or PSYC 171

PSYC 301 Psych of Infant Development 3 Credit Hours
An examination of current theories and findings concerning physical, social, emotional, and intellectual development of the infant. Topics include genetic and experiential factors affecting prenatal and infant development. Language, cognition, and environmental influences on development. Theory will be related to infant care practices in families. (YR).
Prerequisite(s): PSYC 171 or PSYC 170 or PSYC 171

PSYC 302 Psych of Child Development 3 Credit Hours
An examination of current theories and findings concerning physical, social, emotional, and intellectual development from conception to late childhood. Topics include genetic and experiential factors affecting child development. (YR).
Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

PSYC 303 Intro to Women's & Gender Stud 3 Credit Hours
This course provides an interdisciplinary overview of the key theories and topics in Women's and Gender Studies. Special attention is given to how gender intersects with class, race, nationality, religion and sexuality to structure women's and men's lives. Students are also introduced to methods of gender analysis and will begin to apply these methods to topics such as women and health, gender roles in the family, violence against women, and gendered images in the mass media.
Restriction(s):
Cannot enroll if Class is Freshman
PSYC 315  Personality Development  3 Credit Hours
An investigation of the factors involved in the formation of personality and the changes in personality across the life-span. The influence of family, peers, and society will be emphasized. (YR).
Prerequisite(s): PSYC 171 or PSYC 170 or PSYC 101

PSYC 320  Social Psychology  3 Credit Hours
This course provides a comprehensive overview of the field of social psychology focusing on a review of the field's founding principles and classic studies, as well as a focus on recent research. Topics include social cognition; interpersonal behavior (e.g., attraction, aggression, and altruism); attitudes; prejudice and discrimination; social influence; group processes (e.g., intergroup relations; conflict resolution); and social issues (e.g., income inequality). (YR).
Prerequisite(s): PSYC 101 or PSYC 170 or PSYC 171

PSYC 322  Psychology of Prejudice  3 Credit Hours
A consideration of ethnic (including racial), sexual, and religious prejudice from the psychological point of view, focusing on the mind of both the oppressor and the oppressed. (YR).
Prerequisite(s): PSYC 171 or PSYC 170 or PSYC 101

PSYC 325  Psych of Interpersonal Relation  3 Credit Hours
This course presents an overview of theory and research conducted by social psychologists that has been aimed at understanding interactions between individuals. Topics include an exploration of the research process that is used to investigate interpersonal relationships, the processes underlying social perception, friendship, liking, love, close relationships, aggression and violence in interpersonal relationships. (YR).
Prerequisite(s): PSYC 101 or PSYC 170 or PSYC 171

PSYC 335  Psychology of Bilingualism  3 Credit Hours
This course is an introduction to the study of bilingualism with a focus on biological and cognitive aspects of bilingualism. Topics include definitions and types of bilingualism; differences between monolinguals and bilinguals; language development in children and adults and differences between early and late learning; brain areas involved using one and multiple languages; language processing in bilinguals, including topics such as working memory, executive control, proficiency, age of acquisition, and language attrition; and the relationship between language, thought, and culture. We will also discuss social aspects of bilingualism, including heritage language, identity, and attitudes. (FW)
Prerequisite(s): PSYC 101

PSYC 363  Cognitive Psychology  3 Credit Hours
Analysis of human perceptual and cognitive functioning from an information-processing point of view. Emphasis will be placed on attention, pattern-recognition, memory, problem solving and other cognitive processes. (YR).
Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

PSYC 370  Physiological Psychology  3 Credit Hours
Integration of physiological concepts with behavioral phenomena. (YR).
Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

PSYC 372  Animal Behavior  3 Credit Hours
Comparative psychology. Descriptive analysis of human and animal behavior. (YR).
Prerequisite(s): PSYC 170 or PSYC 171 or BIOL 100 or PSYC 101

PSYC 375  Psychology of Language  3 Credit Hours
The nature of human language as seen from the perspective of experimental psychology. The course will also introduce the student to current developments in linguistic theory. (AY).
Prerequisite(s): PSYC 170 or PSYC 171 or LING 280 or PSYC 101

PSYC 381  Prin of Stat and Exper Design  3 Credit Hours
An introduction to basic principles of experimental design and statistical analysis as employed in psychological research. Topics covered include data-gathering, descriptive statistics, hypotheses testing and one- and two-sample experiments, correlational designs, and one- and two-way analysis of variance. (YR).
Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

PSYC 390  Topics in Psychology  3 Credit Hours
Examination of problems and issues in selected areas of psychology. Title listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).
Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

PSYC 391  Topics in Psychology  3 Credit Hours
Examination of problems and issues in selected areas of psychology. Title listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

PSYC 394  Psychology and Theater  3 Credit Hours
The linkages between psychology and theater are analyzed from the perspective of the actor, the audience, and the analyst (both psychotherapeutic and literary). This includes ties between plays and theories of human behavior, psychodrama, and self-insight through performance. Class involves a significant experiential component.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 223 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239) and PSYC 101

PSYC 3955  Diversity and the Workplace  3 Credit Hours
This course will: 1) discuss gender, race, ethnicity, disability, age, sexual orientation, and appearance as aspects of diversity; 2) examine social values and practices, and organizational policies and procedures that affect or have affected the employment opportunities of underrepresented groups; 3) examine individual (e.g., prejudice, stereotypes), group (e.g., in-groups and out-groups), and organizational (e.g., climate and culture) processes that affect workplace diversity and; 4) discuss “best practices” for promoting an organizational culture that values diversity, along with a diverse work force. (YR).
Prerequisite(s): PSYC 170 or PSYC 171 or WST 275 or OB 354 or HRM 405 or WGST 275 or WGST 303 or PSYC 275 or ANTH 275 or SOC 275 or HUM 275 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303 or PSYC 101

PSYC 398  Independent Studies in Psych  1 to 3 Credit Hours
Readings or analytical research in psychology selected in accordance with the interests and needs of students enrolled and agreed upon by the instructor and student. Permission of instructor. (F,W,S).
PSYC 400  Cognitive Neuroscience  3 Credit Hours  
Cognitive neuroscience focuses on the fundamental question of how our nervous system, especially the brain, supports our (generally-defined) cognitive function, such as sensory/perception, learning/memory, language/social/emotion, and executive functions. This is a fast-growing inter-disciplinary research field that bridges psychology and neurobiology. In this course, we will discuss the recent advances in these cognitive neuroscience subfields and learn how various brain systems may play unique roles in supporting these distinct functions. We will also discuss important research methods/techniques used in cognitive neuroscience, such as the functional Magnetic Resonance Imaging (fMRI), Electro/Magnetoencephalography (EEG/MEG), intracranial recording, and brain damage/lesion/stimulation methods, and related research paradigms and resulted theories. Students will also learn to read and criticize cognitive neuroscience research articles. Gross neuroanatomy will be introduced to provide a foundation for understanding systems and interconnectedness of the brain and related cognitive processing. How cognitive neuroscience can help us better understand normal and pathological psychological functions will be discussed. (F, W).  
Prerequisite(s): (PSYC 170 or PSYC 171 or PSYC 101)  

PSYC 404  Parent-Child Relations  3 Credit Hours  
This course examines parental effects on children and children's effects on parents. Emphasis is placed on how the psychologist can collect additional information on the interactions of such people as parents and their children. (YR).  
Prerequisite(s): PSYC 171 or PSYC 170 or PSYC 101  

PSYC 405  Gender Roles  3 Credit Hours  
This course will investigate the development of gender roles in childhood and adolescence due to either innate physiological differences or sociological patterning, the effect of gender roles upon male-female relationships within our society, and the possibility of transcending sociological gender roles in alternate modes of living. Students cannot receive credit for both PSYC 405 and PSYC 505. (YR).  
Prerequisite(s): PSYC 171 or PSYC 170 or SOC 200 or SOC 201 or PSYC 101  
Restriction(s):  
Cannot enroll if Class is Graduate  

PSYC 407  Psychology of Adolescence  3 Credit Hours  
Considers adolescence as an interaction of rapid biological and social change. Students lacking the prerequisite may elect course with permission of instructor. Examines the theoretical and empirical literature in some detail. Students cannot receive credit both PSYC 407 and PSYC 507. (YR).  
Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101  

PSYC 412  Psychology of Aging  3 Credit Hours  
This course examines development of the individual from middle adulthood through old age. Special emphasis is given to the understanding of developmental theories and issues in adulthood. Topics include biological basis, socialization, family relationships, personality, and intellectual development in the aging individual. (YR).  
Prerequisite(s): PSYC 171 or PSYC 170 or PSYC 101  

PSYC 415  Lab in Developmental Psych  4 Credit Hours  
An examination of research design and methodology as related to developmental psychology. Special emphasis will be given to training students in data collection techniques used in developmental research and in providing practical experience in designing and conducting research. (YR).  
Prerequisite(s): (PSYC 300 or PSYC 301 or PSYC 303 or PSYC 407 or PSYC 412) and PSYC 381  

PSYC 425  Lab in Social Psychology  4 Credit Hours  
A broad introduction to research methods in basic and applied social psychology. Students will receive training in construction, implementation, and interpretation of scientific procedures used in the study of social psychology. Topics include: questionnaire construction, experimental design, and various multivariate analytic techniques. (YR).  
Prerequisite(s): PSYC 381  

PSYC 426  Applied Social Psychology  3 Credit Hours  
The field of Applied Social Psychology utilizes social psychological theory and research to understand social problems with the goal of improving social conditions. This course will examine social issues from both macro (social institutions and policies) and micro (interpersonal/intergroup behaviors and beliefs) perspectives. We will investigate how social institutions such as social policy, mass media, and education impact individuals, families, communities, and the environment. (YR)  
Prerequisite(s): PSYC 101 or PSYC 170 or PSYC 171  
Restriction(s):  
Can enroll if Level is Undergraduate  

PSYC 427  Media Psychology  3 Credit Hours  
Media Psychology is the branch of psychology that focuses on the psychological processes associated with media, technology use and the impact that these have on individuals and society. This seminar class will provide an in-depth examination of research methods and psychological theories related to persuasion, media effects, media identification and media participation. Research across several content areas including, aggression, prosocial behavior, health and well-being, risky behaviors, relationships, news and politics, as well as media literacy, will also be considered. (YR)  
Prerequisite(s): (PSYC 101 or PSYC 170 or PSYC 171) and (PSYC 320 or SOC 382 or CRJ 382)  

PSYC 428  Self & Identity  3 Credit Hours  
This course provides an in-depth exploration of the vast body of research concerning psychological perspectives on the self and identity. Through reading academic journal articles pertaining to theories and research findings about the self and identity, students will learn about a) the structure and components of self and identity, b) self-knowledge and self-assessment, c) self-damage, d) self-protection and self-enhancement, and e) aspects of the psychologically healthy self. (AY).  
Prerequisite(s): PSYC 101 or PSYC 170 or PSYC 171  
Restriction(s):  
Can enroll if Class is Junior or Senior  
Can enroll if Level is Undergraduate  
Can enroll if College is Engineering and Computer Science or Education, Health, and Human Services or Business or Arts, Sciences, and Letters  

PSYC 4305  Psychology in the Workplace  3 Credit Hours  
The field of Applied Social Psychology utilizes social psychological theory and research to understand social problems with the goal of improving social conditions. This course will examine social issues from both macro (social institutions and policies) and micro (interpersonal/intergroup behaviors and beliefs) perspectives. We will investigate how social institutions such as social policy, mass media, and education impact individuals, families, communities, and the environment. (YR)  
Prerequisite(s): PSYC 381  

PSYC 4305  Psychology in the Workplace  3 Credit Hours  
This course introduces students to some of the core content areas of Industrial/Organizational (I/O) psychology. These content areas include: selection, training, performance appraisal, work teams, job design, motivation, leadership, union-management relations, and stress and health in the workplace. Students cannot receive credit for both PSYC 4305 and PSYC 530. (YR).  
Prerequisite(s): PSYC 171 or PSYC 170 or OB 354 or PSYC 101
PSYC 431  Organizational Entry  3 Credit Hours
An in-depth consideration of the psychological aspects of the organizational process. Topics to be covered include recruitment, selection, orientation, socialization, and training. (OC).
**Prerequisite(s):** PSYC 170 or PSYC 171 or HRM 405 or OB 354 or PSYC 101

**Restriction(s):**
Cannot enroll if Class is Graduate
Can enroll if Level is Undergraduate

PSYC 440  Abnormal Psychology  3 Credit Hours
An introduction to the field of psychopathology, the study of mental disorders. Includes exposure to a number of historical and theoretical perspectives, each with their own theories, methodologies, and treatment approaches. Disorders covered will include: anxiety and mood disorders, personality disorders, schizophrenia, sexual disorders, and psychosomatic disorders. Students cannot receive credit for both PSYC 440 and PSYC 540. (YR).
**Prerequisite(s):** PSYC 171 or PSYC 170 or PSYC 101

PSYC 441  Intro to Clinical Psychology  3 Credit Hours
Introduction to the logic, problems, and limitations of clinical observations and inference. Issues in diagnosis and treatment are examined, with an attempt to understand parallels between clinical interpretation and problems in other disciplines. (YR).
**Prerequisite(s):** PSYC 171 or PSYC 170 or PSYC 101

PSYC 442  Child Psychopathology  3 Credit Hours
A review of the major psychological disorders of children from birth to adolescence. These disorders are considered from a clinical and theoretical point of view. In addition to an examination of causes, approaches to treatment and behavior modification are considered. Students cannot receive credit for both PSYC 442 and PSYC 542. (YR).
**Prerequisite(s):** PSYC 170 or PSYC 171 or PSYC 101

**Restriction(s):**
Cannot enroll if Class is Undergraduate

PSYC 445  Development of Sex Roles  3 Credit Hours

PSYC 4445  Personality Assessment Lab  4 Credit Hours
This is a course in methods of assessing personality. The theory and methods of observation, interviewing, questionnaires, IQ tests, and projective tests are discussed and employed in brief individually-designed studies. In addition to the course prerequisite, students should have at least three upper-level psychology credits and junior or senior standing or permission of the instructor. Students cannot receive credit for both PSYC 4445 and PSYC 544. (S, W).
**Prerequisite(s):** PSYC 170 or PSYC 171 or PSYC 101

**Restriction(s):**
Cannot enroll if Class is Senior

PSYC 446  Human Sexual Behavior  3 Credit Hours
A comprehensive review of facts about human sexuality. The emphasis is on psychological aspects of sex, but there is also a consideration of genetic, physiological, and anatomical aspects of sex, and contemporary issues. Students cannot receive credit for both PSYC 446 and PSYC 546. (YR).
**Prerequisite(s):** PSYC 171 or PSYC 170 or PSYC 101

PSYC 450  Personality Theory  3 Credit Hours
A comparative review and examination of leading theories of personality; their basic concepts, similarities and differences, applications in clinical psychology, in education, in social planning, and in research. Students cannot receive credit for both PSYC 450 and PSYC 550. (YR).
**Prerequisite(s):** PSYC 171 or PSYC 170 or PSYC 101

PSYC 455  Health Psychology  3 Credit Hours
A discussion of the research on health promotion, psychological factors in the development of illness, cognitive representations of health and illness, stress and coping, social support, nutrition and exercise. Focus will be on the factors related to the development and maintenance of optimal health. Students cannot receive credit for both PSYC 455 and PSYC 555. (YR).
**Prerequisite(s):** PSYC 170 or PSYC 171 or PSYC 101

**Restriction(s):**
Cannot enroll if Class is Graduate

PSYC 457  Positive Psychology  3 Credit Hours
This course examines the contemporary movement of positive psychology, which uses the tools of rigorous science to explore the sources and nature of human strengths and psychological well-being. It then seeks to apply this knowledge to help individuals and institutions function more effectively. Topics include the biological basis of positive emotions, resilience and post-traumatic growth, positive relationships, positive education, positive workplaces, and positive development across the lifespan. (YR)
**Prerequisite(s):** PSYC 101

PSYC 461  Learning and Memory  3 Credit Hours
A consideration of major theories and research results related to learning and memory in humans and animals. Students cannot receive credit for both PSYC 461 and PSYC 561. (YR).
**Prerequisite(s):** PSYC 170 or PSYC 171 or PSYC 101

**Restriction(s):**
Can enroll if Level is Undergraduate

PSYC 463  Sensation and Perception  3 Credit Hours
Analysis of basic sensory and perceptual phenomena with a review of relevant behavioral and physiological literature. Students cannot receive credit for both PSYC 463 and PSYC 563. (YR).
**Prerequisite(s):** PSYC 170 or PSYC 171 or PSYC 101

**Restriction(s):**
Cannot enroll if Class is Graduate

PSYC 464  Applied Cognitive Psychology  3 Credit Hours
The focus will be on the application of principles of cognitive psychology (defined broadly to include sensation and perception) to benefit the student in real-life settings. Specific areas might include human factors, retention, recall, attention, reasoning, problem-solving, decision making, reading, comprehension, learning, and language. (YR).
**Prerequisite(s):** PSYC 170 or PSYC 171 or PSYC 101

PSYC 465  Experimental Psychology  4 Credit Hours
Laboratory course in Experimental Psychology, including sensation, perception, learning, memory, language, and problem solving. Students will perform standard experiments, design one or two new modified experiments, collect data, analyze results, and present them in the form of laboratory reports. (YR).
**Prerequisite(s):** (PSYC 170 or PSYC 171 or PSYC 101) and (PSYC 381 or STAT 301)

PSYC 470  Advanced Physiological Psych  3 Credit Hours
Further study of the subject matter of PSYC 370. Advanced study of topics in the area of psychobiology. Students cannot receive credit for both PSYC 470 and PSYC 570. (YR).
**Prerequisite(s):** PSYC 370

**Restriction(s):**
Can enroll if Level is Undergraduate
PSYC 473  Clinical Neuropsychology  3 Credit Hours
This course is an in-depth examination of the field of clinical neuropsychology including a review of brain anatomy and physiology, theories of neural organization, and disorders of the nervous system. In addition, students will learn techniques utilized in neuropsychological assessment. (Prerequisite may be waived for students with Natural Science background.) (YR).
Prerequisite(s): PSYC 370

PSYC 474  Animal Learning and Cognition   3 Credit Hours
Animal Intelligence involves the study of human and non-human animal behavior and cognition in an evolutionary and comparative framework. As an introduction to human and non-human animal cognition and thought processes this course will examine topics such as problem-solving, spatial cognition, categorization, memory, number concepts, tool-use and tool-production, insight, imitation, social cognition, self-recognition and language(-like) behavior. In addition to discussing basic experimental findings about cognition in animals, an emphasis is placed on the logic and evidence used to justify theoretical conclusions. The course requires reading and critiquing original journal articles in addition to textbook chapters for foundational concepts.
Prerequisite(s): PSYC 372 or PSYC 363 or PSYC 461 or BIOL 419 or BIOL 456 or ANTH 336
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

PSYC 479  Psychopharmacology  3 Credit Hours
This course will provide students with an introduction to the use of psychotropic medications for the treatment of various mental health conditions. The course is designed to give students history and current knowledge of pharmacodynamics, therapeutic indication, side effects, and efficacy treatment. The course will also examine the ethical and societal factors that are involved in the use of psychotropic medications. (W, OC)
Prerequisite(s): PSYC 370 or PSYC 412 or PSYC 440

PSYC 480  History of Psychology  3 Credit Hours
An overview of the development of modern psychology from the 17th century to the present, with particular emphasis on the beginning of psychology in America. The philosophical assumptions of various schools of psychology will be examined. (YR).
Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

PSYC 481  Computers in Psychological Res  3 Credit Hours
An introduction to the use of computers in data analysis and psychological research. Students will receive training in computer programming using SPSSPC and other software packages. Topics will include: correlation, regression, analysis of variance, and several multivariate techniques. (YR).
Prerequisite(s): PSYC 381

PSYC 484  Research Methods in Beh Med  3 Credit Hours
This course introduces psychology students to laboratory based research methods typically used in behavioral medicine. The focus is on laboratory methods of cardiovascular and pain research, specifically cardiovascular reactivity, heart rate variability, acute and chronic pain responses. The class also includes several special topics related to health psychology research (e.g., skin conductance, cortisol sampling, etc.). Students are responsible for physical implementation of research protocols, data analysis, and presentation of research findings. (W, YR).
Prerequisite(s): PSYC 455 or PSYC 381
Restriction(s):
Cannot enroll if Major is Psychology, Behavioral and Biological Sci

PSYC 485  Psychology Internship  3 or 6 Credit Hours
The psychology internship offers experience in a wide variety of placements dealing with human services. These include programs related to child abuse, crisis intervention, geriatrics, human resources/staff development, cognitive impairment, criminal probation, teenage runaways, substance abuse, and women’s issues. The program is designed for juniors and seniors with a concentration in psychology or behavioral sciences and involves training in listening and helping skills.
Prerequisite(s): PSYC 171 or PSYC 170 or PSYC 101
Restriction(s):
Can enroll if Class is Junior or Senior

PSYC 488  Primatology Field Course  3 Credit Hours
This Primatology Field course will take students through an exploration of the scientific approach and methodology to the study of animal behavior. Students will gain experience in creating research projects and collecting data on free-ranging animals in a naturalistic environment. Preparation in lectures and activities on the campus of The University of Michigan-Dearborn will include learning about observational methods in detail, practicing developing ethograms and operational definitions, pilot data collection to modify the ethograms at the Detroit or Toledo Zoo, and use of GPS for data collection. Lecture materials will also cover topics of primate behavior and ecology. Students will spend a week observing a primate species (for example, one possible site for this field course may be to observe free-ranging lemurs at a reserve in Florida). Student’s data collection at the field site will be for five continuous days. This field course provides a unique opportunity to study rare and endangered primates species in a safe and accessible environment. Short day trips to other facilities are possible, such as a visit to an ape sanctuary. Topics covered in this field course include advanced observational methods stemming from the field of Ethology, practical development of ethograms (checksheets) and research design, best practices in GPS data collection methods, and collating and summarizing data on animal behavior into a research paper. Lecture topics will address ethological methods and research design and also how to conduct research with free-ranging nonhuman primates. In addition there will be a strong focus on health and safety precautions in the field for human and nonhuman primates, acclimation to the field site, and practicalities of data collection. For graduate credit on this course, extra journal articles and longer written papers required than for the undergraduate requirements.
Restriction(s):
Cannot enroll if Class is Freshman

PSYC 490  Advanced Topics in Psychology  3 Credit Hours
Examination of problems and issues in selected areas of psychology. Title in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

PSYC 492  Individual Research  1 to 3 Credit Hours
No more than 6 hours may be counted for concentration. Arrangements will be made for adequately prepared students to undertake individual research under the direction of a staff member. The students, in electing, should indicate the staff member with whom the work has been arranged. Students cannot receive credit for both PSYC 492 and PSYC 592. (YR).
Restriction(s):
Can enroll if Level is Undergraduate
PSYC 493  Capstone in Psychology  3 Credit Hours
Students completing this capstone course will apply and further develop their skills with research methods, data analysis, critical thinking and writing by completing a research project within the field of psychology. Students will work closely with the faculty member to develop the topic and specific format of the research project. Upon completion of the project, students will reflect upon the skills developed in the program and how they may be useful in the workplace, in graduate or professional school, and in their personal lives. (F, W)
Prerequisite(s): PSYC 381 and (PSYC 415 or PSYC 425 or PSYC 435 or PSYC 4445 or PSYC 465)
Restriction(s):
Can enroll if Class is Junior or Senior

PSYC 497  Seminar in Psychology  3 Credit Hours
Small seminar examination of problems and issues in selected areas of psychology. Title in Schedule of Classes will change according to content. Course may be repeated for credit when specified topics differ. Written permission of instructor required.

PSYC 497A  Seminar in Psychology  3 Credit Hours
Topic: Seminar in Cognitive Science. Cognitive Science is an interdisciplinary science of mind and intelligence encompassing fields such as cognitive psychology, philosophy, linguistics, neuroscience, and artificial intelligence. The present seminar will investigate cognitive science in terms of the human information processing paradigm of the 1950s and contemporary connectionist challenges to this view.

PSYC 498  Psychology Honors Seminar  3 Credit Hours
Preparation for Honors research project. Involves discussion of and writing on: choosing a topic, reviewing the literature, selecting a research method and design, and developing a research proposal. (YR).

PSYC 499  Psychology Honors Research  3 Credit Hours
Participation with two faculty members in work leading to the honors thesis. This work involves active participation in research and will culminate in an independent research report, the honors thesis. Open only to psychology honors candidates. (F,W).
Prerequisite(s): PSYC 498

Religious Studies (RELS)

RELS 120  Philosophy and Religion  3 Credit Hours
An examination of how basic concerns of philosophy impinge on questions of religious beliefs. Using philosophical texts, the course will explore such questions as the following: Does God exist? Does human life have a purpose? How can we know whether religious claims are true?

RELS 201  Religions of the World  3 Credit Hours
A study of religion in essence, in manifestation, and in relationship with the other dimensions of culture. Surveys major world religions.

RELS 313  African American Religious Experience  3 Credit Hours
Full Title: African American Religious Experience This lecture course presents a survey of African American expressions across diverse religious traditions including Christianity, Islam, Judaism, Buddhism, and will explore contested forms of spiritual expression such as secularism and new religious movements. The course tracks these experiences from the late 18th to the 21st century in light of the contemporaneous context of social, political, and economic forces in the United States. No prerequisites. (YR).

RELS 327  Gods, Myth and Worship  3 Credit Hours
Full Course Title: Gods, Myth and Worship in Classical Art- This course examines the way that gods, goddesses, heroes, and myths are depicted in Greek and Roman art, and how they were central to the religious and cultural life of these civilizations. We study the art, architecture, literature, and archaeology of ancient Greece and Rome as we explore how religious priorities, social needs, and political ideologies shaped the artistic choices behind the representations of deities and legendary figures and stories.

RELS 329  Jesus and the Gospels  3 Credit Hours
Full Title: Jesus and the Gospels: Between Fact and Fiction Who was Jesus or Nazareth? For centuries people seeking an answer have turned to the four gospels of the New Testament. But how reliable are these texts? Were they written as biographies, histories, or to fulfill other purposes? This course will address these and other questions associated with the quest for the historical Jesus. Students will be introduced to a variety of approaches involved in the literary/historical study of the gospels and New Testament backgrounds and learn about the methods scholars employ to move from these texts and context. (S)

RELS 331  Early Christian Byzant Art  3 Credit Hours
Borrowing its formal language from late antiquity and its symbolism from other mystery cults, the art of early Christianity emerged from the Roman catacombs to monumental expression under emperors Constantine and Justinian. Special attention will be devoted to the invention of a new symbolic language in art and to the development of church architecture.
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106

RELS 332  The Reformation Era: 1500-1648  3 Credit Hours
A study of the nature, course, and impact of the Protestant Reformation in Europe, Humanism, the Counter-Reformation, and the cultural and social implications of Protestantism also receive attention. (YR).

RELS 333  Intro to Gospel Music  3 Credit Hours
This course explores the history and aesthetics of Black sacred music within cultural context. Major figures (Thomas A. Dorsey, Mahalia Jackson, The Winans Family, Kirk Franklin), periods (slavery, Great Migration, Civil Rights movement), and styles (folk and arranged Negro spirituals, congregational songs, and gospel songs - traditional to contemporary) will be studied through recording, videos, film, and at least one field experience. Underlying the course is the theory (Mellone Burnim and Pearl Williams-Jones) that gospel music is an expression of African American culture that fuses both African and European elements into a unique whole. (OC).

RELS 335  Women in Medieval Art  3 Credit Hours
Women have often been regarded as the second sex of the middle ages due to the misogynistic attitudes of that era. Recent scholarship, however, has unearthed a significantly more complex picture. Through a study of visual representations of women in medieval art, this course will examine women's roles in the creation and patronage of art and literature, economic and family issues, and women's participation in new and innovative forms of religious piety.

RELS 337  Islamic Movemnts Mid East Hist  3 Credit Hours
Will compare several Islamic movements in Middle Eastern history, starting with the rise of Islam in Mecca and Medina. Later impulses toward Islamic revival all looked back to the first movement, and hoped to capture both its spirit and its success. With this as background, the course will move to address two questions; How did later Islamic movements understand the history of the rise of Islam? How have later Islamic movements had to adapt their methods and their ideology to different historical circumstances? (AY).
REL 338  Women & Islam in MidEast to 1900  3 Credit Hours
This course covers the historical development of Islam's normative stance towards women and gender roles in the Middle East from the rise of Islam to the earliest stirrings of feminist activism.

REL 341  Religion and Literature  3 Credit Hours
An investigation of the ways in which religious ideas and practices have informed works of literature, and vice versa. Surveying a variety of genres and themes, the course will focus mainly on British and/or American literature and its engagement with Judeo-Christian religion, though some attention may be devoted to other literary and religious traditions (e.g., ancient and medieval texts, European and world literature, Islam and Eastern religions).
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

REL 346  Bible and Western Tradition  3 Credit Hours
A detailed study of major episodes from the Bible, first as a literary work, and second as it is reflected in both poetry and the visual arts during the Renaissance and Baroque periods. Included are selected works by such masters as John Donne, George Herbert, and John Milton in poetry and Michelangelo, Raphael, and Leonardo da Vinci in painting and sculpture.

REL 349  The Bible In/As Literature  3 Credit Hours
This course will study selected readings from the Bible, first in regard to their own literary, historical, and cultural contents, and then in regard to their reception, interpretation, and reapplication by later literary tradition. Biblical selections may cover both the Old and New Testaments as well as Apocryphal traditions, while readings from later non-biblical texts will be drawn from various literary periods.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

REL 355  Religion and Politics  3 Credit Hours
The primary focus of the course is on political movements or systems that take a religious form or have a religious base or use a religiously-rooted ideology. Possible themes or cases covered include the Catholic Church as a political system, Evangelical politics in America, religious uprisings, and Islamic political movements. (AY)

REL 360  Myth, Magic, and Mind  3 Credit Hours
A broadly based introduction to the range of human mythical and magical traditions. Sophomore standing; ANTH 101 highly recommended. (YR)

REL 363  Rel in Amer Hist:1607-1865  3 Credit Hours
A survey of the religious movements and trends in America from the 17th century to the Civil War, with emphasis on Puritanism, 18th-century revivalism, and 19th-century denominationalism and social reform. (AY)

REL 364  History of Islam in the US  3 Credit Hours
This course traces the long history of Islam and of Muslims in the United States (1730s-present), paying careful attention to the interaction among Muslims across the dividing lines of race, gender, immigrant generations, sect, political orientation, and class, and between Muslims and other Americans.
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

REL 365  Introduction to the Qur'an  3 Credit Hours
This course is an introduction to the Qur'an. This class will cover the historical and the cultural factors in which the Qur'an appeared. The class will also examine some of the major themes covered in the Qur'an such as gender, science, pluralism, worldview and so forth. Also, will cover major schools of interpretations and methodologies ranging from the literary to the scientific. The class will be conducted in English and knowledge of Arabic is desired but not required. No prerequisites. The class will consist of lectures, discussions, and movies.

REL 367  Religion and Resistance  3 Credit Hours
This course examines how religion and spirituality as cultural form has been instrumental in influencing social, political, and economic thought and the action of violent and nonviolent resistance. In such, African Americans have affirmed their humanity, their citizenship, and have exerted mechanisms of protest and change that have in-kind influenced similar thought and activity around the globe. When contemporary students are aware of this history at all, it is often without the knowledge or understanding of the various forms of resistance and the range of reason and spirituality behind this activity. The course will present key figures from within this range (AY).

REL 373  Bible in History  3 Credit Hours
In this course we will try to examine the historical circumstances and contexts surrounding the writing of The Hebrew Bible. Roughly speaking, we will begin by exploring three aspects of the subject: Historical context of the writing of the Bible-i.e. during the organizing and communicating of each segment. History of the canonization: the ideas and rationale behind including some books but not others. History in the Bible. In more specific terms, this will entail examining who wrote the Bible, when and why. The narrative incorporates the movement from an oral tradition to a written one and will demand some focus on certain pivotal moments, e.g., Ezra's reading (cf. Ezra-Nehemiah), or the historical events in Kings and Chronicles, or the defeat of the northern kingdom of Israel in 722 B.C.E. (BC) and of the southern kingdom of Judah in 589 B.C.E.

REL 384  Islamic Decorative Arts  3 Credit Hours
This course in an in-depth investigation of the decorative arts of the Islamic Middle East from the seventh through the eighteenth century including the lands of Islamic Spain and North Africa and extending east to Afghanistan. The course traces the development of decorative styles in objects of daily and courtly life, particularly ceramics, metal work, glass, wood and ivory carving, textiles and rugs. The central role played by calligraphy in all of the arts in emphasized as well as in manuscript production and the Arts of the Book. As a religion, but also a way of life, Islam fostered a distinctive artistic production reflected in these decorative arts.
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106 or HUM 201 or RELS 201
RELS 385  Philosophy of Religion  3 Credit Hours
A philosophical examination of basic religious problems, such as the nature and grounds of religious belief, the existence and nature of God, human immortality, the relations of religion and science, and the nature or religious language. Students electing this course must have successfully completed a previous course in philosophy or have permission of the instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 365 or PHIL 340 or PHIL 355 or PHIL 350 or PHIL 369 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490 or RELS 120

RELS 390  Topics in Religious Studies  3 Credit Hours
Examination of problems and issues in selected areas of religious studies. Title in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. Junior standing required.
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore
Can enroll if Level is Undergraduate

RELS 393  Black Women, Rel & Spirituality  3 Credit Hours
This lecture course surveys descriptive and critical literature relevant to the religious and spiritual experience and thought of African diasporic women. Studying religiosity and spirituality among this population helps students understand this influential, culturally-constructed world view of Black women as they engage in a variety of institutions including healthcare, economic activity, the criminal justice system, politics, and social relationships. The course gives particular attention to Black feminist and Womanist literature on these topics. (F).
Restriction(s):
Cannot enroll if Class is Freshman

RELS 401  Religion in Contemp US Culture  3 Credit Hours
The purpose of this course is to provide people in contemporary multi-religious America foundational information about beliefs and practices of several of the world’s religions sufficient to engage in inter-religious dialogue. Special emphasis will be given to changes the American religious landscape after 1965 with the passage of new immigration laws. The course will combine lectures and visits to a variety of Metropolitan Detroit religious centers including Hindu, Buddhist, Jain, Sikh, Jewish, Christian, Muslim, and Native American. (S).

RELS 404  Medieval Mystical Writers  3 Credit Hours
A study of the genre of mystical writing as it was developed and practiced throughout the Middle Ages and in 14th century England particularly. Attention will be given to the historical, religious, and cultural contexts that enabled and were created by mystical texts. In addition, the course will explore how traditional and contemporary trends in the fields of religious and literary studies can be brought to bear on the genre of mystical writing. (OC)
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

RELS 440  Religion and Culture  3 Credit Hours
What is religion and how does it shape us? This course begins to answer these questions by exploring religious diversity around the world through the lens of a variety of topics in the anthropology of religion. These include sacred symbols, ritual and rites of passage, prayer, shamanism, witchcraft, and spirit possession. We examine changing approaches to the study of religion and address the myriad ways religion intersects with other aspects of social life including kinship, food, and politics. Students end the course by conducting their own ethnographic research of a religious event, ritual specialist, or sacred place. (AY). (YR).
Prerequisite(s): ANTH 101 or ANTH 202 or ANTH 303 or HUM 303 or PSYC 303 or SOC 303 or WGST 303 or SOC 200

RELS 455  Sociology of Religion  3 Credit Hours
Religion as a social institution; its purposes, methods, structure, and beliefs, and its relation to other institutions.
Prerequisite(s): SOC 200 or SOC 201

RELS 498  Independent Study  3 Credit Hours
This course provides an opportunity for qualified students interested in Religious Studies to pursue independent research under the direction of a qualified faculty member. The project must be defined in advance, in writing, and must be a topic not currently offered in the regular curriculum.
Prerequisite(s): HUM 201 or PHIL 120
Restriction(s):
Can enroll if Class is Junior or Senior

Science and Technology Studies (STS)

STS 300  Intro to Sci & Technol Studies  3 Credit Hours
An examination of the social contexts and consequences of science and technology, with special attention to the impacts of the automobile and automobile industry on American society. Topics include the automobile's role in the history of manufacturing; the impact of various production techniques on work and workers; the effects of the automobile on the natural environment, the design of cities and development of suburbs, and ways of life; the iconic status of the car in American culture and the relationship between automobile design and aesthetics. (YR).

STS 301  Concepts of Environmentalism  3 Credit Hours
Designed to identify the underlying concepts of any environmental issue. The course will demonstrate the interdisciplinary nature of environmental problem-solving through current readings, classical monographs, and films. Students will conduct a systems analysis of a household and a local community. A major research paper on an environmental topic will be required. The course will not be open to students who take ENST 105. (YR).

STS 305  Social Issues in Auto Design  3 Credit Hours
An examination of the impact of four contemporary social issues - vehicle safety, energy consumption, environmental impact, and a changing workforce - on the design and engineering of automobiles in the context of globalization and rapid technological change. Using a series of case studies, the course will focus on the ways social concerns, government regulation, and professional ethics, as well as industry standards and technical considerations, affect the decision-making processes of automobile designers and engineers. (OC).
Prerequisite(s): COMP 105 or COMP 110 or Composition Placement Score with a score of 30 or Composition Placement Score with a score of 107
STS 308 Urban Geography 3 Credit Hours
The geography of human settlement and urbanization. Particular emphasis is placed on human transformation of the physical environment, and resource use throughout history from ancient civilizations to modern megalopolises. Universal urban challenges, such as sprawl, pollution, congestion, crime, poverty, etc., are addressed. (F.W).

STS 309 Economic Geography 3 Credit Hours
Spatial aspects of the ways people make their living. Discussion of the spatial distribution of resources and wealth at various scales. Introduction of site selection and location analysis. (F).

STS 310 Digital Media and Society 3 Credit Hours
Online platforms like Twitter, Facebook, and Snapchat have impacted social interaction so rapidly and dramatically that this period in history has been called a digital revolution. This class explores the digital revolution from a sociological perspective. We examine the effects of new and rapidly evolving means of communication on the self, groups, and society. Applying sociological theory, the class explores topics such as digital identity, cyber crime, and virtual social movements. Questions addressed include: How does communicating on social media impact ourselves and our relationships? Are social media exclusionary or democratic? And How do social movements function on social media? In addition to critically evaluating digital media, students will gain basic practical skills: understanding the virtual landscape, learning “best practices,” and exploring how to use digital technologies in more critical and more powerful ways. (W, YR).

Prerequisite(s): SOC 200

STS 312 Environmental Ethics 3 Credit Hours
The relationship of human beings to the non-human environment raises pressing moral and political issues. This course will use the theories and concepts of philosophical ethics to explore such questions as human obligations to non-human animals; the preservation of wilderness; balancing economic, aesthetic, and spiritual values; and the problems of pollution, urban sprawl, and ecological justice. Prerequisite or permission of instructor. (YR).

Prerequisite(s): PHIL 100 or PHIL 233 or PHIL 240* or CRJ 240 or ENST 105 or ENST 301

STS 321 Labor in the American Economy 3 Credit Hours
An analysis of the nature and underlying causes of the problems facing the worker in modern economic society. Includes an examination of wages, unemployment, economic insecurity, the trade union movement, collective bargaining, and labor legislation. (F).

Prerequisite(s): ECON 201 and ECON 202

STS 325 Environmental Politics 3 Credit Hours
An examination of policy making about problems affecting the environment, at a global, national, and local scale.

STS 326 Gender, Science & Engineering 3 Credit Hours
Explores some of the history of women in science and engineering, the current status of women in science and engineering, and feminist theory in research. Topics include cultural influences on women in science and engineering, careers and life balance, and a feminist approach to scientific and engineering teaching and research.

STS 340 Beyond Race: Understanding Human Variation 3 Credit Hours
This course examines the concept of race from a biocultural perspective. It focuses on several intertwined themes, including: (1) the nature of human biological variation, (2) how human populations have adapted to diverse environments across the world, (3) how Western scientific thought and colonization influenced ideas about race, and (4) how the concept of race has varied both cross-culturally and over time. Students will be asked to critically evaluate current and historical concepts of race and human variation, and to apply this understanding to contemporary issues. Prerequisite ANTH 101 recommended. (YR).

Prerequisite(s):
Can enroll if Class is Sophomore or Junior or Senior

STS 345 Cultural Ecology & Evolution 3 Credit Hours
An introduction to the study of human ecology. This course employs the case-study method to develop an evolutionary and biocultural perspective on the relationship between human beings and their environments. (OC).

STS 349 Thomas Edison and His Era 3 Credit Hours
This course will introduce students to the life and work of Thomas Edison. Breaking with the stereotype of the lone inventor/genius, we will examine how Edison helped shape and was in turn shaped by the context of the Gilded Age America when the United States emerged as an urban, industrial nation. Lectures and discussions will be supplemented by slides, films, and visits to the Edison-related sites at the Henry Ford. . Throughout the course the following themes will be explored: invention and the labor process, the significance of manufacturing and marketing, the origins of modern consumer culture. (OC).

STS 360 Philosophy of Technology 3 Credit Hours
A study of both the history of, and current issues in, the philosophy of technology. This course will examine the deeper meaning and implications of our modern technological society. Questions examined include: What is the definition and nature of technology? How did the concept originate in Western thought? What is the relationship between modern industrial technology and the ‘mechanistic’ worldview? How do Western religious beliefs influence our attitudes about technology? Is technological progress socially determined, or is it culturally independent? In what ways has our technological society been supportive of, or detrimental to, overall human well-being? Students will cover both classic and contemporary readings.

STS 365 Environmental Psychology 3 Credit Hours
A survey of the contributions of the behavioral sciences to the understanding and solution of environmental problems that threaten our survival. Insights derived from psychology, anthropology, and computer science are discussed. Major topics include overpopulation, overconsumption of resources and energy, future shock, cognitive limitations in our understanding of ecological-political systems, and the use of behavioral control. (OC).

Prerequisite(s): PSYC 170 or PSYC 171

STS 366 Henry Ford and His Place 3 Credit Hours
Using the biography of Henry Ford as a touchstone, the course will examine the trajectories of historical change and regional development between 1870 and 1950. Of fundamental concern will be southeastern Michigan’s transformation from a 19th century outpost on the Great Lakes to the nation’s “engine of change” in the 20th century. Henry Ford was the major player in that revolutionary transformation. This course examines his role in history and mythology as well as the causes and implications of that transformation. (OC).
Prerequisite(s): the 21st Century. (AY).

future of the mass audience, and the meaning of the First Amendment in areas to be explored include the Internet and World Wide Web, privacy, the ability to move ideas and information in a democratic society. Examples of technological issues associated with the use of new media technology include the implications of copyright law, privacy, and the role of technology in the making of modern society. (OC).

Prerequisite(s): designation.

course in Economics and also counts toward the Economics Honors prerequisite. This course counts as a required capstone (4000-level) course, requires a field trip and online interaction in addition to on-campus lectures and seminars. (OC).

course, requires a field trip and online interaction in addition to on-campus lectures and seminars. (OC).

This course will examine the history of technology from a comparative perspective; studying the development and impact of technology in different societies during various historical eras. Topics include: irrigation control and the rise of ancient empires; technology’s role in the industrial revolution; technological innovation and the pace of social change. Current issues and various analytical perspectives in the history of technology will also be examined. (OC).

Examination of problems and issues in selected areas of Science and Technology Studies. Title as listed in the Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

A comprehensive examination of how culture mediates processes of illnesses and healing. Comparative materials examined, which provide a context for an anthropological analysis of modern biomedicine. (YR).

Can enroll if Class is is Sophomore or Junior or Senior

The study of work roles in modern society. The impact of industrialization, professionalization, and unionization on the conditions of work, worker motivation, and job satisfaction. Career choice processes and career patterns, occupational status and prestige, and occupations associations are among the topics to be considered. (YR).

Cannot enroll if Class is

Can enroll if Class is

Can enroll if Class is Junior or Senior

Theoretical analysis and empirical studies of the nature and operation of labor markets. Includes theories of wage determination and income distribution, the nature of unemployment, the impact of collective bargaining on the economy, the extent and economic effects of discrimination, and the nature and effects of government wage and employment policies. ECON 321/STS 321, Labor in the American Economy, is valuable background to this course although it is not a prerequisite. This course counts as a required capstone (4000-level) course in Economics and also counts toward the Economics Honors designation.

Prerequisite(s): ECON 302

This course will explore some of the social, political, legal, and technological issues associated with the use of new media technology to move ideas and information in a democratic society. Examples of areas to be explored include the Internet and World Wide Web, privacy, the future of the mass audience, and the meaning of the First Amendment in the 21st Century. (AY).

Prerequisite(s): COMM 280

This course provides and advanced undergraduate introduction to the topic of human growth and shows how human growth can be a reliable measure of the psychological, social, economic and moral conditions of a society. A major theme will be the interplay of biology and culture in shaping the patterns of human growth and, consequently, the health of populations and individuals. (OC).

Darwinism represents a challenge to the traditional view of human life as radically separate from the rest of the natural world. This course will examine the philosophical implications of this world view. It will address questions such as these: Is Darwinism compatible with traditional religion? Does Darwinism imply that human life and the cosmos are without purpose? Can human life be meaningful if it is the result of evolution and natural selection? Does Darwinism require us to change our view of nature? What are the ethical implications of a Darwinian view of life and the universe?

Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490

Restriction(s):

Can enroll if Class is

A comprehensive examination of how culture mediates processes of illnesses and healing. Comparative materials examined, which provide a context for an anthropological analysis of modern biomedicine. (YR).

Restriction(s):

Can enroll if Class is

The focus will be on the application of principles of cognitive psychology (defined broadly to include sensation and perception) to benefit the student in real-life settings. Specific areas might include human factors, retention, recall, attention, reasoning, problem-solving, decision making, reading, comprehension, learning, and language. (YR).

Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

A critical study of the foundations of the sciences, natural and social, with emphasis on the following topics: the nature of scientific method, theories and explanation, probability and determinism, the unity of the sciences. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.

Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490
STS 488  Env Lit & Reps of Nature      3 Credit Hours
An interdisciplinary study of the ways in which the relationship between “nature” and humankind has been represented in literature and other forms of cultural expression. Emphasis on American and British texts of the 19th centuries, but assigned materials may include readings from other cultures and historical periods.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 200 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 205 or ENGL 206 or ENGL 238)

Social Sciences (SSCI)

SSCI 236  Sid-Comm Org for Environ Just      3 Credit Hours
Full Title: Sem in Detroit: Community Organizing for Environmental Justice. This course serves as an elective course for the Semester in Detroit (SiD) program. This course looks at movements, resistance, resilience, and liberation as it pertains to environmental justice. A growing body of evidence reveals that people of color and low-income persons have borne greater environmental and health risks than the society at large in their neighborhood, workplace, and playgrounds. We will connect history, current events, and real-life experiences to local organizing and movement struggles that build power for our communities. We will utilize highly interactive popular education methods where participants share political analysis, learn facilitation and organizing skills, and think together about long-term, transformative strategies to build environmental, racial, and economic justice.

SSCI 302  SiD-Intern Seminar     2 Credit Hours
Full Title: Semester in Detroit: Internship Reflection Seminar This course serves as a core course for the Semester in Detroit (SiD) program. The primary purpose of this class is to provide a supportive, yet challenging learning space for reflecting on your Detroit internship experiences this semester. There are three main sources of material for this class: you, the internship, and Detroit. While, in theory, each is distinct, in practice, all three are interwined and interact and affect one another. Your challenge will be learning to see more clearly the interactions among these domains. Students must apply to, and be accepted by UM-Ann Arbor’s Semester in Detroit program to enroll in this course.
Corequisite(s): URS 301

SSCI 390  Topics in Social Sciences     1 to 3 Credit Hours
Examination of problems and issues in selected areas of social science. Title as listed in the Schedule of Classes will change according to content. Course may be repeated for credit when the specific topic differs. (OC)
Restriction(s):
Can enroll if Level is Undergraduate

Sociology (SOC)

SOC 200  Understanding Society      3 Credit Hours
An introduction to the study of human groups with special attention devoted to an analysis of contemporary American society. (F,W).

SOC 215  Research Skills BSci     1 Credit Hour
Full Title: Research Skills for the Behavioral Sciences This course teaches foundational research and critical-thinking skills necessary for the success of students in the Behavioral Sciences (including Anthropology, Psychology, and Sociology) in conducting university-level research projects, papers, and other research assignments. Students will learn important research skills like distinguishing between scholarly and non-scholarly sources of information, using library search tools to find peer-reviewed and scholarly sources, evaluating and analyzing information sources and using them to build informed opinions and arguments, integrating and synthesizing sources, and using sources ethically. Students will learn these skills through lectures, practice and by applying them through a series of assignments. (F, W, S)
Restriction(s):
Can enroll if Level is Undergraduate
Can enroll if College is Arts, Sciences, and Letters

SOC 302  Social Change     3 Credit Hours
This course explores ways that social science theory and research may support people as they struggle for better lives and for a more just society. Students apply a sociological lens to critical issues such as racial and gender inequality, Islamophobia, climate change, mental health and disability rights, and the growing wealth gap. There are also opportunities to investigate areas of social struggle and social change not included on the syllabus. (W, YR).

SOC 303  Intro to Women's & Gender Stud     3 Credit Hours
This course provides an interdisciplinary overview of the key theories and topics in Women's and Gender Studies. Special attention is given to how gender intersects with class, race, nationality, religion and sexuality to structure women's and men's lives. Students are also introduced to methods of gender analysis and will begin to apply these methods to topics such as women and health, gender roles in the family, violence against women, and gendered images in the mass media.
Restriction(s):
Cannot enroll if Class is Freshman

SOC 304  Studies in Det.Hist. & Culture     3 Credit Hours
This interdisciplinary course explores the political, social, and cultural history of Detroit by examining ways various groups and classes have interacted with and been shaped by structures of power and influence. The course highlights trade and commerce, newcomers, and the influence of organizations and institutions within the contexts of labor, race, ethnic, and religious histories and current affairs, and examines how these fit into the evolution of Detroit from the 19th century to the present. Where pertinent the influence of national and international movements included.

|             | This course will confront and complicate the following key questions: what does it mean to be an American? What is American culture? Participants in this course will respond to the questions central to the American Studies field by reading and discussing historical, sociological, literary, artistic, material culture, political, economic, and other sources. Students will use this interdisciplinary study to examine the multiple identities of Americans - as determined by factors such as gender, race, class, ethnicity, and religion. While emphasizing the diversity of American culture, participants will consider some core values and ideas uniting America both in historical and contemporary society. Students will be invited to seek out and share fresh narratives of the American experience.  
Prerequisite(s): COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 270 or COMP 280  
Restriction(s): Can enroll if Level is Undergraduate | 3            |
| SOC 308     | Sociological Theory                                   | 3            |
|             | A historical survey of major classical social theorists and schools of thought including sociopolitical positivism, conflict theory and symbolic interactionism as well as contemporary theories related to race, gender, media, sexuality and social change. (F, YR).  
Prerequisite(s): SOC 200 or SOC 201 | 3            |
| SOC 309     | Introduction to Law & Society                         | 3            |
|             | Law and Society is a field of study that examines the interaction between the legal system and society from the perspective of the social sciences and humanities. This course focuses on core components of the legal system including courts, lawmaking bodies, regulatory administration, alternative dispute resolution systems, and the legal profession. Throughout the course, students develop the ability to examine the legal system and its relationship to equality, social change, and public benefits using social science evidence. (YR)  
Restriction(s): Cannot enroll if Class is Freshman | 3            |
| SOC 310     | Digital Media and Society                             | 3            |
|             | Online platforms like Twitter, Facebook, and Snapchat have impacted social interaction so rapidly and dramatically that this period in history has been called a digital revolution. This class explores the digital revolution from a sociological perspective. We examine the effects of new and rapidly evolving means of communication on the self, groups, and society. Applying sociological theory, the class explores topics such as digital identity, cyber crime, and virtual social movements. Questions addressed include: How does communicating on social media impact ourselves and our relationships? Are social media exclusionary or democratic? And How do social movements function on social media? In addition to critically evaluating digital media, students will gain basic practical skills: understanding the virtual landscape, learning “best practices,” and exploring how to use digital technologies in more critical and more powerful ways. (W, YR).  
Prerequisite(s): SOC 200 | 3            |
| SOC 350     | Poverty and Inequality                                | 3            |
|             | In a middle class-oriented culture, the poor experience many problems and are also considered deviant which tend to make poverty self-perpetuating. This stratum will be explored with respect to life styles, life changes, contributing factors, characteristics, individual and social consequences, and evaluation of attempted solutions. (YR).  
Prerequisite(s): SOC 200 or SOC 201 | 3            |
| SOC 352     | Social Life in Science Fiction                       | 3            |
|             | This course focuses on the sociological analysis of social life depicted in contemporary and popular science fiction texts and films. The course examine the impact and consequences of different modes of social reproduction and family relations, social structure and organization, social inequality and stratification, social relations and conflicts, social mores, values and scenarios of dystopia. Through studying science fiction, students gain insight in our present's society's hopes, dreams, anxieties, and fears about future social relations, the environment and humanity. (W)  
Prerequisite(s): SOC 200 or SOC 201 | 3            |
| SOC 366     | Sexualities, Genders, & Bodies                        | 3            |
|             | This course introduces key questions and debates in lesbian, gay, bisexual, transgender, and queer studies. Through engagement with multidisciplinary sources, students explore how sexualities, genders, and bodies are constructed and contested, how these constructions vary in diverse contexts and historical moments, and what gaps remain in our knowledge of LGBTQ lives. (YR)  
Prerequisite(s): PSYC 101 or PSYC 170 or PSYC 171 | 3            |
| SOC 362     | Social Life in Science Fiction                       | 3            |
|             | This course provides a comprehensive overview of the field of social psychology focusing on a review of the field's founding principles and classic studies, as well as a focus on recent research. Topics include social cognition; interpersonal behavior (e.g., attraction, aggression, and altruism); attitudes; prejudice and discrimination; social influence; group processes (e.g., intergroup relations; conflict resolution); and social issues (e.g., income inequality). (YR)  
Prerequisite(s): PSYC 101 or PSYC 170 or PSYC 171 | 3            |
| SOC 388     | LGBTQ Religious Experience                           | 3            |
|             | This course explores intersections of religion, spirituality, and faith with sexuality and gender. Christianity and Islam receive particular attention. We also examine Lesbian, Gay, Bisexual, Transgender and Queer (LGBTQ) journeys within Buddhism, Hinduism, Judaism, new spiritual movements, and interfaith work. The course highlights intersections at three levels of analysis: the individual or personal level (how do LGBTQ identities intersect and interact with religious freedom and practice?), the interactional or community level (how do LGBTQ people experience belonging and rejection in diverse faith communities?) and the institutional level (how do the structures of these belief systems shape the life chances of LGBTQ people in society?). (W,S,AY) | 3            |
| SOC 390     | Topics in Sociology                                  | 3            |
|             | Examination of problems and issues in selected areas of sociology. Title in Schedule of Classes will change according to course content. Course may be repeated for credit when specific topics differ. (F,W).  
Prerequisite(s): SOC 200 or SOC 201 | 3            |
| SOC 398     | Directed Readings                                     | 1 to 3       |
|             | Reading assignments in sociology. No more than a total of six credit hours of SOC 398 and SOC 498 may be applied toward concentration. Permission of instructor required. (F,W,S).  
Prerequisite(s): SOC 200 or SOC 201 | 1 to 3       |
| SOC 403     | Race and Ethnicity                                    | 3            |
|             | The status of racial and ethnic minorities in the United States with particular reference to the social dynamics involved with regard to majority-minority relations. Topics of study include inequality, segregation, pluralism, the nature and causes of prejudice and discrimination and the impact that such patterns have upon American life. Students cannot receive credit for both SOC 403 and SOC 503. (F,W).  
Prerequisite(s): SOC 200 or SOC 201 | 3            |
SOC 4045  Dissed: Differ, Power, Discrim  3 Credit Hours
Have you ever been dissed? Why are some people targets of disrespect?
This class examines the unequal distribution of power - social, economic, and political - in the United States and other countries that results in favor for privileged groups. We will examine a variety of institutional practices and individual beliefs that contribute to disrespect. We'll look at ways that beliefs and practices, like viewing inequality as consequence of a 'natural order', obscure the processes that create and sustain social discrimination. We will engage in the intellectual examination of systems, behaviors, and ideologies that maintain discrimination and the unequal distribution of power and resources. Students will not receive credit for both SOC 404 and SOC 504.
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if Level is Undergraduate

SOC 409  Feminist Theories  3 Credit Hours
This course examines the different perspectives that feminist theorists have offered to analyze the unequal conditions of gendered lives. Students taking this course will develop an understanding of how theory functions as a way to know, understand and change the world. They will also be provided with a lens for comparing the assumptions and implications of alternative theoretical perspectives. A particular emphasis of this course is on theorizing the interrelationships among gender, race, class, sexuality and nationality. Course material includes applications of feminist theory to issues such as gender identity formation; sexuality; gender, law and citizenship; women and work; and the history and politics of social movements. Students will not receive credit for both WGST 409 and WGST 509. (AY).
Prerequisite(s): WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303

SOC 410  Quantitative Research and Statistics  4 Credit Hours
Full Course Title: Quantitative Research and Statistics An introduction to methods of data collection and analysis. Elementary statistical data are analyzed using computerized statistics programs. A discussion of research design and the philosophy of social science applied to answering health and human service questions.
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

SOC 411  Program Evaluation  3 Credit Hours
The application of social research procedures in assessing whether a human service program is needed, likely to be used, conducted as planned, and actually helps people in need. The course will cover research design and measurement as well as issues of how to get research findings utilized. Students cannot receive credit for both SOC 411 and SOC 511. (YR).
Prerequisite(s): SOC 200 or PSYC 170 or PSYC 171 or POL 101 or SOC 201 or PSYC 101
Restriction(s):
Can enroll if Level is Undergraduate

SOC 412  Men and Masculinities  3 Credit Hours
This course addresses the question, "What is a man?", in various historical, cross-cultural, and contemporary contexts. A major focus on the social and cultural factors that underlie and shape conceptions of manhood and masculinity in America as well as in a variety of societies around the globe. Prerequisite ANTH 101 recommended. (AY). (AY).
Restriction(s):
Cannot enroll if Class is Sophomore or Junior or Senior

SOC 413  Qualitative Research  3 Credit Hours
Qualitative research methods involve the observation and study of people in their everyday lives, in their taken-for-granted worlds. Qualitative research seeks to combine close empirical observation with analytic techniques that demand (and teach) personal and social self-consciousness as necessary to an understanding of the social worlds of others. This course in qualitative methods is designed to acquaint students with field research theories and techniques. Students will gain hands on experience in participant observation, interviewing and the use of sociological scholarship. Qualitative Research Methods will prepare students to gather data, focus the data in a social scientific manner, analyze the data, and then organize it in reportable form.
Prerequisite(s): SOC 200

SOC 414  Sexuality, Gender and the Law  3 Credit Hours
This course will incorporate social scientific, feminist and queer theory, and legal perspectives to emphasize the dynamic relationship among sexuality, gender, and law. In this course, we will focus on the history of gender and law in the United States while we simultaneously focus on the changing current landscape of law and society, including laws pertaining to equal employment opportunity, violence against women, sexual orientation, and gender identity. As a result, we will assess the factors that govern the relationship between gender & sexuality and the law over time and in current events. (F).
Prerequisite(s): SOC 200 or WGST 303 or HUM 303 or SOC 303 or PSYC 303 or ANTH 303

SOC 423  American Social Classes  3 Credit Hours
Stratification of American communities and society; a review of the findings of major studies and an introduction to methodology. Students cannot receive credit for both SOC 423 and SOC 523. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

SOC 426  Society and Aging  3 Credit Hours
Personal, interpersonal, and institutional significance of aging and age categories. Sociological dimension of aging based on social, psychological, and demographic factors. Attention to social networks and institutionalization. Students cannot receive credit for both SOC 426 and SOC 526. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

SOC 430  Population Problems  3 Credit Hours
Social causes and consequences of population structure and change. How variations in fertility, mortality, and migration arise and how they affect society. Illustrations from the United States and a variety of developed and underdeveloped countries. (YR).
Prerequisite(s): SOC 200 or SOC 201

SOC 433  Race/Ethnic Health  3 Credit Hours
Full Course Title: Race, Ethnicity and Community Health This course provides a broad overview of health disparities in the United States, with a focus on the three types of social inequality-race ethnicity (and nativity status), socioeconomic status (SES), and gender. Epidemiological issues, health behaviors, health care services, and health and social issues specific to various minority populations in the U.S. are covered. The underlying position of the course is that understanding groups that are at higher risk of developing poor health outcomes is crucial to developing better health care and health policy interventions. (OC)
SOC 435  Urban Sociology  3 Credit Hours
A descriptive study of the form and development of the urban community with respect to demographic structure, spatial and temporal patterns, and functional organization. The relationship of city and hinterland. Social planning and its problems in the urban community. Students cannot receive credit for both SOC 435 and SOC 535. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate
SOC 440  Medical Sociology  3 Credit Hours
An analysis of health and illness behavior from the point of view of the consumer, as well as of medical professionals, the structure, strengths, and weaknesses of the medical care delivery system in the U.S.; the impact of culture and personality on illness behavior; and a study of the institution of medicine and activities of health care professionals. Students cannot receive credit for both SOC 440 and SOC 540. (F,W,S)
Prerequisite(s): SOC 200 or SOC 201
SOC 442  Sociology of Work  3 Credit Hours
Study of work roles in modern society. The impact of industrialization, professionalization, and unionization on the conditions of work, worker motivation, and job satisfaction. Career choice processes and career patterns, occupational status and prestige, and occupational associations are among the topics considered. Students cannot receive credit for both SOC 442 and SOC 542. (F,W,S)
Prerequisite(s): SOC 200 or SOC 201
SOC 443  Gender Roles  3 Credit Hours
This course will investigate the development of gender roles in childhood and adolescence due to either innate physiological differences or sociological patterning, the effect of gender roles upon male-female relationships within our society, and the possibility of transcending sociological gender roles in alternate modes of living. Students cannot receive credit for both SOC 443 and SOC 543. (F,W,S)
Prerequisite(s): SOC 200 or PSYC 170 or PSYC 171 or SOC 201 or PSYC 101
SOC 445  The Family  3 Credit Hours
The family as an institution shaped by other aspects of society, as a social system with its own dynamics, and as a primary group affecting the lives of its members. Historical and contemporary materials from the United States and other cultures. Students cannot receive credit for both SOC 445 and SOC 545. (F,W,S)
Prerequisite(s): SOC 200 or SOC 201
SOC 446  Marriage and Family Problems  3 Credit Hours
Sociological analysis of problems encountered within the institution of marriage with particular reference to such issues as choosing a marriage partner, sexual adjustment, occupational involvement, conflict resolution, child rearing, divorce and readjustment. Students cannot receive credit for both SOC 446 and SOC 546. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate
SOC 447  Family Violence  3 Credit Hours
Sociological analyses of various forms of family violence which occur disproportionately in the lives of girls and women. Topics such as incest, sexual abuse, date rape, wife battering, and elder abuse will be situated within the social and cultural context of contemporary gender relationships. Social and political responses to the phenomena will be examined. Students cannot receive credit for both SOC 447 and SOC 547. (YR)
Prerequisite(s): SOC 200 or SOC 301 or SOC 443 or PSYC 405 or WST 405 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate
SOC 448  Comparative Health Care System  3 Credit Hours
An introduction and overview of the English, Swedish and People’s Republic of China health care systems. Focus on cultural context and other organizational characteristics, unique features, approaches and ability to solve problems. Emphasis on how the three systems help us understand the American health care system. Students cannot receive credit for both SOC 448 and SOC 548. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate
SOC 449  Black Family in Contemp Amer  3 Credit Hours
The African-American family is examined in relationship to the historical and contemporary forces that have shaped its characteristic patterns of family life. These forces include the influence of slavery, urbanization, racial discrimination and urban poverty. The patterns of family life include parental roles, family structure, kinship relations, and gender roles. (YR)
Prerequisite(s): SOC 200 or SOC 201
SOC 450  Political Sociology  3 Credit Hours
Examines how society effects the distribution and exercise of power through analyzing linkages between power, participation, and perspectives. Studies of political participation and social organization, ideology and social conflict, as well as political socialization, represent some of the major parameters. Students cannot receive credit for both SOC 450 and SOC 550. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate
SOC 451  Family, Sexuality, Rights  3 Credit Hours
Full Course Title: Family, Sexuality, and Human Rights in a Changing World. This course investigates the changing possibilities for forming families and expressing sexuality, with a focus on how nation states and local and cultural systems construct and respond to these changes. Selected topics include the meanings of sex, love, marriage, and relatedness in different historical moments; struggles for recognition of varied kinship and family arrangements, such as interracial, interfaith, same-sex, polygamous and multi-partner relationships; and new technologies and their implications for family life. (YR)
Prerequisite(s): (WGST 303 or SOC 303 or ANTH 303 or PSYC 303 or HUM 303) or (SOC 200 or SOC 201) or (ANTH 101 or ANTH 202)
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
SOC 452  Marxism  3 Credit Hours
This survey of Marxist and neo-Marxist thought discusses philosophy, economic history, and socialism. Topics include Marx’s view of the nature of man, class conflict, the dialectic in history, the labor theory of value, monopoly capital and imperialism. Problems of socialist societies such as economic development and rule of elites will also be discussed. (AY).
Prerequisite(s): SOC 200 or POL 101 or ECON 201 or ECON 202 or SOC 201

SOC 453  Sociology of Law  3 Credit Hours
Various aspects of the relationship between law and society are explored. After a look at processes of law making, attention is turned to the administration of law. This involves a study of the activities of legislatures, courts, police, and correctional agents. Students cannot receive credit for both SOC 453 and SOC 553. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

SOC 454  Mental Health and the Law  3 Credit Hours
Courts and legislatures now control much of the work of mental health professionals such as social workers, counselors, therapists, and psychologists. This course looks at problems encountered in putting the laws and policies into effect. These implementation problems are much the same in other areas of government action, such as poverty programs and pollution control. Students cannot receive credit for both SOC 454 and SOC 554. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

SOC 455  Sociology of Religion  3 Credit Hours
Religion as a social institution; its purposes, methods, structure, and beliefs, and its relation to other institutions. Students cannot receive credit for both SOC 455 and SOC 555. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

SOC 4555  Immigrant Cultures and Gender  3 Credit Hours
The history and culture of immigration since 1850, including: (1) formation and perseverance of immigrant communities and interethnic boundaries; (2) relations between the homeland and the immigrant; and (3) impact of migration on family life and gender roles. Prerequisite and junior or senior standing. Students may not receive credit for both WGST 4555 and WGST 5555. For graduate credit take WGST 5555. (AY)
Prerequisite(s): ANTH 101 or WGST 275 or WST 275 or PSYC 275 or SOC 275 or ANTH 275 or HUM 275 or WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303
Restriction(s):
Can enroll if Level is Undergraduate

SOC 456  Health Care and the Law  3 Credit Hours
A sociological study of legal issues in health care, including regulation of hospitals, consent for treatment, confidentiality, experimentation, family planning, children’s rights, access to health care. The emphasis will be on the organizational and personal consequences of legal requirements. Junior/Senior standing is a requirement. Students cannot receive credit for both SOC 456 and SOC 556. (AY)
Prerequisite(s): SOC 200 or SOC 201 or POL 364
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

SOC 457  Family, Aging and the Law  3 Credit Hours
The law exerts a powerful impact on the family and the elderly. This course interprets the effects of laws concerning guardianship, competence, nursing home regulation, marriage, divorce, custody, adoption, abortion, and child sexual abuse.
Prerequisite(s): SOC 200 or SOC 201

SOC 458  Sociology of Education  3 Credit Hours
Education as a social institution; its purposes, methods, structure, and philosophy, and its relation to other institutions, particularly in the urban setting. Students cannot receive credit for both SOC 458 and SOC 558.
(YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

SOC 460  America in a Global Society  3 Credit Hours
Social changes in America are studied from an internal and an external perspective. The internal dynamics of social change emphasize the role of social movement, e.g., the impact of the civil rights movement on American culture and politics. The external perspective sees America as part of a changing global society. The development of the capitalist world system from its origin in Western Europe to its present global reach is examined. Contemporary American social problems are examined in relation to America’s position in a rapidly changing world. Students cannot receive credit for both SOC 460 and SOC 560. (AY)
Prerequisite(s): SOC 200 or SOC 201

SOC 461  Cops & Cons: Women in Prison  3 Credit Hours
Course uses contemporary theories of gendered organizations to frame analyses of prison policies and practices in employment and incarceration as they reflect and reproduce gender inequalities. Analyses will be framed within a restorative justice model, that is, a critique of the current criminal justice system of retributive justice and a paradigm of what a alternative system could be.
Prerequisite(s): SOC 200 or SOC 201 or WST 275 or WGST 275 or CRJ 240 or CRJ 300 or PSYC 275 or SOC 275 or ANTH 275 or HUM 275 or WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303
Restriction(s):
Can enroll if Class is Junior or Senior

SOC 465  Deviant Behavior/Soc Disorganz  3 Credit Hours
A general analysis of the concept of social deviance and social disorganization: factors producing each condition, the effects of social control measures on the course of deviance and disorganization consequences for the social system, and the relationship between the two. Students cannot receive credit for both SOC 465 and SOC 565. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

SOC 466  Drugs, Alcohol, and Society  3 Credit Hours
Analyses of the sociology of substance use and abuse. Provides a sociological framework for understanding issues and evaluating our nation’s responses to the phenomenon of drug use. Drawing on sociocultural and social psychological perspectives, this course systematically examines the social structure, social problems, and social policy aspects of drugs in American society. Prerequisite or permission of instructor. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Junior or Senior
SOC 467  Drugs, Crime, and Justice  3 Credit Hours
Provides a comprehensive analysis of the current state of research on interactions between crime and drug use. Examines drug distribution, organization of drug systems, and mechanisms of social control of drug systems. Analyzes the social problems associated with drugs and crime. The course also focuses on drug-law enforcement and public policy strategies for dealing with drugs and crime. Prerequisite or permission of instructor. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Junior or Senior

SOC 469  Juvenile Delinquency  3 Credit Hours
Prerequisite(s): SOC 200 or SOC 201

SOC 473  Race, Crime and Justice  3 Credit Hours
This course is an analysis of race and its relation to crime in the criminal justice system. Students will analyze and interpret the perceived connection between race and crime, while exploring the dynamics of race, crime, and justice in the United States. This course is designed to familiarize students with current research and theories of racial discrimination within America's criminal justice system.
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Cannot enroll if Class is Freshman

SOC 475  Soc Construct Mental Illness  3 Credit Hours
Diversity Issues in Mental Health explores varied cultural descriptions and models of mental illness. By focusing on the ways that culture shapes how people experience, and respond to, mental illness this class explores cultural representations of mental illness, ranging from discrete illness resulting from a chemical imbalance to a profound threat to order. We seek to understand the cultural, personal, and political underpinnings of mental illness and medical practices in societies throughout the world. The course utilizes an interdisciplinary perspective, drawing from multiple sources of information regarding mental health issues, including feminism, psychiatry, history, sociology, and literature. Issues raised throughout the course include the ways gender, race, culture, religion, and stigma influence the diagnosis of mental illness, patterns of help-seeking behavior, formation of comprehensive mental health policy, and treatment options. (F, W).
Prerequisite(s): SOC 200 or SOC 201 or ANTH 303 or HUM 303 or SOC 303 or PSYC 303 or WGST 303
Restriction(s):
Cannot enroll if Class is

SOC 476  Inside Out Prison Exchange  4 Credit Hours
This community-based course, taught in a local correctional facility, brings university students and incarcerated students together to study as peers. Together students explore issues of crime and justice, drawing on one another to create a deeper understanding of how these issues affect our lives as individuals and as a society. The course creates a dynamic partnership between UMD and a correctional facility to allow students to question approaches to issues of crime and justice in order to build a safer and more just society for all. The course encourages outside (UMD) students to contextualize and to think deeply about what they have learned about crime and criminals and to help them pursue the work of creating a restorative criminal justice system; it challenges inside students to place their life experiences into larger social contexts and to rekindle their intellectual self-confidence and interest in further education. (F, W).
Restriction(s):
Can enroll if Class is Junior or Senior

SOC 477  Social Welfare  3 Credit Hours
The practice of social work is examined within the context of the development of the social service professions and welfare institutions in American society. Social welfare is a concept that encompasses the provision of material resources, as well as regulation and protection of clients. Changes in welfare policy are analyzed in relationship to other institutional changes in American society. (YR).
Prerequisite(s): SOC 200 or SOC 201

SOC 478  Social Work Internship  3 to 6 Credit Hours
Provides field experience in social welfare or criminal justice agencies, e.g., for children/adolescents, in residential programs, in abuse remediation, in probation, for chemical dependencies, in victim advocacy, for elderly, in prisons, for special needs populations, in court services, and for families and communities. Supervision by approved field instructors. An internship of 80 hours is required for three (3) credits. Instructor and student will work together to determine appropriate intern placement. Approval of instructor is required. (OC).
Prerequisite(s): SOC 200 or SOC 201

SOC 479  Comparative Hlth Systems:Trip  3 Credit Hours
A unique combination of lectures, field trips, visits with general practitioners, specialists, hospital observations, talks with health policy planners, researchers, and many others. Personal experience in two health care systems. Permission of instructor. Junior/Senior standing required. Students cannot receive credit for both SOC 479 and SOC 579. (AY).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Junior or Senior
SOC 481  Gender and Globalization    3 Credit Hours
Mass media, politics, and academia are full of references to globalization, and a future "world without borders." This interdisciplinary course considers the implication of globalization for women's lives, gender relations, and feminism. Topics covered include the global factory, cross-cultural consumption, human rights, global communications, economic restructuring, nationalism, and environmental challenges. Rather than survey international women's movements, this course explores how globalization reformulates identities and locations and the political possibilities they create. (AY).
Prerequisite(s): ANTH 303 or HUM 303 or SOC 303 or PSYC 303 or WGST 303
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore
Can enroll if Level is Undergraduate
Can enroll if College is Arts, Sciences, and Letters

SOC 482  Methods of Social Work Pract    3 Credit Hours
Examination of social work practice methods and approaches to social problems, contexts of practice and targets of change. Focus is on knowledge and skills each practice method requires to effect personal and social change. (YR).
Prerequisite(s): SOC 200 or SOC 201

SOC 483  Images of Organizations    3 Credit Hours
Formal bureaucratic organizations such as government agencies, hospitals, and colleges are a distinctive feature of modern industrialized societies. Analysis of types of formal organizations, their goals, structure, and consequences for intra- and inter-organizational behavior helps to understand how to deal with a complex world. Students cannot receive credit for both SOC 483 and SOC 583. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

SOC 484  Violence Against Women    3 Credit Hours
Course examines local and global social violence against women outside family and other intimate relationships. Students consider violations against women's human rights through the life cycle, which are often sanctioned under the guise of cultural practices and misinterpretations of religious tenets. Topics include sex-selective abortion and female infanticide (the "missing millions"); female genital mutilation and cosmetic surgeries; prostitution and pornography; trafficking in women; sexual harassment; and women's experiences of war as soldiers, non-combatants and refugees. Topics are "paired", that is, students compare understandings of Western and non-Western social practices related to gender. Students examine both institutionalized sexism and racism, as part of political, economic, and social systems, and sexism and racism as realities affecting individual women's lives.
Prerequisite(s): SOC 200 or SOC 201 or WGST 303 or HUM 303 or PSYC 303 or ANTH 303 or SOC 303 or WGST 275 or HUM 275 or PSYC 275 or SOC 275 or ANTH 275 or WST 275
Restriction(s):
Cannot enroll if Class is Freshman
Can enroll if Level is Undergraduate

SOC 490  Advanced Topics in Sociology    3 Credit Hours
Examination of problems and issues in selected areas of sociology. Title as listed in the Schedule of Classes will change according to content. Course may be repeated for credit when specific topic differs.

SOC 490A  Advanced Topics in Sociology    3 Credit Hours
TOPIC: Diasporas and (Trans) Nationalism: Gender, Race, and Post/Coloniality. An interdisciplinary and comparative inquiry into historical & contemporary linkages between gender regimes, national formations, and legacies of colonialism as they interact at "home" and in "diasporas." Using multi-media and multi-genre pedagogical tools (conceptual and methodological writings; narratives and biographies; guest lectures; films), we study & critique different perspectives on how the dialectics of geography, positionality, and social structures shape the ways in which we imagine "home", "homeland", and "back home." We examine gendered politics of the colonial project 1) in early days of colonialization; 2) during struggles of decolonization; and 3) "post-colonial" geographies' While becoming familiar with "classics" in nationalism/transnationalism, gender, colonialism, and diaspora, we will explore their applicability to specific case studies in European and American contexts as well as in Africa, Asia, and the Middle East.

SOC 497  Senior Research Seminar    3 Credit Hours
This course is intended as the culmination of a student's prior work in sociology. Each student will conduct an applied research project that draws upon sociological concepts and issues. The product of this research will be an essential component of the student's concentration portfolio. (W).
Prerequisite(s): SOC 200

SOC 498  Independent Study    1 to 3 Credit Hours
Analytical assignments in sociology. No more than a total of six credit hours of SOC 398 and SOC 498 may be applied toward concentration. Permission of instructor required. (F,W,S).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

Spanish (SPAN)

SPAN 101  Spanish Language & Culture I    4 Credit Hours
Full Course Title: Introduction to Spanish Language and Culture I-First course in the two-course elementary Spanish sequence. Listening comprehension, speaking, reading, writing, and culture are emphasized. Course materials promote the use of language to communicate with others and to function in Hispanic culture. (F,S).

SPAN 102  Spanish Language & Culture II    4 Credit Hours
Full Course Title: Introduction to Spanish Language and Culture II-Second course in the two-course elementary Spanish sequence. Continued emphasis on culture and the four skills of listening, speaking, reading, and writing. (F,W,S).
Prerequisite(s): SPAN 101 or Spanish Language Placement with a score of 102 or Spanish Language Placement with a score of 201 or Spanish Language Placement with a score of 202 or Spanish Language Placement with a score of 301 or Spanish Language Placement with a score of 302

SPAN 201  Spanish Language and Culture III    4 Credit Hours
An intermediate-level course designed to increase the proficiency in listening, speaking, reading, and writing within a cultural context. Emphasis is placed on acquiring new vocabulary and expanding the use of grammar structures. Course materials promote the use of language to communicate with others and to function in Hispanic culture. (F).
Prerequisite(s): SPAN 102 or Spanish Language Placement with a score of 202 or Spanish Language Placement with a score of 301 or Spanish Language Placement with a score of 302 or Spanish Language Placement with a score of 201
SPAN 202  Spanish Language and Culture IV  4 Credit Hours
Continuation of SPAN 201 with emphasis on the development of all language skills. (W).
Prerequisite(s): SPAN 201 or Spanish Language Placement with a score of 202 or Spanish Language Placement with a score of 301 or Spanish Language Placement with a score of 302

SPAN 231  Introductory and Survival Spanish for Healthcare Professionals  4 Credit Hours
Introductory and Survival Spanish for Health Professionals (231) is a 4-credit hour hybrid course focusing on communication needs in the real world and the use of highly specialized vocabulary in clinical situations and medical terminology. The course addresses today's growing demand for Spanish-speaking physicians and healthcare workers. It provides basic Spanish skills, sample interview questions, relevant cultural information, and more, in addition to online videos of physician-patient interactions, interactive self-assessment tools, and clinic vignettes. Students will develop better physician-patient communication skills, increase their cultural competence, and make better clinical decisions in their practice. Native speakers of Spanish will be invited to the face-to-face class to act as "real" patients. (W).

SPAN 301  Adv Conversation and Comp I  3 Credit Hours
An advanced course in conversation, composition, and syntax designed to strengthen existing skills. An intensive review of grammar combined with pronunciation and vocabulary exercises should enable the student to make progress in composition and conversation. Oral and written assignments will be based on readings from contemporary sources. (F).
Prerequisite(s): SPAN 202 or Spanish Language Placement with a score of 301 or Spanish Language Placement with a score of 302

SPAN 302  Advan Conversation Comp II  3 Credit Hours
Continuation of SPAN 301 with emphasis on the command of conversational and writing skills. (W).
Prerequisite(s): SPAN 301 or Spanish Language Placement with a score of 302

SPAN 305  Language of Business  3 Credit Hours
An introduction to the language and practices of the Hispanic world of business. Particular emphasis will be placed on learning the terminology used in typical business correspondence and documents. A variety of businesses will be examined and practice in reading and composing business letters will be provided. (AY).
Prerequisite(s): SPAN 301

SPAN 310  Intro to Hispanic Linguistics  3 Credit Hours
This class provides students with a systematic overview of key areas of Spanish linguistics, including the sound system, forms of words, syntactic patterns, the development of the language, and regional, social and contextual variation.
Prerequisite(s): SPAN 301
Restriction(s):
Can enroll if Level is Undergraduate

SPAN 321  Spanish Food and Cuisine  3 Credit Hours
Spanish 321 is a course intended to provide students with an overview of Spanish Peninsular culture, civilization and history through the analysis and exposure to its foods, products, dishes and social events around its eating habits. (OC)
Prerequisite(s): SPAN 301

SPAN 350  Masterpiece of Latin Amer Lit  3 Credit Hours
A survey of Latin American literature from the colonial period to the present. Emphasis will be placed on such influential and outstanding contemporary authors as Borges, Garcia Marquez, Paz, Poniatowska, Rosario, Ferre, and Rulfo. (AY).
Prerequisite(s): SPAN 301

SPAN 351  Masterpieces of Spanish Lit  3 Credit Hours
An overview of Spanish Peninsular literature beginning with the Medieval period. Students read and discuss outstanding works from a variety of literary periods and genres. Works by authors such as Cervantes, Lope de Vega, Calderon, Galdos, Unamuno, Lorca, and Goytisolo are included. (AY).
Prerequisite(s): SPAN 301

SPAN 353  Latino Literature  3 Credit Hours
The course offers a selection of literary representations from a range of Latino groups with an emphasis on Cubans, Dominicans, Mexicans, and Puerto Ricans in the United States. Students examine these minority groups and the realities of their migrations through a variety of literary periods and genres.
Prerequisite(s): SPAN 301

SPAN 355  Spanish Civilization and Cult  3 Credit Hours
A survey of Spanish civilization from its origins to the present. The course explores the achievements of the Spanish people in art, architecture, music, literature, and the sciences and examines aspects of contemporary Spanish institutions and society.
Prerequisite(s): SPAN 301

SPAN 357  Latin American Civiliztn Cult  3 Credit Hours
A survey of Latin American literature from the colonial period to the present. Emphasis will be placed on such influential and outstanding contemporary authors as Borges, Garcia Marquez, Paz, Poniatowska, Rosario, Ferre, and Rulfo. (AY).
Prerequisite(s): SPAN 301

SPAN 358  Spain in the Twentieth Century  3 Credit Hours
A cultural study of the institutions, issues, and values of Spanish society in the twentieth century as seen in art, architecture, music, literature, film, and the media. Special emphasis is placed on contemporary Spain from the end of the Franco era through the development of a democracy. (OC).
Prerequisite(s): SPAN 301

SPAN 359  Three Cultures of Spain  1 Credit Hour
Spanish 359 complements Spanish 356, Civilization and Culture of Spain. In Spanish 356, students learn the culture and civilization of Spain from 711 to 1492 when Christians, Muslims and Jews were sharing territory and culture was flourishing due to the hybridity connections during these centuries. In this course, the legacy of these cultures/philosophies in Spain are studied in order to show students the importance of architecture, scientific advances (monuments, towns, castles, mosques, synagogues, old towns, ruins, and palaces) in Spain's three cultures era. (OC)

SPAN 385  Spanish Across the Curriculum  1 Credit Hour
Course is attached to an upper-level course in another discipline and taken concurrently with it. Course materials in Spanish are related to the subject matter of the second course and are discussed with a Spanish-area faculty member. Materials are also integrated into the assignments of the second course. (OC).
Prerequisite(s): SPAN 202
SPAN 390  Topics in Spanish  3 Credit Hours
Examination of problems and issues in selected areas of Spanish. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).
Prerequisite(s): SPAN 301

SPAN 398  Independent Studies in Spanish  1 to 6 Credit Hours
Readings or analytical assignments in Spanish in accordance with the needs and interests of those enrolled and agreed upon by the student and instructor. Students may receive a maximum of six credit hours for a combination of SPAN 398 and SPAN 399. (FW).

SPAN 399  Independent Studies in Spanish  1 to 6 Credit Hours
Readings or analytical assignments in Spanish in accordance with the needs and interests of those enrolled and agreed upon by the student and instructor. May be repeated for a maximum of 6 credit hours. (FW).

SPAN 406  Advanced Written Expression  3 Credit Hours
Through the reading and analysis of authentic materials students will develop and improve their writing skill in various narrative styles such as dialogue, description, essay or research paper. Writing as a process involving editing and revision will be emphasized. (AY).
Prerequisite(s): SPAN 302

SPAN 409  Oral Expression  3 Credit Hours
A course designed to increase the conversational skills of advanced-level students. A variety of activities and assignments will help students refine their oral accuracy and expand upon the number of social situations in which they can function. (AY).
Prerequisite(s): SPAN 302

SPAN 420  Introduction to Translation  3 Credit Hours
An introduction to the history, theory and practice of English-to-Spanish and Spanish-to-English translation. Emphasis will be placed on material selected from the fields of business and commerce, the legal system, and brief passages of literature. Class projects will include translations of advertisements, brochures, and documents provided by area businesses. (AY).
Prerequisite(s): SPAN 302

SPAN 421  Advanced Translation  3 Credit Hours
The course will continue to apply the translation theory and techniques introduced in SPAN 420, and it will continue to focus on English-to-Spanish and Spanish-to-English non-literary translation. Emphasis will be placed on materials selected from the fields of business, advertising, and legal discourse. Class projects will include translation of advertisements, legal documents, and business brochures. (AY,W).
Prerequisite(s): SPAN 305 and SPAN 420

SPAN 450  Hispanic Cinema  3 Credit Hours
An introduction to the history and critical analysis of representative Hispanic films of major directors from Spain and Latin America. Emphasis will be placed on the historical, political, and cultural content of these films as they reflect the problems, customs, and contradictions of Hispanic culture. (AY).
Prerequisite(s): SPAN 301

SPAN 451  Spanish Film  3 Credit Hours
An introduction to the history and critical analysis of representative Spanish films of major directors from Spain. Emphasis will be placed on the historical, political, social and cultural content of these films as they reflect the problems, customs, and contradictions of Spanish culture.
Prerequisite(s): SPAN 301

SPAN 465  Contemporary Spanish Lit  3 Credit Hours
Spanish 465 provides students with an overview of Contemporary Spanish Peninsular literature and culture through the analysis of narrative texts. Selected readings provide the basis for stylistic and textual analysis. Fostering critical thinking through an analysis of texts is the primary focus of the class. The course specifically examines narrative works that belong to the Spanish literary canon produced after the end of an almost forty year dictatorial regime in 1975. The literary works are deeply rooted in Spain's social and cultural history. Consequently, they describe the contemporary socio-political scene in which they were produced and look at the uncertain future of this reborn nation.
Prerequisite(s): SPAN 301
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

SPAN 490  Topics in Spanish  3 Credit Hours
Examination of problems and issues in selected areas of Spanish language, literature, culture and/or civilization. Title as listed in the Schedule of Classes changes according to content. Course may be repeated for credit when specific topic differs. (OC).

Speech (SPEE)

SPEE 101  Principles of Speech Comm  3 Credit Hours
Course is designed to help students become better producers and consumers of oral communication in a diverse democratic society. Students will gain experience and confidence in fundamentals of effective speech writing, presentation, and criticism. Emphasis is placed on researching and selecting credible sources, integrating supporting material, rhetorical invention, audience analysis, speech organization, topic development, delivery skills, visual aids, and effective language.

SPEE 310  Interpersonal Communication  3 Credit Hours
Course adopts a discussion and activities-centered approach to understanding and applying principles and methods associated with successful interpersonal communication. Students will study and refine the communication of relationship in dyadic settings as it is influenced by cultural and gender differences. Non-verbal variables, listening, and assertive communication are just a few of the areas of discourse that will be studied in relationship to expanding cultural and gender awareness.
Prerequisite(s): SPEE 101

SPEE 320  Public Argument and Advocacy  3 Credit Hours
Students gain perspectives and experience as both critical consumers and informed producers of public discourse. Students will become familiar with basic theories of rhetorical action, engage in critical analysis of varied public arguments and rhetorical events, and prepare speeches of advocacy intended for both real and imagined audiences. (YR).
Prerequisite(s): SPEE 101

SPEE 330  Argumentation and Debate  3 Credit Hours
This course covers the logical and legal foundations of the argumentation process. Offers practical and theoretical experience in analysis, reasoning, case-building, evaluation of evidence, refutation, and cross-examination. (AY).
Prerequisite(s): SPEE 101
STAT 301  Biostatistics I  3 Credit Hours
Samples and populations, quantitative vs. categorical data; clinical vs. epidemiological studies; comparative displays and analysis; linear regression. Estimation of effect size is emphasized along with the P-value for a statistical test: difference of means in simple comparative data together with a confidence interval and t-test; relative risk for appropriate categorical data; slope of a regression line together with a confidence interval and t-test. Study design is emphasized: clinical trials in experimental settings; case-control and cohort studies in epidemiological settings. Students are expected to make presentations interpreting and reporting the results of research from the literature. Students can receive credit for only one of MATH 301, MATH 363, STAT 301, CRJ 383, SOC 383, STAT 325.
Prerequisite(s): MATH 113 or MATH 115

STAT 305  Intro. to Data Science for All  3 Credit Hours
With increasing availability of data, companies, governments, and nonprofits alike are striving to convert this data into knowledge and insight. This course will provide students with the basic skill set needed to handle such data. The course will focus on three broad areas: inferential thinking, computational thinking, and real-word applications. We will discuss data collection, data cleaning and exploratory analysis of data so that students can connect the data to the underlying phenomena and be able to think critically about the conclusions that are drawn from the data analysis. The students will also learn how to write short programs to be able to automate the data analysis process developing an applied understanding of different analytics methods, including linear regression, logistic regression, clustering, data visualization, etc. Most of the material will be taught using real world data. (YR)

STAT 325  Applied Statistics I  4 Credit Hours
This course studies the principles and applications of statistics. Topics include descriptive statistics, random variables, probability distributions, sampling distributions, the central limit theorem, confidence intervals, hypothesis testing for mean and variance and the use of normal, chi-square, F and t distributions in statistical problems. Other topics are selected from regression and correlation, the design of experiments and analysis of variance. Students can receive credit for only one of CRJ 383, MATH 301, 363, STAT 301, 363, SOC 383 and STAT 325. (F,W)
Prerequisite(s): MATH 113 or MATH 115 or Mathematics Placement with a score of 116

STAT 327  Statistical Computing  3 Credit Hours
This course focuses on computational techniques that are crucial for statistics applications. Using the statistical packages R and SAS, the course teaches students about importing and storing data, manipulating and visualizing data, debugging and re-sampling, as well as simulation methods including bootstrap and Monte Carlo methods. (YR)
Prerequisite(s): STAT 325 or (STAT 301 and STAT 305)

STAT 330  Intro to Survey Sampling  3 Credit Hours
A course designed to offer selected topics in applied statistics. The specific topic or topics will be announced together with the prerequisites when offered. Course may be repeated for credit when specific topics differ. (OC)
Restriction(s):
Can enroll if Level is Undergraduate

STAT 420  Applied Regression Analysis  3 Credit Hours
Topics include single variable linear regression, multiple linear regression and polynomial regression. Model checking techniques based on analysis of residuals will be emphasized. Remedies to model inadequacies such as transformations will be covered. Basic time series analysis and forecasting using moving averages and autoregressive models with prediction errors are covered. Statistical packages will be used. Students cannot receive credit for both STAT 430 and STAT 530.
Prerequisite(s): STAT 425 or STAT 325 or IMSE 317
Urban and Regional Studies (URS)

URS 300  Urban and Regional Studies  3 Credit Hours
In this course we will explore the field of urban and regional studies. The scope of readings is inter-disciplinary, spanning the environmental, aesthetic, social, economic, geographic, historical, political and cultural aspects of cities, suburbs and regions. The interrelationship between the spatial organization of a city, patterns of social and economic inequality, delivery of services, the relationship between culture and public space, as well as the processes of urban and regional change will all be considered. Problems such as race and class inequality will also be examined. Special attention will be given to issues of relevance in the Detroit metropolitan region (e.g. spatial, economic, cultural, political and social impacts of the loss of manufacturing jobs). Students will be introduced to methods of social scientific analysis and will begin to apply those methods to researching urban and regional community groups, enterprises and social movements.

URS 301  SiD--Field Internship  3 Credit Hours
Full Course Title: Semester in Detroit: Field Internship This course serves as a field internship course for the Semester in Detroit (SiD) program. Students in this course work for 200 hours in an internship with a community-based organization in Detroit over 12 weeks (average of 16 hours per week). They also participate in an internship reflection seminar (co-requisite). Students must apply to, and be accepted by, UM-Ann Arbor’s in Detroit program to enroll in this course. (F,W,S)

Corequisite(s): SSCI 302

URS 302  SiD--Intern Seminar  2 Credit Hours
This course serves as a core course for the Semester in Detroit (SiD) program. The primary purpose of this class is to provide a supportive, yet challenging learning space for reflecting on your Detroit internship experiences this semester. There are three main sources of material for this class: you, the internship, and Detroit. While, in theory, each is distinct, in practice, all three are intertwined and interact and affect one another. Your challenge will be learning to see more clearly the interactions among these domains. Students must apply to, and be accepted by, UM-Ann Arbor’s Semester in Detroit program to enroll in this course.

URS 360  SiD--20th Cent Detroit History  3 Credit Hours
This course serves as the core course for the Semester in Detroit (SiD) program. It examines the transformation of Detroit from the late 19th, through the 20th and into the 21st Centuries. Our goal is to identify the main forces and patterns of change in Detroit’s past that have shaped the contemporary city you encounter today. Thus, the course is organized chronologically, but we will be exploring the city’s history alongside consideration of contemporary social issues, challenges, and debates. Course material will include a range of readings, films, and excursions. Through discussion of this material and in written assignments, the course encourages you to develop your own interpretation of the circumstances, challenges and opportunities currently facing the city.

Students must apply to, and be accepted by, UM-Ann Arbor’s Semester in Detroit program to enroll in this course. (F,W,S)

URS 390  Topics Urban&Regional Studies  1 to 3 Credit Hours
Problems and issues in selected areas of urban and regional studies studies. Title as listed in Schedule of Classes changes according to content. Course may be repeated for credit when specific topic differs.
URS 450  Sr Capstone in Community Rsrch  3 Credit Hours
The capstone course is designed to assist students in integrating the concepts, theories, and methods of inquiry or urban studies into research for or in the surrounding metropolitan area. Open to students in urban and regional studies who have completed their community-based learning requirement for the concentration.

URS 485  Urban Regional Stud Internship  3 to 6 Credit Hours
The internship offers students the opportunity to learn and apply concepts learned in Urban and Regional Studies coursework to real world settings in municipal and regional government offices, non-profit and community organizations, or businesses dedicated to design, development, or data. The student has 8-16 hours of unpaid work per week under the guidance of a faculty advisor. Primarily for junior or senior URS students or other qualified applicants. Up to 6 credits can be used to fulfill the community-based research requirement for urban and regional studies concentrators, with the approval of the URS director.

Prerequisite(s): URS 300
Restriction(s):
Cannot enroll if Class is Freshman

URS 499  Independent Study  3 Credit Hours
Readings, community-based research and analytical assignments in accordance with the needs and interests of the student and approval of the instructor. Students must submit a written proposal of study for approval. In addition, students electing to take this course in partial fulfillment of their community-based research must get approval from the Director of the Urban and Regional Studies program. (F,W,S)

Women's and Gender Studies (WGST)

WGST 303  Intro to Women's & Gender Stud  3 Credit Hours
This course provides an interdisciplinary overview of the key theories and topics in Women's and Gender Studies. Special attention is given to how gender intersects with class, race, nationality, religion and sexuality to structure women's and men's lives. Students are also introduced to methods of gender analysis and will begin to apply these methods to topics such as women and health, gender roles in the family, violence against women, and gendered images in the mass media.

Restriction(s):
Cannot enroll if Class is Freshman

WGST 315  Body Image and Culture  3 Credit Hours
This course examines the biological and sociocultural construction of body image in both men and women. We explore such cultural and social practices as nudity, tattooing, piercing, scarification, dietary habits, physical activity and sports performance and their associated myths and realities. We explore how the human body is a terrain of contested meaning within society. The course provides an examination of the causes and consequences of women's poor body image, contemporary and historically. Course materials include case studies from North America, Europe, Africa, Asia and the Pacific.

Prerequisite(s): ANTH 101 or WST 275 or WGST 275 or WGST 303 or PSYC 275 or ANTH 275 or HUM 275 or PSYC 303 or ANTH 303 or SOC 303 or HUM 303 or SOC 275

WGST 325  Gender, Science & Engineering  3 Credit Hours
Explores some of the history of women in science and engineering, the current status of women in science and engineering, and feminist theory in research. Topics include cultural influences on women in science and engineering, careers and life balance, and a feminist approach to scientific and engineering teaching and research.

Prerequisite(s): NSCI 101 or NSCI 120 or NSCI 121

WGST 326  Poverty and Discrimination  3 Credit Hours
An analysis of the economic aspects of poverty and discrimination. Emphasis on the theoretical economic causes of poverty and the economic bases for discriminatory behavior, the impact of poverty and discrimination on individuals and society and the effect of reform policies on the two problems.

Prerequisite(s): ECON 201 and ECON 202

WGST 335  Women in Medieval Art  3 Credit Hours
Women have often been regarded as the second sex of the middle ages due to the misogynistic attitudes of that era. Recent scholarship, however, has unearthed a significantly more complex picture. Through a study of visual representations of women in medieval art, this course will examine women's roles in the creation and patronage of art and literature, economic and family issues, and women's participation in new and innovative forms of religious piety.

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106 or WGST 275 or WGST 303 or HUM 275 or HUM 303 or ANTH 275 or ANTH 303 or PSYC 275 or PSYC 303 or SOC 275 or SOC 303 or WST 275

WGST 336  Perspectives in Women's Health  3 Credit Hours
This course examines women's health issues across the human lifespan, using feminist and sociocultural perspectives. Topics to be explored include the social construction of women's sexuality, reproductive options, health care alternatives and risk for physical and mental illness. Attention to the historical, economic, and cultural factors that influence the physical and psychological well-being of women is an underlying theme.

Restriction(s):

WGST 337  Women Musicians/West Mus Hist  3 Credit Hours
Through a historical survey of female musicians from the Middle Ages to the present day, this course takes a critical look at theories of creativity and professionalism as they relate to female musical production. The course deals with women in European "art music" traditions and also in jazz and poplar music. Social and cultural norms dictating appropriate female involvement with music are examined. The historical approach will serve to reveal ways in which terms such as professionalism and virtuosity have continually shifted and changed in reference to female musical performance. The course challenges students to re-think many of the commonly accepted gender-based descriptions of particular genres and elements of music through listening and musical analysis.

Prerequisite(s): MHIS 100 or MHIS 120 or MHIS 130 or MTHY 100 or WGST 275 or PSYC 275 or HUM 275 or SOC 275 or ANTH 275 or WGST 303 or ANTH 303 or SOC 303 or PSYC 303 or HUM 303 or WST 275

Restriction(s):
Cannot enroll if Class is Freshman

WGST 338  Women&Islam Mid East to 1900  3 Credit Hours
This course covers the historical development of Islam's normative stance towards women and gender roles in the Middle East from the rise of Islam to the earliest stirrings of feminist activism.
WGST 3385  Sex, War, and Violence  3 Credit Hours
Full Title: Sex, War, and Violence: Gender and Sexuality in the 20th Century European History. This course centers the often overlooked role of gender and sexuality in the 20th century European mobilizations of state violence such as the Holocaust, Armenian Genocide, and conflicts in the former Yugoslavia. It emphasizes the clashes that occurred between gains in gender and sexual rights during the century and projects of state violence that were frequently aimed at dismantling these gains. Attention is paid to the intersection of race, class, religion and gender in the (re)construction of new gender and sexual hierarchies in conflict and post-conflict contexts in the region. (OC).

WGST 362  Women, Politics, and the Law  3 Credit Hours
An examination of the political behavior of women in American politics. Included is an analysis of the legal and legislative demands of American women.
Restriction(s):
Can enroll if Level is Undergraduate
Can enroll if College is Arts, Sciences, and Letters
WGST 3651  Women/Leadership/Social Change  3 Credit Hours
The purpose of this seminar is to examine women’s leadership in movements for social change. We will approach this topic through the study of historical examples, drawn primarily from the twentieth-century United States, and including movements for economic justice, race relations, sexual identity, peace, gender equality, public health and social welfare. HIST 112 and WGST/ANTH/HUM/SOC/PSYC 303 recommended as prerequisites. (W)
Restriction(s):
Cannot enroll if Class is Freshman
Can enroll if Level is Undergraduate

WGST 366  Sexualities, Genders, & Bodies  3 Credit Hours
This course introduces key questions and debates in lesbian, gay, bisexual, transgender, and queer studies. Through engagement with multidisciplinary sources, students explore how sexualities, genders, and bodies are constructed and contested, how these constructions vary in diverse contexts and historical moments, and what gaps remain in our knowledge of LGBTQ lives. (YR)

WGST 370  Women in America-Hist Perspect  3 Credit Hours
A survey of American women’s history from the colonial period to the present. Among the topics included are family roles, women’s economic status, women’s education and women in American political life.

WGST 384  Feminist Philosophy  3 Credit Hours
Feminists working in philosophy, most notably in the 19th and 20th centuries, have altered the traditional philosophical canon by first, recovering women philosophers who were essentially erased from the history and secondly, by extending and contributing to the standard questions of philosophy. For example, one central question of philosophy: “What can we know with certainty?” has been transformed through a feminist lens and reinterpreted as “What does one’s gender, social location and cultural framework contribute to what one knows?” In this course we will look at the variety of feminist philosophical theories with a focus on epistemology, metaphysics and ethics.
Prerequisite(s): PHIL 100 or WGST 275 or WGST 303 or HUM 275 or ANTH 275 or PSYC 275 or SOC 275 or WST 275 or HUM 303 or ANTH 303 or PSYC 303 or SOC 303

WGST 385  Language and Gender  3 Credit Hours
Examines theories of differences between male and female speakers of English, focusing on phonological, syntactic, semantic, stylistic and conversational features, with analyses of differences in speaking strategies and agendas of male and female speakers, as well as split-language situations in the workplace, home and social settings. 
Prerequisite(s): LING 280 or LING 281

WGST 386  Gender Issues in Literature  3 Credit Hours
A study of gender issues in English and American literature. The exact topic will vary from semester to semester, but the course may feature such topics as gay and lesbian literature, feminist criticism, images of masculinity, the representation of sexual ideologies, etc. Course may be repeated for credit when specific topic differs. 
Prerequisite(s): ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 222 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239

WGST 387  Gender, Sex, Pow'r Screen Studies  3 Credit Hours
This course examines representations of gender and sexuality across multiple screens, with a particular emphasis on Hollywood, independent, and non-Western cinema. In addition, the course explores intersections of gender with race, class, and ability to further investigate power structures in contemporary screen studies. The course will engage with a range of debates in film theory and women’s and gender studies, and enable students to apply concepts and theories to specific media texts. 
Prerequisite(s): JASS 248 or WGST 275 or ANTH 275 or PSYC 275 or SOC 275 or WGST 303 or ANTH 303 or PSYC 303 or SOC 303 or WST 275 or HUM 240 or ENGL 240 or FILM 240 or ENGL 248 or HUM 248 or FILM 248 or JASS 240 or HUM 275 or HUM 303

WGST 388  LGBTQ Religious Experience  3 Credit Hours
This course explores intersections of religion, spirituality, and faith with sexuality and gender. Christianity and Islam receive particular attention. We also examine LGBTQ journeys within Buddhism, Hinduism, Judaism, new spiritual movements, and interfaith work. Assignments create room for students to engage faith traditions that are not covered in the course readings. The course highlights intersections at three levels of analysis: the individual or personal level (how do LGBTQ identities intersect and interact with religious freedom and practice?), the interactional or community level (how do LGBTQ people experience belonging and rejection in diverse faith communities?), and the institutional level (how do the structures of these belief systems shape the life chances of LGBTQ people in society?). (F,S,A,Y)

WGST 390  Topics in Women's Studies  3 Credit Hours
Examination of problems and issues in selected areas in Women’s and Gender Studies. Title in Schedule of Classes will change according to content. Course may be repeated for credit when specific topic differs. (YR)
Prerequisite(s): WST 275 or WGST 275 or WGST 303

WGST 393  Black Women, Rel & Spirituality  3 Credit Hours
This lecture course surveys descriptive and critical literature relevant to the religious and spiritual experience and thought of African diasporic women. Studying religiosity and spirituality among this population helps students understand this influential, culturally-constructed world view of Black women as they engage in a variety of institutions including healthcare, economic activity, the criminal justice system, politics, and social relationships. The course gives particular attention to Black feminist and Womanist literature on these topics. (F).
Restriction(s):
Cannot enroll if Class is Freshman
WGST 3955  Diversity and the Workplace  3 Credit Hours
This course will: 1) discuss gender, race, ethnicity, disability, age, sexual orientation, and appearance as aspects of diversity; 2) examine social values and practices, and organizational policies and procedures that affect or have affected the employment opportunities of underrepresented groups; 3) examine individual (e.g., prejudice, stereotypes), group (e.g., in-groups and out-groups), and organizational (e.g., climate and culture) processes that affect work place diversity and; 4) discuss "best practices" for promoting an organizational culture that values diversity, along with a diverse work force. (YR).
Prerequisite(s): PSYC 170 or PSYC 171 or WST 275 or OB 354 or HRM 405 or WGST 275 or WGST 303 or PSYC 275 or ANTH 275 or SOC 275 or HUM 275 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303 or PSYC 101

WGST 401  Images of Women in Germany  3 Credit Hours
This course will focus on the position of women in Germany after WWII and up to and after the unification of East and West Germany. Particular attention will be given to the gendered history of working through the National Socialist past, the division and reconstruction of the two nation-states, and the terrorism in West Germany in the 1970’s. Students will examine images of women in films and tie them to the ideologies of gender and status of women in these larger issues of German history. Course readings will be in English. Students wishing to receive German credit for the course must enroll concurrently in GER 380: Praktikum. Students cannot receive credit for both WGST 401 and WGST 501.
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

WGST 404  Dissed: Differ, Power, Discrim  3 Credit Hours
Have you ever been dissed? Why are some people targets of disrespect? This class examines the unequal distribution of power - social, economic and political in the United States and other countries that results in favor for privileged groups. We will examine a variety of institutional practices and individual beliefs that contribute to disrespect. We'll look at ways that beliefs and practices, like viewing inequality as consequence of a "natural order," obscure the processes that create and sustain social discrimination. We will engage in the intellectual examination of systems, behaviors and ideologies that maintain discrimination and the unequal distribution of power and resources. Student will not receive credit for both WGST 404 and WGST 504.
Restriction(s):
Can enroll if Level is Undergraduate

WGST 405  Gender Roles  3 Credit Hours
This course will investigate the development of sex roles in childhood and adolescence due to either innate physiological differences or sociological patterning, the effect of sex roles upon male-female relationships within our society and the possibility of transcending sociological sex roles in alternate modes of living. Students cannot receive credit for both WGST 405 and WGST 505.
Prerequisite(s): PSYC 171 or SOC 200 or SOC 201 or PSYC 170 or PSYC 101

WGST 406  Culture and Sexuality  3 Credit Hours
The study of women, men, children, socialization practices and the genesis of sex roles cross-culturally. Students cannot receive credit for both WGST 406 and WGST 406.
Prerequisite(s): ANTH 101 or WST 275 or WST 275 or WGST 303 or PSYC 275 or SOC 275 or ANTH 275 or HUM 275 or PSYC 303 or SOC 303 or ANTH 303

WGST 408  Sex, Gender and the Body in International Development  3 Credit Hours
This course provides an overview of sexuality and gender issues in development in the global South, including the differential effects of development policies by gender and sexual orientation, and the role of social movements in transforming development policy frameworks. Students may not receive credit for both WGST 408 and 508. For graduate credit, students should elect WGST 508.
Prerequisite(s): WGST 303 or ANTH 303 or HUM 303 or PSYC 303 or SOC 303
Restriction(s):
Can enroll if Class is Junior or Senior

WGST 409  Feminist Theories  3 Credit Hours
This course examines the different perspectives that feminist theorists have offered to analyze the unequal conditions of gendered lives. Students taking this course will develop an understanding of how theory functions as a way to know, understand and change the world. They will also be provided with a lens for comparing the assumptions and implications of alternative theoretical perspectives. A particular emphasis of this course is on theorizing the interrelationships among gender, race, class, sexuality and nationality. Course material includes applications of feminist theory to issues such as gender identity formation; sexuality, gender, law and citizenship; women and work; and the history and politics of social movements. Students will not receive credit for both WGST 409 and WGST 509. (AY).
Prerequisite(s): WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303

WGST 412  Men and Masculinities  3 Credit Hours
This course addresses the question, "What is a man?" in various historical, cross-cultural and contemporary contexts. A major focus is on the social and cultural factors that underlie and shape conceptions of manhood and masculinity in America as well as in a variety of societies around the globe.
Prerequisite(s): SOC 200 or SOC 201 or ANTH 101 or WST 275 or WGST 275 or PSYC 275 or SOC 275 or ANTH 275 or HUM 275 or WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore
Can enroll if Level is Undergraduate

WGST 414  Sexuality, Gender and the Law  3 Credit Hours
This course will incorporate social scientific, feminist and queer theory, and legal perspectives to emphasize the dynamic relationship among sexuality, gender, and law. In this course, we will focus on the history of gender and law in the United States while we simultaneously focus on the changing current landscape of law and society, including laws pertaining to equal employment opportunity, violence against women, sexual orientation, and gender identity. As a result, we will assess the factors that govern the relationship between gender & sexuality and the law over time and in current events. (F).
Prerequisite(s): SOC 200 or WGST 303 or HUM 303 or SOC 303 or PSYC 303 or ANTH 303
WGST 416  Earl Mod Jpn Paint&Wood Prnts  3 Credit Hours
Paintings and woodblock prints of the Edo/Tokugawa (1600-1868) and Meiji (1868-1912) periods are considered in light of competing developments that on the one hand looked to Japan's classical tradition and on the other to the influence of art and artists from China and the West. Special attention is given to female artists and images of women. Students cannot receive credit for both ARTH/WGST 416 and ARTH/WGST 516. (OC).
Restriction(s):
Cannot enroll if Class is Graduate

WGST 420  Kinship and Marriage  3 Credit Hours
A study of the diversity of kinship and marriage systems, and of the history of kinship theory which has played a seminal role in the development of general anthropological history. Students cannot receive credit for both WGST 420 and WGST 520.
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Level is Undergraduate

WGST 425  Women in Classical Antiquity  3 Credit Hours
This course examines the evidence for the lives of women in Greek, Etruscan and Roman Antiquity, from the Bronze Age through the Imperial Period. Special emphasis will be placed on the archaeological evidence, especially works of art which illustrate women's lives and their relationships with men. Documents such as dedicatory and funerary inscriptions, the poetry of Sappho and Sulpicia, and selections from the writings of Homer, Hesiod, Aristotle, Pliny, Juvenal, and other ancient authors, will also be examined critically, particularly in relationship to the works of art.
Prerequisite(s): ARTH 101
Restriction(s):
Can enroll if Level is Undergraduate

WGST 433  Writing Women In Renaissance  3 Credit Hours
This course will be taught in English, and will focus on the influence of Italian literary models for the construction of female literary types as well as female voices in France and Italy from 1300 to about 1600. Italian authors studied include three very influential Florentines, Dante, Petrarch and Boccaccio, as well as Castiglione and Asiosto. We will read women poets, patrons, prostitutes and queens from Italy and France such as Veronica Gambara, Isabella di Morra, Vittoria Colonna, Christine de Pizan, Louise Labe and Marguerite de Navarre. At issue will be women's roles and women's images in city and court culture during the early modern period and the interaction of their writings with the literary canons of Italy and France.
Restriction(s):
Cannot enroll if Class is Graduate

WGST 436  Reproductive Health Policy  3 Credit Hours
This course provides a comprehensive introduction to the field of reproductive health in the US. Understanding women's reproductive health requires consideration of the intersections of gender, race, class, culture, geography, economic status, and nation within a sociopolitical context. The course introduces students to the historical trends in the regulation of women's fertility and reproductive health. Readings draw from a number of different disciplines, including: law, medical studies, history, social sciences, and personal narratives to critically examine the intent and impact of current standards for reproductive health policy and practice. Topics include: reproductive justice, contraception, pregnancy, reproductive control, and family leave. Course discussions include a focus on health policy and activism to affect change related to women's reproductive health, all within a framework of reproductive justice. A major emphasis is on developing critical thinking skills that can be applied to issues of women's reproductive health in order to educate and empower students to become proactive healthcare consumers.
Prerequisite(s): SOC 201 or ANTH 303 or HUM 303 or SOC 303 or PSYC 303 or WGST 303

WGST 445  20C/21C Women Authors  3 Credit Hours
An analysis of selected works by significant and emerging 20th and 21st century women authors writing in English, with special emphasis on issues of gender and social and cultural identity.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)
Restriction(s):
Cannot enroll if Class is Graduate
Cannot enroll if Level is

WGST 446  Marriage and Family Problems  3 Credit Hours
Sociological analysis of problems encountered within the institution of marriage with particular reference to such issues as choosing a marriage partner, sexual adjustment, occupational involvement, conflict resolution, child rearing, divorce and readjustment. Students cannot receive credit for both SOC 446 and SOC 546. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

WGST 447  Family Violence  3 Credit Hours
Sociological analyses of various forms of family violence which occur disproportionately in the lives of girls and women. Topics such as incest, sexual abuse, date rape, wife battering and elder abuse will be situated within the social and cultural context of contemporary gender relationships. Social and political responses to the phenomena will be examined. Students cannot receive credit for both WGST 447 and WGST 547.
Prerequisite(s): SOC 200 or SOC 201 or SOC 301 or SOC 443 or PSYC 405 or WST 405
Restriction(s):
Can enroll if Level is Undergraduate

WGST 4505  Feminism & Mod. Mid. East  3 Credit Hours
This course provides an analysis of the history, historiography, and sources for the study of feminism in the Middle East since 1800.
Prerequisite(s): COMP 106 or HIST 101 or HIST 113 or WGST 303
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore
**WGST 451 Family, Sexuality, Rights  3 Credit Hours**

Full Course Title: Family, Sexuality, and Human Rights in a Changing World. This course investigates the changing possibilities for forming families and expressing sexuality, with a focus on how nation states and legal and cultural systems construct and respond to these changes. Selected topics include the meanings of sex, love, marriage, and relatedness in different historical moments; struggles for recognition of varied kinship and family arrangements, such as interracial, interfaith, same-sex, polygamous and multi-partner relationships; and new technologies and their implications for family life. (YR)

**Prerequisite(s):** (WGST 303 or SOC 303 or ANTH 303 or PSYC 303 or HUM 303) or (SOC 200 or SOC 201) or (ANTH 101 or ANTH 202)

**Restriction(s):**
Can enroll if Class is Sophomore or Junior or Senior

**WGST 455 Gender and Media Studies  3 Credit Hours**

The course will focus on several feminist approaches used in understanding the media and attempting to create social change through the media. The role of media in the definition and reproduction of gender-based hierarchies and in the renegotiation of gender boundaries will both be explored. To this end, both mainstream and women’s media will be examined. The course will take a multicultural and international perspective, incorporating concerns of class, race, ethnicity and nation as these intersect with the study of gender and media. Mainstream and alternative media will be analyzed through readings, films, case studies, in-class collaborative exercises and long-term projects. News, entertainment and advertising genres will be examined in a variety of media, such as the printed press, television, video, film and the Internet.

**Prerequisite(s):** WGST 303 or HUM 303 or ANTH 303 or PSYC 303 or SOC 303 or WGST 275 or HUM 275 or ANTH 275 or PSYC 275 or SOC 275 or WST 275

**Restriction(s):**
Can enroll if Level is Undergraduate

**WGST 4555 Immigrant Cultures and Gender  3 Credit Hours**

The history and culture of immigration since 1850, including: (1) formation and perseverance of immigrant communities and interethnic boundaries; (2) relations between the homeland and the immigrant; and (3) impact of migration on family life and gender roles. Prerequisite and junior or senior standing. Students may not receive credit for both WGST 4555 and WGST 5555. For graduate credit take WGST 5555. (AY)

**Prerequisite(s):** ANTH 101 or WGST 275 or WST 275 or PSYC 275 or SOC 275 or ANTH 275 or HUM 275 or WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303

**Restriction(s):**
Can enroll if Level is Undergraduate

**WGST 461 Cops & Cons: Women in Prison  3 Credit Hours**

Course uses contemporary theories of gendered organizations to frame analyses of prison policies and practices in employment and incarceration as they reflect and reproduce gender inequalities. Analyses will be framed within a restorative justice model, that is, a critique of the current criminal justice system of retributive justice and a paradigm of what a alternative system could be.

**Prerequisite(s):** PSYC 275 or SOC 275 or ANTH 275 or HUM 275 or WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303 or SOC 200 or SOC 201 or CRJ 240 or CRJ 300

**Restriction(s):**
Can enroll if Class is Junior or Senior

**WGST 4650 Sem in US Women’s History  3 Credit Hours**

Seminar on the historiography and key primary sources related to U.S. Women’s History. The course covers examples of classic texts in the field as well as significant new works of scholarship, with an emphasis on critical reading, analysis, and historiography of the field. Students gain a deeper understanding of the field, its guiding concepts, foundational texts, newest trajectories, and impact on the field of history as a whole. The graduate version of this course includes weighter readings and assignments.

**Prerequisite(s):** HIST 300

**Restriction(s):**
Cannot enroll if Class is Freshman or Sophomore

**WGST 466 Arguing Feminism: Rhetoric, Writing & Advocacy  3 Credit Hours**

Full course title: Arguing Feminism: Rhetoric, Writing & Advocacy. An introduction to the work of major twentieth century feminists working in rhetoric and related fields. Students examine recurring themes of language, meaning, ethics and ideology, and practice writing strategies which address rhetorical and ethical concerns central to feminist/academic writing. (AY)

**Prerequisite(s):** COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107

**Restriction(s):**
Cannot enroll if Class is Freshman
Can enroll if Level is Undergraduate

**WGST 470 Black Women / Lit, Film, Music  3 Credit Hours**

This course will examine works produced by Black women authors, activists, filmmakers and musical performers in order to determine the methods they have incorporated in order to challenge and eradicate the prevailing stereotypes about Black women while advancing their own personal and racial agendas. It will also focus on the extent to which race, gender and class have shaped the creative work of Black women. Students will be required to read, discuss, analyze and write their own responses to the works of such firebrands as author Zora Neale Hurston, activist Ida B. Wells, filmmaker Julie Dash, and singer Billie Holliday.

**Prerequisite(s):** FILM 240 or FILM 248 or FILM 385 or AAAS 239 or AAAS 275 or HUM 303 or HUM 221 or HUM 222 or HUM 223 or HUM 248 or ENGL 200 or ENGL 205 or ENGL 206 or ENGL 231 or ENGL 292 or ENGL 233 or ENGL 237 or ENGL 238 or ENGL 239 or ENGL 248 or WGST 248 or ANTH 303 or PSYC 303 or SOC 303 or WGST 363

**Restriction(s):**
Cannot enroll if Program is
WGST 471  LGBTQ Literature  3 Credit Hours
This course surveys primarily contemporary literature by writers who identify as gay, lesbian, bi-sexual, transgender, or queer. By studying the self-representation and culturally unique perspective of this emerging canon of writers, students in this course understand the emergence of LGBTQ literary traditions and understand the cultural diversity within these traditions. Students learn to identify the aesthetic qualities (such as camp, performativity, coded subtexts, homoeroticism, and the relationship between creativity and sexuality), and historical, political, and social concerns that characterize LGBTQ literary and cultural production. Topics covered include the struggle for civil rights before and after Stonewall, coming out narratives, the negotiation of homophobic cultures, post-colonial writers, and memoirs of the LGBTQ experience, as well as the historical emergence of sexual categories and the literary critique of heteronormativity. This course counts toward the English discipline diversity requirement. Students cannot receive credit for ENGL 471 and ENGL/WGST 571.
Prerequisite(s): (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239) and (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107)

WGST 473  Arab American Women Writers  3 Credit Hours
Examines the literary and cultural contributions of Arab and Arab American women novelists, poets and artists to the development and consolidation of the cultures of understanding and coexistence; explores the tensions between citizenship and belonging, race and the politics of fears, gender and geographical mobility, and ethnic minorities and mainstream consciousness; discerns how Arab women writers and artists retool their various artistic endeavors to channel socio-political disenchantment, critique and civil disobedience; stresses how literary and artistic productions of a heterogeneous number of Arab American women writers and artists can indeed foster alternative visions of socio-cultural coexistence, dialogue and hospitality via artistic commitments to technical and stylistic experimentation and renovation. Students cannot receive credit for both ENGL 473 and ENGL 573. For graduate credit take ENGL 573.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)
Restriction(s):
Cannot enroll if Class is

WGST 475  Soc Construct Mental Illness  3 Credit Hours
Diversity Issues in Mental Health explores varied cultural descriptions and models of mental illness. By focusing on the ways that culture shapes how people experience, and respond to, mental illness this class explores cultural representations of mental illness, ranging from discrete illness resulting from a chemical imbalance to a profound threat to order. We seek to understand the cultural, personal, and political underpinnings of mental illness and medical practices in societies throughout the world. The course utilizes an interdisciplinary perspective, drawing from multiple sources of information regarding mental health issues, including feminism, psychiatry, history, sociology, and literature. Issues raised throughout the course include the ways gender, race, culture, religion, and stigma influence the diagnosis of mental illness, patterns of help-seeking behavior, formation of comprehensive mental health policy, and treatment options. (F, W).
Prerequisite(s): SOC 200 or SOC 201 or ANTH 303 or HUM 303 or SOC 303 or PSYC 303 or WGST 303

WGST 476  Inside Out Prison Exchange  4 Credit Hours
This community-based course, taught in a local correctional facility, brings university students and incarcerated students together to study as peers. Together students explore issues of crime and justice, drawing on one another to create a deeper understanding of how these issues affect our lives as individuals and as a society. The course creates a dynamic partnership between UMD and a correctional facility to allow students to question approaches to issues of crime and justice in order to build a safer and more just society for all. The course encourages outside (UMD) students to contextualize and to think deeply about what they have learned about crime and criminals and to help them pursue the work of creating a restorative criminal justice system; it challenges inside students to place their life experiences into larger social contexts and to rekindle their intellectual self-confidence and interest in further education. (F, W).
Restriction(s):
Can enroll if Class is Junior or Senior

WGST 477  Women and Gend Studies Intern  3 Credit Hours
Provides field experience in social welfare or criminal justice agencies e.g., for children/adolescents in residential programs, in abuse remediation, in probation, for chemical dependencies, in victim advocacy, for the elderly, in prisons, for special needs populations, in services, in medical/public health, in police services, and for families and communities. Supervision by approved field instructors. An internship of 80 hours is required for three (3) credits. Instructor and student will work together to determine appropriate intern placement. Approval of instructor and the Women's Studies Director is required.
Prerequisite(s): ANTH 275 or SOC 275 or WST 275 or PSYC 275 or HUM 275 or WGST 275 or WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303

WGST 481  Gender and Globalization  3 Credit Hours
Mass media, politics and academia are full of references to globalization, and a future "world without borders." This interdisciplinary course considers the implication of globalisation for women's lives, gender relations and feminism. Topics covered include the global factory, cross-cultural consumption, human rights, global communications, economic restructuring, nationalism and environmental challenges. Rather than survey international women's movements, this course explores how globalisation reforulates identities and locations and the political possibilities they create.
Prerequisite(s): HUM 303 or PSYC 303 or SOC 303 or WGST 303
Restriction(s):
Can enroll if Level is Undergraduate
WGST 484  Violence Against Women  3 Credit Hours
Course examines local and global social violence against women outside family and other intimate relationships. Students consider violations against women's human rights through the life cycle, which are often sanctioned under the guise of cultural practices and misinterpretations of religious tenets. Topics include sex-selective abortion and female infanticide (the "missing millions"); female genital mutilation and cosmetic surgeries; prostitution and pornography; trafficking in women; sexual harassment; and women's experiences of war as soldiers, non-combatants and refugees. Topics are "paired", that is, students compare understandings of Western and non-Western social practices related to gender. Students examine both institutionalized sexism and racism, as part of political, economic, and social systems, and sexism and racism as realities affecting individual women's lives.

Prerequisite(s): SOC 200 or SOC 201 or WGST 303 or HUM 303 or PSYC 303 or ANTH 303 or SOC 303 or WGST 275 or HUM 275 or PSYC 275 or SOC 275 or ANTH 275 or WST 275
Restriction(s):
Cannot enroll if Class is Freshman
Can enroll if Level is Undergraduate

WGST 486  Queer Theory & Literature  3 Credit Hours
This course reads theories of sexuality to analyze how writers since 1600 have imagined printed text to reflect and shape desire, particularly same-sex desire. The course questions how same-sex desire appears in literature written before the theorization of "the Homosexual" in the late nineteenth century as well as how writers imagine sexuality before a hetero/homosexual binary appears. Writers may include contemporary theorists (Sedgwick, Foucault, Butler) as well as novelists (Gaskell and Stoker), playwrights (Kushner and Wycherley), and poets.

Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239 or AAAS 239)

WGST 487  Monsters, Women & the Gothic  3 Credit Hours
This course questions our inheritance of "the gothic" as a district literary style that continues to discipline readers’ notions of gender and sexual identity. The course argues that by tracing the gothic’s literary history, we may simultaneously witness a history of gender formation. Readings may include English novelists who originated a gothic style in English (Walpole, Radcliffe, Lewis) as well as English and American poets and novelists who have debated as well as resisted the effects of the gothic on readers’ (particularly women’s) psychology (Christina Rossetti, Austen, King, Stoker).

Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)

WGST 490  Topics in Women's Studies  3 Credit Hours
Examination of problems and issues related to Women's Studies. Title as listed in Schedule of Classes will change according to specific content. Course may be repeated for credit when specific topics differ.

Prerequisite(s): WST 275 or WGST 275 or LIBS 580 or WGST 303
Restriction(s):
Can enroll if Level is Undergraduate

WGST 498  Women's & Gender St Thesis  1 to 6 Credit Hours
A thesis project that is the culmination of the minor in Women's Studies. Students meet with the instructor to reflect on past studies and plan current projects, to conduct research that addresses a gender issue in the larger community, and to write a thesis under the direction of the faculty member. Research involving participant-observer in social agencies is encouraged where appropriate.

Restriction(s):
Can enroll if Level is Undergraduate

WGST 499  Independent Studies  1 to 6 Credit Hours
Provides opportunity for qualified Women's Studies students to pursue independent research under the direction of a qualified faculty member. Project must be defined in advance, in writing and must be in a subject not currently offered in the regular curriculum.

Restriction(s):
Can enroll if Level is Undergraduate
2020-2021 GRADUATE CATALOG

Graduate Admissions
Office of Graduate Studies
4901 Evergreen Road
1055 Administration Building
Dearborn, MI 48128
313-583-6321
umd-graduatestudies@umich.edu
umdearborn.edu/admissions/graduate (http://www.umdearborn.edu/admissions/graduate/)

General Admission Requirements
All graduate applicants are required to meet the following minimum requirements for admission:

- Completion of a bachelor’s degree from an approved institution. Criteria vary based on whether you earned your bachelor’s degree from a US institution (https://umdearborn.edu/admissions/graduate/how-apply/basic-admission-requirements/us-regional-accreditation/) or an institution outside of the United States (https://umdearborn.edu/admissions/graduate/how-apply/basic-admission-requirements/international-undergraduate-degree-requirements/).
- Applicants whose native language is not English must demonstrate English proficiency.

Additional Requirements
Additional requirements vary by program. A summary of basic requirements can be found sorted by college in our Prerequisites by College (p. 496) section of this catalog.

Applicants are considered for admission without regard to race, color, national origin, age, marital status, sex, sexual orientation, gender identity, gender expression, disability, religion, height, weight, or veteran status.

A holistic review of each applicant is conducted. Admission is granted to applicants who have been recommended for admission by the program to which they have applied. Preference is generally given to students who have at least a B average (3.0 in a 4.0 grading system) in relevant undergraduate coursework or otherwise provide evidence of promise that is satisfactory to the admitting program.

Admitted international students seeking an F-1 or J-1 visa must submit an Affidavit of Financial Support along with an original bank certification (in English) from their financial supporter or a detailed letter of sponsorship from a government, employer, or other organization indicating the exact dollar amount available for expenses in U.S. funds. The bank statement must show the required available funds as specified on the affidavit. The Affidavit of Financial Support is valid for one year. See more at umdearborn.edu/offices/international-affairs/admitted-international-students (https://umdearborn.edu/offices/international-affairs/admitted-international-students/).

Applying for Graduate Admission
Find current information at: umdearborn.edu/grad_applynow/ (http://www.umdearborn.edu/grad_applynow/)

We serve highly motivated candidates whose accomplishments suggest the ability to successfully complete a rigorous program of graduate study. Applicants are evaluated not only for academic ability, but for career goals and overall “fit” for their selected program of study. Applicants should carefully review the available programs and choose one that is most appropriate for their future goals. Application deadlines (umdearborn.edu/grad_appdeadlines/ (http://www.umdearborn.edu/grad_appdeadlines/)) vary by program. Note: Not all programs admit for every term.

A generalized list of steps for how to apply is provided below. Complete details can be found at: umdearborn.edu/grad_applynow/ (http://www.umdearborn.edu/grad_applynow/)

- Submit an online application.
- Complete a statement of purpose.
- Gather required letter(s) of recommendation.
  - College of Arts, Sciences, and Letters (CASL): 3
  - College of Business (COB): 1
  - College of Education, Health, and Human Services (CEHHS): 3
  - College of Engineering and Computer Science (CECS): 2 for master’s level; 3 for doctoral level
- Provide current copy of CV/resume.
- Request official college/university transcripts from all institutions attended.
- Request any relevant test scores (GRE or GMAT) be sent. Not all programs require a standardized test.
- Submit required language proficiency scores (TOEFL or IELTS) if a non-native English speaker. Please refer to the policies below.

English Language Requirements for Graduate Admission
Applicants whose native language is not English must demonstrate English proficiency and are required to provide an official score report of an accepted English Language Proficiency Test. Proficiency tests that are accepted are the International English Language Testing System (IELTS) and the Test of English as a Foreign Language (TOEFL). Our TOEFL institution code is 1861. Applicants only need to take one of these test options. Achieving the minimum score does not guarantee admission, only consideration. The table below provides the minimum score required by test type.

English Proficiency Exemptions
- Applicants who have earned or will earn a bachelor’s or master’s degree from an institution where the language of instruction is exclusively English may be exempt from submitting an Official English Proficiency Score. Verification from the school may be required.

The following graduate degree programs will not grant this exemption and require submission of an accepted English Language Proficiency Test:
Prerequisites by College

- Automotive Systems and Mobility (DEng)
- Automotive Systems Engineering (MSE)
- Bioengineering (MSE)
- Computer and Information Science (PhD)
- Electrical, Electronics and Computer Engineering (PhD)
- Industrial and Systems Engineering (PhD)
- Materials Science and Engineering (MSE)
- Mechanical Sciences and Engineering (PhD)
- Mechanical Engineering (MSE)

Applicants who have earned or will earn a bachelor's or master's degree from a country where the official language is English (United States of America, Australia, or England) are exempt from submitting an Official English Proficiency Score.

College of Arts, Sciences, and Letters
Applied and Computational Mathematics (MS)

Undergraduate Degree Required
Bachelor's degree in mathematics, a physical or life science, or engineering with an expected 3.0 minimum cumulative GPA or higher

Standardized Test Scores
GRE not required

Prerequisite Courses

- 3 courses in calculus, including multivariate calculus*
- Introductory course in linear algebra*
- Introductory course in differential equations*

* Prerequisite courses may be taken concurrently

Accelerated 4+1 Option
Current UM-Dearborn students may be eligible for the 4+1 option (https://umdearborn.edu/casl/graduate-programs/programs/master-science-applied-and-computational-mathematics/applied-and-computational-mathematics-41-option/) if they have:

- declared a mathematics major with at least 60 completed credit hours
- a cumulative GPA of at least 3.2
- completed the following prerequisite courses:
  - CIS/CCM 150 (or CIS 1501 or CCM 172)
  - MATH 227 (grade of B+ or better)
  - MATH 228 (grade of B+ or better)
  - MATH 300

Criminology and Criminal Justice (MS)

Undergraduate Degree Required
Bachelor's degree with an expected minimum cumulative GPA of 3.0 or higher

Standardized Test Scores
GRE not required

Prerequisite Courses

- Introduction to Criminal Justice (CRJ 200 or equivalent)*
- Criminology (CRJ 468 or equivalent)*
- Criminal Law (CRJ 416 or equivalent)*

* Prerequisite courses should be completed prior to graduate coursework; these courses may be taken concurrently with graduate coursework at the discretion of the program director

Accelerated 4+1 Option
Current UM-Dearborn undergraduate Criminology and Criminal Justice students who have completed at least 60 credit hours with a cumulative GPA of 3.0 or better may be eligible to enroll in the 4+1 accelerated option (p. 504).
Environmental Science (MS)

Undergraduate Degree Required
Bachelor's degree with a foundation in basic science akin to Environmental Science (p. 116), Geological Sciences (p. 123), Environmental Studies (p. 117), or equivalent as determined by the program director

Standardized Test Scores
GRE not required

Prerequisite Courses
Applicants outside of traditional Natural Sciences degrees are strongly encouraged to speak with the program director for additional information pertinent to their application for admission. As part of admission review, any prerequisite coursework not previously taken that is determined to be necessary for success in the program will be individually itemized.

Psychology (MS)

Undergraduate Degree Required
Bachelor's degree in Psychology or a related major with an expected minimum cumulative GPA of 3.0 or higher.

Undergraduate Degree Required
Bachelor's degree with an expected minimum cumulative GPA of 3.0 or higher.

Standardized Test Scores
GRE (http://www.ets.org/gre/)
The admission review committee will consider a waiver request (https://umich.app.box.com/s/rhq3kg4j9s159j2psytellyg0a0bwkzi/) on a case-by-case basis, though waivers are not generally granted.

Prerequisite Courses
- Introductory psychology
- Statistics
- Abnormal psychology

Public Administration and Policy (MPAP)

Undergraduate Degree Required
Bachelor's degree with an expected minimum cumulative GPA of 3.0 or higher.

Standardized Test Scores
GRE not required

Other Experience Required
Public or non-profit management experience is required or an additive credit internship may need to be taken

College of Business

Accounting (MS)

Undergraduate Degree Required
Equivalent of a four-year U.S. bachelor's degree from a regionally accredited institution

Standardized Test Scores

Business Administration (MBA)

Undergraduate Degree Required
Equivalent of a four-year U.S. bachelor's degree from a regionally accredited institution

Standardized Test Scores
__hstc=202220878.786ca484f45d06c02d65869df70e46d5.1464036529725.1464036529725.

should select "Yes" when asked if you qualify for a GMAT/GRE waiver within the Test Score section of the online application.

**Dual Degree - Accounting (MS)/Finance (MS)**

**Undergraduate Degree Required**
Equivalent of a four-year U.S. bachelor’s degree from a regionally accredited institution

**Standardized Test Score**
GMAT (http://www.ets.org/gre/)

**Prerequisite Courses**
A grade of C or better in an undergraduate course in college algebra, trigonometry, pre-calculus, or higher.

*Eligibility criteria (https://umdearborn.edu/cob/graduate-programs/admission/?utm_source=umdearborn.edu&utm_medium=http301&utm_campaign=redirect%3A//umdearborn.edu/cob/mscriteria) is available on the College of Business website for a GMAT/GRE waiver. Qualifying applicants should select "Yes" when asked if you qualify for a GMAT/GRE waiver within the Test Score section of the online application.

**Dual Degree - Business Administration (MBA)/Financial (MS)**

**Undergraduate Degree Required**
Equivalent of a four-year U.S. bachelor’s degree from a regionally accredited institution

**Standardized Test Score**
GMAT (http://www.ets.org/gre/)

**Prerequisite Courses**
A grade of C or better in an undergraduate course in college algebra, trigonometry, pre-calculus, or higher.

*Eligibility criteria (https://umdearborn.edu/cob/graduate-programs/admission/?utm_source=umdearborn.edu&utm_medium=http301&utm_campaign=redirect%3A//umdearborn.edu/cob/mscriteria) is available on the College of Business website for a GMAT/GRE waiver. Qualifying applicants should select "Yes" when asked if you qualify for a GMAT/GRE waiver within the Test Score section of the online application.

**Dual Degree - Business Administration (MBA)/Industrial Systems Engineering (MSE)**

The College of Business and the College of Engineering and Computer Science offer an innovative dual degree program leading to the simultaneous award of a Master in Business Administration (MBA) and a Master of Science in Engineering -Industrial & Systems Engineering (MSE-ISE).

**Undergraduate Degree Required**
Bachelor's degree in engineering, a physical science, computer science, or applied mathematics

**Standardized Test Scores**
GMAT (http://www.ets.org/gre/)

**Prerequisite Courses**
A course in probability and statistics (IME 510 or equivalent)**
A course in operations research (IME 500 or equivalent)**

*Eligibility criteria (https://umdearborn.edu/cob/graduate-programs/admission/?utm_source=umdearborn.edu&utm_medium=http301&utm_campaign=redirect%3A//umdearborn.edu/cob/mscriteria) is available on the College of Business website for a GMAT/GRE waiver. Qualifying applicants should select "Yes" when asked if you qualify for a GMAT/GRE waiver within the Test Score section of the online application.

**Dual Degree - Business Administration (MBA)/Health Services Administration (MHSA)**

**Undergraduate Degree Required**
Equivalent of a four-year U.S. bachelor’s degree from a regionally accredited institution

**Standardized Test Scores**
GMAT (http://www.ets.org/gre/)

**Prerequisite Courses**
A grade of C or better in an undergraduate course in college algebra, trigonometry, pre-calculus, or higher.

*Eligibility criteria (https://umdearborn.edu/cob/graduate-programs/admission/?utm_source=umdearborn.edu&utm_medium=http301&utm_campaign=redirect%3A//umdearborn.edu/cob/mscriteria) is available on the College of Business website for a GMAT/GRE waiver. Qualifying applicants should select "Yes" when asked if you qualify for a GMAT/GRE waiver within the Test Score section of the online application.

**Dual Degree - Business Administration (MBA)/Information Systems (MS)**

**Undergraduate Degree Required**
Equivalent of a four-year U.S. bachelor’s degree from a regionally accredited institution

**Standardized Test Score**
GMAT (http://www.ets.org/gre/)

**Prerequisite Courses**
A grade of C or better in an undergraduate course in college algebra, trigonometry, pre-calculus, or higher.

*Eligibility criteria (https://umdearborn.edu/cob/graduate-programs/admission/?utm_source=umdearborn.edu&utm_medium=http301&utm_campaign=redirect%3A//umdearborn.edu/cob/mscriteria) is available on the College of Business website for a GMAT/GRE waiver. Qualifying applicants should select "Yes" when asked if you qualify for a GMAT/GRE waiver within the Test Score section of the online application.

Prerequisite Courses
A grade of C or better in an undergraduate course in algebra, trigonometry, pre-calculus, or higher.

*Eligibility criteria (https://umdearborn.edu/cob/graduate-programs/admission/?utm_source=umdearborn.edu&utm_medium=http301&utm_campaign=redirect&utm_content=https://umdearborn.edu/cob/graduate-programs/admission/)

---

Information Systems (MS)

Undergraduate Degree Required
Equivalent of a four-year U.S. bachelor's degree from a regionally accredited institution

Standardized Test Scores

Prerequisite Courses
A grade of C or better in an undergraduate course in college algebra, trigonometry, pre-calculus, or higher.

*Eligibility criteria (https://umdearborn.edu/cob/graduate-programs/admission/?utm_source=umdearborn.edu&utm_medium=http301&utm_campaign=redirect&utm_content=https://umdearborn.edu/cob/graduate-programs/admission/)

---

Marketing (MS)

Undergraduate Degree Required
Equivalent of a four-year U.S. bachelor's degree from a regionally accredited institution

Standardized Test Scores

Prerequisite Courses
A grade of C or better in an undergraduate course in college algebra, trigonometry, pre-calculus, or higher.

*Eligibility criteria (https://umdearborn.edu/cob/graduate-programs/admission/?utm_source=umdearborn.edu&utm_medium=http301&utm_campaign=redirect&utm_content=https://umdearborn.edu/cob/graduate-programs/admission/)

Finance (MS)

Undergraduate Degree Required
Equivalent of a four-year U.S. bachelor's degree from a regionally accredited institution

Standardized Test Score

Prerequisite Courses
A grade of C or better in an undergraduate course in algebra, trigonometry, pre-calculus, or higher.

*Eligibility criteria (https://umdearborn.edu/cob/graduate-programs/admission/?utm_source=umdearborn.edu&utm_medium=http301&utm_campaign=redirect&utm_content=https://umdearborn.edu/cob/graduate-programs/admission/)

---

Supply Chain Management (MS)

Undergraduate Degree Required
Equivalent of a four-year U.S. bachelor's degree from a regionally accredited institution

Standardized Test Scores

Prerequisite Courses
A grade of C or better in an undergraduate course in algebra, trigonometry, pre-calculus, or higher.

*Eligibility criteria (https://umdearborn.edu/cob/graduate-programs/admission/?utm_source=umdearborn.edu&utm_medium=http301&utm_campaign=redirect&utm_content=https://umdearborn.edu/cob/graduate-programs/admission/)
of Business website for a GMAT/GRE waiver. Qualifying applicants should select “Yes” when asked if you qualify for a GMAT/GRE waiver within the Test Score section of the online application.

College of Education, Health, and Human Services

Applied Behavior Analysis (MS)

Undergraduate Degree Required
Bachelor’s degree with a 3.0 GPA or higher

Standardized Test Scores
GRE not required

Accelerated 4+1 Option
Eligibility criteria for the 4+1 option (https://umdearborn.edu/cehhs/graduate-programs/areas-study/ms-applied-behavior-analysis/41-applied-behavior-analysis-accelerated-program/) include:

• current UM-Dearborn undergraduate student
• cumulative GPA of 3.25 or better
• earned at least 60 credits at the undergraduate level

Community Based Education (MA)

Undergraduate Degree Required
Bachelor’s degree with a 3.0 GPA or higher

Standardized Test Scores
GRE not required

Early Childhood Education (MA)

Undergraduate Degree Required
Bachelor’s degree with a 3.0 GPA or higher

Standardized Test Scores
GRE not required

Other Experience Required
Teaching certificate required for the Early Childhood Specialist concentration

Education (EdD)

Previous Degree Required
Master’s degree with a 3.3 GPA or higher

Standardized Test Scores
GRE (http://www.ets.org/gre/) required

Other Experience Required
At least 3 years teaching experience or the equivalent experience working in a professional setting

Education (MA)

Undergraduate Degree Required
Bachelor’s degree with a 3.0 GPA or higher

Standardized Test Scores
GRE not required

Other Experience Required
Teaching certificate required if seeking concentration tied to additional endorsement

Education Specialist (EdS)

Previous Degree Required
Master’s degree with a 3.3 GPA or higher

Standardized Test Scores
GRE not required

Other Experience Required
At least 3 years teaching experience or the equivalent experience working in a professional setting

Educational Leadership (MA)

Undergraduate Degree Required
Bachelor’s degree with a 3.0 GPA or higher

Standardized Test Scores
GRE not required

Other Experience Required
None

Educational Technology (MA)

Undergraduate Degree Required
Bachelor’s degree with a 3.0 GPA or higher

Standardized Test Scores
GRE not required

Accelerated 4+1 Option
Eligibility criteria for the 4+1 option (https://umdearborn.edu/cehhs/graduate-programs/areas-study/ma-educational-technology-online/41-educational-technology-accelerated-program/) include:

• current UM-Dearborn undergraduate Instructional Technology student
• cumulative GPA of 3.0 or better
• earned at least 60 credits at the undergraduate level

Health Information Technology (MS)

Undergraduate Degree Required
Bachelor’s degree with a 3.0 GPA or higher

Program Evaluation and Assessment (MA)

Undergraduate Degree Required
Bachelor’s degree with a 3.0 GPA or higher

Standardized Test Scores
GRE not required

Teaching (MA)

Undergraduate Degree Required
Bachelor’s degree with a 3.0 GPA or higher

Standardized Test Scores
GRE not required
College of Engineering and Computer Science

Artificial Intelligence (MS)
Undergraduate Degree Required
Bachelor’s degree in science, technology, engineering, or mathematics (STEM) field with a cumulative GPA of 3.0 (on a 4.0 scale) or higher

Standardized Test Scores
GRE not required

Prerequisite Courses

- Course in Probability and Statistics (IMSE 317 or STAT 326 or MATH 425 or equivalent)
- Course in Programming (CIS 2001/CIS 200 and CIS 350 or equivalent)
- Calculus II (MATH 116 or equivalent)
- Discrete Structures (CIS 275 or ECE/MATH 276 or equivalent)
- Calculus III (MATH 215 or equivalent) Recommended
- Linear Algebra (MATH 227 or equivalent) Recommended

*If missing prerequisite course(s), they may be taken concurrently within first two semesters of enrollment in the program (B or better) if admitted

Automotive Systems Engineering (MSE)
Undergraduate Degree Required
Bachelor’s degree in engineering from an ABET-accredited program with a minimum cumulative GPA of 3.0 (on a 4.0 scale)

Standardized Test Scores
GRE not required

Bioengineering (MSE)
Undergraduate Degree Required
Bachelor of Science (BS) in bioengineering or a related engineering or science discipline from an ABET-accredited program (http://main.abet.org/aps/Accreditedprogramsearch.aspx) with a cumulative grade point average of 3.0/4.0 or better

Students from non-bioengineering fields may be required to take preparatory courses before or after starting the program. If admission prerequisites are unfulfilled, the applicant must speak to an advisor (https://umdearborn.edu/academics/graduate-studies/offices-graduate-studies/graduate-program-specific-contacts/).

Standardized Test Scores
GRE not required

Prerequisite Courses

- Anatomy & physiology with lab
- One year of calculus-based physics (2 courses; PHYS 150 and PHYS 151 or equivalents)
- One year of chemistry (2 courses; CHEM 134 and CHEM 136 or equivalents)
- Mathematics through calculus III (MATH 205 or MATH 215 or equivalents) AND ordinary differential equations (MATH 216 or equivalent)
- Engineering core, including the following courses at minimum:
  - Solid mechanics and dynamics (ME 265 or equivalent)
  - Thermo-fluid sciences (BENG 325 or equivalent)

Accelerated 4+1 Option
Current UM-Dearborn undergraduate students who have:

- completed at least 60 undergraduate credit hours
- attained Junior standing
- cumulative GPA of 3.4 or higher

Interested students must also have completed the following courses with a B+ or better:

- ME 265 and ME 230
- At least two: BENG 325, 351, 370, 375, 381

Note: a pre-admission interview is required for all applicants to the 4+1 option.

Automotive Systems and Mobility (DEng)

Previous Degrees Required

- Bachelor’s degree from an accredited program with an expected GPA of 3.0 or higher on a 4-point scale
- Master’s degree in a related engineering or computer science field from an accredited program with an expected GPA of 3.2 or higher on a 4-point scale

Standardized Test Scores
GRE (http://www.ets.org/gre/) required

Other Experience Required

At least 2 years of full-time equivalent engineering experience

Please note: Preference will be given to applicants who meet one of the following criteria:

- Scholarships provided by companies or government organizations
- Employer commitment in writing (ex. reduced working hours to 30 hours/week for three years)

Computer and Information Science (MS)
Undergraduate Degree Required
Bachelor’s degree from an accredited program with a minimum GPA of 3.0 or higher

Standardized Test Scores
GRE not required

Prerequisite Courses

- Calculus I & II * (MATH 115 and 116 or equivalents)
- CIS 310 or equivalent (Computer Organization)*
- CIS 350 or equivalent (Data Structures and Algorithm Analysis)*
Other Experience Required
Proficiency in at least 1 high-level programming language
(preferably C/C++ 1&2 or Java 1&2)

*Prerequisite courses may be taken concurrently within 2 years of admission to program.

Computer and Information Science (PhD)

Previous Degrees Required
- Bachelor or master's degree in engineering, applied mathematics, computer science, or a physical science
  - Bachelor's degree expected GPA of 3.2 or higher on a 4-point scale
  - Master's degree expected GPA of 3.5 or higher on a 4-point scale

Standardized Test Scores
GRE (http://www.ets.org/gre/) required

Prerequisite Courses
- 12 credit hours in Calculus
- Linear Algebra (MATH 217 or MATH 227 or equivalent)
- Data Structures (CIS 350 or equivalent)
- Computer Organization (CIS 310 or equivalent)
- Operating Systems (CIS 450 or equivalent)
- Calculus-based Probability and Statistics (IMSE 317 or equivalent)

Data Science (MS)

Undergraduate Degree Required
Bachelor's degree in a Science, Technology, Engineering, or Mathematics (STEM) field with an average of 3.0 on the 4.0 scale

Standardized Test Scores
GRE not required

Prerequisite Courses
- One course in programming (CIS 2001 OR CIS 200 or equivalent)
- Calculus II (MATH 116 or equivalent)
- Probability and Statistics (IMSE 317 OR STAT 326 OR MATH 425 or equivalent)
- Calculus III (MATH 215 or equivalent) Recommended
- Linear Algebra (MATH 227 or equivalent) Recommended

*Prerequisite courses may be taken concurrently within first 2 semesters in the program.

Cybersecurity and Information Assurance (MS)

Undergraduate Degree Required
Bachelor's degree in a Science, Technology, Engineering, or Mathematics (STEM) field with a cumulative GPA of 3.0 on a 4.0 scale

Standardized Test Scores
GRE not required

Prerequisite Courses
- Probability and Statistics (IMSE 317 or STAT 326 or MATH 425 or equivalent) required
- Programming
  - CIS 200/CIS 2001 or equivalent required
  - CIS 350 or equivalent recommended
- Mathematics

*If admission prerequisites are unfulfilled, the applicant must speak to an advisor (https://umdearborn.edu/academics/graduate-studies/office-graduate-studies/graduate-program-specific-contacts/).
Electrical, Electronics and Computer Engineering (PhD)

Previous Degrees Required

• Bachelor or master’s degree in electrical and/or computer engineering or computer science with an expected GPA of 3.2 or higher on a 4-point scale

Backgrounds in other engineering fields, physical science or mathematical science may be considered with the understanding that additional coursework may be required

Standardized Test Scores
GRE (http://www.ets.org/gre/) Required

Prerequisite Courses

• Ordinary Differential Equations (MATH 216 or equivalent)
• Linear Algebra (Math 227 or equivalent)
• Probability and Statistics (IMSE 317 or equivalent)
• Data Structures and Algorithms (IMSE 351 or equivalent)
• Knowledge in computer programming

Industrial and Systems Engineering (MSE)

Previous Degrees Required

GRE not required

Prerequisite Courses

• A course in probability and statistics (IMSE 510 or equivalent)*
• A course in operations research (IMSE 500 or equivalent)*

*If admission prerequisites are unfulfilled, the applicant must speak to an advisor (https://umdearborn.edu/academics/graduate-studies/office-graduate-studies/graduate-program-specific-contacts/).

Energy Systems Engineering (MSE)

Undergraduate Degree Required
Bachelor's degree in Engineering with an overall GPA of 3.0 or higher

Standardized Test Scores
GRE not required

Engineering Management (MS)

Undergraduate Degree Required
Bachelor's degree in engineering or a degree in math, computer science, or a physical science coupled with at least 2 years experience in engineering after completion of bachelor's degree

Standardized Test Scores
GRE not required

Prerequisite Courses

• Calculus-based course in probability and statistics (IMSE 317 or equivalent)

Human Centered Design and Engineering (MS)

Undergraduate Degree Required
Bachelor's degree in cognitive science, computer science, art, design, engineering, business, or related areas with an overall GPA of 3.0 or higher on a 4.0 scale

Standardized Test Scores

Information Systems and Technology (MS)

Undergraduate Degree Required
Bachelor's degree in engineering, a physical science, computer science, applied mathematics, business administration, or liberal arts with a minimum cumulative GPA of 3.0 or higher on a 4.0 scale

Standardized Test Scores
GRE not required

Prerequisite Courses

• A course in Data Structures (IMSE 350/351, CIS 350/352, or equivalent)
• Knowledge of computer programming, such as C++ or Java (IMSE 255, IMSE/CIS 150, CIS 205 or equivalent)

Manufacturing Systems Engineering (MSE)

Undergraduate Degree Required
Bachelor of Science in engineering or a physical science from an accredited program with an average of B or better (3.0 GPA or higher on a 4.0 scale)

Standardized Test Scores
GRE not required

Prerequisite Courses
- a background in probability and statistics*
- a background in engineering materials*

*If the applicant does not have a background in probability and statistics, they will be required to take a statistics course at the undergraduate level (IMSE 317 or equivalent). If the applicant does not have a background in engineering materials, they will be required to take ENGR 250 (or equivalent) as a prerequisite to AE 587 or ECE 385 (or equivalent) as a prerequisite to ECE 539.

Materials Science and Engineering (MSE)
Undergraduate Degree Required
Bachelor’s degree in materials science, mechanical, aerospace, metallurgical, chemical, or biomedical engineering with a cumulative GPA of 3.0 or higher on a 4.0 scale

Backgrounds in other engineering disciplines or natural science fields may be considered with the understanding that additional coursework may be required. These courses should be completed to bring their educational background equivalent to graduates with a BSE in Materials Science and Engineering prior to applying.

Standardized Test Scores
GRE not required

Mechanical Engineering (MSE)
Undergraduate Degree Required
Bachelor of Science in mechanical engineering or equivalent with a GPA of 3.0 or higher on a 4.0 scale

Standardized Test Scores
GRE not required

Mechanical Sciences and Engineering (PhD)
Previous Degrees Required
- Bachelor or master’s degree in mechanical engineering or a closely related field with an expected GPA of 3.2 or higher on a 4-point scale

Backgrounds in other engineering fields or non-engineering fields may be considered with the understanding that additional coursework may be required

Standardized Test Scores
GRE (http://www.ets.org/gre/) required

Program and Project Management (MS)
Undergraduate Degree Required
Bachelor’s degree in engineering, business, economics, math, computer science, or other physical sciences with a bachelor’s cumulative GPA of 3.0 or higher

Standardized Test Scores
GRE not required

Prerequisite Courses

Robotics Engineering (MSE)
Undergraduate Degree Required
Bachelor’s degree in physical or mathematics sciences with a bachelor’s cumulative GPA of 3.0 or higher on a 4.0 scale

Standardized Test Scores
GRE not required

Prerequisite Courses
- Ordinary Differential Equations (MATH 216 or equivalent)
- Linear Algebra (MATH 217 or equivalent)
- Probability and Statistics (IMSE 317 or equivalent)
- Dynamics (ECE 347 or equivalent)
- Data Structures and Algorithms (ECE 270 and ECE 370 or equivalent)

Other Experience Required
Computer programming (no particular language or methodology)

Software Engineering (MS)
Undergraduate Degree Required
Bachelor’s degree in computer science and/or computer engineering with an overall GPA of 3.0 or higher on a 4.0 scale

Standardized Test Scores
GRE not required

Prerequisite Courses
- Calculus I & II *(MATH 115 and 116 or their equivalents)
- CIS 310 or equivalent (Computer Organization) *
- CIS 350 or equivalent (Data Structures and Algorithm Analysis) *
- CIS 450 or equivalent (Operating Systems) *
- IMSE 317 or equivalent (Engineering Probability and Statistics) or MATH 227 or equivalent (Linear Algebra) *

*Prerequisite courses may be taken concurrently within 2 years of admission to program

4+1 Options
Accounting 4+1 Option
The Accounting 4+1 option at the University of Michigan-Dearborn allows students to earn both the BBA in Accounting and the Master of Science in Accounting at a substantial savings in time and money.

Students may count 4 graduate accounting courses toward the BBA Accounting major and the MS-Accounting at the same time, thereby
saving 4 courses. Students will receive scholarships to reduce the net cost of these 4 shared courses to undergraduate tuition rates.

For more information, please visit the College of Business’s Accounting 4+1 Option webpage (https://umdearborn.edu/cob/graduate-programs/degree-programs/ms-accounting/accounting-41-option/).

**Applied Behavior Analysis 4+1 Option**
The Applied Behavior Analysis 4+1 option at the University of Michigan-Dearborn is designed to allow students who complete their undergraduate degree to fulfill the requirements of the MS in Applied Behavior Analysis with one additional year of graduate study. This will be achieved by combining a portion of undergraduate and graduate coursework.

For more information, please visit the 4+1 Applied Behavior Analysis Accelerated Program webpage. (https://umdearborn.edu/cehhs/graduate-programs/areas-study/ms-applied-behavior-analysis/41-applied-behavior-analysis-accelerated-program/)

**Applied and Computational Mathematics 4+1 Option**
The Accelerated Masters Studies Option (4+1 Option) in Mathematics and Applied and Computational Mathematics (MATH-ACM) is designed to allow motivated students to earn both a B.S. or A.B. in Mathematics (https://umdearborn.edu/casl/undergraduate-programs/areas-study/mathematics/) and an M.S. in Applied and Computational Mathematics (https://umdearborn.edu/casl/graduate-programs/programs/master-science-applied-and-computational-mathematics/) with one additional year of coursework. This is achieved by a double-counting allowance of up to 15 credits or five graduate level (500-level or above) courses. One additional year of graduate work (15 credits) would be needed to complete the Master’s program enabling students to earn two degrees in a total of five years.

For more information, please visit the Applied and Computational Mathematics 4+1 Option webpage. (https://umdearborn.edu/casl/graduate-programs/programs/master-science-applied-and-computational-mathematics/applied-and-computational-mathematics-41-option/)

**Bioengineering 4+1 Option**
The accelerated undergraduate/master’s studies option in bioengineering (4+1 option) allows the most qualified UM-Dearborn undergraduate bioengineering students to pursue a program of study in which BSE and MSE degrees are earned in a five-year accelerated format. This is achieved via combining a portion of undergraduate and graduate coursework.

For more information, please visit the 4+1 Bioengineering Program webpage. (https://umdearborn.edu/cecs/departments/mechanical-engineering/undergraduate-programs/41-bioengineering-program/)

**Criminology and Criminal Justice 4+1 Option**
The 4+1 accelerated program option allows current UM-Dearborn undergraduate Criminology and Criminal Justice majors to complete both the Bachelor of Arts and the Master of Science in Criminology and Criminal Justice in a format that offers substantial savings in both time and money. This is achieved by a double-counting allowance of up to 15 credits or 5 graduate level (500-level or above) courses. One additional year of graduate work (15-16 credits) would be needed to complete the Master’s program enabling students to earn two degrees in a total of five years.

Participation in the 4+1 program is limited to students who have completed at least 60 credit hours with a cumulative GPA of 3.0 or better. Admission to the 4+1 program is at the discretion of the Program Director and requires an admission interview. The “regular” online graduate application should be completed with a “Yes” response to the 4+1 accelerated program question. The only supplemental materials required for 4+1 applicants are a letter of recommendation from a CCJ faculty member and official transcripts.

Once admitted to the 4+1 program, the student must attain a grade of B- or better in each 500 level class elected. Failure to do so may result in removal from the 4+1 program.

For more information, please visit the Criminology and Criminal Justice 4+1 Option webpage. (https://umdearborn.edu/casl/graduate-programs/programs/master-science-criminology-and-criminal-justice/41-option/)

**Educational Technology 4+1 Option**
The Master of Arts in Educational Technology Accelerated Program, or 4+1 program, is designed for undergraduate students in the Instructional Technology program (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/instructional-technology/) major who have the interest, and demonstrated ability, to pursue the MA in Educational Technology. The program is designed to allow students who complete the BA in Instructional Technology (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/instructional-technology/) to fulfill the requirements of the MA in Educational Technology with one additional year of graduate study. This will be achieved by combining a portion of undergraduate and graduate coursework.

For more information, please visit the 4+1 Educational Technology Accelerated Program webpage. (https://umdearborn.edu/cehhs/graduate-programs/areas-study/ma-educational-technology-online/41-educational-technology-accelerated-program/)

**Certificate Programs**
A graduate certificate is a non-degree credential, less extensive than a Master's program, which is designed to provide students with a specialized set of courses that supplement a primary field of study, area of expertise, or provide an interdisciplinary experience within a defined body of knowledge. Certificates are encouraged in areas not currently addressed by a graduate degree program and where they might provide added benefits to students beyond existing degree programs. More information, please visit the Graduate Certificate Policy webpage. (p. 518)

**College Education, Health, and Human Services**
For current students, fill out a Declaration of Certificate Form.

For new students not enrolled in a UM-Dearborn degree program, please fill out the appropriate Certificate Program Application (accessed via the non-degree application online).

For more information regarding application to the CEHHS certificate programs, please visit the CEHHS Graduate Certificate Programs webpage (https://umdearborn.edu/cehhs/professional-development-training/certificates/graduate-certificate-programs/).
College of Engineering and Computer Science

Degree Seeking Students

Students already enrolled in a graduate degree program at UM-Dearborn may declare a CECs graduate certificate to supplement their primary field of study or area of expertise. In order to declare a certificate, students must fill out a Declaration of Certificate Form.

Non-Degree Seeking Students

Students may also pursue a graduate certificate as a non-degree seeking student. Students pursuing this option should complete the appropriate Certificate Program application (accessed via the non-degree application online).

For more information regarding application to the CECs certificate programs, please visit the CECs Graduate Certificate Programs webpage (https://umdearborn.edu/cecs/graduate-programs/certificates/).

Change of Degree Level Within a Field

To change from non-degree-seeking status (NCFD) to degree-seeking status within the same field of specialization, a student must submit a regular graduate admission application. An international student must supply documentation of additional funding if a change of degree status will result in an extension of the expected study period.

Change of Program

A change in program generally requires full consideration by the new program’s admissions committee. If a student has not enrolled yet, the change of program request can be handled through the Graduate Admissions Office. If a current student wants to change after having enrolled under a different program, a Graduate Change of Degree Program or Concentration form should be completed. The student should contact the new program of interest for information about any supporting materials that may be needed. International students must supply documentation of additional funding if a change of program will result in the issue of new immigration documents.

Guest

Important Policies

Students currently enrolled in a graduate degree-seeking program at another university may request permission to enroll in graduate courses at the University of Michigan-Dearborn as a guest student. Master’s level students are permitted to enroll for a maximum of 6 semester hours of credit and doctoral level students are permitted to enroll for a maximum of 9 semester hours of credit as a guest student at UM-Dearborn. Guest students register on a space-available basis. University of Michigan-Ann Arbor and University of Michigan-Flint students, while still considered guests, are not held to the above credit cap. However, these University of Michigan system students should follow relevant transfer credit policies.

Please note that the University of Michigan-Dearborn participates in the Michigan Intercollegiate Graduate Studies (MIGS) program (p. 506). Students in good standing at one institution may take advantage of course and research opportunities offered at another institution, provided that such opportunities are not available on the home campus. If your current institution participates in MIGS and the courses you are interested in taking are not available at your home institution, you should consider applying through the MIGS option. Grades earned in MIGS courses may be applied toward the Home Institution grade point average or used for credit toward a graduate degree as allowed by the Home Institution’s policy.

All Guest Students are:

- Subject to all UM-Dearborn admission and registration regulations.
- Admitted for one term only. Additional registration under this status requires a new application each term.
- Assessed regular UM-Dearborn graduate tuition and related fees for all courses elected.
- Not eligible for financial aid from UM-Dearborn.
- Responsible for determining if credit earned as a Guest student will be accepted by their degree-seeking program of interest if applicable.
- Registered on a space-available basis.
- Prerequisites, grading standards, class assignments, and attendance requirements of a course apply to all students in that course. Colleges, departments, schools, and programs determine rules of access to their courses and may limit enrollment of Guest students in certain courses. Prospective Guest students should contact the relevant academic unit for further information on departmental policies and course availability.

Applicants who are interested in Guest status should complete the online Guest Application (https://umdearborn.edu/admissions/graduate/graduate-non-candidate-degreeteenguest-information/) (accessed via the non-degree application option).

Michigan Intercollegiate Graduate Study

The Michigan Intercollegiate Graduate Study (MIGS) program (https://umich.app.box.com/v/MIGS-app18/) creates exchange possibilities for graduate students currently enrolled in Michigan universities. Students in good standing at one institution (the home) may take advantage of course and research opportunities offered at another institution (the host), provided that such opportunities are not available on the home campus. Inquiries regarding appropriate faculty contacts and administrative approval can be directed to the Office of Graduate Studies (p. 495).

Non-Candidate for Degree

Non-Candidate for Degree (NCFD) admission may be granted to qualified students who wish to elect courses for graduate credit but who are not candidates for a degree. Taking graduate-level courses (those numbered 500 or above) as an NCFD at the University of Michigan-Dearborn might be appealing to:

- Professionals seeking to continue studies without completing a full degree course of study;
- Students currently enrolled in a graduate program at another graduate school (also known as Guest students); or
• Individuals wishing to "test out" our institution before a future decision to pursue a graduate degree here.

**Important Policies**

NCFD status enables qualified individuals not in a degree-seeking program elsewhere to take a maximum of 6 credit hours for graduate credit. NCFD students register on a space-available basis.

Courses elected by students under this status cannot be counted toward a degree program until the student receives regular degree-seeking admission and the graduate program advisor determines that the courses are acceptable.

Non-Candidate for degree applicants should be aware of the following:

- Admission as a graduate non-candidate for degree student does not guarantee or imply admission or eligibility for a graduate degree-seeking program at the University of Michigan-Dearborn. To be considered for transition to a degree-seeking program, a completed graduate degree-seeking application and required supplemental materials must be submitted.

- In order for courses taken as a graduate non-candidate for degree student to be considered as credit towards a graduate degree program, relevant applicable credit evaluation or transfer credit policies should be followed. Advance communication with your program of interest is encouraged.

**NOTE:** The College of Business on the University of Michigan-Dearborn campus only offers an NCFD option for students who have already earned a UM-Dearborn master's degree.

**All NCFD Students are:**

- Subject to all UM-Dearborn admission and registration regulations.

- Admitted for one term only. Additional registration under this status requires a new application each term.

- Assessed regular UM-Dearborn graduate tuition and related fees for all courses elected.

- Not eligible for financial aid from UM-Dearborn.

- Responsible for determining if credit earned as a NCFD student will be accepted by their degree-seeking program of interest if applicable.

- Registered on a space-available basis.

- Prerequisites, grading standards, class assignments, and attendance requirements of a course apply to all students in that course. Colleges, departments, schools, and programs determine rules of access to their courses and may limit enrollment of NCFD students in certain courses. Prospective NCFD students should contact the relevant academic unit for further information on departmental policies and course availability.

Applicants who are interested in NCFD status should complete the appropriate online application (accessed via the non-degree online application). Additional information can be found on the Graduate Non-Candidate for Degree webpage (https://umdearborn.edu/admissions/graduate/graduate-non-candidate-degreestudent-information/).

**Readmission**

Most students who have not been enrolled in a master’s program for one year (12 months) must use the Application for Graduate Readmission form (https://umich.app.box.com/v/grad-readmit/). Readmission is dependent upon program approval and availability of space and facilities for the term in which readmission is requested. Before readmission can be finalized for international students, proof of adequate funding is required in order to obtain the appropriate visa documents.

If a student withdrew for health reasons, readmission may be subject to satisfactory evidence that the condition has been remedied. If a student was on conditional admission, academic probation, or extended probation, that standing will continue if he or she is readmitted, unless approval to remove or modify the status is granted. If a student was required to withdraw, readmission may be granted only following approval by the program.

**Retired Person Studies Program**

Founded in 1984, the Retired Persons Studies Program (RPSP), formerly known as Retired Persons Scholarship Program, is a University of Michigan-Dearborn program for retired Michigan residents 60 years of age and older who seek intellectual engagement and stimulation. Through its commitment to nontraditional constituencies, UM-Dearborn continues its outstanding tradition of extending quality and excellence in education to the residents of southeast Michigan.

Beginning Fall 2019, students in the RPSP program will enroll with the following new stipulations:

**Tuition and Fees**

A special tuition rate for the program, set approximately at 25% of the in-state tuition is approved annually by the Regents in mid-summer. RPSP students are also subject to all applicable registration fees and college-specific premiums. The new rate each fall term will be published on the Registrar’s Office website.

**Registration**

Given the intellectual enrichment nature of the RPSP program, students enrolled in it will register under the Non-Candidate for Degree (NCFD) option. RPSP students should consult the campus’ graduate and undergraduate academic policies for the number of credit hours allowed under the NCFD option. NCFD students cannot register for internship and co-op courses. In addition, students will be permitted to register only after degree-seeking students as specified in the Registrar’s Registration Timetable.

**Academic Credit**

Students enrolled in the RPSP program can only take courses under the audit option. It is important that students considering a degree at the university not enroll under the RPSP program, as courses taken under the audit option do not carry academic credit and are not transferable into a degree program.

**Admission Requirements**

Please consult with graduate admissions (https://umdearborn.edu/academics/graduate-studies/office-graduate-studies/) (if seeking to enroll in graduate-level courses) or undergraduate admissions (https://umdearborn.edu/admissions/undergraduate/contact-admissions/) (if
seeking to enroll in undergraduate courses) for RPSP admission requirements.

Prospective students are required and expected to:

- Have reached their 60th birthday prior to the semester of their first registration under this program.
- Be a "retired" person - to have no current career or employment.
- For undergraduate coursework, have graduated from high school (or equivalent) and demonstrate the potential to succeed in academic coursework. For graduate coursework, have completed a bachelor's degree from an approved institution. Criteria vary based on whether a bachelor's degree was earned from a US institution (https://umdearborn.edu/admissions/graduate/how-apply/basic-admission-requirements/us-regional-accreditation/) or an institution outside of the United States (https://umdearborn.edu/admissions/graduate/how-apply/basic-admission-requirements/international-undergraduate-degree-requirements/). All incoming students (undergraduate or graduate) must meet the posted minimum English proficiency standards. Appropriate education, career or life experience will be given special consideration.

Advising

Admitted RPSP students can obtain information and guidance from the academic advising offices (https://umdearborn.edu/students/academic-advising/) and faculty advisors in the colleges where they plan to take courses.

Current RPSP students seeking a degree as of Summer 2019 will be grandfathered under the previous policy and thus will be allowed to continue to the completion of their degree provided active student status is maintained (at least one course per 12 month period).

Second Master's Degree

Admission to a master's degree program in the same field of specialization and at the same level as one previously completed is possible only if the previous degree program was of substantially different character or was not accredited.

Visiting Scholar

Admission as a visiting scholar may be granted to qualified individuals who wish to study and/or conduct research at the University of Michigan-Dearborn. The general purpose of the Exchange Visitor Program is to promote international educational and cultural exchange to develop mutual understanding between the people of the U.S. and other countries. At UM-Dearborn, there are three types of J-1 exchange visitors: students, scholars, and professors. An exchange visitor must not be a candidate for a tenure-track position. J-1 students must be admitted to a degree program for a full course of study or be engaged full time in a non-degree course of study. Visiting scholars are generally invited by a host faculty or department, or supported by a program agreement. Details are coordinated with the Office of International Affairs (https://umdearborn.edu/offices/office-international-affairs/). They can be reached at 319-583-6600 or umdoia-international@umich.edu.

Financial Assistance Available

Financial aid for graduate students consists of the following types of assistance: gift aid (scholarships, fellowships, and other funds from private sources), loans, and employment. Graduate students should contact their department for possible stipends or fellowships and will need to complete the Free Application for Federal Student Aid (FAFSA (https://fafsa.gov/)) in order to be considered for financial assistance by the Office of Financial Aid and Scholarships (OFAS).

Most financial aid sources require a minimum of at least half-time enrollment (4 or more credit hours per semester) in coursework that counts toward degree requirements.

Admission into an eligible program of study (i.e. a degree-granting program) is the primary criterion to receive financial aid funding. All Personal Enrichment, English Proficiency, and Non-Candidate for Degree status students are ineligible for financial aid. Most Guest, Prospective Degree status, and Alumni Enrichment students are ineligible for financial aid – however, there are limited exceptions which may be applicable to specific situations. Students admitted via Guest, Prospective Degree, or Teaching Certificate status should contact the Office of Financial Aid & Scholarships to discuss their specific admission status and financing options.

Determining Eligibility

With the exception of some scholarships and graduate loans, financial assistance awarded by the Office of Financial Aid & Scholarships is based upon financial need as determined by a careful review of the resources of the student and the student's household.

Need for financial aid is determined by the following calculation:

\[
\text{Cost of Attendance/Budget (COA) - Expected Family Contribution (EFC) = Financial Aid Eligibility (Need)}
\]

The calculation formula used to determine the Expected Family Contribution (EFC) is the Federal Methodology, as mandated by the U.S. Congress. By completing the Free Application for Federal Student Aid (FAFSA (https://fafsa.gov/)), the student's family contribution is calculated and reported on the Student Aid Report (SAR) which is emailed or mailed to the student's home by the federal processor.

Note: Most foreign students are not eligible for federal student aid from the U.S. Department of Education. There are, however, some instances in which noncitizens may be eligible for financial aid from the U.S. federal government. To learn more, visit: studentaid.ed.gov/sa/eligibility/non-us-citizens (https://studentaid.ed.gov/sa/eligibility/non-us-citizens/).

Application for Financial Aid

Most assistance is committed at a certain time of the year, so be mindful of application dates. Dates assume entrance for the fall semester.

New Students

1. After October 1, preceding Fall enrollment, complete the Free Application for Federal Student Aid (FAFSA). Students must apply online at fafsa.gov (http://www.fafsa.gov). Include student FSA ID. Release the FAFSA information to the University of Michigan-Dearborn by entering our Federal Title IV School Code 002326. Students should use their Federal Income Tax Returns (Form 1040) to complete the FAFSA. FAFSA results received in the Office of Financial Aid & Scholarships (OFAS) by the recommended priority deadline will receive first priority consideration for funds.

2. Upon review of your FAFSA, the Federal Processor will provide you with a Student Aid Report (SAR). The Federal Processor will forward an electronic SAR to the email address you provided on the FAFSA.
The OFAS will receive your information electronically (assuming you have released the information to UM-Dearborn as described in #1 above).

Continuing Students
Students currently enrolled must apply every year at fafsa.gov (https://www.fafsa.gov) after October 1 preceding fall enrollment. Applications, SARs, and/or ISIRs (resulting from the FAFSA) must be received in the Office of Financial Aid & Scholarships.

Summer
Summer is a separate processing period. Applications for Summer aid are available in late March/early April.

Reminders
1. Financial aid applications are processed only after a student has been admitted, but students need not wait until they are admitted to apply for financial aid.
2. Applications submitted after the stated dates will be considered, subject to the availability of funds, but notification may not come until after the term has begun.
3. Students must re-apply for financial aid each year.
4. All correspondence and documents must include the student’s legal name and UMID number.

Award Notification
New Students
Incoming students are notified in writing via U.S. mail of their initial financial aid offer. Thereafter, communication is via Email and UM-Dearborn Connect (see below).

Current/Returning Students
Students are encouraged to regularly check their UM-Dearborn Email account and access their UM-Dearborn Connect account for award notification and other communication from the Office of Financial Aid & Scholarships. Email communication sent to student’s UM-Dearborn Email address directs students to recent notices or activity on UM-Dearborn Connect.

Additive Credit
Additive credits courses do not count toward any degree requirements. Additive credits include most co-op/internship courses, which will not count towards enrollment for financial aid eligibility.

Award Procedures
All financial aid awards are made in accordance with three criteria: demonstrated financial need, the student’s ability to maintain satisfactory academic progress, and availability of funds. Completed files are processed on a first-come, first-served basis. A financial aid file is complete only after the following documents or information have been received:

- A completed FAFSA on file with the U.S. Department of Education. The processed FAFSA must be valid and have the University of Michigan-Dearborn school code (002326) listed so that OFAS can obtain the results electronically.
- The submission of all other information requested by the Office of Financial Aid & Scholarships (required prior to disbursement of federal aid), including verification documents if necessary.

Once a student’s financial aid file has been reviewed and deemed complete by a financial aid counselor, a financial aid package will be processed and an award notification will be mailed or Emailed to the student. The initial financial aid package will be based on assumed enrollment of at least half-time status (4 or more credits hours) status for the Fall and Winter semesters. Financial aid awards can be viewed on UM-Dearborn Connect.

Repeating Coursework
Federal financial aid programs can only pay for one repeat of a passed course (passed meaning grade “C” or higher). For example, if a student enrolls and earns a grade of “C” in a course, the student’s enrollment status for financial aid will include that course attempt. If a student enrolls a second time in the same course, the course will be included in the student’s enrollment status for financial aid. If the student enrolls for a third time, financial aid will not include the course in the student’s eligibility for aid. When a course is repeated, the previous enrollment is deducted from the calculation of successfully completed courses; therefore, this will lower your Cumulative Completion Rate.

The University of Michigan-Dearborn may allow a successfully-completed course to be repeated beyond financial aid limitations. Only the last grade received is counted in the CGPA.

Types of Financial Aid
Graduate Fellowship, Teaching or Research Assistantship Support
Recipients of these awards must be appointed or nominated by a member of the academic department in which the applicant is enrolled. The number of awards varies annually, as do the award amounts.

UM-Dearborn Current Student Scholarship Program (for Graduate Students)
The scholarships in the Current Student Scholarship Program are made available through the generous gifts of private donors and alumni of UM-Dearborn.

Students who have completed a minimum of 6 credit hours as a Graduate student at UM-Dearborn can apply for several university scholarships at one time using the University of Michigan-Dearborn Current Student Scholarship Application Portal. This application becomes available each year with most scholarships having a deadline of March 1st.

There are a number of different scholarships that graduate students may qualify for through this annual process. Scholarship descriptions as well as the application can be found on the following Office of Financial Aid & Scholarships website: umd-umich.academicworks.com/opportunities (https://umd-umich.academicworks.com/opportunities/).

Additional opportunities for scholarship funding may be available from other sources and would require a separate application.

City Year Detroit Alumni Scholarships
The University of Michigan-Dearborn salutes City Year Detroit Program participants for their service and metropolitan impact. The University of Michigan-Dearborn will award at least 2 two-year scholarships to students who successfully complete the City Year Detroit experience. Up to $5,350 is available each year, up to two years (four semesters). This scholarship is a match scholarship, awarded during every academic year.
period (September through August; Fall/Winter/Summer semesters). Graduate students are eligible for consideration.

To be considered for a City Year Alumni Scholarship, the student must provide City Year documentation (signed City Year Certificate of Graduation) to the Office of Financial Aid & Scholarships.

Community Service Personnel Scholarships

The University of Michigan-Dearborn provides a scholarship valued at 20% of tuition and fees for public safety employees at partnering organizations. The scholarship is available for degree-seeking students and can be used for undergraduate and graduate programs. For more information, visit: umdearborn.edu/students/financial-aid/types-aid/scholarships/community-service-personnel-scholarship (https://umdearborn.edu/students/financial-aid/types-aid/scholarships/community-service-personnel-scholarship/).

Center for the Education of Women Scholarships

The CEW Scholarship Program for women and nontraditional students was established in 1970 to honor the academic performance and potential of women whose education has been interrupted and to commemorate the one hundredth anniversary of the admission of women to the University of Michigan. Thanks to the generosity of individuals and foundations, CEW has awarded over 1600 scholarships since 1970. CEW Scholarship Awards are invaluable, since they often mean the difference between completing a degree or not doing so for many students at the University of Michigan. Due to the generosity of donors, CEW was able to expand the program in 2008 to include additional scholarships for students of all genders.

Approximately 40 Scholarships are awarded annually ranging from about $1,000 to $10,000, with some larger scholarship awards given. For more information, visit: cew.umich.edu/funding/scholar (http://www.cew.umich.edu/funding/scholar/).

King-Chavez-Parks Future Faculty Program

The King-Chavez-Parks Future Faculty Program is funded by the State of Michigan and is intended to increase the pool of traditionally underrepresented candidates pursuing faculty teaching careers in postsecondary education. Preference may not be given to applicants on the basis of race, color, ethnicity, gender, or national origin. Applications are encouraged from minorities, women, people with disabilities, and individuals from cultural, linguistic, geographic, and socio-economic backgrounds who would otherwise not adequately be represented in the graduate student and faculty populations. The amount of the KCP Future Faculty Fellowship Award will depend on the student’s financial needs. The maximum available award for master’s students is $20,000 and for doctoral students is $35,000. These amounts may be distributed over a two-and-a-half year period for Masters Fellows and over a four to six year period for Doctoral Fellows. For more information, visit: umdearborn.edu/students/financial-aid/types-aid/scholarships/king-chavez-parks-initiative-future-faculty-fellowship-program (https://umdearborn.edu/students/financial-aid/types-aid/scholarships/king-chavez-parks-initiative-future-faculty-fellowship-program/)

TEACH Grant (Teacher Education Assistance for College and Higher Education)

Funded by the federal government, the TEACH Grant provides up to $3,764 per year for students whose intention is to teach in a “high need field” (subject area), in an elementary or secondary school serving students from low-income families. As a recipient, students agree (in advance of receipt) to teach a “high need field,” full-time, for a minimum of four years within the eight years following program completion (or progress interruption from the program for which the grant was awarded). The FAFSA is required to be considered for a TEACH Grant. However, recipients do not have to demonstrate “need.”

The TEACH Grant will remain a grant if recipients meet the specific criteria. If recipients do not meet the criteria, the TEACH Grant converts to an unsubsidized loan with interest calculated back to the initial disbursement date(s). For this reason, UM-Dearborn has defined our eligibility criteria as cautiously as possible.

The population UM-Dearborn currently considers for the TEACH Grant are Seniors (at the undergraduate level) and graduate level students, with a high Cumulative Grade Point Average (CGPA), admitted into a degree-granting program of the College of Education, Health, and Human Services, and pursuing majors that align with the “high need fields.”

The cumulative grade point average requirement for the TEACH Grant is 3.25 (on a 4.0 scale). The degree programs currently considered are: Master of Arts, Master of Arts in Teaching, and Master of Science. Eligible majors at UM-Dearborn are: Education, General Science, Mathematics, Mathematics Studies, Reading, Science Education, Science Studies, Special Education and Teaching.

Loans

Eligibility for the following Federal loan programs require adherence to Federal fund criteria, maintenance of the University’s Satisfactory Academic Progress guidelines, and minimum enrollment of at least half-time (4 or more credit hours). Requirements are subject to change over time. Additional documents may be required (e.g., Promissory Notes and Entrance Counseling) prior to disbursement of funds.

William D. Ford Federal Direct Loan Program

Federal Direct Loans are available through the William D. Ford Federal Direct Loan Program. Under the Federal Direct Loan Program, funds are lent to student or parent borrowers directly by the U.S. government. There are several types of Direct Loans: the Federal Direct Subsidized Loan (Subsidized FDSL), Federal Direct Unsubsidized Loan (Unsubsidized FDSL), Federal Direct Parent Loan for Undergraduate Students (FDPLUS), Federal Direct PLUS Loan for Graduate Students, and the Federal Direct Consolidation Loan program. Graduate students are not eligible for the Federal Direct Subsidized Loan program.

Unsubsidized Federal Direct Loan

Those borrowing an Unsubsidized Loan are assessed interest starting at the time of disbursement. Interest is automatically deferred until loan repayment begins. However, to avoid capitalized interest a student may pay interest while enrolled, which will result in lower loan payments over the life of the loan and a lower long-term cost.

Because Federal Direct Loan awards have origination fees, the Direct Loan amounts applied to your University student account will be lower than those listed on your Award Notice.

Annual and Lifetime Federal Direct Student Loan Limits
Annual limit $20,500 up to the Cost of Attendance, whichever is less

The program aggregate (maximum borrowing) is $138,500. Graduate loan debt includes Federal Direct Student Loans received as an undergraduate.

Federal Direct PLUS Loans for Graduate Students

Direct PLUS Loans are part of the federal Direct Loan Program, which makes loans directly from the U.S. Dept. of Education.

The Graduate Student must apply for PLUS loans separately if they need additional funds to cover costs. To be eligible for a Graduate PLUS loan the student must first exhaust Unsubsidized Loan eligibility. Eligibility is not based on need and borrowers may obtain up to the Cost of Attendance minus any other financial assistance received.

There are certain requirements to qualify for the PLUS loan and the federal processor will access your credit report as part of the application process. Because credit checks are valid for a limited time, applications for the Fall and/or Winter terms should be completed beginning in early June. Applicants must complete the FAFSA before eligibility for the PLUS Loan can be determined. You must reapply each year.

Federal Direct Consolidation Loan

Federal Direct Consolidation Loans are designed to help borrowers simplify loan repayment. This loan allows the borrower to consolidate several types of federal educational loans with various repayment schedules into one loan, requiring only one payment per month. Interest rates, however, may differ depending on the loan category as well as repayment and deferment options for the borrower.

Borrowers in default on a previous federal education loan may be able to obtain a Direct Consolidation Loan as a method of resuming the educational process and regaining eligibility for financial aid funds. (Those in default are ineligible for any and all financial aid while the default status is unresolved.)

Those interested may contact their Direct Loan Servicer or access their website studentloans.gov (http://studentloans.gov/) for additional information.

Student Employment

Federal Work-Study Program—Federal Work-Study is a Title IV program offering part-time work for students who demonstrate financial need. Students work up to 25 hours per week during the regular semester, depending upon the student’s financial need, availability of federal funds, and the student’s class schedule. Seven percent of the school’s annual Federal Work-Study allocation will be used to fund community service jobs.

Work-Study awards are earned by working for Work-Study employers and earning a paycheck, typically paid bi-weekly through the employer’s payroll system. Work-Study earnings will not credit your tuition and fees bill. Employers pay a percentage of students’ wages and federal funds pay the remaining wages.

University openings are posted on careers.umich.edu (http://careers.umich.edu/). You can also contact the Office of Career Services (https://umdearborn.edu/students/office-career-services/) for assistance with Off-Campus openings. You must show the employer a copy of your Award Notice and proof that your enrollment is at least half-time (4 or more credit hours) and inform your employer if your Work-Study eligibility changes.

On-Campus Employment

On-campus employment is funded by UM-Dearborn, when not funded by Federal funds. There are many part-time and temporary jobs available in the academic departments and in the support offices. Eligibility for Federal financial aid funds is not a requirement for University employment. Students may contact the Office of Career Services (https://umdearborn.edu/students/office-career-services/) to inquire about job availability. The departments pay 100 percent of these wages. To locate an on-campus job, visit careers.umich.edu (http://careers.umich.edu/).

Other Sources of Financial Aid

Other sources of financial assistance are available through government agencies such as Vocational Rehabilitation, Veterans Administration, and Social Security. Students needing information on these programs should contact the nearest appropriate agency.

Assistance for educational expenses may also come in the form of tax allowances. The Internal Revenue Service publishes Publication 970. Publication 970 provides information on educational benefits allowed within the tax code. Publication 970 may be obtained from the Internal Revenue Service or viewed online at irs.gov/publications/p970 (http://www.irs.gov/publications/p970/).

Satisfactory Academic Progress

Satisfactory Academic Progress

Satisfactory Academic Progress policy

Satisfactory Academic Progress (SAP) describes a student’s successful completion of coursework toward a degree. SAP is monitored at the end of each semester (Fall, Winter, Summer). To maintain SAP, a student must:

- Students must complete academic program within 150% of published length of program. For transfer students: The number of transfer hours accepted at the point of admission are used to calculate a student’s remaining eligibility under the 150% standard and will be included in the quantitative calculation which includes number of credits attempted and completed.
- Graduate students must complete at a minimum rate of 67% of attempted courses.
- Graduate students must maintain 3.0 CGPA or higher if required by your academic unit.
- For second graduate degree students: These students are eligible to receive only loan funds within the program aggregate. Second-degree students are given 150% of stated credit hours required for the second degree program.

Satisfactory Academic Progress Standards

Students who receive financial aid must demonstrate SAP as determined by the University of Michigan-Dearborn in accordance with federal regulations. Financial aid recipients are required to be in good academic standing and to maintain SAP toward their degree requirements for each semester in which they are enrolled. SAP is required to maintain eligibility for financial aid. The requirements for financial aid may be different than those required by one’s academic unit. The standards of Satisfactory Academic Progress measure a student’s academic progress using both

Satisfactory Academic Progress:

- Students must complete academic program within 150% of published length of program. For transfer students: The number of transfer hours accepted at the point of admission are used to calculate a student’s remaining eligibility under the 150% standard and will be included in the quantitative calculation which includes number of credits attempted and completed.
- Graduate students must complete at a minimum rate of 67% of attempted courses.
- Graduate students must maintain 3.0 CGPA or higher if required by your academic unit.
- For second graduate degree students: These students are eligible to receive only loan funds within the program aggregate. Second-degree students are given 150% of stated credit hours required for the second degree program.
qualitative and quantitative measurements. These measurements include a Cumulative Grade Point Average (CGPA) requirement, a Cumulative Completion Rate requirement, and a Maximum Timeframe requirement. In addition, certain types of courses are limited or excluded from eligibility. The standards apply to all federal financial aid programs and programs funded and administered by the University of Michigan-Dearborn Office of Financial Aid and Scholarships and include degree, certificate, and consortium guest students who receive financial aid. SAP is evaluated at the end of each term (Fall, Winter, and Summer). Federal regulations require the University of Michigan-Dearborn to evaluate all students for SAP regardless of whether or not they receive financial aid. SAP is evaluated based on the student’s cumulative academic record, from the date of entry to the university.

Cumulative Grade Point Average (CGPA) The qualitative measurement assesses the student’s Cumulative Grade Point Average (CGPA).

- Graduate/Professional Students: The minimum CGPA requirement is a 3.00 or higher if required by your academic unit.

Completion Rate The quantitative measure assesses the pace at which a student progresses towards a degree. To ensure progress, students are required to complete a minimum percentage of all attempted courses. Attempted courses are those for which a student is enrolled at the conclusion of the Add/Drop period for a semester (those that appear on the academic transcript). Graduate students must complete attempted courses at a minimum rate of 67%.

Maximum Timeframe (MTF) Federal regulations require that a student must complete his or her educational program within a Maximum Timeframe (MTF) no longer than 150% of the published length of the educational program measured in academic years, terms or credit hours attempted. Students who fulfill this minimum rate of course completion and follow departmental recommendations on course selection should complete their degree within the Maximum Timeframe.

Transfer Credits Courses that are transferred from another institution and accepted toward an academic degree program at the University (at the time of SAP Review) count as attempted and completed hours for Completion Rate and Maximum Timeframe (MTF). The CGPA is determined only with courses taken in residence at the University.

Grades, enrollment/withdrawal and repeated classes

GRADES: Only courses for which a student receives a grade of A, B, C, or P are acceptable. A grade of D, E, UE, F, ED, W, NR, or X is not acceptable. Students who fail to complete at least 67% of attempted credit hours because of incomplete grades or who withdraw from all classes will be placed on probation for one semester. If they still fail to meet the 67% completion rate, their financial aid will be terminated. A student may receive financial assistance for a course that was repeated and for which a non-passing grade was received.

REPEATED CLASSES: Students who receive a passing grade may repeat that class once and have that enrollment considered for financial aid. (Repeating classes that do not result in additional hours earned will not improve completion rate.)

TERMS WITH FAILING GRADES: Office of Financial Aid and Scholarships will be verifying attendance during a term in which all grades received are unacceptable (as defined above). Failure to verify attendance in each class will result in cancellation of all aid for the term.

REGAINING AID ELIGIBILITY: A student may regain eligibility by notifying the UM-Dearborn Office of Financial Aid and Scholarships when these three things have been accomplished:

1. Complete a minimum of 8 credit hours for graduate students at UM-Dearborn (or as specified in the Academic Plan) without the benefit of financial aid. Students may take the credits at another institution of higher education if approved by their academic advisor; and, 2. Achieve a minimum GPA of 3.0 for graduate students; and,
3. Complete 100% of attempted credit hours.

NOTE: For more information regarding Satisfactory Academic Progress and how it effects your financial aid see the complete policy online at umdearborn.edu/students/financial-aid/consumer-information/standards-academic-progress (https://umdearborn.edu/students/financial-aid/consumer-information/standards-academic-progress/).

Return of Title IV Funds

Return of Title IV Funds

Students sometimes find it necessary to withdraw from all classes during a semester. Depending on when this occurs, students may receive a refund of all or part of tuition and fees. If the student is a financial aid recipient, the University and student may be required to return the aid, or a portion of it, to the federal government.

Tuition Refund Policy: The University has a tuition refund policy stipulating the amount of tuition and fees refunded to a student who withdraws from all classes during a term. The Registrar's Office determines specific tuition refund dates each term (umdearborn.edu/students/registration-records/academic-calendar-important-dates) and select "Registration Deadlines" for the specific semester). Students must notify the Registrar’s Office immediately by following specific withdrawal procedures. Visit umdearborn.edu/students/registration-records/academic-calendar-important-dates/ for hours of operation.

Unofficial withdrawals

The federal government considers an unofficial withdrawal one in which a failing grade is received when a student does not attend, or stops attending, a class for which he/she is enrolled. In these cases, students can be required to repay aid received. If you have questions about enrollment and aid eligibility, contact the Office of Financial Aid and Scholarships for assistance.

Allocating returned Title IV (federal) financial aid

Funds returned to the federal government reimburse the individual federal programs from which the student received the aid. Financial aid returned (by the university and/or the student or parent) must be allocated, in the following order, up to the net amount disbursed from each source:

1. Federal Unsubsidized Direct Loan
2. Federal Subsidized Direct Loan
3. Federal Direct PLUS (Parent) Loan or Grad PLUS Loan
4. Federal Pell Grant
5. Federal Supplemental Educational Opportunity Grant (FSEOG)
6. Other Federal Loan or Grant Assistance

Return of Title IV (federal) financial aid
The Office of Financial Aid and Scholarships is notified by the Registrar when a student has officially withdrawn from the University. The federal government mandates that students withdrawing from all classes may keep only the financial aid they have "earned" up to the time of withdrawal.

Title IV funds disbursed in excess of the earned amount must be returned by the University and/or the student to the federal government. The student could owe the University, the government, or both.

The calculation for Return of Title IV funds is based upon the date on which a student initiates the withdrawal process by indicating intent to withdraw. This is either by speaking with an academic advisor, member of the Registrar's staff, or completing the University's withdrawal form.

Students who withdraw will have academic activity confirmed by their instructors to determine the last date of attendance. Failure to receive attendance or participation, from instructors, will result in cancellation of all aid for that semester.

To determine what a student earns, we:

• Divide the number of calendar days the student has attended classes by the total number of calendar days in the semester (minus any scheduled breaks of 5 days or more).

• The resulting percentage is multiplied by total federal funds disbursed (either to the student's University account or to the student directly by check or direct deposit) for the semester.

• This calculation determines the amount of aid earned that a student may keep. (For example, if the student attended 25% of the term, he will have earned 25% of the aid disbursed. The unearned amount must be returned to the federal government by the University and/or the student.)

We will notify students who are required to return funds to the government. In some instances, students who withdraw may be eligible for a post-withdrawal disbursement of "earned" aid. The following conditions must be met for the student to be considered eligible:

• The student must have submitted a valid FAFSA to UM-Dearborn prior to date of withdrawal.

• UM-Dearborn must have made an offer of federal aid to the student. In the case of a Direct Loan, the University must have originated the loan with the U.S. Department of Education, must have documentation that the student signed a loan promissory note, and must be making the first disbursement of the loan.

Students considering withdrawal from all classes should contact the Office of Financial Aid and Scholarships and their academic advisor so that the consequences of withdrawing from all classes can be explained. Financial aid counselors can further explain this policy to students and parents.

Student Consumer Rights and Responsibilities

Section 493.A of the Higher Education Act requires post-secondary educational institutions to disseminate relevant, candid information on student financial aid programs available at the college. Any change in a student's financial situation, address, or school enrollment must be reported to the Office of Financial Aid & Scholarships. Students have the right to request a review of their financial aid package when a change in family or personal circumstances occurs. Students also have a right to review their financial aid records and may do so during counseling hours.

Information Dissemination and Report Disclosure

The U.S. Department of Education requires UM-Dearborn to disseminate information and disclose certain information to students. This information includes, but is not limited to: Voter Registration, Equity in Athletics, Campus Crime and Security, Completion and Transfer-Out Rates, and Drug and Alcohol-Free Campus policies. For further information on the listed topics, please refer to the University website at umdearborn.edu/students/financial-aid/consumer-information (https://umdearborn.edu/students/financial-aid/consumer-information/).

Change in Course Elections: Add, Drop, Withdrawal

(See Also “Change of Fees And Refunds”)

Changes in course elections include adding a course(s), dropping a course(s), substituting course(s), and withdrawing (discontinuing) all courses. All students will process their add/drop and withdrawals either online or by contacting the Office of the Registrar via email, registrars@umich.edu (with signatures when appropriate).

Please consult the section on “Change of Fees and Refunds” for the impact on tuition and fees.

Add

A student may add courses or change a standard graded course to Pass/Fail or Audit during the first two weeks of a full term, the first week of a half-term or four week mini-term, or before the second class meeting of a less than one-month mini-term. Any exceptions for adding courses must be approved by the student’s academic unit.

Drop

A student may drop a course(s) during the first two weeks of a full term, the first week of a half-term or four-week mini-term, or before the second class meeting of a less than one-month mini-term. No record of the student's brief enrollment will be recorded.

Courses may be dropped during the third through the ninth week of classes in a full term, during the second through the fourth week of classes in a half-term or four-week mini-term, and before the third class meeting in a less than one-month mini-term.

The effective date of the drop is the date the drop request is received by the Office of the Registrar.

Permission to drop courses under circumstances other than stated above will require the approval of the student’s academic unit.

Withdrawal

A student may discontinue all of his/her courses through the last day of classes (for the term) by withdrawing from the term. The completed form must be presented to the Office of the Registrar for processing. The effective date of the withdrawal is the date the withdrawal form is received and signed by the Office of the Registrar.

If a student withdraws (drops all courses) from a term during the first two weeks of classes in a full term, the first week of classes in a half-term or four-week mini-term, or before the second class meeting in a less than one-month mini-term, no record of the student’s brief enrollment will
be recorded. Beyond those deadlines, the mark of W will appear on the transcript.

Permission to withdraw under circumstances other than stated above will require the approval of the student's academic unit.

Consecutive Withdrawals
Every student's academic record is reviewed for the purpose of observing academic progress at the end of each term in which the student is enrolled. A student who has not enrolled for one calendar year or who has withdrawn for two consecutive terms must apply for readmission and may not re-register without the explicit written permission of the student's unit office. (PDS/PE students see START Advising, Room 2149 UC.)

A student who first registers and then withdraws from two consecutive terms may be placed on academic probation and may not register without the explicit written permission of the Associate Dean or the Associate Dean's representative.

Required Withdrawals
Unless extenuating circumstances are presented by petition, a student who is required to withdraw from one academic unit may not be admitted to another UM-Dearborn academic unit within the same term as that in which such withdrawal action is taken.

Refunds and Financial Aid
Students receiving Title IV financial aid may be required to repay some or all of the financial aid received for a term in which the student withdraws. Students required to repay financial aid funds will have the refunds allocated to financial aid programs in the following order: Federal Direct Loans, Federal Perkins Loans, Pell, SEOG, other Title IV, federal, state, private, and institutional programs and finally, to the student. Students receiving financial aid and considering withdrawal should seek the advice of a Financial Aid Officer prior to taking such action.

Instructor Requested Drop
A student who is absent from class meetings of a course during the first week of any term and does not inform the instructor or the instructor's department of his/her intention to continue as a class member may be administratively dropped from the course per the instructor's request. The academic college will notify students who have been administratively dropped from the course.

Reporting of Grades
The Office of the Registrar reports term grades to students via a Final Grade Report in UM-Dearborn Connect. Grades are also reported on each student's Academic Transcript. Updated Academic Transcripts are available to students two weeks following the close of the final examination period. Students requiring more immediate service may contact the Office of the Registrar for assistance. (Also see "Request for Transcripts").

Tuition Assessment and Fee Regulation
Tuition and fees are subject to the approval of the Regents of the University and are subject to change at any time.

Policies Governing Student Tuition and Fees
The Board of Regents shall determine the level of tuition and fees and a schedule of such shall be published. All other student tuition and fees shall be fixed by the Campus Fee Committee.

Payment of Tuition and Fees
All tuition and fees are payable in accordance with regulations established by the University providing only that said regulations may not defer payment beyond the end of the term for which they are assessed.

Payment for tuition and fees may be made in full at the Student Accounts Office, or online, after registration. The laboratory and/or course fees are refundable if the course is dropped during the first two weeks of a full term, the first week of a half-term or mini-term, or before the second class meeting of a less than one-month mini-term. The procedure for obtaining a refund is described in the section "Change of Fees and Refunds."

Application Fees
Graduate degree-seeking applicants must submit a $60 application fee. The application fee is nonrefundable and cannot be credited toward tuition or any other fees. When applying via the online application, the application fee can be paid by credit or debit card (Visa, MasterCard, or Discover).

Graduate non-degree or guest applications do not require a fee.

Undergraduate applicants are not charged an application fee regardless of how they apply.

Students who have paid the appropriate application fee at another campus of the University will not be assessed a second fee.

Course Level Assessment
Graduate students electing Undergraduate course(s) will be assessed at the Undergraduate Tuition rate for Undergraduate course(s). Undergraduate courses are numbered 499 and below. (Effective Fall 2006)

Please note: This tuition assessment is dependent on various factors and a change in tuition may not occur for some students.

Dual Status Tuition and Fees: Graduate And Undergraduate
Seniors who are within six hours of completing the requirements for graduation and who have been admitted to a UM-Dearborn graduate program may, with both undergraduate and graduate advisors' approval, register simultaneously in a UM-Dearborn undergraduate unit and in a graduate program. Tuition and fees will be assessed at the graduate program level for graduate courses and the undergraduate program level for undergraduate courses.

Dual Enrollment Tuition and Fees: On Two Campuses Of The University
A student electing courses at UM-Dearborn and at another campus of the University, by means of a "Guest Admission," will pay the appropriate tuition and fees at each campus. The only exception is that the student will not be assessed tuition and fees totaling more than a full program
Students should consult the Office of Registrar’s Tuition & Fees webpage for current tuition and fee information. Course levels 300 and above are assessed an additional $50.00 as Additional Assessments. Students should obtain current tuition and fee information from the Office of Registrar before the end of the drop/add period (the first two weeks of the term).

### Undergraduate Credit By Examination (CBE)
See the Special Examinations in the Policies section.

### Laboratory and/or Course Fees
Students will be assessed a laboratory or course fee if enrolled in any of the courses so designated in the Schedule of Classes (e.g., "Lab fee $50.00").

### Late Registration Assessment
A late registration assessment of up to $45 will be assessed for anyone registering later than two weeks (one week for a half term) after the first day of classes. It should be noted that students are not ordinarily permitted to register after the first two weeks of a full term, the first week of a half-term or mini-term, or after the second class meeting of a less than one-month mini-term. In exceptional cases, a student might be permitted to enroll even after the first two weeks (and be charged a late fee) if the student has obtained the written approval of the dean (or a designated representative) of the college or school.

### Fees Included Within Tuition
The tuition and fees assessed by the University include a nominal charge for parking and other transportation-related services, information technology services, the health referral service to the Henry Ford Hospital-Fairlane Clinic, facilities debt service, and support for student activities and organizations.

### Exemption From Payment Of Fees
No exemption from the payment of fees shall be granted. Failure to fulfill financial obligations to the University may result in disciplinary action, including the withholding of degrees and transcripts.

### New Student Fee
The New Student Fee of $75.00 is charged to all new incoming degree-seeking students at the time of registration. The fee will be automatically posted to the student’s account. This fee covers operational expenses required to deliver high-quality orientation programming for students. It also includes the administration of placement exams, regardless of participation in these activities. The New Student Fee is non-refundable unless a student withdraws from all courses in his/her first term on or before the end of the drop/add period (the first two weeks of the term).

### Tuition and Fees
Students should obtain current tuition and fee information from the Office of the Registrar’s Tuition & Fees webpage, umdearborn.edu/rr_tuition-fees. Course levels 300 and above are assessed an additional amount per credit hour. For current tuition and fee information, students should consult the Office of Registrar’s Tuition & Fees webpage, umdearborn.edu/rr_tuition-fees.

### Special Tuition and Fee Adjustments
The Registrar and the Provost for Academic Affairs are authorized to make adjustments in the application of the policy stated above when, in their judgment, unusual circumstances warrant special consideration such as a serious illness or injury of a student. The student who wishes to have his/her case reviewed must petition and submit documentation to the Office of the Registrar by email, registrars@umich.edu or mail to 1169 University Center, Dearborn, MI 48128. It is the responsibility of the student to make sure that the required documents are submitted. Except in rare and unusual circumstances, petitions will not be accepted after the last day of classes for the term concerned. Additionally, petitions will not be accepted once an account has been turned over for collection.

### Verification of Enrollment
Enrollment Verification requests cannot be processed prior to the end of the Change of Election (add/drop) period for the term requested.

When a loan agency, student loan provider, employer, insurance agency, etc. requires proof that a student enrolled at the University of Michigan-Dearborn, the Office of the registrar, at the student’s request, can provide an Enrollment Verification.

### Requesting Enrollment Verification
The University of Michigan-Dearborn has partnered with the National Student Clearinghouse (NSC) to provide official enrollment verification online. This partnership allows students to access and print enrollment verification letters 24 hours a day, seven days a week. The NSC website provides instructions for obtaining an enrollment verification letter.

### Loan Deferments
The University of Michigan-Dearborn uses the National Student Clearinghouse as the service for verifying enrollment for student loans. These verification requests will be processed by that agency within 10 business days of receipt of a request from the Office of the Registrar. The Printable Enrollment Verification Request Form is used for this purpose and is available on the Office of the Registrar website, umdearborn.edu/registration. When requesting verification for a student loan, you must submit the official forms sent to you by the loan agency along with your request to the Office of the Registrar.

### All Other Requests
The Office of the Registrar processes requests for verification, excluding student loan deferments. Requests are accepted via mail, email (registrars@umich.edu), or fax. If you are requesting enrollment verification on a document that you have received, use the Printable Enrollment Verification Request Form, complete it, and mail or fax it along with the document to the Office of the Registrar.

### Scale
The following scale is used when verifying student enrollment status at UM-Dearborn:

<table>
<thead>
<tr>
<th>Status</th>
<th>Undergraduate</th>
<th>Graduate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full Time</td>
<td>12 or more hours</td>
<td>8 or more hours</td>
</tr>
<tr>
<td>Three-Quarter Time</td>
<td>9-11 hours</td>
<td>6-7 hours</td>
</tr>
</tbody>
</table>
Veteran Affairs

The goal of the Office of Veteran Affairs is to provide support to a diverse community of student veterans and enhance the experience of veterans as they move through our academic programs. We accomplish this mission by:

- Providing academic assistance and tutoring
- Coordinating access to Counseling and Disabilities Services
- Providing veteran-specific enrollment and certification services
- Maintaining a dialog with our Student Veterans of America Chapter and the Association of Women Veterans
- Retaining points of contact in Financial Aid, Cashiers/Student Accounting, and the Office of the Registrar
- Forging partnerships with business, industry, educational institutions, and government agencies.
- Scheduling veteran-specific events

The veteran’s office space provides a friendly environment for our active-duty military and veterans to study, relax, socialize, converse, or just gain a moment of quiet reflection. Whether you were just discharged from active duty, currently on active duty, in the National Guard or Reserves, or a spouse or dependent of a disabled veteran, we will help you with your transition and academic goals. The Office of Veteran Affairs is located in the University Center in room 2170 UC.

Certification of Educational Benefits

The administration of veteran’s education benefits programs and enrollment certifications are handled by Veteran Affairs School Certifying Officials. Our goal is to effectively assist veterans, or the dependents of veterans, with the certification process. Students who are eligible for VA educational benefits are able to apply their respective benefits toward their educational endeavors at UM-Dearborn with assistance from the School Certifying Officials.

All students who are eligible for, and elect to receive education and training benefits while attending UM-Dearborn, may address inquiries for information to the:

Office of Veteran Affairs
4901 Evergreen Road
2170C University Center
Dearborn, MI 48128

Please forward completed Printable Enrollment Verification Request Forms to:

Research, Thesis, and Dissertations (p. 520)
Transfer Credit Policy (p. 520)

Academic Actions and Exceptions

Good Academic Standing

A graduate student in good academic standing is making adequate progress toward the completion of degree requirements both in terms of time and quality of work. Students in good standing will maintain a cumulative grade point average of 3.0 (B) or better in their coursework (with at least six credit hours attempted). Individual graduate programs may adopt stricter requirements for good academic standing, which need to be formally approved and included in their section of the University Graduate Catalog.

Graduate students should periodically discuss their academic progress with their advisors to learn whether they are performing satisfactorily and making sufficient progress toward the degree.

Probation & Dismissal Process

If a graduate student is deemed not to be in good academic standing in a given term or half term, the graduate program will decide to place the student on academic probation in the following term or half term for at least the duration of that entire term or require the student to withdraw from the University. Graduate programs will notify students in writing when their performance falls below acceptable levels. Students should be notified of their probationary status ahead of the add/drop deadline of the subsequent semester, otherwise they will be granted an additional full semester of probation.

During the probationary status, the student will not be awarded a graduate degree or certificate or be advanced to candidacy. For students on probation, individual graduate programs may also create policies requiring students to achieve minimum grades in the overall program of study and/or in particular courses, provided such stipulations are
applied fairly, transparently, and consistently among the graduate student population in the program. A longer probationary period may be granted at the discretion of the program. Whenever an extended probationary period is granted, a list of clear expectations and milestones shall be shared with the student in writing, and progress shall be tracked.

A student on probation when last enrolled in a graduate program who wishes to be readmitted to that program, or change programs, or degree level, must submit a petition along with the Request for readmission form or application to a new program. The petition should provide reasons for the poor academic record, explain how conditions that produced the poor performance have changed, and present specific plans for improvement. The admitting graduate program reviews the documents and makes a determination on admission/readmission as well as any conditions of academic probation.

A student whose cumulative GPA falls below a B (3.0 on a 4.0 point scale), or who is not making satisfactory progress toward the degree, may be denied permission to register, required to withdraw from the term, or be dismissed from the program. Immediate dismissal without a probationary period should only be used in the most extreme situations, where student success support efforts are highly unlikely to succeed. The decision to dismiss a student without a probationary period should be reviewed by the college academic standards committee or an equivalent committee. Programs must provide the student with written notification of the grounds for dismissal.

See also your program’s time to degree policy and the Code of Conduct (http://catalog.umd.umich.edu/academic-policies-campus/academic-code-of-conduct/).

### Academic Honors

Graduate students who graduate and have obtained a cumulative GPA of at least 3.7 but less than 3.9 are recommended for graduation “With Distinction”. Graduate students who graduate and have obtained a cumulative GPA of 3.9 and above are recommended for graduation “With High Distinction”.

Graduation distinctions are not calculated and granted for graduate programs for any College of Arts, Sciences, and Letters graduate programs affiliated with the Horace H. Rackham School of Graduate Studies.

### Accelerated Masters Programs

An accelerated graduate degree creates an opportunity for exceptional undergraduate students to obtain both their undergraduate and graduate degrees by completing some undergraduate course requirements at the graduate level leading to a substantial savings in time and money. The graduate credit hours that satisfy undergraduate degree requirements also reduce the credit hours needed for the graduate degree and are typically referred to as double counting or credit sharing. Accelerated programs that rely on double counting to reduce time-to-degree are often referred to as “4+1 accelerated masters”.

#### Double counting

The maximum number of graduate level credits that can be counted toward an undergraduate degree program is 15 credit hours in an accelerated program. Accelerated program proposals must specify which courses in the graduate curriculum can be double counted with the undergraduate requirements and how they fit into the undergraduate program of study. Typically, graduate programs designate graduate courses with similar subject-matter to undergraduate degree requirements (i.e. requiring accelerated students to take the 500 level course of a 400 level undergraduate requirement). Graduate level double counted courses are delivered at a higher level of rigor and should not be taken until students are officially admitted into the accelerated program.

### Admission

Undergraduate students can be considered for admission into an accelerated master’s program after they have earned 60 credit hours, typically in the junior year. If admitted, their graduate program will be their secondary curriculum in the student information system. Given the condensed nature of the program, a higher GPA is expected for admission. Individual programs can set their own admission requirements to ensure student success in the accelerated program.

### Student Status (U/G)

Accelerated students remain classified as continuing undergraduate students until they complete their undergraduate degree requirements and apply for and are granted their bachelor’s degree. In addition, they will not be classified as new graduate students or be factored into a graduate cohort for retention calculation purposes. They will only come in as continuing graduate students for headcount.

### Financial Aid eligibility

Accelerated students taking graduate courses to complete the requirements of their undergraduate degree are eligible for financial aid as undergraduate students. When 4+1 students obtain their undergraduate degree and their graduate program changes from secondary to primary curriculum, they are viewed as graduate students for financial aid purposes (i.e. domestic students are restricted to only loans). To maximize their financial aid benefits, students should be advised not to proceed with additional graduate courses before they complete the approved double-counted graduate courses along with all other undergraduate degree requirements.

### Tuition

Undergraduate students electing graduate courses (those numbered 500 and above) will be assessed at the undergraduate tuition rate while still pursuing their undergraduate degree. However, any relevant graduate-equivalent premiums and lab fees will be added.

### Graduation timing

Accelerated students can apply for each degree credential as soon as the respective degree requirements have been completed. Students who are unable to complete their graduate degree, are still eligible to complete the requirements of the undergraduate degree and apply for their bachelor’s degree.

### Minimum grade requirements

Students must meet the minimum grade requirements of their graduate program and respective accelerated option.
Exempting, Waiving, and Repeating Courses

Exempting, Waiving, and Repeating Courses

The following policies on course waivers, exemptions, and repeats apply only to the University of Michigan-Dearborn master's programs.

Some University of Michigan Dearborn master's programs permit course waivers and/or exemptions. Wherever permitted, course waivers or exemptions are initiated and approved by program faculty. A course may be waived -- thereby reducing the number of credit hours required for the degree -- in cases when students have taken courses similar in content to courses in a graduate program. A course exemption, on the other hand, does not reduce the total number of credit hours needed to satisfy program requirements, and thus requires the replacement of the exempted course with another approved course.

Course waivers/exemptions are approved for academic study of a subject; they are not approved for experiential background in the subject area.

Course Waivers

It is recognized that some students may have taken courses that are similar in content to courses in a graduate program. Under these circumstances, with academic unit approval, a course requirement may be waived. Course waivers reduce the number of credits required for the degree. It is important to note that all masters students will still need to accumulate a minimum of 30 credits in order to earn the degree. Many master's programs require more than 30 credit hours. To qualify for a waiver, typically, the course should have similar content as the course required for the University of Michigan-Dearborn program. Students should consult their academic unit for their specific policies; not all graduate programs permit waivers.

Course Exemptions

On occasion, a course in a graduate program may not be available, may no longer be offered due to program changes, or the student may have taken a course with equivalent content. In these instances, and for other similar reasons, programs may consider granting a course exemption. The determination of courses suitable for exemption rests with the academic unit.

To qualify for an exemption, the course should be similar in content to a course required for the University of Michigan-Dearborn graduate program. An approved course exemption does not reduce the total number of credit hours needed to satisfy program requirements. Programs must require an approved course to replace an exempted course. Students should consult their academic unit for their specific policies and process; not all graduate programs permit course exemptions.

Repeating Courses

Graduate students, with the permission of the program advisor, may repeat a course. Grades and honor points for the original course and the repeated course(s) will appear on the student's transcript and be used in computing the student's grade point average; however, additional credit toward program will not be awarded for the repeated course.

Graduate Certificate Policy

A graduate certificate is a non-degree credential, less extensive than a Master's program, which is designed to provide students with a specialized set of courses that supplement a primary field of study, area of expertise, or provide an interdisciplinary experience within a defined body of knowledge. Certificates are encouraged in areas not currently addressed by a graduate degree program and where they might provide added benefits to students beyond existing degree programs. This policy pertains to non-Rackham University of Michigan Dearborn programs. Rackham graduate degree programs must follow Rackham rules, found on their website (http://www.rackham.umich.edu/).

Certificates can be created within specific disciplines or departments, college-wide programs, or across departmental/college boundaries with the issuing college having the responsibility for administering/monitoring the certificate program.

- University of Michigan-Dearborn graduate certificates contain a required minimum of nine (9) credit hours. Individual graduate programs may opt for a higher credit hour requirement depending on the particular set of skills on which their certificates focus.
- Only graduate level courses may be used to meet certificate requirements.
- Students admitted to certificate programs must complete requirements within three (3) years from the date of first enrollment in the program, with only one possible one-year extension allowed for unusual individual circumstances.
- Upon completion of the graduate certificate requirements, the student will receive a certificate issued by the University of Michigan-Dearborn. Graduate certificate recipients will not participate in commencement ceremonies.

There are two (2) types of graduate certificate programs offered at the University of Michigan-Dearborn:

1) Linked certificates are connected to specific graduate degree programs and offered to students enrolled in a degree program. Students pursuing such a certificate must be formally admitted to the certificate program and must be enrolled in a degree-granting program at UM-Dearborn.

2) Stand-alone certificates comprise a distinct set of courses not wholly aligned with an existing degree program and are offered to non-degree students. Students interested in these certificates should apply directly through standard graduate non-degree seeking admissions procedures.

All graduate certificate applicants are required to meet the following minimum requirements for admission:

- Completion of a bachelor's degree from a U.S. college or university accredited by a regional accrediting association, or completion of an international degree that is equivalent to a U.S. bachelor's degree from a college or university recognized and approved by the Ministry of Education or Commission responsible for higher education in the country where the degree is earned.
- Applicants whose native language is not English must demonstrate English proficiency according to the admission requirements of the relevant graduate program.
All University of Michigan-Dearborn certificate programs should follow the below criteria:

- Students may transfer from another accredited institution into a University of Michigan-Dearborn certificate program up to half of the credit hours required by the certificate, but no more than six (6) credit hours of graduate credit. If a certificate requires 9 credits of coursework, only 3 credits can be double-counted. Applicable credit hours from other institutions can be transferred only if they have not been applied to another degree or certificate and if they were earned with a grade of B or better within five (5) years prior to enrollment.
- There is no limit to the number of credit hours earned at the University of Michigan-Dearborn that can be applied to a graduate certificate program.
- Students who have taken the requisite courses for a given certificate, but have not applied for admission into the certificate program, can petition to obtain the certificate as long as they are currently enrolled in a graduate degree program at the University of Michigan Dearborn.
- To obtain a certificate, the student must have a minimum cumulative grade point average of B (3.0 on a 4.0 point scale) with a minimum of C (2.0 on a 4.0 point scale) in any course in the certificate program coursework.
- All graduate credits earned in a certificate program at the University of Michigan Dearborn can be applied toward a University of Michigan-Dearborn graduate degree program, however, a more restrictive policy is at the discretion of each graduate program. For Dual degree programs, if either program prohibits double counting, the prohibition applies to the other program as well.

Graduate Dual Degrees

Dual degree programs allow a student to combine two graduate programs of study in complementary programs via intentionally designed curricular coursework which allow for some double-counting of credits. Students completing dual degree programs successfully will be granted two separate diplomas and will include both degrees on the transcript.

Dual degree programs can be student-initiated, or school-defined. School-defined programs are subject to the regular degree program review process. The review process for student-initiated degree programs is described below.

Student-Initiated Dual Degree Programs

A student may seek approval for an individualized graduate dual degree program. Graduate students must complete at least one term of coursework in good academic standing before requesting to be considered for admission to a dual degree program. A dual degree program can combine at most two single degree programs. Student-initiated dual degree programs are reviewed on an individual basis and must be approved by the colleges of each degree. To provide consistent application of curriculum requirements and policy as well as to ensure the degree audit requirements are met, all proposals for dual degrees must be submitted to the UCDC Graduate Subcommittee.

Students may request dual degree programs in the following combinations:

- a doctoral degree in one field of specialization and a master’s degree in another field;
- two master’s programs.

This graduate dual degree policy does not cover graduate certificates and how their coursework can be counted toward a degree (see Graduate Certificate Policy (http://catalog.umd.umich.edu/academic-policies-graduate/grad-cert-policy/)).

Double-Counting Credit Hours for Dual Degree Programs

Students in dual degree programs may ask to double-count a limited number of credits toward the requirements of both degrees. All dual-degree programs are subject to the following general rules:

- Double-counted courses must meet the requirements of both programs.
- Courses can be double-counted only if they were taken less than five years before the start of enrollment in the current degree program.
- At least half of the minimum required credits for each degree must be earned in the program and counted solely for that degree. For example, a student enrolled in a 36-hour master’s program may not apply more than a combination of 18 transfer and/or double-counted credits toward the degree requirements.
- A program may overlap with only one other program for the purpose of double-counting credits. Credits may never be used for three or more programs. If a student seeks a third degree, it must stand alone.
- Programs may limit credit double-counting below the maximum number allowed in this policy, but may not allow credit double-counting above this limit. Some programs may not allow credit double-counting.
- For a doctoral student who wishes to use some credits toward a master’s in another program, no course numbered 990, 995, or with “doctoral,” “dissertation,” or “preliminary” in the title may be counted toward a master’s degree.
- The maximum number of credits that may be double-counted is determined by adding the minimum number of credits required for each program and dividing by six, rounding any fraction down to the nearest whole number. For example:

| Minimum credit hours required for Degree A | 30 |
| Minimum credit hours required for Degree B | 36 |
| Total | 66 |
| Maximum number that may be double-counted | 11 |

- Credits for a single course may not be split; a course must be double-counted in its entirety or not at all.

Students can begin the dual degree program as soon as their application and study plan has been approved by the college(s). New student-initiated degree programs will follow the university curriculum process for recording and processing purposes.

Graduate Guest/Non-Candidate for Degree

Guest Students

Students currently enrolled in a graduate degree-seeking program at another university may request permission to enroll in graduate courses at the University of Michigan-Dearborn as a guest student. Master’s level students are permitted to enroll for a maximum of 6 semester
hours of credit and doctoral level students are permitted to enroll for a maximum of 9 semester hours of credit as a guest student at UM-Dearborn. University of Michigan-Ann Arbor and University of Michigan-Flint students, while still considered guests, are not held to the above credit cap. However, these University of Michigan system students should follow relevant transfer of credit policies. Guest students register on a space-available basis.

Please note that the University of Michigan-Dearborn participates in the Michigan Intercollegiate Graduate Studies (MIGS) program. If the courses you are interested in taking are not available at your home institution, you should consider applying through the MIGS option.

**Non-Candidate For Degree (NCFD)**

NCFD status enables qualified individuals not in a degree-seeking program to take a maximum of 6 credit hours for graduate credit. NCFD students register on a space-available basis. Courses elected by students under this status cannot be counted toward a degree program until the student receives regular degree-seeking admission and the graduate program advisor determines that the courses are acceptable. Please note: the College of Business on the University of Michigan-Dearborn campus does not offer enrollment under NCFD status.

All guest and NCFD students are:

- Subject to all UM-Dearborn admission and registration regulations.
- Admitted for one term only. Additional registration under this status requires a new application each term.
- Assessed regular UM-Dearborn graduate tuition and related fees for all courses elected.
- Not eligible for financial aid.
- Responsible for determining if credit earned as a guest/NCFD student will be accepted by their degree-seeking program of interest if applicable.

All guest/non-candidate for degree applicants must provide the following documentation for admission consideration:

- A completed guest/NCFD application form.
- Official transcripts from the student's undergraduate degree-granting institution and when applicable, from all other higher education institutions where graduate courses were completed or are in progress.
- For guest applicants only: Written permission from the student's home institution verifying enrollment in a graduate program and granting permission to elect the course(s) at the University of Michigan—Dearborn is required.

Non-Candidate for degree applicants should be aware of the following:

- Admission as a graduate non-candidate for degree student does not guarantee or imply admission or eligibility for a graduate degree-seeking program at the University of Michigan-Dearborn. To be considered for transition to a degree-seeking program, a completed graduate degree-seeking application and required supplemental materials must be submitted.
- In order for courses taken as a graduate non-candidate for degree student to be considered as credit towards a graduate degree program, relevant applicable credit evaluation or transfer credit policies should be followed. Advance communication with your program of interest is encouraged.

---

**Graduate Program Completion Requirements**

**Graduation/Application for Diploma**

Each candidate for a degree must file a Degree/Diploma Application with the Office of Registration & Records, typically within ten days of the beginning date of classes for the term in which the student expects to complete the requirements for degree. Please consult the Applying to Graduate Webpage, umdearborn.edu/rr_apply-graduate (http://www.umdearborn.edu/rr_apply-graduate/), for specific dates. Applications will not be accepted after the published deadlines. If an application for a diploma was filed for a previous graduation period in which the student did not graduate, a new application is necessary. Degrees are granted at the end of the fall, winter, and summer terms, even though commencement exercises are held only in April (or May) and December.

**Research, Thesis, and Dissertations**

**Thesis and Dissertation Formatting Requirements and Policies**

Thesis and dissertation guidelines vary by discipline. Be sure to follow the correct procedure and guidelines as outlined on the Office of Graduate Studies webpages:

- Master’s Thesis (https://umdearborn.edu/academics/graduate-studies/office-graduate-studies/master-thesis/)
- Doctoral Dissertation (https://umdearborn.edu/academics/graduate-studies/office-graduate-studies/doctoral-dissertations/) (https://umdearborn.edu/academics/graduate-studies/office-graduate-studies/master-thesis/)

**Transfer Credit Policy**

The following policy represents a campus-wide baseline standard for transferring credit at University of Michigan-Dearborn graduate programs. Individual colleges or programs may adopt more restrictive requirements. Rackham programs at the University of Michigan Dearborn campus are required to follow the academic policies of the Rackham Graduate School.

With program adviser approval, select graduate coursework credits earned at another accredited institution may be transferred toward a University of Michigan-Dearborn graduate degree. It is the responsibility of the student requesting transfer of credit to submit to the graduate program adviser an official transcript with course final grade, a copy of the catalog with course description from the former institution, and a course syllabus.

Students eligible to transfer credit must:

- be enrolled in good standing in their graduate degree program;
- have satisfied all conditions for full or conditional admission.

Criteria for transferring credit for master’s programs:

1. Coursework must have been completed within five years of the term of admission into the graduate program where credit is being transferred.
2. Students may transfer credits for graduate-level courses taken while pursuing an undergraduate degree only if these were not used...
to fulfill requirements for a degree or certification from another institution and only if there is confirmation that these courses required graduate-level work.

3. For master’s level programs, graduate credit may be transferred from other accredited degree-granting universities with graduate degree programs for up to a maximum of 6 credit hours, or their equivalent. For universities on the quarter system, 9 credit hours is the equivalent of 6 semester credit hours. Graduate credit may be transferred from other University of Michigan campuses (Flint or Ann Arbor) for up to half the credits required for the degree.

For doctoral and other post-master’s programs, students should refer to program-specific information and requirements.

Credits may not be transferred:

- If they are used or will be used, in whole or in part, to fulfill requirements for a bachelor’s or other degree
- If they are applied to a certificate from another institution;
- for courses taken at an exclusively undergraduate institution or community college;
- for courses taken more than five years before admission to the student’s current program; or
- for courses for which a letter grade of less than “B” has been awarded. Note: Courses graded pass/fail or satisfactory/unsatisfactory are not eligible to be transferred.

Under no circumstance will credit used in one master’s degree program be transferred to satisfy the requirements of another master’s degree. If the program advisor determines that coursework completed in a previous master’s degree is equivalent to University of Michigan-Dearborn courses, the may be eligible for a course waiver provided they satisfy degree requirements in the second master’s program.

Approved graduate transfer credit will appear on the student’s official transcript. Grades earned in coursework transferred from University of Michigan campuses (Flint and Ann Arbor included), or from another university through the Michigan intercollegiate Graduate Study (MIGS) program, will be calculated into the students graduate program GPA. Grades in coursework transferred from other universities will not be calculated into the student’s graduate program GPA.
College of Arts, Sciences, and Letters

College of Arts, Sciences, and Letters History of the College

From the beginning of the Dearborn Center of the University of Michigan, as it was called at first, there was “an intent to provide a full schedule of daytime courses in Engineering, Business Administration, and the Liberal Arts and Sciences” (Report by the University’s Dean of Statewide Education, January 1957). On January 10, 1958, the Regents approved the creation of the Division of Literature, Science, and the Arts (LSA) as an official academic division. Full programs in the liberal arts began in Fall 1960; by Fall 1965 the LSA Division was the largest academic unit on the Dearborn Campus, a distinction which continues to the present.

When it became a four-year undergraduate institution in 1971, the Campus was designated the University of Michigan-Dearborn (UM-Dearborn). Two years later, the Regents approved a new set of UM-Dearborn Bylaws, in which the Department of Education became a separate division, and the LSA Division became the College of Arts, Sciences, and Letters (CASL), administered by a Dean. CASL now consists of six multidisciplinary departments: Behavioral Sciences; Language, Culture, and Communication; Literature, Philosophy, and the Arts; Mathematics and Statistics; Natural Sciences and Social Sciences.

College of Arts, Sciences, and Letters Mission Statement

The College of Arts, Sciences, and Letters inspires and equips its students, through education in the liberal arts, to be servant leaders in society at large and for the resurgence and renewal in southeast Michigan. The College fulfills its mission by providing rigorous and intellectually challenging educational experiences rich in critical thinking, collaborative and reflective learning, civic engagement, and personal interaction with high quality and dedicated faculty. The College of Arts, Sciences, and Letters promotes the value of life-long intellectual growth and development, rational and respectful discourse, living and leading in multicultural societies, striving for justice and fairness, and in gaining a global perspective.

College of Arts, Sciences, and Letters Graduate Programs

Graduate programs in the College of Arts, Sciences, and Letters engage a diverse, highly motivated, and talented student body in disciplined and sustained study for both intellectual and vocational purposes. In particular, these programs are designed to equip students with the intellectual resilience required for the complex challenges of a changing world—and for the intersecting domains of professional activity, citizenship and public policy, and life-long learning.

Building on the talents of a distinguished faculty of teacher-scholars and the resources of the region, these programs fulfill two broad liberal arts functions. They enlarge, deepen, and refine students’ knowledge and awareness. They also develop students’ analytical, critical thinking, and problem-solving skills. Most emphasize interdisciplinary perspectives and methods, a hallmark of the College, in the conviction that multiple perspectives yield richer analytical contexts. Most offer small classes, close interaction with faculty, and special sensitivity to issues that have regional significance. Whether specifically oriented to a particular profession or not, these programs try to accommodate the interests and needs of working adults through convenient scheduling, customized plans of study, and thoughtful advising. Partnerships with the broader community provide opportunities for the dissemination and application of knowledge, and for collaborative projects. For example, our students might develop problem-solving applications for industrial and scientific settings like those in southeastern Michigan, use the Rouge River watershed as a laboratory for environmental concerns, or work with nearby healthcare providers.

CASL offers five graduate degrees: Master of Science in Applied and Computational Mathematics, Master of Science in Criminology and Criminal Justice, Master of Science in Environmental Science, Master of Science in Psychology with Specializations in Health Psychology and Clinical Health Psychology, Master of Public Administration and Policy.

Following are descriptions of each program’s mission, admission standards, and requirements. For additional information see the Graduate Programs page.

Master’s Programs

- Applied and Computational Mathematics (p. 526)
- Criminology and Criminal Justice (p. 529)
- Environmental Science (p. 529)
- Psychology (p. 530)
- Public Administration and Policy (p. 533)

Administration

Hershock, Martin J., PhD, Dean
Scarlatia, Gabriella M., PhD, Associate Dean
Lachance, Michael, PhD, Associate Dean
Bachir, Nada, BA, Assistant to the Dean
Gassel, Susanne, MA, Director, CASL Advising and Academic Success
Gordé, Susan, BA, Communications Editor & Alumni Affiliate Coordinator
Judge-Gonzalez, Ellen, MA, Director, Student Outreach and Academic Resources (SOAR Program)
Kelly-Williams, Christine, BA, Business Process Analyst
Lennon, Nicole, BA, Administrative Assistant
Yuncker, Morgan, BA, Outreach Marketing and Event Coordinator

Chairs and Directors

Beauchesne, Patrick, Director, Foundations
Brainer, Amy, Director, Women’s and Gender Studies
Forsyth-Brown, Ivy, Director, African American and African Studies and Center for Ethnic and Religious Studies
González del Pozo, Jorge, Chair, Language, Culture, and Communication; Chair, Literature, Philosophy, and the Arts, and Director of International Studies
Hickey, Georgina, Chair, Social Sciences
Howell, Sally, Director, Center for Arab American Studies
Leonard, Michelle, Director, Psychology Graduate Program
Little, Daniel, Director, Honors Program
Martin, Lisa, Director, Women’s and Gender Studies
Morgan, Sven, Chair, Natural Sciences
Muller, Anna, Director, Women in Learning and Leadership
Napieralski, Jacob, Director, Masters of Science - Environmental Science
Pyrozhko, Vadym, Director, Master of Public Administration and Policy
Remski, Joan, Chair, Mathematics and Statistics
Ruch, Lara, Director, Urban and Regional Studies Program
Sanijian, Ara, Director, Center for Armenian Studies
Sethuraman, Nitya, Director, Behavioral and Biological Sciences
Shelton, Donald, Director, Criminology and Criminal Justice
Smith, Jonathan, Chair, Behavioral Sciences
Taylor, John, Director, Writing Center
Walters, Claudia, Director, Environmental Interpretative Center
Zhao, Jennifer, Director, Applied and Computational Mathematics

Professors Emeriti

Akiyama, Michael, PhD, Professor Emeritus of Psychology
Anderson, Donald F., PhD, Professor Emeritus of Political Science
Axsom, Richard, PhD, Professor Emeritus of Art History
Bjorn, Lars, PhD, Professor Emeritus of Sociology
Bogin, Barry A., PhD, Professor Emeritus of Anthropology
Bord, Donald J., PhD, Professor Emeritus of Physics
Brown, James W., PhD, Professor Emeritus of Mathematics
Clark, Elaine G., PhD, Professor Emerita of History
Constant, John G., PhD, Associate Professor Emeritus of Music
Crowell, Elizabeth, PhD, Associate Professor Emerita of Economics
Dahlke, Richard M., PhD, Professor Emeritus of Mathematics and Mathematics Education
DeCamp, Mark, PhD, Associate Professor Emeritus of Chemistry
Emery, Allan, PhD, Professor Emeritus of Chemistry
Fakler, Robert, PhD, Professor Emeritus of Mathematics
Fink, John F., PhD, Professor Emeritus of Mathematics
Flax, Neil M., PhD, Associate Professor Emeritus of Comparative Literature and German
Gardner, Gerald, PhD, Professor Emeritus of Psychology
Garland, Frank, PhD, Associate Professor Emeritus of Chemistry
Gelderloos, Orin G., PhD, Professor Emeritus of Biology and Environmental Studies
Gillespie, John A., PhD, Professor Emeritus of Mathematics and Statistics
Grewe, Eugene, PhD, Professor Emeritus of Rhetoric and English Composition
Gruber, James, PhD, Professor Emeritus of Sociology
Heady, Judith, PhD, Associate Professor Emerita of Biology
Higgs, Elton, PhD, Professor Emeritus of English Language and Literature
Höft, Marget, PhD, Professor Emerita of Mathematics
House, Gloria, PhD, Professor Emerita of African and African American Studies and Humanities
Hull, Brooks, PhD, Professor Emeritus of Economics
Jacobs, Claude, PhD, Associate Professor Emeritus of Behavioral Sciences
James, David A., PhD, Professor Emeritus of Mathematics
Kamachi, Noriko, PhD, Professor Emerita of History
Klein, Bernard W., PhD, Professor Emeritus of Political Science
Kotre, John, PhD, Professor Emeritus of Psychology
Lee, Dorothy A., PhD, Professor Emerita of Comparative Literature and English
Lempert, Lora Bex, PhD, Professor Emerita of Sociology
Lyak, Robert, PhD, Professor Emeritus of Mathematics and Computer Science
Massey, Frank J., PhD, Associate Professor Emeritus of Mathematics and Computer Science
Milles, Stephen, PhD, Associate Professor Emeritus of Mathematics and Mathematics Education
Moerman, Daniel, PhD, Professor Emeritus of Anthropology
Moran, Gerald, PhD, Professor Emeritus of History
Morash, Ronald P., PhD, Professor Emeritus of Mathematics
Mostafapour, Kazem, PhD, Associate Professor Emeritus of Biochemistry and Chemistry
Nadasen, Arunajallam, PhD, Professor Emeritus of Physics
Norman, Richard, PhD, Associate Professor Emeritus of Biology

Otto, Charlotte, PhD, Professor Emerita of Chemistry
Papazian, Dennis, PhD, Professor Emeritus of History
Papp, F. J., PhD, Professor Emeritus of Mathematics
Pearson, Sheryl S., PhD, Professor Emerita of English Language and Literature
Pebworth, Ted-Larry, PhD, Professor Emeritus of English Language and Literature
Perlove, Shelley K., PhD, Professor Emerita of Art History
Peter, Philip H., PhD, Associate Professor Emeritus of Music
Prentis, Jeffrey J., PhD, Professor Emeritus of Physics
Proctor, Donald, PhD, Professor Emeritus of History
Radine, Lawrence, PhD, Professor Emeritus of Sociology
Rahman, Ahmad, PhD, Associate Professor Emeritus (posthumously) of History
Riebesell, John, PhD, Associate Professor Emeritus of Biology
Roehl, Richard, PhD, Professor Emeritus of Economics
Rubenstein, Rheta N., PhD, Professor Emeritus of Mathematics Education and Mathematics
Sayles, Edward, PhD, Professor Emeritus of Philosophy
Schaum, Melita, PhD, Professor Emeritus of English Literature
Schneider, Michael J., PhD, Professor Emeritus of Biology
Sheldon, Jane, PhD, Professor Emeritus of Psychology
Simpson, Robert, PhD, Professor Emeritus of Biology and Environmental Science
Smith, Patricia, PhD, Professor Emerita of Economics
Snabb, Thomas E., PhD, Associate Professor Emeritus of Mathematics and Statistics
Spinelli, Emily L., PhD, Professor Emerita of Spanish
Spoiden, Ste`phane, PhD, Professor Emeritus of French
Stern, Jeffrey, PhD, Professor Emeritus of Psychology
Summers, Claude, PhD, Professor Emeritus of English Language and Literature
Tai, Julia C., PhD, Professor Emerita of Chemistry
Tentler, Leslie W., PhD, Professor Emerita of History
Thomson, William, PhD, Associate Professor Emeritus of Psychology
Troweny, Michael, PhD, Professor Emeritus of Economics
Vansant, Jacqueline, PhD, Professor Emeritus of German
Verhey, Roger, PhD, Professor Emeritus of Mathematics
Woodward, Wayne, PhD, Associate Professor Emeritus of Communication

Faculty

College Wide Programs

Barak, Maya, PhD, American University, Assistant Professor of Criminology and Criminal Justice
Brainer, Amy, PhD, University of Illinois at Chicago, Associate Professor of Women's and Gender Studies and Sociology
DeGregorio, Scott, PhD, University of Toronto, Professor of Honors and English
Lacey, Krim, PhD, Wayne State University, Assistant Professor of African and African American Studies and Sociology
Laws, Terri, PhD, Rice University, Assistant Professor of African and African American Studies
Martin, Lisa, PhD, University of Michigan, Associate Professor of Women's and Gender Studies
Shelton, Donald, JD, PhD, University of Nevada, Associate Professor of Criminology and Criminal Justice and Sociology

Department of Behavioral Science

Aronson, Pamela, PhD, University of Minnesota, Professor of Sociology
Banner, Francine, JD, PhD, Arizona State University, Professor of Sociology
Beauchesne, Patrick, PhD, University of California at Berkeley, Assistant Professor of Anthropology
Chatkoff, David, PhD, University of Southern Mississippi, Associate Professor of Psychology
Chenoweth, John, PhD, University of California Berkeley, Assistant Professor of Anthropology
Clark-Foos, Arlo, PhD, University of Georgia, Assistant Professor of Psychology
Dolins, Francine, PhD, University of Stirling (Scotland), Assistant Professor of Psychology
Draus, Paul, PhD, Loyola University, Professor of Sociology
Early, Kevin, PhD, University of Florida, Associate Professor of Sociology
Forsythe-Brown, Ivy, PhD, University of Maryland, Assistant Professor of Sociology
Hymes, Robert W, PhD, Michigan State University, Associate Professor of Psychology
Lacey, Krim, PhD, Wayne State University, Assistant Professor of African American Studies
Leonard, Michelle, PhD, Wayne State University, Assistant Professor of Psychology
Liu, ZhongXu, PhD, University of Toronto, Assistant Professor of Psychology
Loeb, Roger C., PhD, Cornell University, Professor of Psychology
McAulsan, Pamela, PhD, Wayne State University, Associate Professor of Psychology
McKenna, Brian, PhD, Michigan State University, Associate Professor of Anthropology
Patel, Nehal, JD, PhD, Northwestern University, Associate Professor of Criminal Justice and Sociology
Pecina, Susana, PhD, University of Michigan, Associate Professor of Psychology
Price, Carmel, PhD, University of Tennessee at Knoxville, Assistant Professor of Psychology
Reppond, Harmony, PhD, University of California at Santa Cruz, Associate Professor of Psychology
Sethuraman, Nitya, PhD, University of California at San Diego, Assistant Professor of Psychology
Shelton, Donald, JD, PhD, University of Nevada, Associate Professor of Sociology
Siefert, Caleb, PhD, Adelphi University, Assistant Professor of Psychology
Swift, Dan J., PhD, University of New Hampshire, Associate Professor of Psychology
Waung, Marie, PhD, Ohio State University, Professor of Psychology
Wellman, Rose, PhD, University of Virginia, Assistant Professor of Anthropology
Wrobel, Nancy, PhD, Wayne State University, Professor of Philosophy

Department of Language, Culture and Communication
Calzada-Orihuela, Sofia, PhD, University of Maryland, Lecturer IV of Spanish
Davis, Daniel, D.Phil., Oxford University, Professor of Linguistics
DeGenaro, William, PhD, University of Arizona, Professor of Composition and Rhetoric
Dika, Rifaat, PhD, Wayne State University, Lecturer IV of Arabic
Elmeligi, Wessam, PhD, Alexandria University (Egypt), Assistant Professor of Arabic
Gilmore, H James, MA, University of Iowa, Clinical Associate Professor of Communication
González del Pozo, Jorge, PhD, University of Kentucky, Professor of Spanish
Iannarino, Nicholas, PhD, University of Kentucky, Assistant Professor of Communication
Kiska, Timothy, MA, Wayne State University, Associate Professor of Communication
Lee, Jamie, PhD, University of Illinois, Associate Professor of Linguistics

Wayman, Francis W., PhD, University of Pennsylvania, Professor of Political Science
Wraight, Jamie, PhD, University of Toledo, Lecturer IV of History

Applied and Computational Mathematics

The Applied and Computational Mathematics (ACM) program provides graduate-level education in applied mathematics for people whose goal is to develop comprehension of principles of applied mathematics and skills in employing those principles in industrial or scientific settings. It has three central themes: general principles and theories of applied mathematics, the construction and analysis of mathematical models, and the development and efficient execution of computational mathematical algorithms. Effective use of advanced applied mathematical techniques has become increasingly important in industrial settings as the amount of sophisticated simulation software has mushroomed. People are needed who can help engineers, scientists and managers in the precise formulation of complex problems and in selecting the analytical methods and software appropriate for their solution. These people should understand the algorithms underlying mathematical software and be able to implement additional mathematical algorithms knowledgeably and efficiently in the framework of existing software. Finally, these people need to be able to interpret the results of computations to others. It is the goal of the program to provide people with these skills.

The Program

The key components of this evening program involve the integration of applied mathematics, mathematical modeling and numerical analysis. The ACM program provides not only coursework in various areas of applied mathematics, but also opportunities for independent or collaborative work. These approaches to learning contribute to a student's outlook and depth of understanding. The program supports the development and enhancement of students' skills useful in industrial and scientific careers, and in other careers having applied mathematics as its primary focus. It is geared toward three groups of prospective students: individuals in established careers who want or require further training for their current positions, individuals in the workforce who wish to retrain for new career directions, in some cases preparing for a more mathematically-oriented assignment with their current employer, and recent graduates who desire a deeper understanding of applied mathematics as an aid in launching a career.

Admission and Prerequisites

Admission to the ACM program as a regular student requires a BA or a BS degree in mathematics, computer and information science, engineering, a physical science or a life science earned from a program at an accredited institution with an average of B or better. Individuals with other degrees or less than a B average may be considered for conditional admission status and may be required to submit evidence of potential for success in a graduate program. An entering student should have completed three courses in Calculus, including multivariate calculus, plus introductory courses in Linear Algebra and Differential Equations. Deficiencies in prerequisites may be made up after entrance to the Graduate Program. However, credits received in courses elected to make up the deficiencies do not count toward the degree.

Application instructions can be found at: umdearborn.edu/gradapplynow (http://www.umdearborn.edu/gradapplynow/)

Each applicant should submit the following:

1. Official transcripts from all universities attended.
2. A one-page statement of purpose describing the applicant's career goals and personal objectives in pursuing the program.
3. Three letters of recommendation. At least one letter must be from an academic source.
4. Students whose native language is not English are also required to satisfy the English Language Requirements for Admission which can be found in the General Information section of this catalog.

For more information, visit the ACM website (https://umdearborn.edu/cas/graduate-programs/programs/master-science-applied-and-computational-mathematics/) or call 313-583-6321.
Advanced Standing

Graduate credit may be transferred from other accredited degree-granting universities with graduate degree programs for up to a maximum of 6 credit hours, or their equivalent. For universities on the quarter system, 9 credit hours is the equivalent of 6 semester credit hours. Graduate credit may be transferred from other University of Michigan campuses (Flint or Ann Arbor) for up to half the credits required for the degree.

Degree Requirements

30 semester hours of graduate course work with a cumulative grade point average of B or better. The 30 hours must be selected from lists of approved courses and be approved by the student’s graduate advisor. At least 15 of the hours must be Mathematics and Statistics courses. Up to six credit hours toward the degree may be granted by the Graduate Program Committee to a student through the transfer of credit for approved graduate-level courses. Such courses must have been completed within the past five years with a grade of B or better at an accredited institution and not have been applied in whole or in part toward another degree or certificate.

Criminology and Criminal Justice

Advance your career with a Michigan graduate degree from University of Michigan-Dearborn in the rapidly growing criminal justice profession.

Faculty, who are experts in their field, developed the Master of Science in Criminology and Criminal Justice to prepare students for research, management and policy positions or continuation into a Ph.D. program.

This flexible degree program is 30-31 credits and provides a thesis and non-thesis option, while offering traditional, evening and online courses. Public safety professionals from partnering organizations may quality for a scholarship valued at 20 percent of tuition and fees through our community service personnel scholarship program.

The program can be completed entirely on campus, entirely online, or through a combination of on-campus and online courses. The following courses are available online:

Elective courses: CRJ 509, 517, 519, 569, 582, 587.

Admission Requirements

• Completion of a Bachelor's degree with at least a 3.0 undergraduate GPA

• Completion of the following courses or equivalent:
  • CRJ 200 Introduction to Criminal Justice
  • CRJ 468 Criminology
  • CRJ 416 Criminal Law

Applicants who meet the GPA requirement but lack one or more required courses may be admitted conditionally with the permission of the Program Director. These course deficiencies may be completed concurrently with graduate courses in the program upon Program Director approval.

Community Service Personnel Scholarships

The University of Michigan-Dearborn provides a scholarship valued at 20% of tuition and fees for public safety employees at partnering organizations. The scholarship is available for degree-seeking students at 20% of tuition and fees for public safety employees at partnering organizations. This flexible degree program is 30-31 credits and provides a thesis and non-thesis option, while offering traditional, evening and online courses. Public safety professionals from partnering organizations may qualify for a scholarship valued at 20 percent of tuition and fees through our community service personnel scholarship program.

The University of Michigan-Dearborn provides a scholarship valued at 20 percent of tuition and fees through our community service personnel scholarship program.

For additional information, please see the Master of Science in Criminology and Criminal Justice website or call 313-583-6404.

Master's Essay or Master's Thesis

The 4+1 accelerated program option allows current UM-Dearborn undergraduate Criminology and Criminal Justice majors to complete both the Bachelor of Arts and the Master of Science in Criminology and Criminal Justice in a format that offers substantial savings in both time and money. This is achieved by a double-counting allowance of up to 15 credits or 5 graduate level (500-level or above) courses. One additional year of graduate work (15-16 credits) would be needed to complete the Master's program enabling students to earn two degrees in a total of five years.

Participation in the 4+1 program is limited to students who have completed at least 60 credit hours with a cumulative GPA of 3.0 or better. Admission to the 4+1 program is at the discretion of the Program Director and requires an admission interview. The "regular" online graduate application should be completed with a "Yes" response to the 4+1 accelerated program question. The only supplemental application materials required for 4+1 applicants are a personal statement describing career goals and a resume.

Once admitted to the 4+1 program, the student must attain a grade of B- or better in each 500 level class elected. Failure to do so may result in removal from the 4+1 program.

For additional information, please see the Master of Science in Criminology and Criminal Justice website or call 313-583-6404.

Standardized Test Requirement

Applicants who meet the GPA requirement but lack one or more required courses may be admitted conditionally with the permission of the Program Director. These course deficiencies may be completed concurrently with graduate courses in the program upon Program Director approval.

Admission to the 4+1 program is at the discretion of the Program Director and requires an admission interview. The "regular" online graduate application should be completed with a "Yes" response to the 4+1 accelerated program question. The only supplemental application materials required for 4+1 applicants are a personal statement describing career goals and a resume.

Once admitted to the 4+1 program, the student must attain a grade of B- or better in each 500 level class elected. Failure to do so may result in removal from the 4+1 program.

For additional information, please see the Master of Science in Criminology and Criminal Justice website or call 313-583-6404.
Environmental Science

The Master of Science in Environmental Science (MSES) is a two-year program designed for students who wish to pursue graduate study on a full or part-time basis so they can balance professional and personal goals. Courses are primarily held in the evening and occasionally on Saturdays. Graduate students in the Department of Natural Sciences are talented and often have significant professional experience. Graduate faculty are highly qualified and experienced, and the educational culture is one in which learning, teaching, and research are emphasized. Pursuing a graduate degree in Environmental Science at UM-Dearborn will result in substantial growth in knowledge, skills, and long-term career potential.

We stress personalized, individual attention to graduate student education and research. The program provides a choice between emphasizing the environmental aspects of biology, chemistry, or geology, or a more broadly focused approach involving courses in each of the above fields. Faculty and students are engaged in the research of many environmental issues.

Research Facilities

The Department of Natural Sciences (https://umdearborn.edu/casl/departments/natural-sciences/) offers graduate students extensive access to research equipment and space, including labs for preparation and chemical analysis of environmental, biological and geological samples. Environmental chambers are available for experiments requiring precisely controlled environments for experimental study of both plants and animals. With NSF assistance, we have acquired a scanning electron microscope in collaboration with the College of Engineering and an inductively coupled plasma spectrometer (ICP).

A focal point for the environmental programs on the Dearborn campus is the Environmental Interpretive Center (https://umdearborn.edu/casl/centers-institutes/environmental-interpretive-center/) that opened in May 2001. It is the gateway to a 300-acre environmental study area featuring many natural habitats, including a mature beech-maple forest, floodplain forest, an upland mesic forest, meadows, an 8-acre lake, and the Rouge River on its western border.

The Geospatial Analysis and Mapping (https://umdearborn.edu/casl/life-casl/labs-learning-centers/geospatial-analysis-and-mapping-laboratory/) (GAM Lab) (located in Social Sciences Building, 1170) is a state-of-the-art computer lab used to teach Geographic Information Systems (GIS), remote sensing, spatial analyses, geospatial data management, and cartographic principles. The GAM Lab is equipped with 22 high-end networked workstations, instructional support technology and an array of special purpose peripherals and software (e.g., ArcGIS, Erdas Imagine, large format printers and laser printers, large map scanner, GPS units, iPads, etc.).

Admission and Prerequisites

The MSES Program anticipates the applicant has a foundation and experience in basic science and math akin to the University of Michigan-Dearborn’s Environmental Sciences (http://catalog.umd.umich.edu/undergraduate/college-arts-sciences-letters/environmental-science/), Geological Sciences (http://catalog.umd.umich.edu/undergraduate/college-arts-sciences-letters/geological-science/), or Environmental Studies (http://catalog.umd.umich.edu/undergraduate/college-arts-sciences-letters/environmental-studies/) programs (Regular admit). Applicants outside of traditional Natural Sciences degrees are strongly encouraged to speak with the MSES Chair (Professor Jacob Napieralski: jnapiera@umich.edu) for additional information pertinent to their application for admission (Conditional Admit).

Each applicant should submit the following:

1. Official transcripts from all universities attended.
2. A convincing statement of purpose that clearly describes career goals and specific reasons for pursuing the MSES program, including any potential research collaborations with faculty.
3. Three letters of recommendation, of which at least two must be from professors that are familiar with applicant’s academic performance.
4. Students whose native language is not English are required to satisfy the English Language Requirements for Admission, which can be found in Graduate (http://catalog.umd.umich.edu/graduate/graduate-admissions/Admissions).

Application instructions can be found at: umdearborn.edu/gradapplynow

For more information, visit the MSES website or call 313-583-6321.

Degree Requirements

The MSES degree requires 30 semester hours of graduate coursework that can be satisfied by one of three options:

- **Plan A. Thesis Option** 24 credit hours (15 credit hours core, 9 credit hours electives 500 level or above) plus ESCI 699. A thesis will be based on original research. (Preferred by the environmental consulting industry)
- **Plan B. Project Option** 27 credit hours (15 credit hours core, 12 credit hours electives 500 level or above) plus ESCI 698. A project will be based on library/field/laboratory research or classroom exercises demonstrating analysis and interpretation of scientific data.
- **Plan C. Coursework Option** 30 credit hours (15 credit hours core, 15 credit hours electives 500 level or above) (Not recommended for students interested in doctoral degrees).

The non-thesis M.S. program has an emphasis on coursework, while the thesis-based/project-based degree has an emphasis on both coursework and original research. Thesis-based M.S. students will experience the excitement of performing guided research.

A cumulative grade point average of B or better is required. For more information, visit the MSES website.

  - GEOL 577: Geology Field Methods
  - GEOL 578: Geology of the National Parks
  - GEOL 587: Groundwater Modeling
  - MIRC 505: Applied & Environ Microbiology
  - Other Departments:
  - STAT 530: Applied Regression Analysis
  - STAT 545: Reliability & Survival Analysis
  - STAT 555: Environmental Statistics

Total Credit Hours 30

Three Options for a MSES Degree

- **Plan A. Thesis Option** 24 credit hours (15 credit hours core, 9 credit hours electives 500 level or above) plus 6 credits ESCI 699. A thesis will be based on original research, and is supervised by an advisor and committee. This is preferred by the environmental consulting industry and doctoral programs.

- **Plan B. Project Option** 27 credit hours (15 credit hours core, 12 credit hours electives 500 level or above) plus ESCI 698. A project will be based on library/field/laboratory research, and is supervised by an advisor.

- **Plan C. Coursework Option** 30 credit hours (15 credit hours core, 15 credit hours electives 500 level or above). This is not recommended for students interested in pursuing a doctoral degree.

Psychology

The Behavioral Sciences Department at University of Michigan-Dearborn offers a Master of Science (MS) in Psychology in two specializations.

The Specialization in Clinical Health Psychology (p. 531) is a two-year 48-credit program that trains mental health care providers to work in primary care settings, as well as more traditional clinical psychology settings.

The Specialization in Health Psychology (p. 530) is a two-year 39-credit program that provides students with intensive training in one or more content areas within Health Psychology.

Health Psychology

Master of Science: Specialization in Health Psychology

This two-year, 39-credit program is designed for students who wish to obtain a research oriented graduate degree in the Behavioral Sciences. This program focuses on theory and research in Health Psychology. The program is intended to serve several populations including students who would like to continue graduate training in a research related behavioral sciences field, as well as individuals who require an advanced degree to further their careers. It should be noted that this program is not intended to lead to limited licensure as a clinician in Michigan.

The Program

The 39-credit program consists of 24 hours (8 courses) in core areas of Health Psychology. Students will complete either a 3 credit project or a 6 credit thesis under the supervision of program faculty. The remaining 9-12 credits will be composed of elective courses that focus on one or more content areas.

Admission and Prerequisites

Admission decisions are based upon applicants’ records of academic achievement, Graduate Record Examination (general test) scores, letters of recommendation, and personal statements of education and career goals. More specifically a BA or BS in Psychology or a related major with a cumulative undergraduate GPA of at least 3.0 (4.0 scale) and a minimum GRE score (general test) of approximately 300 are required for admission. Students without undergraduate psychology degrees are welcome to apply but will need Introductory Psychology, Statistics, and Abnormal Psychology; undergraduate Health Psychology and Research Methods are strongly recommended.

Application instructions can be found at: umdearborn.edu/gradapplynow

Each applicant should submit the following:

1. Official transcripts from all universities attended.
2. A 600-word statement of purpose describing the applicant’s personal history, educational and professional goals and personal objectives in pursuing the program.
3. Three letters of recommendation. (at least 2 from academic sources).
4. GRE Test Results (general test).
5. Students whose native language is not English are also required to satisfy the English Language Requirements for Admission which can be found in the General Information section of this catalog.

For more information, call 313-583-6321 or visit the health psychology website.

Plan of Work

Students will be required to complete a plan of work during their first semester in the MS in Psychology: Specialization in Health Psychology program. The plan of work requires discussion between students and their program advisers. Copies will be retained by the student and the program director or program advisor.

Degree Requirements

To complete the degree a minimum of 39 credits are required in the Behavioral Sciences. The following schedule provides the sequence of courses that students in the MS in Psychology: Specialization in Health Psychology program are expected to take. Although it is possible to take some of the courses out of sequence, many build on previous courses and all course schedules will need to be approved by the program director or your appointed program advisor.

Electives

If PSYC 697 (thesis, 6 credits) completed, then 9 credit hours of electives is required. If PSYC 592 (project, 3 credits) completed, then 12 credit hours of electives is required. Examples of elective courses that would fulfill program requirements include: Advanced Psychopathology (PSYC 545), Multicultural Counseling (PSYC 523), Human Sexual Behavior (PSYC 546), and Medical Sociology (SOC 540). Courses elected as an undergraduate at UM-Dearborn may not be taken for graduate credit. More information about the specific elective courses that will fulfill program requirements should be discussed with your program advisor or the program director each semester.

Thesis/Project Requirements

Students in the MS in Psychology: Specialization in Health Psychology program will complete either a 3 credit Project (PSYC 592) or a 6 credit master’s thesis (PSYC 697) during their second year.

Grade Requirements

The graduate grading system is intended to reflect higher standards of critical and creative scholarship than those applied at the undergraduate level. To receive a graduate grade in courses open to both undergraduate and graduate students, the graduate student is expected to do work of superior quality and is required to do additional work specified by the instructor. Graduate students are required to earn a B (3.0) average or higher to satisfy degree requirements.

Grades of C+ and below are unsatisfactory for graduate level work and constitute valid cause for dropping a student from the graduate program. To be awarded the MS in Psychology: Specialization in Health Psychology, a student must have achieved at least a 3.0 GPA (a B average). No more than two grades of C may be applied toward the MS in Psychology degree; grades of C- or lower will not be applied toward the MS in Psychology: Specialization in Clinical Health Psychology. Students who fail to maintain a 3.0 average or have more than two C or lower grades will be placed on academic probation for the term following the lapse. Upon the recommendation of the Program Director, a student may be granted an opportunity to correct the scholastic and/or academic deficiency. Students who fail to meet program requirements may be denied permission to register or may be required to withdraw from the program.

Clinical Health Psychology

Master of Science: Specialization in Clinical Health Psychology

This two-year, 48-credit program trains mental health care providers to work with a variety of medical populations, as well as in more
traditional clinical psychology settings. The curriculum of the program, in conjunction with 1 year of supervised postgraduate experience in an organized health care setting, is designed to fulfill the course requirements for the Michigan Limited License.

The Program
The 48-credit program consists of 11 required courses (36 credits) in core areas of Clinical Health Psychology. Six credit hours will be devoted to practicum in a community setting. Students will take either two elective courses or complete a master’s thesis under the supervision of program faculty.

Admission and Prerequisites
Admission decisions are based upon applicants’ records of academic achievement, Graduate Record Examination (general test) scores, letters of recommendation, and personal statements of education and career goals. More specifically a BA or BS in Psychology or a related major with a cumulative undergraduate GPA of at least 3.0 on a 4.0 scale and a minimum GRE score (general test) of approximately 300 are required for admission. Students without undergraduate psychology degrees are welcome to apply but will need Introductory Psychology, Statistics, and Abnormal Psychology, undergraduate Health Psychology and Research Methods are strongly recommended.

Application instructions can be found at: umdearborn.edu/gradapplynow

Each applicant should submit the following:

1. Official transcripts from all universities attended.
2. A 600-word statement of purpose describing the applicant’s personal history, educational and professional goals and personal objectives in pursuing the program. An additional 300-word statement describing the applicant’s potential effectiveness as a mental health professional are required for students applying to the Clinical Health Psychology program.
3. Three letters of recommendation. (at least 2 from academic sources).
4. GRE Test Results (general test).
5. Students whose native language is not English are also required to satisfy the English Language Requirements for Admission which can be found in the General Information section of this catalog.

For more information, call 313-583-6321 or visit the clinical health psychology website.

Plan of Work
Students will be required to complete a Plan of Work during their first semester in the MS in Psychology: Specialization in Clinical Health Psychology program. The plan of work requires discussion between students and their program advisers. Copies will be retained by the student and the program director or program advisor.

Degree Requirements
To complete the degree program a minimum of 48 credits are required in the Behavioral Sciences. The following schedule provides the sequence of courses that students in the MS in Psychology: Specialization in Clinical Health Psychology program are expected to take. Although it is possible to take some of the courses out of sequence, many build on previous courses and all course schedules will need to be approved by the program director or your appointed program advisor.

Notes:

Electives
Students are required to have 6 credits in approved elective courses if they do not elect to complete a master’s thesis. Information about specific elective courses that will fulfill these requirements should be discussed with your program advisor or the program director each semester.
The Master of Public Administration and Policy (MPAP) program serves a diverse student body representing a variety of public service organizations. MPAP students are mainly mid-career professionals working in government or nonprofit organizations and committed to learning and developing as individuals, administrators, and policymakers. Our seminars are conveniently offered to accommodate full-time jobs.

The MPAP curriculum emphasizes the integration of practical skills and knowledge with an understanding of the concepts and theories that help leaders adapt those skills in an ever-changing environment. Our classes will develop and improve your skills in policy development and implementation, as well as leadership, personnel, strategic management, fundraising, and program evaluation. You will engage with your peers coming from various backgrounds, learn from each others’ professional experiences, and master your ability to work in different organizational settings with diverse groups of individuals. You will engage with faculty whose research, academic training, and professional experience covers a wide array of public administration and policy areas and whose primary goal is to build a cadre of high caliber public and nonprofit leaders to enable our region, state, and nation to address contemporary and future challenges successfully.

Thesis
Students in the MS in Psychology. Specialization in Clinical Health Psychology who choose to do so can elect to complete a 6 credit hour master’s thesis during their second year of the program. Students selecting this option will not be required to take any elective credits.

Grade Requirements
The graduate grading system is intended to reflect higher standards of critical and creative scholarship than those applied at the undergraduate level. To receive a graduate grade in courses open to both undergraduate and graduate students, the graduate student is expected to do work of superior quality and is required to do additional work specified by the instructor. Graduate students are required to earn a B (3.0) average or higher to satisfy degree requirements.

Grades of C+ and below are unsatisfactory for graduate level work and constitute valid cause for dropping a student from the graduate program. To be awarded a MS in Clinical Health Psychology, a student must have achieved at least a 3.0 grade point average (a B average). C+ grades in the core classes, PSYC 545, PSYC 547, PSYC 548, PSYC 549, PSYC 565, PSYC 593, and PSYC 698 will not be applied toward the MS in Psychology. Specialization in Clinical Health Psychology degree. A grade of B- or higher is required in each of these classes. Students may re-take the class one time to raise the grade to an acceptable level. Furthermore, no more than two grades of C in other courses may be applied toward the MS in Psychology. Specialization in Clinical Health Psychology degree; grades of C- or lower will not be applied toward the MS in Psychology. Specialization in Clinical Health Psychology degree. Students who fail to maintain a 3.0 average or have more than two C or lower grades will be placed on academic probation for the term following the lapse. Upon the recommendation of the program director, a student may be granted an opportunity to correct the scholastic and/or academic deficiency. Students who fail to meet program requirements may be denied permission to register or may be required to withdraw from the program.

Public Administration and Policy
The Master of Public Administration and Policy (MPAP) program requires 36 credit hours. To be awarded the MS in Public Administration and Policy, a student must have achieved at least a 3.0 grade point average (a B average). C+ grades in the core classes, PSYC 545, PSYC 547, PSYC 548, PSYC 549, PSYC 565, PSYC 593, and PSYC 698 will not be applied toward the MS in Psychology. Specialization in Clinical Health Psychology degree. A grade of B- or higher is required in each of these classes. Students may re-take the class one time to raise the grade to an acceptable level. Furthermore, no more than two grades of C in other courses may be applied toward the MS in Psychology. Specialization in Clinical Health Psychology degree; grades of C- or lower will not be applied toward the MS in Psychology. Specialization in Clinical Health Psychology degree. Students who fail to maintain a 3.0 average or have more than two C or lower grades will be placed on academic probation for the term following the lapse. Upon the recommendation of the program director, a student may be granted an opportunity to correct the scholastic and/or academic deficiency. Students who fail to meet program requirements may be denied permission to register or may be required to withdraw from the program.

College of Business

Information

Accreditation
The College of Business’s graduate and undergraduate degree programs are accredited by AACSB-International, the Association to Advance Collegiate Schools of Business. AACSB-International is the premier accreditation agency for business schools.

Mission Statement
The vision of the College of Business is to build on the quality tradition of the Block “M” by being a thought leader, known for creating positive impact on the communities we serve, and for promoting a global perspective through active learning, relevant teaching, and influential research.

The mission of the College of Business is to offer a challenging and engaging business education that broadens our students’ intellectual perspectives and career opportunities in an inclusive environment through a balanced emphasis on active learning, and rigorous and relevant teaching and research.

In accomplishing our mission, we are student-centered and value the importance of:

• practical and experiential learning
• personal connections among students, faculty, and staff
• leading-edge scholarship
• curricular innovation
• diverse students and programming, and
• industry and community partnerships.

Admission Policies and Process
The College of Business accepts graduate applications from those holding a bachelor degree or its equivalent from an accredited college or university. Students with all types of undergraduate and graduate degrees and fields of study are welcome to apply for admission.

Mathematics Admission Prerequisite
Quantitative skills are important and frequently used in graduate business courses. Applicants must demonstrate proficiency in mathematics by successful completion of courses through college algebra, finite mathematics, or pre-calculus, with the equivalent of a "C" grade or better. If an applicant’s university transcripts do not show satisfactory completion of college algebra, finite mathematics, pre-calculus, or higher-level math courses (e.g. calculus), the burden will be on the applicant to explain and document that the applicant has math knowledge equivalent to one of these courses.

The following UM-Dearborn courses will satisfy the mathematics admission requirement: MATH 104 College Algebra or MATH 105 Pre-calculus.

GMAT/GRE Admission Prerequisite
Applicants must submit official GMAT (Graduate Management Admission Test) or GRE (Graduate Records Examination) scores as a part of the evaluation for admission. Scores older than five years will not be considered. GMAT and GRE Verbal and Quantitative scores are heavily weighted in the admission decision. Applicants are encouraged to take the GMAT or GRE test at the earliest possible date and request that scores be reported to the University of Michigan-Dearborn. The GMAT (http://www.mba.com/) and GRE (https://www.ets.org/gre/) websites provide complete information about these tests.

Applicants may be eligible to receive a waiver of the GMAT/GRE admission requirement if they meet one of the following conditions:

• Have 3+ years of progressively-responsible, professional work experience and 3.2 (3.0 for MS applicants) cumulative or post-60 undergraduate GPA.
• Completed an undergraduate business or engineering degree from an AACSB- or ABET-accredited program within the previous 5 years with a 3.2 (3.0 for MS applicants) cumulative or post-60 GPA.
• Completed a graduate degree from a regionally accredited US-based institution, or an equivalent international degree.
• Passed all portions of any of the following certification exams: CAS, CFA, CFM, CMA, CPA, FRM, SOA, or a state bar exam.
• Are a member of the US armed services with 3+ years of service, or an honorably discharged veteran.
• Are a full-time, regular employee of the UM-system with a letter of recommendation from a supervisor or department/unit head who is familiar with your professional work.
• Completed an undergraduate degree from a program included in an articulation agreement with UM-Dearborn within the previous 5 years with a 3.2 (3.0 for MS applicants) cumulative or post-60 GPA (on a 4-point, US-equivalent scale).
• Completed at least 24 graduate hours in a program included in an articulation agreement within the previous 5 years with a 3.2 (3.0 for MS applicants) graduate GPA (on a 4-point, US-equivalent scale).

If applicants believe they qualify to receive the GMAT/GRE waiver, they should indicate so in the appropriate section of the application for admission. The College of Business graduate admissions committee may require applicants to submit official GMAT or GRE scores even if those applicants meet one of the waiver conditions. The committee sometimes does this when additional information is necessary in order to reach an admission decision. Also, the admissions committee will consider any GMAT and GRE scores applicants submit to the University, regardless of whether the applicant qualifies to receive the waiver. If applicants have any questions about the GMAT/GRE waiver, they should contact the College of Business at umd-gradbusiness@umich.edu.

Work Experience
Work experience is not required for admission to the graduate programs in the College of Business. However, all applicants must submit a 1-2 page resume with their application materials listing education; any employment, internship, or similar types of experience; any professional affiliations, volunteer activities, or relevant honors and awards, together with the months and years of each activity. The resume is considered during the admission process.

References
At least one reference is required for admission. Applicants indicate who their reference(s) is (are) in the graduate application for admission, and those references will submit their evaluations directly to the University. The reference is typically a person who is familiar with the applicant’s academic accomplishments or job performance.
Bring-Your-Own Device and Presumption of Computer Application Skills

The College of Business requires graduate students to bring their own laptop computers to several courses, which are noted each semester in the College's graduate course schedules (https://umdearborn.edu/cob/graduate-programs/advising-and-registration/). We recommend all graduate students purchase a laptop computer (https://umdearborn.edu/cob/about/campus-facilities-and-technology/) according to the College's specifications.

In addition, the faculty expect each graduate student to be proficient in word processing and spreadsheets, including spreadsheet math and statistical functions. Before enrolling in College of Business graduate courses, students must have completed a college-level computer applications course, or they must have acquired equivalent expertise through training or work experience.

Transcripts

The admissions committee strongly considers applicants' previous undergraduate and graduate transcripts in the admission evaluation. The evaluation includes grade point average (both the post-60 GPA and cumulative GPA), trends of grades, types and relative difficulty of courses taken, and evidence of quantitative and analytical skills.

Applicants must submit an official academic transcript from each college and university attended, including the University of Michigan-Dearborn, during the application process. To be considered official, transcripts must come directly from one university to another. Transcripts cannot be accepted if sent by the student. When requesting transcripts from one of the three University of Michigan campuses (UM-Ann Arbor, Dearborn, or Flint), inter-office copies are sufficient for admission consideration.

Admission Criteria

Students with all types of undergraduate and graduate degrees from all fields of study are welcome to apply for admission.

The College of Business conducts a holistic review of each application. There is no formula to define who will make a successful candidate, but the College is especially interested in strong academic performance, as evidenced on the applicants' academic transcripts, and strong GMAT or GRE test scores. In addition, the College considers the statement of purpose, reference letter, and resume. Additional information about the admission process and criteria, including information about GMAT and GRE waivers, as well as profiles of the most recent entering class, can be found at umdearborn.edu/cob/grad-admissions (http://www.umdearborn.edu/cob/grad-admissions/).

Taking UM-Dearborn Undergraduate Courses to Fulfill Admission Prerequisites

Please check the registration system (https://umdearborn.edu/students/registration-records/registration/course-offerings/) for course availability each term. To register for admission prerequisite courses as a non-degree student (personal enrollment) before starting a College of Business graduate program, follow the instructions provided by the Undergraduate Admissions Office. Please note that personal enrollment students are not eligible for financial aid. For further information and guidance, please contact the College of Business at umd-gradbusiness@umich.edu or 313-593-5460.

Applicants deficient in one of the admission prerequisites may be considered for admission contingent upon their completing the appropriate course during their first term of enrollment in the graduate degree program.

Application Deadlines, Fees, and Other Instructions

The College of Business admits students in the fall (September), winter (January), and summer (May) terms. Applicants for full-time study should generally plan to enter in the fall or winter term; full-time admission is subject to course availability, especially during the summer term. Applications are reviewed on a rolling basis. Email notification is sent shortly after the admission decision. The application deadlines for domestic students are August 1 for fall admission, December 1 for winter admission, and April 1 for summer admission. Applications received after these deadlines are accepted on a space-available basis.

Full College of Business admission criteria and instructions, including links to the Graduate Application, can be found at umdearborn.edu/cob/grad-admissions (http://www.umdearborn.edu/cob/grad-admissions/).

All transcripts, credentials and other documents submitted during the admission process become the property of the University. Originals or copies of application/admission documents are not released to the applicant or to any third party.

Deferred Admission

Admission to a College of Business graduate program is valid for one year after the semester for which admission was granted. If an admitted applicant wishes to defer admission, students must submit the Graduate Admission Deferral Request Form (https://umdearborn.formstack.com/forms/deferral_request/), available from the UM-Dearborn Office of Graduate Studies, before the start of the semester for which initial admission was granted. Students must meet admission and degree requirements in effect during the new semester of entry.

International Students

The College of Business welcomes applications from qualified international students.

Housing

Students should refer to the following website for housing information at umdearborn.edu/campus-life/housing (https://umdearborn.edu/campus-life/housing/).

Costs

Each international student or his/her sponsor(s) must submit a notarized Affidavit of Support. This form must indicate that the student has access to funds, including living expenses, equaling an amount stipulated by the Office of International Affairs. Refer to umdearborn.edu/international (http://www.umdearborn.edu/international/).

Transcripts

In addition to the instructions for domestic applicants, international applicants must also provide:

- Official documentation of all courses taken and grades received (transcripts/records) from each undergraduate and postgraduate institution attended. Transcripts/records should be issued in the original language and be accompanied by English translations prepared by the institution’s authorized official, such as a registrar.
- Official certification of degrees and dates awarded, issued in the original language and accompanied by English translations prepared by the institution’s authorized official, such as a registrar. Academic
transcripts/records must have a seal and signature in ink from the institution's authorized official, such as a registrar or recorder.

All credentials and documents submitted become the property of the University.

Applications
In addition to the instructions for domestic applicants, international applicants must follow special application instructions for international students (https://umdearborn.edu/cob/graduate-programs/admission/international-admission/), including:

- Submit the Affidavit of Financial Support for International Students with supporting documentation. Recommendation for admission cannot be certified without this information.
- Submit official transcripts from all universities attended.
- Meet the minimum standards of the English proficiency requirement by taking either the TOEFL, IELTS, or the MELAB and submitting scores to the University.
- International students requiring an I-20 upon admission to the College must have a complete application file and the application fee must be paid by May 1 for fall admission, September 1 for winter admission, and January 1 for summer admission.

English Language Requirements
Since all instruction at the University is in English, international students must demonstrate proficiency in English comprehension, writing, grammar, and vocabulary.

The College of Business requires the following minimum test score requirements on one of the following tests for admission consideration:

- Internet Based Test TOEFL (https://www.ets.org/toefl/): 84
- Paper-Pencil TOEFL (https://www.ets.org/toefl/): 560
- Computer-Based TOEFL (https://www.ets.org/toefl/): 220
- IELTS (https://www.ieltstest.org/): 6.5
- MELAB (https://michiganassessment.org/i-am-a/recognition/#MELAB): 80

The College of Business does not offer conditional admission while students practice their English skills; however, the University of Michigan-Dearborn does offer several intensive English language courses through its English Language Proficiency Program (https://umdearborn.edu/offices/international-affairs/english-language-proficiency-program/elpp-admission/).

Guest Students and Post-Graduate Students
Students currently enrolled in a graduate program at another university (guest students), as well as students who have already earned a graduate degree (post-graduate students), may request permission to enroll in College of Business graduate courses as guest students. Guest and post-graduate registration is allowed on a space-available basis, usually on or shortly after the first day each semester's courses begin. Prospective guest students should review the College of Business graduate course descriptions (https://umdearborn.edu/cob/graduate-programs/advising-and-registration/), paying particular attention to prerequisites, to determine which course(s) they wish to take. Prospective guest students must then:

- Complete the UM-Dearborn graduate guest application (https://umdearborn.edu/cob/graduate-programs/admission/guest-student-admission/) and application fee; the application and application fee is valid for one semester. When a guest or post-graduate student requests enrollment for two consecutive terms at the time of initial application, the application fee will be waived for the second term of enrollment. The second term of enrollment is contingent on earning a grade of B or better in each course elected at UM-Dearborn.
- Have official transcripts sent directly to the College of Business Graduate Office from the student's undergraduate degree-granting institution, as well as any official transcripts for graduate coursework completed or in progress.
- Provide written permission from their current graduate institution verifying enrollment in a graduate program and granting permission to elect the course(s) at the University of Michigan-Dearborn.

The College of Business Graduate Office will review the previous documentation. If approved for guest admission, the College will contact the student with appropriate procedures for course registration. Guest and post-graduate students are allowed to elect a maximum of nine semester hours of credit. Credits earned as a guest or post-graduate student do not count as credit toward degree in the College of Business. Graduate guest business students may contact umdgradbusiness@umich.edu or 313-593-5460 for additional information.

Academic Policies and Courses

Graduate Internship Program
The Internship program is an optional academic program that integrates classroom work and practical experience with cooperating businesses.

College of Business master’s program students may apply for internship credit (BI 500) after they have completed at least 6 credit hours and at least one semester of enrollment. (Master of Science in Accounting students may apply for an internship during their first term of entry and before they have completed 6 credit hours.) Students in the Master of Business Administration, MS in Finance, and MS-Information Systems may count up to 3 credits in Business Internship (BI 500) toward their degree program with the approval of the appropriate faculty and the COB Graduate Office. Other COB graduate students may elect BI 500 as additive credit.

Graduate students who are interested in an internship should contact the Internship and Career Management Center (ICMC) (https://umdearborn.edu/cob/life-cob/internship-career-management-center/). The ICMC coordinates resume dissemination, interview scheduling and job offers. Students must register for the internship before starting work. As part of the internship, students are required to write a report at the end of the semester and participate in the evaluation process. Students may elect two regular academic courses during the same semester as the internship with the approval of the ICMC.

iLabs
The University of Michigan-Dearborn's Center for Innovation Research, iLabs (https://umdearborn.edu/cob/business-community/ilabs-center-innovation-research/), is housed within the College of Business. Students from across UM-Dearborn may apply to work on iLabs research projects for academic credit, such the College of Business Experiential Education Study, the eCities Project, and the College of Business Marketing Strategy Initiative.
Graduate students who are interested in participating should contact iLabs. If accepted to work on an iLabs project, students in the Master of Business Administration and MS-Business Analytics Marketing concentration may elect up to 3 credits of iLabs work (BA 690) toward their degree program with the approval of the appropriate faculty and the COB Graduate Office. Other COB graduate students may elect BA 690 as additive credit.

Course Descriptions
The courses described here are those regularly offered by the College. All courses give three hours of credit, except as otherwise specified by the numeral(s) in parentheses. Check with your Graduate Program Advisor at umd-cobgradadvisor@umich.edu for applicability of course offerings to your degree program. Students are strongly encouraged to plan their program by using the Course Reference Guide (https://umdearborn.edu/cob/graduate-programs/advising-and-registration/) and working with their academic adviser.

Students enrolled in graduate degree programs from other UM-Dearborn colleges may not elect more than 12 graduate credits offered by the College of Business, unless the College of Business credits are required as part of the student’s graduate degree program.

Course Prerequisites
The faculty determine the appropriate prerequisites for each course. Course prerequisites help ensure each student has the specific knowledge necessary to complete and fully participate in each course. Students must observe all course prerequisites. The registration system will not allow students to register for courses without the course prerequisites successfully completed. Students with previous coursework or experience may petition the College of Business for a course prerequisite override (https://umdearborn.edu/students/academic-advising/student-petitions/). (In order to allow time for faculty to review the petition, you must allow 10 business days for your request to be reviewed.) In some cases, students may be asked to supply additional information to support the request.

Students who have registered for a course without the prerequisites or an approved override will be withdrawn from the course.

Course Waivers and Exemptions
Course waivers, where available, reduce the number of credits required to complete a degree. Exemptions, where available, must be replaced with other advisor- or department-approved, graduate-level coursework, as noted in the College of Business degree program descriptions. The College of Business Graduate Program Office, in consultation with the faculty and academic department chairs, determines all course waivers and exemptions at the time of admission. Waivers and exemptions are based on previous equivalent undergraduate or graduate coursework as reflected on official transcripts. Students may enroll in courses that have been waived or exempted, although completion of waived courses will result in the loss of the respective course waiver. Once admitted to a graduate program in the College of Business, students must take graduate level courses or courses approved for graduate credit.

Admitted applicants may request a course waiver or exemption by completing an Academic Petition Form (https://umdearborn.edu/cob/graduate-programs/advising-and-registration/). The following supporting documentation must accompany the petition: copy of the course description from the college catalog, a copy of the course syllabus, and a copy of the title page and table of contents of the textbook used in the course.

Minimum Credits in Residence
A maximum total of twelve (12) graduate credits may be applied to any College of Business graduate degree from any combination of:

- Approved graduate level offerings (500-level and above) offered by another UM-Dearborn academic unit: maximum three (3) credits.
- Graduate transfer credit from an AASCB-accredited program: maximum six (6) credits.
- Graduate Business Internships (BI 500): maximum three (3) credits.
- College of Business graduate credits earned through exchanges with international partner universities: maximum twelve (12) credits.

Transfer Credit
A maximum of six (6) graduate semester credits may be transferred to a student’s academic record. Transfer credits appear on the UM-Dearborn transcript, but the associated grades received for these credits do not appear and are not computed in the student’s cumulative GPA. Credits may be transferred only for approved graduate-level courses if the following conditions are met:

- The student must submit an Academic Petition Form (https://umdearborn.edu/students/academic-advising/student-petitions/) requesting transfer credit with the following documentation attached: a description of the course from the college or university catalog, the course syllabus, and, if requested, a copy of the title page and table of contents for each textbook used. Usually, the course must have been completed in an AACSB-accredited business program. The petition is then reviewed by the appropriate faculty member, department chairperson, and Graduate Program Director.
- The student must direct the institution offering the course to send an official transcript showing the course and final course grade, if final, official transcripts were unavailable at the time of admission.

Courses may not be transferred for credit if:

- They were already applied toward a degree or certificate; or
- They were completed more than five years before enrollment in the College of Business graduate program; or
- The earned course grade was lower than a B.

Grade Requirements and Academic Standing
A cumulative average grade of B (3.0) or higher is required in all graduate courses taken for credit and applied to the credit hour requirements. No credit toward degree requirements is granted for courses in which grades below C- are received. Courses elected under the pass-fail option are not considered in computing grade average.

To be in good academic standing, a student must have an overall grade point average of 3.0 or better on a 4.0 scale. At the end of each term, the College of Business reviews the standing of each student with a scholastic average below 3.0. Those whose grade point average for the term falls below 3.0 will receive a warning regardless of the cumulative average.

If a student’s cumulative GPA is below a 3.0 upon reaching a total of 6 credit hours, or at any point thereafter, the student will be placed on academic probation. Students on academic probation are required to meet with their academic adviser. The student will be allowed to continue on probation as long as the student is making progress toward degree and earning above a 3.0 term GPA. Students not progressing toward
degree will be required to withdraw from the program. Students required
to withdraw may petition to be readmitted.

Repeating Courses
College of Business graduate students may repeat courses in which
they receive a grade of C+ or lower. Grades and honor points for the
original course and the repeated course both appear on the student's
transcript, and both are used in computing the student's grade point
average. However, additional credit toward program will not be awarded
for repeated courses in which the original grade was C+, C, or C-. College
of Business graduate students may not repeat courses in which they
have received grades of B- or higher. Students should check with their
academic adviser to verify specific program grading policies.

Pass-Fail Option
Graduate students enrolled in the College of Business may elect courses
with the pass-fail grading option, subject to the following conditions.
Courses elected on a pass-fail basis outside of these parameters will not
count toward degree requirements:

- Students on academic probation may not elect courses as pass-fail.
- Courses to be taken under this option must be specified at the time of
  registration or within the regular period for adding courses.
- Required MBA Core, Applied Integrated Management (AIM), and
  Concentration courses may not be elected pass-fail. Only general
  elective courses not used toward one of these other categories may
  be taken pass-fail. Courses used to satisfy any degree requirements
  in the MS in Accounting, MS-Business Analytics, MS-Finance,
  MS-Information Systems, MS-Marketing, and MS-Supply Chain
  Management may not be elected pass-fail.
- In a course offered with a pass-fail option, a reported grade of B- or
  above will be recorded as P, and a reported grade of below B- will be
  recorded as F. (Whether a P or F is recorded, the grade is not used in
  computing a student's grade point average.)
- In a course offered exclusively on a pass-fail basis, a passing grade
  will be recorded as S (and not used in computing a student's grade
  point average), and a failing grade will be recorded as E (and used in
  computing grade point average).
- A student may elect at most two courses (6 credit hours) on a pass-
  fail basis, whether at the student's option or not (excluding internship
courses).

Time-Limits for Enrollment and Degree Completion
Admission to the College of Business is granted for a specific term.
Students who are admitted but do not enroll in the appointed term, and
who have not notified the College of their desire to defer admission, must
reapply for admission. Full-time or part-time students lose active degree
candidacy if they do not complete at least one course within each 12-
month period. Readmitted students must comply with current degree
requirements at the time of readmission. Admission to the College is
competitive, and applications for readmission will be decided on the
standard for the term in which the former student wishes to enroll.

Requirements for the degree must be completed within seven (7) years of
first enrollment. Students who desire more time must submit, in a written
petition to the College of Business Academic Standards Committee,
reasons for the request and specific plans for the completion of the
degree program.

Petitions for Academic Action
Each request to the faculty of the College of Business for special
academic action, including credits, requirements, academic standing, and
other matters, should be entered on the Academic Petition Form (https://
umdearborn.edu/students/academic-advising/student-petitions/) for
review by the faculty serving on the Academic Standards Committee. A
written response, indicating the Committee's decision or action, will be
sent to the student's UM-Dearborn email account.

Master's Degree Programs
The College of Business offers the following master's degree programs,
each accredited by AACSB-International. Programs indicated with an
asterisk (*) are offered as evening programs. Programs indicated with a
plus (+) also have an online option.

- Accounting (MSA) (p. 541)*
- Business Administration (MBA) (p. 543)+
- Business Analytics (MS) (p. 545)*
- Finance (MSF) (p. 560)+
- Information Systems (MS) (p. 562)*
- Marketing (MS) (p. 563)*
- Supply Chain Management (MS) (p. 564)*

Dual-Degree Options
- Master of Business Administration (MBA) and Master of Science in
  Finance (MS) (p. 547)+
- Master of Business Administration (MBA) and Master of Science in
  Information Systems (MS) (p. 551)*
- Master of Business Administration (MBA) and Master of Science in
  Supply Chain Management (MS) (p. 552)*
- Master of Science in Accounting (MSA) and Master of Science in
  Finance (MSF) (p. 554)*
- Master of Business Administration (MBA) and Master of Science in
  Engineering in Industrial and Systems Engineering (MSE) (p. 555)+
- Master of Business Administration (MBA) and Master of Health
  Services Administration (MHSA) (p. 558)*

Bloomberg Finance Lab

The College of Business Bloomberg Finance Lab (https://umdearborn.edu/cob/life-cob/bloomberg-finance-lab/) allows students to analyze a vast amount of real-time market data and even earn their Bloomberg certification. Several courses in Finance and other fields use the Bloomberg Finance Lab as part of the course instruction. This includes especially the Investment Fund Management course, FIN 657, which allows students to manage an investment fund with real money. Students may also access the Bloomberg Finance Lab on their own during open lab hours.

iLabs

The University of Michigan-Dearborn’s Center for Innovation Research, iLabs (https://umdearborn.edu/cob/business-community/ilabs-center-innovation-research/), is housed within the College of Business. iLabs is dedicated to advancing the understanding of corporate, entrepreneurial, and institutional innovation and its impact on economic development. Since 2006, students have worked on iLabs projects for academic credit, including the College of Business Experiential Education Study, the eCities Project, and the College of Business Marketing Strategy Initiative.

If accepted into an iLabs program, students in the Master of Business Administration and MS-Business Analytics Marketing concentration may elect up to 3 credits of iLabs work (BA 690) toward the degree program electives with the approval of the appropriate faculty and the COB Graduate Office. Other COB graduate students may elect BA 690 as additive credit. See additional information under “Academic Policies and Courses” on the “Overview” tab.

Internship and Career Management Center

The Internship and Career Management Center (https://umdearborn.edu/cob/life-cob/internship-career-management-center/), working in partnership with the University of Michigan-Dearborn’s Talent Gateway, offers College of Business students a full-range of career-support services, including assistance with internship and full-time placement, career counseling, interviewing skills, and opportunities to meet and network with corporate recruiters.

Students in the Master of Business Administration, MS in Finance, and MS-Information Systems may count up to 3 credits of Business Internship (BI 500) toward the degree program electives with the approval of the appropriate faculty and the COB Graduate Office. Other COB
graduate students may elect BI 500 as additive credit. See additional information under "Academic Policies and Courses" on the "Overview" tab.

Academic Honors
Achievement of various kinds is recognized both prior to graduation and in the granting of degrees.

Dean's Honor Roll
Each fall and winter term the dean posts an honor roll recognizing those students who have taken nine hours or more, and have obtained a B+ (3.3) or better average.

Beta Gamma Sigma
Beta Gamma Sigma is the national honor society for business schools accredited by AACSB-The International Association for Management Education. Membership in Beta Gamma Sigma is one of the highest scholastic honors that a graduate business student can achieve based on outstanding scholastic achievement as measured by overall grade point average. Invitation for membership to Beta Gamma Sigma is extended to College of Business students that are in the top twenty percent of their graduation class.

Graduation with Distinction
Students who have maintained a 3.70-3.89 cumulative grade point average will graduate "With Distinction," and it will be recorded on their transcript.

Graduation with High Distinction
Students who have maintained a 3.90 or above cumulative grade point average will graduate "With High Distinction," and it will be recorded on their transcript.

Accounting
The Master of Science in Accounting provides specialized training for successful careers in corporate accounting, controllership, and public accounting.

Students in the MS in Accounting at UM-Dearborn can complete the CPA exam preparation (https://umdearborn.edu/cob/undergraduate-programs/majors-minors-curriculum/professional-certifications/cpa-exam-preparation/) course through CPAexcel® at a significant discount, and even qualify to receive a 100% reimbursement. The MS in Accounting is open to students from all undergraduate majors and does not require previous accounting coursework.

The program is offered on campus, and a few of the courses are also occasionally available on-line. You may enroll on a full- or part-time basis during the fall and winter semesters, and some courses are often available during the summer. The program usually can be completed within 12-16 months of full-time study.

Admission is rolling, and you may begin the program in September or January. May admission is also usually possible for part-time students.

Students eligible to pursue the Accounting 4+1 option (https://umdearborn.edu/cob/graduate-programs/degree-programs/ms-accounting/accounting-41-option/) may count 4 courses/12 credits in the graduate program toward their undergraduate accounting major. All other University of Michigan-Dearborn students who have been admitted to the MS in Accounting may take up to 6 graduate credits during the final semester of their undergraduate program.

**MS in Accounting Program Goals and Objectives**
Goal: MS in Accounting students will be able to integrate theory and applications in a wide variety of business situations.

Objectives: MS in Accounting students will:
- Effectively communicate ideas orally and in writing.
- Integrate multiple sources of information to formulate solutions to complex business issues.
- Analyze standards and regulations that affect multinational businesses.
- Apply the professional standards of practice to business situations.

**MS in Accounting Admission**
**Prerequisites**
- Mathematics admission prerequisite
- GMAT/GRE admission prerequisite, unless applicant qualifies for the GMAT/GRE waiver

**MS in Accounting Curriculum**

Total Credit Hours: 30

¹ Simultaneous credit toward the BBA Accounting major and MSA for students admitted to the Accounting 4+1 option.
² Recommended for students who intend to take the CPA exam.

Students who have not previously completed an acceptable course in financial accounting we be advised to complete ACC 505 before

---

---

---
planning to complete the remainder of the program. ACC 505 (or equivalent) is a prerequisite to subsequent accounting courses.

Previous undergraduate or graduate coursework deemed substantially similar to the MSA core courses may qualify to exempt students from those courses. Exempted courses must be replaced with elective courses within the degree program; however, taking a course exemption is optional, and the total required credit-hours in the program remains the same.

Students who have completed 6 MSA elective courses (18 credits) may elect up to 3 College of Business graduate courses (https://drive.google.com/file/d/1TS3E-6AuYDdVnxhEEV0WnPngQOHzcqs/view/) (9 credits) to replace other exempted or elective MSA courses.

In addition, up to 6 transfer credits for previous equivalent graduate coursework can be applied to the degree if those credits have not been counted toward a degree.

Exemptions and transfer credit are granted at the discretion of the program faculty.

**Dual Degree, MS in Accounting/MS in Finance**

The MS in Accounting/MS in Finance dual degree program combines specialized training for careers in corporate accounting, controllership, and public accounting with specialized training required for success in the financial professions. Students select either the corporate finance or the investments concentration in the MS-Finance. Students in the program can qualify to receive a 100% reimbursement of the cost of completing CPA exam preparation through CPAexcel®. The program is open to students with strong quantitative and analytical skills, regardless of their undergraduate major.

The program allows students to receive both the MS in Accounting and the MS in Finance simultaneously upon completion of 51-54 credit hours, depending on which MSF concentration is selected.

Students may enroll on a full- or part-time basis. All courses in the program are offered on campus; many are also available online. Course offerings are greatest during the fall and winter semesters, and the program usually can be completed within 12 months of full-time study.

Admission is rolling, and students may begin the program in September or January. May admission is also usually possible for part-time students.

University of Michigan-Dearborn students who have been admitted to the program may take up to 6 graduate credits during the final semester of their undergraduate program. Students must successfully complete their undergraduate degree before taking any additional graduate-level courses.

Regardless of exemption credits granted, students must earn at least 51 credits in the dual-degree program if completing the MSF Corporate Finance concentration, or at least 54 credits if completing the MSF Investments concentration.

In addition, up to 6 transfer credits for previous equivalent graduate coursework can be applied to the degree if those credits have not been counted toward a degree.

Exemptions and transfer credit are granted at the discretion of the program faculty.

**Business Administration**

The Master of Business Administration, featuring courses in Applied Integrated Management, provides students with the integrated perspective required to solve today's complex business problems.

The MBA may be completed in 36-48 credit hours.

The program offers expert faculty, expansive opportunities for networking, and the flexibility of evening and on-line courses, all from a highly-ranked program.

The degree is open to students of all undergraduate majors and all levels of work experience.

You may complete the program on campus, on-line, or any combination of the two. (Concentrations are optional, and most require a campus presence.) You may enroll on a full- or part-time basis, but course availability is greatest during the fall and winter semesters. The program can usually be completed within two to two-and-a-half years of part-time study, depending on core course waivers earned.

Admission is rolling, and you may begin the program in September or January. May admission is also usually possible for part-time students.

University of Michigan-Dearborn students who have been admitted to the MBA may take up to 6 graduate credits during the final semester of their undergraduate program.

**MBA Goals and Objectives**

**Goal 1:** Students will have an understanding of the core business disciplines and be able to apply this knowledge to global business situations.

**Objectives:** MBA students will:

- Demonstrate knowledge of disciplinary concepts, terminology, models, and perspectives.
- Identify business problems and apply appropriate solutions (problem-finding/problem-solving).
- Integrate knowledge across disciplinary areas (integrative thinking).
- Apply knowledge in a global environment.

**Goal 2:** Students will be effective communicators.

**Objectives:** MBA students will:

- Demonstrate an ability to effectively communicate in a manner that is typically required of a business professional.
Goal 3: Students will appreciate the importance of ethical/corporate social responsibility principles.

Objectives: MBA students will:

- Identify and explain alternative approaches to ethical/corporate social responsibility issues.

**MBA Admission Prerequisites**

- Mathematics admission prerequisite
- GMAT/GRE admission prerequisite, unless applicant qualifies for the GMAT/GRE waiver

**Total Credit Hours** 48

1 Up to three graduate credits may be elected from units other than the College of Business. Elective courses must be approved by the Graduate Program Advisor in advance of course election.

Students may waive any or all of the core courses if they have equivalent courses in an AACSB business program completed within the previous 10 years and have earned at least a 3.2 post-60 GPA (that is, your GPA in courses taken after your first 60 undergraduate credit hours).

Students who do not meet these criteria may request to have their courses evaluated for waiver credit at the time of admission. Students must have earned a B or better in equivalent courses as a part of a degree program completed within the previous 10 years.

Regardless of waiver credit granted, students must earn at least 36 credits in the MBA program.

In addition, up to 6 transfer credits for previous equivalent graduate coursework can be applied to the degree if those credits have not been counted toward a degree.

Waivers and transfer credit are granted at the discretion of the program faculty.

**MBA Breadth Requirements (3, 4, 5 Rule)**

- Complete AIM courses in at least 3 different disciplines
- Complete more than 4 AIM, Concentration, and Elective courses (12 credits) in any one discipline
- Complete graduate business courses in at least 5 different disciplines.
- No single course may be counted toward more than one MBA requirement or concentration.

**MBA Concentrations**

Concentrations are optional, and students may earn more than one. Some concentrations are available online; others require campus enrollment. Concentrations are awarded at the time of graduation.

**Accounting**

Available on campus

Choose any three graduate ACC courses beyond ACC 505.

Business Analytics

The Master of Science-Business Analytics trains students to create business strategies using data and statistics. Professionals in this rapidly expanding field use algorithms and formulas to uncover patterns and trends in aggregate data, then apply that knowledge to real-world business problems. The degree is open to students with strong quantitative and analytical skills, regardless of their undergraduate major. The program includes a large number of courses involving statistical analysis.

The program is offered on campus, and a few of the courses are also occasionally available on-line. You may enroll on a full- or part-time basis during the fall and winter semesters, and some courses are often available during the summer. The program usually can be completed within 12 months of full-time study.

Admission is rolling, and you may begin the program in September or January. May admission is also usually possible for part-time students.

University of Michigan-Dearborn students who have been admitted to the MS-Business Analytics may take up to 6 graduate credits during the final semester of their undergraduate program.

MS-Business Analytics Program Goals and Objectives

Goal 1: Students will acquire discipline-specific knowledge in business analytics.

Objectives: MS-Business Analytics students will:

• Evaluate business analytics approaches.
• Evaluate relevant business analytics tools and techniques.

Goal 2: Students will develop analytical skills for business problems.

Objectives: MS-Business Analytics students will:
• Formulate business analytics problems.
• Synthesize relevant business analytics information.
• Evaluate business analytics solution alternatives.

**MS-Business Analytics Admission Prerequisites**
• Mathematics admission prerequisite
• GMAT/GRE admission prerequisite, unless applicant qualifies for the GMAT/GRE waiver

**MS-Business Analytics Curriculum**

**Concentration**
Select one of the following concentrations: 12

**Total Credit Hours** 30

Courses may not be taken off campus except by prior permission of the Academic Standards Committee. Permission is granted only in the case of unusual, extenuating circumstances.

Previous coursework deemed substantially similar to ACC 505, BE 530, DS 520, FIN 531, ISM 525, MKT 515 and OM 521 may qualify to exempt students from those courses. Exempt courses must be replaced with other approved courses in the degree program.

In addition, up to 6 transfer credits for previous equivalent graduate coursework can be applied to the degree if those credits have not been counted toward a degree.

Exemptions and transfer credit are granted at the discretion of the program faculty.

Total Credit Hours: 12

1. Students may elect either ACC 505 or BE 530 as credit toward the Financial Analytics concentration but not both.
2. Students must receive department approval.

### Dual Degrees

- Master of Business Administration/Master of Science in Finance (p. 547)
- Master of Business Administration/Master of Science-Information Systems (p. 551)
- Master of Business Administration/Master of Science-Supply Chain Management (p. 552)
- Master of Science in Accounting/Master of Science in Finance (p. 554)
- Master of Business Administration/Master of Science in Engineering-Industrial and Systems Engineering (p. 555)
- Master of Business Administration/Master of Health Services Administration (p. 558)

### Dual Degree, MBA/MS in Finance

The dual MBA/MS in Finance combines a broad managerial education with specialized training required for success in the financial professions.

Whether you select the corporate finance or the investments concentration, the Master of Science in Finance will help prepare you to succeed in your chosen finance profession, and the MBA will provide you with the perspective to help manage your organization and the people who work in it. If you have strong quantitative and analytical skills, we welcome your application, regardless of your undergraduate major or previous work experience.

The dual MBA/MS-Finance allows students to receive both the MBA and MS-Finance simultaneously upon completion of the required 57-66 credit hours.

You may complete the program on campus, on-line, or any combination of the two, depending on which program options you select. You may enroll on a full- or part-time basis during the fall and winter semesters, and some courses are often available during the summer.

Admission is rolling, and you may begin the program in September or January. May admission is also usually possible for part-time students.

University of Michigan-Dearborn students who have been admitted to the MBA/MS-Finance may take up to 6 graduate credits during the final semester of their undergraduate program.

### MBA Goals and Objectives

**Goal 1:** Students will have an understanding of the core business disciplines and be able to apply this knowledge to global business situations.

Objectives: MBA students will:

- Demonstrate knowledge of disciplinary concepts, terminology, models, and perspectives.
- Identify business problems and apply appropriate solutions (problem-finding/problem-solving).
- Integrate knowledge across disciplinary areas (integrative thinking).
- Apply knowledge in a global environment.

**Goal 2:** Students will be effective communicators.

Objectives: MBA students will:

- Demonstrate an ability to effectively communicate in a manner that is typically required of a business professional.

**Goal 3:** Students will appreciate the importance of ethical/corporate social responsibility principles.

Objectives: MBA students will:

- Identify and explain alternative approaches to ethical/corporate social responsibility issues.

### MS in Finance Goals and Objectives

**Goal 1:** Students will demonstrate analytical skills in solving problems.

Objectives of the Corporate Finance concentration: MS in Finance students will have the ability to:

- Analyze and manage risk in a global setting.
- Estimate the value of real assets.
- Evaluate managerial decisions concerning financial policy.

Objectives of the Investments concentration: MS in Finance students will have the ability to:

- Analyze and manage risk in a global setting.
- Estimate the value of financial assets.
- Apply portfolio theory concepts to construct optimal risky assets portfolios that meet the objectives and constraints of their clients.

**Goal 2:** Students will be persuasive and/or informative communicators.

Objective 1: MS in Finance students will be able to convey finance knowledge through effective communication.

### MBA/MS in Finance Admission

**Prerequisites**

- Mathematics admission prerequisite. Calculus is not required for admission to the MS in Finance. However, applicants who wish to
pursue careers in investments or risk management, as well as those who wish to earn Chartered Financial Analysts (CFA) credentials, are strongly recommended to satisfy the Mathematics admission requirement with a college level Calculus course. Also, Calculus is a course prerequisite to FIN 656, an optional course in the Investments concentration. Students who wish to take this course must first complete a college level Calculus course with a grade of “C” or better.

- GMAT/GRE admission prerequisite, unless applicant qualifies for the GMAT/GRE waiver

At most one of the following:

- DS 630: Applied Forecasting
- DS 631: Decision Analysis

---

\(^1\) Depending on the specific concentration chosen.

\(^2\) Courses may be part of the core curriculum for some concentrations.
General Requirements

- Complete MBA AIM courses in at least 3 different disciplines.
- Complete no more than 4 AIM, MBA Concentration, and Elective courses (12 credits) in any one discipline other than Finance.
- Complete at least 5 BE and FIN courses (15 credits), excluding BE 530 and FIN 531.
- Complete at least 7 FIN courses (21 credits) in Finance, excluding FIN 531.
- Complete graduate business courses in at least 7 different disciplines.
- No single course may be counted toward more than one requirement or concentration in the dual degree program.

MBA Core Course Waivers

Students may waive BPS 516, ISM 525, MKT 515, OB 510 or OM 521 if they have equivalent courses in an AACSB business program completed within the previous 10 years and have earned at least a 3.2 post-60 GPA (that is, the GPA in courses taken after the first 60 undergraduate credit hours). Students who do not meet these criteria may request to have their courses evaluated for waiver credit at the time of admission. Students must have earned a B or better in equivalent courses as a part of a degree program completed within the previous 10 years.

MSF Foundation Course Exemptions

Previous coursework deemed substantially similar to ACC 505, BE 530, DS 520 or FIN 531 may qualify to exempt students from these MSF foundations courses. Students who use more than one MSF foundations course exemption must replace those courses with elective courses within their MSF concentration.

Regardless of waiver and exemption credits granted, students must earn at least 57 credits in the dual-degree program.

In addition, up to 6 transfer credits for previous equivalent graduate coursework can be applied to the degree if those credits have not been counted toward a degree.

Exemptions, waivers and transfer credit are granted at the discretion of the program faculty.

BA 605 Mgrl Dec Making 3 Credit Hours

This course covers the findings of research on behavioral decision making as they apply to managerial decision making. You will learn how the human mind works, what it is particularly good at and not so good at, and what the implications of this are for managerial decision making. The course will help you make better decisions and understand the potential shortcomings of the decisions made by your colleagues, competitors, collaborators, and customers. Topics include human cognition, overconfidence, heuristics and biases in decision making, bounded awareness, framing, preference reversal, motivational and emotional influences on decision making, escalation of commitment, expertise in decision making, and fairness and ethics in decision making. We will apply the research on behavioral decision making to a wide variety of problems in various domains of business, study how applications of information systems can mitigate limitations of the human mind, and apply our knowledge of the way the human mind works to develop an understanding of ways to improve managerial decision making. Students interested in careers in a wide variety of business professions will find the knowledge and skills gained in this course to be useful in their professional endeavors.

Prerequisite(s): BE 530 and FIN 531 and OB 510 and DS 520 or IMSE 510 or IMSE 514

BA 690 Graduate Research 1 to 3 Credit Hours

To provide masters candidates with the opportunity to undertake a research project under the supervision of a faculty member. The research topic is chosen by the student, in consultation with a faculty member in the appropriate discipline. Written approval must be obtained at least two weeks prior to registration on a form available in the Graduate Office. The request must include a comprehensive description of the proposed research project, as well as a time line for the project’s completion.

Restriction(s):
- Can enroll if Class is Graduate
- Can enroll if College is Business

BA 691 Graduate Seminar 1 to 3 Credit Hours

Topics Course. To provide masters candidates with an opportunity for study of selected advanced topics in particular fields. Topics vary. See Schedule of Classes for current offerings. May be elected more than once if topics differ.

Prerequisite(s): (MIS 525 or MIS 502) and (MKT 515 or MKT 610)

Restriction(s):
- Can enroll if Class is Graduate

BA 691A Graduate Seminar 3 Credit Hours

Topic: The Internal Revenue Service. This course introduces the student to the structure, organization, practices and procedures of the Internal Revenue Service. The course is intended to give students an understanding of the organizational makeup of the Internal Revenue Service and the authority of its various employees. The different approaches to resolving tax controversies will be explored through the study of assigned readings and in-depth class discussions. The course will be conducted in a seminar-like fashion with each student expected to make significant contributions to class discussions. Attention to news items affecting the area of federal tax procedures is expected, as well as conveyance to class of these newsworthy developments. This course is appropriate for MSA? Tax Concentration students.
FIN 531  Fin Fundamentals & Value Creation  3 Credit Hours
This course provides the fundamentals of the finance discipline with an emphasis on value creation as the primary objective of a corporation. Capital budgeting analysis and techniques are extensively discussed. Valuation of securities is presented along with an introduction to modern portfolio theory and market efficiency. Issues related to international financial management are also introduced.
Prerequisite(s): (Mathematics Placement with a score of 105 or MATH 104 or MATH 105 or MATH 113 or MATH 115) and (DS 520* or IMSE 510* or IMSE 514*) and ACC 505
Restriction(s):
Can enroll if Class is Graduate

FIN 581  Topics in Corporate Finance  3 Credit Hours
This course integrates theory and practice for major topics such as capital structure and dividend policy. Additional topics include leasing, corporate governance, mergers and acquisitions, short-term financial management, and risk management. These topics are examined from the perspective of the corporate financial manager.
Prerequisite(s): FIN 531 and BE 530 and ACC 505 and (DS 520 or IMSE 510 or IMSE 514) and (Mathematics Placement with a score of 105 or MATH 104 or MATH 105 or MATH 113 or MATH 115)

FIN 565  Financial Intermediation  3 Credit Hours
Financial Intermediaries provide services to borrowers and lenders, often creating new securities or providing brokerage services broadly defined. Intermediaries include depository institutions such as commercial banks and non-depository institutions such as security firms, pension funds and insurance companies. This course studies the functions of intermediaries, the industry regulations, and competition in a deregulated environment. Special emphasis is placed on financial markets and fiscal instruments created by intermediaries, risk of intermediation, risk management, and financial innovations in the industry.
Prerequisite(s): FIN 531* and ACC 505 and (DS 520 or IMSE 510 or IMSE 514) and (Mathematics Placement with a score of 105 or MATH 104 or MATH 105 or MATH 113 or MATH 115)

FIN 654  Fixed Income Securities  3 Credit Hours
The fixed income market, accompanied by the introduction of sophisticated financial engineering techniques, has grown enormously over the last two decades. Today, the fixed income market has been a vital segment of the global financial market. This course covers major topics associated with this market, including bond pricing, yields, and volatility; term structure of interest rates and yield curve; market structure and analytical techniques for Treasury, municipal, corporate bonds, mortgage-backed securities, asset-backed securities, and bond with embedded options. The fundamental objective of this course is to help students develop analytical skills for pricing fixed income securities and managing interest rate risk. In addition, materials covered in this course are compatible with the Common Body of Knowledge in Analysis of Debt Investments that is required by the Chartered Financial Analysts (CFA) examination. Students will not receive credit for both FIN 456 and FIN 654.
Prerequisite(s): (MATH 113 or MATH 115 or Mathematics Placement with a score of 116) and FIN 651* and (FIN 581 or FIN 652 or FIN 654 or FIN 655)
Restriction(s):
Can enroll if Class is Graduate
Dual Degree, MBA/MS, Information Systems

The dual MBA/MS-Information Systems combines a broad managerial education with in-depth training in the skills required to manage IT projects, oversee application development, and develop an organization’s IT strategy.

The Master of Science-Information Systems will prepare you to manage information systems functions, as well as the organizational challenges facing information systems managers, while the MBA will provide you with a managerial perspective on your organization as a whole. If you have a background in fields such as information technology management, computer science, electronics engineering – or even if you simply have an aptitude for information technology – we welcome your application.

The dual MBA/MS-Information Systems allows students to receive both the MBA and MS-Information Systems simultaneously upon completion of the required 57-66 credit hours.

All courses in the program are offered on campus; many are also available on-line. You may enroll on a full- or part-time basis during the fall and winter semesters, and some courses are often available during the summer.

Admission is rolling, and you may begin the program in September or January. May admission is also usually possible for part-time students.

University of Michigan-Dearborn students who have been admitted to the MBA/MS-Information Systems may take up to 6 graduate credits during the final semester of their undergraduate program.

MBA Goals and Objectives

Goal 1: Students will have an understanding of the core business disciplines and be able to apply this knowledge to global business situations.

Objectives: MBA students will:

- Demonstrate knowledge of disciplinary concepts, terminology, models, and perspectives.
- Identify business problems and apply appropriate solutions (problem-finding/problem-solving).
- Integrate knowledge across disciplinary areas (integrative thinking).
- Apply knowledge in a global environment.

Goal 2: Students will be effective communicators.

Objectives: MBA students will:

- Demonstrate an ability to effectively communicate in a manner that is typically required of a business professional.

Goal 3: Students will appreciate the importance of ethical/corporate social responsibility principles.

Objectives: MBA students will:

- Identify and explain alternative approaches to ethical/corporate social responsibility issues.

MS-Information Systems Goals and Objectives

Goal 1: MS-Information Systems students will acquire discipline-specific knowledge and competencies.

Objectives: MS-Information Systems students will:

- Design an information system for an organization.
- Evaluate security risks of an organization.
- Use data to provide solutions to business questions.

Goal 2: MS-Information Systems students will develop effective communication skills.

Objectives: MS-Information Systems students will:

- Communicate complex information technology concepts orally.
- Communicate complex information technology concepts effectively in writing.

Goal 3: MS-Information Systems students will develop information technology strategy skills.

Objectives: MS-Information Systems students will:

- Be able to assess the impact of information technology strategy on organizational effectiveness.
- Manage information quality initiatives in organizations.

MBS/MS-Information Systems Admission Prerequisite

- Mathematics admission prerequisite
- GMAT/GRE admission prerequisite, if applicant qualifies for the GMAT/GGRE waiver.

Total Credit Hours: 66

1. Up to three graduate credits may be elected from units other than the College of Business, with prior approval of the Graduate Program Advisor.

Breadth Requirements

- Complete AIM courses in at least 3 different disciplines.
- Complete no more than 4 AIM, MBA Concentration, and Elective courses (12 credits) in any one discipline other than Finance.
- Complete no more than 7 courses (21 credits) in Management Information Systems courses (MIS) after completion of the MBA Core.
- Complete graduate business courses in at least 7 different disciplines.

No single course may be counted toward more than one requirement or concentration in the dual degree program.

Students may waive any of the MBA core courses except ISM 525 if they have equivalent courses in an AACSB business program completed within the previous 10 years and have earned at least a 3.2 post-60 GPA (that is, the GPA in courses taken after the first 60 undergraduate credit hours). Students who do not meet these criteria may request to have their courses evaluated for waiver credit at the time of admission. Students must have earned a B or better in equivalent courses as a part of a degree program completed within the previous 10 years.

Previous coursework deemed substantially similar to ISM 525 may qualify to exempt students from the course. The exempt course must be replaced with other approved courses in the MS-Information Systems program.

Regardless of waiver and exemption credits granted, students must earn at least 57 credits in the dual-degree program, including at least 36 credits in the MBA portion of the program.

In addition, up to 6 transfer credits for previous equivalent graduate coursework can be applied to the degree if those credits have not been counted toward a degree.

Exemptions, waivers and transfer credit are granted at the discretion of the program faculty.

Dual Degree, MBA/MS, Supply Chain Management

The dual MBA/MS-Supply Chain Management combines a broad managerial education with specialized training in managing the organizations, people, technology, and resources that transform raw materials into deliverable products.

The degree is open to all students, regardless of their undergraduate major.

The program allows students to receive both the MBA and MS-Supply Chain Management simultaneously upon completion of the required 57-66 credit hours.

All courses in the program are offered on campus; many are also available on-line. You may enroll on a full- or part-time basis during the fall and winter semesters, and some courses are often available during the summer.

Admission is rolling, and you may begin the program in September or January. May admission is also usually possible for part-time students.

University of Michigan-Dearborn students who have been admitted to the MBA/MS-Supply Chain Management may take up to 6 graduate credits during the final semester of their undergraduate program.

MBA Goals and Objectives

Goal 1: Students will have an understanding of the core business disciplines and be able to apply this knowledge to global business situations.

Objectives: MBA students will:

• Demonstrate knowledge of disciplinary concepts, terminology, models, and perspectives.
• Identify business problems and apply appropriate solutions (problem-finding/problem-solving).
• Integrate knowledge across disciplinary areas (integrative thinking).
• Apply knowledge in a global environment.

Goal 2: Students will be effective communicators.

• Demonstrate an ability to effectively communicate in a manner that is typically required of a business professional.

Goal 3: Students will appreciate the importance of ethical/corporate social responsibility principles.

Objectives: MBA students will:

• Identify and explain alternative approaches to ethical/corporate social responsibility issues.
MS-Supply Chain Management Goals and Objectives

Goal 1: Students will acquire knowledge in supply chain management concepts and tools.

Objectives: MS-Supply Chain Management students will:

• Demonstrate understanding of supply chain management concepts.
• Demonstrate understanding of supply chain management problem-solving tools.

Goal 2: Students will develop skills to address relevant supply chain management issues and problems.

Objectives: MS-Supply Chain Management students will:

• Evaluate supply chain management problems using appropriate problem-solving approaches.
• Effectively communicate supply chain management issues.

MBA/MS-Supply Chain Management Admission Prerequisites

• Mathematics admission prerequisite
• GMAT/GRE admission prerequisite

Dual Degree, MS in Accounting/MS in Finance

The dual MS in Accounting/MS in Finance program prepares students for success by providing excellent skills in both finance and accounting. The program offers specialized coursework applicable to careers in corporate accounting, controllership, public accounting, and the financial professions. Students select either the corporate finance or the investments concentration in the MS in Finance. Students in the program can complete the CPA exam preparation course through CPAexcel® at a significant discount, and even qualify to receive a 100% reimbursement.

The program is open to students with strong quantitative and analytical skills, regardless of their undergraduate majors.

The program allows students to receive both the MS in Accounting and the MS in Finance simultaneously upon completion of 51-57 credit hours, depending on applicable course exemptions and course choices.

All courses in the program are offered on campus; many are also available on-line. You may enroll on a full- or part-time basis during the fall and winter semesters, and some courses are often available during the summer. The program usually can be completed within 24 months of full-time study.

Admission is rolling, and you may begin the program in September or January. May admission is also usually possible for part-time students.

University of Michigan-Dearborn students who have been admitted to the program may take up to 6 graduate credits during the final semester of their undergraduate program. Students must successfully complete their undergraduate degree before taking any additional graduate-level courses.

MS in Accounting Goals and Objectives

Goal: MS in Accounting students will be able to integrate theory and applications in a wide variety of business situations.

Objectives: MS in Accounting students will:

- Be able to effectively communicate ideas orally and in writing.
- Integrate multiple sources of information to formulate solutions to complex business issues.
- Apply standards and regulations that affect multinational businesses.
- Apply standards of practice to business situations.

MS in Finance Goals and Objectives

Goal 1: Students will demonstrate analytical skills in solving problems.

Objectives of the Corporate Finance concentration: MS in Finance students will have the ability to:

- Analyze and manage risk in a global setting.
- Estimate the value of real assets.
- Evaluate managerial decisions concerning financial policy.

Objectives of the Investments concentration: MS in Finance students will have the ability to:

- Analyze and manage risk in a global setting.
- Estimate the value of financial assets.
- Apply portfolio theory concepts to construct optimal risky assets portfolios that meet the objectives and constraints of their clients.

Goal 2: Students will be persuasive and/or informative communicators.

Objective 1: MS in Finance students will be able to convey finance knowledge through effective communication.

MS in Accounting/MS in Finance

Admission Prerequisites

- Mathematics admission prerequisite. Calculus is not required for admission. However, applicants who wish to pursue careers in investments or risk management, as well as those who wish to earn Chartered Financial Analyst (CFA) credentials, are strongly recommended to satisfy the Mathematics admission requirement with a college level Calculus course. Also, Calculus is a course prerequisite to FIN 656, an optional course in the MSF Investments concentration. Students who wish to take this course must first complete a college level Calculus course with a grade of “C” or better.
- GMAT/GRE admission prerequisite, if applicant qualifies for the GMAT/GRE waiver.

2 Simultaneous credit toward the BBA Accounting major and MSA for students admitted to the Accounting 4+1 program.
3 Recommended for students who intend to take the CPA exam.

General MSF Requirement
Complete at least 15 BE and FIN credits, excluding BE 530 and FIN 531.

MSF Foundation Course Exemptions
Previous equivalent undergraduate or graduate coursework may qualify students to exempt any of the foundation courses. Students must replace exempt MSF foundation courses with additional courses within their MSF concentration.

MSA Core Course Exemptions
Previous equivalent undergraduate or graduate coursework may qualify students to exempt any of the core courses. Exempt core courses are replaced with additional MSA electives.

Previous coursework deemed substantially similar to BE 530, DS 520 or FIN 531 may qualify to exempt students from these MSF foundation courses. Students must replace exempt MSF foundation courses with additional courses within their MSF concentration.

Regardless of exemption credits granted, students must earn at least 51 credits in the dual-degree program if completing the MSF Corporate Finance concentration, or at least 54 credits if completing the MSF Investments concentration.

In addition, up to 6 transfer credits for previous equivalent graduate coursework can be applied to the degree if those credits have not been counted toward a degree.

Exemptions and transfer credit are granted at the discretion of the program faculty.

Dual Degree, MBA/MSE in Industrial and Systems Engineering
The MBA/MSE-Industrial Systems Engineering has been carefully developed to meet the increasing need for professionals who have expertise in both engineering and management. It is open to students
who have completed a Bachelor of Science degree in engineering, a physical science, computer science, or applied mathematics.

The program is offered jointly by the College of Business and the College of Engineering and Computer Science. It allows students to receive both the MBA and MSE-ISE simultaneously upon completion of the required 57-66 credit hours.

You may complete the program on campus, on-line, or any combination of the two, and you may enroll on a full- or part-time basis.

Admission is rolling, and you may begin the program in September, January, or May. Students must apply and be admitted to the MBA and the MSE-ISE programs separately. University of Michigan-Dearborn students who have been admitted to the program may take up to 6 graduate business credits during the final semester of their undergraduate program.

Program Goals and Objectives

Master of Business Administration

Goal 1: Students will have an understanding of the core business disciplines and be able to apply this knowledge to global business situations.

Objectives: MBA students will:

1. Demonstrate knowledge of disciplinary concepts, terminology, models, and perspectives.
2. Identify business problems and apply appropriate solutions (problem-finding/problem-solving).
3. Integrate knowledge across disciplinary areas (integrative thinking).
4. Apply knowledge in a global environment.

Goal 2: Students will be effective communicators.

Objectives: MBA students will:

1. Demonstrate an ability to effectively communicate in a manner that is typically required of a business professional.

Goal 3: Students will appreciate the importance of ethical/corporate social responsibility principles.

Objectives: MBA students will:

1. Identify and explain alternative approaches to ethical/corporate social responsibility issues.

Admission Prerequisites

Master of Business Administration

• Mathematics admission prerequisite
• GMAT/GRE admission prerequisite

MSE in Industrial and Systems Engineering

• Completion of a bachelor of science degree in engineering, a physical science, computer science, or applied mathematics
• A course in Probability and Statistics equivalent to IMSE 510
• A course in Operations Research equivalent to IMSE 500

- OM 663  Lean & Six Sigma
- OM 664  Strategic Sourcing
- OM 665  IT in SCM

Total Credit Hours: 9

Courses may not be taken off campus except by prior permission of the Academic Standards Committee. Permission is granted only in the case of unusual, extenuating circumstances.

**Program Details**

**Breadth Requirements**

- Complete AIM courses in at least 3 different disciplines.
- Complete no more than four AIM, MBA Concentration, and MBA Elective Courses (12 credits) in any single discipline. This does not apply to courses associated with the MSE in ISE portion of the dual-degree program.
- Complete graduate business courses in at least 5 different disciplines.

No single course may be counted toward more than one requirement or concentration in the dual degree program.
Course Waivers and Transfer Credit

Students may waive ACC 505, BE 530, BPS 516, FIN 531, MIS 525, MKT 515, and OB 510 if they have equivalent courses in an AACSB business program completed within the previous 10 years and have earned at least a 3.2 post-60 GPA (that is, your GPA in courses taken after your first 60 undergraduate credit hours). Students who do not meet these criteria may request to have their courses evaluated for waiver credit at the time of admission. Students must have earned a B or better in equivalent courses as a part of a degree program completed within the previous 10 years.

Regardless of waiver and exemption credits granted, students must earn at least 57 credits in the dual-degree program.

In addition, up to 6 transfer credits for previous equivalent graduate coursework can be applied to the degree if those credits have not been counted toward a degree.

Waivers and transfer credit are granted at the discretion of the program faculty.

Dual Degree, MBA/MHSA

The College of Business at UM-Dearborn and the School of Public Health at UM-Ann Arbor offer a jointly administered dual degree program leading to the Master of Health Services Administration (MHSA) and the Master of Business Administration (MBA). This program takes advantage of many areas of overlap between the two curricula, and allows admitted students to receive both degrees simultaneously upon completion of 82 credit hours.

The MHSA focuses on the organization, financing, marketing, and management of health care institutions and the delivery of personal health services in the United States. The program prepares students for management careers in the unique environment of health care, including careers in health systems, hospital, clinic, and emergency services management. The MHSA degree is also appropriate for those seeking positions as planners, policy analysts, or consultants focusing on the financing, organization, quality and delivery of personal health services in either the public or the private sector.

The MBA offers a number of skills beyond the MHSA, including expanded coverage of finance, marketing, and strategies as practiced in industries other than health care. It is valuable to understand the management of for-profit corporations in health care, and it provides a broader foundation for senior management positions in all sectors.

Students may complete the MBA portion of the dual degree in evening courses at the Dearborn campus, on-line, or any combination of the two. (The MBA concentrations are optional, and most require a campus presence.) Students may enroll on a full- or part-time basis, but course availability is greatest during the fall and winter semesters. The MHSA portion of the program requires full-time enrollment and daytime courses at the Ann Arbor campus. Students must verify the curriculum for the
MHSA portion of this dual-degree program with their program advisor in the School of Public Health at UM-Ann Arbor.

Students must apply and be admitted to the MBA and MHSA separately. Students already enrolled in either degree may apply for the second degree before completing one-half of their degree requirements. Admission to the MBA is rolling, and students may begin the program in September or January. May admission is also usually possible for part-time students. For detailed information about admission to the MHSA, see sph.umich.edu/hmp/programs/mhsa.html.

University of Michigan-Dearborn students who have been admitted to the program may take up to 6 graduate business credits during the final semester of their undergraduate program. Students must successfully complete their undergraduate degree before taking any additional graduate-level courses.

**MBA Program Goals and Objectives**

Goal 1: Students will have an understanding of the core business disciplines and be able to apply this knowledge to global business situations.

Objectives: MBA students will:

- Demonstrate knowledge of disciplinary concepts, terminology, models, and perspectives.
- Identify business problems and apply appropriate solutions (problem-finding/problem-solving).
- Integrate knowledge across disciplinary areas (integrative thinking).
- Apply knowledge in a global environment.

Goal 2: Students will be effective communicators.

Objectives: MBA students will:

- Demonstrate an ability to effectively communicate in a manner that is typically required of a business professional.

Goal 3: Students will appreciate the importance of ethical/corporate social responsibility principles.

Objectives: MBA students will:

- Identify and explain alternative approaches to ethical/corporate social responsibility issues.

**MHSA Program Goals and Objectives**

View the core competencies taught in the Master of Health Services Administration (https://sph.umich.edu/hmp/programs/mhsa.html) program.

**MBA/MHSA Admission Prerequisites**

- Mathematics admission prerequisite
- GMAT/GRE admission prerequisite, unless applicant qualifies for the GMAT/GRE waiver
- Applicants must also meet admission requirements for the Master of Health Services Administration (https://sph.umich.edu/hmp/programs/mhsa.html)

In addition, up to 6 transfer credits for previous equivalent graduate credits in the MBA program and 46 credits in the MHSA program. Regardless of waiver credit granted, students must earn at least 36 as a part of a degree program completed within the previous 10 years. Students must have earned a B or better in equivalent courses in an AACSB business program completed within the previous 10 years and have earned at least a 3.2 post-60 GPA (that is, your GPA in courses taken after your first 60 undergraduate credit hours). Students who do not meet these criteria may request to have their courses evaluated for MBA core course waiver credit at the time of admission. Students must successfully complete minimum of 36 MBA credits. Students may enroll on a full- or part-time basis, but course availability is greatest during the fall and winter semesters. The program usually can be completed within 12-16 months of full-time study. Admission is rolling, and students may begin the program in September or January. May admission is also usually possible for part-time students.

University of Michigan-Dearborn students who have been admitted to the MS-Finance may take up to 6 graduate credits during the final semester of their undergraduate program. Students must successfully complete their undergraduate degree before taking any additional graduate-level courses.

**MS in Finance Program Goals and Objectives**

**Goal 1:** Students will demonstrate analytical skills in solving problems.

Objectives of the Corporate Finance concentration: MS in Finance students will have the ability to:

- Analyze and manage risk in a global setting.
- Estimate the value of real assets.
- Evaluate managerial decisions concerning financial policy.

Objectives of the Investments concentration: MS in Finance students will have the ability to:

- Analyze and manage risk in a global setting.
- Estimate the value of financial assets.
- Apply portfolio theory concepts to construct optimal risky assets portfolios that meet the objectives and constraints of their clients.

**Goal 2:** Students will be persuasive and/or informative communicators.

Objective 1: MS in Finance students will be able to convey finance knowledge through effective communication.
MS in Finance Admission Prerequisites

- Mathematics admission prerequisite. Calculus is not required for admission to the MS in Finance. However, applicants who wish to pursue careers in investments or risk management, as well as those who wish to earn Chartered Financial Analysts (CFA) credentials, are strongly recommended to satisfy the Mathematics admission requirement with a college level Calculus course. Also, Calculus is a course prerequisite to FIN 656, an optional course in the Investments concentration. Students who wish to take this course must first complete a college level Calculus course with a grade of "C" or better.

- GMAT/GRE admission prerequisite, unless applicant qualifies for the exemption

General MSF Requirements

- Complete at least 15 BE and FIN credits, excluding BE 530 and FIN 531.
- Complete at least 30 credits in the degree program.

At most 3 courses/9 credits of the 4 required foundations courses may count toward the 30-credit degree requirement. Previous undergraduate or graduate coursework deemed substantially similar to ACC 505, BE 530, DS 520 or FIN 531 may qualify to exempt students from those courses. Exempt courses must be replaced with elective courses within the degree program.

In addition, up to 6 transfer credits for previous equivalent graduate coursework can be applied to the degree if those credits have not been counted toward a degree.

Exemptions and transfer credit are granted at the discretion of the program faculty.

¹ Previous equivalent undergraduate or graduate coursework may qualify students to exempt any of the foundation courses. Students may complete the MS-Finance in 30 credit hours if they have completed one or more equivalent courses, with a converted grade of "B" or better, before admission. Otherwise, students complete all four foundation courses in the program, for a total of 33 credit hours.

² At least one of the two Accounting electives must be ACC 514, ACC 555 or ACC 608.

Information Systems

The Master of Science-Information Systems provides the knowledge and skills required to manage IT projects, oversee application development, and develop an organization’s IT strategy.

The program will prepare you to manage information systems functions, as well as the organizational challenges facing information systems managers. If you have a background in fields such as information technology management, computer science, electronics engineering -- or even if you simply have an aptitude for information technology -- we welcome your application.

The program is offered on campus, and a few of the courses are also occasionally available on-line. You may enroll on a full- or part-time basis during the fall and winter semesters, and some courses are often available during the summer. The program usually can be completed within 12 months of full-time study.

Admission is rolling, and you may begin the program in September or January. May admission is also usually possible for part-time students.

University of Michigan-Dearborn students who have been admitted to the MS-Information Systems may take up to 6 graduate credits during the final semester of their undergraduate program.

MS-Information Systems Program Goals and Objectives

Goal 1: MS-Information Systems students will acquire discipline-specific knowledge and competencies.

Objectives: MS-Information Systems students will:

• Design an information system for an organization.
• Evaluate security risks of an organization.
• Use data to provide solutions to business questions.

Goal 2: MS-Information Systems students will develop effective communication skills.

Objectives: MS-Information Systems students will:

• Communicate complex information technology concepts orally.
• Communicate complex information technology concepts effectively in writing.

Goal 3: MS-Information Systems students will develop information technology strategy skills.

Objectives: MS-Information Systems students will:

• Be able to assess the impact of information technology strategy on organizational effectiveness.
• Manage information quality initiatives in organizations.

MS-Information Systems Admission

Prerequisites

Total Credit Hours: 9

Previous coursework deemed substantially similar to ISM 525, or an undergraduate degree in Information Systems Management, may qualify to exempt students from ISM 525. Exempt courses must be replaced with other elective courses in the degree program.

In addition, up to 6 transfer credits for previous equivalent graduate coursework can be applied to the degree if those credits have not been counted toward a degree.

Exemptions and transfer credit are granted at the discretion of the program faculty.

Dual Degree, MBA/MS-Information Systems

The MBA/MS-Information Systems combines a broad managerial education with in-depth training in the skills required to manage IT
projects, oversee application development, and develop an organization's IT strategy. The program is open to all students who have an aptitude for information technology, and it is particularly useful to students with backgrounds in information technology management, computer science, computer engineering, electronics engineering, and related fields. Students will learn how to manage the organizational challenges facing information systems managers while simultaneously acquiring the skills necessary to manage information systems functions.

The program allows students to receive both the MBA and MS-Information Systems simultaneously upon completion of the required 57-66 credit hours.

All courses in the program are offered on campus; many are also available on-line. Students may enroll on a full- or part-time basis, but course availability is greatest during the fall and winter semesters.

Admission is rolling, and you may begin the program in September or January. May admission is also usually possible for part-time students.

University of Michigan-Dearborn students who have been admitted to the MBA/MS-Information Systems may take up to 6 graduate credits during the final semester of their undergraduate program. Students must successfully complete their undergraduate degree before taking any additional graduate-level courses.

**Total Credit Hours**

| 66 |

*1 Up to three graduate credits may be elected from units other than the College of Business, with prior approval of the Graduate Program Advisor.*

**Breadth Requirements**

- Complete AIM courses in at least 3 different disciplines.
- Complete no more than 4 AIM, MBA Concentration, and Elective courses (12 credits) in any one discipline other than Finance.
- Complete no more than 7 courses (21 credits) in Management Information Systems courses (MIS) after completion of the MBA Core.
- Complete graduate business courses in at least 7 different disciplines.

No single course may be counted toward more than one requirement or concentration in the dual degree program.

Students may waive any of the MBA core courses except ISM 525 if they have equivalent courses in an AACSB business program completed within the previous 10 years and have earned at least a 3.2 post-60 GPA (that is, the GPA in courses taken after the first 60 undergraduate credit hours). Students who do not meet these criteria may request to have their courses evaluated for waiver credit at the time of admission. Students must have earned a B or better in equivalent courses as a part of a degree program completed within the previous 10 years.

Previous coursework deemed substantially similar to ISM 525 may qualify to exempt students from the course. The exempt course must be replaced with other approved courses in the MS-Information Systems program.

Regardless of waiver and exemption credits granted, students must earn at least 57 credits in the dual-degree program, including at least 36 credits in the MBA portion of the program.

In addition, up to 6 transfer credits for previous equivalent graduate coursework can be applied to the degree if those credits have not been counted toward a degree.

Exemptions, waivers and transfer credit are granted at the discretion of the program faculty.

**Marketing**

The Master of Science-Marketing at the University of Michigan-Dearborn equips you with skills necessary to manage core marketing functions,
and it allows you to choose among numerous electives to tailor the degree to a wide variety of positions.

The degree is open to students from all undergraduate majors and all levels of work experience.

The program is offered on campus, and some courses are also available on-line. You may enroll on a full- or part-time basis during the fall and winter semesters, depending on your choice of electives, and some courses are often available during the summer. The program often can be completed within 10-12 months of full-time study.

Admission is rolling, and you may begin the program in September or January. May admission is also usually possible for part-time students.

**MS-Marketing Program Goals and Objectives**

**Goal 1:** MS-Marketing students will demonstrate understanding of core marketing concepts.

**Objective:** MS-Marketing students will demonstrate a knowledge of marketing concepts, terminology, models, and perspectives.

**Goal 2:** MS-Marketing students will be able to apply knowledge of core marketing concepts to organizations and business situations.

**Objective:** MS-Marketing students will identify business problems and apply appropriate marketing solutions.

**MS-Marketing Admission Prerequisites**

- Mathematics admission prerequisite
- GMAT/GRE admission prerequisite, unless applicant qualifies for the GMAT/GRE waiver

Previous coursework deemed substantially similar to DS 520, if completed with a grade of "B" or better, may qualify to exempt students from that course. Exempt courses must be replaced with other approved courses in the degree program.

In addition, up to 6 transfer credits for previous equivalent graduate coursework, if completed with a grade of "B" or better, may be applied to the degree if those credits have not previously been counted toward a degree.

Exemptions and transfer credit are granted at the discretion of the program faculty.

Any MKT graduate level course not listed on the core courses will be considered an elective for this program.

**Supply Chain Management**

The Master of Science-Supply Chain Management at the University of Michigan-Dearborn teaches students how to manage the organizations, people, technology, and resources that transform raw materials into deliverable products.

The degree is open to students from all undergraduate majors.

You may enroll on a full- or part-time basis. The program is offered on campus, and a few of the courses are also occasionally available on-line. You may enroll on a full- or part-time basis during the fall and winter semesters, and some courses are often available during the summer. The program usually can be completed within 12 months of full-time study.

Admission is rolling, and you may begin the program in September or January. May admission is also usually possible for part-time students.

University of Michigan-Dearborn students who have been admitted to the MS-Supply Chain Management may take up to 6 graduate credits during the final semester of their undergraduate program.

**MS-Supply Chain Management Program Goals and Objectives**

**Goal 1:** Students will acquire knowledge in supply chain management concepts and tools.

**Objectives:** MS-Supply Chain Management students will:

- Demonstrate understanding of supply chain management concepts.
- Demonstrate understanding of supply chain management problem-solving tools.

**Goal 2:** Students will develop skills to address relevant supply chain management issues and problems.

**Objectives:** MS-Supply Chain Management students will:

- Evaluate supply chain management problems using appropriate problem-solving approaches.
- Effectively communicate supply chain management issues.

### Dual Degree, MBA/MS, Supply Chain Management

The MBA/MS-Supply Chain Management dual degree combines a broad managerial education with specialized training in managing the organizations, people, technology, and resources that transform raw materials into deliverable products. The degree is open to all students, regardless of their undergraduate major. The program allows students to receive both the MBA and MS-Supply Chain Management simultaneously upon completion of the required 57-66 credit hours.

Students may enroll on a full- or part-time basis. All courses in the program are offered on campus; many are also available on-line. Course offerings are greatest during the fall and winter semesters. Admission is rolling, and students may begin the program in September or January. May admission is also usually possible for part-time students.

University of Michigan-Dearborn students who have been admitted to the MBA/MS-Supply Chain Management may take up to 6 graduate credits during the final semester of their undergraduate program. Students must successfully complete their undergraduate degree before taking any additional graduate-level courses.

Total Credit Hours 66

1 Up to three graduate credits may be elected from units other than the College of Business, with prior approval of the Graduate Program Advisor.

Breadth Requirements

- Complete AIM courses in at least 3 different disciplines.
- Complete no more than 4 AIM, MBA Concentration, and Elective courses (12 credits) in any one discipline other than Finance.
- Complete no more than 7 courses (21 credits) in Operations Management (OM) after completion of the MBA Core.
- Complete graduate business courses in at least 7 different disciplines.

No single course may be counted toward more than one requirement or concentration in the dual degree program.

Students may waive ACC 505, BE 530, BPS 516, FIN 531, ISM 525, MKT 515, or OB 510 if they have equivalent courses in an AACSB business program completed within the previous 10 years and have earned at least a 3.2 post-60 GPA (that is, the GPA in courses taken after the first 60 undergraduate credit hours). Students who do not meet these criteria may request to have their courses evaluated for waiver credit at the time of admission. Students must have earned a B or better in equivalent courses as a part of a degree program completed within the previous 10 years.

Previous coursework deemed substantially similar to DS 520, or OM 521 may qualify to exempt students from those courses. Exempt courses must be replaced with other MS-Supply Chain Management Elective Courses.

Regardless of waiver and exemption credits granted, students must earn at least 57 credits in the dual-degree program, including at least 36 credits in the MBA portion of the program.

In addition, up to 6 transfer credits for previous equivalent graduate coursework can be applied to the degree if those credits have not been counted toward a degree.

Exemptions, waivers and transfer credit are granted at the discretion of the program faculty.
College of Education, Health, and Human Services

Our Work: Education, Health, and the Human Services

The College of Education, Health, and Human Services aims to prepare and sustain exemplary practitioners and administrators for work in the interrelated fields of education, human health, and human services through an emphasis on scholarship, diversity, inclusion, and excellence in service delivery.

The College draws broadly upon institutional resources including faculty and programs in other colleges of the University. Additionally, facilities in local school districts, health-related settings, public agencies and private corporations regularly provide students with a spectrum of rich experiences.

The College contributes to the University of Michigan-Dearborn’s impact as a dynamic metropolitan university in which teaching and research interact to develop leaders and new knowledge in the tradition of the University of Michigan. Students in CEHHS have the opportunity to participate in many organizations within the College, campus, and community.

History of the College

Shortly after UM-Dearborn opened in 1959, a small teacher certification program was added to the liberal arts division. By 1969 the teacher certification program had grown into one of the largest academic departments on the campus. During 2012-13, the Regents of the University of Michigan authorized the addition of the Department of Health and Human Services (HHS), and the creation of the College of Education, Health, and Human Services (CEHHS).

Graduate Degree Programs

Whether you are looking to develop your teaching skills, prepare for a career in healthcare IT or build your expertise in working with nonprofits, we have the program for you. The College of Education, Health, and Human Services offers a number of master’s degree programs geared towards advancing student knowledge in health- and education-related career fields.

For a listing of graduate offerings and opportunities, see our G (https://umdearborn.edu/cehhs/graduate-programs/areas-study/) Graduate Programs page (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/).

Details regarding any of the programs can be found in later sections of this Graduate Catalog.

Admission to the College of Education, Health, and Human Services

The College of Education, Health, and Human Services prepares students through Master’s degree programs, an Education Specialist degree (Ed.S.) and a Doctorate in Education (Ed.D). More information on graduate level opportunities and admissions information can be found on the Graduate Programs webpage (https://umdearborn.edu/cehhs/graduate-programs/areas-study/).

Office of Student Success

The Office of Student Success for the College of Education, Health, and Human Services is located in 262 FCS. All matters relating to CEHHS student needs including academic advising, field placement, teacher certification, and student records and forms are handled here.

Academic Advising (https://umdearborn.edu/cehhs/cehhs-office-student-success/academic-advising/graduate-advising/)

Academic Advising at the graduate level is done by College faculty. Information on graduate level advising at CEHHS can be found on the Graduate Advising (https://umdearborn.edu/cehhs/cehhs-office-student-success/academic-advising/graduate-advising/) webpage (https://umdearborn.edu/cehhs/cehhs-office-student-success/academic-advising/graduate-advising/). The College has professional Academic Advisors that specialize in CEHHS programs and can help students navigate their coursework and requirements from beginning to end.

Students are encouraged to meet with an Academic Advisor at least once a semester to support their success and progress.

Field Placement (https://umdearborn.edu/cehhs/cehhs-office-student-success/field-placement-office/)

Field placements allow for each learner to build skills, knowledge, and confidence in his/her own pathway toward becoming a professional in real world placements. All required clearances, paperwork, and placements for field assignments are handled within the CEHHS Office of Student Success.

Department of Education

Education is not one career; it is many. Individuals specializing in education are qualified to pursue a wide variety of attractive and rewarding professions including teaching, corporate training, recreation, social service, and childcare. Wherever there is a need for people specifically prepared to teach others, there is a need for individuals with a background in education.

Still, most college graduates seeking a career in education elect to become classroom teachers. Teaching offers a wide choice of opportunities to work with persons of different age levels in a variety of specialized fields. It is a satisfying career for those who like to inspire growth in others and continue their own development.

Students admitted to any of the education programs offered at UM-Dearborn are provided with an academic and professional background suited to the challenges of education in a multicultural society. For further information, please visit the College of Education, Health, and Human Services website at http://umdearborn.edu/cehhs/ (http://www.umdearborn.edu/cehhs/).

Accreditation (https://umdearborn.edu/cehhs/departments/education/about/accreditation/)

The University of Michigan-Dearborn Teacher Certification program is designed to produce graduates who are knowledgeable in their content areas and their use of pedagogy with diverse learners and who are prepared to become caring and reflective professionals. The Michigan Department of Education approval enables the College to offer programs and make recommendations resulting in state-issued certification of teachers and administrators. Additionally, certification is accredited by the Council for the Accreditation of Educator Preparation (CAEP). This accreditation certifies that the program has provided evidence that it
adheres to CAEP’s standards. The Early Childhood Education Center is accredited by the National Association for the Education of Young Children (NAEYC).

Department of Health and Human Services

The Department of Health and Human Services (HHS) prepares leaders, professionals, and scholars to improve the health and welfare of persons and communities in local, national, and global settings. HHS provides an innovative academic environment for students interested in improving the lives and health of vulnerable populations. HHS faculty enhance student learning by connecting classroom instruction with ongoing intervention research, meaningful field experiences and community outreach efforts. Students complete a rigorous interdisciplinary program of study and master valuable professional skills. HHS students are well prepared to launch their careers or pursue additional graduate training to help solve pressing problems and deliver exceptional health and human services.

Cengiz-Phipps, Nesrin, PhD, Associate Professor of Mathematics Education
Krebs, Angela, PhD, Associate Professor of Mathematics Education
Martinez-Valencia, Francia Eliana, PhD, University of Alabama, Associate Professor Spanish

Special Programs and Centers

The College of Education, Health, and Human Services is recognized for its concentrated focus in several areas. This concentrated focus is designed to marshal available expertise at the institution in pursuit of regional needs and goals in several particular emphasis areas, including early childhood learning and instruction and inquiry-based science instruction.

- Curriculum Knowledge Center (CKC) (https://umdearborn.edu/cehhs/centers-institutes/curriculum-knowledge-center-ckc/)
- Early Childhood Education Center (https://umdearborn.edu/cehhs/centers-institutes/ececc/)
- The Inquiry Institute (https://umdearborn.edu/cehhs/centers-institutes/inquiry-institute/)

Applied Behavior Analysis

The Master of Science degree in Applied Behavior Analysis prepares students with training in the science of learning and behavior and prepares them to work as Board Certified Behavior Analysts (BCBA). Applied Behavior Analysis (ABA) is a scientific approach to the study of behavior. Behavior analysts work directly with individuals to improve their social, educational, health, adaptive skills, and behavioral outcomes through the development of programming based upon the principles of ABA. Behavior analysts are trained to describe behavior, explain, predict, and analyze the occurrence and non-occurrence of behavior, and change behavior through the development of programming based on ABA strategies and tactics.

Through coursework firmly grounded in theory, with an emphasis on the application of theory to socially significant and effective practice, the M.S. in ABA program provides students with an excellent foundation to meet the proficiencies mandated by the Behavior Analyst Certification Board (https://www.bacb.com/) (BACB). Students will be prepared to complete the required supervised field work and sit for the Board Certified Behavior Analyst (BCBA) examination. Pass-rate data for University of Michigan-Dearborn candidates are not available at this time. Pass-rate data are not published for sequences with fewer than six first-time candidates in a single year or for sequences within their first four years of operation. Pass-Rate Data (https://www.bacb.com/verified-course-sequences/) are available at the BACB website.

BCBAs provide services within mental health, educational, and human services environments that may include collecting and analyzing data, writing and evaluating behavior intervention plans, training others to implement components of treatment plans, and overseeing the implementation of treatment plans. BCBAs are qualified to provide services to individuals with a variety of needs such as academic performance, skill deficits (e.g., communication, adaptive behavior and functional skills), and problem behavior (e.g., aggression, self-injurious behavior), and social interactions. BCBAs also provide supervision to Board Certified Assistant Behavior Analysts (BCaBA) and Registered Behavior Technicians (RBT).

Admission Requirements

Students must submit the following items with their application.

- Board Certified Behavior Analyst (BCBA) examination. Pass-rate data for University of Michigan-Dearborn candidates are not available at this time. Pass-rate data are not published for sequences with fewer than six first-time candidates in a single year or for sequences within their first four years of operation. Pass-Rate Data (https://www.bacb.com/verified-course-sequences/) are available at the BACB website.

Sayles, Daniel G., PhD, Associate Professor Emeritus of Education
Trepanier-Street, Mary, EdD, Professor Emerita of Education
Van Tiern, Darlene, PhD, Associate Professor Emerita of Education
Verhey, Roger, PhD, Professor Emeritus of Education

Nesmith, Judy, MS, Senior Lecturer of Natural Sciences
Rathouz, Margaret, PhD, Associate Professor of Mathematics Education
The GRE is not required for admission to this program. The Office of International Affairs lists additional admission requirements for international students (https://umdearborn.edu/admissions/graduate/how-apply/).

- Bachelor's degree from an accredited institution
- Official transcripts from all post-secondary institutions attended
- 3.0 GPA or higher on submitted transcripts
- Three professional letters of recommendation
- Personal statement

The university's academic policies for graduate students (p. 516) apply.

## Program Requirements

The Master of Science in Applied Behavior Analysis is a 30 credit hour degree program. A minimum cumulative GPA of $B$ (3.0 on a 4.0 scale) must be maintained to continue enrollment in the program. The program requires successful completion of the following courses:

### Core Coursework

### Total Credit Hours: 30

### Program Notes:

1. Students must complete program requirements with a minimum 3.0 GPA.
2. Completion of this degree leads to, but does not equate to certification through the Behavior Analyst Certification Board (BACB).
   - a. In order to become a Board Certified Behavior Analyst (BCBA) a student must complete the required courses of this certificate, obtain supervision in an ABA setting, and successfully pass the BCBA exam.
   - i. ONSET OF EXPERIENCE: Supervisees may not start accumulating experience hours until they have done all of the following: • Started qualifying coursework (may begin accruing hours after attending first class meeting of a course with the Verified Course Sequence) • Passed the Experience Standards Training Module • Secured a qualified supervisor
   - ii. DURATION OF EXPERIENCE: The start and end dates of the experience may not be more than five years apart.
   - iii. ACCRUAL OF EXPERIENCE: For all categories, no fewer than 10 hours but no more than 30 hours, including supervision hours, may be accrued per week. Supervisees may accrue experience in only one category per supervisory period.
3. In order to be eligible to take the BCBA exam and complete practicum hours, a student must complete all the required courses with a C or better.
4. More information regarding Behavior Analyst Certification can be found at https://www.bacb.com/

## Master of Science in Applied Behavior Analysis Accelerated Program Option (4+1 program)

### Overview

The Master of Science in Applied Behavior Analysis Accelerated Program, or 4+1 program, is designed for undergraduate students who have the interest, and demonstrated ability, to pursue the M.S. in Applied Behavior Analysis. The program is designed to allow students who complete a B.A./B.S. at the University of Michigan-Dearborn to fulfill the requirements of the M.S. in Applied Behavior Analysis with one additional year of graduate study. This will be achieved by combining a portion of undergraduate and graduate coursework as described below.

### Eligibility

To be eligible for the program, a student must:

- Be enrolled in an undergraduate program at the University of Michigan-Dearborn.
- Have a 3.25 cumulative GPA or better.
- Have earned at least 60 credits at the undergraduate level.

### Double Counting Credits

1. The 4+1 Masters program allows current UM-Dearborn undergraduate students to complete both their B.A./B.S. and M.S. in Applied Behavior Analysis degrees in an accelerated format. 4+1 students can double-count up to 15 credits of 500-level or above courses. The courses eligible to be double-counted include:
   - a. EDC 506
   - b. EDC 507
   - c. EDC 516
   - d. EDC 580
   - e. EDC 539, EDC 561 or EDC 514 (select only 1 elective course)
2. Students enrolled in undergraduate programs that require the 400-level equivalent of the courses listed above can count the 500-level version of those courses towards the completion of their undergraduate requirements. If the 400-level version of the classes listed above are not part of the student’s undergraduate requirements then these courses can count as electives towards the undergraduate degree. Students who do not have room for any more elective credit in their plan of study can still complete this program, but may end
up with more than the minimum number of undergraduate credits required for their program.

3. At least one additional year of graduate work (at least 15 credits) would be needed to complete the Master's program.

4. The double-counted classes appear on both the undergraduate and graduate transcripts. Students are graded based on the graduate grading scheme for all graduate courses elected.

Admission to the Program

1. Participation in the 4+1 program is limited to students who have:
   a. completed at least 60 undergraduate credit hours
   b. earned a cumulative GPA of at least 3.25

2. Admission to the 4+1 program is at the discretion of the CEHHS Director of Master's Degree Programs.

3. Applicants to the 4+1 program must apply for the M.S. in Applied Behavior Analysis through the online graduate program application and indicate a "Yes" response to the 4+1 accelerated program question. Students must submit a letter of recommendation from a UM-Dearborn faculty member or instructor and official transcripts.

4. 4+1 students must enroll in the M.S. in Applied Behavior Analysis program for a minimum of two full terms, paying graduate tuition rates. 4+1 students do not dual register and should utilize their graduate registration, not their undergraduate registration, to complete the remaining credits of the graduate program.

5. Students must attain a grade of B or better in each 500 level class double-counted or transferred to the graduate program. Failure to do so may result in removal from the 4+1 program. Students may be given the opportunity to retake courses once they complete their undergraduate degree.

Feasibility of this Program

To complete the 4+1 program in five years students will have to complete any remaining required courses in the M.S. in Applied Behavior Analysis plan of study. The following table shows a sample course schedule for the last three years of the accelerated program. In this schedule it is assumed that students take 15 credits of graduate coursework as undergraduates, which leaves them with 15 credits to complete as graduate students. Students taking less than the full 15 credits as undergraduates may require more than one year to complete the Master's program. The courses shown in the table are only the graduate level courses that would be required to complete the M.S. in Applied Behavior Analysis. It is assumed students would fill in other requirements for their undergraduate degree as needed during years 3 & 4.

Sample Course Schedule

The Association for Behavior Analysis International has verified the following courses toward the coursework requirements for eligibility to take the Board Certified Behavior Analyst® or Board Certified Assistant Behavior Analyst® examination. Applicants will need to meet additional requirements before they can be deemed eligible to take the examination.

</tbody>
</table>

Program Notes

- Students only need to complete 3 courses (9 credits) of electives. The course list above shows all possible elective options even though only 3 of these courses would need to be taken.
- The undergraduate degree for 4+1 students can be conferred upon completion of the undergraduate degree requirements, rather than after completion of the graduate degree.

The Applied Behavior Analysis (BCBA) certificate program provides students with an excellent foundation to meet the proficiencies mandated by the Behavior Analyst Certification Board (BACB). Students will be prepared to complete the required supervised field work and sit for the Board Certified Behavior Analyst (BCBA) examination.

- or EDK 625 Qualitative Research Seminar

**Seminar and Research Project**

- EDK 680 Individual Res in Education

Total Credit Hours: 28

1. EDA 521 is a 1 credit hour course and must be taken 3 times over 3 semesters, for a total of 3 credit hours.

Community Based Education

The Masters of Arts in Community Based Education (https://umdearborn.edu/cehhs/graduate-programs/areas-study/ma-community-based-education/) program is designed to serve two related professional fields:

1. individuals working with, and for non-profit organizations engaged in educational outreach and
2. urban teachers who are working to build connections with the community as part of implementing place-based education strategies.

Admission Requirements & Application

Eligibility for regular admission includes:

- Completed application form
- $60.00 application fee
- Official transcript(s) from each college/university attended
- Completion of a bachelor’s degree from an accredited institution
- 3.0 (B) undergraduate/graduate grade point average or better
- Three professional letters of recommendation using required form
- Statement of purpose

The university's academic policies for graduate students (p. 516) apply.

Program of Study

The Master of Arts in Community Based Education (CBE) is a 30 credit hour degree program. A minimum cumulative GPA of B (3.0 on a 4.0 scale) must be maintained to continue enrollment in the program. The CBE requires successful completion of the following courses:

Early Childhood Education

The Master of Arts in Early Childhood Education (https://umdearborn.edu/cehhs/graduate-programs/areas-study/ma-early-childhood-education/) includes three program options for teachers, administrators, other service providers and educators who wish to learn how to serve young children and their families. The Early Childhood (ZS) Endorsement and the Early Childhood Special Education Inclusion options are for those who are already certified elementary teachers. The Early Childhood Administration and Leadership option is for non-certified professionals who are interested in early childhood leadership and administration. Courses are offered with the working professional in mind. Most courses required for the master’s degree are offered during evening and summer hours and include several online courses.

Admission Requirements & Application

Eligibility for regular admission includes:

- Completed application form
- $60.00 application fee
- Official transcript(s) from each college/university attended
- Completion of a bachelor’s degree from an accredited institution
- 3.0 (B) undergraduate/graduate grade point average or better
- Three professional letters of recommendation using required form
- Statement of purpose

Contact the Office of Student Success at 313-593-5090 for additional information or consult the College of Education, Health, and Human Services web page at: umdearborn.edu/cehhs/cehhs_masters/ (https://umdearborn.edu/cehhs/cehhs_masters/)
• Valid state of Michigan teaching certificate if seeking the Early Childhood (ZS) endorsement

The university’s academic policies for graduate students (p. 516) apply.

Program of Study
The Master of Arts in Early Childhood Education is a 30 credit hour degree program that features three program options for teachers, administrators, or other service providers who wish to serve young children and their families.

Students are strongly recommended to elect at least one core class during the first year of work. Completion of all core classes is recommended within the first 20 credit hours. All core classes must be elected on the UM-Dearborn campus.

The Master of Arts in Early Childhood Education with the Early Childhood (ZS) Endorsement

The Master of Arts in Early Childhood Endorsement (ZS) program is designed for certified elementary teachers wishing to gain competency in the general and special education of young children birth to eight. This program provides an inquiry-based constructionist early childhood curriculum development and an inclusive trans-disciplinary approach to early childhood education. A minimum of 30 credit hours is required. This program requires fieldwork (EDD 594 Internship) at the UM-Dearborn Early Childhood Education Center during a summer semester.

The Master of Arts with Early Childhood Special Education Inclusion

The Master of Arts in Early Childhood Education with Early Childhood Special Education Inclusion is a non-endorsement program for teachers holding an Early Childhood (ZA/ZS) endorsement. The unique internship opportunities offered in partnership with the Early Childhood Education Center and the Beaumont Children's Center for Exceptional Families focus on inclusive early childhood theories and practices. The program provides significant knowledge and skills for teaching children with disabilities using a trans-disciplinary inclusive approach. A minimum of 30 credit hours is required.

Master of Arts in Early Childhood for Early Childhood Administration and Leadership

The Master of Arts in Early Childhood Education for Early Childhood Administration and Leadership program is designed for non-certified professionals who are interested in early childhood leadership and administration. In the Early Childhood field there is a growing need for administrators and leaders in early childhood. This program will serve professionals (Directors, Education Coordinators and Curriculum Specialists) who need further preparation in supervision, and field experience in administration and leadership. A minimum of 30 credit hours is required.

**Education**

**Master of Arts in Education**

The College of Education, Health, and Human Services of the UM-Dearborn offers a Master of Arts in Education (https://umdearborn.edu/cehhs/graduate-programs/areas-study/ma-education-online-options/) degree. This is a degree, which is designed for educators who desire to fulfill all requirements for a University of Michigan master's degree, including residency, at UM-Dearborn. Courses are offered in the late afternoon, the early evening, the summer, as well as online, in order to accommodate working students. Classes are taught by the faculty of the College of Education, Health, and Human Services and CASL as well as by selected adjunct faculty who are specialists in their field.

The program is designed for educators, enabling them to (a) strengthen their knowledge of established research and best practices in their specific disciplines; (b) to become reflective, caring, and effective leaders within their respective disciplines at the classroom, school, and/or district level; and, (c) continue to develop their knowledge of research and best practices that lead to effective instructional strategies for all student achievement subject specialization. There are four areas of focus within the program: Education, in which students can design their own focus area of study, TESOL, English as a Second Language, and Reading Specialist. The last two can also satisfy the State Of Michigan Specialty Area Endorsements.

**Education Specialist (Ed.S.)**

The Education Specialist (EdS) degree program is designed to meet a critical need for educational leaders who can transform education at the PK-12, community college and university levels. The Education Specialist (EdS) degree is an advanced professional degree program that assists veteran educators to enhance their knowledge of theory and best practice, to acquire skills in interpreting and using educational scholarship and research, and to understand processes of change and leadership in education settings. The degree program is ideal for educators who seek new skills and new opportunities for leadership and for those seeking the Michigan Central Office Administrator Certificate.

Coursework can be completed on either a full or part time basis. Three courses for a total of 9 credits will be in the core areas; an additional 18 credits will be in one of three concentration areas that will specifically target their professional interests. The final 3 credits will focus on an applied studies or research project. The three concentration areas are: Educational Leadership, Metropolitan Education, and Curriculum and Practice.

**Doctorate in Education (Ed.D.)**

The Doctorate in Education (Ed.D.) degree is designed for working professionals who aspire to be leaders in education. Students will complete 60 credit hours beyond a Master's degree in course and field work that lead to the Ed.D. degree. Students may count credits earned toward the completion of a specialist’s degree, either from the University of Michigan – Dearborn or another accredited institution of higher education, toward the completion of their Ed.D. degree. Students who have completed the Ed.S. degree at the University of Michigan – Dearborn and subsequently been admitted to the Ed.D. program will need to complete a minimum of 30 additional credit hours to earn an Ed.D. The determination of what courses need to be taken to complete the program will be the responsibility of the student’s doctoral advisor.

Coursework can be completed on either a full or part time basis. Eight classes for a total of 24 credits will be in the core areas; an additional 24 credits will be in one of three concentration areas that will specifically target students’ professional interests. The final 12 credits will focus on dissertation research or an applied studies project. The three concentration areas are: Educational Leadership, Metropolitan Education, and Curriculum and Practice.

**Admission Requirements & Application**

Eligibility for regular admission includes:

- Completed application form
- $60.00 application fee
- Official transcript(s) from each college/university attended
- Completion of a bachelor's degree from an accredited institution
- 3.0 (B) undergraduate/graduate grade point average or better
- Three professional letters of recommendation using required form
- Statement of purpose
- Valid state of Michigan teaching certificate required if seeking an additional endorsement

The university's academic policies for graduate students (p. 516) apply.

**Program Requirements**

This 30 (minimum) semester hour master’s degree is divided into two parts: 1) Core Courses and 2) Professional Studies. Considerable flexibility is available in the professional studies area to satisfy individual interests and needs.

**Core Courses**

The core sequence provides continuity and integration for all programs. Ideas of policy, change, growth and diversity are developed in the following courses.

Nine credit hours in the Core are required for all.
Minimum requirements for admission in the EdS program include:

1. A Master's degree from an accredited institution of higher education with at least an overall 3.3 on a four point scale or equivalent.
2. Official copies of transcripts of all undergraduate and graduate coursework.
3. Applicants whose native language is not English must demonstrate English proficiency and are required to provide an official score report of an accepted English Proficiency Test. See umdearborn.edu/684363/ (http://umdearborn.edu/684363/) for details.

### Professional Studies

The professional studies courses are offered through the College of Education, Health, and Human Services. These courses are to be selected with the advisor’s approval in consideration of the student’s academic background and/or teaching assignments. The number of credits within this category varies.

Professional studies courses may be selected to enhance the student’s current areas of specialty in elementary or secondary education or to obtain an additional area of specialization. These courses may be used to add an endorsement to the certificate. If so, students must meet all the State of Michigan and UM-Dearborn certification requirements for that major or minor. Only courses required for the major or minor, which are approved for graduate credit, may be applied toward the MA program.

Professional studies courses may also be used toward meeting the requirements for State teaching endorsements.

Details concerning the requirements and the appropriate coursework can be obtained from the student’s assigned advisor or from the College of Education, Health, and Human Services Office of Student Success. A more definitive description of the program is available from the College of Education, Health and Human Service’s web page at: umdearborn.edu/cehhs/cehhs_maed/ (http://umdearborn.edu/cehhs/cehhs_maed/)

### Program Options in the Master of Arts in Education

#### No Additional Endorsement Option

No Additional Endorsement Option (http://catalog.umd.umich.edu/graduate/college-education-health-human-services/education/no-endorsement/)

English as a Second Language (ESL) Endorsement Option (http://catalog.umd.umich.edu/graduate/college-education-health-human-services/services/esl/)

Reading Specialist K-12 Endorsement Option (http://catalog.umd.umich.edu/graduate/college-education-health-human-services/education/reading-specialist/)

Teaching English to Speakers of Other Languages (TESOL) Option (http://catalog.umd.umich.edu/graduate/college-education-health-human-services/education/tesol/)

### Admission

Minimum requirements for admission in the EdS program include:

1. A Master's degree from an accredited institution of higher education with at least an overall 3.3 on a four point scale or equivalent.
2. Official copies of transcripts of all undergraduate and graduate coursework.
3. Applicants whose native language is not English must demonstrate English proficiency and are required to provide an official score report of an accepted English Proficiency Test. See umdearborn.edu/684363/ (http://umdearborn.edu/684363/) for details.

### Program Requirements

The 30 (minimum) semester hour specialist degree is divided into three parts: 1) Core Courses, 2) Concentration Area Courses, and 3) Research or Applied Studies Project. Considerable flexibility is available in the concentration areas to satisfy individual interests and needs. Courses leading to the Michigan Department of Education Central Office Administrator Certificate are available to students who choose the Educational Leadership Concentration.

### Core Courses

The core courses are designed to provide students with a global perspective of education in contemporary schools and to prepare them for higher-level courses in the specialization area.

4. At least three years teaching experience or the equivalent experience working in a professional setting.
5. Three recommendation letters from faculty and/or employer. Standard questions will be asked of all references and may include:
   - Potential for quality doctoral work
   - Potential for leadership impact in the field upon completion of the program
   - Other areas may be included such as: collegiality, ability to complete quality work on time, work etc.
6. A letter or statement of academic interests, professional goals and the applicant’s personal/unique potential for contribution to a student cohort.
7. The application fee is $60.00 USD.

Meeting the minimum requirements qualifies an applicant for admissions consideration but does not guarantee admission to the program. Admissions will be granted on a competitive basis.

### Concentration Area Courses (18 hrs)

Six specialist level courses must be selected in the area of concentration with the guidance of the student’s respective EdS program advisor. The professional studies courses are offered through the College of Education, Health, and Human Services and other units of the University. Students will work with their faculty advisor to determine which...
concentration area courses are appropriate to the student’s needs and professional goals.

**Action Research Studies (3 hrs)**
Students will complete an action research project with approval of their advisor following successful completion of the core and concentration area courses.

**Central Office Administration Certificate Program**
The Central Office Administration Certificate Program is designed to prepare students for roles in PK-12 school district central office administration/leadership. The program is approved by the Michigan Department of Education and meets MDE Standards for the Preparation of Central Office Administrators. Upon successful completion of the program, students will be eligible for recommendation to the Michigan Department of Education for the Central Office Administration Certificate.

The Central Office Administration Certificate Program can be obtained in one of the three following ways:

- In conjunction with the Education Specialist (Ed.S.) degree program
- In conjunction with the Education Doctoral (Ed.D.) degree program

The program curriculum emphasizes the knowledge and skill base required to meet the opportunities and challenges of central office leadership in PK-12 school systems. The courses are designed to develop educational leadership competency and skills in organizational development, labor relations, human resource development, strategic planning, applications of technology, policy development, school community relations, data analysis, legal and regulatory issues, and evaluation of programs. An internship in central office administration is required in the final year of the program. Courses are offered in the evening and online to accommodate the working professional.

**Admission Requirements**
Eligibility for admission to the Central Office Administration Certificate program requires a bachelor’s degree from an accredited college or university with an undergraduate GPA of 3.0 or better on a 4.0 scale, a valid elementary or secondary teaching certificate, a minimum of three years classroom teaching experience, completion of a master’s degree in educational administration/leadership with a GPA of 3.3 or better on a 4.0 scale, and a valid K-12 school administration certificate. Upon successful completion of the program, students will be eligible for recommendation to the Michigan Department of Education for the Central Office Administration Certificate for the Michigan Department of Education Central Office Administrator Certificate.

**Application Process**
Formal application to the Central Office Administration Certificate Program must be submitted to the College of Education, Health, and Human Services Educational Leadership Program. Applications are available online at the College of Education, Health, and Human Services website or can be obtained at the College of Education, Health, and Human Services Office of Student Success. Applications should be completed and submitted to the College of Education, Health, and Human Services Office of Student Success along with the following supporting materials:

1. Official copy of the applicant’s baccalaureate degree transcript;
2. Official copy of the applicant’s master’s degree transcript;
3. Official transcripts from all other colleges or universities attended;
4. A copy of the applicant’s current Michigan Teaching Certificate;
5. A copy of the applicant’s current Michigan School Administrator Certificate;
6. Three letters of recommendation attesting to the applicant’s quality level of graduate work, potential for leadership impact in the field upon completion of the program, and other area related to ability to complete the program;
7. A one page Statement of Purpose including academic interests, professional goals, and personal/unique potential for contribution to the field of central office administration;
8. A $60.00 non-refundable application fee.

The Statement of Purpose should be a concise, well written essay addressing applicant’s educational background, academic interests, career goals, and service to PK-12 schools.

**Coursework**
A minimum cumulative GPA of 3.0 on a 4.0 scale must be maintained to continue enrollment in the program. Candidates must hold a valid and current elementary or secondary teaching certificate and a valid and current school administrator certificate. The program requires successful completion of the following courses:

Total Credit Hours 29-30

The internship in Central Office Administration requires sustained practice in multiple central office positions under the mentorship of a practicing central office administrator. This program remains under on-going review to insure quality and compliance with University and Michigan Department of Education standards and requirements.

**Admission**
The objective of the admission process for the Ed.D. is to build a learning community that engages in active scholarship. The admissions process works to balance three primary goals:

1. that students admitted to the program are of the highest quality,
2. that there is a good match between students and faculty in terms of interest, and
3. that we promote a learning community within cohorts that is supportive, challenging and sustained until program completion.

Basic Admission Requirements (https://umdearborn.edu/admissions/graduate/how-apply/basic-admission-requirements/)
College of Education, Health, and Human Services Admission
Prerequisites (https://umdearborn.edu/admissions/graduate/college-
education-health-and-human-services-admission-prerequisites/)

Applications are due annually on March 15 in order to be considered for admission in the Ed.D. Program. Applicants may be interviewed by the Ed.D. Committee as part of the selection process.

Individuals who wish to apply for this program may initiate the application process online at: umdearborn.edu/gradapplynow/ (http://umdearborn.edu/gradapplynow/)

Review process
The Ed.D. Faculty Advisory Committee will review complete applications and invite selected students for personal interviews. During the interview, the applicant will be expected to demonstrate evidence of personal commitment to earn a doctoral degree, evidence of personal and professional goals that are aligned with the goals of the Ed.D. program, and evidence of professional behavior. Meeting the minimum requirements qualifies an applicant for admissions consideration but does not guarantee admission to the program; the Ed.D. Faculty Advisory Committee will determine admission on a competitive basis.

Satisfactory Progress Towards Degree
Each doctoral student is expected to maintain satisfactory progress towards the degree by maintaining a "B" average in coursework and passage of all required examinations within two attempts. Students who fall below a "B" grade point average in any one term will be placed on academic probation and notified of this in writing. Students who do not make satisfactory progress may be removed from the program in writing. CEHHS and the EdD Faculty Advisory Committee will determine criteria for disqualification from the program.

Readmission
Students not registered for classes within one calendar year must submit a readmission form to the doctoral program coordinator. Approval for readmission must be obtained in order to register for classes.

Residency Requirements
While there will be no formal residency requirement for part time students, it is expected that they will participate in doctoral program activities on campus or through online discussions. This involvement will foster intellectual development and provide a supportive environment for all program participants.

Normative Time from Matriculation to Degree
The Ed.D. program is designed for completion of the degree requirements at a minimum of four calendar years. However, circumstances may require students to take fewer courses each term. As a result, flexibility is built into the program. Total time to complete coursework and advancement to candidacy should not normally exceed four years, but students can request additional time. A request for extension needs to be submitted to the Ed.D. Faculty Advisory Committee.

Total registered time in the program is not expected to exceed six years and may not exceed ten years without a formal request by the student submitted to the Ed.D. Advisory Committee.

Transfer of Credit
Courses may receive transfer credit if:

- Graduate credits were completed within five years of application to the Ed.D. program at another accredited institution.
- Graduate credits were completed at another University of Michigan School or College (including Flint and Ann Arbor).
- Graduate Extension courses were completed at any of these campuses; the University of Michigan, Wayne State University, Michigan State University, Western Michigan University, Central Michigan University, Eastern Michigan University, Northern Michigan University, and Oakland University.
- Courses were taken at an undergraduate institution, only if students completed the course during their junior or senior year and they were approved for graduate credit by the graduate school of the institution where and when the student took the course; and the courses were not used in whole or in part, in any way, to meet requirements for a degree, and the student’s doctoral program adviser approves the transfer of the course.

Up to six credit hours from another (non University of Michigan) accredited university will be accepted as transfer credits; however, the Ed.D. advisor must approve the acceptance of transfer credits. Students may transfer up to one-half (1/2) the minimum number of credit hours required in the coursework for the core and concentration classes in the Ed.D. degree from the Ann Arbor and Flint University of Michigan campuses.

Program Requirements
The 60 (minimum) credit hour doctoral degree is divided into three parts: 1) Core Courses (24 credit hours), 2) Concentration Area Courses (24 credit hours), and 3) Dissertation Research or Applied Studies Project (12 credit hours). Considerable flexibility is available in the concentration areas to satisfy individual interests and needs.

Core Courses (24 credit hours)
The core courses are designed to provide students with a global perspective of education in contemporary schools and to prepare them for higher-level courses in the specialization area.

<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>EDK 992</td>
<td>Dissertation/Applied Study</td>
<td>1-4</td>
</tr>
</tbody>
</table>

The Ed.D. performance assessment is a scaffolded procedure designed to help students develop their scholarly voice, research skills, and become members in a professional academic learning community. At each stage students are given opportunities to present scholarship that is related to their areas of interest within the field of education. Following the completion of all coursework students will present and defend their work in a portfolio. For detailed information please review the Ed.D. Handbook (https://umich.app.box.com/s/me1hrqzb9hhy1yb02odp03g5ncdud6nv/).

Candidacy

A student will become a candidate for the Ed.D. degree after completing the required coursework with a minimum GPA of B and after successfully defending their passing the portfolio defense qualifying examination and proposal defense. At this point, the student will be allowed to pursue the dissertation or applied studies work.

Dissertation/Applied Studies Project

Following successful defense of the portfolio and completion of the qualifying exam and dissertation/applied studies proposal defense, the student will complete a focus will be on the preparation for the dissertation research or applied studies project. This culminating work may focus on a wide range of topics and/or research methods. Whether the candidate decides to do a dissertation or applied studies project, the work will focus on a significant professional problem or issue and have the potential to contribute in a general way or in the context of a particular educational setting to the improvement of PK-12, community college, or university level education.

The student must submit a written copy of the dissertation or applied studies project to the dissertation/applied studies committee for approval before the oral defense will be scheduled. All members of the dissertation or applied studies committee are responsible for reading the dissertation or applied studies documents and submitting their written evaluations to the committee chair at least one week prior to the defense.

Oral Defense of Dissertation/Applied Studies Project

The final oral examination is the candidate’s defense of the dissertation or applied studies project. The dissertation/applied studies committee members conduct the oral examination. The final oral examination will be open to other faculty, students and interested public. The dissertation/ applied studies committee members must be present at the oral defense. Unanimous agreement of the committee is required for approval of the dissertation/applied study and recommendation that the Ed.D. degree be awarded. If the committee requires substantive changes to the written project, the final vote of the committee will be postponed until after the changes are completed.

Submission of the Written Dissertation/Project

The dissertation/applied studies project must be submitted to the program director by a specified deadline in the semester in which the degree is conferred.

The dissertation/applied studies project must conform to UM-Dearborn approved dissertation/applied studies manuscript guidelines.

EdD and EdS Degree Alignment

The Ed.D. requires a minimum of 60 credit hours beyond the Master’s Degree. Students may count credits earned toward the completion of a specialist’s degree, either from the University of Michigan – Dearborn or another accredited institution of higher education, toward the completion of their Ed.D. degree. Students who have completed the Ed.S. degree at the University of Michigan – Dearborn can transfer up to 30 credit hours toward completion of the Ed.D. from the Ed.S. at the University of Michigan – Dearborn. The determination of which hours can be counted will be the responsibility of the student’s doctoral advisor. Students who have completed an Ed.S. degree at another institution can petition to transfer up to 24 credit hours toward completion of the Ed.D. at the University of Michigan – Dearborn. The determination of which hours can be counted will be the responsibility of the student’s doctoral advisor, the petition must also be approved by the Ed.D. Advisory Committee.

Advising

Students must plan their program with their assigned advisor or with the Director of the Ed.D. program. Contact the College of Education, Health, and Human Services at (313) 593-5090 for an advising appointment.

Petition

All graduate policies have been formulated by the UM-Dearborn College of Education, Health, and Human Services Ed.D. Faculty Advisory Committee with the goal toward academic quality. This goal requires that policies be equitably and uniformly applied. However, there may be an infrequent extenuating circumstance that warrants individual consideration. In such a case, a petition to waive or modify a policy may be filed by the doctoral student. Please contact the Office of Student Success for information and forms regarding the petition process.

Graduation

A diploma application must be submitted at the time of registration for the final semester.

Educational Leadership

The Master of Arts in Educational Leadership is designed to prepare students for roles in PK-12 school leadership. The program is approved by the Michigan Department of Education and meets MDE Standards for the Preparation of School Principals. Successful program completers are eligible, upon recommendation by the College of Education, Health, and Human Services, to apply for the Michigan Department of Education School Administrator Certificate.

The MAEL curriculum emphasizes the knowledge and skill base required to meet the opportunities and challenges of PK-12 school administration. The courses are designed to develop educational leadership competency and skills in organizational administration, curriculum development, instructional leadership, personnel, finance, applications of technology, school community relations, data analysis, legal and regulatory issues, and program evaluation. An internship in educational administration
is required in the final year of the program. Courses are offered in the evening and online to accommodate the working professional.

**Admission Requirements**

Eligibility for regular admission includes:

- Completed application form
- $60.00 application fee
- Official transcript(s) from each college/university attended
- Completion of a bachelor’s degree from an accredited institution
- 3.0 (B) undergraduate/graduate grade point average or better
- Three professional letters of recommendation using required form
- Statement of purpose
- State of Michigan Teaching Certificate recommended (not required)

The university’s academic policies for graduate students (p. 516) apply.

**Program Requirements**

The Master of Arts in Educational Leadership (MAEL) is a 33 credit hour degree program. A minimum cumulative GPA of B (3.0 on a 4.0 scale) must be maintained to continue enrollment in the program. Students who successfully complete this degree program are also eligible for recommendation to the Michigan Department of Education for the School Administrator Certificate. The MAEL requires successful completion of the following courses:

<table>

Total Credit Hours 33

¹ This internship must be repeated for up to a total of 6 credit hours.

This program remains under on-going review to insure quality and compliance with University and Michigan Department of Education standards and requirements.

**Educational Technology (EDET)**

The Masters of Arts in Educational Technology program is designed for educators interested in developing expertise in the effective use of various forms of educational technology in teaching and learning. The program can be completed fully online and offers professionals advanced knowledge in a broad range of educational technologies. In addition, students will learn how to integrate technology across the curriculum in face-to-face, hybrid and online settings. Individuals who teach in K-12 schools, colleges and universities, private industry and other instructional settings will find this program useful for increasing their overall effectiveness in the field of educational technology and their ability to utilize proven pedagogical practices.

**Admission Requirements & Application**

Eligibility for regular admission includes:

- Completed application form
- $60.00 application fee
- Official transcript(s) from each college/university attended
- Completion of a bachelor’s degree from an accredited institution
- 3.0 (B) undergraduate/graduate grade point average or better
- Three professional letters of recommendation using required form
- Statement of purpose
- Valid state of Michigan teaching certificate if seeking the Educational Technology endorsement

The university’s academic policies for graduate students (p. 516) apply.

Students eligible to pursue the Educational Technology Accelerated 4+1 Option (https://umdearborn.edu/cehhs/graduate-programs/areas-study/ma-educational-technology-online/41-educational-technology-accelerated-program/) may count up to 15 credits in the graduate program toward their undergraduate Instructional Technology major. At least one additional year of graduate work (at least 15 credits) would be needed to complete the Master’s program.

**Program Requirements**

The Master of Arts in Educational Technology (EDET) is a 30 credit hour degree program. A minimum cumulative GPA of B (3.0 on a 4.0 scale) must be maintained to continue enrollment in the program. The EDET requires successful completion of the following courses:

Contact the Office of Student Success at 313-593-5090 for additional information or consult the College of Education, Health, and Human Services web page at: umdearborn.edu/cehhs/cehhs_ma_ed_tech/ (http://umdearborn.edu/cehhs/cehhs_ma_ed_tech/)
Health Information Technology

The Master of Science in Health Information Technology (HIT) is designed for professionals in either health or information technology who are seeking masters level specialization in information systems dedicated to healthcare. The degree emphasizes data management, financial systems, and information security as well as treatment progress, patient management and outcome measurement.

The program prepares graduates for mid-level positions in hospital information technology departments, community health care clinics’ medical records departments, public health agencies, government health departments (federal, state and local), research departments for medical and health schools. The degree consists of 30 semester hours, available to both full and part-time students, and courses are scheduled during the late afternoon and evening sessions to accommodate the working professional. Summer course work is also available.

Admission Requirements & Application

Eligibility for regular admission includes:

• Completed application form
• $60.00 application fee
• Official transcript(s) from each college/university attended
• Completion of a bachelor’s degree
• 3.0 (B) undergraduate/graduate grade point average or better
• Three letters of recommendation using required form
• Statement of purpose

Admission to this program is by cohort during the fall semester only. The application deadline is March 15th. The university's academic policies for graduate students (p. 516) apply.

Program Evaluation and Assessment

The Master of Arts in Program Evaluation and Assessment is designed to prepare students for positions in assessment and evaluation particularly in educational settings or healthcare organizations. With an increasing emphasis on accountability, the demand for assessment and program evaluation is high in many fields. The curriculum will provide students with the knowledge and experience to: understand theories, issues, and approaches in assessment and program evaluation, 2: develop and administer formative and summative assessments and evaluation instruments, and 3: analyze and interpret assessment or evaluation results for evidence-based decision making. Students in this program will develop these skills and knowledge with a choice of a concentration in either education or health.

The UM-Dearborn MA in Program Evaluation and Assessment is differentiated from other Michigan institutions in that it uniquely combines assessment and program evaluation with a concentration in either education or health. The program will develop leaders who understand how issues of assessment and evaluation impact both schools and communities. Graduates will be equipped to handle the complexities of research design encountered in evaluations in institutional/organizational settings.

Program Goals

Graduates of the Master of Arts in Program Evaluation and Assessment program will become proficient in:

1. Designing and implementing formative and summative evaluations
2. Applying evaluation theory and diverse approaches in places of practice
3. Gathering, analyzing, interpreting, and using multiple data sources to make data-evidenced decisions
4. Understanding the types of requests from stakeholders in both formal and informal settings to know how to use a range of evaluation methods for assessing and furthering organizational goals

Admission Requirements

Students must submit the follow items with their application. The GRE is not required for admission to this program. The Office of International Affairs lists additional admission requirements for international students (https://umdearborn.edu/io_international-grad-adm/).

• Bachelor’s degree from an accredited institution
• Official transcripts from all post-secondary institutions attended
• 3.0 GPA or higher on submitted transcripts
• Three professional letters of recommendation
• Statement of purpose
The university's academic policies for graduate students (p. 516) apply.

Program Requirements

The Master of Arts in Program Evaluation and Assessment is a 30 credit hour degree program. A minimum cumulative GPA of 3.0 on a 4.0 scale must be maintained to continue enrollment in the program. The program requires successful completion of the following courses:

Teaching

The Master of Arts in Teaching program is designed for those who have completed a bachelor's degree in non-educational fields and wish to earn the Michigan Secondary Standard Teaching Certificate. Students in the MAT program will bring valuable experience and expertise to assist in their exploration of the practice of teaching. In addition to learning about adolescent learners and how to teach them, MAT coursework spurs students to think about the goals, values, beliefs and assumptions underlying formal schooling, and to consider schools in social, political and historical contexts. Students interested in this degree program should submit a Transcript Evaluation Request Form (https://umdearborn.formstack.com/forms/transcript_evaluation_request_form/) in order to receive a draft plan of study prior to admission. The MAT coursework will be offered weekdays in the late afternoon, evening hours, and online to enable students to earn the degree through part-time study. Students who are employed will be able to complete the degree through after-work study except for the Directed Teaching requirement. This will occur during the last semester of each student's residency.

Admission Requirements & Application

Eligibility for regular admission includes:

- Completed application form
- $60.00 application fee
- Official transcript(s) from each college/university attended
- Completion of a bachelor's degree from an accredited institution
- 3.0 (B) undergraduate/graduate grade point average or better
- Three professional letters of recommendation using required form
- Statement of purpose

The university's academic policies for graduate students (p. 516) apply.

A full list of teaching majors and optional minors can be found on the Master of Arts in Teaching website (https://umdearborn.edu/cehhs/graduate-programs/areas-study/ma-teaching-mat/).

The Master of Arts in Teaching requires that students select a teaching major and optional minor taken at the undergraduate level in order to complete the full requirements of Secondary Teacher Certification. A full list of possible majors and minors can be found on the Master of Arts in Teaching website (https://umdearborn.edu/cehhs/graduate-programs/areas-study/ma-teaching-mat/).

Teaching English to Speakers of Other Languages Certificate Program

There are many opportunities for teaching English to speakers of other languages (TESOL). This UM-Dearborn certificate program (https://umdearborn.edu/cehhs/graduate-programs/areas-study/tesol-certificate-online/) can be completed entirely online and is specifically designed for individuals seeking opportunities both locally or internationally. The certificate will prepare students with the requisite content knowledge and pedagogy to teach English to students or adults outside of the PK-12 public school system. Certificate holders may find careers with non-U.S. agencies/institutions in order to meet international needs to provide English instruction to their student populations.

This certificate does not lead to state teacher certification or a state endorsement. For those interested in PK-12 certification, please refer to the ESL Endorsement (http://umdearborn.edu/cehhs/cehhs_ns_endorsement/).

The TESOL certificate program requires 15 graduate credit hours. All of the courses will prepare certificate students with the requisite content knowledge, pedagogy, and skills to teach non-native speakers of English.

The university’s academic policies for graduate students (p. 516) apply.

Admissions Requirements

- Hold a baccalaureate degree from an accredited institution.
- A 2.75 or higher grade point average (GPA is based on a 4.0).
- An official transcript from college or university granting the undergraduate degree and one from each college or university attended.
- Submit a completed Post-Degree Application Form and non-refundable $30.00 application fee (payable by check or money order to University of Michigan-Dearborn). This fee is waived for applicants who have previously paid an application fee to any University of Michigan campus.

College of Engineering and Computer Science

Graduate Programs

While the undergraduate program in engineering offers a challenging basic education, graduate studies provide the opportunity for advanced or special studies in particular areas of interest. Particularly in an era of rapid technological and scientific advancement, many students find continued study a decided advantage. It offers an attractive opportunity to pursue their special interests and acquire a more thorough preparation for their professional careers.

The College of Engineering and Computer Science (CECS) offers 20 master's degrees, one Doctor of Engineering, and 4 Ph.D. programs. Our partnerships with major domestic automobile companies and automotive suppliers have led to many educational and research opportunities for students and faculty.

Many graduate programs and courses are offered online. Students interested in this flexible and convenient course option can visit https://umdearborn.edu/cecs/cecs-online to learn more.

Post-Baccalaureate Programs

The post-baccalaureate programs in engineering at the UM-Dearborn are geared to the demands of the student and the desires of society to further the technical background of the practicing engineer. Working students are accommodated by course offerings late in the afternoon and evening. Master's level study is offered in the field of engineering and computer science. A full list of these programs and their specific requirements are discussed in the following sections or at the following CECS Master's Website (https://umdearborn.edu/cecs/graduate-programs/masters-programs-1/).

Master of Science in Engineering (MSE) and Master of Science (MS) Programs

The College of Engineering and Computer Science (CECS) offers 20 master’s degrees, with many of our courses are offered in the evening, and most master's degree programs may be completed fully online through CECS Online (https://umdearborn.edu/cecs/cecs-online/). Students have the opportunity to receive a unique graduate education in the College of Engineering and Computer Science. Our partnerships with major domestic automobile companies and automotive suppliers have led to many educational and research opportunities for students and faculty. Our programs are designed to provide a thorough and vigorous educational experience for the student who plans to enter the engineering profession after completing the requirements and for the student who wishes to pursue a Ph.D. This is accomplished by the curricula, which provide appropriate breadth while at the same time permitting the students considerable freedom in the selection of both engineering science and professionally oriented courses in their special interests, and through an environment in which faculty and graduate students may work together on a broad spectrum of research projects.

Students planning part-time study can begin their work during any of the three terms. Class schedules are arranged to accommodate part-time, later afternoon, and evening students from local industrial firms. Information on this kind of program, which provides many advantages to both employer and student, can be obtained from the graduate program advisor.

Doctor of Philosophy (Ph.D.) and Doctor of Engineering (D.Eng.)

The College of Engineering and Computer Science (CECS) offers 5 doctoral programs: 4 full-time Ph.D. programs and one Doctor of Engineering (D. Eng.) program. The D.Eng. program accepts students for both part-time and full-time study. In CECS, we are committed to excellence. Our doctoral programs are administered and taught by tenure-track faculty with active theoretical and translational research interests. Students and faculty work collaboratively and develop strong mentor relationships.

Located in the automotive industry’s global epicenter in Metro Detroit, the university has developed strategic partnerships with major automobile companies and suppliers. Faculty and students have a variety of opportunities and regularly collaborate on innovative research with industry partners.

Course Descriptions

The following lists include all courses normally offered at UM-Dearborn. However, not all courses are offered every year, and periodically courses are added and deleted. For details, students should consult the Schedule of Classes for each term.

Master's Programs

- Artificial Intelligence (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/artificial-intelligence/)
- Automotive Systems Engineering (p. 590)
- Bioengineering (p. 592)
- Computer and Information Science (p. 594)
- Computer Engineering (p. 599)
- Cybersecurity & Information Assurance (p. 601)
- Data Science (p. 603)
- Electrical Engineering (p. 605)
- Energy Systems Engineering (p. 609)
- Engineering Management (p. 610)
- Human-Centered Design and Engineering (p. 611)
- Industrial and Systems Engineering (p. 612)
- Information Systems and Technology (p. 618)
- Manufacturing Systems Engineering (p. 621)
- Materials Science and Engineering (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/materials-science-engineering/)
- Mechanical Engineering (p. 622)
- Program and Project Management (p. 626)
- Robotics Engineering (p. 627)
- Software Engineering (p. 628)

Doctorate Programs

- D.Eng. in Automotive Systems and Mobility (p. 587)
- Ph.D. in Computer and Information Science (p. 596)
- D.Eng. in Electrical and Computer Engineering (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/electrical-and-computer-engineering/)
• Ph.D. in Electrical, Electronics, and Computer Engineering (p. 606)
• Ph.D. Industrial and Systems Engineering (p. 614)
• Ph.D. in Mechanical Sciences and Engineering (p. 623)

Dual Degree Programs
• Industrial and Systems Engineering (MSE) and Master of Business Administration (MBA) (p. 614)

Certificates
• Automotive Materials and Design (p. 586)
• Automotive Noise, Vibration & Harshness (p. 587)
• Automotive Powertrains (p. 587)
• Control Systems (p. 600)
• Electric Energy Technology (p. 605)
• Electrical System Analytics (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/electrical-system-analitics/)
• Electrical System Equipment (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/electrical-system-equipment/)
• Electrical System Planning (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/electrical-system-planning/)
• Electrical System Protection and Control (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/electrical-system-protection-control/)
• Engineering of Electrified Vehicular Systems (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/engineering-electrified-vehicular-systems/)

Automotive Materials and Design

The automotive system of the twenty-first century is poised to advance at a rapid pace with greater emphasis on lightweight structures, high efficiency powertrains, intelligent control systems, lower emissions, robust design and manufacturing, as well as improved comfort and safety. This certificate program gives an opportunity for automotive engineers to learn about lightweight materials, advancements in ergonomic and structural design, vehicle dynamics and control, and advanced manufacturing techniques (12 credit hours).

Certificate offered on Campus and via Distance Learning.
Automotive Noise, Vibration and Harshness

This certificate program provides fundamental principles of acoustics and vibration theories, with emphasis on the applications of these principles to practical vehicle NVH problems. It covers basics of vehicle dynamics, free and forced vibration systems, acoustic wave propagations and transmission, acoustic interior trim and floor covering designs and analysis including Statistical Energy Analysis (SEA) technology, plus sound quality issues and vehicle audio system designs. (12 credit hours)

Certificate offered on Campus and via Distance Learning.

Automotive Powertrains

Automobiles of the twenty-first century is poised to advance at a rapid pace with greater emphasis on lightweight structures, high efficiency powertrains, intelligent control systems, lower emissions, robust design and manufacturing, as well as improved comfort and safety. This certificate program gives an opportunity for automotive engineers interested in high efficiency powertrains to learn to about the advancements in engines, transmissions, electric and hybrid vehicles, and emission controls. (12 credit hours)

Certificate offered on Campus and via Distance Learning.
Pre-Candidacy Coursework Requirement

The program requires completion of:

- Two curricular qualifying courses with a combined GPA of 3.5/4.0 and 3.3/4.0 or better in each course
- The two graduate courses must be related to the student’s chosen core research area and recommended by the advisor.
- ASM 791 Doctoral Directed Study
- ASM 980 Pre-Candidate Dissertation Research

### Early Start Requirements

The students are expected to engage in research work from the first year of the program. To facilitate this, each student should have a faculty research advisor at the beginning of the first semester and develop the dissertation research topic with the faculty advisor by the end of the second semester in the program. There is an additional requirement that at least 6 credit hours of faculty-guided research (ASM 791 or ASM 980) be completed within the first year of enrollment in the program. In the first semester, all students need to take the ASM 791 (Doctoral Direct Study) and the second semester the ASM 980 (Pre-candidate Dissertation Research).

### Research Maintenance Requirements

- ASM 990 (Dissertation for candidates) can be taken only after a student achieves candidacy. A minimum of 24 credit hours in ASM 990 is required.
- During the candidacy, a student enrolls in ASM 990 every semester. The outcomes of ASM 990 include a written dissertation research progress report, a presentation of research results to the dissertation committee. A “S” or “U” grade will be given by the adviser based on the student’s performances in research. Any “U” grade will be reviewed by the committee and a written plan will be provided to the student about what is needed to improve dissertation research. The metric to measure a student’s progress includes, but not limited to, regular meetings with the adviser, good quality research progress reports, publications, patent applications, prototype system demos, and well-recognized open-source programs. The faculty advisor notifies ASM committee about the student’s progress in each semester.
- A Student must register to ASM 791, ASM 980 or ASM 990 must arrange meetings with the faculty advisors at least twice per month for mentoring by the advisor.
Dissertation Committee
The dissertation committee is formed when a student takes ASM 980. As a rule, the dissertation committee continues overseeing the student’s work to the stage of the final dissertation defense.

- The faculty advisor serves as the chair of the Dissertation Committee.
- The dissertation committee will consist of a minimum of three members in addition to the committee chair. The committee members will include two faculty members (at least one member from the CECS) and one industry member.
- The composition of the dissertation committee must be approved by the D. Eng. program committee. The industry member’s curriculum vitae must be submitted to the Program Committee for approval.
- Depending on the dissertation topic, a faculty member outside the CECS may be included in the dissertation committee.
- A committee may have a sole chair or two co-chairs. Persons who may serve as co-chair, but not the sole chair, include:
  - tenure or tenure-track members of the University’s instructional faculty;
  - research faculty;
  - instructors and lecturers;
  - similarly qualified University faculty or staff, or person from outside the University; and
  - former University faculty members who have moved to a faculty position at another university

Candidacy Requirements
Achieving candidacy for the D. Eng. in ASM requires:

- Completion of two curricular qualification courses and maintain a combined GPA of 3.5/4.0 and 3.3/4.0 or better for each course
- Completion of all the required outcomes of ASM 980
- Submission of the candidacy application form
- Approved Doctoral Dissertation Committee

Dissertation
After passing ASM 980, the student may proceed with the dissertation research and the writing of the dissertation. The dissertation should document the original contributions made by the candidate as a result of independent research. This research work should be of archival quality. In advance of graduation, all members of the student’s dissertation committee must approve the dissertation. To obtain this approval a student must submit a written copy of the dissertation to the dissertation committee and defend the research work at a final oral examination open to other faculty, students, and the interested public. Students defending the dissertation must be registered in ASM 990.

Upon completion of the dissertation work, the student initiates the last step toward the degree—the dissertation defense process. The process follows the official guidelines and consists of the following main stages:

- Preparation of a written dissertation formatted in accordance with the guidelines,
- Pre-Defense meetings with the members of the program committee,
- Written evaluations of the dissertation by the dissertation committee members
- The Oral Defense of the dissertation consisting of two parts:
  - Public seminar and open question session held by the student
  - Private deliberations by the committee,
- Final oral examination report and certificate of approval prepared by the dissertation committee
- Post-Defense meeting with the CECS Graduate Education Office

Timeline Requirements
The D. Eng. ASM program has a time limit of 3 years for completion. Students are expected to complete the degree within 2 years after achieving candidacy, but no more than 3 years from the date of the first enrollment in the program.

All D. Eng. ASM students are required to register for either the program’s coursework or dissertation credits every fall and winter semester unless they are on an approved leave of absence. Students may request a leave of absence when certain life events prevent continued active participation in their degree program. Students may request a leave of absence as early as six months prior to the term the leave is to start. A leave will be granted to students for illness (either physical or mental) or injury, to enable them to provide care or assistance for family or dependents, to allow them to meet military service obligations, or for other personal reasons. The student’s request for a leave of absence will need the approval by the CECS Doctoral Program Committee.

A student is considered to have completed the D. Eng. ASM program only if the student has completed the two required courses with satisfactory grades and the required research credit hours, passed the dissertation defense and got a satisfactory grade on the written dissertation. A petition for an extension of study time may be submitted by the student with the endorsement of student’s dissertation advisor to the committee of D. Eng. in ASM for approval. The time extension will be no more than 2 years. Table 2.2 is an example of curriculum.

Automotive Systems Engineering
The automotive industry of the twenty-first century is advancing at a rapid pace with great emphasis on lightweight structures, alternative energy sources, high efficiency powertrains, intelligent control systems, lower emissions, robust design and manufacturing, as well as improved comfort and safety. To meet the challenges of the automotive industry, engineers are required to improve their technical knowledge and skills in a variety of topics that are beyond the realm of traditional engineering curricula.

Today’s automotive engineers are expected to make connections among different areas of knowledge and integrate them in ways that benefit the automotive industry, society and the environment. Automotive engineers must be well grounded in their own areas of specialty. They must also have a good understanding of the related disciplines, be skilled in synthesis, analysis and design, work effectively in a team environment, and adopt a ‘systems’ approach.

In response to these needs, the College of Engineering and Computer Science offers a 30-credit-hour interdisciplinary graduate degree program leading to a master’s degree in Automotive Systems Engineering. Many courses in this program are specifically designed to address the new and emerging technology in the automotive industry. Students in this program will not only learn about advanced technologies, but also how to apply them in practice for creative design and problem solving.

The Automotive Systems Engineering degree program aims to achieve the following educational goals:
1. Provide depth in the area of automotive systems engineering.
2. Provide breadth across the engineering disciplines of electrical, industrial, mechanical, materials, and manufacturing engineering and provide this breadth from an engineering systems perspective.

A candidate for the Master of Science in Engineering in Automotive Systems Engineering must meet the requirements for the Bachelor of Science degree at this campus or the equivalent of these requirements. Undergraduate degrees must be from an accredited program, and for regular admission must be with an average of B or better. Each applicant should present complete, official transcripts of all prior college work.

The candidate must then complete at least 30 semester hours of graduate work approved by the program advisor/graduate advisory committee with a grade of at least a B covering all courses elected. No more than one B- will be allowed under any circumstances. Applicants who meet the general admission criteria but do not have adequate preparation in required areas of engineering would be asked to take appropriate undergraduate courses as a condition for full admission to the program. Such courses, when elected, will not count towards the degree requirements.

The automotive systems engineering degree program is made up of three components:

1. Core courses of 12 credit hours.
2. Concentration courses of 18 credit hours.

**Core Courses**

The core is intended to provide a unified graduate-level preparation in interdisciplinary topics that will allow students to elect courses in departmental, systems, or general concentrations. It consists of six credit hours of required courses and six credit hours of elective core courses based on the applicant's background.

**General:**
With the approval of the advisor, a general concentration of twelve credit hours may be satisfied by selecting courses in more than one concentration.

Total Credit Hours 12

Students may elect AENG 698, a 3 credit hour or a 6-credit hour project, or AENG 699, a 6-credit hour master’s thesis, in lieu of equivalent credit hours of courses. This will require prior approval of a faculty advisor and the program director.

Bioengineering

The Program

The master’s degree in bioengineering is a 30-credit-hour program designed to prepare students in an area of rapid growth and profound impact on society. The curriculum consists of courses specifically designed to provide a comprehensive background in the bioengineering field. Bioengineering courses are 3 credit hours and most are offered in the evening from 6:00 to 8:45 p.m.

Degree Requirements

The degree requirements for this program consist of a minimum of 30 graduate-level semester credit hours (beyond an undergraduate degree from an accredited engineering program) and includes 6 credit hours of core courses, 18 credit hours of bioengineering elective courses, and 6 credit hours of cognate elective courses.

Students eligible to pursue the Bioengineering 4+1 Option (https://umdearborn.edu/cecs/departments/mechanical-engineering/undergraduate-programs/41-bioengineering-program/) or the Dual Bioengineering/Mechanical Engineering Accelerated Undergraduate/Master’s Studies Option (https://umdearborn.edu/cecs/departments/mechanical-engineering/undergraduate-programs/bme-dual-accelerated-masters-program/) may count up to 9 credits in the graduate program toward their undergraduate bioengineering major. Of these, only one cognate course is allowed. In practice with the usual graduate student program rules, accelerated master’s students may also transfer a maximum of 6 additional 500 level credits toward the 30-credit master’s degree.

Laboratory Facilities

The bioengineering laboratory is designed to provide students with hands-on experience in tissue engineering, biomechanics, and developing and characterizing biomaterials. The laboratory houses standard equipment and facilities required for biomaterial development, biomechanical testing, and tissue engineering. Equipment available for biomechanical testing includes eight axial test machines, a high rate tensile/compressive impact tester, a high speed imaging system, environmental chambers, and assorted fixtures.

Faculty

The BENG program faculty are engaged in research in orthopaedic biomechanics, human movement, ocular biomechanics, impact safety, biomaterials, tissue engineering, hypoxia, protein engineering, cellular engineering, biominalization, biomimetics, biopreservation, bioprocessing, drug delivery, nanotheranostics, pharmaceutical formulation, microspectroscopy, thermogravimetrics, biophotonics, microoptics, biosensors, MEMS, and microfluidics.

Assistantships/Financial Assistance

Research assistantships may be available to exceptionally qualified students who are not otherwise employed. Tuition scholarships are available to qualified full-time graduate students. Find out more about bioengineering faculty and their research areas (http://umdearborn.edu/cecs/departments/mechanical-engineering/our-faculty-research/).

Can enroll if Major is Bioengineering

Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Bioengineering

BENG 520  Adv Molecular and Cell Biology  3 Credit Hours
This course introduces the cell and molecular biology concepts from an engineering perspective and provides the foundation for modern biotechnology and bioengineering. This course is designed for a first year engineering graduate student to develop a comprehensive understanding of relevant applications in biology, including biochemical, cellular organizational, metabolic and genetics aspects. Advanced concepts including genomics, molecular biology, recombinant DNA technology and evolution are discussed. The course provides exposure to several key techniques used in biological engineering laboratories. Students will have chance to present and discuss individual application through team project. (YR)
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if Major is Bioengineering

BENG 521  Biomatls and Biochem Interface  3 Credit Hours
The course will provide graduate-level foundation on biomaterials science and principles. Specifically, the course will involve discussion on the importance of surfaces and interfaces in biomaterial function and elements controlling host responses to materials, introduction to biomimetic and rational designing approaches, and develop critical analyses of biomaterials through reading research papers and developing projects. (YR)
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Bioengineering

BENG 526  Fundamentals of Drug Delivery  3 Credit Hours
This course is designed to provide students with an understanding on the concepts in drug delivery from an engineering perspective. The course will cover drug delivery mechanisms, quantitative understanding of drug transport, nanotechnology, drug delivery devices, toxicity and immune response, FDA regulations, clinical trials and technology transfer. The course will conclude with a design project on nanoparticles development for targeted drug delivery. (YR)
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Bioengineering

BENG 550  Biophotonics and Optical Metrology  3 Credit Hours
The recent explosion of interest in minimally invasive medical diagnostics and contactless metrology has been fueled in part by the development of novel optics and photonics. A large number of optically-based imaging and sensing techniques have moved beyond research laboratories into medical clinics, materials engineering, and industrial applications. Topics include design principles of optical instrumentation, techniques for diagnostics and metrology, and elastic and inelastic light scattering theory. Applications include optical metrology, confocal and multiphoton microscopy, light propagation and tomographic imaging in tissues, and design of minimally invasive spectroscopic systems. Optical systems design is included as a class project. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Bioengineering

BENG 551  Microfluidics  3 Credit Hours
Microscaled systems and devices have enhanced reaction rates, predictable fluidic mechanics, reduced reagent volumes, and also lowered cost of manufacturing. These advantages benefit many biomedical applications that require sensitive molecular detection in robust and economical devices. In this course, a range of microsystem techniques will be discussed, including those based on Microfluidics, BioMEMS, and Optofluidics. The lectures will meet twice a week, one hour each, and will be accompanied by student-driven design projects that will be conducted in 3-hour laboratories. (YR)
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Bioengineering
BENG 560  Nanobiosystems Engineering  3 Credit Hours
Nanobiosystems Engineering is an emerging frontier in nanotechnology. It integrates materials science, bioengineering, physics and life science with the biological and biochemical applications. This fast-developing interdisciplinary field holds the promise to solve many of the medical problems of future. The course will introduce advanced concepts related to nanomaterials and nanofabrication and their application in medicine. The course will also focus on design and development of nano-devices for the applications of pharmaceuticals and healthcare. Typical applications including nano-biosensor, targeted drug delivery, and tissue engineering will also be discussed. Students in Bioengineering will have chance to present and discuss individual application through team project. (YR)
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Bioengineering

BENG 570  Advanced Biomechanics  3 Credit Hours
This course covers intermediate level subject matter on structural biomechanics, analysis and design. Topics include: soft tissues biomechanics, human motion analysis including gait, orthopedic implants, fixation and reconstruction, head impact and injury, advanced bone models. (YR) (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Bioengineering

BENG 571  Impact Biomechanics  3 Credit Hours
This course focuses on the understanding of the behavior of human organs, bone and tissue at their point of mechanical or functional failure. Topics will include research methods in injury biomechanics, injury tolerance of the structures and materials of the head, brain, spine, thorax, abdomen and extremities and injury prevention focusing on safety equipment. Federal motor vehicle safety standards will be discussed. (YR)
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Bioengineering

BENG 575  Regenerative Engineering  3 Credit Hours
This course will discuss principles of tissue engineering whereby the properties of stem as well as primary cells, growth factors, and extracellular matrix and their impact in the development of engineered tissue constructs will be explored. In addition, the course will also focus on supporting/enabling technologies typically utilized in engineering these constructs including nano-and micro-fabrication techniques, 3D printing, micro-patterning as well designing principles of bioreactors, and drug and gene delivery techniques. Additionally, various tissue engineering applications will be discussed including synthetic tissues and organs that are currently under development for regenerative medicine application. (YR)
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or

BENG 595  Digital Manufacturing  3 Credit Hours
This combined lecture and hands on project course aims to train students to optimize the interplay of materials, people, machines and profitability. The course introduces methods to identify product concepts with commercial potential. Student teams will perform market analysis and explore the intellectual property space around their ideas and rapidly iterate them into a final prototype via direct digital manufacturing (e.g., 3D CAD/CAM files manifested via digital printing or machining). Advanced instruction on direct digital manufacturing tools will be given, and customer response will be used as feedback. Early stage prototypes will progress into more sophisticated designs, scaling up (cost, pricing, tooling, process flow and automation) scenario planning for mass manufacturing as well as Failure Mode Effect Analysis (FMEA) will be discussed. (W,YR)
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Bioengineering

BENG 600  Study or Research in BENG  1 to 3 Credit Hours
Individual study or research in an area of bioengineering under supervision of a faculty member. The student will submit a written report at the close of the term. (YR)
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or

BENG 699  Master's Thesis  1 to 6 Credit Hours
Research project in the area of bioengineering conducted under supervision of a program faculty member. While guided by a faculty member, a student electing this course is expected to carry out the work him-or herself. Successful completion of the course requires completion and public defense of a written thesis. A student must satisfactorily complete all 6 credit hours, which can be distributed over multiple semesters. (YR)
Restriction(s):
Can enroll if Level is Rackham or Graduate

Computer and Information Science
Admission
Applicants for the MS in Computer and Information Science are required to meet the following requirements:

1. A bachelor's degree from an accredited institution with a grade point average of B or better. Applicants with lower GPAs may be granted conditional admission. Preference will be given to students with a background in Computer and Information Science, engineering, math and science.

2. Satisfactory completion of the following:
   a. Calculus I & II
   b. One course in probability and statistics or linear algebra)
   c. Programming Language (Preferably C/C++ I & II)
   d. One course in data structures with algorithm analysis
   e. One course in computer architecture
   f. One course in operating systems

Note: Students may be admitted conditionally to make up the deficiencies in item 2. In this case, the applicant will be required to complete appropriate courses within two years from the date of entrance. These courses may not be used to satisfy degree requirements.

1. Two letters of recommendation, with at least one from a person familiar with the candidate's academic performance, are required.
Copies of the applicant’s undergraduate transcripts and degree must be submitted.

**Degree Requirements**

To satisfy the requirements for the MS degree in CIS, all students admitted to the program are expected to complete 30 semester hours of graduate coursework, with a cumulative grade point average of B or better. The program of study consists of core courses, electives and the project/thesis option.

1Please contact the Computer and Information Science Department about the policy on the minimum grade for a course to satisfy graduation requirements.

**Advanced Standing**

Up to six graduate credit hours (grade of B or better) may be transferred from another accredited institution.

**Master’s Thesis Committee**

A Master’s Thesis committee consists of three full-time CIS faculty members, one of whom is the thesis advisor, and requires the approval of the CIS graduate committee. When deemed appropriate, the chair of the graduate committee may request, in the committee, the presence of an additional member from outside the department.

**Course Requirements**

The 30 semester hours of required graduate work are as follows:

**Project Option**

1 May not be used as concentration course if counted as core course.

**Cognate**

Students can take any graduate-level courses approved by the student’s advisor, as described in the requirements for graduation.

**Project Option**

Students must take CIS 695, Master’s Project for 3 credit hours.

- Core courses - 9 credit hours
- Two concentration areas - 12 credit hours
- Cognate courses - 6 credit hours
- Project - 3 credit hours

**Thesis Option**

Students must take a CIS elective course for 3 credit hours and CIS 699, Master’s Thesis for 6 credit hours.

- Core courses - 9 credit hours
- One concentration area - 6 credit hours
- Cognate courses - 6 credit hours
- CIS elective course - 3 credit hours
- Thesis - 6 credit hours

The Ph.D. CIS program will follow the guidelines of the Rackham Graduate School and consists of at least 36 credits of coursework beyond the bachelor’s degree and at least 24 dissertation credits.

There are three types of students who will be admitted to the Ph.D. CIS program:

- Students with just a B.S. in computer and information science or closely related area
  - Complete at least 36 credit hours of coursework, including 30 credit hours toward the completion of the MS degree, and at least 24 dissertation credits, and can earn an M.S. CIS, M.S. DS, M.S. SWE, M.S. CIA, or M.S. AI along the way to their Ph.D. CIS.
- Students with a relevant Rackham or a UM-Dearborn master’s degree
  - Complete at least 6 credits of coursework and at least 24 dissertation credits.
- Students with a relevant non-Rackham and non-UM-Dearborn master’s degree
  - Complete at least 18 credits of coursework and at least 24 credits of thesis research.
Each student is guided by a research advisor and a dissertation committee and has to pass the following major milestones:

- Identifying the faculty advisor and research topic
- Completion of required coursework
- Passing the qualifying examination consisting of two parts:
  - Curriculum exam
  - Research proficiency exam
- Advancement to candidacy
- Forming the dissertation committee
- Passing the dissertation proposal examination
- Completion of required research credit hours
- Preparation of a written dissertation and its oral defense

The target typical time of degree completion is five (5) years.

**Step 1: Qualification**

In addition to fulfilling the following coursework requirements, a Ph.D. student must have:

- a 3.5/4.0 GPA overall and a 3.5/4.0 GPA for all CIS courses to sign up for these exams
- A working relationship with a CIS faculty member as a research advisor

**Breadth Requirement (https://umdearborn.edu/)**

The breadth requirement is satisfied by taking three courses (9 credit hours), one from each of three of the four concentration areas below. All Ph.D. breadth courses must be completed with a grade of B+ or better within 3 full terms (1.5 years) for a full-time student with a relevant Master’s degree or 4 full terms (2 years) for all other full-time students.

**Depth Requirement (https://umdearborn.edu/)**

The depth requirement is satisfied by taking four courses (12 credit hours). At least one and at most two of these courses can be CIS 791—Advanced Guided Study for Doctoral Students (Directed Study course below). The remainder of these courses must be in the same concentration area, below, and must be different from the courses taken for the breadth requirement. Each of these Ph.D. depth courses must be completed with a grade of A- or better and may not be completed via equivalency. At least one of these courses must be 600-level.

**Mathematics Requirements (https://umdearborn.edu/)**

The student must take CIS 505 (Algorithm Design and Analysis) and at least one other advanced mathematics course. CIS 505 must be taken within the first two semesters after enrollment in the Ph.D. CIS program. These latter mathematics courses can be used to meet the cognate course requirement. The other required mathematics course must be selected from the list provided below.

- MATH 504: Dynamical Systems
- MATH 5055: Integral Equations
- MATH 512: First Course in Modern Algebra
- MATH 514: Numerical Solutions of Partial Differential Equations
- MATH 515: B-Splines and Their Applications
- MATH 516: Partial Differential Equations
- MATH 520: Stochastic Processes
- MATH 525: Mathematical Statistics II

- MATH 551: Advanced Calculus I
- MATH 552: Advanced Calculus II
- MATH 554: Fourier Series and Boundary Value Problems
- MATH 555: Functions of a Complex Variable with Applications
- MATH 558: Introduction to Wavelets
- MATH 562: Mathematical Modeling
- MATH 583: Discrete Optimization
- MATH 584: Applied and Algorithmic Graph Theory
- MATH 592: Introduction to Topology
- STAT 530: Applied Regression Analysis
- STAT 535: Data Analysis and Modeling
- STAT 545: Reliability and Survival Analysis
- STAT 590: Topics in Applied Statistics

These latter mathematics courses can be used to meet the cognate course requirement.

**Elective Requirement (https://umdearborn.edu/)**

The remaining CIS coursework must be chosen from the concentration area courses, below (*indicates a course in the planning stages).

Directed Study (https://umdearborn.edu/)

A commitment from an approved CIS Faculty member to act as one's research advisor is a requirement of the qualification stage. All students who aspire to receive a Ph.D. must demonstrate a potential for conducting original research. This is accomplished by completing either 3 or 6 credit hours of a research-oriented directed study (CIS 791——Advanced Guided Study for Doctoral Students) prior to the Research Proficiency Exam. These must be taken while in residence on the UM-Dearborn campus.

Ph.D. students must complete 3 credits of CIS 791 within their first two semesters (Fall and Winter Semesters) of the Ph.D. CIS program.

Ph.D. Research Seminar

This seminar will be offered in the fall and winter semesters.

Continuous attendance will be required of all program students, including those at the pre-candidacy level. The focus will be on reports by students on the status of their research projects. Occasional presentations by guest speakers will also be included. This seminar will have no credit hours. Passing the course will be based on participation and attendance.

Ph.D. Research Methodology Seminar

This course must be completed within the first two semesters after enrolling into the program. The seminar will include the required training in responsible conduct of research and scholarship. This seminar will carry no credit hours. Passing is based on participation and attendance, with the exception of the Responsible Conduct of Research and Scholarship Training module of the Methodology seminar, for which a test will be required.

Cognate Credits

At least 4 credit hours of coursework must be outside the computer and information science area. The second mathematics class (see above) can be used to satisfy all or part of this requirement. Other ways of satisfying this requirement are:

- Completion of at least four credit hours of approved cognate credits, which must be from outside the CIS department. The minimum acceptable grade for a cognate course is a B.
- Completion of a University of Michigan Master's degree, which includes a cognate component. This coursework must have been completed no more than 5 years before admission to the CIS Ph.D. Program.
- Completion of a relevant Master's degree from another university which had coursework that meets the expectation of the program cognate requirement, without transferring the credit to the transcript. This coursework must have been completed no more than 5 years before admission to the CIS Ph.D. Program. These courses do not apply toward the minimum 18 (or 36) credit hours required for the degree and do not appear on the University transcript.

Qualifying Exam

There are two qualification exams, and they should be taken in sequence: the Curriculum Exam and the Research Exam. To take these exams, a student must have an overall and CIS GPA of at least 3.5 and will be given two attempts to pass each exam.

Once all the requirements for Qualification have been met, a decision whether the student is qualified to continue in the Ph.D. Program is made by vote of the CIS Faculty in attendance.

Curriculum Exam:

The goal of this examination will be to ensure that students have a good understanding of the fundamentals of Computer and Information Science in the broad area of their research. The examination committee will be selected from the Graduate Faculty by the Ph.D. Program Committee. The examination will include the following steps:

1. The student selects three (3) CIS graduate courses during the first semester of the program. One course should be in the area of the student's research. The two other courses should be in separate areas.
2. These three (3) courses should be approved by the Ph.D. CIS program committee to ensure that the student has proper fundamental knowledge in CIS for his/her study in the program.
3. For each of the three courses, if the student receives at least an A- in this course, the written exam is waived. However, if the student receives a grade lower than A- in this course, a 1-hour-long written exam on the course material, together with the underlying undergraduate material, is taken by the student.
4. For students who do not pass this exam in the first time, an additional oral exam is conducted.

Research Proficiency Exam:

The student's ability to conduct independent research is evaluated through a written report of a project done in CIS 791, followed by a 90-minute oral exam by three faculty members. The student's research advisor cannot be among the three faculty. The Ph.D. CIS committee selects the three faculty members based on the student's research area. The student should prepare a 45-minute presentation, followed by up to 45 minutes of questions. Examiners will be given the written report on the Directed Study at least one week before the examination, and each examiner will submit a written report on the examination. The student must submit four copies of the written report to the Ph.D. CIS program committee director at least one week before the research proficiency exam.
Step 2: Candidacy

The decision to admit a student to Candidacy is based on the following:

- The CIS Qualification process has been completed successfully
- Completion of at least 4-credit cognate course with a grade of at least B

A student must apply for candidacy by submitting the appropriate forms to the CIS Ph.D. Program Director before the term in which the student plans to become a candidate. Candidacy is not awarded automatically; it must be applied for. The achievement of candidacy is considered an important milestone in a Ph.D. student's progress. A full-time student with a relevant Master's degree is making satisfactory progress if candidacy is achieved after 3 full terms (1.5 years) and must be achieved after 4 full terms (2 years). Other full-time students are making satisfactory progress if candidacy is achieved after 5 full terms (2.5) years and must be achieved within 6 full terms (3 years). Part-time students are making satisfactory progress if candidacy is achieved after 7 full terms (3.5) years and must be achieved within 8 full terms (4 years).

Step 3: Dissertation and Defense

Dissertation and Defense for the CIS Ph.D. requires the following:

- Identify a research advisor and agree on an appropriate topic
- Identify a doctoral committee
- Submit and defend a proposal for the doctoral research content
  - Dissertation Proposal Examination
- Do the research and write the dissertation
- Submit and defend the dissertation

The Dissertation Committee

The Dissertation Committee will consist of the chair and at least three other members. The student’s dissertation advisor will serve as chair. Of the additional members, two must hold at least 50% appointment as tenured or tenure-track faculty of the Computer and Information Science Department, with at least one being a member of the graduate faculty. The third committee member must be from outside the department: a faculty from another department or another university or an expert from industry.

The composition of the Dissertation Committee has to be approved by the Ph.D. Program Committee.

Dissertation Proposal Examination

The next important step of the Dissertation and Defense stage will be the Dissertation Proposal Examination. The main objective is to ensure that the proposed research topic, as well as the student's background and relevant knowledge, are of sufficient strength.

The examination will consist of a written Dissertation Proposal and a presentation open to the public by the student. The examination will be conducted by the Dissertation Committee formed by the Ph.D. Program Committee. As a rule, the Dissertation Committee will continue overseeing the student's work to the stage of final dissertation defense.

Dissertation Defense

After the initial requirements are met, the student may proceed with the dissertation research and the writing of the dissertation. The dissertation should document the original contributions made by the candidate as a result of independent research. This research work should be of archival quality. In advance of graduation, the dissertation must be approved by all the members of the student’s dissertation committee. To obtain this approval a student must submit a written copy of the dissertation to the dissertation committee and defend the research work at a final oral examination open to other faculty, students, and the interested public.

Students are expected to complete the degree within two years of passing the dissertation proposal exam, but no more than seven years from the date of the first enrollment in the Ph.D. CIS program. The Ph.D. CIS committee conducts annual reviews to evaluate progress toward degree completion. Students defending the dissertation must be registered in the 990 Dissertation Research course.

Copies of the dissertation, approved by the student’s research advisor, must be provided to the committee at least two weeks before the oral defense. Copies of the dissertation given to the committee should be in final form and must meet campus dissertation guidelines (https://umdearborn.edu/academics/graduate-studies/office-graduate-studies/doctoral-dissertations/).

Dissertation committee members are required to submit written evaluations of the student’s dissertation prior to the oral defense. The dissertation committee members must be present at the dissertation defense. Since the defense examination includes the formal public presentation of the dissertation research, it will be publicized throughout the college and the university. The time between passing the Dissertation Proposal Examination and the dissertation oral defense should be at least 14 weeks.

Publication of Research

The Ph.D. CIS program is designed to give a student a comprehensive and in-depth knowledge of the computer and information science field, as well as training in research methods. Therefore, based on the student’s dissertation research, the student is required to have published at least 1 paper in a top-quality, peer-reviewed, professional conference or journal in the field, prior to scheduling the final oral examination. The department will provide a list of acceptable top-quality conferences and journals in all CIS research areas.

Time Limit for Completing the Degree

The CIS Ph.D program has a time limit of 7 years. Full-time students are expected to complete the degree within five years of achieving candidacy, but no more than seven years from the date of the first enrollment in the CIS Ph.D program. Students who have not completed their degree within the seven-year limit may petition the CIS Ph.D Program Committee for an extension of time to degree with a plan for completion. A student who does not complete the degree after two years of extension may be returned to pre-candidacy status and required to meet candidacy requirements again.

Computer Engineering

The ECE Department offers, an evening program of 30 credit hours, leading to the degree of Master of Science in Engineering (Computer Engineering). Students desiring admission to the program must have earned a Bachelor’s degree in Electrical and/or Computer Engineering
with an overall GPA of 3.0 or higher. Students whose undergraduate background is in a field other than Electrical or Computer Engineering may be given conditional admission and required to take preparatory courses in electrical and/or computer engineering. Students admitted to the program are required to take courses as specified below. Students are expected to earn a B or better in every graduate course to be credited toward the degree requirements, however, a maximum of two grades of B- will be accepted. In addition, students must maintain a cumulative GPA of 3.0 or higher in every semester. Students may be placed on probation if their cumulative GPA falls below 3.0. Finally, a cumulative GPA of 3.0 or higher is required in order to be eligible to receive the MSE (CE) degree.

Specific course requirements are described next.

This degree program is available both on campus and online.

1 These are partial lists and will be expanded and updated from time to time.

**Professional Electives**

Students may complete the professional elective in several ways: (1) Elect the thesis ECE 699 (6 hours) to work under the supervision of a faculty advisor, (2) Take direct study by ECE 591 (3 credits), and one CE course from the lists above, (3) take two CE courses from the lists above.

**Cognate Courses**

Students should select a minimum of 4 and a maximum of 6 credit hours of courses from other disciplines. Some courses from outside ECE may not meet cognate requirement. Please check with the ECE Department prior to registering.

**Preparatory Courses**

Students with inadequate background in Electrical or Computer Engineering may be required to meet with the department graduate advisor to determine the need for preparatory courses.

For further information please contact:

Department of Electrical and Computer Engineering
University of Michigan-Dearborn, 4901 Evergreen Road
Room 206 ELB, Dearborn, MI 48128-2406
Tel: 313-593-5420 Fax: 313-583-6336
E-mail: umd-ecegrad@umich.edu

**Control Systems**

Control systems are the critical center of any vehicle system. Examples of control systems are numerous and multifaceted: climate control for passenger comfort in an automobile, automatic cruise control, engine control and pollution control are some typical illustrations. Design of control systems for practical applications requires a thorough understanding of physical models of the process, mathematical modeling techniques, transient behavior of systems and dynamic characteristics of a physical system.

The Control Systems certificate program will introduce the participants to mathematical techniques of system analysis, use of software, such as Matlab, to enhance the student’s experience, system modeling, continuous and discrete time control techniques, including analog and digital PID controllers, digital control, fuzzy logic control, neural network controller, etc. At the next level, participants will be introduced to multivariable control (control of several interacting variables of a physical process) and design strategies for multivariable processes. Finally, the program will introduce some basic concepts in nonlinear control and
simple design techniques. Several case studies will be presented to enhance the learning experience. Group design projects will be assigned to ensure that the participants understand the design process. (12 credit hours)

</table>

Please choose four courses to complete the required 12 credit hours.

**Cybersecurity and Information Assurance**

The Master of Science in Cybersecurity and Information Assurance (CIA) is a 30-credit hour graduate degree offered by the Department of Computer and Information Science (CIS). This initiative reflects the University’s eagerness to address rising needs of cybersecurity professionals in both the private and public sectors. The CIA program educates and trains an elite, diverse group of students who want to pursue a career in cybersecurity, such as cybersecurity analysts/specialists, cybersecurity engineers, network engineers/architects, software developers, etc. The program will also benefit anyone on this campus who is interested in advancing their knowledge of computer security and privacy, and it will offer a great opportunity for interdisciplinary inquiry and teaching.

This program can be completed fully online, in person, or a combination of both.

**Curriculum**

To satisfy the requirements for the MS degree in Cybersecurity and Information Assurance, all students admitted to the program are expected to complete a minimum of 30 credit hours of graduate coursework, with a cumulative grade point average of B or better. The program of study consists of core courses, concentration courses and electives with coursework/project/thesis options.

1 Please contact the Computer and Information Science Department about the policy on the minimum grade for a course to satisfy graduation requirements

**Option 1:** MS Coursework. This option requires a minimum of 30 credits be earned through coursework. The minimum requirements are as follows:

- Core courses - 9 credit hours
- Concentration courses - 12 credit hours
- Elective courses - 9 credit hours

**Option 2:** MS Project. This option requires a project report describing the results of an independent study project under the supervision of the advisor. The minimum requirements are as follows:

- Core courses - 9 credit hours
- Concentration courses - 12 credit hours
- Elective courses - 6 credit hours
- Master’s Project - 3 credit hours

**Option 3:** MS Thesis. This option requires a research thesis prepared under the supervision of the advisor. The minimum requirements are as follows:

- Core courses - 9 credit hours
- One concentration area - 12 credit hours
- Elective courses - 3 credit hours
- Master’s Thesis - 6 credit hours

**Requirements**

**Elective Courses**

The following specializations are provided for guidance only. Students are allowed to select elective courses from the same or different specializations. An elective course should not be the same as any course taken to satisfy concentration course requirements.

- **Option 1:** MS Coursework. Choose 9 credit hours (or 3 courses) from the following list below
- **Option 2:** MS Project. Choose 6 credit hours (or 2 courses) from the following list below and CIS 695 Master’s Project for 3 credits.
- **Option 3:** MS Thesis. Choose 3 credit hours (or 1 course) from the following list below and CIS 699 Master’s Thesis for 6 credits.

</table>

Select one from the following:
- CIS 525 | Web Technology                                    | 3            |
- CIS 579 | Artificial Intelligence                           | 3            |
- CIS 580 | Data Analytics in Software Eng                    | 3            |

**Total Credit Hours:** 12

#### Electives and Options

The following areas are provided for guidance only. Students are allowed to select elective courses from the same or different areas.

- **Option 1:** MS Coursework. Choose 9 credit hours (or 3 courses) from the following list below
- **Option 2:** MS Project. Choose 6 credit hours (or 2 courses) from the following list below and CIS 695 Master's Project for 3 credits.

- IMSE 514 | Multivariate Statistics                           | 3            |
- IMSE 559 | System Simulation                                 | 3            |
- IMSE 577 | Human-Computer Interaction                        | 3            |
- IMSE 586 | Big Data Aanal & Visulitzn                         | 3            |
- HCDE 530 | Information Visualization                         | 3            |

---

602 Cybersecurity and Information Assurance
Option 3: MS Thesis. Choose 3 credit hours (or 1 course) from the following list below and CIS 699 Master’s Thesis for 6 credits.

Note: An elective course should not be the same as any course taken to satisfy concentration course requirements.

### Data Science

The Data Science master’s degree program is designed as a 30-credit hour interdisciplinary graduate program. The curriculum consists of required core courses and technical electives, providing opportunities to build knowledge and professional skills in various Data Science areas that are highly demanded in the current job market. This program can be completed fully online, in person, or a combination of both. Four specializations are recommended (not mandatory) for students with different interests in Data Science:

#### Computational Intelligence Specialization

This specialization is recommended for those students who are interested in building their knowledge and professional skills to solve complex data analytics problems through learning and adapting based on data.

#### Applications Specialization

This specialization is recommended for those students who are interested in building their knowledge and professional skills to develop effective data analytics solutions in selected application domains.

#### Business Analytics Specialization

This specialization is recommended for those students who are interested in building their knowledge and professional skills to apply intelligent strategies and technologies to support the collection, data analysis, presentation and dissemination of business information in enterprises.

#### Big Data Informatics Specialization

This specialization is recommended for those students who are interested in building their knowledge and professional skills to apply cutting-edge technologies and tools to tackle Big Data challenges that are essential for data processing and analytics in numerous applications.

### Degree Requirements

Regular admission to the program requires a Bachelor degree in a Science, Technology, Engineering, or Mathematics (STEM) field earned from an accredited program with an average of B or better. Each applicant is required to present official, complete transcripts of prior college work.
Two letters of recommendation are required for admission. At least one letter must be from someone familiar with the candidate’s academic performance. An entering student should have completed one course in probability and statistics, one course in programming, and one course in calculus II. A course in calculus III and a course in linear algebra are recommended but not required.

1Please contact the Computer and Information Science Department about the policy on the minimum grade for a course to satisfy graduation requirements.

### Requirements

#### Specialization Courses (9 credit hours)

Note that the specializations are offered for guidance only. Students may select three courses from one specialization or three courses from multiple specializations for a broader approach to the degree. For students who are interested in selecting the Business Analytics Specialization, they need to choose 3 courses in that specialization as specified.

One of the following specializations is recommended:

**Computational Intelligence Specialization**

This specialization is recommended for those students who are interested in building their knowledge and professional skills to solve complex data analytics problems through learning and adapting based on data.

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>

</table>
Choose one course from:

- FIN 531 Fin Fundament & Value Creation 3
- MIS 525 Computer and Info Systems 3
- MKT 515 Marketing Management 3
- OM 521 Operations Management 3

Big Data Informatics Specialization

This specialization is recommended for those students who are interested in building their knowledge and professional skills to apply cutting-edge technologies and tools to tackle Big Data challenges that are essential for data processing and analytics in numerous applications.

- CIS 511 Natural Language Processing 3
- CIS 515 Computer Graphics 3
- CIS 534 Semantic Web 3
- CIS 536 Text Mining and Information Retrieval 3
- CIS 540 Foundation of Information Security 3
- CIS 548 Security and Privacy in Cloud Computing 3
- CIS 552 Information Visualization and Virtualization 3
- CIS 554 Info Sys Analysis and Design 3
- CIS 559 Principles of Social Network Science 3
- CIS 560 Electronic Commerce 3
- CIS 562 Web Information Management 3
- CIS 5570 Introduction to Big Data 3
- CIS 5700 Advanced Data Mining 3
- CIS 571 Web Services 3
- CIS 577 S/W User Interface Dsgn&Analys 3
- CIS 586 Advanced Data Management 3
- CIS 590J Selected Topic: Edge Computing 3
- CIS 590K Selected Topic: Deep Learning 3
- CIS 652 Advanced Information Visualization and Virtualization 3
- CIS 658 Research Advances in Data Management 3
- ECE 524 Interactive Media 3
- ECE 525 Multimedia Data Stor & Retr 3
- ECE 5251 MM Design Tools I 3
- ECE 5252 MM Design Tools II 3
- ECE 528 Cloud Computing 3
- ECE 576 Information Engineering 3
- ESCI 585 Spatial Analysis and GIS 3
- IMSE 570 Enterprise Information Systems 3
- IMSE 577 Human-Computer Interaction 3
- IMSE 586 Big Data Aanal & Visuliztn 3
- OM 665 IT in SCM 3

Capstone Course (3 credit hours)

In consultation with a faculty advisor, the student should choose between a capstone course (recommended) or one additional course from his/her specialization. Acceptable capstone courses are:

- CIS 695 Master’s Project 3
- DS 635 Analytics Experience Capstone 3
- ECE 695 Master’s Project 3
- EMGT 590 Capstone Project 3

Note that no more than a total of 15 credit hours may be taken in the College of Business for this degree (core, specializations, and capstone).

Electric Energy Technology

This certificate program introduces theories and technologies in electric energy and related applications. Topics include power electronics, power system analysis, electric drives, motor drives, electric aspects of hybrid vehicles, and practical aspects of the design of power electronics devices. (12 credit hours)

This program is available on campus only.

Complete 3 courses from the following (9 credits):

- ECE/AENG 510 Vehicle Electronics I 3
- ECE 517 Adv Pwr Electrncs&Motor Drvs 3
- ECE 542 Instr to Pwr Mgmt & Reliability 3
- ECE 5462 Elec Aspects of Hybrid Vehicle 3

Electrical Engineering

The ECE Department offers an evening program of 30 credit hours, leading to the degree of Master of Science in Engineering (Electrical Engineering). Students desiring admission to the program must have earned a Bachelor's degree in Electrical and/or Computer Engineering with an overall GPA of 3.0 or higher. Students whose undergraduate background is in a field other than Electrical or Computer Engineering may be given conditional admission and required to take preparatory courses in electrical and/or computer engineering. Students admitted to the program are required to take courses as specified below. Students are expected to earn a B or better in every graduate course to be credited toward the degree requirements, however, a maximum of two grades of B- will be accepted. In addition, students must maintain a cumulative GPA of 3.0 or higher in every semester. Students may be placed on probation, if their cumulative GPA falls below 3.0. Finally, a cumulative GPA of 3.0 or higher is required, in order to be eligible to receive the MSE (EE) degree.

This degree program is available both on campus and online.
Program Requirements

<table>
<thead>
<tr>

</table>

Core Courses
Select three courses from the following list:

- ECE 500: Math Mthds for Elec & Comp Eng\(^1\)
- ECE 550: Communication Theory
- ECE 560: Modern Control Theory
- ECE 580: Digital Signal Processing

Concentration Courses\(^2\)
Select three courses from one or more of the concentration areas below:

**Control Systems:**
- ECE 519: Adv Topics in EMC
- ECE 552: Fuzzy Systems
- ECE 560: Modern Control Theory
- ECE 565: Digital Control Systems
- ECE 567: Nonlinear Control Systems

**Digital Signal Processing:**
- ECE 512: Analog Filter Design
- ECE 529: Intro to Computer Music
- ECE 5542: Embedded Sig Proc and Control
- ECE 580: Digital Signal Processing
- ECE 5802: Multirate Sig Proc w/App
- ECE 582: Intro to Statistical DSP

**Pat Rec & Neural Netwks:**
- ECE 5831: Pat Rec & Neural Netwks

**Speech Processes:**
- ECE 584: Speech Processes

**Intelligent Systems:**
- ECE 5251: MM Design Tools I
- ECE 535: Mob Dev & Ubiqys Comp Sys
- ECE 537: Data Mining
- ECE 576: Information Engineering
- ECE 579: Intelligent Systems
- ECE 580: Digital Signal Processing
- ECE 5831: Pat Rec & Neural Netwks

**Vehicle Electronics:**
- ECE 512: Mod & Des of Electric Cir&Sys
- ECE 515: Vehicle Electronics II
- ECE 519: Adv Topics in EMC
- ECE 531: Intelligent Vehicle Systems
- ECE 532: Auto Sensors and Actuators
- ECE 533: Active Automotive Safety Sys
- ECE 539: Production of Elec Prods
- ECE 5462: Elec Aspects of Hybrid Vehicle
- ECE 5791: Vehicle Power Management

Total Credit Hours: 18-20

---

\(^1\) Required unless waived. Must be taken in the first year.

\(^2\) These are partial lists and will be expanded and updated from time to time. For a complete list of ECE courses please view the "Course Descriptions" later in this Catalog.

**Professional Electives (6 credit hours)**
Students may complete the professional elective in several ways: (1) Elect the thesis ECE 699 (6 hours) to work under the supervision of a faculty advisor, (2) Take direct study by ECE 591 (3 credits), and one EE course listed above, (3) take any two EE courses listed above.

**Cognates (4-6 credit hours)**
Students should select a minimum of 4 and a maximum of 6 credit hours of courses from other disciplines. Some courses from outside ECE may not meet cognate requirement. Please check with the ECE Department prior to registering.

**Preparatory Courses**
Students with inadequate background in Electrical/Computer Engineering may be required to meet with the department graduate advisor to determine the need for preparatory courses.

**For further information contact:**
Department of Electrical and Computer Engineering
University of Michigan-Dearborn, 4901 Evergreen Road
Room 206 ELB, Dearborn, MI 48128-2406
Tel: 313-593-5420 Fax: 313-583-6336
E-mail: umd-ecegrad@umich.edu

**Electrical, Electronics, and Computer Engineering**
The EECE Ph.D. program addresses the critical need for engineers who are proficient in emerging technologies, knowledgeable in the latest advancements in science and engineering and research that combines deep knowledge in both electrical and computer-related areas. The Ph.D. degree is aimed primarily at those who wish to have academic as well as research and development careers.

This Ph.D. program of the Rackham Graduate School of the University of Michigan-Ann Arbor is located, administered, and offered by UM-Dearborn. The program observes the standards for admissions, registration, degree requirements, awarding of degrees, and other administrative policies and regulations established by the Executive Board of the Rackham Graduate School.

The EECE Ph.D. degree requirements include a minimum of 36 credits of coursework and a minimum of 24 credit hours of dissertation credits for Ph.D. students entering the program without a prior M.S. degree. Students without a master’s degree may work toward an M.S. in Electrical Engineering or M.S. in Computer Engineering as part of the candidacy requirements. Both M.S. EE and M.S. CE require 30 credits of graded coursework. To complete the Ph.D. program, students will typically complete a minimum of 6 additional credits hours in coursework in order to satisfy the specific course requirements.

Students with a prior M.S. degree must satisfy the same course requirements or the equivalent from other institutions, as approved by the ECE Graduate Committee. In addition, they must complete 18 credit hours of graded coursework or directed study and a minimum of 24 credit hours of dissertation coursework at the University of Michigan-Dearborn to satisfy the Rackham residency requirement. Waiver of this requirement will be considered for students who obtained their master’s degree from a University of Michigan program in a similar area and whose coursework meets the Ph.D. program requirements.
The Doctoral Program proceeds in three stages:

1. Pre-Candidacy
   - Coursework providing breadth in ECE
   - Coursework providing depth in the chosen area
   - Research-based directed study

2. Candidacy
   - Successful completion of the qualifying examinations
   - Completion of all requirements for Candidacy, including the 4-hour cognate requirement.

3. Dissertation
   - Successful dissertation proposal examination
   - Successful completion of written Dissertation and public defense presentation

Step 1. Pre-Candidacy
At the beginning of their enrollment in the ECE Ph.D. Program, students will typically take a series of courses to satisfy the depth, breadth, and advanced mathematics requirements. A study plan should be made by every student under consultation with the student's advisor, which will outline the courses and research activities for meeting the milestones of the ECE Ph.D. program. The student's study plan needs to be approved by the ECE Ph.D. Committee, and a copy of the study plan will be included in the student's file. Any change of the study plan must be approved by the ECE Ph.D. Committee.

Breadth Requirement
Students must select three courses from three different core areas. Equivalency is possible. Courses selected to fulfill the ECE Ph.D. Breadth requirement may not also be used to fulfill the ECE Ph.D. Depth requirement. All Ph.D. breadth courses must be completed with a grade of B+ or better within 3 full terms (1 1/2 years) for a student with a relevant Master's degree and 4 full terms (2 years) for all other students. Courses taken at another university that are equivalent in level and content may fulfill one or more of these requirements with appropriate approval.

Depth Requirement
The Depth coursework requirement is designed to ensure that students complete graduate-level coursework relevant to their chosen area of specialization and acquire the core research skills and knowledge of the current research and technologies relevant to this specialization. Here, students must select two courses from one core area, including at least one advanced course (indicated with an asterisk). The Depth courses must be completed with a grade of A- or better. These courses may not be completed via equivalency. These courses must be completed within 3 full terms (1 1/2 years) for a student with a relevant Master's degree and 4 full terms (2 years) for all other students.

Technical Electives
Students can take any courses in the four core areas listed below. The selected courses must be approved by the student's research advisor and the Ph.D. Program Committee and a signed Depth Course Approval form must be submitted when signing up for the Qualifying Examination.

Directed Study

All students who aspire to receive a Ph.D. must demonstrate a potential for conducting original research. This is accomplished by completing either three or six credit hours of a research-oriented directed study prior to the Preliminary Exam. These must be taken while in residence on the UMD campus. Ph.D. students must complete all credits of ECE 691 within their first two semesters. At least 3 credit of ECE 691 must be completed in the concentration area of the degree and prior to taking the Qualifying Exam.

Ph.D. Research Seminar

All Ph.D. students will participate in ECE research seminars and colloquia, which will expose them to eminent researchers and current research topics in the broad areas of ECE.

Ph.D. Research Methodology Seminar

The seminar will include the required training in responsible conduct of research and scholarship. This seminar will carry no credit hours. Passing is based on participation and attendance with the exception of the Responsible Conduct of Research and Scholarship Training module of the Methodology seminar, for which a test will be required.

Cognate Credits

The cognate requirement is intended to foster intellectual breadth in graduate studies. Students must undertake at least 4 credit hours of coursework in an area outside of their chosen field of specialization. The cognate requirement should be approved by the Ph.D. Program Committee, and will generally be satisfied in one of the following ways:

1. Completion of at least 4 credit hours of cognate coursework in one or more approved graduate-level courses listed with a grade of B or better. No more than 6 credit hours of cognate courses can be counted towards the degree requirement.
2. Completion of graduate coursework at another institution that meets the expectation of the cognate requirement. This coursework must be completed no more than 5 years before admission to the EECE Ph.D. program.

Qualifying Examination

The Ph.D. qualifying examination is intended to allow a Ph.D. student to demonstrate her/his potential for conducting original research.

A Ph.D. student must complete at least one directed study course of ECE 591/691 prior to the Qualifying Exam. The directed study course must be taken as a Rackham student at the ECE Department at UM-Dearborn. During their first year in the Ph.D. program, students are required to perform independent research in collaboration with an ECE faculty member. The intent of this research requirement is to provide adequate opportunity for students to work closely with a research advisor to prepare to take the qualifying exam before their qualification deadline. The first-year research requirement is a condition of continued departmental financial support guarantees and can be waived only by petition to the Ph.D. Program Committee with an explanation of special circumstances (e.g., a research-oriented internship directly relevant to the student’s qualifying exam preparation) endorsed by the student’s academic or research advisor. This requirement does not apply to students who transfer from a terminal MS to the Ph.D. program, who will be given more than one calendar year after entering the MS program.

The student’s qualification is evaluated through a written report of a project done in a research-oriented directed study, followed by a 1-2 hour oral exam by a Ph.D. Qualifying Examination Committee, which consists of three faculty members not including the research advisor, two of which are ECE faculty and one is an affiliate faculty. The three faculty members on the Ph.D. qualifying committee are selected by the ECE Ph.D. Program Committee. The oral examination will cover the student’s directed study project and knowledge directly related to the student’s research area. The examination will be administered during the qualification examination period in every Fall and Winter semester. The director of the students’ directed study project may not serve as one of the examiners. The student must submit four copies of the directed study written report to the ECE Ph.D. Program Coordinator at least two weeks
before the qualifying examination. The examiners will be given the written report at least one week before the examination.

The faculty in the qualifying examination committee will grade students on a scale of 1-4, representing Poor, Fair, Good and Excellent, respectively. An average score across all faculty members on the examination committee will be at least 3.0 in order to pass the qualifying examination. A student is given two chances to take the qualifying examination within the first three years.

**Step 2. Candidacy**

Students are initially admitted to the program as pre-candidates. Candidacy will normally be achieved in the second or third year of study after completion of the Qualifying Examination and completion of at least three semesters of courses with a grade-point-average of at least 3.5 over a scale of 1-4. A student will be admitted to Ph.D. Candidacy only if she/he satisfies every requirement below.

**Candidacy Requirements**

1. Successful completion of the ECE Qualifying Examination, which is described below.
2. Fulfillment of all course requirement and all other candidacy requirements such as cognate coursework with a grade-point-average of at least 3.4 over a scale of 1~4. A student may satisfy the Ph.D. cognate requirement—four to six hours of graduate-level coursework — by taking the graduate course(s) associated with CECS programs (not his/her own), by taking the graduate course(s) outside the department, or by a mixture thereof. Courses taken from other programs cannot overlap in content with any ECE course-related material. Any course in question must have prior approval of the ECE Ph.D. Program Committee.
3. Soon after passing the Qualifying Examination, the candidate and the advisor will form a Dissertation Committee, which should be submitted to the ECE Ph.D. Program Committee for preliminary approval. Normally the advisor serves as chair or co-chair of this committee. It is the responsibility of the student and the advisor to find eligible faculty members willing to serve. A typical Ph.D. Dissertation Committee will consist of three regular ECE faculty, one industry expert with a Ph.D. degree, and one faculty member outside of the ECE department. The Dissertation Committee is responsible for reviewing the student’s progress, including the dissertation proposal and the final dissertation. The dissertation committee must be approved by the ECE Ph.D. Program Committee.
4. A student must apply for candidacy by submitting the appropriate forms to the ECE Ph.D. Program Committee. These forms must be submitted before the student plans to become a candidate. Candidacy is not awarded automatically; it must be applied for.

The achievement of candidacy is considered an important milestone in a Ph.D. student’s progress, and all students are expected to apply for candidacy as soon as they are eligible. Full-time students with a relevant Master’s degree must achieve candidacy in four terms (2 years). Students that have only a Bachelor’s degree will be allowed six terms (3 years) to achieve candidacy. Part-time students with a relevant Master’s degree must achieve candidacy in six terms (2.5 years). Part-time students that have only a Bachelor’s degree will be allowed eight terms (4 years) to achieve candidacy.

**Step 3. Dissertation**

**Dissertation Committee**

The Dissertation Committee will consist of the chair and at least three other members. The student’s dissertation advisor will serve as chair. Of the additional members, two must hold at least 50% appointment as tenured or tenure-track faculty of the Computer and Information Science Department, with at least one being a member of the graduate faculty. The third committee member must be from outside the department: a faculty from another department or another university or an expert from industry.

The composition of the Dissertation Committee has to be approved by the Ph.D. Program Committee.

**Dissertation Proposal**

A full-time (part-time) student entering with a Bachelor degree must successfully complete a dissertation proposal within 3.5 (4) years from the start of graduate study to maintain satisfactory progress. A student full-time (part-time) with a relevant Master’s degree must complete the dissertation proposal examination within 2.5 (3) years. The dissertation proposal examination will be administered by the Dissertation Committee (see above). The student will submit a dissertation research proposal to the Dissertation Committee at least two weeks in advance of the date of an oral examination. In the written proposal, the student must precisely identify the intellectual area in which he or she intends to pursue research and must demonstrate an in-depth understanding of that area. The student must give a general description of the research problem to be addressed and an outline of the approach that will be taken. It is desirable that the research problem be specified in considerable detail and that some initial results be presented. During the oral presentation, the student will present the proposed dissertation research, including relevant background material and preliminary research results. During and after the presentation, the Dissertation Committee will explore the research area with the student to determine whether the student has completed this phase successfully. The Dissertation Committee will prepare a written evaluation report on the outcome of the proposal presentation, and a copy of the written proposal will be placed in the student’s file. Students may receive one of the two possible outcomes, (1) the Dissertation Committee has approved the dissertation proposal, or (2) the student needs to revise the dissertation proposal and take the proposal examination one more time.

**Dissertation and Final Defense**

After the dissertation proposal has been approved, the candidate may proceed with the dissertation research and the writing of the dissertation. Upon completion of the dissertation, the student must receive a written evaluation of her/his dissertation from each member of the Dissertation Committee, and must defend her/his dissertation orally in an open examination (the Final Defense) before the Dissertation Committee, in accordance with Rackham rules. The dissertation defense may not be scheduled in the same academic term as the dissertation proposal examination.

Dissertation Proposal Examination and the dissertation oral defense should be at least 14 weeks.

**Energy Systems Engineering**

Energy Systems Engineering is a 30 credit hour program, designed to provide systems-based knowledge in energy engineering through four core courses and in-depth knowledge in automotive energy and
distributed energy systems through six elective courses. The core courses deal with sustainable energy sources, energy generation and storage, energy and environmental policies, and risk-benefit analysis. The elective courses can be selected from a range of courses offered in mechanical, electrical and manufacturing aspects of energy engineering. The elective courses covers a variety of topics, such as hybrid and electric vehicles, alternative energy systems for vehicles, emissions, power electronics, power distribution, design and manufacturing for environment, etc.

The Energy Systems Engineering program has been designed to address the educational need for graduate students interested in energy engineering. Significant growth and investment are expected to occur in energy industries in the State of Michigan and elsewhere in the next several decades. Both small and large energy-related companies are starting up in the State and many of them are located in the metro-Detroit area. The automotive companies are also accelerating research and development in new power generation and propulsion technologies for future vehicles, such as electric batteries and fuel cells. As a result, there is a need for engineers with specialized knowledge in the alternative and renewable energy production, utilization and distribution.

Online program option:
The Energy Systems Engineering program is also offered online through the Distance Learning Network (https://umdearborn.edu/cecs/extended-learning-outreach/online-learning/) (DLN). The online courses utilize video streaming of the lectures given on campus. The online students have the opportunity to interact with the instructors and with fellow students (both on campus as well as online) through CANVAS. The class lectures, notes and discussions are posted on CANVAS for online students’ access.

Program Goals:
To provide students with systems-oriented graduate level knowledge in the fields of energy systems engineering.

Learning Outcomes:
1. A strong foundation in the theoretical principles and techniques from science, engineering, and mathematics needed for advanced engineering design and development.
2. An ability to use modern engineering software, processes, devices, and diagnostic tools for advanced engineering design and development.

Engineering Management
The program may be completed entirely on campus, entirely online, or through a combination of on-campus and online courses.

Admission
Undergraduate Degree Requirement
Admission to the program requires a BS degree in engineering, OR a degree in math, computer science, or a physical science earned from an accredited program with an average of B or better coupled with extensive experience in engineering.

Students who do not meet BS degree requirements of the program should speak to the program advisor regarding the additional requirements to be met.

Course Prerequisite
- Course in probability and statistics (IMSE 510, Probability and Statistical Models or equivalent)

The IMSE 510 requirements can be completed after admission into the program and will count as an elective toward the 35-credit degree requirement.

Advanced Standing
Up to six graduate credit hours (grade of B or better) may be transferred from another accredited institution.

Students may transfer up to one-half (1/2) the minimum number of credit hours required for their master’s or professional degree from another University of Michigan program.

Graduate Academic Policies can be found below:
http://catalog.umd.umich.edu/academic-policies-graduate/

Degree Requirements
The Master of Science in Engineering Management requires a minimum of 35 graduate credit hours.

Minimum Grade Requirement in addition to maintaining a minimum cumulative GPA of 3.0 or higher every semester:
1. Courses in which grades of C- or below are earned cannot be used to fulfill degree requirements.
2. No more than two courses in which grades of B- or below are earned can be used to fulfill degree requirements.

A minimum of a 3.0 cumulative GPA or higher is required at the time of graduation.

Degree Requirements
The program of study must satisfy the following distribution and course requirements:

1. Engineering Management core courses, 18 credit hours

5. Work Experience requirement—minimum of two years in an engineering job function for students with an undergraduate degree in a field other than engineering.

6. Thesis or Research Essay—students, with the approval of their graduate advisor, may elect a master’s thesis for no more than five credit hours.

### Game Design

The purpose of the certificate program in game design is to provide interested students with the theoretical knowledge and practical experience needed to program computer games at the professional level. The core courses included in this program are taught from a software engineering perspective and also include game programming techniques. The elective courses are intended to allow students to strengthen their software engineering backgrounds and to explore advanced areas of computer science important to game programmers. (12 credit hours)

**Certificate offered on Campus and via Distance Learning**

### Human Centered Design and Engineering

The program may be completed entirely on campus, entirely online, or through a combination of on-campus and online courses.

### About the Program

MS in HCDE is 31 semester hours graduate degree designed for students who want to pursue leadership roles in user experience research and design and/or explore, extend, and integrate theoretical and practical issues in design using human centered approach. The proposed program also addresses strong need in industry for highly qualified individuals who can research, identify, document and translate user requirements and needs, generate creative ideas, implement and evaluate the products or services in a scientific way.

MS in HCDE is an interdisciplinary program offered by the Department of Industrial and Manufacturing Systems Engineering in the College of Engineering and Computer Science with the participation of the Department of Behavioral Sciences in the College of Arts, Science and Letters at the University of Michigan-Dearborn.

Human centered design related jobs are on the rise and appear under various titles, such as user experience designer, user interface designer, interaction designer, usability analyst, and product designer.

### Program Goals

- Provide knowledge to research, explore, extend, and integrate theoretical and practical issues in design using human centered approach.
- Provide students with the ability to function in multidisciplinary teams and develop innovative solutions to real life design problems.
- Prepare students for the carrier opportunities in human centered/experience design.

### Degree Requirements

- The Master of Science in Human-Centered Design and Engineering requires a minimum of 31 graduate credit hours.
Minimum Grade Requirement in addition to maintaining a minimum cumulative GPA of 3.0 or higher every semester:
1. Courses in which grades of C- or below are earned cannot be used to fulfill degree requirements.
2. No more than two courses in which grades of B- or below are earned can be used to fulfill degree requirements.

A minimum of a 3.0 cumulative GPA or higher is required at the time of graduation.

M.S. Thesis Option

With the approval of their graduate advisor, students may substitute a master's thesis (i.e., IMSE 699) for no more than seven credit hours of graduate course work. IMSE 699, Master's thesis will replace three credits of program electives, Capstone Project I and Capstone Project II requirements in the program.

Industrial and Systems Engineering

The Master's program in Industrial & Systems Engineering (ISE) is a 30 credit hour degree program designed for engineers and other professionals who have responsibility for designing, installing, improving and evaluating large integrated systems. Specializations/courses are available in the areas of:

- Human Factors/Ergonomics
- Operations Research & Management Science
- Quality Systems Design
- Advanced Manufacturing & Automation
- Information Systems Management
- Program Management & Product Development

The program may be completed entirely on campus, entirely online, or through a combination of on-campus and online courses.

The ISE Ph.D. program provides educational opportunities to talented students to acquire the advanced knowledge needed to become creative researchers as well as technical leaders and technology innovators in industrial and systems engineering. The program is a full-time, research-based degree designed to address the growing needs of society for scientific and engineering professionals with advanced knowledge, technical skills, and abilities to conduct original and high-quality translational research in industrial and systems engineering. Students are admitted for full-time study and all admission offers are for the Fall term only.

Specific requirements of the program are described below.

The program may be completed entirely on campus, entirely online, or through a combination of on-campus and online courses.

Admission

Undergraduate Degree Requirement

Admission to this degree program requires a bachelor's degree in engineering, physical science, computer science, or applied mathematics.
Students who do not meet BS degree requirements of the program should speak to the program advisor regarding the additional requirements to be met.

Course Prerequisites

- Calculus based course in probability and statistics (IMSE 510, Probability and Statistical Models or equivalent)
- A course in operations research (IMSE 500, Models of Operations Research or equivalent)

The IMSE 510 and IMSE 500 course requirements can be completed after admission into the program. However, only IMSE 500 will count toward the 30-credit degree requirement.

Degree Requirements

The degree MSE in ISE requires a minimum of 30 credit hours.

Minimum Grade Requirement in addition to maintaining a minimum cumulative GPA of 3.0 or higher every semester:
1. Courses in which grades of C- or below are earned cannot be used to fulfill degree requirements.
2. No more than two courses in which grades of B- or below are earned can be used to fulfill degree requirements.

A minimum of a 3.0 cumulative GPA or higher is required at the time of graduation.

Advanced Standing Provision

Up to six graduate credit hours (grade of B or better) may be transferred from another accredited institution. Students may transfer up to one-half (1/2) the minimum number of credit hours required for their master's or professional degree from another University of Michigan program.

Graduate Academic Policies can be found below:
http://catalog.umd.umich.edu/academic-policies-graduate/

Specific Course Requirements

The program of study must satisfy the following distribution and course requirements:

Integrated Design and Manufacturing Engineering Concentration

Quality Systems Design:
- IMSE 513 | Robust Design                           | 3            |
- IMSE 519 | Quan Meth in Quality Engin              | 3            |
- IMSE 561 | Tot Qual Mgmt and Six Sigma             | 3            |
- IMSE 567 | Reliability Analysis                    | 3            |

Advanced Manufacturing & Automation:
- IMSE 502 | Computer-Integrated Mfg                 | 3            |
- IMSE 538 | Intelligent Manufacturing               | 3            |
- IMSE 5655 | Supply Chain Management                | 3            |
- IMSE 581 | Prod & Oper Engineering II              | 3            |

Information Systems Concentration

Information Systems Management:
- IMSE 553 | Software Engineering                    | 3            |
- IMSE 556 | Database Systems                         | 3            |
- IMSE 557 | Comp Networks and Comm                   | 3            |

Enterprise Information Systems:
- IMSE 555 | Decision Support/Expert Sys             | 3            |
- IMSE 5585 | Electronic Commerce                     | 3            |
- IMSE 564 | Meth & Tech in ERP Sys Develop          | 3            |
- IMSE 570 | Enterprise Information Systems           | 3            |
- IMSE 5715 | Modeling of Int Info Syst               | 3            |
- IMSE 5725 | Object Oriented System Design           | 3            |
- IMSE 574 | IS Based Prod Planning & Cont           | 3            |
- IMSE 579 | Software Int Mfg & Logis Mgmt           | 3            |

Program Management & Product Development

- EMGT 580 | Mgt of Prod and Proc Design             | 3            |
- IMSE 515 | Fundamentals of Program Mgt             | 3            |
- IMSE 516 | Project Management and Control          | 3            |
- IMSE 517 | Managing Global Programs                | 3            |

With the approval of their graduate advisor, students may substitute a master's thesis for no more than six credit hours of graduate coursework.
Students choosing the thesis option are required to elect a minimum of 9 credit hours from the concentration electives, rather than the 12 credit hours stipulated above for the concentration areas. Students must complete 2 of the courses from one of the concentration areas.

**Dual Degree, MBA/MSE-Industrial Systems Engineering**

The MBA/MSE-Industrial Systems Engineering has been carefully developed to meet the increasing need for professionals who have expertise in both engineering and management. It is open to students who have completed a Bachelor of Science degree in engineering, a physical science, computer science, or applied mathematics.

The program is offered jointly by the College of Business and the College of Engineering and Computer Science. It allows students to receive both the MBA and MSE-ISE simultaneously upon completion of the required 57-66 credit hours.

You may complete the program on campus, on-line, or any combination of the two, and you may enroll on a full- or part-time basis.

Admission is rolling, and you may begin the program in September, January, or May. Students must apply and be admitted to the MBA and the MSE-ISE programs separately. University of Michigan-Dearborn students who have been admitted to the program may take up to 6 graduate business credits during the final semester of their undergraduate program.

**Program Goals and Objectives**

**Master of Business Administration**

**Goal 1:** Students will have an understanding of the core business disciplines and be able to apply this knowledge to global business situations.

**Objectives:** MBA students will:

1. Demonstrate knowledge of disciplinary concepts, terminology, models, and perspectives.
2. Identify business problems and apply appropriate solutions (problem-finding/problem-solving).
3. Integrate knowledge across disciplinary areas (integrative thinking).
4. Apply knowledge in a global environment.

**Goal 2:** Students will be effective communicators.

**Objectives:** MBA students will:

1. Demonstrate an ability to effectively communicate in a manner that is typically required of a business professional.

**Goal 3:** Students will appreciate the importance of ethical/corporate social responsibility principles.

**Objectives:** MBA students will:

1. Identify and explain alternative approaches to ethical/corporate social responsibility issues.

**Admission Prerequisites**

**Master of Business Administration**

- Mathematics admission prerequisite
- GMAT/GRE admission prerequisite

**MSE in Industrial and Systems Engineering**

- Completion of a bachelor of science degree in engineering, a physical science, computer science, or applied mathematics
- A course in Probability and Statistics equivalent to IMSE 510
- A course in Operations Research equivalent to IMSE 500

**Ph.D. in Industrial and Systems Engineering**

**About the Program**

The ISE Ph.D. program provides educational opportunities to talented students to acquire the advanced knowledge needed to become creative researchers as well as technical leaders and technology innovators in industrial and systems engineering.

This Ph.D. program of the Rackham Graduate School of the University of Michigan-Ann Arbor is located, administered, and offered by UM-Dearborn. The program observes the standards for admissions, registration, degree requirements, awarding of degrees, and other administrative policies and regulations established by the Executive Board of the Rackham Graduate School.

**Program Description:**

The Ph.D. ISE program offers concentrations in integrated design and manufacturing, decision science and operations research, and human factors and ergonomics.

The program requires the core, concentration, and cognate coursework; qualifying and dissertation proposal examinations; a written dissertation; and an oral defense of the dissertation. The Ph.D. ISE degree is offered to exceptional students who have completed, with distinction, a master's degree in engineering or a closely related field.

Degree requirements for the Ph.D. ISE include a minimum of 18 credit hours of coursework (beyond master’s) and a minimum of 24 credit hours of Ph.D. dissertation. The Ph.D. ISE is composed of five major milestones, which all students are required to pass successfully before graduation:

1. Filing an approved plan of study
2. Completion of the required coursework with the minimum GPA 3.3
3. Passing the qualifying examination on the core coursework
4. Advancement to candidacy
5. Passing the dissertation proposal examination
6. Completion of required dissertation research credit hours
7. Successful oral defense of an approved written dissertation

The target typical time of degree completion is four (4) years.

**Curriculum**
Satisfactory Progress Requirements:
Only letter-graded courses at the 500+ level count toward the degree. Courses completed with a grade lower than B or a "U" grade are not accepted.

To advance to candidacy, the cumulative coursework GPA (Grade Point Average) must be 3.3 or above on the 4.0-scale.

Coursework Requirement:

Breadth Requirement:
The breadth requirement is satisfied by a student taking three core courses (9 credit hours) in the program. The minimum grade for breadth requirement courses is B.

Depth Requirement:
Students must select at least three courses (9 credit hours) from the same concentration area. The minimum grade for depth requirement courses is B.

Students must take the Qualifying Exam by the end of the third term in the Ph.D. ISE program cognate requirement in one of the following ways:

- Completion of at least four hours of approved cognate credits, which must be from outside the IMSE department. The minimum acceptable grade for a cognate course is a B. The list of approved cognate courses can be found in the Approved Program courses section.
- Completion of a University of Michigan master's degree that included a cognate component. This coursework must be completed no more than five (5) years before admission to the Ph.D. ISE program.
- Completion of a cognate course with a minimum B grade. The examination must be completed within a year of passing the qualifying examination.
- Passing the dissertation proposal examination
- Conduction an original research
- Submission of a written dissertation
- A Pre-Defense meeting
- An Oral Defense of an approved written dissertation

Candidates must register for the IMSE 990 Dissertation course each fall and winter until completion of all degree requirements. A Ph.D. ISE student should achieve candidacy within two years from the time of initial enrollment in the program.

The examination must be completed within a year of passing the qualifying examination.

The dissertation defense may not be scheduled in the same academic term as the dissertation proposal examination.

The Ph.D. ISE program has a limit of 7 years. Students are expected to complete the degree within five years of achieving candidacy, but no more than seven years from the date of the first enrollment in the Ph.D. ISE program.

Students must take the Qualifying Exam by the end of the third term in the program.

- **Candidacy: Achieving candidacy for the Ph.D. ISE requires:**
  - Completion of the coursework and Pre-candidacy requirements
  - Passing the qualifying examination
  - Selection and Approval of a Dissertation Committee
  - Submission of the candidacy application form
  - Posting a minimum cumulative GPA of 3.3 out of 4 at the time of applying for the candidacy

- **Dissertation Proposal Requirements:**
  - Achieving Candidacy
  - Identify a research advisor and agree on an appropriate topic
  - Submit and defend a proposal for the doctoral research content

- **Dissertation and Oral Defense:**
  - Passing the dissertation proposal examination
  - Completion of required dissertation research credit hours
  - Conduction an original research
  - Submission of a written dissertation
  - A Pre-Defense meeting
  - An Oral Defense of an approved written dissertation

The examinations are given twice a year, once in the fall and once in the winter. The qualifying examination is composed of the following:

- By the end of the third semester in the program, a student must take one three-hour written qualifying examination covering the material in three core courses taken in the program.
- Each one-hour portion of the examination covers material from one of three core courses taken in the program: (1) Optimization (coverage of IMSE 505), (2) Applied Probability and Statistics (coverage of IMSE 514), (3) Production (coverage of IMSE 581), and (4) Ergonomics (coverage of IMSE 548).
Forming the Dissertation Committee: Dissertation Committee

The composition of a dissertation committee adheres to the Rackham guidelines (see the Rackham dissertation handbook).

- The dissertation committee will consist of four members, including at least three tenure-track members (appointment as Professor, Associate Professor, or Assistant Professor) of the instructional faculty affiliated with a Rackham doctoral program.
- The student's dissertation advisor, who must be a member of the graduate faculty of the department, will serve as chair or co-chair.
- Of the additional members, two must hold at least 50% appointment as tenured or tenure-track faculty of the Department of Industrial and Manufacturing Systems Engineering, with at least one being a member of the IMSE graduate faculty.
- The third committee member (cognate member) must be from outside the department: a faculty member with at least 50% appointment from a Rackham Doctoral program other than Ph.D. in ISE.
- The composition of the dissertation committee must be approved by the Ph.D. program committee and requires Rackham approval.
- A committee may have a sole chair or two co-chairs. By special arrangement, retired faculty members who were affiliated with a Rackham doctoral program or research professors may serve as sole chairs. Persons who may serve as co-chair, but not the sole chair, include:
  - tenure or tenure-track members of the University's instructional faculty who are not affiliated with a Rackham doctoral program;
  - research faculty;
  - instructors and lecturers;
  - similarly qualified University faculty or staff, or person from outside the University; and
  - former University faculty members who have moved to a faculty position at another university.

In the cases when it is justified by the nature of the student's research and by approval of the program committee, the dissertation work can be co-supervised by two co-chairs. Both co-chairs must hold at least 50 percent appointments as tenured or tenure-track faculty. One of them must be a member of the graduate faculty of the IMSE department. The other can be from the IMSE department or a department other than IMSE.

Dissertation Proposal and Dissertation Research: Please refer to the Path to Degree (https://umdearborn.edu/cecs/graduate-programs/path-degree/) for the policies, procedures, and forms for the dissertation committee, dissertation proposal, dissertation, and final oral defense.

Dissertation Proposal Examination

The main objective of the dissertation proposal examination is to ensure sufficient strength and feasibility of the proposed research topic, as well as the suitability of the student's background and skills regarding the topic.

The examination consists of a written dissertation proposal and its open-to-the-public presentation by the student. The examination is conducted by the dissertation committee. As a rule, the dissertation committee continues overseeing the student's work to the stage of the final dissertation defense.

Dissertation

After passing the dissertation proposal examination, the student may proceed with the dissertation research and the writing of the dissertation. The dissertation should document the original contributions made by the candidate as a result of independent research. This research work should be of archival quality. In advance of graduation, all members of the student's dissertation committee must approve the dissertation. To obtain this approval a student must submit a written copy of the dissertation to the dissertation committee and defend the research work at a final oral examination open to other faculty, students, and the interested public. Students must be registered for IMSE 990 the full spring/summer term if defending the dissertation after May during the spring/summer term.

Students are expected to complete the degree within two years of passing the dissertation proposal exam, but no more than seven years from the date of the first enrollment in the Ph.D. ISE program. The Ph.D. ISE committee conducts annual reviews to evaluate progress toward degree completion. Students defending the dissertation must be registered in the 990 Dissertation Research course.

Dissertation Research Requirement

- At least 24 credit hours of doctoral research credit must be completed before graduation.
  - Students who have completed the coursework requirements but have not reached the candidacy status should register for IMSE 980 (Pre-Candidacy Dissertation Research). A maximum of 12 credits may be completed in IMSE 980 Pre-Candidacy course.
  - Students who have achieved candidacy should register for 6 credits in IMSE 990 (Doctoral Dissertation Research).

Note that the actual completion of the dissertation project is likely to take several years at full-time enrollment and, thus, require more than the minimum number of credit hours.

Final Oral Defense:

Upon completion of the dissertation work, the student initiates the last step toward the degree—the dissertation defense process. The process follows the official guidelines and consists of the following main stages:

1. Preparation of a written dissertation formatted in accordance with the guidelines,
2. Pre-Defense meetings with the members of the program committee,
3. Written evaluations of the dissertation by the dissertation committee members presented to the Ph.D. program committee,
4. The Oral Defense of the dissertation consisting of two parts:
   - Public seminar and open question session held by the student
   - Private deliberations by the committee,
5. Final oral examination report and certificate of approval prepared by the dissertation committee and submitted to the Ph.D. program committee.
6. Post-Defense meeting with the CECS Graduate Education Office
Information Systems and Technology

The program may be completed entirely on campus, entirely online, or through a combination of on-campus and online courses.

Admission

Bachelor’s degree in engineering, a physical science, computer science, applied mathematics, business administration, or liberal arts with a minimum cumulative GPA of 3.0 or higher

Prerequisite Courses

• A course in Data Structures (IMSE 350/351, CIS 350/352, or equivalent)
• A course in computer programming, such as C++, Java/JavaScript, C#, or Python (IMSE 255, IMSE/CIS 150/200, CIS 205 or equivalent)

These course requirements may be completed after admission into the program.

The MS in IS&T program is a response to the need of students who want to complement, extend, and integrate technical and organizational knowledge on information systems. The program designed meet the need of the industry to incorporate enterprise wide information systems to be competitive in the global market place. Students who possess either technical knowledge about computers and information systems, or knowledge about information needs and information system requirements in organizations, but who want to expand their knowledge in a constructive way, constitute an important part of the intended audience.

The degree aims to achieve simultaneously the following educational goals.

1. Provide access to advances in the information systems field.
2. Provide necessary skills to effectively integrate information technology in organizations.
3. Provide training in specialized areas of information systems and technology.

Degree Requirements

The degree MS in IS&T requires a minimum of 30 credit hours.

Minimum Grade Requirement in addition to maintaining a minimum cumulative GPA of 3.0 or higher every semester:
1. Courses in which grades of C- or below are earned cannot be used to fulfill degree requirements.
2. No more than two courses in which grades of B- or below are earned can be used to fulfill degree requirements.

A minimum of a 3.0 cumulative GPA or higher is required at the time of graduation.

Advanced Standing

Up to six graduate credit hours (grade of B or better) may be transferred from another accredited institution.

Students may transfer up to one-half (1/2) the minimum number of credit hours required for their master’s or professional degree from another University of Michigan program.

Graduate Academic Policies can be found below.

Concentration Area 7: Individual Concentration
Select 5 courses from Areas 1 through 6. Requires Advisor’s approval.

Electives (6 credit hours)
Other CIS, ECE, IMSE and business graduate courses may be taken per advisor approval.

A thesis may be substituted for six hours of electives, on approval by the program director.

Information Systems Engineering

About the Program

Rapid changes in technology and increasing technological sophistication needed to maintain global competitiveness are causing information technology industries to encourage their workforce to advance its knowledge, skills, and expertise through graduate-level education and training. For many engineers, this means education beyond the master’s degree. More specifically, the kind of advanced knowledge needed in niche or specialized areas of emerging technologies can only be offered through doctoral programs that not only allow engineers to acquire and strengthen their own knowledge but also educate them to become technical leaders and technology developers in their own companies. The Ph.D. in Information Systems Engineering is designed to meet the need of engineers who want to be the technology leaders of the future. It is a 50 credit hour postgraduate program and can be pursued either on a full-time or a part-time basis. The classes are held in the evenings for the convenience of working engineers. The areas of specialization available in the program include information management and knowledge engineering, computer networks and computer architecture, intelligent systems and human/computer interaction, graphics and visualization, supply chain informatics, web services and security.

Admission Requirements

The following are the requirements for admission in the Ph.D. program.

1. A bachelor’s degree in engineering or computer science from an accredited program with an expected GPA of 3 or higher on a 4-point scale.
2. A master’s degree in engineering or computer science from an accredited program with an expected GPA of 3.5 or higher on a 4-point scale or 6.5 or higher on a 9-point scale
3. GRE taken within 5 years prior to admission
4. TOEFL for international students (minimum score of 84 in internet-based test)
5. At least one advanced mathematics course at the master’s level (if the student has not taken an advanced math course at the
master's level, an appropriate math course will be recommended as a prerequisite. This course must be successfully completed within the first year of the program.)

6. Three recommendation letters from faculty and/or employer (The recommendation letters must be on official letterhead and indicate the student's research potential.) Each recommender must also complete the Recommendation for Admission form.

7. A Statement of Purpose describing academic and research background, career goals and educational objectives and research interest

Graduation Requirements
A student must complete a minimum of 50 credit hours (beyond master's) for graduation. Out of the 50 credit hours, 24 credit hours will be based on coursework (beyond master's) and 26 credit hours will be based on Ph.D. dissertation.

The student must maintain a GPA of 3.2 out of 4.0 for good academic standing and graduation. Only one B- and no C grade will be allowed in the program.

Qualifying Examination
- The qualifying examination must be taken within 24 months after admission in the program. This will typically occur after finishing the core course, at least two specialization courses, and two courses outside the specialization area.
- The student must be in good academic standing at the time of the qualifying examination.
- The student must select three areas for the qualifying examination and declare one of the areas as the specialization area typically the area of the student's research.
- There will be two examiners in the specialization area (in the area of student's research). The other two areas will be minor areas (of the student's choice, but approved by the Doctoral Program Council) and will have one examiner each.
- The examination in the specialization area will include both written and oral tests. Examination in the minor areas will be written only.
- The student will select the examination areas, which must then be approved by the Doctoral Program Council. The Doctoral Program Council will assign the examiners for each of the areas selected.
- The Doctoral Program Council will review and approve the examination results.
- A student failing the qualifying examination the first time will be allowed to take it again; however, if the student fails it the second time, he/she will be terminated from the program.

Preliminary Examination
- The Doctoral Program Council must approve the dissertation topic, the proposal outline, and the dissertation committee prior to the preliminary examination.
- The student will make an open oral presentation, which has been prepared in consultation with the dissertation advisor, in defense of the proposal.

Candidacy
A student will become a candidate for the Ph.D. degree after completing the required coursework with a minimum GPA 3.2 out of 4.0 and after passing both the qualifying and the preliminary examinations. At this point, the student will be allowed to register for the dissertation work.

Dissertation Committee
The dissertation committee will include a minimum of four faculty members. One of these members must be from outside the College of Engineering and Computer Science. One of the faculty members will be the dissertation advisor and will serve as the chair of the dissertation committee. Depending on the dissertation topic, other members, including a qualified industry member, may be included in the dissertation committee. The industry member's curriculum vitae must be submitted to the Doctoral Program Council for approval.

Dissertation and Dissertation Defense
The dissertation must include original research work of archival quality. The student must submit a written copy of the dissertation to the dissertation committee for approval. The work must be defended at a final oral examination open to other faculty, students, and the interested public.

Other Requirements
While there are no formal residency requirements for the part time students, it is expected that each Ph.D. student will spend sufficient time on campus for conducting research, interacting with other graduate students, and fostering intellectual activities. All students in the Ph.D. program are required to attend graduate seminars in the College of Engineering and Computer Science. After attaining candidacy, each Ph.D. student is required to present at least one seminar per year on his/her research until the dissertation is completed. All Ph.D. students are required to attend these research seminars. After attaining candidacy, each Ph.D. student is expected to spend at least 12 hours per week on campus working on his/her research and discussing research issues with faculty and fellow students.

Course Curriculum
The course curriculum will consist of one required core course, four specialization courses, three elective courses, and a seminar course. Each student must submit a course plan with specified specialization area within one semester after starting the program.

Core Course (3 credit hours)
The student must complete the core course titled "Information Engineering."

Specialization Courses (12 credit hours)
Four courses must be selected in an area of concentration with prior approval from the director of the doctoral program. At least two of these concentration courses must be 600-level courses.

Elective Courses (9 credit hours)
The student must take three elective courses, at least two of which must be from outside the student's concentration area.

Seminar Course (0 credit hours)
The student must register for and participate in the seminar course each semester after attaining candidacy and until the completion of the dissertation. The seminar course will be of pass/fail type and will not carry any credits.
Dissertation (26 credit hours)
The dissertation will be of pass/fail type and will not carry any letter grades.

Ph.D.-Level Courses
All Ph.D. courses must be 500 level and above. However, not all 500-level courses may be accepted in the Ph.D. program.

Transfer Credit
Up to 9 credit hours for courses from another university will be accepted as transfer credits; however, the Doctoral Program Council must approve the acceptance of transfer credits.

Additional Information
Additional information on Ph.D. programs can be requested from:

The Office of Interdisciplinary Programs,
College of Engineering and Computer Science,
University of Michigan-Dearborn, 116 MSEL,
4901 Evergreen Road,
Dearborn, MI 48128-2406

Intelligent Systems in Engineering Applications
This certificate program introduces students to the core concepts of intelligent systems and a broad range of techniques for building, testing and evaluating intelligent systems. Topics include: intelligent system design, training and evaluation, decision trees, rule based systems, Bayesian learning, Support Vector Machines, neural network systems, and fuzzy systems. A variety of application cases will be studied in the courses under this program. (12 credits hours)

Certificate offered on Campus and via Distance Learning

A thesis may be submitted in lieu for six hours of electives, on approval by the program director. The thesis work may be a company project if it meets certain requirements.

**Mechanical Engineering**

A candidate for the Master of Science in Engineering (Mechanical Engineering) must meet the requirements for the Bachelor of Science in Engineering (Mechanical Engineering) degree at this campus or the essential equivalent to these requirements. The candidate must then complete at least 30 credit hours of graduate work approved by the program advisor/graduate committee with an average grade of at least B covering all courses elected. These 30 credit hours must include two graduate-level cognate courses for a minimum of three credit hours each in a department other than mechanical engineering, with the option to take a third non-ME cognate in an engineering field. Students are not permitted to elect more than three courses outside mechanical engineering.

Students who have not fulfilled the requirements of the bachelor’s degree in mechanical engineering should communicate with the department graduate committee regarding the requirements to be met.

interfaces between the science of mechanical engineering and other government. The doctoral program has a strong orientation toward the cutting edge technologies while working in industry, academia, and field, educate future generations, and play leading roles in developing who will conduct original and innovative research in the engineering University of Michigan-Dearborn educates and trains talented students required to take for the bachelor's degree or for courses required in the undertake the advanced courses. In general, the applicants must have completed preparation equivalent to the undergraduate degree requirements in this department and that they are prepared to they have completed preparation equivalent to the undergraduate In order to be admitted as an applicant for the master's degree, Students must earn a B or better in every graduate course to be credited toward the degree requirements. However, a maximum of one grade of B- will be accepted. In addition, students must maintain a cumulative GPA of 3.0 or higher. In order to be admitted as an applicant for the master's degree, students must satisfy the graduate committee of the department that they have completed preparation equivalent to the undergraduate degree requirements in this department and that they are prepared to undertake the advanced courses. In general, the applicants must have maintained B averages as undergraduates. Students will not be given graduate credit for courses equivalent to any which they have been required to take for the bachelor's degree or for courses required in the undergraduate curriculum of this department.

Mechanical Sciences and Engineering

The Ph.D. program in Mechanical Sciences and Engineering at the University of Michigan-Dearborn educates and trains talented students who will conduct original and innovative research in the engineering field, educate future generations, and play leading roles in developing cutting edge technologies while working in industry, academia, and government. The doctoral program has a strong orientation toward the interfaces between the science of mechanical engineering and other areas. In addition to the core mechanical engineering subfields, such as mechanical and thermo-fluid sciences, the program's areas of research training include the emerging fields in which mechanical engineering intersects with the materials sciences, bioengineering, automotive engineering, optical engineering, and advanced energy technologies.

The Ph.D. program is highly selective and offers admission to exceptional students who have completed a Bachelor's or Master's degree in engineering, applied math, computer science, or physical science.

All students admitted for full-time study receive a competitive financial aid package in the form of an appointment as a graduate student instructor (GSI) or research assistant (GSRA).

All admissions are for the Fall term only.

If you have additional questions, please contact the program chair: D (https://umdearborn.edu/users/zikanov/). Dohoy Jung (https://umdearborn.edu/users/dohoy/).

The specific learning goals of the program is that the graduates will have:

- A strong foundation in engineering science and deep knowledge of the chosen field
- The ability to conduct high-quality original research in the broad field of Mechanical Sciences and Engineering
- The ability to communicate and disseminate their knowledge to a broader audience
- Preparedness for varied responsibilities and opportunities of careers in industrial research and academia.

Ph.D. in Mechanical Sciences and Engineering

The MSE Ph.D. degree requirements include a minimum of 36 credits of coursework and 24 credits hours of dissertation for Ph.D. students. The implementation of the requirements is, by necessity, different for the three major student profiles:

1. Direct Ph.D. students, who are admitted with a Bachelor's degree in mechanical engineering or a closely related field, but without a relevant Master's degree. Students of this group must complete no fewer than 36 credit hours of coursework, 30 of which allow them to earn an embedded MSE in mechanical engineering (https://umdearborn.edu/cecs/departments/mechanical-engineering/graduate-programs/mse-mechanical-engineering/) or bioengineering (https://umdearborn.edu/cecs/departments/mechanical-engineering/graduate-programs/mse-bioengineering/).

2. Students admitted with a relevant Master's degree (in mechanical engineering or a closely related field) from one of the Rackham school programs. These students must complete no fewer than 6 credit hours of coursework.

3. Students admitted with a relevant non-Rackham (i.e., from outside the University of Michigan system) Master's degree. These students must satisfy the requirement of coursework in residence by completing no fewer than 18 credit hours of coursework.

For students entering with insufficient background in mechanical engineering and essential sciences, such as mathematics, physics, and chemistry, remedial coursework is assigned, which does not count toward the degree requirements.
The completed coursework must satisfy the minimum degree requirements specified below. Only letter-graded courses at the 500+ level will be allowed.

Each student is guided by a research advisor and a dissertation committee and must pass the following major milestones:

- Completion of required coursework
- Qualifying examination consisting of two parts:
  - Curriculum examination
  - Research fundamentals examination
- Dissertation proposal examination and advancement to candidacy
- Preparation of a written dissertation and its oral defense

**Degree Requirements**

For students admitted on the basis of a Master’s degree, some of the requirements can be satisfied by the coursework completed during the Master’s studies. This should be approved by the Ph.D. program committee and does not reduce the required total number of credits within the program.

**GPA Requirement**

To advance to candidacy, a student must have a cumulative GPA (Grade Point Average) of 3.5 or above on the 4.0-scale. Courses completed with a grade lower than 3.3 (B+) do not count toward the degree requirements.

**Breadth Requirement**

For direct Ph.D. students, the courses must be selected so that, in addition to satisfying the Ph.D. program requirements, they satisfy the requirements of one of the two MSE degrees offered by the ME department: MSE in Mechanical Engineering (http://catalog.umich.edu/graduate/college-engineering-computer-science/mechanical-engineering/) or MSE in Bioengineering (http://catalog.umich.edu/graduate/college-engineering-computer-science/bioengineering/).

**Depth Requirement**

A least two courses (6 credit hours) must be in a sequence, i.e., belong to the same narrow field of studies (presumably the field of the student’s research work) and include a higher-level course that continues the ideas of a lower-level course.

**Cognate Requirement**

At least 4 credit hours of coursework must be outside the mechanical engineering area. The second mathematics class (see below) can be used to satisfy all or part of this requirement.

Other ways of satisfying this requirement with some restrictions are:

- Engineering courses of 500+ level in a discipline other than mechanical engineering or the discipline of the student’s studies
- Other 500+ level courses, if approved by the program committee
- Completion of a University of Michigan Master’s degree, which includes a cognate component
- Completion of a relevant Master’s degree from another university which had coursework that meets the expectations of the program cognate requirement, without transferring the credit to the transcript

No more than 6 credit hours of cognate courses can be counted towards the degree requirement.

**Directed Study Requirement**

At least 6 credit hours of research coursework, guided by the student’s research advisor, must be completed within the first two years of enrollment in the program. ME 600 (Study or Research in Selected ME Topics), ME 601 (Experimental Research in Mechanical Engineering), ME 602 (Guided Study in Mechanical Engineering), or ME 699 (Master’s Thesis*) can be used for this purpose.

<tr>
<td>ME 699</td>
<td>Master’s Thesis</td>
<td>1-6</td>
</tr>
</tbody>
</table>

* Can be used by direct Ph.D. students only.

**Elective Requirement**

The remaining coursework must be in graduate-level engineering, mathematics, or natural sciences courses.

**Methodology Seminar**

This course must be completed within the first two semesters of enrollment in the program. The seminar includes required training in responsible conduct of research and scholarship. The seminar carries no credit hours. Passing is based on participation and attendance, with the exception of the responsible conduct of a research and scholarship training module, for which a test is required.

**Ph.D. Research Seminar**

Attendance at this seminar is required for all Ph.D. students, including those at the pre-candidacy level, during each semester they are enrolled in the program. The seminar carries no credit hours and is graded pass/fail based on attendance and participation.

**Advanced Mathematics Requirement**

ME 518 (Advanced Engineering Analysis, 3 credit hours) must be taken within the first two semesters of enrollment in the program. A second graduate-level mathematics or mathematics-related class of no fewer than 3 credit hours must also be taken.

The examining committee will test such aspects of the student's preparedness as:

- Conducting independent research in the selected area
- Specifically, the student has the necessary educational background and skills

The examination will take place at any time during the first three semesters of enrollment in the program. The principal objective will be to ensure the student has good understanding of the fundamentals of mechanical sciences and engineering in the broad area of their research. The examination committee will be selected from the graduate faculty by the program committee. The examination must be completed within the first three years for part-time students and within the following time limits for full-time students:

- More than 3.7 (A-).
- Each course must be passed by the student with a grade no lower than 3.7 (A-).
- Area course).

Qualifying Examination
The qualifying examination consists of two parts to be taken in sequence:

1. A set of three mechanical engineering graduate-level courses is selected by the student during their first semester in the program. The list is then approved by the Ph.D. program committee. One course should be in the area of the student’s research program (Research Area course).
2. Each course must be passed by the student with a grade no lower than 3.7 (A-).

Oral Qualifying Examination
This oral examination on the selected Research Area course will follow a successfully passed curriculum examination and, as a rule, occur in the same or following semester. The principal objective will be to ensure that a student has the necessary educational background and skills to conduct independent research in the selected area. Specifically, the examiners will test such aspects of the student's preparedness as:

- Depth and clarity of understanding in the selected area
- Ability to make independent logical conclusions
Plastic and Composite Materials

Students in this certificate program will be exposed to both design and manufacturing considerations of plastics and composite materials. Particular emphasis will be given to the materials for automotive applications. Processes, properties and design of the materials will be examined, and characteristics of the materials manufactured from different processes will be discussed. (12 credit hours)

Program and Project Management

The program may be completed entirely on campus, entirely online, or through a combination of on-campus and online courses.

Admission

Admission to the program as a regular student requires a BS in engineering, business, economics, math, computer science or other physical sciences and at least two years of practical work experience. The prerequisite for the program is the course work in probability and statistics that can be satisfied by completing IMSE 510 as part of approved electives within the first two semesters of the admission into the program. Two letters of recommendation, with at least one from a person familiar with the candidate's academic performance, are also required. The undergraduate cumulative GPA is a large factor in master's admission consideration and typically 3.0 (on a scale of 4.0) is expected.

Advanced Standing

Up to six graduate credit hours (grade of B or better) may be transferred from another accredited institution.

Students may transfer up to one-half (1/2) the minimum number of credit hours required for their master's or professional degree from another University of Michigan program.

Graduate Academic Policies can be found below:

http://catalog.umd.umich.edu/academic-policies-graduate/

Degree Requirements

The Master of Science in Program and Project Management requires a minimum of 30 graduate credit hours.

Minimum Grade Requirement in addition to maintaining a minimum cumulative GPA of 3.0 or higher every semester:

1. Courses in which grades of C- or below are earned cannot be used to fulfill degree requirements.

2. No more than two courses in which grades of B- or below are earned can be used to fulfill degree requirements.

A minimum of a 3.0 cumulative GPA or higher is required at the time of graduation.

Program Requirements

The program of study must satisfy the following distribution and course requirements:

<table>

**Robotics Engineering**

The ECE Department offers a program totaling 30 credit hours, leading to the degree of Master of Science in Engineering (Robotics Engineering). Students desiring admission to the program must have earned a Bachelor's degree in Robotics, Electrical, Computer, Mechanical, Industrial and Manufacturing Systems Engineering or Computer Science with an overall GPA of 3.0 or higher. Students whose undergraduate background is in other fields may be given conditional admission and would be required to take preparatory courses in the aforementioned fields as described in section V. Students admitted to the program are required to take courses as specified below. Students must earn a B or better in every graduate course to be credited toward the degree requirements. However, a maximum of two grades of B- will be accepted. In addition, students must maintain a cumulative GPA of 3.0 or higher in every semester. Students may be placed on probation, if their cumulative GPA falls below 3.0. Finally, a cumulative GPA of 3.0 or higher is required, in order to be eligible to receive the MSE (RE) degree.
Professional Electives
Select six credit hours

Cognates
Select 4 to 6 credit hours

Professional Electives
Students may complete the professional elective in several ways: (1) Elect the thesis ECE 699 (6 credits) to work under the supervision of a faculty advisor; (2) Take directed study by ECE 591 (3 credits) and another RE course at graduate level, (3) take another two RE courses from the list above.

Cognate Courses
Students should select a minimum of 4 and a maximum of 6 credit hours of courses from other disciplines. Some courses from outside ECE may not meet cognate requirement. Please check with the ECE Department prior to registering.

Preparatory Courses
Students with inadequate background in Robotics, Electrical, or Computer Engineering may be required to meet with the department graduate advisor to determine the need for preparatory courses.

For further information please contact:
Department of Electrical and Computer Engineering
University of Michigan-Dearborn, 4901 Evergreen Road
Room 206 ELB, Dearborn, MI 48128-2406
Tel: 313-593-5420 Fax: 313-583-6336
E-mail: umd-ecegrad@umich.edu

Software Engineering
This degree program is available both on campus and online.

Admission
Applicants for the MS in Software Engineering are required to meet the following requirements:

1. A bachelor’s degree from an accredited institution with a grade point average of B or better. An applicant with a lower GPA may be granted conditional. Preference will be given to applicants with backgrounds in computing, engineering, mathematics, or science.

2. Satisfactory completion of the following:
   a. Calculus I & II
   b. One course in probability and statistics or linear algebra
   c. Programming Language (Preferably C/C++ I & II)
   d. One course in data structures with algorithm analysis
   e. One course in microprocessors
   f. One course in computer architecture
   g. One course in operating systems

Note: Students may be admitted conditionally to make up deficiencies in 2(A-G), above. The software engineering prerequisites may be completed after admission into the program on a “conditional lack of preparation” basis or substituted by two or more years of full-time professional experience in sizeable software development projects. The program committee will determine any decision on substitutions. The applicant will be required to complete the appropriate courses within two years from the date of entrance. Prerequisite courses will not earn credit towards the MS – Software Engineering degree.

3. Two letters of recommendation, with at least one from a person familiar with the candidate’s academic performance, are required. Copies of the applicant’s undergraduate transcripts and degree must be submitted.

Degree Requirements
The MS degree in Software Engineering is a 30-credit hour graduate program. Students admitted to the program are required to complete the approved graduate courses with an average of B or better. The program of study consists of core courses, elective concentrations, a thesis/project requirement (part of which may be satisfied by additional coursework), and electives.

1 Please contact the Computer and Information Science Department about the policy on the minimum grade for a course to satisfy graduation requirements.

Advanced Standing
Up to six graduate credit hours (grade of B or better) may be transferred from another accredited institution. Students may transfer up to one-half (1/2) the minimum number of credit hours required for their master’s or professional degree from University of Michigan campuses (including Dearborn, Ann Arbor, Flint).

A student is expected to complete all work within five years from the date of first enrollment in the master’s program. A student who fails to complete requirements within five years may be withdrawn and required to apply for readmission. Students exceeding this limit must submit a petition (https://umdearborn.edu/students/academic-advising/student-petitions/) requesting additional time to complete the program. Petitions must describe in detail the amount of work remaining and a timeline for completion. You can review this policy and more on the Graduate Academic Policies page: http://catalog.umich.edu/academic-policies-graduate/

**Application Courses**

Choose three courses from one of the following application areas:

**Web Engineering:**
- CIS 525 | Web Technology
- CIS 534 | Semantic Web
- CIS 536 | Text Mining and Information Retrieval
- CIS 540 | Foundation of Information Security
- CIS 544 | Computer and Network Security
- CIS 549 | Software Security
- CIS 559 | Principles of Social Network Science
- CIS 562 | Web Information Management
- CIS 571 | Web Services
- CIS 577 | S/W User Interface Dsgn&Analys
- CIS 580 | Data Analytics in Software Engineering
- CIS 678 | Research Advances in Software Engineering
- ECE 528 | Cloud Computing
- ECE 570 | Computer Networks

**Game Engineering:**
- CIS 515 | Computer Graphics
- CIS 552 | Information Visualization and Virtualization
- CIS 577 | S/W User Interface Dsgn&Analys
- CIS 579 | Artificial Intelligence
- CIS 580 | Data Analytics in Software Engineering
- CIS 587 | Computer Game Design and Implementation
- CIS 588 | Computer Game Design II
- CIS 652 | Advanced Information Visualization and Virtualization
- CIS 678 | Research Advances in Software Engineering
- ECE 524 | Interactive Media
- ECE 579 | Intelligent Systems
- ECE 5251 | MM Design Tools I
- ECE 5252 | MM Design Tools II

**Data Engineering and Analytics:**
- CIS 540 | Foundation of Information Security
- CIS 545 | Data Security and Privacy
- CIS 549 | Software Security
- CIS 556 | Database Systems
- CIS 5570 | Introduction to Big Data
- CIS 562 | Web Information Management
- CIS 568/ | Data Mining
- ECE 537 | Information Engineering
- CIS 579 | Artificial Intelligence
- CIS 5700 | Advanced Data Mining
- CIS 580 | Data Analytics in Software Engineering
- CIS 585 | Advanced Artificial Intelligence
- CIS 586 | Advanced Data Management
- CIS 658 | Research Advances in Data Management
- CIS 678 | Research Advances in Software Engineering
- ECE 525 | Multimedia Data Stor & Retr
- ECE 576 | Information Engineering
- ECE 579 | Intelligent Systems

**Information and Knowledge Engineering:**
- CIS 511 | Natural Language Processing
- CIS 540 | Foundation of Information Security
- CIS 549 | Software Security
- CIS 5570 | Introduction to Big Data
- CIS 559 | Principles of Social Network Science
- CIS 568/ | Data Mining
- ECE 537 | Computer Networks
- CIS 5700 | Advanced Data Mining
- CIS 574 | Compiler Design
- CIS 579 | Artificial Intelligence
- CIS 580 | Data Analytics in Software Engineering
- CIS 581 | Computational Learning
- CIS 585 | Advanced Artificial Intelligence
- CIS 590K | Selected Topic: Deep Learning
- CIS 578 | Research Advances in Software Engineering
- CIS 679 | Research Advances in Computational Game Theory and Economics
- ECE 5251 | MM Design Tools I
- ECE 527 | Multimedia Secur & Forensics
- ECE 531 | Intelligent Vehicle Systems
- ECE 537 | Data Mining
- ECE 552 | Fuzzy Systems
- ECE 576 | Information Engineering
- ECE 577 | Engineering in Virtual World
- ECE 579 | Intelligent Systems
- ECE 583 | Artificial Neural Networks
- ECE 588 | Robot Vision

**Mobile and Cloud Computing:**
- CIS 535 | Wireless Technologies and Pervasive Computing
- CIS 537 | Advanced Networking and Distributed Systems
- CIS 546 | Security and Privacy in Wireless Networks
- CIS 548 | Security and Privacy in Cloud Computing
- CIS 550 | Object-Oriented Programming and Its Applications
- CIS 590J | Selected Topic: Edge Computing
- CIS 647 | Research Advances in Networking and Distributed Systems
- CIS 676 | Soft Arch Des & Analysis
- ECE 528 | Cloud Computing
- ECE 528 | Cloud Computing
- ECE 535 | Mob Dev & Ubiqys Comp Sys
- ECE 570 | Computer Networks
- ECE 5701 | Intro to Wireless Comm

**Embedded Systems**
- CIS 525 | Web Technology
- CIS 527 | Computer Networks
- CIS 535 | Wireless Technologies and Pervasive Computing
- CIS 537 | Advanced Networking and Distributed Systems
- CIS 546 | Security and Privacy in Wireless Networks
- CIS 569 | Wireless Sensor Networks
- ECE 505 | Intro to Embedded Systems
- ECE 535 | Mob Dev & Ubiqys Comp Sys
- ECE 5541 | Embedded Networks
A student may elect the application area of his or her choice from CIS or ECE courses with the approval of the advisor.

A student must choose one of the two options:

i. **Project:** Students desiring to obtain project experience are encouraged to elect the directed studies ECE 591/CIS 591 (3 credit hours), or Project Course ECE 695/CIS 695 (3 credit hours) to work under the supervision of a faculty advisor, and take one additional 3-credit course listed in Sections I and II, or any other CIS/ECE course related to the students’ project and approved by the graduate program advisor.

ii. **Thesis:** Students desiring to obtain research experience are encouraged to elect the thesis ECE 699/CIS 699 (6 hours) and work under the supervision of a faculty advisor.

**Master’s Thesis Committee**

A Master’s thesis committee consists of three full-time CIS or ECE faculty members, one of whom is the thesis advisor and requires the approval of the Software Engineering graduate committee. When deemed appropriate, the chair of the graduate committee may request the presence of an additional member from outside CIS or ECE.

**Preparatory Courses**

Students with inadequate background in CIS or CE may be required to meet with the department graduate advisor to determine the need for preparatory courses and to determine what courses to take prior to consideration into the Masters program.

For further information contact:

Department of Computer and Information Science
University of Michigan-Dearborn, 4901 Evergreen Road
Room 105 CIS, Dearborn, MI 48128-2406
Tel: 313-436-9145 Fax: 313-593-4256
E-mail: umd-cis-office@umich.edu

Software Engineering provides a systematic, disciplined, and quantifiable approach to the development, operation, and maintenance of software. The program includes core engineering courses plus electives chosen from a graduate introduction to software engineering, software reliability, management, interface design, and case studies. (12 credit hours)

**Certificate offered on Campus and via Distance Learning**

- ECE 5831  Pat Rec & Neural Networks 3

**Systems Engineering**

The Systems Engineering program is designed for engineers and other professionals who are responsible for defining, planning, managing and supporting large integrated systems. The program consists of four graduate core courses and one graduate elective course.

The value of acquiring a systems engineering certificate includes:

- Formal recognition of the participant’s systems engineering capabilities
- Career advancement assistance
- A portable systems engineering designation that is recognizable across industries
- Professional development as a systems engineer, in addition to demonstrating a commitment to personal development
- The Systems Engineering certificate program also provides students with a strong foundation to pursue Project Management Professional® (PMP®) certification and/or the International Council on Systems Engineering (INCOSE) multi-level professional certification program.

(15 credit hours)

**Certificate available on Campus and via Distance Learning**

**Admission Requirements:** An undergraduate degree in engineering, business, a physical science, computer science, or applied mathematics, with a GPA of 3.0 or higher. A probability & statistics course is a prerequisite for this certification program.

### Vehicle Electronics and Controls

The increasing use of electrical systems and electronic sensors and devices in vehicles and automobiles has resulted in new developments in this field for vehicle application. With rapid progress in battery technology, it is envisaged that electric vehicles will become more affordable and more efficient. Electric drive control requires the use of power devices which are primarily high power electronic devices. Modern vehicles will rely on both analog and digital hardware for efficient operation of the vehicle. Engineers would be required to be well versed in the design of hybrid electrical and electronic systems.

The Vehicle Electronics certificate will introduce the participants to analog and digital electronics. Starting with simple diodes and rectifiers, students will be introduced to other solid state devices that are used in electronic circuits. Participants will learn the design of amplifiers, switches and other commonly used circuits. They will also receive instruction on digital logic and the use of microprocessors. Besides featuring hands-on laboratory practice, participants will be involved in several group design projects. (12 credit hours)

*Certificate offered on Campus and via Distance Learning*

### Coursework Requirements

Please choose four courses to complete the required 12 credit hours.

Courses A-Z

Accounting (ACC)

ACC 505  Devel & Interp Financial Info  3 Credit Hours
Students learn how financial information is developed, interpreted and utilized in business. This is accomplished by studying financial accounting tools and estimation methods used for interpretation and managers? decisions relating to investing, financing, and operating activities. Topics include financial information development and analysis, accounting estimation techniques, and cash flow analysis. Financial accounting methodology with respect to the sales and receivables cycle, inventory, property, plant and equipment, liabilities, corporate equity and initial public offerings, and investments in other corporate entities are studied. Cases requiring critical analysis and interpretation may be integrated throughout the course.
Restriction(s):
Can enroll if Class is Graduate

ACC 514  Financial Reporting  3 Credit Hours
This course covers detailed financial statements, the theoretical foundations behind those statements and how the various transactions are reported on those statements. These transactions include financing through various ownership and debt instruments, off-balance-sheet financing and leverage; investing in tangible and intangible operating assets; investing in financial instruments for return and risk management purposes; and investing in financial instruments to influence or control operations of other business units. Specifically, the course will review the accounting process and examine in detail the income statement, balance sheet and statement of cash flows including a study of the basics of revenue recognition, a detailed study of accounting for inventory, accounting for the life cycle of capital investments in non-current assets, various debt topics such as short term loans and payroll, as well as how companies account for long term debt and equity changes. These operating, investing and financing issues will be considered based on today's international business environment. (OC)
Prerequisite(s): ACC 505
Restriction(s):
Can enroll if Level is Rackham or Graduate

ACC 516  Advanced Accounting  3 Credit Hours
To study selected advanced accounting topics which may include partnerships, business combinations, consolidated financial statements, multinational accounting and reporting, accounting for financial distress situations and regulation of accounting by the SEC. Students will not receive credit for both ACC 416 and ACC 516.
Prerequisite(s): ACC 514
Restriction(s):
Can enroll if Program is

ACC 520  Comm for Acct and Tax Prof  3 Credit Hours
The ability to communicate effectively is an important skill for the tax professional. This course develops this important skill in tax compliance and tax planning settings through a series of case studies. Emphasis will be placed on effectively communicating technical aspects of the tax law to management, clients, and other professional tax situations. Students cannot receive credit for both ACC 630 and ACC 520.
Prerequisite(s): ACC 360
Restriction(s):
Can enroll if Class is Graduate

ACC 539  Not-for-Profit Accounting  3 Credit Hours
To study the principles and procedures of accounting for not-for-profit entities. Topics may include: state and local government financial accounting, financial accounting for selected other entities, managerial concepts and current issues. Student will not receive credit for both ACC 439 and ACC 539.
Prerequisite(s): ACC 505
Restriction(s):
Can enroll if Program is

ACC 555  Cost Management  3 Credit Hours
To introduce how cost and managerial accounting concepts and techniques can be applied to fully utilize information created by contemporary accounting information systems. The theoretical and empirical nature of cost management reports, their structures and contents, are emphasized with the goal of highlighting the relevance and limitations of this information in decision making. The course gives consideration to global and individual responsibility center performance by covering such topics as product costing, control standards, cost allocation, pricing, quality, short-term and long-term budgeting, and performance evaluation. In addition, the reciprocal roles of accounting and technology in enhancing efficiency and effectiveness benchmarks are investigated. Interwoven into course coverage are ethical, diversity, critical thinking, and global dimensions of business. This course also integrates emerging issues and techniques to assist managers and consultants in the accounting, finance, marketing, and human resources arenas.
Prerequisite(s): ACC 505
Restriction(s):
Can enroll if Class is Graduate

ACC 557  Auditing  3 Credit Hours
To study generally accepted auditing standards, internal control, principal audit objectives, the structure of audit programs, audit procedures, professional legal liability, ethical standards, statistical sampling techniques, the audit of EDP systems, auditors report and management letters. (OC)
Prerequisite(s): ACC 505
Restriction(s):
Can enroll if Level is Rackham or Graduate

ACC 560  Intro Federal Income Taxation  3 Credit Hours
Full Title: Introduction to Federal Income Taxation Survey analysis of the basic framework utilized in measuring and reporting taxable income of individuals and business entities including gross income, deductions, tax rates, credits, timing issues and procedural matters. (OC)
Prerequisite(s): ACC 505
Restriction(s):
Can enroll if Level is Rackham or Graduate
ACC 580 accounting information systems 3 credit hours
Accounting uses techniques to take raw data and convert it into information that is useful to managers and investors. But is it possible to convert data into information without knowing what it relates to, where and how it was gathered and what its limitations are? We will address these questions as we study accounting information systems. To begin, we focus on how data for typical business processes is captured and processed in a computerized accounting system using relational databases. We'll then learn how to describe an organization's accounting-related processes in a professionally rigorous way via documentation using tools used in the profession. We'll finish by learning how to analyze accounting processes to find control weaknesses in them that might allow them to generate unreliable data that could compromise the assets or liabilities of the firm or the decisions made by accountants, the managers they support or investors. (OC)
Prerequisite(s): ACC 505
Restriction(s):
Can enroll if Level is Rackham or Graduate

ACC 600 financial accounting theory 3 credit hours
This course provides an overview of 1) various approaches to accounting theory formulation (including traditional, regulatory, events, behavioral, information processing, predictive, and positive approaches), and 2) alternative asset valuation and income determination models (including historical cost, replacement cost, net realizable value, and present value models, along with the impacts of price level adjustments). Particular attention is directed at how these various approaches impact the state of the art of Accounting and how they influence the future evolution of Accounting. Additionally, the course provides for exploration and critical examination of the evolution and present state of the Financial Accounting Standards Board conceptual framework. The nature of the topics covered will enhance understanding of current and developing generally accepted accounting principles.
Prerequisite(s): ACC 356
Restriction(s):
Can enroll if Class is Graduate

ACC 601 information tech auditing 3 credit hours
With the increased capabilities of IT have come new risks for firms and or their auditors. Audit firms are finding that they can no longer audit ‘around the computer’. This requires CPAs to understand the types of risk arising in IT-based systems and consider their impact on a clients’ business and the audit. This course introduces you to these types of risk, the implications these risks have for the traditional audit and the other services public accountants provide to address IT-based risks. It is also a powerful tool that accountants and auditors must know how to harness. Students will become proficient in applying commonly used electronic audit tools to conduct computer-assisted audit techniques (CAATs).
Prerequisite(s): ACC 505 or ISM 525 or CIS 564
Restriction(s):
Can enroll if Class is Graduate

ACC 602 contemporary accounting issues 3 credit hours
This course provides in-depth exposure to emerging contemporary issues in accounting. Topics in the seminar change to reflect the most relevant professional issues. The issues chosen are designed to be not only timely but to also provide insight into emerging future areas of the profession. In addition to lecture material and readings, the lecturer may incorporate case material, research papers, and other teaching methods as appropriate.
Prerequisite(s): ACC 600 and ACC 601

ACC 603 controllership 3 credit hours
The nature of the control function in business corporations is the focus of this course. Thus, classes cover the characteristics of management planning and control in functional and divisional organizations, responsibility accounting and the role of efficiency and effectiveness in performance measurement. Coverage also extends to controllers' roles in strategic planning, programming, and budgeting, transfer pricing, and their behavioral, global, ethical, and technological dimensions. Class presentations employ case analysis and emphasize the qualitative nature of controllership.
Prerequisite(s): ACC 555
Restriction(s):
Can enroll if Class is Graduate

ACC 604 auditing & forensic examination 3 credit hours
To study forensic examination and investigation techniques including typical embezzlement and financial statement fraud scenarios, fraud risk factors, sources and uses of evidence, and interrogation and surveillance techniques. Other course topics may include auditing standards for private and public companies, expanding assurance services, advanced internal control testing, audit objectives and procedures, ethical standards, sampling techniques, auditor’s report, risk based auditing, and management letters. Special attention will be given to the changing role and services offered by internal and external auditors, auditor responsibility to the public, and the ability of the auditor to offer assurance. Prerequisites: Graduate standing.
Prerequisite(s): ACC 457 or ACC 557

ACC 605 international accounting 3 credit hours
To study selected topics in international accounting and taxation. The course will examine accounting principles and practices of the major world economies and consider issues typically encountered by U.S. corporations in accounting for and reporting the financial activities of foreign operations. Students will explore taxation of international operations and tax planning for the U.S. based multinational corporation.
Prerequisite(s): ACC 608 or ACC 356 or ACC 357 or ACC 358

ACC 608 financial statement analysis 3 credit hours
The objective of financial statement analysis is to examine the relationship between financial statement information and the measurement of firm value. The analysis merges actual firm value created by economic process and estimating firm value through accounting reporting methods. Students will develop tools to interpret financial statement information for use by investors, creditors, and other third party stakeholders. Topics include, but are not limited to, an overview of financial statements, basic financial analysis, profitability analysis and the quality of earnings, cash flow analysis, asset analysis, liability analysis, and valuation and equity analysis.
Prerequisite(s): ACC 505 and FIN 531*
Restriction(s):
Can enroll if Class is Graduate
ACC 614  Advanced Accounting II  3 Credit Hours
This course is intended to help students gain expertise in preparing financial statements for complex business organizations. Specific topics include: The preparation of segmental and consolidated financial statements. Intricate accounting issues associated with business combinations including but not limited to combinations at the date of acquisition and periods post acquisition. Analysis of inter-company transactions such as inventory and asset transfers between parent and subsidiary. Reporting for segments of a business as well as interim reporting. Reporting foreign exchange issues including inter-period reporting and financial statement translation. Analysis of firm issues related to SEC reporting, re-organization, bankruptcy and troubled debt restructuring. Understanding of issues associated with fair-value reporting. International reporting issues associated with all of the above, as well as other topics. (OC)
Prerequisite(s): ACC 516
Restriction(s):
Can enroll if Level is Rackham or Graduate

ACC 616  Corp Acts & Reacts & Firm Val  3 Credit Hours
This course will analyze various decisions made by the firm relating to its operations as well as environmental impacts on its operations. This analysis will focus on the interpretation or translation of these decisions and environmental impacts by the two main providers of estimates of the firm's economic value, its own financial statements and the stock market. The primary objective of this course is to illustrate how quickly, or slowly, firm decisions and environmental impacts are impounded into these estimates of firm value. Additionally, the need for both stock market participants and the accounting process to estimate the value of these events before all uncertainty concerning their actual economic impact of firm value can be known will be illustrated. Open only to MBA and dual MBA students.
Prerequisite(s): ACC 505 and FIN 531 and (DS 520 or IMSE 514)
Restriction(s):
Can enroll if Program is MBA-Business Administration, MBA/ISE-Management & ISE Dual, MBA/MHSA-Management & HSA Dual, MBA/ MSF-Management & Fin Dual, MBA/MSIS-Mgmt & Info Sys Dual, MBA-Business Admin (Web)

ACC 657  Adv Auditing & Assurance Serv  3 Credit Hours
Full Title: Advanced Auditing and Assurance Services Introduces students to advanced audit and assurance service practices, strategies, and techniques. Topics include audit strategy, fraud, internal and operation audits, auditor liability, issues in audit information technologies, and audit practice. (OC)
Prerequisite(s): ACC 557
Restriction(s):
Can enroll if Level is Rackham or Graduate

ACC 660  Advanced Federal Income Tax  3 Credit Hours
Full Title: Advanced Federal Income Taxation Survey analysis of federal tax law relating to the formation, operation, and liquidation of corporations, partnerships, and LLCs, including current distributions; and the election, operation, and termination of Subchapter S corporations. (OC)
Prerequisite(s): ACC 560
Restriction(s):
Can enroll if Level is Rackham or Graduate

African & African-American Studies (AAAS)
AAAS 503  Minority Groups  3 Credit Hours
The status of racial and ethnic minorities in the United States with particular reference to the social dynamics involved with regard to majority-minority relations. Topics of study include inequality, segregation, pluralism, the nature and causes of prejudice and discrimination and the impact that such patterns have upon American life. Additional reading assignments or projects will distinguish this course from its undergraduate version AAAS 403. Students cannot receive credit for both AAAS 403 and AAAS 503. (AY)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

AAAS 504  Dissing: Differ, Power, Discrim  3 Credit Hours
Have you ever been dissed? Why are some people targets of disrespect? This class examines the unequal distribution of power - social, economic, and political - in the United States and other countries that results in favor for privileged groups. We will examine a variety of institutional practices and individual beliefs that contribute to disrespect. We'll look at ways that beliefs and practices, like viewing inequality as consequence of a 'natural order', obscure the processes that create and sustain social discrimination. We will engage in the intellectual examination of systems, behaviors, and ideologies that maintain discrimination and the unequal distribution of power and resources. Students will not receive credit for both AAAS 404 and AAAS 504. This course is distinguished from its 400-level counterpart by the requirement of additional assignments, including a required additional paper.
Restriction(s):
Can enroll if Class is Graduate

AAAS 533  Race/Ethnic Health  3 Credit Hours
Full Course Title: Race, Ethnicity and Community Health This course provides a broad overview of health disparities in the United States, with a focus on the three types of social inequality -race (and nativity status), socioeconomic status (SES), and gender. Epidemiological issues, health behaviors, health care services, and health and social issues specific to various minority populations in the U.S. are covered. The underlying position of the course is that understanding groups that are at higher risk of developing poor health outcomes is crucial to developing better health care and health policy interventions. (OC)

AAAS 5401  Seminar: African Diaspora  3 Credit Hours
Research seminar on the history of the African Diaspora in the Atlantic World. This course covers examples of classic texts in the field, as well as significant new scholarship, with an emphasis on critical reading, analysis, and the development of an independent research project. Students gain a deeper understanding of the significance of the African Diaspora in the New World, derived from lectures and discussions providing an overview of this subject, as well as the micro views gleaned from sharing classroom presentation about students’ individual research topics. The graduate version of this course includes weightier readings and assignments, with a research paper for potential publication.
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if Level is Rackham or Graduate
AAAS 569 Contemp African American Lit 3 Credit Hours
An intensive study of major 20th century African American writers. Fiction, poetry, autobiography, and drama will be examined, but one genre will be stressed in any given term, e.g., the novel. Lectures will provide historical and biographical context for analysis and discussion of the works. (OC).
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)
Restriction(s):
Can enroll if Class is Graduate

AAAS 577 African American English 3 Credit Hours
An examination of the structure, history and use of African-American English. Topics will include the pronunciation, grammar and vocabulary of African-American English, theories of origin, linguistic repertoire and code-switching in African-American communities, the Ebonics controversy, and the role of this variety in education and identity formation. Additional reading assignments or projects will distinguish this course from its undergraduate version. Students cannot receive credit for both AAAS 477 and AAAS 577.
Prerequisite(s): LING 280 or LING 281 or LING 480 or LING 580
Restriction(s):
Can enroll if Class is Graduate

AAAS 591 Topics in African Diaspora 3 Credit Hours
This course deals with African Diasporan history from the 19th century to the present. The method is by definition cross-cultural and comparative, requiring that the works or figures under study represent a diversity of Diasporan nationalities and/or cultures. The course may focus on a wide range of topics. Students cannot receive credit for AAAS 491 and 591 when the topic title is the same.
Restriction(s):
Can enroll if Class is Graduate

Anthropology (ANTH)

ANTH 506 Culture and Sexuality 3 Credit Hours
The study of women, men, children, socialization practices, and the genesis of sex roles cross-culturally. Additionally, reading assignments or projects will distinguish this course from its undergraduate version ANTH 406. Students cannot receive credit for both ANTH 406 and ANTH 506. ANTH 101 recommended. (YR).
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Graduate

ANTH 509 Human Body, Growth and Health 3 Credit Hours
This course provides an advanced undergraduate introduction to the topic of human growth and shows how human growth can be a reliable measure of the psychological, social, economic and moral conditions of a society. A major theme will be the interplay of biology and culture in shaping the patterns of human growth and, consequently, the health of populations and individuals.
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Graduate

ANTH 515 Nutrition and Health 3 Credit Hours
The influence of nutrition on physical and mental development from conception to adulthood. Topics include: 1) definition and function of the essential nutrients for people, 2) basic principles of human growth and development, 3) the causes and consequences of under- and over-nutrition, 4) feeding practices for infants and children and the development of food habits, 5) nutrient and food problems in the local region and in global perspective. Additional reading assignments or projects will distinguish this course from its undergraduate version ANTH 415. Students cannot receive credit for both ANTH 415 and ANTH 515. (YR).
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Graduate

ANTH 520 Kinship and Marriage 3 Credit Hours
A study of the diversity of kinship and marriage systems, and of the history of kinship theory which has played a seminal role in the development of general anthropological theory. Additional reading assignments or projects will distinguish this course from its undergraduate version ANTH 420. Students cannot receive credit for both ANTH 420 and ANTH 520. (OC).
Prerequisite(s): ANTH 101 or ANTH 201
Restriction(s):
Can enroll if Class is Graduate

ANTH 521 Education and Culture 3 Credit Hours
How and where do people learn? Why are there schools, and how is schooling culturally organized? Why do school experiences tend to vary by "race", social class, and gender? What insights does anthropology bring to practical problems of learning and teaching? Additional reading assignments or projects will distinguish this course from its undergraduate version ANTH 421. Students cannot receive credit for both ANTH 421 and ANTH 521. (AY, YR).
Restriction(s):
Can enroll if Level is Rackham or Graduate

ANTH 525 Language and Society 3 Credit Hours
An examination of the social functions of speech through readings and exercises, emphasizing schools and other applied settings. Topics include ethnic and social class dialects, codeswitching, and the organization of conversation. Additional reading assignments or projects will distinguish this course from its undergraduate version ANTH 425. Students cannot receive credit for both ANTH 425 and ANTH 525. (OC).
Prerequisite(s): ANTH 101 or LING 280
Restriction(s):
Can enroll if Level is Rackham or Graduate

ANTH 530 Health, Culture and Medicine 3 Credit Hours
A comprehensive examination of how culture mediates processes of illness and healing. Comparative materials worldwide are examined and provide a context for an anthropological analysis of modern biomedicine. Special attention is given to psychosocial illnesses, culture-bound syndromes, and the role of meaning in sickness and curing. Admission to the Master of Science in Health Psychology Program or permission of instructor. (W).
Restriction(s):
Can enroll if Class is Graduate
ANTH 555  Immigrant Cultures and Gender  3 Credit Hours
The history and culture of immigration since 1850, including: 1) formation and perseverance of immigrant communities and interethnic boundaries; 2) relations between the homeland and the immigrant; and 3) impact of migration on family life and gender roles. Additional reading assignments or project will distinguish this course from its undergraduate version ANTH 455. Students cannot receive credit for both ANTH 455 and ANTH 555. ANTH 101 recommended. (OC).
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Graduate

ANTH 560  Economic Anthropology  3 Credit Hours
A comparative examination of the basis of political economy. Economic problems (the production and distribution of goods and services) will be considered in ecological, evolutionary, and political terms. The primary emphasis will be on traditional economies, on production and exchange at the household level, and on the effect of modern market systems on indigenous cultures. (OC).
Restriction(s):
Can enroll if Class is Graduate

ANTH 570  Doing Anthropology  3 Credit Hours
A practicum of anthropological theory and method, including ethnographic interviews and participant observation. Students will conduct field research and evaluate results with the help of classmates. Additional reading assignments or projects will distinguish this course from its undergraduate version ANTH 470. Students cannot receive credit for both ANTH 470 and ANTH 570. (YR).
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate

ANTH 577  Ethnographic Film  3 Credit Hours
This course will analyze ethnographic films as a medium for the construction of meaning in and across cultures. It will teach students to understand how the putatively "real" content of documentary film creates a mixture of fantasy, news and "science." Covering texts as varied as National Geographic photographic layouts, traditional ethnographic films made by anthropologists, and auto-ethnographies of cultural groups such as Native Americans and the Trobriand Islanders of Papua New Guinea, the course will aim to deconstruct such oppositions as indigene vs. alien, us vs. them, and self vs. other. Additional reading assignments or projects will distinguish this course from its undergraduate version ANTH 477. Students cannot receive credit for both ANTH 477 and ANTH 577. (AY).
Prerequisite(s): FILM 248 or HUM 248 or ANTH 101 or ENGL 248 or JASS 248
Restriction(s):
Can enroll if Class is Graduate

ANTH 581  Gender and Globalization  3 Credit Hours
Mass media, politics, and academia are full of references to globalization, and a future "world without borders." This interdisciplinary course considers the implication of globalization for women's lives, gender relations, and feminism. Topics covered include the global factory, cross-cultural consumption, human rights, global communications, economic restructuring, nationalism, and environmental challenges. Rather than survey international women's movements, this course explores how globalization reformulates identities and locations and the political possibilities they create. Students cannot receive credit for both ANTH 481 and ANTH 581. (AY).
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Arts, Sciences, and Letters

ANTH 582  Psychological Anthropology  3 Credit Hours
Cross-cultural comparison of theories of human nature, including psychoanalytic anthropology, culture-and-personality, and other theories from Western science, as well as non-Western theories about such concepts as the person, emotions, and mental illness. Additional reading assignments or projects will distinguish this course from its undergraduate version ANTH 482. Students cannot receive credit for both ANTH 482 and ANTH 582. ANTH 101 and PSYC 170 or 171 highly recommended. (YR).
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Graduate

ANTH 590  Topics in Anthropology  1 to 3 Credit Hours
Examination of problems and issues in selected areas of anthropology. Title in the Schedule of Classes will change according to content. Course may be repeated for credit when specific topic differs. (OC).

ANTH 598  Independent Study  1 to 6 Credit Hours
Readings or analytical assignments in Anthropology in accordance with the needs and interests of those enrolled and agreed upon by the student and instructor. (F, W, S).
Restriction(s):
Can enroll if Class is Graduate

ANTH 599  Readings in Anthropology  1 to 3 Credit Hours
For students desiring study not available in the regular course offerings. Additional reading assignments or projects will distinguish this course from its undergraduate version ANTH 499. Students cannot receive credit for both ANTH 499 and ANTH 599. (F, W, S).
Restriction(s):
Can enroll if Class is Graduate
Arab American Studies (AAST)

AAST 5676  Arab Americans Since 1890  3 Credit Hours
This course traces immigration from Syria, Lebanon and Palestine (Bilad al Sham) to the U.S. from the 1890's to the present. We begin by utilizing theories on immigration and ethnicity in order to understand patterns of settlement, work, and leisure, and examine the Arab Americans? religious life, press, and evaluate their membership in unions and political parties. Participants will gain knowledge of the immigrants? past achievements and more recent scholarship on their development in public and private spheres. The course includes activities in local institutions, researching archival material, and contact with community leaders. This course will provide knowledge of the historical roots of the Arab Americans? adjustment to life as U.S. citizens and will prepare the students for further inquiry. Graduate Students can expect to evaluate archival manuscript collections, lead class discussions and could engage original research.

Restriction(s):
Can enroll if Class is Graduate

AAST 5678  Middle Eastern Diasporas  3 Credit Hours
This course explores the diasporas of Arabs, Turks, Assyrians, and Iranians living in Europe and the Americas that have occurred since the 1880s. It pays careful attention to how "aspects of diaspora" shape, mimic, transact, and undermine the political and economic regimes of which they are part. The reception of Middle Eastern communities in different national contexts and historical periods receive special attention as do their adaptive strategies as religious, ethnic, gendered, and racialized minorities. Those enrolled in the graduate level of the course pursue additional readings and assignments.

Restriction(s):
Can enroll if Class is Graduate

AAST 573  Arab American Women Writers  3 Credit Hours
Examines the literary and cultural contributions of Arab and Arab American women novelists, poets, and artists to the development and consolidation of the cultures of understanding and coexistence; explores the tensions between citizenship and belonging, race and the politics of fear, gender and geographical mobility, and ethnic minorities and mainstream consciousness; discerns how Arab women writers and artists retool their various artistic endeavors to channel socio-political disenchantment, critique and civil disobedience; stresses how literary and artistic productions of heterogeneous number of Arab American women writers and artists can indeed foster alternative visions of socio-cultural coexistence, dialogue, and hospitality via artistic commitments to technical and stylistic experimentation and renovation.

AAST 590  Topics in Arab Amer Studies  3 Credit Hours
The content of this course will vary. All courses which will run under this number will cover Arab American issues. (OC)

Art History (ARTH)

ARTH 516  Earl Mod Jpn Paint&Wood Prnts  3 Credit Hours
Paintings and woodblock prints of the Edo/Tokugawa (1600-1868) and Meiji (1868-1912) periods are considered in light of competing developments that on the one hand looked to Japan's classical tradition and on the other to the influence of arts and artists from China and the West. Special attention is given to female artists and images of women. Students cannot receive credit for both ARTH/WGST ARTH 516 and ARTH/WGST ARTH 516. (AY).

Restriction(s):
Can enroll if Class is Graduate

ARTH 525  Women in Classical Antiquity  3 Credit Hours
This course examines the evidence for the lives of women in Greek, Etruscan, and Roman Antiquity, from the Bronze Age through the Imperial Period. Special emphasis will be placed on the archaeological evidence, especially works of art which illustrate women's lives and their relationships with men. Documents such as dedicatory and funerary inscriptions, the poetry of Sappho and Sulpicia, and selections from the writings of Homer, Hesiod, Aristotle, Pliny, Juvenal, and other ancient authors, will also be examined critically, particularly in relationship to the works of art. (AY)

Prerequisite(s): ARTH 101

Restriction(s):
Can enroll if Class is Graduate

ARTH 526  City of Ancient Rome  3 Credit Hours
This course will focus on the ancient city of Rome, from its foundation to its precipitous decline in the fifth century AD. It will explore the public art and architecture of the city, emphasizing the different types of evidence available (topography, architecture, sculpture, texts) for understanding the history, politics, religion, and urban development of Rome as well as the various historical and archaeological techniques used to analyze the evidence. Students cannot receive credit for both ARTH 426 and 526. (OC)

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or LIBS 560

Restriction(s):
Can enroll if Class is Graduate

ARTH 528  Roman Art and Memory  3 Credit Hours
In this course, we examine Roman art closely associated with personal commemoration and cultural memory, including portraiture, funerary monuments, imperial monuments, and public architecture. We explore these objects' relationship to Roman literary culture's theories of mnemotechnics, and in the social context of the Roman obsession with memory perpetuation. We also examine how art historians apply modern theories of collective and social memory in their scholarship on Roman art, creating new ways of understanding Roman sculpture, painting, and architecture. Finally, we investigate Roman spectacle and performance as a vehicle of cultural memory. Graduate students enrolled in this seminar will be exposed in greater depth to the theoretical and historiographical scholarship of cultural and collective memory, as well as to current topics in Roman art. Graduate students are responsible for additional reading assignments and more lengthy and substantial oral presentations and final papers, as outlined below. Students cannot earn credit for both ARTH 428 and ARTH/LIBS 528.

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106

Restriction(s):
Can enroll if Class is Graduate

ARTH 554  Rembrandt  3 Credit Hours
Rembrandt's paintings, drawings, and prints are considered in the full historical and cultural context of the Golden Age of the Northern Netherlands, a period of unprecedented wealth and cultural diversity. Special attention will be given to issues of style, iconography, biography, art criticism, gender, and artistic technique. (AY).

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103

Restriction(s):
Can enroll if Class is Graduate
ARTH 569  Collage, Montage, Assemblage  3 Credit Hours
Different conceptions of collage, montage, and assemblage have vitally shaped artistic practice in the twentieth century, perhaps even more so than the advent of modernist abstraction. The modern phenomenon of collecting, mixing, and sampling that permeates the last century up to and including the contemporary moment will be traced in the class across the thresholds of painting, sculpture, architecture, photography, and film. We will discuss a wide range of movements, genres, and styles (Cubism, Futurism, Surrealism, Dada, Weimar and Russian photomontage, Soviet film, found footage film, French decollage, postwar assemblage) and their relation to the ever-changing mass media, the urban, and the modernized, in short, the everyday. The last segment of the class addressed more recent interpretations of the collage paradigm, including installation art and digital applications. Student cannot receive credit for both ARTH 469 and ARTH 569.

Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate

Automotive Engineering (AENG)

AENG 500  Automobile: An Integrated Syst  3 Credit Hours
Factors external to engineering such as markets, financing, and sales; the customers and their perceptions as influenced by marketing and performance; volume markets; international. An abc of engineering factors in all the components and sub-systems areas and in the plant, labor, and supplies area. Vehicle characteristics and dynamic interactions.

Restriction(s):
Can enroll if Level is Rackham or Graduate
Can enroll if Major is Automotive Systems Engineering

AENG 502  Modeling of Automotive Systems  3 Credit Hours
This course will first introduce systems modeling approach and then develop mathematical models for ride, vibration, handling control, etc. of automobiles. The models will then be used to examine the design and performance of an automobile from a systems point of view. (F, YR).

Prerequisite(s): ME 265 or ME 345

Restriction(s):
Can enroll if Class is Graduate

AENG 505  Intro to Embedded Systems  3 Credit Hours
Introduction to modern digital computer logic. Numbers and coding systems; Boolean algebra with applications to logic systems; combinational and sequential logic design; examples of digital logic circuits; simple machine language programming; microprocessors-programming, input/output, interrupts, and system design. (Not open to students with EE degree.)

Restriction(s):
Can enroll if Level is Rackham or Graduate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Automotive Systems Engineering

AENG 510  Vehicle Electronics  3 Credit Hours
Semiconductor diodes, junction transistors, FETS, rectifiers and power supplies, small signal amplifiers, biasing considerations, gain-bandwidth limitations, circuits models, automotive applications and case studies. (Not open to students with EE degree.)

Prerequisite(s): ECE 305

Restriction(s):
Can enroll if Level is Rackham or Graduate
Can enroll if Major is Automotive Systems Engineering

AENG 545  Vehicle Ergonomics I  3 Credit Hours

Prerequisite(s): IMSE 442

Restriction(s):
Can enroll if Level is Rackham or Graduate
Can enroll if College is Engineering and Computer Science

AENG 546  Vehicle Ergonomics II  3 Credit Hours
This course covers advanced human factors engineering and ergonomics topics related to incorporation and integration of new display, information, lighting and sensor technologies to improve driver convenience, performance, safety, and to reduce driver distractions. The students will learn new evaluation methodologies, driver performance models, and use research equipment to measure driver performance, and evaluate usability issues. Some advanced topics to be covered include: driver workload, evaluation and design of new in-vehicle devices, advanced vehicle lighting, and design vision systems, models to predict and evaluate field of view, target detection, disability and discomfort glare, legibility, etc. Three lecture hours including laboratory projects and demonstrations. Prerequisite: Graduate standing. (W).

Prerequisite(s): AENG 545

Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate

AENG 547  Automotive Powertrains  3 Credit Hours
Topics in kinematics and dynamics including engine output and balance; mechanisms and machine theory. Force analysis and design of gears and shaft systems. Analysis of planetary gear trains. Design and analysis of automotive gear boxes.

Prerequisite(s): ME 265

Restriction(s):
Can enroll if Level is Rackham or Graduate
Can enroll if College is Engineering and Computer Science

AENG 550  Design of Automotive Chassis  3 Credit Hours
This course provides a systems approach to the design of automotive chassis and body components and examines the influence of their design on the overall structural performance of the automobile. Design issues related to structural rigidity, ride comfort, safety and crash-worthiness, durability and assembly are covered. Applications of advanced materials and joining techniques are discussed. Analytical tools used in automotive structural design are also discussed.

Restriction(s):
Can enroll if Class is Graduate

AENG 551  FEM in Auto Structure Design  3 Credit Hours
This course is designed to introduce the applications of finite element method in automotive structure design. It includes specific design examples of vehicle NVH and durability with commercial pre-processor and FEA solver. The course also provides theoretical knowledge of FEA and vehicle design.

Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate
Can enroll if Major is Automotive Systems Engineering
AENG 555  Vehicle Stability & Control   3 Credit Hours
Introduction to static and dynamic stability characteristics of vehicles. Study on directional vehicle responses and stability in small disturbance maneuver. Design, numerical simulation, and analysis of vehicle control systems (ABS, active suspension, and yaw stability). Prerequisite: Dynamics (ME 345), Control Systems Design and Analysis (ME 442) or equivalent.
Restriction(s):
Cannot enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if Major is Automotive Systems Engineering

AENG 566  Vehicle Thermal Management   3 Credit Hours
This course covers fundamental thermo-fluid principles and advanced topics in thermal management of conventional and electric drive vehicles (EDVs). The topics include: principles of energy conservation, heat transfer, and fluid mechanics; vehicle thermal management system and components; electrification of vehicle thermal management system; EDV thermal management; battery thermal management in EDVs; and waste energy recovery.
Restriction(s):
Can enroll if Class is Graduate or Doctorate
Can enroll if College is Engineering and Computer Science

AENG 576  Battery Sys Modeling & Ctrl   3 Credit Hours
Full Course Title: Battery Systems, Modeling, and Control This course will cover modeling, control, and estimation techniques for battery systems. Students will learn how electrochemical systems work and how they can be mathematically described. A simple phenomenological electrical circuit model and a detailed physics-based model that can capture diffusion dynamics will be covered. The thermal behavior of a battery system and its modeling will be covered as well. Students will learn the basic functions of battery management systems for monitoring state-of-charge, state-of-power, and state-of-health in applications to automotive and consumer electronics. (OC)
Restriction(s):
Can enroll if Class is Graduate or Rackham or Doctorate
Can enroll if Major is Automotive Systems Engineering

AENG 581  Materials Sel in Auto Design   3 Credit Hours
This course develops an understanding of the properties of modern engineering materials and explains the role of the materials selection process in product design, development, and manufacturing. Materials selection/design problems and case studies involving automotive and other commercial products are discussed. The role of environmental regulations, societal pressures and customer wants on the selection of alternate materials is discussed. (YR)
Restriction(s):
Cannot enroll if Class is Graduate or Rackham or Doctorate
Can enroll if Major is Automotive Systems Engineering

AENG 584  Lightweight Automotive Alloys   3 Credit Hours
This course introduces structure-processing-property relationships in the lightweight automotive alloys that are candidates for automotive applications such as aluminum, titanium, and magnesium. Metal matrix composite and intermetallic materials are also discussed. Emphasis will be placed on the processing and design of these materials in future automotive applications. (YR).
Restriction(s):
Can enroll if Class is Graduate

AENG 586  Design & Mfg: Ltwt Auto Mat   3 Credit Hours
This course will address the design issues and manufacturing considerations for various lightweight automotive structural materials. Design issues will include stiffness, fatigue, vibrations, dent resistance, crush resistance, etc. Methods of producing lightweight automotive structures are discussed. Design for manufacturing, assembly, disassembly and recycling are emphasized. (YR).
Prerequisite(s): AENG 581 and AENG 587

AENG 587  Automotive Manuf Processes   3 Credit Hours
Manufacturing processes, including casting, forging, forming, machining, molding, etc., are examined specifically in the context of their applications in the automotive industry. Quality control and techniques, process selection and methods are emphasized.
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Automotive Systems Engineering

AENG 588  Design & Manufac for Environment   3 Credit Hours
This is a course focused on the effects of product design and manufacturing on the environment, with special emphasis on automobiles. The fundamental principles of life cycle engineering will be introduced. The importance of environmental improvement will be considered. Design and material selection for recycling, reuse and disposal will be illustrated. Furthermore, it will cover the elementary relationships between design and manufacturing for the development of future environmentally friendly vehicles.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Engineering and Computer Science
Can enroll if Program is MSE-Automotive Engineering

AENG 589  Auto Assembly Systems   3 Credit Hours
This course deals with in-depth analysis of automotive assembly systems. Design, analysis and economics of manual and automatic assembly of automotive components are to be emphasized. It includes design of assembly stations for manual assembly, automatic assembly stations; design for assembly and disassembly; analysis of automatic feeding and orientation techniques of small parts; assembly of large parts; application of robotics in assembly; and economics of assembly for automotive systems as well as electronic systems.
Restriction(s):
Cannot enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Automotive Systems Engineering

AENG 590  Selected Topics   1 to 3 Credit Hours
Individual or group study of an automotive systems engineering topic of contemporary interest.
Restriction(s):
Can enroll if Level is Graduate

AENG 591  Guided Study in Automotive Sys   1 to 3 Credit Hours
Individual or group study of an automotive systems engineering topic of contemporary interest.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Engineering and Computer Science
**AENG 596  Internal Combustion Engines I  3 Credit Hours**
Comparison of several forms of internal combustion engines including Otto and diesel-type piston engines; performance parameters and testing; thermodynamic cycles and fuel-air cycles; combustion in SI and Diesel engines; charge formation and handling; ignition; elements of exhaust emissions. (Not available to students with ME 496 or equivalent background.)

**Prerequisite(s):** ME 330  
**Restriction(s):**
Can enroll if Level is Doctorate or Rackham or Graduate or Can enroll if College is Engineering and Computer Science 
Can enroll if Major is Automotive Systems Engineering

**AENG 598  Energy Sys for Auto Vehicles  3 Credit Hours**
This course will discuss the current and future energy systems for automotive vehicles. Topics include liquid and gaseous fuels, direct energy conversion systems and fuel cells. Characteristics of various energy systems are discussed with respect to their performance, cost, reliability and environmental concerns. Fuel cell analysis and design is covered in detail. (W, AY).

**Prerequisite(s):** ME 496 or AENG 596  
**Restriction(s):**
Can enroll if Class is Graduate

**AENG 650  Anyls&Des for Veh Crshwrthss  3 Credit Hours**
This course aims to provide knowledge on vehicle crash mechanics, structural design to improve crashworthiness and crash energy management. Finite element techniques for vehicle crash analysis are also covered.

**Prerequisite(s):** ME 510 or AENG 551  
**Restriction(s):**
Cannot enroll if Class is 
Can enroll if Level is Doctorate or Rackham or Graduate or Can enroll if College is Engineering and Computer Science 
Can enroll if Major is Automotive Systems Engineering

**AENG 687  Adv Auto Mfg Processes  3 Credit Hours**
This course deals with in-depth analysis of select manufacturing processes used for the fabrication and assembly of automotive vehicles. Modeling and simulation of selected classes of manufacturing processes using numerical methods; such as finite difference and finite element methods, will be studied. Process optimization approaches will be introduced and applied to selected processes.

**Prerequisite(s):** AENG 587  
**Restriction(s):**
Can enroll if Class is Graduate 
Can enroll if Level is Doctorate or Rackham or Graduate or

**AENG 698  Capstone Proj(Case Stud/Dsn)  3 to 6 Credit Hours**
Individual or team design or case study of interest to the students. Topics may be chosen from any of the areas of automotive engineering. The student (or the team) will submit a project report and give an oral presentation at the end of the second term. The project spans two terms. (Permission of advisor required before registration.)

**Restriction(s):**
Can enroll if Level is Rackham or Graduate 
Can enroll if College is Engineering and Computer Science 
Can enroll if Major is Automotive Systems Engineering

**AENG 699  Master's Thesis  3 to 6 Credit Hours**
Research for master's thesis under the direction of a faculty member. (Permission of advisor required.)

**Restriction(s):**
Can enroll if Level is Rackham or Graduate 
Can enroll if College is Engineering and Computer Science 
Can enroll if Major is Automotive Systems Engineering

---

### Automotive Systems Engineering (ASE)

**ASE 798  Doctoral Seminar  0 Credit Hours**
After attaining candidacy every Ph.D. student is required to attend and actively participate in seminars each semester until graduation. In addition, each Ph.D. student is required to present a one hour seminar about his/her research or an a pre assigned research topic, and lead a follow-up discussion on the future trends in his/her field.

**Corequisite(s):** ASE 990 

**Restriction(s):**
Can enroll if Class is Doctorate 
Can enroll if Level is Doctorate or 
Can enroll if College is Engineering and Computer Science 
Can enroll if Major is Automotive Systems Engineering

**ASE 990  Doctoral Dissertation  1 to 9 Credit Hours**
Dissertation work by a Ph.D. student who has been admitted to the candidacy status. The student must be registered during the semester of the dissertation defense. (1 to 9 credit hours per semester)

**Restriction(s):**
Can enroll if Class is Doctorate 
Can enroll if Level is Doctorate or 
Can enroll if College is Engineering and Computer Science 
Can enroll if Major is Automotive Systems Engineering

---

### Automotive Systems & Mobility (ASM)

**ASM 791  Doctoral Directed Study  1 to 6 Credit Hours**
Independent study and research work on the material related to the doctoral research project under the guidance of the faculty advisor. A report and an oral presentation are required. Required outcomes include well-defined research topic/objective/technical approach and in-depth literature review. (F, S, W).

**Restriction(s):**
Can enroll if Level is Doctorate 
Can enroll if College is Engineering and Computer Science 
Can enroll if Major is

**ASM 980  Pre-Candidate Dissertation Research  1 to 9 Credit Hours**
Dissertation work by a pre-candidate student in the Automotive Systems and Mobility program conducted under guidance of the faculty advisor. (F, S, W).

**Restriction(s):**
Can enroll if Level is Doctorate 
Can enroll if College is Engineering and Computer Science 
Can enroll if Major is
ASM 990  Doctoral Dissertation  1 to 12 Credit Hours
Dissertation work by a student of the D.Eng. program in Automotive Systems and Mobility conducted under guidance of the faculty advisor. The student must be admitted to D.Eng. candidacy status. (F, S, W).
Restriction(s):
Can enroll if Level is Doctorate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Bioengineering

Bioengineering (BENG)

BENG 520  Adv Molecular and Cell Biology  3 Credit Hours
This course introduces the cell and molecular biology concepts from an engineering perspective and provides the foundation for modern biotechnology and bioengineering. This course is designed for a first year engineering graduate student to develop a comprehensive understanding of relevant applications in biology, including biochemical, cellular organizational, metabolic and genetics aspects. Advanced concepts including genomics, molecular biology, recombinant DNA technology and evolution are discussed. The course provides exposure to several key techniques used in biological engineering laboratories. Students will have chance to present and discuss individual application through team project. (YR)
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if Major is , Bioengineering

BENG 521  Biomatls and Biochem Interface  3 Credit Hours
The course will provide graduate-level foundation on biomaterials science and principles. Specifically, the course will involve discussion on the importance of surfaces and interfaces in biomaterial function and elements controlling host responses to materials, introduction to biomimetic and rational designing approaches, and develop critical analyses of biomaterials through reading research papers and developing projects. (YR)
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Bioengineering

BENG 526  Fundamentals of Drug Delivery  3 Credit Hours
This course is designed to provide students with an understanding on the concepts in drug delivery from an engineering perspective. The course will cover drug delivery mechanisms, quantitative understanding of drug transport, nanotechnology, drug delivery devices, toxicity and immune response, FDA regulations, clinical trials and technology transfer. The course will conclude with a design project on nanoparticles development for targeted drug delivery. (YR)
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Bioengineering

BENG 550  Biophotonics and Optical Metrology  3 Credit Hours
The recent explosion of interest in minimally invasive medical diagnostics and contactless metrology has been fueled in part by the development of novel optics and photonics. A large number of optically-based imaging and sensing techniques have moved beyond research laboratories into medical clinics, materials engineering, and industrial applications. Topics include design principles of optical instrumentation, techniques for diagnostics and metrology, and elastic and inelastic light scattering theory. Applications include optical metrology, confocal and multiphoton microscopy, light propagation and tomographic imaging in tissues, and design of minimally invasive spectroscopic systems. Optical systems design is included as a class project. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Bioengineering

BENG 551  Microfluidics  3 Credit Hours
Microscaled systems and devices have enhanced reaction rates, predictable fluidic mechanics, reduced reagent volumes, and also lowered cost of manufacturing. These advantages benefit many biomedical applications that require sensitive molecular detection in robust and economical devices. In this course, a range of microsystem techniques will be discussed, including those based on Microfluidics, BioMEMS, and Optofluidics. The lectures will meet twice a week, one hour each, and will be accompanied by student-driven design projects that will be conducted in 3-hour laboratories. (YR)
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Bioengineering

BENG 560  Nanobiosystems Engineering  3 Credit Hours
Nanobiosystems Engineering is an emerging frontier in nanotechnology. It integrates materials science, bioengineering, physics and life science with the biological and biochemical applications. This fast-developing interdisciplinary field holds the promise to solve many of the medical problems of future. The course will introduce advanced concepts related to nanomaterials and nanofabrication and their application in medicine. The course will also focus on design and development of nano-devices for the applications of pharmaceuticals and healthcare. Typcial applications including nano-biosensor, targeted drug delivery, and tissue engineering will also be discussed. Students in Bioengineering will have chance to present and discuss individual application through team project. (YR)
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Bioengineering

BENG 570  Advanced Biomechanics  3 Credit Hours
This course covers intermediate level subject matter on structural biomechanics, analysis and design. Topics include: soft tissues biomechanics, human motion analysis including gait, orthopedic implants, fixation and reconstruction, head impact and injury, advanced bone models. (YR) (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Bioengineering
BENG 571  Impact Biomechanics  3 Credit Hours
This course focuses on the understanding of the behavior of human organs, bone and tissue at their point of mechanical or functional failure. Topics will include research methods in injury biomechanics, injury tolerance of the structures and materials of the head, brain, spine, thorax, abdomen and extremities and injury prevention focusing on safety equipment. Federal motor vehicle safety standards will be discussed. (YR)
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Bioengineering

BENG 575  Regenerative Engineering  3 Credit Hours
This course will discuss principles of tissue engineering whereby the properties of stem as well as primary cells, growth factors, and extracellular matrix and their impact in the development of engineered tissue constructs will be explored. In addition, the course will also focus on supporting/enabling technologies typically utilized in engineering these constructs including nano-and micro-fabrication techniques, 3D printing, micro-patterning as well designing principles of bioreactors, and drug and gene delivery techniques. Additionally, various tissue engineering applications will be discussed including synthetic tissues and organs that are currently under development for regenerative medicine application. (YR)
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or

BENG 595  Digital Manufacturing  3 Credit Hours
This combined lecture and hands on project course aims to train students to optimize the interplay of materials, people, machines and profitability. The course introduces methods to identify product concepts with commercial potential. Student teams will perform market analysis and explore the intellectual property space around their ideas and rapidly iterate them into a final prototype via direct digital manufacturing (e.g., 3D CAD/CAM files manifested via digital printing or machining). Advanced instruction on direct digital manufacturing tools will be given, and customer response will be used as feedback. Early stage prototypes will progress into more sophisticated designs, scaling up (cost, pricing, tooling, process flow and automation) scenario planning for mass manufacturing as well as Failure Mode Effect Analysis (FMEA) will be discussed. (W,YR)
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Bioengineering

BENG 600  Study or Research in BENG  1 to 3 Credit Hours
Individual study or research in an area of bioengineering under supervision of a faculty member. The student will submit a written report at the close of the term. (YR)
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or

BENG 699  Master's Thesis  1 to 6 Credit Hours
Research project in the area of bioengineering conducted under supervision of a program faculty member. While guided by a faculty member, a student electing this course is expected to carry out the work him-or herself. Successful completion of the course requires completion and public defense of a written thesis. A student must satisfactorily complete all 6 credit hours, which can be distributed over multiple semesters. (YR)
Restriction(s):
Can enroll if Level is Rackham or Graduate

Biological Science (BIOL)

BIOL 501  Discoveries in Current Biology  3 Credit Hours
Current issues in biology based on an inquiry approach to learning with a primary emphasis on laboratory, field observations, and discussion. Students will help to develop the specific topics within the subject areas that include the environment, heredity, and health. Projects will have direct applications for classroom teaching. Lecture and laboratory. Permission of College of Education, Health, and Human Services advisor. Teacher experience. (S).

BIOL 508  Invasive Species Ecology  3 Credit Hours
This course will examine the biological, ecological and societal impacts of invasive species. Major issues including characteristics of invasive species, invaded communities, origins and success rates of invaders, economic and health effects, methodologies and regulatory strategies for dealing with invasive species will be discussed. Students will investigate an invasive species and make oral and written reports.
Prerequisite(s): BIOL 304 or BIOL 320

BIOL 514  Applied Ecology  3 Credit Hours
An advanced treatment of the principles of ecology especially as they relate to environmental problems and environmental management. This course is intended for graduate students and for undergraduate fulfillment of the biology capstone requirement. Students should have earned a C or above in Ecology (BIOL/ESCI 304) or equivalent.
Prerequisite(s): BIOL 304 or ESCI 304
Restriction(s):
Can enroll if Class is Graduate
Cannot enroll if Level is Undergraduate or Professional Development

BIOL 515  Aquatic Ecosystems  4 Credit Hours
Advanced course based on the comparative study of the structure and function of lakes, wetlands and rivers. The physical, geological, chemical and biological characteristics of natural and disturbed ecosystems will be emphasized. (F, AY).
Prerequisite(s): BIOL 130 and CHEM 124 and GEOL 118
Restriction(s):
Can enroll if Class is Graduate

BIOL 516  Limnology  3 Credit Hours
The study of the structural and functional relationships and productivity of organisms in lakes and streams as they are regulated by their physical, chemical and biotic environments. BIOL/ESCI 304 or ESCI 275 required. Not open to undergraduates or students who have taken BIOL/ESCI 414.
Prerequisite(s): BIOL 304 or ESCI 301 or ESCI 304 or ESCI 275
Restriction(s):
Can enroll if Level is Rackham or Graduate

BIOL 517  Wetland Biology  3 Credit Hours
An in depth examination of wetlands from functional, habitat and management perspectives. Topics include hydrology, soils, biogeochemical cycling, biological adaptations, major wetland types, regulation, restoration and creation. Two all-day Saturday field trips required.
Prerequisite(s): BIOL 304 or ESCI 304
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Post-baccalaureate Cert only or Senior or Graduate
BIOL 519  Behavior and Evolution  3 Credit Hours
An in depth examination of how evolutionary processes shape behavior, focusing on the influence of natural, sexual, and kin selection. Topics include behavioral genetics, natural selection, sexual selection, kin selection, optimality, game theory, evolutionary stable strategies, phylogenetics, and the comparative method. Additional assignments will distinguish this course from the undergraduate version.

Restriction(s):
Can enroll if Class is Graduate

BIOL 522  Conservation Biology  3 Credit Hours
This course is a study of the historical and current preservation of global biodiversity. The value of biodiversity, extinction, threats to biodiversity, and both ex situ and in situ conservation strategies are considered. A student may not receive credit for both BIOL/ESCI 422 and BIOL 522. (W, AY)

Restriction(s):
Can enroll if Class is Graduate

BIOL 524  Biology of Spiders  4 Credit Hours
An introduction to the biology of spiders and related arachnids. Lectures include spider anatomy, natural history, ecology, and evolution. Laboratory work includes specimen preparation, use of dichotomous keys, spider behavior, field methods, rearing and collecting techniques, and identification of spiders and their webs. Three hours lecture, four hours laboratory. Students cannot receive credit for both Biology 424 and Biology 524.

Prerequisite(s): BIOL 130

Restriction(s):
Can enroll if Class is Graduate

BIOL 545  Restoration Ecology  3 Credit Hours
Restoration Ecology is an interdisciplinary course that develops theories and practices that help rehabilitate impaired ecosystems towards a sustainable state. Bioremediation and phytoremediation are some approaches to be discussed. Short-term site management is discussed, often including continued resource or recreational use, with the eventual site sustainability in mind. (F, AY)

Prerequisite(s): BIOL 304 or ESCI 304

Restriction(s):
Can enroll if Class is Graduate

BIOL 552  Med & Env Toxicology  3 Credit Hours
Mechanistic concepts of toxicology at the cellular and molecular levels. The course is taught from a human health perspective focusing on contemporary problems and environmental associations. Three hours lecture.

Prerequisite(s): BIOL 140 and CHEM 225 and (BIOL 301 or BIOL 303 or BIOL 304 or BIOL 306 or BIOL 307 or BIOL 309 or BIOL 310 or BIOL 311 or BIOL 312 or BIOL 313 or BIOL 315 or BIOL 320 or BIOL 326 or BIOL 333 or BIOL 335 or BIOL 350 or BIOL 351 or BIOL 360 or BIOL 361 or BIOL 370 or BIOL 380 or BIOL 385 or BIOL 390 or BIOL 405 or BIOL 406 or BIOL 414 or BIOL 416 or BIOL 420 or BIOL 450 or BIOL 455 or BIOL 459 or BIOL 470 or BIOL 471 or BIOL 472 or BIOL 473 or BIOL 474 or BIOL 485 or BIOL 489 or BIOL 490 or BIOL 495 or BIOL 497 or BIOL 498 or BIOL 499 or BIOL 501 or BIOL 514 or BIOL 515 or BIOL 545 or BIOL 552 or BIOL 590)

Restriction(s):
Can enroll if Class is Senior or Graduate

Can enroll if Level is Rackham or Graduate

BIOL 590  Topics in Biology  1 to 4 Credit Hours
Current topics in Biology. One to four credit hours. (OC)

Restriction(s):
Can enroll if Class is Graduate

Business Administration (BA)

BA 605  Mgrl Dec Making  3 Credit Hours
This course covers the findings of research on behavioral decision making as they apply to managerial decision making. You will learn how the human mind works, what it is particularly good at and not so good at, and what the implications of this are for managerial decision making. The course will help you make better decisions and understand the potential shortcomings of the decisions made by your colleagues, competitors, collaborators, and customers. Topics include human cognition, overconfidence, heuristics and biases in decision making, bounded awareness, framing, preference reversal, motivational and emotional influences on decision making, escalation of commitment, expertise in decision making, and fairness and ethics in decision making. We will apply the research on behavioral decision making to a wide variety of problems in various domains of business, study how applications of information systems can mitigate limitations of the human mind, and apply our knowledge of the way the human mind works to develop an understanding of ways to improve managerial decision making. Students interested in careers in a wide variety of business professions will find the knowledge and skills gained in this course to be useful in their professional endeavors.

Prerequisite(s): BE 530 and MIS 525 and OB 510 and (DS 520 or IMSE 510 or IMSE 514)
BA 607 Business Disruption in the Digital Age: Machine Learning, Platforms, and the Crowd 3 Credit Hours
This course integrates research from the fields of economics, mathematics and statistics, information systems, and organizational behavior as they inform our understanding of the three interrelated phenomena of machine learning, the platform, and the crowd that are disrupting and transforming businesses, organizations, industries, and the economy. Our study of machine learning will contrast human decision making (and its limitations and biases) with machine learning and examine the organizational and economic effects of robotics, digitization, and other technological innovations. Our study of platforms will focus on network effects, technical architecture, and strategies related to the monetization and openness of platforms. Our study of the crowd will focus on crowd-based expertise, prediction markets, economic impacts of the sharing economy, blockchain, regulatory issues in the sharing economy, and issues of the nature of work and labor in the sharing economy. We will apply and integrate research in these areas to the development of insights into business problems with an emphasis on shifts in traditional business organizations and emerging types of organizations that use technological innovations in ways that have the potential for disrupting and transforming industries. Students interested in careers in a wide variety of business professions will find the knowledge and skills gained through this course to be useful in their professional endeavors. (YR)
Prerequisite(s): BE 530 and ISM 525 and OB 510 and (DS 520 or IMSE 510 or IMSE 514)

BA 611 Organizational Economics 3 Credit Hours
This course focuses on the transactions and contracts that occur within and between organizations. You will learn economic frameworks that can inform decisions about a firm's scope, internal strategies, and incentive structures. You will apply these frameworks to readings and cases about organizational failures (e.g., oil spills, rocket explosions, corruption cases), successes (e.g., initial iPhone commercialization), and contracting dilemmas (e.g., incomplete contracts, hold-up, asymmetric information, regulations and certifying organizations). Students interested in a wide variety of business professions will find the expertise gained in this course to be useful for decisions about structuring complex projects and company-wide initiatives, allocating scarce resources, and fostering organizational change. (YR)
Prerequisite(s): ACC 505 and BE 530 and OB 510
Restriction(s):
Can enroll if Degree is Master of Business Admin
Can enroll if College is Business

BA 690 Graduate Research 1 to 3 Credit Hours
To provide masters candidates with the opportunity to undertake a research project under the supervision of a faculty member. The research topic is chosen by the student, in consultation with a faculty member in the appropriate discipline. Written approval must be obtained at least two weeks prior to registration on a form available in the Graduate Office. The request must include a comprehensive description of the proposed research project, as well as a time line for the project's completion.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Business

BA 691 Graduate Seminar 1 to 3 Credit Hours
Topics Course. To provide masters candidates with an opportunity for study of selected advanced topics in particular fields. Topics vary. See Schedule of Classes for current offerings. May be elected more than once if topics differ.
Prerequisite(s): (MIS 525 or MIS 502) and (MKT 515 or MKT 610)
Restriction(s):
Can enroll if Class is Graduate

BA 691A Graduate Seminar 3 Credit Hours
Topic: The Internal Revenue Service. This course introduces the student to the structure, organization, practices and procedures of the Internal Revenue Service. The course is intended to give students an understanding of the organizational makeup of the Internal Revenue Service and the authority of its various employees. The different approaches to resolving tax controversies will be explored through the study of assigned readings and in-depth class discussions. The course will be conducted in a seminar-like fashion with each student expected to make significant contributions to class discussions. Attentiveness to news items affecting the area of federal tax procedures is expected, as well as conveyance to class of these newsworthy developments. This course is appropriate for MSA? Tax Concentration students.

Business Economics (BE)

BE 530 Econ Analysis: Firm & Consumer 3 Credit Hours
This is a microeconomics course with a managerial emphasis designed for graduate students. Microeconomics is a branch of economics that studies the behavior of individual consumers, producers, and industries. This course emphasizes business applications of economic theories. Among the topics covered are supply and demand, production functions, cost minimization, profit maximization, competitive markets, monopoly and monopolistic competition, oligopoly, decision making in uncertain situations, and asymmetric information. The mathematics admission prerequisite must be satisfied prior to electing BE 530.
Prerequisite(s): Mathematics Placement with a score of 105 or MATH 104 or MATH 105 or MATH 113 or MATH 115
Restriction(s):
Can enroll if Class is Graduate

BE 580 Econ Analysis: Nat'l & Int'l 3 Credit Hours
This is a macroeconomics course designed for graduate management students. Macroeconomics is a branch of economics that studies the performance of entire economies. Accordingly, this course develops an understanding of both the domestic economic situation and the importance of global interactions. Topics include analysis of the levels of aggregate output, employment and prices, the roles of aggregate supply and aggregate demand, monetary and fiscal systems and policies; and the impacts of international trade and financial flows.
Prerequisite(s): BE 530
Restriction(s):
Can enroll if Class is Graduate
BE 583  Global Econ: Crisis & Growth  3 Credit Hours
This AIM course develops the understanding of the global economy and financial system necessary for business leaders. Understanding of the fundamentals of macroeconomic systems is developed in the first half of the course including both domestic and international perspectives. In the second half of the course these fundamentals are expanded and shown how they apply to contemporary global events. The financial instruments which played an important role in these global economic events are understood both in terms of their construction and their effects. By seeing how the tools apply to the modern international economic system, students will gain an ability of how to apply the tools of macroeconomics and finance to the international events of the future. No credit for both BE 580 and BE 583.
Prerequisite(s): BE 530 and (DS 520 or IMSE 510 or IMSE 514) and FIN 531
Restriction(s):
Can enroll if Class is Graduate

Business Internship (BI)

BI 500  Business Internship  1 to 3 Credit Hours
The internship provides experience for students in a professional business environment. Participating employers hire students within parameters set by the College of Business and its internship program. Students are required to submit a report and evaluation documents at the end of each work assignment and participate in an assessment session with the internship staff. (A maximum of 3 credit hours of internship course work may be applied toward MBA, MSA, MSIS, or MSF graduation requirements upon approval from the Program Advisor.)
Restriction(s):
Can enroll if Class is Graduate

BI 505  Part-Time Business Internship  1 Credit Hour
The internship provides part-time paid and unpaid experience for students in a professional business environment. Participating employers hire students within parameters set by the internship program. Students are required to submit a report and evaluation documents at the end of each work assignment and participate in an assessment session with the internship staff. This course may be repeated a maximum of three times (A maximum of 3 credit hours of internship course work from BI 500, BI 505 or BI 560 may be applied toward graduation requirements upon approval from the Program Advisor.)
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Degree is Master of Science, Master of Science in Finance, Master of Business Admin

BI 560  International Business Intern  1 to 3 Credit Hours
This internship allows flexibility to engage in applied practical work experience outside of the United States, through paid or unpaid and full or part time work experiences. Participating organizations hire students within parameters set by the Internship Program. Students are required to maintain contact with the Internship Office throughout their experience. Students are required to submit reports, evaluation documents and participate in an assessment session with the internship staff. Students are responsible for their own legal, housing and transportation issues. This course will satisfy non-resident academic credit, which may be applied to elective credit for the student's degree requirements. (A maximum of 3 credit hours of internship course work from BI 500, BI 505, or BI 560 may be applied toward graduation requirements upon approval from the Program Advisor.)
Restriction(s):
Can enroll if Level is Graduate
Can enroll if College is Business

Business Policy and Strategy (BPS)

BPS 516  Corporate Social Responsib  3 Credit Hours
The focus of this writing intensive interdisciplinary course will be on covering the perspectives that form the context for business: the pressure from changing ethical and global issues; the influence of political, social, legal and regulatory, environmental, and technological issues; and the impact of diversity on the organization. These issues will be addressed from the viewpoint of the various stakeholder groups that impact a business including shareholders, employees, customers, community (including the global community), and the natural environment.
Restriction(s):
Can enroll if Class is Graduate

BPS 535  Strategic Plan and Dec Making  3 Credit Hours
To study management of the business in relationship to its external environment. Emphasis is on strategic analysis, strategy formulation, and strategy implementation. Topics include: the strategic management process; developing a strategic vision; setting objectives; company, industry, and competitive analysis; strategic analysis and competitive advantage; crafting strategy at the functional, business, corporate, and international levels; designing the organizational structure; and designing operational policies and procedures, and reward systems.
Prerequisite(s): ACC 505 and FIN 531 and MKT 515 and OB 510 and (EMGT 520 or IMSE 580 or OM 521)
Restriction(s):
Can enroll if Class is Graduate
BPS 585 Managing Strat Innov & Change 3 Credit Hours
This course examines how even well-designed, highly capable organizations fail to deal with the challenges of technological and industry changes if they do not pursue strategies that fit the moving competitive landscape. Emphasis is placed on developing a systematic understanding of the challenges involved in weaving together organizational components to create an organization that is capable of enacting successful competitive strategies, for nurturing, sustaining and exploiting innovation. The course will offer in-depth coverage of changes that ought to be made in various functional areas, marketing, finance, human resources etc., by building up and building on consistent capabilities of the company, while adapting to and exploiting competitive openings that new technologies may provide.
Prerequisite(s): ACC 505 and OB 510 and MKT 515 and FIN 531
Restriction(s):
Can enroll if Class is Graduate

Chemistry (CHEM)

CHEM 535 Green Chemistry 3 Credit Hours
An examination of green chemistry principles and methods used to assess and improve chemical processes with respect to environmental impact. Topics include: concepts of green chemistry, waste prevention, catalysis, renewable resources, alternative energy resources, and green technologies. Additional assignments and/or projects will distinguish this course from its undergraduate version CHEM 435. Students cannot receive credit for both CHEM 435 and CHEM 535.
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore or Junior or Senior
CHEM 548 Environmental Chemistry 3 Credit Hours
Advanced study of the concepts, principles, practices, and current problems in the chemistry of natural waters, the soils, and the atmosphere. Students in this graduate-level course will engage in mutually agreed-upon projects in addition to the class work assigned undergraduates. (W, AY).
Prerequisite(s): CHEM 344 and (CHEM 225 or CHEM 325)
Restriction(s):
Can enroll if Class is Graduate

COMM 500 Narrative and Identity 3 Credit Hours
This class explores the role that communication and storytelling play in the creation and management of the identities people inhabit at various levels of society. We examine the ways in which personal, family, subcultural, organizational, mass mediated, and intercultural and transnational narratives can affect the shaping and reshaping of individual and group identities. This includes the study of multiple identities as members of families, communities, civil societies, and businesses, and those that involve different social locations like gender, race, and ethnicity. Students will learn theoretical tools and examine case studies to better understand the communicative aspects of identity creation and recreation. (YR).
Restriction(s):
Can enroll if Class is Graduate

COMM 520 Critical Media Studies 3 Credit Hours
Course presents various critical approaches to the study of the media. Perspectives include political economy, cultural studies, critical theory of the Frankfurt school and feminism. Through readings and first hand analysis of the media students will delve deeply into the institutional underpinnings, content, use and reception of media. There will be special emphasis on how broader economic, cultural and technological changes influence our experience of media in everyday life as creators, citizens, audiences and consumers.
Restriction(s):
Can enroll if Class is Graduate

COMM 530 International Communication 3 Credit Hours
Course examines the relationship between globalization and communication from various vantage points such as cultural imperialism, global media flows, and hybridity theory. Students use these theoretical approaches to understand how people in particular locations experience, adapt, resist and modify globally circulating aspects of media, popular culture, news and information. Through critical responses to readings, class exercises, individual and team projects, students also explore how global pressures and changes influence the way people understand and project their identities, buy and sell communication as a commodity, negotiate borders, and create social change.
Restriction(s):
Can enroll if Class is Graduate

COMM 550 Prin of Organizational Comm 3 Credit Hours
Course examines how communication networks function in organizations. Purpose: to provide an organizational context and conceptual framework for the practice of professional writing and speaking skills. Writing projects include a research report, a case study, and shorter papers (practical and analytical) on assigned topics. Areas of focus include persuasion, decision-making, conflict resolution, problem solving, and the role of communication in leadership, motivation, small group activity, organizational change, and job satisfaction. (AY)
Prerequisite(s): COMM 340 or COMM 440
Restriction(s):
Can enroll if Class is Graduate

COMM 555 Gender and Media Studies 3 Credit Hours
The course will focus on several feminist approaches used in understanding the media and attempting to create social change through the media. The role of media in the definition and reproduction of gender-based hierarchies and in the renegotiation of gender boundaries will both be explored. To this end, both mainstream and women's media will be examined. The course will take a multicultural and international perspective, incorporating concerns of class, race, ethnicity, and nation as these intersect with the study of gender and media. Mainstream and alternative media will be analyzed through readings, films, case studies, in-class collaborative exercises and longer term projects. News, entertainment, and advertising genres will be examined in a variety of media, such as the printed press, television, video, film, and the Internet.
Prerequisite(s): WGST 275 or WGST 303
Restriction(s):
Can enroll if Class is Graduate
COMM 564  
Contemporary Rhetorical Theory  
3 Credit Hours
An examination of contemporary rhetorical theories through study of representative practitioners and related developments in linguistics, philosophy, psychology, communication, and composition and rhetoric. Additional work will distinguish this course from its undergraduate version. Students may not receive credit for both COMP 464 and COMP 564.
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
Restriction(s):
Cannot enroll if Class is Graduate

COMM 570  
Adv Technical and Prof Comm  
3 Credit Hours
Review and practice of advanced professional communication skills, especially audience analysis, assessment of organizational contexts and field-specific conventions, document design, varieties of formal and informal report writing, proposal writing, abstracting, editing, and documentation. Students will study specialized formats and communication issues specific to their professional needs, and will develop their abilities to present technical and complex information to a variety of audiences, both general and specialized, in a variety of professional contexts. Appropriate for graduate students in professional degree programs, such as engineering, management, public administration, and education. Undergraduates must have permission of instructor.

COMM 577  
Professional Comm Ethics  
3 Credit Hours
An examination of professional communication in the organizational context, focusing on important issues, problems, and concepts. This course is designed to help students become conscious of the role of values in a wide range of professional communication situations; to locate organizational behavior in an ethical framework based on considered definitions, standards, perspectives, and criteria for evaluation and analysis; to consider individuals as well as organizations as moral agents in a changing and complex universe; and to analyze topical cases on emergent issues in communication ethics. (YR)
Prerequisite(s): COMM 340 or COMM 440 or COMM 450
Restriction(s):
Cannot enroll if Class is Graduate

COMM 581  
Gender and Globalization  
3 Credit Hours
Mass media, politics, and academia are full of references to globalization, and a future "world without borders." This interdisciplinary course considers the implication of globalization for women's lives, gender relations, and feminism. Topics covered include the global factory, cross-cultural consumption, human rights, global communications, economic restructuring, nationalism, and environmental challenges. Rather than survey international women's movements, this course explores how globalization reformulates identities and locations and the political possibilities they create. Students cannot receive credit for both COMM 481 and COMM 581. (AY)
Restriction(s):
Cannot enroll if Class is Graduate
Can enroll if College is Arts, Sciences, and Letters

COMM 590  
Topics in Communication  
1 to 3 Credit Hours
Examination of problems and issues in selected areas of Communications. Titles listed in the Schedule of Classes will change according to content. Course may be repeated for credit when specific topic differs. Only offered for graduate credit. (OC)

Comparative Literature (COML)

COML 533  
Writing Women in Renaissance  
3 Credit Hours
This course will be taught in English, and will focus on the influence of Italian literary models for the construction of female literary types as well as female voices in France and Italy from 1300 to about 1600. Italian authors studied include three very influential Florentines, Dante, Petrarch and Boccaccio, as well as Castiglione and Ariosto. We will read women poets, patrons, prostitutes and queens from Italy and France such as Veronica Gambara, Isabella di Morra, Vittoria Colonna, Christine de Pizan, Louise Labe, and Marguerite de Navarre. At issue will be women's roles and women's images in city and court culture during the early modern period, and the interaction of their writings with the literary canons of Italy and France. (OC).
Restriction(s):
Cannot enroll if Class is Graduate

COML 555  
This American Life  
3 Credit Hours
The course "This American Life: Immigrant Literature and the American Dream" is a literary and cultural analysis of the literature of immigration. The readings are from works of fiction in a variety of genres, and are written by American and non-American prize-winning authors. Their common denominator is the pursuit of the American Dream and its many multifaceted aspects. The themes explored include: assimilation, acculturation, diversity, language, subculture, intertextuality, nostalgia, belonging, and double identity. This course will be distinguished from its undergraduate counterpart, COML 455, by the inclusion of additional readings and assignments.
Restriction(s):
Cannot enroll if Class is Graduate

Computer & Computational Math (CCM)

CCM 504  
Dynamical Systems  
3 Credit Hours
The aim of this course is to survey the standard types of differential equations. This includes systems of differential equations, and partial differential equations, including for each type, a discussion of the basic theory, examples of applications, and classical techniques of solution with remarks about their numerical aspects. Also included are autonomous and periodic solutions, phase space, stability, perturbation techniques and Method of Liapunov. Additional reading assignments or projects will distinguish this course from its undergraduate version CCM 404. Students cannot receive credit for both CCM 404 and CCM 504. (AY)
Prerequisite(s): MATH 216 and (MATH 217 or MATH 227)
Restriction(s):
Cannot enroll if Class is Graduate

CCM 551  
Computer Graphics  
3 Credit Hours
Basic geometrical concepts, graphics primitives, two-dimensional transformations, segmented files, windowing and clipping, camera models, and 3-D viewing transformations.
Restriction(s):
Cannot enroll if Class is Graduate
Can enroll if Level is Rackham or Doctorate
Can enroll if Degree is Master of Sci in Engineering, Doctorate in Science, Master of Science
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Software Engineering, Data Science, Computer & Information Science, Computer Engineering
CCM 558  Introduction to Wavelets  3 Credit Hours
This course will introduce the student to theory and application of wavelets using linear algebra. Topics will include the discrete Fourier transform, linear transformations, orthogonal decomposition, discrete wavelet analysis, the filter bank, Harr Wavelet family, Daubechies’s Wavelet family, and applications. Additional reading assignments or projects will distinguish this course from its undergraduate version CCM 458. Students cannot receive credit for both CCM 458 and CCM 558. (OC)
Prerequisite(s): (MATH 216 or MATH 217 or MATH 228) and MATH 227
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Program is MS-Applied&Computational Math

CCM 572  Intro to Numerical Analysis  3 Credit Hours
Solution of linear systems by Gaussian elimination, solution of non-linear equations by iterative methods, numerical solution of ordinary differential equations, data fitting with spline functions, numerical integration, optimization. Additional reading assignments or projects will distinguish this course from its undergraduate version CCM 472. Students cannot receive credit for both CCM 472 and CCM 572. (F)
Prerequisite(s): MATH 216 and (MATH 217 or MATH 227)
Restriction(s):
Can enroll if Class is Graduate

CCM 573  Matrix Computation  3 Credit Hours
A study of the most effective methods for finding the numerical solution of problems that can be expected in terms of matrices, including simultaneous linear equations, orthogonal projections and least squares, eigenvalues and eigenvectors, positive definite matrices, and difference and differential equations. Additional reading assignments or projects will distinguish this course from its undergraduate version CCM 473. Students cannot receive credit for both CCM 473 and CCM 573. (AY)
Prerequisite(s): MATH 217 or MATH 227
Restriction(s):
Can enroll if Class is Graduate

Computer & Information Science (CIS)

CIS 505  Algorithm Analysis and Design  3 Credit Hours
This course investigates how to design efficient algorithms. Topics covered include: asymptotic analysis, average-case and worst-case analysis, recurrence analysis, amortized analysis, classical algorithms, computational complexity analysis, NP-completeness, and approximation algorithms. In addition, the course investigates approaches to algorithm design including: greedy algorithms, divide and conquer, dynamic programming, randomization, and branch and bound.
Prerequisite(s): CIS 350 or CIS 3501 or IMSE 350 or (ECE 370 and MATH 276) or (ECE 370 and ECE 276)
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Doctorate
Can enroll if College is Engineering and Computer Science

CIS 510  Computer Interfacing  3 Credit Hours
This course covers fundamentals of computer interfacing to the external world through the following: parallel and serial interfaces, timers, interrupts, Uart, and Duart. Programming aspects will be emphasized. Knowledge of an assembly language required. (YR).
Prerequisite(s): CIS 310

CIS 511  Natural Language Processing  3 Credit Hours
This course provides an introduction to the theory and practice of natural language processing (NLP), as well as the approaches that allow understanding, generating, and analyzing natural language. The course will introduce both knowledge-based and statistical approaches to NLP, illustrate the use of NLP techniques and tools in a variety of application areas, and provide insight into many open research problems.
Restriction(s):
Can enroll if Level is Graduate
Can enroll if Major is Software Engineering, Computer & Information Science, Data Science

CIS 515  Computer Graphics  3 Credit Hours
Basic geometrical concepts, graphics primitives, two-dimensional transformations, segmented files, windowing and clipping, camera models, and 3-D viewing transformations.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Doctorate
Can enroll if Degree is Master of Sci in Engineering, Doctorate in Science, Master of Science
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Software Engineering, Data Science, Computer & Information Science, Computer Engineering

CIS 525  Web Technology  3 Credit Hours
This course deals with the study of the technologies used to design and implement multimedia web sites. Topics include web servers, HTML, CGI, scripting languages, Java applets, back-end database connectivity, web security, multimedia, XML, web services, .NET, semantic web.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Doctorate or Doctorate or
Can enroll if Major is Software Engineering, Info Systems and Technology, Computer & Information Science

CIS 527  Computer Networks  3 Credit Hours
To study the technical and management aspects of computer networks and distributed systems. Topics include: communication hardware, communication protocols, network architectures, local area networks, distributed database systems. Case studies and research project will be assigned for additional insight.
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Software Engineering, Computer Engineering, Info Systems and Technology, Computer & Information Science

CIS 534  Semantic Web  3 Credit Hours
The aim of this course is to investigate the fundamental concepts, techniques, and technologies for enabling the envisioned semantic Web. The topics to be covered include ontologies, domain modeling, logic, reasoning and inference techniques, semantic Web services, and ontology interaction/mappings. We will review major semantic web research projects, as well as current technologies for enabling the semantic web.
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Software Engineering, Info Systems and Technology, Computer & Information Science, Data Science
CIS 535 Wireless Technologies and Pervasive Computing 3 Credit Hours
This course covers contemporary technologies for programmable mobile and wireless intelligent hand-held devices. Students will get an overview of mobile operating system concepts/techniques and will learn how to develop software for mobile/smart devices, with particular emphasis on the constraints intrinsic to such devices. Topics in location-based services and pervasive computing will also be covered. Participation in a project is a requirement in this course. This class requires knowledge in computer programming.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or

CIS 536 Text Mining and Information Retrieval 3 Credit Hours
This course covers techniques for retrieving ranked relevant documents from a text repository based on user queries, using various techniques for extracting and representing latent knowledge from these documents. Topics also include language models, summarization, topic modeling, entity extraction, sentiment analysis, and embeddings. A significant aspect of this course is participation in a medium to large-scale project.
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if Major is Software Engineering, Data Science, , Computer & Information Science

CIS 537 Advanced Networking and Distributed Systems 3 Credit Hours
This course focuses on the design, implementation, analysis, and evaluation of large-scale networked systems. Specific networking topics include congestion/flow control, traffic analysis, routing, internetworking, multicast, mobile and wireless networks, quality of service, and security. Fundamental distributed systems topics include domain name service, global routing protocols, content delivery networks, and peer-to-peer systems.
Prerequisite(s): CIS 527
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if College is Engineering and Computer Science

CIS 540 Foundation of Information Security 3 Credit Hours
This course provides the foundation for understanding the key issues associated with protecting information assets, determining the levels of protection and response to security incidents, and designing a consistent, reasonable information security system, with appropriate intrusion detection and reporting features. The purpose of the course is to provide the student with an overview of the field of information security and assurance. Students will be exposed to the spectrum of security activities, methods, methodologies, and procedures. Coverage will include inspection and protection of information assets, detection of and reaction to threats to information assets, and examination of pre-and post-incident procedures, technical and managerial responses, and an overview of the information security planning and staffing functions.
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if Major is Software Engineering, Data Science, Info Systems and Technology, , Computer & Information Science

CIS 544 Computer and Network Security 3 Credit Hours
The course will provide a broad spectrum introduction of the fundamental principles of computer and network security. Topics will include security policies, models and mechanism for confidentiality, integrity and availability, access control, authorization, cryptography and applications, threats and vulnerabilities in computer networks, key management, firewalls and security services in computer networks.
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if Major is Software Engineering, Computer Engineering, Info Systems and Technology, , Computer & Information Science

CIS 545 Data Security and Privacy 3 Credit Hours
With the continuing proliferation of ways to collect and use information about people, there is a great concern whether such use of information about people affects privacy adversely. This course covers basics of data security and privacy techniques which can facilitate the use of data in a secure and privacy-sensitive way. Topics include security and privacy challenges due to big data collection and analytics, technologies and strategies for data security and privacy (access control mechanism, integrity policy, cryptography and encryption, notice and consent, anonymization or de-identification, deletion and non-retention).
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if Major is Software Engineering, Data Science, , Computer & Information Science

CIS 546 Security and Privacy in Wireless Networks 3 Credit Hours
This course focuses on security issues in wireless networks, such as cellular networks, wireless LANs, mobile ad-hoc networks, vehicular networks, sensor networks, and RFID. The course will first present an overview of wireless networks, then focus on attacks and discuss proposed solutions and their limitations.
Restriction(s):
Cannot enroll if Class is
Can enroll if Level is Rackham or Graduate or Doctorate or
Can enroll if Major is Software Engineering, Computer Engineering, Info Systems and Technology, , Computer & Information Science

CIS 548 Security and Privacy in Cloud Computing 3 Credit Hours
This course covers the major security and privacy topics in cloud computing. The goals of this course are to familiarize students with the major security and privacy issues and challenges associated with cloud computing, and to show them how to address them. Topics include outsourced storage security and privacy, outsourced computation security and privacy, secure virtualization and cloud platform security, trusted cloud computing technology, key management in the cloud, cloud forensics, cloud-related regulatory and compliance issues, and business and security risk models.
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Computer & Information Science, Software Engineering, Data Science, Info Systems and Technology, , Computer Engineering
CIS 549  Software Security  3 Credit Hours
This course provides a broad-spectrum introduction to the fundamental principles of software security, as well as the approaches that allow understanding common software security practices, analyzing programs for vulnerabilities, and methods for developing secure software systems. The course will cover three major areas: software attacks and defenses, program analysis, and software verification. Various forms of software will be considered in this class including high level applications and system software. The course will also provide insight into many open research problems in this area.
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if Major is Computer & Information Science, Software Engineering,

CIS 550  Object-Oriented Programming and Its Applications  3 Credit Hours
This course covers the major concepts involved in object-oriented programming, including inheritance, polymorphism, encapsulation and patterns in C# and Java. Topics include standalone objects, distributed objects, and objects in web services and cloud computing environments.
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if Major is Software Engineering, Info Systems and Technology, Computer & Information Science

CIS 551  Advanced Computer Graphics  3 Credit Hours
Introduction to curves, surfaces, and solids. Bezier and B-spline curves, spline surfaces, intersections of curves and surfaces, blending methods, illumination models and surface rendering. Solid modeling-wireframe, constructive solid geometry.
Prerequisite(s): CIS 515
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate

CIS 552  Information Visualization and Virtualization  3 Credit Hours
This course introduces basic techniques for visualization, virtualization, digital animation, computer and video games, and web multimedia. Topics include data visualization, the process of creating animated video clips from start to finish (including story creation, storyboarding, modeling, animation, and post-production), and computer virtualization; several key techniques include graphic design, video editing, motion generation, multimedia, real-time rendering, visualization tools, and virtual machines.
Restriction(s):
Cannot enroll if Class is
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Software Engineering, Data Science, Computer & Information Science, Computer Engineering

CIS 553  Software Engineering  3 Credit Hours
Program design methodologies; control flow and data flow in programs; program measurement. Software life cycle; large program design, development, testing, and maintenance. Software reliability and fault tolerance. Evolution dynamics of software.
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Software Engineering, Info Systems and Technology, Computer & Information Science

CIS 554  Info Sys Analysis and Design  3 Credit Hours
To analyze the information needs of organizations and design suitable information systems to meet their needs. Topics include: systems analysis and design techniques related to analyzing and determining information needs, feasibility studies, designing input/processing/output systems, and hardware/software development and evaluation.
Prerequisite(s): CIS 350

CIS 555  Decision Support and Expert Systems  3 Credit Hours
The application of artificial intelligence to building decision support and expert systems for management and other applications. Topics include fundamentals of artificial intelligence, knowledge representation and knowledge processing, tools for building expert systems (logic programming, expert shells), decision support system design (modelling and simulation), expert system design (knowledge engineering, learning).
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Data Science, Computer & Information Science

CIS 556  Database Systems  3 Credit Hours
Introduction to database system concepts and techniques. Topics covered include: database environment, ER model, relational data model, object-oriented databases, object-relational databases, database design theory and methodology, database languages, query processing and optimization, concurrency control, database recovery, and database security. No credit given to both CIS 421 and CIS 556.
Restriction(s):
Cannot enroll if Class is
Can enroll if Level is Rackham or Graduate or Doctorate or
Can enroll if Major is Software Engineering, Info Systems and Technology, Computer & Information Science

CIS 5570  Introduction to Big Data  3 Credit Hours
This course provides an overview of what big data is and explores its characteristics. It introduces the fundamental technologies, platforms, and methods that enable Big Data analysis, and covers how to acquire, store, and analyze very large amounts of information to complete Big Data analysis tasks. Students will gain hands-on experience in real-world applications of Big Data such as in cyber-physical systems and health informatics. Most of the work in this course will be team-based and task-oriented.
Restriction(s):
Can enroll if Level is Rackham or Graduate or Doctorate or
Can enroll if Major is Software Engineering, Data Science, Info Systems and Technology, Computer & Information Science

CIS 5559  Principles of Social Network Science  3 Credit Hours
This course presents an in-depth study of various types of information networks, which range from the structure and behavior of the world-wide web, to the structure and behavior of various collaboration networks, such as bibliographic citations, viral marketing, and online social networks. Using concepts from graph theory and game theory, topics include small-world networks, scale-free networks, the structure of the web, link analysis and web search, and influence networks.
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Software Engineering, Info Systems and Technology, Computer & Information Science, Data Science

</table>
CIS 5700 | Advanced Data Mining | 3 Credit Hours
This course provides an in-depth study of advanced data mining, data analysis and pattern recognition concepts and algorithms. Course content builds upon a first data mining course and explores advanced machine learning algorithms, high-dimensional data, graph and temporal data, and advanced methods and applications to deal with dynamic stream data. Various applications will be considered, including social networks and health informatics. Students will be able to understand the research methods applied in the field and conduct an end-to-end data mining project and document and present the results.

Restriction(s):
Can enroll if College is Engineering and Computer Science

CIS 571 | Web Services | 3 Credit Hours
In this course, we study the major concepts and techniques for enabling service based interactions on the Web. The objective is to familiarize the students with the recent trends in industry and academia to address service computing research and implementation issues. The course will address various aspects of service computing including SOAP Services, WSDL, REST services, service composition and mashup, security, privacy, service management as well as recent trends in service computing such as cloud, Internet of Things (IoT), social media, crowdsourcing, and big data.

Restriction(s):
Can enroll if Class is Graduate or Doctorate
Can enroll if Level is Rackham or Graduate or Doctorate or
Can enroll if Major is Software Engineering, Data Science, Info Systems and Technology, Computer & Information Science

CIS 572 | Object Oriented Systems Design | 3 Credit Hours
Students will be introduced to fundamental concepts and methods of object design and development. Topics that will be covered include object database concepts, data models, schema design (conceptual schema and physical schemas), query languages, physical storage of objects and indexes on objects, version management, schema evolution and systems issues such as concurrent control and recovery from failure. For application programming, a programming language such as C++ will be used for database design and query language. (YR).

Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate

CIS 574 | Compiler Design | 3 Credit Hours
Lexical analysis and symbol table; syntactical analysis of expressions and statements; error detection; translation into intermediate code and its correctness. (YR).

Prerequisite(s): CIS 350 or CIS 3501 or IMSE 350 or (ECE 370 and MATH 276)

Restriction(s):
Can enroll if Class is Graduate

CIS 575 | Software Engineering Mgmt | 3 Credit Hours
Quantitative models of the software lifecycle; cost-effectiveness; uncertainty and risk analysis; planning and modeling a software project; software cost estimation (COCOMO, Function points); software engineering metrics; software project documentation. Special emphasis on emerging software process standards such as the Capability Maturity Model of the Software Engineering Institute, and other international ones.

Prerequisite(s): CIS 553

Restriction(s):
Can enroll if College is Engineering and Computer Science

CIS 577 | S/W User Interface Dsgn&Analys | 3 Credit Hours
This course introduces current theory and design techniques concerning how user interface (UI) and user experience (UX) should be designed and assessed to be easy to learn and use. Course includes flowing general modules: introduction of HCI & UX; Interface/Interaction design strategy; Advanced Issues in HCI; and Evaluation methods.

Prerequisite(s): CIS 553*

Restriction(s):
Can enroll if College is Engineering and Computer Science

CIS 578 | Advanced Operating Systems | 3 Credit Hours
Advanced techniques used in operating system design. Distributed operating systems. Message-based operating systems. Operating systems for parallel architectures. Layered techniques in operating systems. Formal models of operating systems. Current trends in operating system design. (YR).

Prerequisite(s): CIS 450 or IMSE 450 or ECE 478

Restriction(s):
Can enroll if College is Engineering and Computer Science

CIS 579 | Artificial Intelligence | 3 Credit Hours
This course introduces students to the essential concepts, methods, and techniques of artificial intelligence (AI) from a computer science perspective. The general topics of the course will include a variety of knowledge representations and algorithms for interference, decision-making, planning, and learning. Modern intelligent systems, including those that can handle uncertainty, will serve to motivate the course material. The course will cover topics at a depth appropriate for an introductory AI course at the graduate level. A student project may be required.

Restriction(s):
Cannot enroll if Class is
Can enroll if Level is Rackham or Graduate or Doctorate or
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Software Engineering, Computer Engineering, Data Science, Computer & Information Science

CIS 580 | Data Analytics in Software Engineering | 3 Credit Hours
Full Course Title: Data Analytics in Software Engineering-This course focuses on state-of-the-art methods, tools, and techniques for evolving software. Topics such as reverse engineering, design recovery, program analysis, program transformation, refactoring, and traceability will be covered. There will be a project in which student teams participate.

Restriction(s):
Can enroll if Level is Rackham or Graduate or Doctorate or
Can enroll if Major is Software Engineering, Data Science, Computer & Information Science
CIS 581  Computational Learning  3 Credit Hours
This graduate-level course covers computational aspects of learning from experience to making inferences and providing improved decisions. The main focus is an in-depth examination of the computational learning landscape from the viewpoint of a computer scientist. We will focus on such computer science concerns as basic runtimes, time/space complexity analysis, programming aspects, and empirical evaluations, including the appropriateness of various techniques for particular problems. Topics include learning frameworks and problem formulations, standard models, methods, computational tools, algorithms and modern techniques, and methodologies to evaluate learning ability to automatically select optimal models. Applications to areas such as visual analysis, natural language processing, and multimodal interaction will also motivate the course material. (W).

Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate
Can enroll if Major is Software Engineering, Data Science, Computer & Information Science

CIS 584  Adv Comp Net Sec  3 Credit Hours
This course consists of an in-depth examination of current technological advancements in computer and network security. Topics will include secure group communication (key generation, distribution, and management), secure routing and multicasting, identity-based encryption, digital signatures, broadcast authentication, device pairing, and malware/intrusion detection and mitigation.

Prerequisite(s): CIS 544
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if College is Engineering and Computer Science

CIS 585  Adv AI  3 Credit Hours
This course will cover the most recent advances in the theory and practice of artificial intelligence, from a computer-science perspective. Topics covered will include the state-of-the-art in knowledge representation, uncertainty, learning, CSPs, graphical models, multi-agent systems, algorithms and heuristics, and propagation-based techniques. Various application areas will be taken from security, game theory, economics, finance, biology, sociology, and big data. (W)

Prerequisite(s): CIS 579
Restriction(s):
Can enroll if Level is Rackham or Graduate or Doctorate or

CIS 586  Advanced Data Management  3 Credit Hours
This course provides an in-depth examination of some advanced database technologies. Topics are selected from: object-relational databases, active databases, distributed databases, parallel databases, deductive databases, fuzzy databases, data warehousing and data mining, spatial and temporal databases, multimedia databases, advanced transaction processing, information retrieval and database security.

Prerequisite(s): CIS 556
Restriction(s):
Can enroll if College is Engineering and Computer Science

CIS 587  Computer Game Design and Impl  3 Credit Hours
This course deals with the study of the technology, science, and art involved in the creation of computer games. The focus of the course will be hands-on development of computer games. Students will study a variety of software technologies relevant to computer game design, including: programming languages, scripting languages, operating systems, file systems, networks, simulation engines, and multi-media design systems. Lecture and discussion topics will be taken from several areas of computer science: simulation and modeling, computer graphics, artificial intelligence, real-time processing, game theory, software engineering, human computer interaction, graphic design, and game aesthetics. (YR)

Prerequisite(s): CIS 553*
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Graduate

CIS 588  Computer Game Design II  3 Credit Hours
This course is a continuation of the material studied in CIS 587. The focus of the course will be hands-on development of computer game development tools (e.g. game engines). Students will study a variety of software technologies relevant to computer game design, including: 3D graphics, computer animation, data-driven game design, multiplayer game programming, and game AI. Lecture topics will be taken from several areas of computer science: simulation and modeling, computer graphics, artificial intelligence, game theory, software engineering, human computer interaction, and game content development, and game aesthetics.

Prerequisite(s): CIS 587
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Software Engineering, Computer & Information Science

CIS 590  Selected Topics  1 to 3 Credit Hours
In-depth study of a CIS topic of contemporary interest. Topic varies from semester to semester.

Restriction(s):
Can enroll if Class is Graduate

CIS 590I  Select Topics in CIS  3 Credit Hours
Topic: Large Scale Enterprise Computing. This course helps students gain an understanding of the reasons companies chose large scale systems to run (and grow) their computing environments. Topics include capacity, scalability, integrity and security, availability, access to large amounts of data, systems management, and autonomic capabilities. Large scale enterprise computing technologies power all 50 of the top 50 worldwide banks and 22 of the top 25 U.S. retailers. The course provides a broad understanding of networking principles and the hardware and software components necessary to allow large scale systems to participate in a high volume data communications network. It discusses security principles and the hardware and software components needed to insure that the large scale systems resources and environment are secure.

Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate
CIS 590J Selected Topic: Edge Computing 3 Credit Hours
This course introduces state-of-the-art edge computing technologies and their applications in data-intensive distributed systems like smart homes, Internet of Things, and connected vehicles. Topics include edge computing applications and platforms, edge-based sensor data collection and processing, computation offloading and QoS-optimal task scheduling, and security/privacy. This course will also explore the current challenges facing edge computing. Participation in a project is a requirement in this course.
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if Major is Software Engineering, Computer Engineering, Data Science, Computer & Information Science

CIS 591 Directed Research Project 1 to 3 Credit Hours
Special projects for laboratory or library investigation with the intent of developing initiative and resourcefulness. The student will submit a report of the project and give an oral presentation to a panel of faculty members at the close of the term.
Restriction(s):
Can enroll if Class is Graduate

CIS 624 Res Adv Cmp Net Sec 3 Credit Hours
An in-depth study of the current state-of-the-art in computer and network security. Selected topics will be from areas such as social network security, sensor network security, information and network provenance, cyber-physical system security, pervasive and mobile computing security, smart-grid security, and healthcare system security and privacy.
Prerequisite(s): CIS 584
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or

CIS 647 Rsrch Advances Ntwkng&Dist Sys 3 Credit Hours
This course presents an in-depth study of such topics as Internet analysis, approaches for network performance enhancements, multimedia applications, network coding, routing techniques, congestion control, wireless and sensor networks, vehicular networks, social networks, network science, and other emerging networking technologies and applications.
Prerequisite(s): CIS 537
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or

CIS 652 Info Visualztn & Comp Anim 3 Credit Hours
This course introduces algorithms for three-dimensional imaging, geometric modeling, geometric processing, information visualization, and computer animation. Particular research topics include volume graphics, point-based graphics, surface reconstruction, wavelet and subdivision methods, level of details, and physics-based animation. Students will study state-of-the-art papers in the above areas and be involved in a course project.
Prerequisite(s): CIS 551
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or

CIS 654 Research Advances in Data Mgt 3 Credit Hours
An in-depth study of special topics of current interest in database systems. Selected topics will be from areas such as query optimization for emerging database systems, indexing for non-traditional data, data provenance for scientific databases, databases on modern hardware, self-managing databases, information integration and retrieval, bioinformatics, or other emerging database areas/applications.
Prerequisite(s): CIS 586
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate

CIS 676 Soft Arch Des & Analysis 3 Credit Hours
This course provides in-depth coverage of the concepts needed to effectively design and analyze software architectures. It introduces major architectural styles and design patterns and illustrates their application in designing and analyzing modern software architectures such as wireless, service-oriented, and security-based systems. The course also studies software architecture documentation practices that meet the needs of the entire architecture stakeholder community.
Prerequisite(s): CIS 553
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or

CIS 678 Research Advances Software Eng 3 Credit Hours
An in-depth study of the current state-of-the-art in software engineering. Selected topics will be from areas such as software maintenance, software testing, model-driven engineering, human factors in software engineering, software specifications, software management, emerging technology and applications, applying optimization techniques in software engineering, and empirical software engineering.
Prerequisite(s): CIS 565
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or

CIS 691 Adv Dir Study 1 to 3 Credit Hours
Advanced Directed Studies: Special topic in computer and information science. A project report and a seminar are required.
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if College is Engineering and Computer Science

CIS 691 Adv Dir Study 1 to 3 Credit Hours
Advanced Directed Studies: Special topic in computer and information science. A project report and a seminar are required.
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if College is Engineering and Computer Science
CIS 695  Master's Project  3 Credit Hours
Application of the methodologies, tools and theory of software engineering to produce a specific validated software product. Projects can be faculty-generated, self-generated, and/or work related. All projects must be undertaken with one or more students under the supervision of the instructor. Prior to enrollment, a project proposal must be prepared and approved by the instructor and department chair. Standard software engineering documents must be prepared and approved at each phase of the project, and an oral presentation of the project is required. Course includes lectures and case studies. Permission of instructor required.
Prerequisite(s): CIS 553
Restriction(s):
- Can enroll if Class is Graduate
- Can enroll if College is Engineering and Computer Science
- Can enroll if Program is MS-Software Engineering, MS-Computer & Information Sci

CIS 699  Master's Thesis  1 to 6 Credit Hours
Graduate students electing this course, while working under the general supervision of a member of the department faculty, are expected to plan and carry out the work themselves and submit a thesis for review and approval, and also present an oral defense of the thesis.
Restriction(s):
- Can enroll if Class is Graduate

CIS 791  Adv Guided Study  2 to 6 Credit Hours
This is a guided study course for doctoral students on an advanced topic of research. A report and an oral presentation are required.
Restriction(s):
- Can enroll if Level is Doctorate or
- Can enroll if College is Engineering and Computer Science

CIS 798  Doctoral Seminar  0 Credit Hours
After attaining candidacy, every Ph.D. student is required to attend and actively participate in seminars each semester until graduation. In addition, each Ph.D. student is required to present a one-hour seminar about his/her research on a pre-assigned research topic, as well as lead a follow-up discussion on the future trends in his/her field.
Restriction(s):
- Can enroll if Level is Rackham or or Doctorate
- Can enroll if Major is Computer & Information Science

CIS 980  Pre-Cand Dissertation Research  1 to 9 Credit Hours
Full Title: Pre-Candidate Dissertation Research Dissertation work by a pre-candidate student in Computer and Information Sciences program conducted under guidance of the faculty advisor. (F,W,S)
Restriction(s):
- Can enroll if Level is or Doctorate
- Can enroll if Major is Computer & Information Science

CIS 990  Doctoral Dissertation  1 to 9 Credit Hours
Dissertation work by a student of the Ph.D. in Computer and Information Science program, conducted under guidance of the faculty advisor. The student must be a Ph.D. candidate. (F,W,S)
Restriction(s):
- Can enroll if Level is Doctorate or
- Can enroll if Major is Computer & Information Science

Criminal Justice Studies (CRJ)

CRJ 502  Parole and Probation  3 Credit Hours
This course deals with corrections in the community with primary focus on the areas of probation and parole. It discusses the history and foundation of probation and parole, and how each functions within the larger system of criminal corrections. The practical daily activities of probation and parole officers are examined, including monitoring techniques, report-writing, offender and risk assessment evaluation, presentation investigations, and court testimony. Students may not receive credit for both CRJ 402 and CRJ 502. (YR).

CRJ 504  Sentencing  3 Credit Hours
This course will familiarize students with the history, structure, and performance of America's sentencing system. Sentencing is the process by which criminal sanctions are imposed in individual cases following criminal convictions. The course examines the laws and policies that guide the determination of punishment in the court system. Topics include the theoretical underpinnings of sentencing, with an application focus on capital punishment; determinate and indeterminate sentencing systems; sentencing guidelines and departures from the guidelines; mandatory minimum sentences; and "3 strikes" and other habitual offender statutes. Students will engage in a graded practical exercise using sentencing guidelines to learn how to calculate sentences based on various facts. Students cannot receive credit for both CRJ 404 and CRJ 504. (YR).

CRJ 509  Intel and Homeland Security  3 Credit Hours
Full Title: Intelligence and Homeland Security This course will provide an in-depth examination of the principles that guide the collection, analysis, and sharing of intelligence in the United States and how these principles impact homeland security. Topics will include the US Intelligence Community (CIA, FBI, military intelligence), the National Criminal Intelligence Sharing Plan, the National Intelligence Strategy, and the recent emphasis places on Intelligence-Led Policing. Emphasis will also be placed on the increased role that local and state law enforcement agencies as well as private sector entities play in contributing to the assessment of threats to homeland security. (F,W,S)
Restriction(s):
- Can enroll if Level is Graduate

CRJ 513  American Constitutional Law  3 Credit Hours
A major theme of this course is the development of the constitution, especially focusing on the themes of judicial review, judicial self-restraint and judicial activism; the expansion of executive and legislative powers; and the rise of "substantive due process of the law". Prerequisite or equivalent recommended. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (AY).
Prerequisite(s): POL 101
Restriction(s):
- Can enroll if Level is Graduate

CRJ 514  Civil Rights and Liberties  3 Credit Hours
An analysis of the Bill of Rights and the 14th Amendment, with particular emphasis upon recent landmark or controversial Supreme Court decisions dealing with freedom of speech and religion, rights of criminal defendants; cruel and unusual punishment, right to privacy; civil rights and equal protection clause; and apportionment. Prerequisite or equivalent recommended. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (YR).
Prerequisite(s): POL 101
Restriction(s):
- Can enroll if Class is Graduate
CRJ 515  Restorative Justice  3 Credit Hours
This graduate course explores the practice of restorative justice as it has been engaged in historical and contemporary criminal justice contexts. Topics addressed include the principles and philosophies underlying restorative justice, differences between restorative and retributive models, victim-offender dialogue, and offender reintegrations. Students will be asked to think critically about restorative and retributive systems and to apply these concepts to develop their own approach to restorative justice.

CRJ 517  Crimmigration  3 Credit Hours
Full Title: Crimmigration: Intersections of Immigration and Criminal Justice This course explores the intersection(s) of the criminal justice and immigration systems with special attention to race, class, and gender. It covers the evolution of American immigration policy and its application, the criminalization of immigrants, immigrant offending and victimization, the policing of immigrant communities, and the immigrant experience in the United States.
Prerequisite(s): CRJ 200 or CRJ 468 or CRJ 473 or SOC 200 or SOC 201

CRJ 518  CJ Research Methods  4 Credit Hours
Full Title: Criminal Justice Research Methods This course provides an introduction to methods of data collection and analysis, as well as a discussion of research design and the philosophy of social science, within the context of the field of Criminology and Criminal Justice. Attention is given to quantitative, qualitative, and mixed methodologies.
Restriction(s):
Can enroll if Level is Graduate

CRJ 519  LGBTQ+ Criminology  3 Credit Hours
This course explores matters of crime, crime control, and the law through the lens of Queer Criminology, which draws attention to the stigmatization, criminalization, and rejection of LGBTQ+ populations. Special attention is paid to the intersections of identity (e.g. class, race, gender, sexual orientation) and offending, as well as identity and victimization, as well as the experiences of LGBTQ+ communities with police, courts, and corrections, in the United States and around the world.

CRJ 535  Urban Sociology  3 Credit Hours
A descriptive study of the form and development of the urban community with respect to demographic structure, spatial and temporal patterns, and functional organization. The relationship of city and hinterland. Social planning and its problems in the urban community. Additional readings or projects will distinguish this course from its undergraduate version CRJ 435. Students cannot receive credit for both CRJ 435 and CRJ 535. (YR).
Prerequisite(s): SOC 200 or SOC 201

CRJ 543  Gender Roles  3 Credit Hours
This course will investigate the development of gender roles in childhood and adolescence due to either innate physiological differences or sociological patterning, the effect of gender roles upon male-female relationships within our society, and the possibility of transcending sociological gender roles in alternate modes of living. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 443. Students cannot receive credit for both SOC 443 and SOC 543. (YR).
Prerequisite(s): PSYC 170 or PSYC 171 or SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

CRJ 546  Marriage and Family Problems  3 Credit Hours
Sociological analysis of problems encountered within the institution of marriage with particular reference to such issues as choosing a marriage partner, sexual adjustment, occupational involvement, conflict resolution, child rearing, divorce and readjustment. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

CRJ 547  Family Violence  3 Credit Hours
Sociological analyses of various forms of family violence which occur disproportionately in the lives of women and girls. Topics such as incest, sexual abuse, date rape, wife battering, and elder abuse will be situated within the social and cultural context of contemporary gender relationships. Social and political responses to the phenomena will be examined. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 447. Students cannot receive credit for both SOC 447 and SOC 547. (F).
Prerequisite(s): SOC 200 or SOC 201 or SOC 301 or SOC 443 or PSYC 405 or WST 405 or PSYC 505 or WST 505 or SOC 543
Restriction(s):
Can enroll if Class is Graduate

CRJ 553  Sociology of Law  3 Credit Hours
Various aspects of the relationship between law and society are explored. After a look at processes of law making, attention is turned to the administration of law. This involves a study of the activities of legislatures, courts, police, and correctional agents. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

CRJ 555  Immigrant Cultures and Gender  3 Credit Hours
The history and culture of immigration since 1850, including: (1) formation and perseverance of immigrant communities and inter-ethnic boundaries; (2) relations between the homeland and the immigrant; and (3) impact of migration on family life and gender roles. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (AY).
Prerequisite(s): ANTH 101 or WST 275 or WGST 275 or PSYC 275 or SOC 275 or ANTH 275 or HUM 275 or WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303
Restriction(s):
Can enroll if Class is Graduate

CRJ 560  Law and Culture  3 Credit Hours
This course will explore the ways in which legal rules, norms, and processes are embedded in and shaped by the societies in which they are created and disseminated. We will address anthropological and sociological theories about the nature of law and disputes, examine related studies of legal structures in non-Western cultures, and consider the uses of sociology and anthropology in studying our own legal system. By examining individual legal institutions in the context of their particular cultural settings, we can begin to make cross-cultural comparisons and contrasts. In so doing, we confront the challenge of interpreting and understanding the legal rules and institutions of other cultures while assessing the impact of our own social norms and biases. (F,W)
Restriction(s):
Can enroll if Level is Graduate
CRJ 565 Deviant Behavior/Soc Disorganz 3 Credit Hours
General analysis of the concepts of social deviance and social disorganizations: factors producing each condition, the effects of social control measures on the course of deviance and disorganization consequences for the social system, and the relationship between the two concepts. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

CRJ 566 Drugs, Alcohol, and Society 3 Credit Hours
Analyses of the sociology of substance use and abuse. Provide a sociological framework for understanding issues and evaluating our nation’s responses to the phenomenon of drug use. Drawing on sociocultural and social psychological perspectives, this course systematically examines the social structure, social problems, and social policy aspects of drugs in American Society. Additional assignments will distinguish this course from its undergraduate version.
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

CRJ 568 Criminology 3 Credit Hours
Analysis of criminal behavior in relationship to the institutional framework of society. Emphasis upon the more routinized and persistent forms of criminality along with the joint roles played by victims, the criminal, the police, and all other relevant parties. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (F, W).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

CRJ 569 Juvenile Delinquency 3 Credit Hours
The analysis of juvenile delinquent behavior in relationship to the institutional framework of society. Emphasis on the extent, causes, and methods of treatment of juvenile delinquency in the United States. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

CRJ 570 Current Issues in Crim Justice 3 Credit Hours
Current issues in the field of criminal justice and law enforcement in the US and other countries. Topics include an evaluation of police activities, problems of apprehension and prosecution, the courts and the correctional system, and the efficacy of the legal structure in its social context. Prerequisite or permission of instructor. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (F, W, S).
Prerequisite(s): CRJ 200
Restriction(s):
Can enroll if Class is Graduate

CRJ 571 Intl Criminal Justice Systems 3 Credit Hours
Description, analysis, and evaluation of selected criminal justice systems throughout the world. Course focuses on the various systems, theories, structures, methods, and functions, including common law systems and socialist law systems. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

CRJ 572 Correctional Systems 3 Credit Hours
Analysis of the legal, social and political issues affecting contemporary correctional theory and practice. Topics covered include the history of corrections; the nature of existing institutions; the functions and social structure of correctional institutions; and alternatives to institutional incarceration; probation and parole. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (OC).
Restriction(s):
Can enroll if Class is Graduate

CRJ 576 Inside Out Prison Exchange 4 Credit Hours
This community-based course, taught in a local correctional facility, brings university students and incarcerated students together to study as peers. Together students explore issues of crime and justice, drawing on one another to create a deeper understanding of how these issues affect our lives as individuals and as a society. The course creates a dynamic partnership between UMD and a correctional facility to allow students to question approaches to issues of crime and justice in order to build a safer and more just society for all. The course encourages outside (UMD) students to contextualize and to think deeply about what they have learned about crime and criminals and to help them pursue the work of creating a restorative criminal justice system; it challenges inside students to place their life experiences into larger social contexts and to rekindle their intellectual self-confidence and interest in further education. (YR).

CRJ 580 Applied CJ Theory 3 Credit Hours
Full Course Title: Applied Criminal Justice Theory Criminal Justice theories emphasize the study of formal and informal mechanisms of social control in specific places, such as bars and night clubs, city parks, schools, and shopping malls. This course will include a comprehensive assessment of Criminal Justice theories as well as key principles of human behavior that may be impacted by formal and informal mechanisms of social control. As an applied theory course, students will also be introduced to a process by which theories and principles can be translated into daily practical use in place where behavioral problems frequently occur. (YR)
Prerequisite(s): CRJ 200 and CRJ 468 and CRJ 473 and (SOC 200 or SOC 201)

CRJ 582 Legal Ethics 3 Credit Hours
This course will explore the many ethical dilemmas faced by professionals in the legal system. We will pay particular attention to the criminal justice system and to the Rules of Professional Conduct for attorneys. Some of the questions we may address are: How should an attorney consider his/her own ethical beliefs when deciding the appropriate course of action in a case? How should a judge consider his/ her own ethical beliefs when making a juvenile justice decision? How should a police offer determine the ethical course of action when the law’s instructions are ambiguous? (F,W)
Restriction(s):
Can enroll if Level is Graduate

University of Michigan-Dearborn 657
CRJ 584  White Collar Crime  3 Credit Hours
This course reviews the history, categories, and problems related to white-collar crime. The course covers these topics by incorporating both legal and empirical perspectives in the study of white collar crime. In this course, we will focus on the substantive and procedural white collar crime laws (law on the books) and analyze real white collar crime cases. Simultaneously, we will pay special attention to the dynamic relationship between white color crime and the American regulatory framework. As a result, we will assess the relationship and differences between various types of white collar crime and the regulatory regimes that oversee the business sector (law in action). (OC)

CRJ 587  Forensic Science Evidence in Criminal Cases  3 Credit Hours
This class is a study of the increasing use of scientific evidence in criminal cases, gathered by crime scene investigators (CSI) and/or later developed in a criminal laboratory. After a review of the history and development of forensic scientific evidence, the class will study the standards used by courts to prevent the admission of so-called "junk science" and the emergence of DNA as a new model for forensic science evidence. Several common forms of scientific evidence, beginning with DNA, will be studied, including fingerprints, handwriting, hair, bite marks, ballistics, fire and arson debris, and blood stains. The study also includes the forensic use of social sciences testimony, including the reliability of eyewitness testimony and several forms of abuse "syndrome" testimony. Each of these forms of evidence will be described and then compared to the "junk science" standards and to the most recent information about their reliability. The class will examine the impact of forensic science evidence on jurors and the so-called "CSI Effect". The reaction of courts, attorneys and police to juror expectations for scientific evidence will be reviewed. Finally, the class will review the impact of DNA exonerations and the National Academy of Sciences report on the reliability of forensic science evidence and how judges and appeals courts are responding to those challenges, particularly the current controversies concerning the validity of such evidence. Students cannot receive credit for both CRJ 487 and CRJ 587. (W).

CRJ 588  Criminal Procedure  3 Credit Hours
Full Title: Criminal Procedure and Constitutional Law This class is a study of Constitutional law regarding criminal procedure in the United States. Initially the class reviews the federal and state court structure relating to criminal prosecutions and the flow of cases through those systems. The focus is then on the nature of individual rights under the Constitution, the case law, and the concept of the "exclusionary rule." The class then examines specific issues and procedures relating to arrests, searches, confessions and identifications, and analyzes the constitutional requirements for each. (F,W,S)

Restriction(s):
Can enroll if Level is Graduate

CRJ 590  Topics in Criminal Justice  3 Credit Hours
Examination of problems and issues in selected areas of criminal justice. Title as listed in Schedule of Classes will change according to the content of the course. Course may be repeated for credit when specific topics differ. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research.

Restriction(s):
Can enroll if Class is Graduate

CRJ 598  Directed Studies  1 to 6 Credit Hours
Directed individual study of any subject agreed upon by the student and the instructor. May not duplicate a formal course offering. (F, S, W).

CRJ 599  CRJ Master's Essay  3 Credit Hours
Full Title: Criminology & Criminal Justice Essay Criminology and Criminal Justice Master's degree non-thesis students must complete a major essay addressing the application of substantive or theoretical issues in criminology or criminal justice to current issues or practices in the field. The major paper may be based on papers completed in other graduate courses but must be of higher quality and depth than a usual term paper. The topic must be approved in advance, and approved upon completion, by the graduate faculty advisor.

Restriction(s):
Can enroll if Level is Graduate
Can enroll if Major is Criminal Justice Studies, Criminology & Criminal Justice

CRJ 699  CRJ Thesis  4 Credit Hours
Full Title: Criminology & Criminal Justice Thesis Students electing the Thesis option in the last stage of the MS in Criminology & Criminal Justice program will work under the general supervision of a member of the graduate faculty in the Criminology & Criminal Justice Program but will plan and carry out the work independently. Students should obtain a copy of the thesis requirements from the CASL Office of Graduate Programs or the Program Director before registering for this course. The student will submit a report on the thesis and give an oral presentation to a panel of faculty members when the thesis is completed.

Restriction(s):
Can enroll if Level is Graduate
Can enroll if Major is Criminal Justice Studies, Criminology & Criminal Justice

Decision Sciences (DS)

DS 500  Accelerated Statistics  2 Credit Hours
This course will introduce fundamental concepts and methods in data analysis, probability, estimation, and statistical inference for application in management and management science. Topics include: basic probability theory, discrete and continuous random variables and distributions, sample and data analysis, sampling distributions, estimation, confidence intervals and hypothesis testing, introductory regression analysis, and utilization of statistical software packages. The course is designed to fulfill the statistics prerequisite for admission to SOM graduate degree programs, and is open only to those with strong mathematics backgrounds. Prerequisite: By permission of the Graduate Programs Office.

Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Graduate

DS 503  Managerial Stats and Opt I  3 Credit Hours
To develop basic competence and judgment in the application of quantitative methods for the analysis of probabilistic decision problems. Topics include: structure of probabilistic decision problems, probability theory and applications, statistical estimation and hypothesis testing, data collection and analysis, and applications. Selected software packages are used in homework and laboratory sessions.

Restriction(s):
Can enroll if Class is Graduate
DS 520  Applied Statistical Modeling  3 Credit Hours
This course explores statistical modeling and analysis techniques for aiding managerial decision making. Topics include: introduction to descriptive statistics, sampling methods and sampling distribution, confidence interval estimation, one sample hypothesis tests, one-way and two-way analysis of variance, simple and multiple linear and nonlinear regressions, and time series forecasting. Selected software packages are used in exercises, projects, and business case examples.
Prerequisite(s): Mathematics Placement with a score of 115 or MATH 104 or MATH 105 or MATH 113 or MATH 115
Restriction(s):
Can enroll if Class is Graduate

DS 553  Managerial Stats and Opt II  3 Credit Hours
To develop basic competence and judgment in the application of quantitative analysis to the solution of decision problems. Topics include: univariate and multivariate regression analysis, one-way analysis of variance (ANOVA), linear programming, integer programming, and network models. Selected software packages are used in homework and laboratory exercises.
Prerequisite(s): DS 503

DS 570  Management Science  3 Credit Hours
To develop basic competence in introductory management science and operations research. Topics include: problem formulation and model development in optimization, linear programming (LP), duality theory, economic interpretation, and sensitivity analysis, introduction to integer programming (IP), special linear programs, network modeling, and introduction to non-linear programming (NLP). Selected software packages are used in laboratory exercises and in optimization project.
Prerequisite(s): Mathematics Placement with a score of 115 or MATH 104 or MATH 105 or MATH 113 or MATH 115
Restriction(s):
Can enroll if Class is Graduate

DS 630  Applied Forecasting  3 Credit Hours
This course explores various quantitative modeling methods used in forecasting. Topics include: moving averages, various smoothing techniques, trend- and seasonal forecasting, univariate- and multivariate regression based time series analysis (ARMA, ARIMA). Selected software packages are used in laboratory exercises and in an applied forecasting project.
Prerequisite(s): (DS 520 or IMSE 510 or IMSE 514 or STAT 530 or STAT 535 or STAT 555 or STAT 560) and (Mathematics Placement with a score of 115 or MATH 104 or MATH 105 or MATH 113 or MATH 115)

DS 631  Decision Analysis  3 Credit Hours
This course entails study of analytic techniques for rational decision making that address uncertainty, conflicting objectives, and risk attitudes. Topics covered in the course include modeling uncertainty, rational decision making principles, representing decision problems with value trees, decision trees and influence diagrams; solving value hierarchies, decision trees and influence diagrams; defining and calculating the value of information, incorporating risk attitudes into the analysis and conducting sensitivity analysis.
Prerequisite(s): (DS 520 or IMSE 510 or IMSE 514 or STAT 530 or STAT 535 or STAT 555 or STAT 560) and (Mathematics Placement with a score of 115 or MATH 104 or MATH 105 or MATH 113 or MATH 115)
Restriction(s):
Can enroll if Class is Graduate

DS 632  System Simulation  3 Credit Hours
In this course students will learn how to design, model, and implement discrete-event computer simulation models of real or conceptual systems. Simulation studies will be conducted using contemporary software such as ProModel. Student will learn random number generation, applying distribution sampling, and conducting output analysis.
Prerequisite(s): (DS 520 or IMSE 510 or IMSE 514 or STAT 530 or STAT 535 or STAT 555 or STAT 560) and (Mathematics Placement with a score of C or MATH 104 or MATH 105 or MATH 113 or MATH 115)
Restriction(s):
Can enroll if Class is Graduate

DS 633  Data Mining for Business Appl  3 Credit Hours
The purpose of this course is to provide students with both quantitative and qualitative exposure to the field of Data Mining, a topic of immense importance and relevant to the study of Business Analytics. Data Mining is the process of discovering meaningful correlations, patterns and trends in large data sets and employs statistical and mathematical techniques. Students will be exposed to theory, computation, tools & techniques to analyze repositories of data from a vast array of business applications with a view to implement successful business strategies aimed at improved decision-making. The course contents are representative of three primary areas of analytics - prescriptive, predictive, and descriptive that define the core of studies offered in our Masters of Science in Business Analytics program. Selected software packages are used in exercises to solve data mining problems. (F) (W)
Prerequisite(s): (DS 520 or IMSE 510 or IMSE 514 or STAT 530 or STAT 535 or STAT 555 or STAT 560) and DS 570 and (Mathematics Placement with a score of 115 or MATH 104 or MATH 105 or MATH 113 or MATH 115)
Restriction(s):
Can enroll if Class is Graduate

DS 635  Analytics Experience Capstone  3 Credit Hours
The purpose of this course is to provide students with an experience that allows them to demonstrate application of integrative knowledge aimed at addressing an industry relevant decision-making problem by drawing on the breadth and depth of the Business Analytics programmatic curriculum. The plan of studies requires that the student complete this course under the direction and guidance of the Instructor who may enroll the services of an industry expert for advice. Depending on the size and complexity of the problem, one or many students may be assigned to the project. The deliverables for the course are a detailed project report describing evaluation and analysis of the problem to be presented at a public setting. The course can be finished in one or two semesters. (F) (F, W).
Prerequisite(s): (DS 520 or IMSE 510 or IMSE 514 or STAT 530 or STAT 535 or STAT 555 or STAT 560) and DS 630 and DS 631* and DS 632* and (Mathematics Placement with a score of 115 or MATH 104 or MATH 105 or MATH 113 or MATH 115)
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Program is

DS 638  Adv Topics in Mgmt Science  3 Credit Hours
This is the second in Management Science offering advanced topics beyond the DS 570 course. Among the topics included are algorithms in-dynamic programming, nonlinear programming, game theory, goal programming, Markov chains, Markov decision processes, queuing theory, inventory theory, and simulation.
Prerequisite(s): DS 570
Restriction(s):
Can enroll if Class is Graduate
Economics (ECON)

ECON 5011 Monetary Economics 3 Credit Hours
This course examines financial institutions in a macroeconomic theoretical context. A rigorous treatment of monetary theory is presented followed by practical discussion of U.S. monetary policy as implemented by the Federal Reserve System. Students cannot receive credit for ECON 411 and ECON 4011 or ECON 5011.
Prerequisite(s): ECON 311 and ECON 301
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Public Policy, Economics

ECON 5015 Introduction to Econometrics 3 Credit Hours
The theory and practice of the statistical analysis of economic relationships. Topics covered include the construction and estimation of econometric models and tests of economic theories, emphasizing the use of multiple linear regression. Students cannot receive credit for ECON 415 and ECON 4015 or ECON 5015.
Prerequisite(s): (MATH 113 or MATH 115) and ECON 305
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Public Policy, Economics

ECON 5021 Economics of the Labor Sector 3 Credit Hours
Theoretical analysis and empirical studies of the nature and operation of labor markets. Includes theories of wage determination and income distribution, the nature of unemployment, the impact of collective bargaining on the economy, the extent and economic effects of discrimination, and the nature and effects of government wage and employment policies. Students cannot receive credit for ECON 421 and ECON 4021 or ECON 5021.
Prerequisite(s): ECON 302
Restriction(s):
Can enroll if Class is Graduate

ECON 503 Economics and Public Policy 3 Credit Hours
In this course students will review basic neoclassical economic theory and learn to apply it to the analysis of public policy issues. Economics offers important insights into the behavior of businesses, consumers, and government entities. We will review key economic concepts, applying each to an array of public policy questions. Next we will evaluate resource allocation via the market system and consider how public policy might address situations where the market fails to produce desirable results. Lastly, we'll learn about the basic tools economists use to evaluate public policies.
Prerequisite(s): (ECON 201 and ECON 202) or PPOL 500
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate
Cannot enroll if College is Engineering and Computer Science

ECON 5065 History of Economic Thought 3 Credit Hours
Course examines the evolution of economic thought and theory from the early origins to the present, focusing on the major contributions to economics, especially from Adam Smith onward, and assesses the current condition of economic analysis. Students cannot receive credit for ECON 465 and ECON 4065 or ECON 5065.
Prerequisite(s): ECON 302
Restriction(s):
Can enroll if Class is Graduate

ECON 5085 Public Finance 3 Credit Hours
Analysis of the role of government in the economy. Course examines theories of the need for and nature of government intervention in economic activities. Includes analysis of the local, state and Federal US tax system and its labor supply implications, intergovernmental transfers and transfers to individuals, cost-benefit and budget analysis as well as models of political economy and public choice theory. Students cannot receive credit for ECON 481 and ECON 4085 or ECON 5085. (AY, F).
Prerequisite(s): ECON 302
Restriction(s):
Can enroll if Class is Graduate

ECON 537 Behavioral Public Policy 3 Credit Hours
This course teaches you to apply the insights from behavioral economics and psychology to public policy design. Empirically-based behavioral science offers policy makers the opportunity to decrease the impact of psychological limitations of lazy or boundedly rational individuals. In this course we consider various public policies that are informed by behavioral science research in the areas of retirement savings, household borrowing, health care, energy use and choice of nutrition. (AY, S).
Prerequisite(s): ECON 201 and ECON 202
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Graduate
Cannot enroll if Program is

ECON 538 Beh Econ for Business & Policy 3 Credit Hours
This course is a reading intensive seminar on behavioral economics, which is the combination of psychology and economics that investigates what happens in markets in which some agents display human limitations and complications. The course focuses on the behavioral economics theory and its' application to business practice and policy decision making. Specifically, in this course we: (1) examine the ways in which people deviate from the standard economics models, including irrationality, preferences for fairness, prosperity to cooperate, trust, dual-interest, empathy, and emotions; (2) explore behavioral economics theories and models; discuss how the behavioral economic theories and models can be applied to solve business and policy problems. Graduate version of the course requires completion of additional assignments. Students cannot receive credit for ECON 336 and ECON 438 or ECON 538. (F,W,AY)
Restriction(s):
Can enroll if Class is Specialist or Graduate or Doctorate

ECON 542 Economic Development 3 Credit Hours
A survey of economic problems currently affecting third world countries and the various policy options available to them. Topics covered will include agrarian vs. industrial growth, and monetary and fiscal policies, planning problems, foreign exchange and debt problems. Students cannot receive credit for ECON 342 and ECON 442 or ECON 542(OC).
Prerequisite(s): ECON 201 and ECON 202
Restriction(s):

ECON 544 Economies of the Middle East 3 Credit Hours
Survey of socio-economic issues of the post-WWII Middle East, using textbooks and web-based readings. Topics include population growth, urbanization, migration, gender issues, land reform, privatization, and stabilization policies. The Arab-Israeli conflict is not a focus of study. Grade based on papers and exams. Students cannot receive credit for ECON 344 and ECON 444 or ECON 544.
Prerequisite(s): ECON 201 or ECON 202
Restriction(s):
Can enroll if Class is Graduate
**ECON 547  International Finance  3 Credit Hours**
This course studies the large-scale economic issues in interdependent economies, such as the behavior of exchange rates, interest rates, income, wealth, prices, and the balance of payments. International finance focuses particularly on economic policies in a world with a multitude of currencies and increasingly integrated goods, financial, and capital markets. Students cannot receive credit for ECON 347 and ECON 447 or ECON 547.

**Prerequisite(s):** ECON 201

**Restriction(s):**
- Can enroll if Level is Graduate
- Can enroll if Major is Public Policy, Economics

**ECON 548  International Trade  3 Credit Hours**
Course analyzes in depth the debate of free trade vs. protectionism. Different theoretical models of the "gains from trade" are presented, as well as studies of their empirical validity. Some historical perspective is included, as well as discussion of the current situation of the European Union. Students cannot receive credit for ECON348 and ECON 448 or ECON 548.

**Prerequisite(s):** ECON 201 or ECON 202

**Restriction(s):**
- Can enroll if Class is Graduate
- Can enroll if Program is MPP-Public Policy

**ECON 582  Regional Economics  3 Credit Hours**
Course explores methods of economics evaluation of regions in terms of intra- and inter-regional activity. Regions may smaller than a nation, be a collection of nations, or be composed of portions of more than one nation. Theoretical topics include the theories of (1) the location of the firm, (2) spatial demand, (3) agglomeration economies, and (4) input-output analysis. Regional development policy is discussed using Michigan and Ontario as subjects. Students cannot receive credit for both ECON382 and ECON482.

**Prerequisite(s):** ECON 201 or ECON 202 or ECON 2001

**Restriction(s):**
- Can enroll if Class is Graduate

**ECON 583  Urban Economics  3 Credit Hours**
The economics of the city and the introduction of space in economic analysis; the determination of land use patterns, the location of firms and industries, and an urban area's growth; economic analysis and policy issues concerning urban poverty, housing, transportation, the local public sector, and other urban problems. Students cannot receive credit for ECON 381 and ECON 483 or ECON 583.

**Prerequisite(s):** ECON 201 or ECON 202 or ECON 2001

**Restriction(s):**
- Can enroll if Class is Graduate

**ECON 597  Economics Seminar  3 Credit Hours**
An advanced study in selected areas of economics. Topics vary; see the current Schedule of Classes for topics and prerequisites. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (OC).

**Restriction(s):**
- Can enroll if Class is Graduate

**ECON 599  Directed Research  1 to 3 Credit Hours**
Independent study under the direction of a faculty supervision in advanced topic areas. Normally must be elected on the "pass/fail" option, in which case it does not count toward credit hour requirement or concentration. Special consideration for the A through E grading option must be approved by members of the Economics discipline. In all cases students must have faculty supervision's permission to register. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (F, W, S).

**Restriction(s):**
- Can enroll if Class is Graduate

**Educ A-Theoretical Foundatns (EDA)**

**EDA 500  Theoretical Foundations of Ed  3 Credit Hours**
This is an advanced seminar course in educational theory. It involves a systematic examination of numerous theories that have played a major role in shaping American education. Among these are: 1) ideologies, 2) ethical theories, 3) learning theories, 4) instructional theories, and 5) theories of study. These have provided education with different moral outlooks, different social objectives, different curricula, and different teaching methods.

**Restriction(s):**
- Can enroll if Class is Post-baccalaureate Cert only or Graduate
- Can enroll if College is Education, Health, and Human Services

**EDA 501  Adv Social Fndtions of Ed  3 Credit Hours**
This advanced seminar will investigate various aspects of formal education taking into account historical, philosophical, political, social, cultural, religious and economic contexts. Within these contexts, the course will identify and examine school reform and change issues and trends as they relate to complex and rapidly changing local, national and global society.

**Restriction(s):**
- Can enroll if Class is Post-baccalaureate NCFD or Graduate
- Can enroll if College is Education, Health, and Human Services

**EDA 515  Comm & Schools: Partnerships  3 Credit Hours**
Communities and Schools: Building and Sustaining Partnerships offers an examination of the role that communities play in schools' achieving public aims and the value that alliances have on the overall delivery of instruction. Thus, the course reviews various arguments and presents the student learner with the opportunity to connect the theory to practice so that she/he can develop her/his own views on the need and value of these methods. (YR)

**EDA 519  Early Literacy/Language Devel  3 Credit Hours**
This course examines early language development, the factors that contribute to its growth and the role that it plays in the development of literacy. Diagnostic techniques for assessing language and literacy and teaching strategies and materials to facilitate language and literacy growth in children birth through third grade will be discussed.

**Restriction(s):**
- Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate
EDA 520  Community Action: Detroit  3 Credit Hours
Using the Detroit Metropolitan region as a case study, students will examine the local history of different types of community organization-grassroots citizen action groups, non-profit social service agencies, issue coalitions, and government-sponsored councils-as a way of understanding the concepts of self-interest, power, institutional change, community control, and leadership. The class will examine how history, ecology, culture, economics and individuals working in groups shape communities including Detroit. Through this examination, students will develop the understanding and skills needed to act as collaborators and leaders in the community working with different organizations to help empower citizens and affect social change. (YR)

EDA 521  Comm Based Edu Seminar  1 Credit Hour
This seminar is designed to support students pursuing the MA in Community Based Education. By developing an extended learning community the course will help students build connections between theory and practice by hosting regular research talks with local experts and professionals in the field. It will also support students in developing essential skills that will help them be successful in the field such as responding to an RFP; developing a conference proposal, writing for publication, and preparing a proposal for a foundation. (F) (W)

EDA 530  Loc Govt for Teach/Admin  1 to 3 Credit Hours
At the seminar, teachers participate in interactive learning activities with local government staff members. Officials serve as resource people, not lecturers. Teachers experience each lesson through the eyes of their students. All participants provide complete lesson plans for each activity, making it easy to share favorites from the course/academy with colleagues. Teachers work on developing coordinated learning experiences in local government including field trips, case studies and class visitations drawn from both school district and local government resource bases.

Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate

EDA 550  Hist/Theory of Bilingual Educ  2 to 3 Credit Hours
This course provides an extensive background on bilingual education (programs where two languages are used as media of instruction) in the United States, and events that led to the inception of such programs on the Federal as well as the State levels. The course provides a background on the concept itself, its rationale and implementation. (OC)

Restriction(s):
Can enroll if Class is Graduate

EDA 555  Lang,Clture,Litrcy&Power in Ed  3 Credit Hours
During this course we will examine the social/cultural functions of language with an emphasis on schools and other applied educational settings. Through our readings, discussions, and class activities, students will gain a greater appreciation for the ways in which language varies across cultures, social settings, and situations.

Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate

EDA 610  Seminar in Critical Pedagogy  3 Credit Hours
This course will engage students in an in-depth study of pedagogy and will allow for the examination their own disciplines through a critical theory lens. Students will be expected to problematize their disciplines core tenets and consider teaching for today's urban/metropolitan schools and curriculum.

Restriction(s):
Can enroll if Class is Graduate
Cannot enroll if Level is
Can enroll if College is Education, Health, and Human Services

EDA 620  Public Pedagogy  3 Credit Hours
This course examines the out-of-school spaces and experiences in an effort to revision our understanding of what counts as education. Participants will complete case studies of the physical, social, and political places inhabited by the people in Detroit and the surrounding communities as a source for reimagining teaching and learning in ways that connect the school and the community to empower students, teachers and the community to create educative experiences that cultivate their own agency in the community.

Restriction(s):

EDA 810 Seminar in Critical Pedagogy 3 Credit Hours
This course will engage students in an in-depth study of pedagogy and will allow for the examination their own disciplines through a critical theory lens. Students will be expected to problematize their disciplines core tenets and consider teaching for today's urban/metropolitan schools and curriculum.
Restriction(s):
Can enroll if Class is Graduate

EDA 820 Public Pedagogy 3 Credit Hours
This course examines the out-of-school spaces and experiences in an effort to revision our understanding of what counts as education. Participants will complete case studies of the physical, social, and political places inhabited by the people in Detroit and the surrounding communities as a source for reimagining teaching and learning in ways that connect the school and the community to empower students, teachers and the community to create educative experiences that cultivate their own agency in the community.
Prerequisite(s): EDB 823 and EDB 825 and EDB 820
Restriction(s):
Can enroll if Level is Doctorate or or Specialist or Graduate or Rackham

EDA 855 Lang,Culture,Litrcy,Power in Ed 3 Credit Hours
During this course we will examine the social/cultural functions of language with an emphasis on schools and other applied educational settings. Through our readings, discussions, and class activities, students will gain a greater appreciation for the ways in which language varies across cultures, social settings, and situations.
Restriction(s):
Can enroll if Class is Specialist or Doctorate
Can enroll if College is Education, Health, and Human Services

**Educ B-Educational Admin (EDB)**

EDB 500 Multicult Ed in US Classroom 3 Credit Hours
The theoretical concepts from the history of education, educational research, and the social sciences will form a base for studying educational trends, issues, and reforms in our society of diverse origins and outlooks. Topics for discussion may include: issues in reform movements; social, economic, pedagogical, and ethical problems related to education; and problems and prospects in international educational competition. The focus will be on institutional problems and processes related to quality education for pupils in our multicultural society.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate
Can enroll if College is Education, Health, and Human Services

EDB 501 Leadership and Administration 3 Credit Hours
An overview and examination of the background and current practices and applications associated with substantive leadership and futures-oriented management of a variety of public service and nonprofit organizations.
Restriction(s):
Can enroll if Class is Graduate

EDB 502 School and Community Relations 3 Credit Hours
Examines interactions of schools and their communities: citizens' role/involvement in governance of education, internal and external communication concepts and practices, politics of education, community power and pressure groups, and organizational culture and climate.
Restriction(s):
Can enroll if Level is Rackham or Graduate
Can enroll if Degree is Education Specialist, MA in Educational Leadership, Doctor of Education

EDB 503 Reading Programs: K-12 3 Credit Hours
Overview of K-12 reading programs. Examines district, building, and classroom models, program development, implementation, and assessment/evaluation. Analysis of supervisory roles and leadership alternatives. Writing and technology connections will be explored.
Prerequisite(s): EDA 419 or EDD 419 or EDA 519 or EDD 519
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate
Can enroll if College is Education, Health, and Human Services

EDB 505 Intro to Educ Administration 3 Credit Hours
The course will provide an overview of educational administration and cover basic issues facing school administrators. It provides an introduction to the role of the school leader in contemporary educational programs and services. Students will examine opportunities in school administration and begin to develop a knowledge base for leadership in a variety of educational settings.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate

EDB 507 Strategic Comm for Admin 3 Credit Hours
This Internet course addresses three levels of administrative communications - individual, group and organization - and examines the concepts and skills needed to be an effective communicator. Students will develop applications emphasizing goal-oriented communications and making strategic choices in content, structure, style and delivery. An emphasis is given to the design and best use of computer technologies such as Word and PowerPoint applications. The course also covers basic ethical and legal issues of work-place communications.
Restriction(s):
Can enroll if Class is Graduate

EDB 521 Current Issues in Early Ed 2 Credit Hours
Examines the expanding field of early childhood in order to understand major issues which are shaping the development and support of early education and child care programs. Designed for present and future teachers, administrators, and other workers in the field of early childhood, and for the general public who must participate in major pending decisions relating to such questions as proposed changes in state licensing, teacher certification, and funding sources.
Restriction(s):
Can enroll if Class is Graduate

EDB 522 Lead Advanc Admin Early Child 3 Credit Hours
This course promotes the role of the early childhood educator as a leader and advocate for young children and families. It is designed for present and future teachers, administrators and other professionals who participate in decisions relating to public policy legislation, state licensing, teacher certification, funding resources, parental involvement and other issues affecting young children and families.
Prerequisite(s): EDC 240
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate
Can enroll if Level is Rackham or Graduate
EDB 523  Legal and Reg Issues in Ed  3 Credit Hours
This class will focus on important legal and regulatory issues related to public, education, and nonprofit organizations. It will consider the various court and administrative decisions which affect these. Numerous case situations will be used to facilitate the student's learning.
Restriction(s):
Can enroll if Level is Rackham or Graduate

EDB 524  Site-Based Management  2 Credit Hours
Site-based management in organizations is an evolving type of organizational improvement effort. Shared planning and participative decision-making are other related vehicles for enabling local organizational units to plan and execute their own processes, goals, and outcomes. An examination of the policies, practices, evolving research, impediments, and promoters of site-based management will be reviewed, along with case studies of success stories.
Restriction(s):
Can enroll if Level is Rackham or Graduate

EDB 540  School Budgeting and Finance  3 Credit Hours
Basic principles and actual practices of financial administration and accounting for state/local governments, public school systems, and nonprofit organizations, particularly budgeting and financial reporting within the context of other organizational processes and political demands and/or requirements. As one of the required seminars for the Educational Administration Certification, the case method will be employed to illustrate issues and problems of school financial administration.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate

EDB 560  Admin of Human Resources  3 Credit Hours
This seminar will examine human resource administration activities in public, educational and nonprofit settings. Issues such as recruiting, selection, planning, performance appraisal, contracting and collective bargaining will be related to the overall administrative activities. Emphasis will be placed on the connections between human resource issues in public, education, and nonprofit organizations.
Restriction(s):
Can enroll if Class is Graduate

EDB 561  Organizational Dev and Theory  3 Credit Hours
Students will learn how organizations are structured and shaped, know what features of organizations vary and the parameters on which they vary, and be able to analyze, synthesize, and apply concepts to reduce organizational uncertainty, and to improve and regulate organization behaviors and outcomes. Attention will also focus on top down and participatory administration in organizations, and change in public, educational, and nonprofit organizations and agencies.
Restriction(s):
Can enroll if Class is Graduate

EDB 562  Labor Relat in School Settings  3 Credit Hours
The seminar will consider the impact of collective bargaining on traditional human resource administration in public, education, and nonprofit settings. It also will focus on developing an initial competency in the various activities associated with collective bargaining situations.
Prerequisite(s): PADM 560 or EDB 560
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate

EDB 580  Info Sys and Stats for Admin  3 Credit Hours
This course will introduce MPA students to descriptive and basic inferential statistics. Participants will use microcomputers and software to perform elementary statistical analyses and to prepare presentation quality reports and graphics, making use of statistical information.
Restriction(s):
Can enroll if Class is Graduate

EDB 581  Strategic Plng/Needs Assess  3 Credit Hours
This course develops the strategic planning and needs assessment competencies of participants. Emphasized in the course is the "cascade" process of information gathering involving interviewing, focus groups, and surveys as applied in strategic planning.
Restriction(s):
Can enroll if Class is Graduate

EDB 582  Policy Analysis & Development  3 Credit Hours
Policy formulation involves two different activities: 1) identifying and assessing alternative courses of action, i.e., deciding what, if anything, needs to be done about a problem; and 2) developing the policy, regulation or law that will carry an agreement in principle into effect. Both aspects of policy development will be covered in the course.
Restriction(s):
Can enroll if Class is Graduate

EDB 583  Program Evaluation  3 Credit Hours
This class will examine procedures for evaluating programs in public, education and nonprofit settings. The concern will be to examine the various techniques available to determine whether a program is doing what it was intended to do. Students will utilize various techniques in examining a variety of case situations.
Restriction(s):
Can enroll if Class is Graduate

EDB 586  Curriculum Delib and Develop  3 Credit Hours
Study of teaching, learning, evaluation, and outcomes of education in relation to curriculum study and development. Focus on policy issues, utilization of research and current effective practices related to the successful articulation and implementation of curricula.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate

EDB 650  Assessment Seminar  1 to 3 Credit Hours
This class will focus on assessing the performance of individuals in administrative settings. There will be a variety of exercises which will provide an assessment of the students with regard to different administrative circumstances. Students will also evaluate their career plans and situation.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate

EDB 700  Multicult Educ in U.S. Classrm  3 Credit Hours
The theoretical concepts from the history of education, educational research, and the social sciences will form a base for studying educational trends, issues, and reforms in our society of diverse origins and outlooks. Topics for discussion may include: issues in reform movements; social, economic, pedagogical, and ethical problems related to education; and problems and prospects in international educational competition. EDB 762  Labor Rel in School Setting  3 Credit Hours
The seminar will consider the impact of collective bargaining on traditional human resource administration in public, education, and nonprofit settings. It also will focus on developing an initial competency in the various activities associated with collective bargaining situations.

Restriction(s):
Can enroll if Class is Specialist or Doctorate
Can enroll if College is Education, Health, and Human Services

EDB 783  Program Evaluation  3 Credit Hours
This course will examine procedures for evaluating programs in public, education, and nonprofit settings. The concern will be to examine the various techniques available to determine whether a program is doing what it was intended to do. Students will utilize various techniques in examining a variety of case situations.

Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDB 807  Strategic Comm for Admin  3 Credit Hours
This Internet course addresses three levels of administrative communications - individual, group and organization - and examines the concepts and skills needed to be an effective communicator. Students will analyze various communications emphasizing goal-oriented communications and making strategic choices in content, structure, style and delivery. An emphasis is given to the design and best use of computer technologies such as Word and PowerPoint applications. The course also covers basic ethical and legal issues of workplace communications.

Restriction(s):
Can enroll if Class is Doctorate

EDB 861  Organization Dev & Theory  3 Credit Hours
Students will learn how organizations are structured and shaped, know what features of organizations vary and the parameters on which they vary, and be able to analyze, synthesize, and apply concepts to reduce organizational uncertainty. The growth and development of the human learner is studied, with stress upon teaching and learning from preschool through adulthood. Consideration will be given to theories of learning, development, and motivation, with the goal of identifying the implications of theory for educational practice.

Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDC 500  The Human Learner  2 Credit Hours
An examination of the current theories and research findings concerning the physical, social, emotional and cognitive development during the early and late adolescent years. Theory will be related to educational practice.

Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDC 501  Intro to Learning Disabilities  3 Credit Hours
Overview of characteristics, identification, service delivery models, and issues pertaining to persons from preschool to adulthood with learning disabilities. Required course for Special Education-Learning Disabilities Certification.

Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate
Can enroll if College is Education, Health, and Human Services

EDC 502  Adol Devl & Classroom Mgmt  3 Credit Hours
An examination of the current theories and research findings concerning the physical, social, emotional and cognitive development during the early and late adolescent years. Theory will be related to educational and parenting practices. Course includes significant material addressing classroom management of the middle school and high school classroom using simulations, case studies and videos of actual classrooms.

Corequisite(s): EDC 504

Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate

EDC 504  Organization Devel & Theory  3 Credit Hours
Students will learn how organizations are structured and shaped, know what features of organizations vary and the parameters on which they vary, and be able to analyze, synthesize, and apply concepts to reduce organizational uncertainty. The growth and development of the human learner is studied, with stress upon teaching and learning from preschool through adulthood. Consideration will be given to theories of learning, development, and motivation, with the goal of identifying the implications of theory for educational practice.

Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDC 505  LD Practicum K-12  1 Credit Hour
The K-12 LD Practica will provide beginning students with initial exposure to the practical aspects of teaching LD students in a variety of general and special education settings. Students will be required to observe and actively participate in instructional planning, teaching, managing, and monitoring LD students in K-12 settings. Students will also observe a variety of service delivery models including the resource room, inclusive settings, and tutorial situations. Graduate standing or permission of the instructor; concurrent enrollment in C501.

Corequisite(s): EDC 501

EDC 506  Strategic Plng/Needs Assess  3 Credit Hours
This course develops the strategic planning and needs assessment competencies of participants. Emphasized in the course is the "cascade" process of information gathering involving interviewing, focus groups, and surveys as applied in strategic planning.

Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDC 507  Policy Analysis & Development  3 Credit Hours
Policy formulation involves two different activities: 1) identifying and assessing alternative courses of action, i.e., deciding what, if anything, needs to be done about a problem; and 2) developing the policy, regulation or law that will carry an agreement in principle into effect. Both aspects of policy development will be covered in the course. (AY).

Frequency of Offering

The following abbreviations are used to denote the frequency of offering: (F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally.
EDC 504  Pract Adol Devl&Clsm Mgmt  1 Credit Hour
A supervised field experience related to adolescent development and classroom management in grades 6-12. Requires a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Must be taken with EDC 502. For undergraduate credit elect EDC 304.
Prerequisite(s): Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDC 502
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate

EDC 505  Adult Lrning:Theory & Practice  3 Credit Hours
This course introduces students to current theory and practice for understanding and working with adult learners in today's society.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate

EDC 506  Applied Behavior Analysis I  3 Credit Hours
This is the first in a two course sequence in applied behavior analysis (ABA) that focuses on the fundamental principles, processes, and concepts of the field. These principles, processes, and concepts serve as the foundation of practice. Topics include: the definition and characteristics of ABA, basic elements in a scientific analysis of behavior, principles and tactics for analyzing and changing behavior, and fundamental elements and key terms that are essential to understanding the relationship between behavior and its environment. (YR)
Prerequisite(s): EDC 506

EDC 507  Applied Behavior Analysis II  3 Credit Hours
This is the second in a two course sequence in applied behavior analysis (ABA) that focuses on the fundamental principles, processes, and concepts of the field that were covered in Applied Behavior Analysis I. Through discussion, demonstration, and analysis, students will learn about specific behavior change procedures based upon the principles of ABA and the process for selecting and implementing those procedures. (YR)
Prerequisite(s): EDC 506

EDC 508  Intro to Dvlpmntl Disabilities  3 Credit Hours
Full Title: Introduction to Developmental Disabilities This course will provide an overview of the issues related to individuals with developmental disabilities. Topics include the history, public policy issues, familial issues within the context of socio-cultural issues, and the role of families in the provision of services across the lifespan. Students will be exposed to the range of assessment practices for developmental disabilities and criteria for diagnosis. Other topics include educational and behavioral interventions, person centered planning/family centered support, post-school and adult issues, physical and mental health issues, services and supports to improve quality of life, controversial therapies, and ethical issues. (YR)

EDC 511  Dev Peer/Social Relationships  2 Credit Hours
Students will examine the processes of peer relations and socio-emotional development from birth to adolescence. Topics to be covered in this course include attachment, peer popularity and intimacy. As well, students will discuss the importance of the family on social development. Classroom environment and peers as educators will also be covered. (OC)
Prerequisite(s): EDC 340*
Restriction(s):
Can enroll if Class is Graduate

EDC 512  Soc Devl & Pos Guidnce Techn  3 Credit Hours
This course will examine the process of social and emotional development in childhood through adolescence. Positive strategies to promote and guide this development in the classroom will be explored using behaviorist and constructivist frameworks. Topics will include character education, discipline models, conflict resolution and family collaboration. Guiding the development of emotional regulation, perspective taking and peer relationships in children including children with special needs will be investigated.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate
Can enroll if College is Education, Health, and Human Services

EDC 514  Early Child Ed Special Needs  3 Credit Hours
Focuses on the psychological and educational needs of the young child with special needs. Discusses identification techniques and educational strategies for teaching in a regular early childhood classroom with young children having special needs. Special emphasis will be placed on behavioral, linguistic, and intellectual needs. Suitable for classroom teachers, child care directors, and teachers in training.
Prerequisite(s): EDC 540 or (EDC 340 or EDC 240)
Restriction(s):
Can enroll if Class is Graduate

EDC 516  Research Methods Beh Analysis  3 Credit Hours
Full Title: Research Methods in Behavioral Analysis The purpose of this course is to introduce the fundamentals of behavior-analytic research methods. The course will review single-case time series methodologies to assess various dimensions of behavior and evaluate the effects of interventions on behavior. Single-case research has played an important role in developing and evaluating interventions designed to modify some aspect of human behavior. This course will encompass a broad range of research areas that utilize single-case designs within both the behavior analytic literature and other disciplines including school psychology, medicine, and business. (YR)
Prerequisite(s): EDC 506*

EDC 517  Mgmt of Classroom Behavior  3 Credit Hours
Provides intervention and management techniques for teachers and teacher candidates using principles of behavior modification. Includes examination of theoretical foundations, research and field reports, participation in self-management projects, and consideration of various applications in regular and special classrooms. Field experience is optional. Will focus on classroom management in early childhood and elementary environments, allowing a more focused examination of topics and case studies geared to those grade levels.
Prerequisite(s): EDC 300
Restriction(s):
Can enroll if Class is Grad 

EDC 520  Hum Sexuality:Psyc-Ed Concepts  2 Credit Hours
The course is intended to acquaint elementary and secondary teachers with the elements that comprise sexuality as it relates to their lives and those of their students. Although a basic core of information is to be covered, the content of each class will provide for the needs and interests of the teachers. Teachers will be directly involved in identifying problems and the development and collection of strategies for problem resolution. Teachers who complete this program will meet the state requirements for certification in sex education/reproductive health.
Restriction(s):
Can enroll if Class is Graduate
EDC 525  Treat Plan/Eth Prof Cond ABA  3 Credit Hours
Full Title: Treatment Planning/Ethical and Professional Conduct in Applied Behavior Analysis. This course provides a comprehensive approach to treatment planning in Applied Behavior Analysis. The course addresses application of the principles of Applied Behavior Analysis to intervention, assessment, implementation, evaluation, program continuation/maintenance, and data-based clinical decision making. Central to treatment are the ethical responsibilities for Applied Behavior Analysts. The Professional and Ethical Compliance Code for Behavior Analysts, as put forth by the Behavior Analyst Certification Board is addressed. Throughout the course, the behavior analytic literature is used as the basis for all coursework, discussion, and evaluation. (YR)
Prerequisite(s): EDC 506

EDC 531  Constructivist Education  3 Credit Hours
An examination of constructivist theory and its application to educational practices. The nature and stages from birth through adolescence of cognitive and social development from the constructivist viewpoints of Piaget, Vygotsky, and others will be discussed. A major focus will be the application of constructivist theory to educational goals, teaching strategies and curriculum.
Prerequisite(s): (EDC 340 or EDC 240) and (EDC 341 or EDC 241)
Restriction(s):
Can enroll if Class is Graduate

EDC 539  Child Maltreatment and Trauma  3 Credit Hours
This course will examine adverse childhood experiences, including the impact of physical abuse, neglect, sexual abuse, and other forms of psychological trauma. Particular emphasis will be placed on the role of trauma informed professionals to identify, assess, and support the needs children, youth, and families impacted by trauma and child maltreatment. This course will explore various levels of prevention, intervention, and collaborative response to suspected cases of child maltreatment by multi-disciplinary teams, including investigation and treatment. (YR)
Restriction(s):
Can enroll if Level is Rackham or Graduate or Doctorate or

EDC 540  Advanced Child Development  3 Credit Hours
An advanced study of the development of the child from conception through adolescence. Research on physical, cognitive, and psychosocial development will be explored and analyzed. Current applications of knowledge in this field will be examined as well as new innovations in both research and practice.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate

EDC 541  The Child: Birth to Three  2 to 3 Credit Hours
An examination of current theories and findings concerning the physical, social, emotional and intellectual development of the young child from prenatal to three years of age. Topics include fetus maturation, capabilities of the newborn, language, cognition, and environmental influences on development. Theory will be related to infant care practices in the home and in early childhood centers.

EDC 545  Develop Assess of Young Child  3 Credit Hours
Examines the theories and recent research on the development of cognition and memory. Selected topics include: perception, language, representation, social cognition and problem solving. Educational implications and strategies for developing children’s thinking and memory are explored.
Prerequisite(s): EDC 340 or EDC 445
Restriction(s):
Can enroll if Class is Graduate

EDC 542  EC:Fam/Sch/Com Collab Multi Soc  3 Credit Hours
FULL COURSE TITLE: Early Childhood: Family School Community Collaboration in a Multicultural Society. Focuses on factors which influence the building of partnerships among early childhood professionals, families and communities. Includes understanding and working with culturally and linguistically diverse families. Various communication and problem-solving strategies which promote family involvement and community outreach are practiced through discussion and role play.
Prerequisite(s): (EDC 340 or EDC 240) and (EDC 341 or EDC 241)
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDC 543  Family/School/Community Collab  2 Credit Hours
Characteristics, roles, and functions of contemporary families are described. Various communication and training strategies designed to promote collaboration and teamwork within and between the school staff, the families, and community are described and practiced through discussion, problem-solving activities, and role playing. Family effectiveness assessment instruments and strategies are also described and practiced.
Restriction(s):
Can enroll if Class is Graduate

EDC 544  Cog/Memory Dev in Children  3 Credit Hours
Examines the theories and recent research on the development of cognition and memory. Selected topics include: perception, language, representation, social cognition and problem solving. Educational implications and strategies for developing children’s thinking and memory are explored.
Prerequisite(s): EDC 340 or EDC 540
Restriction(s):
Can enroll if Class is Graduate

EDC 546  Formal & Informal Testing&Eval  2 to 3 Credit Hours
In this course students will develop their knowledge and skills in traditional and non-traditional methods for evaluating classroom learning, performance technology and training. Students will learn how to construct evaluations, tests, analyze evaluation results, conduct program evaluation and educational assessment in relation to performance technology, training and teaching and learning.
Restriction(s):
Can enroll if Class is Graduate
EDC 555  Assmt: Sec Lang Learning K-12  2 Credit Hours
In this course, students will learn to identify, assess, and place second language learners for appropriate instruction and instructional programs. Students will review, evaluate, and implement a variety of assessment instruments and strategies intended for use with limited English proficient students, K-12. Students will also examine the impact and issues regarding high-stakes assessments on English language learners. Official admission to and good standing in the teacher certification program are required. (W).
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDC 556  Learning & Classrm Assessment  3 Credit Hours
In this course students will examine the relationship between curriculum, instruction and assessment. Students will review different forms of assessment and evaluate the strengths and weaknesses of each format. Students gain experience in 1) selection of assessment formats based on curricular focus and student developmental levels; 2) development of assessments; and 3) decision-making based on the results of the assessments.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate
Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters

EDC 560  Rdg/Diag/Assessment Tech K-12  3 Credit Hours
Overview of K-12 reading diagnostic and assessment techniques. Review of state-mandated tests. Use of criterion referenced tests, norm-referenced tests, and informal inventories to develop individual reading profile. Results of diagnostic instruments will be interpreted to suggest appropriate instructional strategies. (YR).
Restriction(s):
Can enroll if Class is Graduate

EDC 561  Educating the Exceptional Child  3 Credit Hours
Characteristics, identification, assessment and instruction of students with exceptionalities are addressed. Includes students with learning disabilities, behavior disorders, emotional impairment, mild mental retardation, communicative disorders, visual and hearing impairments, orthopedic impairments, giftedness, and chronic medical conditions. Service delivery models, general assessment procedures, and curricular and instructional adaptations that help integrate students with exceptionalities into the general education classroom will also be addressed.
Restriction(s):
Can enroll if Class is Graduate

EDC 580  Behavioral Assessment  3 Credit Hours
This course will focus on Functional Behavior Assessment, a process used in the field of Applied Behavior Analysis (ABA) that uses a variety of techniques and strategies to gather information that allow practitioners to identify the function, or purpose, of behavior. Essential elements of the Functional Behavior Assessment/Functional Analysis process will be addressed with emphasis on the interrelationship between assessment results and the development of interventions based upon the principles of ABA. (YR)
Prerequisite(s): EDC 506 and EDC 507

EDC 590  Litrcy Instr & Assess for Els  3 Credit Hours
Full Title: Literacy Instruction and Assessment for English Language Learners. The course covers current and research-based pedagogy for literacy instruction and assessment for teaching English language learners. This course provides the knowledge and skills to effectively teach literacy to non-native speakers of English. (YR)
Restriction(s):
Can enroll if Level is Rackham or Graduate

EDC 603  Mntl Hlth in Med, Hu Srv, Lm  3 Credit Hours
Full Title: Mental Health Issues in Medical, Human Services, & Learning Environments. This course surveys mental health across the lifespan and the manifestation of mental health issues in medical, human services, and educational environments. Included are developmental factors, diagnostic issues, theoretical formulations, etiology, commonly used evidence-based treatments, and research findings related to the range of mental health issues. Issues related to classification systems, diagnosis, and institutional responses to mental health issues within the context of medical, human services, and learning environments are also addressed. Medical, legal, educational, and social-emotional issues related to mental health and the treatment of people living with mental health issues are addressed. Other issues such as comorbidity, cultural influences on the expression of mental health, and psychological factors related to physical conditions will also be considered. (OC)

EDC 604  Adverse Childhood Experiences  3 Credit Hours
Full Course Title: Adverse Childhood Experiences Adverse Childhood Experiences (ACEs) are stressful, traumatic events, e.g., physical, sexual, or emotional abuse, neglect, multiple foster care placements, exposure to community violence, or significant family dysfunction (e.g., exposure to domestic violence, inconsistent caregiving due to mental illness or substance abuse), that have cognitive, affective, behavioral, and physiological impact across the lifespan. This course will examine the ACEs, their impact on one's overall functioning, and the implications for one's physical health, academic performance, and social-emotional functioning. Strategies and tools for interacting and communicating with individuals with ACEs are addressed, along with treatment modalities, ACE prevention strategies, and educational, clinical, and community resources. (OC)

EDC 616  Needs Assessment  3 Credit Hours
Full Title: Needs Assessment Evaluation Capstone This course is designed to provide students with the theoretical and practical knowledge to design, complete and report a needs assessment evaluation for an organization. A culminating assignment requires the students to integrate the knowledge and skills they have developed over the course of their graduate studies in a capstone project. (YR)

EDC 620  Survey Research and Design  3 Credit Hours
This course provides an advanced focus on the theories, methods, and procedures for conducting survey research in education. Topics explored include advanced design of survey instruments, interview and focus group protocols, planning and budgeting survey research, and survey data analysis techniques. Sampling and mixed method design will be addressed.
Prerequisite(s): (EDK 500 or EDK 700) and (EDC 556 or EDC 756)
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or
EDC 622  Science and Human Behavior  3 Credit Hours
The philosophy of the science of behavior is the foundation of applied behavior analysis (ABA), learning that philosophy is key to the application of the fundamental principles, processes, and concepts of the field. This course will address seminal publications in the science of behavior and examine their application. (YR)

EDC 623  Ethics in ABA  3 Credit Hours
This course provides students pursuing the BCBA certification with a comprehensive examination of the Professional and Ethical Compliance Code for Behavior Analysts. Through reading and discussion of the code, students will learn to recognize Code violations and avoid unethical behavior and Code violations in all aspects of practice. Throughout the course, case studies will be used as a basis for demonstrating Code violations. (YR)
Prerequisite(s): EDC 506

EDC 624  Prog Develop, Super & Mgmt  3 Credit Hours
Full Title: Program Development, Supervision & Management This course seeks to address the selection, development, and implementation of behavior change procedures within the framework of strategies for personnel training, supervision, and management. Through the analysis of case studies, students will develop behavioral programming, consider the personnel issues to consider for effective programming, and examine strategies that allow for more effective personnel training, monitoring, and supervision. (YR)
Prerequisite(s): EDC 506 and EDC 507

EDC 630  Portfolio and Performance  3 Credit Hours
This course is an introduction to the theory and practice of performance and portfolio assessment. It examines the theory behind both forms of assessment including issues of validity, scoring, and the relationship to standards-based objectives. Topics include portfolio types, structures, contents and uses, as well as visual, written, oral, electronic and performance assessment. Students will create both a performance and a portfolio task, associated rubrics, and gain an understanding of how these types of assessments can impact teaching and learning.
Prerequisite(s): EDC 506 and EDC 556
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or Can enroll if College is Education, Health, and Human Services

EDC 645  Transdisc Appr Assess/Collab  3 Credit Hours
Culturally sensitive and family-centered approaches to assessing infants, toddlers, and young children with a variety of disabilities as well as determining family resources, needs and priorities will be the focus. Selecting and using assessment instruments and procedures in order to guide decision-making about determining eligibility for services, planning intervention goals and objectives, monitoring progress, and evaluating program effectiveness will be included. (YR).
Prerequisite(s): EDC 414 or EDC 514
Restriction(s):
Can enroll if Class is Graduate

EDC 701  Intro to Learning Disabilities  3 Credit Hours
Overview of characteristics, identification, service delivery models, and issues pertaining to persons from preschool to adulthood with learning disabilities. Required course for Special Education-Learning Disabilities Certification.
Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDC 714  Early Child Ed Special Needs  3 Credit Hours
Focuses on the psychological and educational needs of the young child with special needs. Discusses identification techniques and educational strategies for teaching in a regular early childhood classroom with young children having special needs. Special emphasis will be placed on behavioral, linguistic, and intellectual needs. Suitable for classroom teachers, child care directors, and teachers in training.
Prerequisite(s): EDC 540 or (EDC 340 or EDC 240)
Restriction(s):
Can enroll if Class is Graduate

EDC 731  Constructivist Education  3 Credit Hours
An examination of constructivist theory and its application to educational practices. The nature and stages from birth through adolescence of cognitive and social development from the constructivist viewpoints of Piaget, Vygotsky, and others will be discussed. A major focus will be the application of constructivist theory to educational goals, teaching strategies and curriculum. Additional course work differentiates this course from the master's level course.
Restriction(s):
Can enroll if Level is Specialist or or Doctorate

EDC 740  Seminar in Ed Psych/Spec Educ  3 Credit Hours
This course will focus on contemporary topics related to the development of knowledge of current theories in the areas of cognitive development, language, motor, and social development, in particular as they relate to issues in special education.
Restriction(s):
Cannot enroll if Class is
Can enroll if Degree is Education Specialist, Doctor of Education
Can enroll if College is Education, Health, and Human Services

EDC 756  Learning & Classrm Assessment  3 Credit Hours
In this course students will examine the relationship between curriculum, instruction and assessment. Students will review different forms of assessment and evaluate the strengths and weaknesses of each format. Students gain experience in 1) selection of assessment formats based on curricular focus and student developmental levels; 2) development of assessments; and 3) decision-making based on the results of the assessments.
Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDC 845  Transdisc Appr Assess/Collab  3 Credit Hours
Culturally sensitive and family-centered approaches to assessing infants, toddlers, and young children with a variety of disabilities as well as determining family resources, needs and priorities will be the focus. Selecting and using assessment instruments and procedures in order to guide decision-making about determining eligibility for services, planning intervention goals and objectives, monitoring progress, and evaluating program effectiveness will be included. (YR).
Prerequisite(s): EDC 545
Restriction(s):
Can enroll if Class is Specialist or Doctorate

Frequency of Offering
The following abbreviations are used to denote the frequency of offering: (F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally
**Educ D-Curriculum & Instructn (EDD)**

**EDD 501 Teach English in Second Grds  3 Credit Hours**
Investigates the general and specific goals and objectives of English education. Trends, materials, and strategies are presented. A study of outstanding problems in the teaching of English composition, literature, grammar, and language are discussed. Official admission to and good standing in teacher certification program are required.

**Corequisite(s):** EDD 502  
**Restriction(s):**  
Can enroll if Class is Graduate

**EDD 502 Practicum: English Second Grd  1 Credit Hour**
A supervised field experience related to the teaching of English in grades 6-12. Requires a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Must be taken concurrently with EDD 501. For undergraduate credit elect EDD 441. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).

**Prerequisite(s):** Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1  
**Corequisite(s):** EDD 501  
**Restriction(s):**  
Can enroll if Class is Graduate  
Can enroll if College is Education, Health, and Human Services

**EDD 503 Wksp: Art in the Elementary Sch  2 Credit Hours**
A course which presents the rationale, trends, and principles of art education for elementary teachers. Teachers will have ample opportunities to experiment with various art media such as printmaking, puppetry, paints, and clay. Different strategies that focus on the creative growth of children will be developed. (OC)

**Restriction(s):**  
Can enroll if Class is Graduate

**EDD 504 Inquiry Based Curr Prim Grades  3 Credit Hours**
This course examines how teachers can apply inquiry method to all curriculum areas in the primary grades. Major focus will be designing curriculum to meet state and professional guidelines within a developmentally appropriate context. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).

**Prerequisite(s):** (EDC 340 and EDC 341) or (EDC 240 and EDC 241) and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1  
**Restriction(s):**  
Can enroll if Class is Graduate  
Can enroll if College is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate

**EDD 508 Practicum in Early Child Ed  1 Credit Hour**
A supervised field experience related to the study of early childhood education involving a minimum of 45 clock hours of observation and work spread over a semester in an early childhood school setting. TB clearance, physician's statement of good health, and criminal background check are required. Students cannot receive credit for both EDD 410 and EDD 508. (F,W)

**Restriction(s):**  
Can enroll if Class is Graduate

**EDD 509 Workshop in Secnd Sci Educ  1 to 6 Credit Hours**
Provides an opportunity for experienced professionals in junior and senior high schools to work on problems and topics related to the teaching of natural science.

**Restriction(s):**  
Can enroll if Class is Graduate

**EDD 513 Internship Elementary LD  2 or 3 Credit Hours**
Field experience with elementary students with learning disabilities in regular and resource classrooms. Experiences include delivery of direct instruction through observation, tutoring, small and large group instruction, small and large group assessment, curriculum development, participation in the IEP process, collaboration with regular classroom teachers, and other activities under the on-site supervision of a certified teacher of LD and LD-certified university field supervisor.

**Prerequisite(s):** EDC 501 and EDN 501 and EDN 503 and EDN 504 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1  
**Corequisite(s):** EDN 508  
**Restriction(s):**  
Can enroll if Class is Post-baccalaureate Cert only or Graduate

**EDD 515 Internship - Secondary LD  2 Credit Hours**
Field experience with secondary students with learning disabilities in secondary-general and special education classrooms. Experiences include delivery of direct instruction through observation, tutoring, small and large group instruction, curriculum development and adaptations for secondary settings, participation in the IEP and ITP process, collaboration and co-teaching with regular classroom teachers in various academic content areas, and other activities under the on-site supervision of a certified teacher of LD and LD certified university field supervisor.

**Prerequisite(s):** EDC 501 and EDN 501 and EDN 503 and EDN 504 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1  
**Corequisite(s):** EDN 508  
**Restriction(s):**  
Can enroll if Class is Post-baccalaureate Cert only or Graduate

**EDD 516 Creatvty/Crit Thnk Yng Childr  3 Credit Hours**
This course intends to study the processes and products of creativity for both adults and young children. Strategies for promoting the emerging creative disposition of the young child, birth to eight years, will be explored. Areas of focus will include art, music, movement, dramatic play, improvisation, storytelling, and problem-solving. The importance of understanding and encouraging the young child's capacity for representation skills will be emphasized.

**Prerequisite(s):** EDC 340  
**Restriction(s):**  
Can enroll if Class is Graduate

**EDD 517 Sem: Teaching Secondary MAT  1 Credit Hour**
Draws upon the resources found in the directed teaching environment. Considers problems and issues in four broad areas: students in the school, teacher's professional responsibilities, curriculum understandings, and administrative/organizational problems. Open only to students enrolled in EDD 518.

**Corequisite(s):** EDD 518  
**Restriction(s):**  
Can enroll if Class is Graduate  
Can enroll if College is Education, Health, and Human Services  
Can enroll if Program is MAT-Teaching
EDD 518  Directed Tchg (MAT) Second Sch  5 to 12 Credit Hours
Directed teaching consists of a teaching internship in a selected
classroom for a full term under the direction of an experienced teacher.
Includes a period of observation followed by several weeks of responsible
teaching. (F, W).
Corequisite(s): EDD 517
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services
Can enroll if Major is Teaching

EDD 519  Early Literacy/Language Develp  3 Credit Hours
This course examines early language development, the factors that
contribute to its growth and the role that it plays in the development
of literacy. Diagnostic techniques for assessing language and literacy
and teaching strategies and materials to facilitate language and literacy
growth in children birth through third grade will be discussed. (YR)
Prerequisite(s): EDC 340
Restriction(s):
Can enroll if Class is Post-baccalaureate NCDF or Graduate
Can enroll if College is Education, Health, and Human Services

EDD 530  Concepts & Strat/Tchg: Mdl Lev  3 Credit Hours
FULL TITLE: Concepts and Strategies for Teaching at the Middle Level.
Introduces current curricular trends and various teaching strategies
for use at the middle school level to stimulate inquiry in the classroom.
Opportunity will be provided to experiment with these strategies in
videotaped, microteaching situations.
Restriction(s):
Can enroll if Class is Graduate

EDD 534  ML Curriculum & Instruction  3 Credit Hours
This course addresses curriculum development and instruction adapted
to meet the unique needs and characteristics of the middle level student.
Attention is given to instructional planning, presentation, and assessment
of learning.
Corequisite(s): EDD 535
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 535  Field Exploration: ML  1 Credit Hour
Field exploration involving a minimum of 45 clock hours research
activities related to the study of middle level curriculum development,
instruction and students.
Corequisite(s): EDD 534
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 536  Grad Sem in Early Childhood Ed  3 Credit Hours
This course examines the theories, research, and educational practices
developmentally appropriate for children: infancy through primary grades.
The seminar provides the theoretical foundation for the field placement
(EDD 594). Strategies for planning effective curricular activities, arranging
a learning environment, communicating and working with families and
staff, and administering early childhood programs will be discussed. The
issues of multiculturalism, family centered approaches, addressing the
inclusion of children with special needs and professional development
will be addressed. Open only to graduate students seeking an early
childhood endorsement and approved by the program coordinator. TB
test, physician’s statement of good health, and criminal background
check are required. (W).
Prerequisite(s): EDC 540
Restriction(s):
Can enroll if Level is Rackham or Professional Development or Graduate
Can enroll if Degree is Master of Arts

EDD 537  Administrative Intern in EC  3 Credit Hours
This internship will focus on providing experience in central early
childhood office administration. Recruitment, communication skills,
financial administration, grant writing, leadership, program evaluation and
program development and other topics related to the administration of
Early Childhood programs will be developed and practiced. This course
studies the procedures for evaluating early childhood programs and
for continual program development in their leadership. Students must
submit the following clearances as prerequisites in order to register for
this class (Blood Borne Pathogen test, Criminal Background Consent,
Video Recording Consent).
Prerequisite(s): EDD 412 or EDD 536 and Infect Disease/Blood Born Path
with a score of 1 and Criminal Background Check with a score of 1 and
Video Recording Consent with a score of 1
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if College is Education, Health, and Human Services

EDD 542  Differentiating Inst K-12 Clrm  2 to 3 Credit Hours
Individualized instruction combined with the latest information on the
brain and our understanding of multiple intelligences leads us to a
new method of meeting the needs of students called differentiating
instruction. This course will look at the concept of differentiating
instruction in-depth.

EDD 543  Tchg Writing at the Scnd Lvl  2 to 3 Credit Hours
This course is designed to help the classroom teacher promote functional
and creative writing among students at the secondary school level.
Attention will be given to both theory and research with emphasis on the
development of instructional strategies, teaching materials and practical
resources.
Restriction(s):
Can enroll if Class is Graduate
EDD 546 Intervention Strat EC Spec Ed 3 Credit Hours
Course Title: Family-Centered Intervention Strategies for Early Intervention and Early Childhood Special Education. Strategies and methods which early educators can use when planning and implementing interventions for infants, toddlers, and young children with disabilities and their families. Emphasis will be on addressing family identified priorities and the goals and objectives stated on the Individual Family Service Plan (IFSP) or Individual Educational Plan (IEP) using activity-based intervention, adapting materials, modifying environments and using assistive technology. (W, YR)
Prerequisite(s): EDC 514 and EDC 540
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate
Can enroll if College is Education, Health, and Human Services

EDD 547 Tchng English as Second Lang 3 Credit Hours
This course examines current methodologies and theories for English as a second language learning and instruction. Emphasis will be placed on a standards-based curriculum for English language learners. The use of communicative activities and strategies for developing English language skills in the elementary grades will be emphasized. Official admission to and good standing in teacher certification program are required. (F).
Corequisite(s): EDD 548
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate
Can enroll if College is Education, Health, and Human Services

EDD 548 Pract: Tch Engl as Secnd Lang 1 Credit Hour
A supervised field experience related to the teaching of English as a second language. Requires a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Must be taken concurrently with EDD 547. For undergraduate credit elect EDD 448. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent). (F).
Prerequisite(s): Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 547
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate
Can enroll if College is Education, Health, and Human Services

EDD 552 Methods of Teaching Math K-8 3 Credit Hours
The course relates to the teaching of the mathematics curriculum in the elementary and middle school. The emphasis is on the development of teaching techniques that promote problem solving, reasoning, connections, communication, and concept and algorithmic development. Cooperative groups, manipulatives, technology, and meeting the special needs of every child in grades K-8. Required for all preservice elementary teachers. Official admission to and good standing in teacher education program required.
Prerequisite(s): MATH 387 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Restriction(s):
Can enroll if Class is Graduate

EDD 554 Wrkshp:Nwspaper in Educ 2 Credit Hours
A course designed to familiarize elementary and secondary teachers with the use of newspapers as a classroom resource. Workshop participants will use the daily newspaper and other resource materials to develop activities appropriate for meeting their own professional needs. Emphasis will be on the enhancement of academic skills, practical life skills and creative expression.
Restriction(s):
Can enroll if Class is Graduate

EDD 560 Reading:Clinical Pract Int/Sem 3 Credit Hours
A supervised field experience in which students will work in a reading program. In this internship students will acquire experience in selecting students for the program, assessing students, working with students to develop reading and writing skills, and in reporting functions. In addition, a weekly seminar to explore issues related to reading programs will be held. (S)
Prerequisite(s): EDA 519 and EDB 503 and EDC 560
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Degree is Master of Arts
Can enroll if College is Education, Health, and Human Services
Can enroll if Program is MA-Education

EDD 563 Tchng Gifted Stdtntl Reglr Clssr 2 Credit Hours
This course introduces classroom teachers to the education of gifted and talented students in the regular classroom. It is designed to help teachers understand the social, emotional, and intellectual needs of gifted students and to show them ways of effectively addressing these needs along with those of the other students present. It will offer specific proposals for structuring the learning environment as well as for selecting appropriate levels and types of subject matter.
Restriction(s):
Can enroll if Class is Graduate

EDD 565 Teach Math in Second Grades 2 to 3 Credit Hours
This course discusses: 1) the important parts of recent pedagogical literature, 2) new instructional materials, methods, and curricular trends, and 3) procedures useful in the construction of new units and in the improvement of curricular units. Official admission to and good standing in teacher certification program are required.
Prerequisite(s): MATH 412 and MATH 331
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 566 Practicum: Math Second School 1 Credit Hour
A supervised field experience related to the teaching of mathematics in grades 6-12. Requires a minimum of 45 clock hours of observation and work in a school setting. Must be taken concurrently with EDD 565. For undergraduate credit elect EDD 451. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 565
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services
EDD 567  Practicum in Reading Instruct  1 Credit Hour
A required supervised field experience related to the teaching of reading in the elementary and/or K-8. Involves a minimum of 45 clock hours of work and observation in a supervised classroom setting. Techniques learned in EDD 568 will be applied directly to increase the reading competence of elementary school children. Must be elected concurrently with EDD 568. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).

Prerequisite(s): Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 568
Restriction(s):
Can enroll if Class is Graduate

EDD 568  Teach Read/Lang Arts- Elem Grd  3 Credit Hours
Acquaints the student with theory, methods, materials, and research related to the teaching of reading and other communications skills in the elementary and/or K-8. Includes classroom activities designed to strengthen skills in reading comprehension, word recognition, word attack, and the related language arts. Official admission to and good standing in the College of Education, Health, and Human Services certification program are required.

Restriction(s):
Can enroll if Class is Graduate

EDD 569  Reading in the Content Areas  3 Credit Hours
Emphasis on developmental and remedial reading activities at the middle grades and the secondary level; diagnosis, testing, and materials; reading in the content subjects; study habits; independent reading activity; exemplary programs. Some attention will be given to related problems in the teaching of written composition. Official admission to and good standing in the College of Education, Health, and Human Services certification program are required. Students cannot receive credit for both EDD 469 and EDD 569.

Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 570  Teach Sci in the Second Grd  2 to 3 Credit Hours
A survey of the place of science in the secondary school curriculum, an analysis and evaluation of objectives, and a consideration of modern practices in teaching science. Official admission to and good standing in teacher certification program are required.

Corequisite(s): EDD 581
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 574  Environmental Education  2 to 3 Credit Hours
An analysis of environmental education at both the elementary and secondary school level particularly stressing the environment as a teaching resource. Community resources as they relate to environmental education also are investigated.

Restriction(s):
Can enroll if Class is Graduate

EDD 575  Integrating Science & Literacy  3 Credit Hours
Students will enhance their understanding of and ability to integrate multiple literacy skills into the science classroom. Students will create integrated classroom activities and lessons based on State of Michigan benchmarks in language arts and science. (FW).

Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 580  Teach of Sci in the Second Grd  2 to 3 Credit Hours
A required supervised field experience related to the teaching of science in grades 6-12. Requires a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Must be taken concurrently with EDD 580. For undergraduate credit elect EDD 481. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).

Prerequisite(s): Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 580
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 581  Practicum in Science:Secnd Grd  1 Credit Hour
A supervised field experience related to the teaching of science in grades 6-12. Requires a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Must be taken concurrently with EDD 580. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).

Prerequisite(s): Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 580
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 582  Tch Sci in Secndary Grds II  3 Credit Hours
This course builds upon the concepts and skills developed in EDD 480 as students learn to become effective, reflective science teachers. Students will learn multiple strategies for effective lesson planning, teaching, and assessment in science. Science, technology, engineering and mathematics (STEM) and integration of reading/writing strategies will be emphasized throughout the course. Students cannot receive credit for both EDD 482 and EDD 582. EDD 582 will be distinguished from EDD 482 by additional readings and assignments for the enrolled students.

Prerequisite(s): EDD 480 and EDD 481
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Graduate or Professional Development
Can enroll if College is Education, Health, and Human Services

EDD 583  Wkshp:Sci Teach Elem/Midd Schl  1 to 3 Credit Hours
Deals with existing and innovative science materials. Offered at various times emphasizing one or more areas from elementary and middle level science. Centers on a laboratory approach. May be elected twice for a total of six hours.

Restriction(s):
Can enroll if Class is Graduate
EDD 585  Teach Science in the Elem Grd  2 to 3 Credit Hours
Explores the objectives, methods, and instructional emphasis of elementary school science. Stresses concept development in several areas of elementary science. Provides opportunity for preparation of materials for classroom use. Official admission to and good standing in teacher certification program are required. Students cannot receive credit for both EDD 485 and EDD 585.
Prerequisite(s): Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1

EDD 586  Environmental Interpretation  3 Credit Hours
Course deals with the interpretation of the environment, its characteristics, and its presentation to school groups as well as to the general public. Intended to acquaint students with a variety of skills and techniques necessary for interpreting the environment to others. Extensive use is made of the UM-D Environmental Study Area.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate
Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters

EDD 589  Practicum in Soc Stud:Sec Sch  1 Credit Hour
A supervised field experience related to the teaching of social studies in grades 6-12. Requires a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Must be taken concurrently with EDD 590. For undergraduate credit elect EDD 489. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 590
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 590  Tch of the Soc Stud in Sec Sch  3 Credit Hours
This course examines theoretical and practical approaches to teaching social studies at the secondary level. Students explore, develop, and evaluate instructional methods. In light of professional standards, they consider diverse strategies for teaching and assessing middle and high school students.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 593  Simulation and Gaming  1 to 3 Credit Hours
This course focuses on simulation and gaming as approaches to learning which are fundamentally different from methods traditionally used in education, industry, business, and psychology. Students will have the opportunity to examine many different types of simulations and games and to participate in selected ones. They will also be able to design one for use in their own area of interest.
Restriction(s):
Can enroll if Class is Graduate

EDD 594  Early Childhood Ed Internship  2 to 3 Credit Hours
Supervised observation and teaching in early childhood programs under the joint direction of university and school personnel. Open only to students in the M.A. in Education Program (Early Childhood Endorsement) who have been approved for the course by the program director. TB clearance, physician’s statement of good health, blood borne pathogen, video recording consent, and criminal background check required. Replaces EDD 494 as the graduate level Early Childhood Internship.
Prerequisite(s): EDD 536 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services
Can enroll if Major is Early Childhood

EDD 595  Wkshp:Social Studies Educ  2 to 3 Credit Hours
The workshop is planned to acquaint elementary and secondary teachers with specific trends and/or problems in social studies education. The theme of each workshop will vary according to the needs and interests of the teachers to reflect current interests in social studies education. Teachers will be directly involved in problem definition, literature review, research, and the collection and creation of strategies for classroom use. Students may repeat the course as topics vary up to a maximum of three hours of credit.
Restriction(s):
Can enroll if Class is Graduate

EDD 596  Second Lang Tchg: Sec Level  3 Credit Hours
An examination of current methodologies and techniques for instruction in foreign languages in grades 7-12. Emphasis will be placed on a standards-based curriculum with special attention given to the creation of learning scenarios. The use of communicative activities and the assessment of language skill areas will also be emphasized. Official admission to and good standing in teacher certification program are required.
Prerequisite(s): FREN 301 or GER 301 or SPAN 301
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 597  Practicum in Second Lang Tchg  1 Credit Hour
A supervised field experience related to the teaching of a foreign language in grades 6-12. Requires a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Official admission to and good standing in teacher certification program are required. Must be taken concurrently with EDD 596. For undergraduate credit elect EDD 497. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): FREN 301 or GER 301 or SPAN 301 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 596
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services
EDD 598  Writing Meth: Formal&Informal  3 Credit Hours
This course is designed for those wishing to establish or improve creative writing programs in their elementary school classrooms. Theoretical models will be discussed. Strategies and materials which facilitate the writing of prose and poetry will be emphasized. (OC)
Restriction(s):
Can enroll if Class is Graduate

EDD 599  Social Studies in the Elem Grd  2 to 3 Credit Hours
Examination and analysis of various programs and materials currently available for teaching social studies at the elementary level. Critical investigation of new developments and trends. Opportunity is provided to experiment with various techniques and to evaluate their effectiveness. Official admission to and good standing in teacher certification program are required.
Restriction(s):
Can enroll if Class is Graduate

EDD 631  Junior High/Middle Sch Currcdm  2 Credit Hours
Relates the junior high and middle school curriculum to the unique needs and characteristics of early adolescence. Gives attention to the scope, organization, and interrelationships of instructional programs as well as trends, experimentation, innovations and reports of research in this field. Designed for pre-service and in-service teachers.
Restriction(s):
Can enroll if Class is Graduate

EDD 650  Internship ECSE  1 to 3 Credit Hours
Supervised observation and teaching in Early Childhood Special Education setting under the joint direction of university and program personnel. Open only to graduate students in the Early Childhood Special Education Inclusion program who have been approved for the course by the program director. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent). (YR).
Prerequisite(s): EDC 645 and EDD 546 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 651
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 651  Seminar in ECSE  1 Credit Hour
The seminar provides a theoretical foundation and support for the Internship in Early Childhood Special Education. Focus is on understanding the supports and barriers to implementing recommended practices in early childhood special education and early intervention as well as the changing roles of professionals working in early care and education settings. Skills in family-centered service delivery, collaborative consultation, problem-solving, teaming, advocacy and supervising paraprofessionals will be included. (YR).
Prerequisite(s): EDC 645 and EDD 546
Corequisite(s): EDD 650
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDD 680  Adv Science Meth: Secondary  3 Credit Hours
This course is designed for students interested in utilizing the research in science education at the secondary level. Students will study historical and philosophical perspectives that have shaped thinking and research related to science education. They will also be involved in the latest methods and techniques for science teaching and learning. Topics will include the use of inquiry methodologies, science education research, integration of science and other core subject areas, and current science education reform efforts. (F)
Prerequisite(s): EDD 485 or EDD 585
Restriction(s):
Can enroll if Class is Graduate

EDD 685  Adv Science Meth: Elem & MS  3 Credit Hours
This course is designed for students interested in utilizing the research in science education at the elementary and middle school levels. Students will study historical and philosophical perspectives that have shaped thinking and research related to science education. They will also be involved in the latest methods and techniques for science teaching and learning. Topics will include the use of inquiry methodologies, science education research, integration of science and other core subject areas, and current science education reform efforts. (F)
Prerequisite(s): EDD 485 or EDD 585
Restriction(s):
Can enroll if Class is Graduate

EDD 717  Sem in Curriculum and Practice  3 Credit Hours
This course will prepare doctoral candidates a framework from which to focus on in their particular field of study. During this course we will review major curriculum theories past and present within U.S. education and work toward applying these models in the practice of developing curriculum and reforming instructional practice. Emphasis is given to considering ways in which teachers and administrators might inquire into curriculum selection and teaching practice at the PK-12 or community college levels.
Restriction(s):
Can enroll if Level is Doctorate or

EDD 719  Review of Research on Teaching  3 Credit Hours
The goal of this course is to review the historical and current literature for Research on Teaching. Students will develop an understanding of the critical issues and best practices for teaching and learning. They will also critically analyze the different methods of conducting research on teaching.
Prerequisite(s): EDD 717
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or

Other Content
* An asterisk denotes that a course may be taken concurrently.

Frequency of Offering
The following abbreviations are used to denote the frequency of offering:
(F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally
Educ F - Physical Education (EDF)

EDF 550  Hlth, Nutr, & PE/Clsrm Tchrs  2 Credit Hours
Instruction and participation in health, nutrition and physical education concepts and principles as they relate to elementary school curriculum. The six-dimensional model of wellness will be applied to meet legislative goals and objectives for the various grade levels. Required for elementary education majors.

Restriction(s):
Can enroll if Class is Graduate

EDF 555  Principles of Coaching  2 Credit Hours
Introduction in the basic principles and psychology of coaching all age groups, skill levels, and genders. Emphasis will be placed on many factors which relate to success in athletics/sports, the qualities and qualifications of coaches, and the administration of programs and organized practices. Students cannot receive credit for both EDF 455 and EDF 555. (YR)

Restriction(s):
Can enroll if Class is Graduate

The following abbreviations are used to denote the frequency of offering:
(F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Educ K - Independent Study (EDK)

EDK 500  Intro to Research in Education  3 Credit Hours
An introduction for classroom teachers to the process of reviewing, evaluating, conducting, and disseminating educational research. Designed to help teachers evaluate research findings and their applications to classroom practice.

Restriction(s):
Can enroll if Class is Graduate

EDK 510  Scholarly Writing  1 Credit Hour
This seminar is designed to enhance the capacity of doctoral students in education to write for academic and professional purposes. It guides students through the process of academic writing including: editing, developing their academic voice, following the APA style manual, writing for a specific purpose, developing audience awareness, and using feedback and editing to improve writing. The course will use a writers’ workshop model where students will share their writing and provide constructive feedback to each other. (F, W, S)

EDK 623  Quantitative Research Methods  3 Credit Hours
This course provides an introduction to quantitative methods for research in education. Topics explored include the logic of research design, using SPSS, graphical displays of both univariate and bivariate distributions, statistical inference and significance testing, contingency tables, t-tests, ANOVA, and regression. (YR)

Prerequisite(s): EDK 500

EDK 625  Qualitative Research Seminar  3 Credit Hours
This course introduces students to qualitative research in education. Using qualitative research in educational settings places the lived experiences of individuals and/or communities as the core of analysis and is grounded in a theoretical framework that relies on multiple perspectives of the same setting. During this course students will be introduced to the key tools used for qualitative research, through readings, discussions, and application. (YR)

Prerequisite(s): EDK 500

EDK 680  Individual Res in Education  1 to 3 Credit Hours
Requires the student to initiate and carry to completion a research project under the supervision of a staff member. May be elected more than once for a total of not more than three credits as approved by an advisor.

Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Undergrad Certification only or Graduate
Can enroll if College is Education, Health, and Human Services

EDK 690  Internship/Directed Field Exp  1 to 3 Credit Hours
Allows the student to practice skills in the field in which the student has been trained. Develops greater competence in skill use. The staff member under whose direction the work is to be done, or a program coordinator, will make arrangements with the field supervisor who will furnish a report of the student’s work. May be elected more than once for a total of not more than three credits as approved by an advisor.

Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Undergrad Certification only or Graduate
Can enroll if College is Education, Health, and Human Services

EDK 700  Intro to Research in Education  3 Credit Hours
An introduction for classroom teachers to the process of reviewing, evaluating, conducting, and disseminating educational research. Designed to help teachers evaluate research findings and their applications to classroom practice.

Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDK 810  Scholarly Writing  1 Credit Hour
This seminar is designed to enhance the capacity of doctoral students in education to write for academic and professional purposes. It guides students through the process of academic writing including: editing, developing their academic voice, following the APA style manual, writing for a specific purpose, developing audience awareness, and using feedback and editing to improve writing. The course will use a writers’ workshop model where students will share their writing and provide constructive feedback to each other.

Restriction(s):
Can enroll if Class is Doctorate

EDK 823  Quantitative Research Methods  3 Credit Hours
This course provides an introduction to quantitative methods for research in education. Topics explored include the logic of research design, using SPSS, graphical displays of both univariate and bivariate distributions, statistical inference and significance testing, contingency tables, t-tests, ANOVA, and regression.

Prerequisite(s): EDK 500 or EDK 700

Restriction(s):
Can enroll if Class is Specialist or Doctorate
Can enroll if Level is Specialist or or Doctorate
Can enroll if Degree is Doctor of Education
EDK 825 Qualitative Research Seminar 3 Credit Hours
This course introduces students to qualitative research in education. Using qualitative research in educational settings places the lived experiences of individuals and/or communities as the core of analysis and is grounded in a theoretical framework that relies on multiple perspectives of the same setting. During this course students will be introduced to the key tools used for qualitative research, through readings, discussions, and application.
Prerequisite(s): EDK 500 or EDK 700
Restriction(s):
Cannot enroll if Class is
Cannot enroll if Level is
Can enroll if Degree is Education Specialist, Doctor of Education

EDK 850 Resrch Dsgn & Proposal Dvlpmnt 3 Credit Hours
This course will provide an introduction and overview of proposal development in preparation for writing a dissertation or applied studies project. It addresses basic proposal development stages faced by pre-doctoral candidates. The course provides an introduction and guidance to the appropriate selection of research design. This is a computer assisted course.
Prerequisite(s): EDK 823 and EDK 825
Restriction(s):
Cannot enroll if Class is
Cannot enroll if Level is
Can enroll if Degree is Doctor of Education
Can enroll if College is Education, Health, and Human Services

EDK 880 Individual Res in Education 1 to 3 Credit Hours
Requires the student to initiate and carry to completion a research project under the supervision of a staff member. May be elected more than once for a total of not more than three credits as approved by an advisor.
Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDK 890 Intern/Direct Field Experience 1 to 3 Credit Hours
Allows the student to practice skills in the field in which the student has been trained. Develops greater competence in skill use. The staff member under whose direction the work is to be done, or a program coordinator, will make arrangements with the field supervisor who will furnish a report of the student's work. May be elected more than once for a total of not more than three credits as approved by an advisor.
Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDK 990 Ed.D. Prelim Exam/Proposal 3 to 6 Credit Hours
EDK 990 is for students planning to complete their preliminary examinations and submit and defend their dissertations or applied studies project proposals. The preliminary examination includes two parts that need to be completed in a one-week period. Students will write a paper that demonstrates the depth of their knowledge in the four concentration areas of the doctoral program and their ability to apply that knowledge in a thoughtful analysis of a case study selected by their Doctoral Committee. Students will write a paper that demonstrates the depth and breadth of their knowledge of the theoretical issues and empirical research related to their area of concentration and the relationship between their area of concentration and the broader field of education. Their Doctoral Committee will establish the goals and guidelines for the paper. To successfully complete the proposal for a dissertation, students will submit and orally defend a paper of sufficient length, depth, and complexity that demonstrates their ability to identify a significant and worthwhile problem, select a method or methods of research, apply these methods properly and present the entire effort in writing that is clear and cogent. To successfully complete the proposal for an applied studies project, students will submit and orally defend a paper of sufficient length and complexity that demonstrates their ability to identify a significant and worthwhile problem, use appropriate theoretical and empirical studies to develop a response to the problem and assess the effectiveness of the response, and present the entire effort in writing that is clear and cogent.
Restriction(s):
Can enroll if Class is Doctorate
Can enroll if Level is Doctorate or
Can enroll if Degree is Doctor of Education

EDK 992 Dissertation/Applied Study 1 to 18 Credit Hours
Full Course Title: Dissertation/Applied Study for EdD Dissertation/Applied study is required for all students in the EdD who have completed all of the core and concentration area coursework. Students must maintain registration in EDK 992 until they have completed the program. Students must register for a minimum of 12 credit hours before completing the program. (F,W,S)

EDK 995 Ed.D. Dissertation/App Study 3 to 9 Credit Hours
Course for dissertation or applied studies work for students who have been approved for candidacy.
Prerequisite(s): EDK 990
Restriction(s):
Can enroll if Class is Doctorate
Can enroll if Level is Doctorate or
Can enroll if Degree is Doctor of Education

Other Content

Frequency of Offering

The following abbreviations are used to denote the frequency of offering: (F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally
**Educ M-Community & Bilingual (EDM)**

**EDM 505  TESOL Strategies  3 Credit Hours**
This course examines a variety of instructional approaches to teaching English to speakers of other languages (TESOL). These approaches will be discussed in light of underlying language learning theories. Instructional materials representing various approaches to TESOL will be examined. Students will also have the opportunity to construct instructional materials for use in TESOL.

**Restriction(s):**
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate

**EDM 510  Teach Eng for Specific Purpose  3 Credit Hours**
Full Course Title: Teaching English for Specific Purposes This course is designed to provide the knowledge and skills to teach adult speakers of other languages to use English for specific purposes. These are students who will already have a working knowledge of English, but need to have more specialized language for professional, academic and/or job-related skills.

**Other Content**
* An asterisk denotes that a course may be taken concurrently.

**Frequency of Offering**
The following abbreviations are used to denote the frequency of offering: (F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

**Educ N-Special Education (EDN)**

**EDN 501  Strategies for LD  3 Credit Hours**
Content includes strategies for teaching students with learning disabilities in special and regular education classes. Course addresses diagnostic-prescriptive teaching, direct instruction, and specific strategies and materials addressing each academic area. The individualized education program (IEP), development of goals and objectives, linking assessment and instruction, inclusion, and generality of behavior change will also be included.

**Prerequisite(s):** EDC 501

**Restriction(s):**
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

**EDN 502  Social/Vocational Transitions  3 Credit Hours**
Course includes strategies that teach age-appropriate social skills to elementary students with learning disabilities. Topics include interactive skills, self-management skills, self-concept, attitude, communication skills particularly pragmatics, assessing social skills, and differential responding in a variety of social settings found in the school, home, and community.

**Prerequisite(s):** EDC 501

**Restriction(s):**
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

**EDN 503  Assessment of the Learner  3 Credit Hours**
Formal and informal assessment strategies used in the identification and service of students with handicaps are described. Technical and operations aspects of standardized testing, curriculum-based assessment, and informal strategies are described.

**Prerequisite(s):** EDC 501

**Corequisite(s):** EDN 504

**Restriction(s):**
Can enroll if Class is Post-baccalaureate Cert only or Undergrad Certification only or Graduate
Can enroll if College is Education, Health, and Human Services

**EDN 504  Assessment Practicum  1 Credit Hour**
Clinical experiences with formal and informal assessment strategies currently used by special educators to identify and program for students with disabilities. Activities include administration, scoring, and interpretation of norm- and criterion-referenced tests, curriculum-based assessments, and informal assessment strategies. Deriving goals, objectives, activities, and strategies from assessment data are also included. Must be taken concurrently with EDN 503.

**Prerequisite(s):** EDC 501

**Restriction(s):**
Can enroll if Class is Post-baccalaureate Cert only or Undergrad Certification only or Graduate
Can enroll if College is Education, Health, and Human Services

**EDN 505  Teaching Students with ADD  2 to 3 Credit Hours**
Identification of the behavioral characteristics and instructional needs of students with attention deficit disorders and/or hyperactivity will be discussed. Conducting and interpreting assessment, promoting academic skill gains, sustained attention, task involvement, self-management and functional social skills, and managing hyperactive and hypoactive behaviors will be addressed. Strategies to support and promote family involvement and self-esteem will be described.

**Prerequisite(s):**
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

**EDN 506  Collaboration in the Classroom  3 Credit Hours**
Techniques for enhancing collaboration between special and regular classroom teachers of mainstreamed exceptional and low-achieving learners at all levels. Included are essential skills for managing and monitoring the learning process and maintaining collaborative partnerships.

**Restriction(s):**
Can enroll if Class is Post-baccalaureate Cert only or Undergrad Certification only or Graduate
Can enroll if College is Education, Health, and Human Services

**EDN 507  Ed of the Emotionally Impaired  2 Credit Hours**
Explores educational strategies for the emotionally disturbed and behaviorally disordered. Emphasis is given to etiological factors and prescriptive approaches to teaching. The role of the teacher as a consultant, a modifier of behavior, and a learning strategist is explored.

**Prerequisite(s):** EDC 561

**Restriction(s):**
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services
EDN 508 Internship Seminar - LD 1 Credit Hour
Seminar will focus on the discussion, development, and evaluation of Individualized Educational Programs, Individualized Transition Plans, and Behavior Intervention Plans for students with learning disabilities at a variety of internship sites. Topics will include academic and behavior assessment and strategies, curriculum, child study teaming, service delivery options and inclusion strategies.
Prerequisite(s): EDC 501 and EDN 501 and EDN 503 and EDN 504

EDN 520 Intro to Emotional Impairments 3 Credit Hours
Identification of the behavioral characteristics and instructional needs of children with emotional impairments/behavior disorders will be discussed. Causes of emotional impairments and environmental influences on behavior will also be discussed. Strategies for identification, assessment, and interpreting such instruments will be addressed. Finally, instructional strategies for students with emotional impairments will be described and practiced through classroom activities. (YR).
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate

EDN 521 Practicum at Psych Facility 1 Credit Hour
Experience in a clinical setting with emotionally impaired individuals, for no less than 45 clock hours. Activities include working with cooperating teacher on tasks such as individual tutoring, data collection, informal assessment, and program implementation and evaluation. Also included will be the development of goals and objectives relevant for emotionally impaired students. (YR).
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Graduate

EDN 522 Emotional Impairments Intrmshp 3 Credit Hours
Field experience with elementary/secondary students with emotional impairments in classroom setting. Experiences include delivery of direct instruction, observations, tutoring, small and large group instruction, curriculum development, program development, and implementation and participation in the IEP process. Collaboration with regular classroom teachers, and other activities under the on-site supervision of an EI certified teacher and an EI-certified university field supervisor. Internship also includes weekly seminar. This course has EDN 520, EDN 525, EDN 526, EDN 523 with a "B" or better as prerequisites. (YR).
Prerequisite(s): EDN 520 and EDN 523 and EDN 525 and EDN 526

EDN 523 Strat: Emotional Impairments 3 Credit Hours
Course content includes strategies for teaching students with emotional impairments, including instruction on reading and mathematics. Course also includes strategies to deal with hyperactive behavior, aggressive behavior, socially withdrawn behavior, and delinquency. Strategies for effective teaching, and the development of instructional materials and learning environments for students with emotional impairments is included. The Individualized Educational Program, development of goals and objectives, linking assessment with instruction, and integrating students with emotional impairments into the regular classroom will also be covered. EDN 520 or EDC 501 is a prerequisite. (YR).
Prerequisite(s): EDN 520 or EDC 501

EDN 524 Couns Fam of Studnts Emo Impair 2 Credit Hours
Course content focuses on preparing teachers to work with parents and families, to meet the academic, emotional, social and behavioral needs of students with emotional impairments. Issues concerning counseling families and students in educational settings will be discussed. Strategies for individual and group counseling will also be addressed and practiced through classroom activities. (YR).
Prerequisite(s): EDN 520

EDN 525 Eco-Behavioral Assessment 2 or 3 Credit Hours
Formal and informal assessment strategies used in identifying and serving students with emotional impairments are described. Assessment strategies include eco-behavioral assessment, functional analyses, naturalistic observation techniques, norm-referenced and criterion referenced tests, interviewing, achievement tests, and curriculum based assessment. Technical aspects of assessment, interpretation of data, and diagnostic strategies are also addressed, as well as using assessment instruments to facilitate more effective teaching for students with emotional impairments. To be taken concurrently with EDN 526. (YR).
Prerequisite(s): EDN 520 or EDC 501
Restriction(s):
Can enroll if Class is Graduate

EDN 526 Eco-Behav Assessment Practicum 1 Credit Hour
Clinical experiences with formal and informal assessment strategies currently used by special educators to identify and program for students with emotional impairments. Activities include practicing observation techniques, completing and analyzing eco-behavioral assessments and functional analyses. Also included are administration, scoring, and interpretation of norm-referenced and criterion referenced tests, curriculum based assessments, achievement tests, rating scales and checklists, and informal assessment strategies. To be taken concurrently with EDN 525. (YR).
Prerequisite(s): EDN 520
Corequisite(s): EDN 525

EDN 527 Inclusion:Multisen/Direct Inst 2 to 3 Credit Hours
Course addresses developing, implementing, and evaluating teaching strategies and materials that incorporate principles of direct instruction and multi-sensory activities that promote inclusion of students with special needs in general education settings, increase all students' academic achievement, and improve social interaction among students from a wide variety of social, economic, and cultural backgrounds. (F,W,S).
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Graduate

EDN 580 Mentally Impaired Child 2 to 3 Credit Hours
A course specially designed for regular classroom teachers to better equip them for effectively teaching children with mental impairments.
Restriction(s):
Can enroll if Class is Graduate

EDN 701 Strategies for LD 3 Credit Hours
Content includes strategies for teaching students with learning disabilities in special and regular education classes. Course addresses diagnostic-prescriptive teaching, direct instruction, and specific strategies and materials addressing each academic area. The individualized education program (IEP), development of goals and objectives, linking assessment and instruction, inclusion, and generality of behavior change will also be included.
Prerequisite(s): EDC 501

Restriction(s):
Can enroll if Class is Specialist or Doctorate
EDN 702 Social/Vocational Transitions 3 Credit Hours
Course includes strategies that teach age-appropriate social skills to elementary students with learning disabilities. Topics include interactive skills, self-management skills, self-concept, attitude, communication skills particularly pragmatics, assessing social skills, and differential responding in a variety of social settings found in the school, home, and community.

Prerequisite(s): EDC 501 or EDN 520

Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDN 703 Assessment of the Learner 3 Credit Hours
Formal and informal assessment strategies used in the identification and service of students with handicaps are described. Technical and operations aspects of standardized testing, curriculum-based assessment, and informal strategies are described.

Prerequisite(s): EDC 501

Corequisite(s): EDN 504

Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Undergrad Certification only or Graduate

Can enroll if College is Education, Health, and Human Services

EDN 706 Collaboration in the Classroom 3 Credit Hours
Techniques for enhancing collaboration between special and regular classroom teachers of mainstreamed exceptional and low-achieving learners at all levels. Included are essential skills for managing and monitoring the learning process and maintaining collaborative partnerships.

Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDN 720 Intro to Emotional Impairments 3 Credit Hours
Identification of the behavioral characteristics and instructional needs of children with emotional impairments/behavior disorders will be discussed. Causes of emotional impairments and environmental influences on behavior will also be discussed. Strategies for identification, assessment, and interpreting such instruments will be addressed. Finally, instructional strategies for students with emotional impairments will be described and practiced through classroom activities. (YR).

Restriction(s):
Can enroll if Class is Specialist or Doctorate
Can enroll if Level is Specialist or or Doctorate
Can enroll if College is Education, Health, and Human Services

EDN 723 Strat: Emotional Impairments 3 Credit Hours
Course content includes strategies for teaching students with emotional impairments, including instruction on reading and mathematics. Course also includes strategies to deal with hyperactive behavior, aggressive behavior, socially withdrawn behavior, and delinquency. Strategies for effective teaching, and the development of instructional materials and learning environments for students with emotional impairments is included. The Individualized Educational Program, development of goals and objectives, linking assessment with instruction, and integrating students with emotional impairments into the regular classroom will also be covered. EDN 520 or EDC 501 is a prerequisite. (YR).

Prerequisite(s): EDC 501 or EDN 520

Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDN 725 Eco-Behavioral Assessment 2 to 3 Credit Hours
Formal and informal assessment strategies used in identifying and serving students with emotional impairments are described. Assessment strategies include eco-behavioral assessment, functional analyses, naturalistic observation techniques, norm-referenced and criterion referenced tests, interviewing, achievement tests, and curriculum based assessment. Technical aspects of assessment, interpretation of data, and diagnostic strategies are also addressed, as well as using assessment instruments to facilitate more effective teaching for students with emotional impairments. To be taken concurrently with EDN 526. (YR).

Prerequisite(s): EDC 501 or EDN 520

Restriction(s):
Can enroll if Class is Specialist or Doctorate

Other Content

* An asterisk denotes that a course may be taken concurrently.

Frequency of Offering

The following abbreviations are used to denote the frequency of offering:
(F) fall term; (W) winter term; (S) summer term; (F,W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Educ T-Education Technology (EDT)

EDT 500 Instrl Media Meth and Matrls 1 to 2 Credit Hours
Explores the technology, the production, and the effective use of audiovisual media instructional purposes in a variety of settings.

Restriction(s):
Can enroll if Level is Graduate

EDT 501 Rsrch, Trnds&Iss in Ed Tchnlgy 3 Credit Hours
This course is designed to acquaint the students with research and issues facing education in the digital era. This course will look at the wide range of developments in technology and investigate the trends that are impacting the field of educational technology. Students explore and analyze key issues related to technology in the classroom of the twenty-first century. (F)

Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDT 502 Survey of Educ Tech Tools 3 Credit Hours
This course provides students with a general overview of relevant educational software and hardware technologies as well as web-based digital resources that can be used in instructional settings. The students will learn how to identify, select and integrate a broad range of technologies into different learning environments. Students will also create several technology-based instructional products using various tools, applications, and authoring environments.

Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services
EDT 510  Teaching with Technology  3 Credit Hours
Introduces students to the management and integration of technology in education. Students experience and become familiar with technologically based teaching and learning materials; learn methodologies for using technology in specific teaching situations including audiovisual and media methods methods; develop skills effectively evaluating educational software; explore how technology can be used as a problem-solving tool within the classroom environment; and become familiar with application programs, telecommunications and multimedia. Students also log a minimum of 45 hours of practicum experience in an instructional capacity where they have the opportunity to implement a variety of technology-enhanced learning activities that they create (F,W,S).
Prerequisite(s): EDT 501 and EDT 502 and EDT 514
Restriction(s):
Can enroll if Class is Graduate

EDT 511  Design Tech-Based Learn Solutn  3 Credit Hours
EDT 511 provides students with the opportunity to design and develop technology-based learning solutions for real-world instructional problems. Students will identify an instructional problem, collect data to assess relevant needs of an authentic population of learners and work collaboratively to create learning solutions for face-to-face, blended and/or online environments. Students will also become proficient in the operation of various pieces of hardware and software and develop skills for evaluating and integrating technology into the different learning environments.
Restriction(s):
Can enroll if Class is Graduate

EDT 512  Human Performance Improvement  3 Credit Hours
This course addresses organizational and human behaviors that affect performance. Causes of performance deficits will be examined and possible solutions linking business goals to interventions will be considered.
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior or Graduate

EDT 513  Analyzing Human Performance  3 Credit Hours
Students will practice research design, sampling, surveys, and statistical analysis in the analysis of performance problems in local companies. Different modes of performance analysis will be demonstrated. (F, W).
Prerequisite(s): EDT 512
Restriction(s):
Can enroll if Class is Graduate

EDT 514  Application of Instrl Design  3 Credit Hours
The course provides students with necessary skills to apply Technological Pedagogical Content Knowledge (TPCK) instructional design process in a specific subject area.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Undergrad Certification only or Graduate
Can enroll if College is Education, Health, and Human Services

EDT 516  Application of Distance Learn  3 Credit Hours
Students will use cameras, microphones, VCRs, computers, and other equipment to manage video conferences and other forms of distance education. Students will research distance learners' satisfaction and retention of distance learning applications.
Prerequisite(s): EDT 505 and EDT 512 and EDT 514
Restriction(s):
Can enroll if Level is Graduate

EDT 517  Evaluating PI Interventions  3 Credit Hours
Students will learn several models for evaluating performance interventions. Concepts of validity, reliability, item analysis and culture bias will be included.
Prerequisite(s): EDT 512
Restriction(s):
Can enroll if Level is Graduate

EDT 519  Select & Design Interventions  3 Credit Hours
Students will learn appropriate interventions for remedying typical performance problems. Students will also learn to manage and monitor the implementation process. (F, W).
Prerequisite(s): EDT 512 and EDT 513 and EDT 517
Restriction(s):
Can enroll if Level is Graduate

EDT 520  Intro to Teaching/Learn Online  3 Credit Hours
This course will introduce students to best practices in the design, creation and implementation of instructional materials in an online environment. Students will create and implement several instructional activities and assessments in blended, hybrid and online environments.
Restriction(s):
Can enroll if Class is Graduate

EDT 521  Transitioning to HPI  3 Credit Hours
Students will learn tools for analyzing organizational readiness for change. Students will plan an intervention cycle including preparing for change, designing the intervention, and comparing anticipated and actual results.
Prerequisite(s): EDT 512 and EDT 513 and EDT 517 and EDT 519
Restriction(s):
Can enroll if Level is Graduate

EDT 522  Educating the Digital Learner  3 Credit Hours
This course builds upon knowledge learned in EDT 520. Students are introduced to Universal Design for Learning (UDL) theory and how to apply it to learning activities in the blended, hybrid and online environment. Emphasis is placed on learning how to make accommodations for students in the online environment as well. Students will also learn to critically assess different approaches to online instruction.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services
Cannot enroll if Program is

EDT 530  Assistive Technology  3 Credit Hours
This course is designed as an introductory course in assistive technology (AT) including the history, relevant legislation, and development of assistive technology. Students will be introduced to key AT categories by function including high tech and low tech assistive hardware, software and mobile devices to increase learning opportunities for individuals with disabilities.
EDT 531  Lead. & Prof. devel in Ed Tech  3 Credit Hours
This field-based course provides students with necessary skills to design and practice methods and strategies for providing effective professional development programs for teachers and to demonstrate leadership in technology learning practices and techniques in K-12 environment. This course is designed as a capstone course and should be taken in the final semester of the program.
Prerequisite(s): EDT 510 and EDT 501 and EDT 502 and EDT 514 and EDT 520 and EDT 522
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDT 562  EDT Internship/Seminar  3 Credit Hours
A supervised field experience in which students will work in a K-12 technology program for 120 clock hours. In this internship students will serve as instructional staff, developing knowledge of and experience in managing resources, assessing students, working with students to develop technology literacy, and assisting another teacher in integrating technology into the classroom. In addition, a weekly seminar to explore issues related to K-12 technology programs will be held. (F, W, S).
Restriction(s):
Can enroll if Class is Graduate

EDT 580  Appl of Tech for Organ Admin  2 or 3 Credit Hours
FULL TITLE: Applications of Technology for Organizational Administrators. This course will focus on the role of organizational administrators in the applications of technology within and organization, including policy development, personnel management, financial planning and budgeting, program planning and evaluation, training, and strategic planning.
Restriction(s):
Can enroll if Level is Rackham or Professional Development or Graduate

EDT 585  Technology for Administrators  3 Credit Hours
This course will focus on the role of educational administrators in the applications of technology within a school, including policy development, personnel/student management, financial planning and budgeting, curricular planning and evaluation and professional development.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate
Cannot enroll if College is Engineering and Computer Science

EDT 702  Survey of Educ Tech Tools  3 Credit Hours
This course provides students with a general overview of relevant educational software and hardware technologies as well as web-based digital resources that can be used in instructional settings. The students will learn how to identify, select and integrate a broad range of technologies into different learning environments. Students will also create several technology-based instructional products using various tools, applications, and authoring environments.
Restriction(s):
Can enroll if Level is Specialist or or Doctorate
Can enroll if College is Education, Health, and Human Services

EDT 720  Intro to Teaching/Learn Online  3 Credit Hours
This course will introduce students to best practices in the design, creation and implementation of instructional materials in an online environment. Students will create and implement several instructional activities and assessments in blended, hybrid and online environments.
Prerequisite(s): EDT 514
Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDT 722  Educating the Digital Learner  3 Credit Hours
This course builds upon knowledge learned in EDT 720. Students are introduced to Universal Design for Learning (UDL) theory and how to apply it to learning activities in the blended, hybrid and online environment. Emphasis is placed on learning how to make accommodations for students in the online environment as well. Students will also learn to critically assess different approaches to online instruction.
Prerequisite(s): EDT 720
Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDT 731  Lead. & Prof. devel in Ed Tech  3 Credit Hours
This field-based course provides students with necessary skills to design and practice methods and strategies for providing effective professional development programs for teachers and to demonstrate leadership in technology learning practices and techniques in K-12 environment. This course is designed as a capstone course and should be taken in the final semester of the program.
Prerequisite(s): EDT 510
Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDT 785  Technology for Administrators  3 Credit Hours
This course will focus on the role of educational administrators in the applications of technology within a school, including policy development, personnel/student management, financial planning and budgeting, curricular planning and evaluation and professional development.
Restriction(s):
Can enroll if Class is Specialist or Doctorate

Other Content
* An asterisk denotes that a course may be taken concurrently.

Frequency of Offering
The following abbreviations are used to denote the frequency of offering:
(F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Education Mathematics (EDMA)

EDMA 511  Lrng & Tchg Middle Grade Math  3 Credit Hours
This course addresses issues central to teaching and learning mathematics in middle grades; building learning communities, how students learn mathematics, use of worthwhile mathematical tasks, instructional modes, technology options, assessment to inform instruction, and professional perspectives. (Y).
Prerequisite(s): MATH 443 or MATH 543
Restriction(s):
Cannot enroll if Class is
Can enroll if Level is Rackham or Professional Development or Graduate
Can enroll if College is Education, Health, and Human Services
EDMA 512 Comm and Asmnt in Math Lrng  3 Credit Hours
Problems and strategies for making effective the reading, symbolizing, graphing, diagramming, explaining, and writing of mathematical concepts and solutions: multiple uses and forms of assessment. (W)
Restriction(s):
Can enroll if Class is Specialist or Graduate
Can enroll if College is Education, Health, and Human Services
Can enroll if Major is Education

EDMA 521 Leadership in Mathematics Educ  3 Credit Hours
This course focuses on leadership concerns in mathematics education at the middle grades level. Topics may include school reform; staff development; program review; communicating with the community; new teacher induction; proposal writing. Open only to graduate students or by permission of the instructor. (Y).
Prerequisite(s): EDMA 512
Restriction(s):
Can enroll if Class is Specialist or Doctorate
Can enroll if College is Education, Health, and Human Services

EDMA 525 Curric Devt & Rsch in Math Ed  3 Credit Hours
Curriculum Development and Research in Mathematics Education is a capstone course for leadership in mathematics education. It addresses recent research in mathematics education and the design, implementation, and evaluation of research-based curriculum development; action research methods; and applications.
Prerequisite(s): EDMA 512 and EDMA 521
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Professional Development or Graduate
Can enroll if College is Education, Health, and Human Services

EDMA 590 Topics in Math Education  1 to 3 Credit Hours
This course focuses on mathematics education topics of current or emerging interest, such as current research; current curriculum development; issues related to school organization; new technologies; new national, state, or local initiatives; focused fieldwork; and equity concerns. Open only to graduate students or by permission of instructor. Course may be repeated for up to six hours when specific topics differ. (OC).
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Professional Development or Graduate
Can enroll if College is Education, Health, and Human Services

EDMA 598 Independent Study in Math Ed  1 to 6 Credit Hours
Independent study in Mathematics Education under the supervision of a faculty member.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EDMA 712 Comm and Asmnt in Math Lrng  3 Credit Hours
Problems and strategies for making effective the reading, symbolizing, graphing, diagramming, explaining, and writing of mathematical concepts and solutions: multiple uses and forms of assessment. (W)
Prerequisite(s): (MATH 442 or MATH 542) and (MATH 443 or MATH 543)
Restriction(s):
Cannot enroll if Class is Doctorate
Cannot enroll if Major is Education

EDMA 721 Leadership in Mathematics Educ  3 Credit Hours
This course focuses on leadership concerns in mathematics education at the middle grades level. Topics may include school reform; staff development; program review; communicating with the community; new teacher induction; proposal writing. Open only to graduate students or by permission of the instructor. (Y).
Prerequisite(s): EDMA 512
Restriction(s):
Can enroll if Class is Specialist or Doctorate
Can enroll if College is Education, Health, and Human Services

EDMA 725 Curric Devl&Rsch in Math Ed  3 Credit Hours
Curriculum Development and Research in Mathematics Education is a capstone course for leadership in mathematics education. It addresses recent research in mathematics education and the design, implementation, and evaluation of research-based curriculum development; action research methods; and applications.
Prerequisite(s): EDMA 512 and EDMA 521
Restriction(s):
Can enroll if Class is Specialist or Doctorate

EDMA 798 Independent Study in Math Ed  1 to 6 Credit Hours
Independent study in Mathematics Education under the supervision of a faculty member.
Restriction(s):
Can enroll if Class is Specialist or Doctorate
Can enroll if College is Education, Health, and Human Services

Electrical&Computer Engin (ECE)

ECE 500 Math Mthds for Elec & Comp Eng  3 Credit Hours
Topics include: Transform Techniques using Fourier series, Fourier transforms, Laplace transforms and Sampling Theorem. Linear Algebra using eigen expansions, polynomial functions and matrices and determinants. Random Variables using probability density and distribution functions, functions of a random variable, and conditional and joint probabilities.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 5001 Analytic and Comp Math  3 Credit Hours
Full Title: Analytical and Computational Mathematics This course covers selected topics in applied mathematics useful in science and engineering fields, including: solution of linear equations, polynomial interpolation and approximation, solution of nonlinear equations, roots of polynomials, resultants, approximation by orthogonal functions (includes Fourier series), ordinary differential equations, optimization, calculus of variations, probability and stochastic processes, computational geometry, and differential geometry. In addition to providing students with necessary mathematical knowledge for their future course study and research projects, students will be required to program in MATLAB and/or other languages to gain and improve programming ability. Students in RE program must take this course in the first year. This course cannot be taken with ECE 500. Three lecture hours per week. (F)
Restriction(s):
Can enroll if College is Engineering and Computer Science
ECE 502  Electromag Theory & Simul  3 Credit Hours
The course will cover basic devices and applications in Electromagnetic waves. The course will use examples of electromagnetics that operate at low frequency, (e.g., coils and motors), and others that operate at high frequency (e.g., Optical fiber, Laser, Imaging Sensor, LEDs, Solar cells and Antenna.) The course will develop fundamental understandings for the behavior of these devices. Three lecture hours per week.
Restriction(s):
Can enroll if Level is Rackham or Graduate
Can enroll if Major is Software Engineering, Industrial & Systems Engin, Mechanical Engineering, Computer Engineering, Electrical Engineering

ECE 505 Intro to Embedded Systems  3 Credit Hours
Introduction to modern digital computer logic. Numbers and coding systems; Boolean algebra with application to logic systems; examples of digital logic circuits; simple machine language programming and Assembly and C/C+ programming language; microprocessors programming (both assembly and C/C+) for input/output, interrupts, and system design. (May not be available to students with EE or CE degrees) Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 507 Intro to Multimedia Sys  3 Credit Hours
This course is designed to provide a broad overview of the engineering, art, and business of developing multimedia systems. In terms of technical and engineering issues, students will learn basic data analysis techniques and computer programming tools. In terms of art and media, students will learn the basics of human perception, communication, and aesthetics. In terms of business, students will learn how to identify customer needs and think like an entrepreneur. By learning and understanding the working vocabulary of each of these three fields, students will be able to contribute creative and effective multimedia-based solutions to interesting real-world problems. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate

ECE 510 Vehicle Electronics I  3 Credit Hours
This course discusses the principles of electrical engineering and applications of electrical and electronic systems in automobiles, including resistive, inductive, and capacitive circuit analysis, semiconductor diodes, junction transistors, FETS, rectifiers, and power supplies, small signal amplifiers, biasing considerations, gain-bandwidth limitations, circuit models. Some automotive EE applications are used for case study. Three lecture hours per week. (Not open to students with EE degree.)
Restriction(s):
Can enroll if Class is Graduate
Cannot enroll if Major is Electrical Engineering, Computer Engineering

ECE 512 Analog Filter Design  3 Credit Hours
This course addresses the analysis and design of continuous time (analog) and switched-capacitor filters. Students will analyze and design filters. Effect of tolerances of circuit elements on the performance of the circuit behavior will be analyzed. Students will use simulation tools to design filters and verify circuit performance. Three lecture hours per week.
Prerequisite(s): ECE 314
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 513 Computer-Aided Network Design  3 Credit Hours
Numerical methods required for circuit analysis and design using digital computers are investigated. These techniques include matrix analysis of linear systems; network graphic theory, tolerance analysis, transient analysis, numerical integration, nonlinear circuit analysis, network optimization, and device modeling. Practical examples are given requiring the construction of computer subroutines and use of general analysis programs such as ECAP and CIRAN. Three lecture hours.
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 514 VLSI Design  3 Credit Hours
Topics relevant to the design and analysis of VLSI circuits are investigated. These include an introduction to CMOS circuits, their characterization and performance estimation. Logic design and testing of VLSI circuits. Analysis of layout and the design of subsystems. VHDL and commercial CAD packages for VLSI design.
Prerequisite(s): ECE 410
Restriction(s):
Can enroll if Class is Graduate

ECE 515 Vehicle Electronics II  3 Credit Hours
This course discusses advanced topics in electronics with an emphasis on vehicle applications. It will include ignition systems and controls, amplifiers, frequency characteristics of electronic circuits, feedback in electronic systems and stability, power electronics and motor drive controls (DC/DC and DC/AC converters) and EMC issues. Selected examples include applications such as voltage regulators and battery chargers. Three lecture hours per week.
Prerequisite(s): AENG 510

ECE 516 Electronic Materials & IC Proc  3 Credit Hours
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Electrical Engineering, Computer Engineering
ECE 517 Adv Pwr Electncs&Motor Drvs 3 Credit Hours
This is an advanced course on power electronics and electric drives. Example topics include DC, induction, synchronous and reluctance drives; industrial and residential application of power electronics; practical aspects of design of power electronics devices including heat sink and magnetic components designs. Three lecture hours per week.
Prerequisite(s): ECE 415
Restriction(s):
- Can enroll if Class is Graduate
- Can enroll if Level is Rackham or Graduate
- Can enroll if College is Engineering and Computer Science
- Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 518 Mat Selec for Commercial Prod 3 Credit Hours
Impact of modern materials on commercial product performance; representative illustrations from product areas such as automotive vehicles, commercial aircraft, recreational equipment, and electronic products.
Restriction(s):
- Can enroll if Class is Graduate

ECE 519 Adv Topics in EMC 3 Credit Hours
This course covers the EMC requirements and EMC test methods for large systems. Examples involving various types of applications (automotive, communications, computers) will be discussed. Discussion of design practices used in large installation, including component segregation, cable routing, connectors, grounding, shielding, common impedance coupling, ground planes, screening and suppression. Classification of electromagnetic environments will also be discussed. Three lecture hours per week.
Restriction(s):
- Can enroll if Class is Graduate or Doctorate
- Can enroll if Level is Doctorate or Rackham or Graduate or
- Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 524 Interactive Media 3 Credit Hours
This course will provide an introduction to computer and human interface and AI, user-interface design from design principles and cognitive perspectives. The course covers such topics innovative multimedia interfaces, design ethics, psychological principles, cognitive models, interaction principles, requirements analysis, project management, I/O devices, standards and styles guides, and visual design principles. This is a project-based class. Three lecture hours per week.
Restriction(s):
- Can enroll if Class is Graduate
- Can enroll if Level is Rackham or Graduate

ECE 525 Multimedia Data Stor & Retr 3 Credit Hours
This course will cover the fundamental concepts and techniques used in multimedia data, storage and retrieval including storage and retrieval images, videos, audio and text documents. Selected multimedia applications will be discussed and students will be required to work on a project related to multimedia applications such as advertising and marketing, education and training, entertainment, medicine, surveillance, wearable computing, biometrics, and remote sensing. Three lecture hours per week.
Restriction(s):
- Can enroll if Class is Graduate
- Can enroll if Major is Software Engineering, Electrical Engineering, Computer & Information Science, Computer Engineering

ECE 5251 MM Design Tools I 3 Credit Hours
This course will introduce students to design tools for multimedia systems. Basic concepts, algorithms, and standards will be covered for systems that process digital images, vector graphics, and text. Models and relevant parameters of display technologies (video and printer) will be discussed. Part of the coursework involves a project concerning the analysis and design of a multimedia-based system. Three lecture hours per week.
Restriction(s):
- Can enroll if Class is Graduate
- Can enroll if Major is Software Engineering, Electrical Engineering, Computer & Information Science, Computer Engineering

ECE 5252 MM Design Tools II 3 Credit Hours
This course will introduce students to multimedia design tools for dynamic media (video and audio). Basic concepts of digital video will be reviewed, such as resolution and compression standards. Algorithms and methods for video and audio processing and effects will be reviewed. Part of the coursework involves a project concerning the analysis and design of a multimedia-based system. Three lecture hours per week.
Restriction(s):
- Can enroll if Class is Graduate
- Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 526 Multimedia Comm Sys 3 Credit Hours
Object of this course is to introduce current techniques in multimedia communications. This course will cover in-depth study of existing multimedia compression standards such as, MPEG, MJPEG, JPEG2000, etc. The course will introduce the basic issues in multimedia communications and networking and is designed to give the student hands-on experience in various aspects of multimedia communications through the various assignments and projects.
Restriction(s):
- Can enroll if Class is Graduate
- Can enroll if Major is Software Engineering, Electrical Engineering, Computer & Information Science, Computer Engineering

ECE 527 Multimedia Secur & Forensics 3 Credit Hours
Object of this course is to introduce current techniques information security in general and multimedia security in particular. This course will cover existing information hiding techniques such as digital watermarking, steganography, and fingerprinting. The course will also cover basics of cryptography and coding theory. This course will cover the basic issues in multimedia security and forensics and is designed to give the student hands-on experience in various aspects of information security and forensic analysis through the various assignments and projects. Three lecture hours per week.
Restriction(s):
- Can enroll if Class is Graduate
- Can enroll if Major is Software Engineering, Electrical Engineering, Computer & Information Science, Computer Engineering
ECE 528  Cloud Computing  3 Credit Hours
Cloud computing represents the emerging Internet-based services/platforms with elastic and scalable computation powers operating at costs associated with service. Topics of the course include advanced web technologies, distributed computing models and technologies, software as a service (SaaS), virtualization, pallelization, security/privacy and the advance in cloud computing. Course work includes building up a SaaS project. Students cannot take both ECE 428 and ECE 528 for degree credit. Three lecture hours per week.
Restriction(s):
Cannot enroll if Class is
Can enroll if Level is Graduate or Doctorate
Cannot enroll if Major is

ECE 529  Intro to Computer Music  3 Credit Hours
This course will introduce students to methods and technologies of computer music. The basics of digital audio will be covered, including sampling, quantization, and compression standards. Various analysis tools will be covered, including the Fourier transform and windowing techniques. Mathematical models of physical instruments will be introduced. Various sound synthesis strategies will be introduced: wave tables, additive synthesis, subtractive synthesis, frequency modulation, and granular synthesis. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 530  Energy Storage Systems  3 Credit Hours
This course introduces the basics of energy storage systems for EDV. It will cover battery basics, ultracapacitors, flywheels, and hybrid energy storage concepts. Battery management, battery charging, and battery safety will be covered. Finally, the requirements of EDV and renewable energy application examples will be explained. Lead acid, nickel metal hydride, and lithium ion batteries will be covered. Other energy storage systems such as super conducting magnetic, hydraulic, compressed air, and integrated (hybrid) energy storage systems, will be discussed as well.
Restriction(s):
Can enroll if Class is Graduate or Doctorate
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if College is Engineering and Computer Science

ECE 531  Intelligent Vehicle Systems  3 Credit Hours
The course covers important technologies relevant to intelligent vehicle systems including systems architecture, in-vehicle electronic sensors, traffic modeling and simulation. Students will design and implement algorithms and simulate driver-highway interactions.
Restriction(s):
Can enroll if Class is Graduate or Doctorate
Can enroll if Level is Doctorate or Rackham or Graduate or
Cannot enroll if Major is

ECE 532  Auto Sensors and Actuators  3 Credit Hours
Study of automotive sensory requirements; types of sensors; available sensors and future needs. Study of functions and types of actuators in automotive systems. Dynamic models of sensors and actuators. Integrated smart sensors and actuators. Term project.
Restriction(s):
Can enroll if Class is Graduate or Doctorate

ECE 533  Active Automotive Safety Sys  3 Credit Hours
The course addresses enabling technologies relevant to active automotive safety systems. The study of intelligent vehicle systems includes system architectures, sensors, and algorithms. Modeling and simulation will also be covered. Students will design and simulate systems encompassing important concepts presented in the course. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate or Doctorate

ECE 535  Mob Dev & Ubiqys Comp Sys  3 Credit Hours
This class will introduce students to the technology used in mobile/smart devices and mobile communication networks. Various hardware and software aspects will be introduced, with particular emphasis on the constraints intrinsic to such system. Students will get an overview of various mobile operating systems and will learn how to develop software for mobile devices. The topics of ubiquitous and pervasive computing will be introduced and discussed. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate or Doctorate
Cannot enroll if Major is

ECE 536  All Weather Automotive Vision  3 Credit Hours
Coverage of the next generation of active automotive safety systems including intelligent cruise control, lane departure warning, virtual camber, and back-up and blind spot warning systems. Topics include active safety system architecture, enabling technologies for such systems, and future directions. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate

ECE 537  Data Mining  3 Credit Hours
Introduction to the fundamental concepts of data mining including data exploration, pre-and post-processing, OLAP, predictive modeling, association analysis, and clustering. This course also focuses on the analysis of algorithms commonly used for data mining applications, mining structured, semi-structured and unstructured data, streaming data, and web data. Team oriented course project to provide hands-on experience may be required. Three lecture hours per week.
Prerequisite(s): ECE 479 or CIS 479
Restriction(s):
Can enroll if Class is Graduate or Doctorate

ECE 539  Production of Elec Prods  3 Credit Hours
The course discussed the manufacturing of discrete components, integrated circuits, hybrid circuits and modules, advances packages, printed circuit boards, optical components, and MEMS products. Special topics on product testing, reliability assurance, accelerated reliability testing, product lifetime models, and automotive environments will also be addressed. The course will be organized as a combination of conventional lectures, workshops-style discussion, and design review sessions. Three lectures hours per week.
Restriction(s):
Can enroll if Major is Electrical Engineering, Manufacturing Engineering, Computer Engineering

ECE 541  Intro to Electrical Energy Sys  3 Credit Hours
The course will cover the sources of energy including coal, nuclear, solar, wind, their impact on the climate, and their technological characteristics in terms of availability, cost and reliability. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Mechanical Engineering, Industrial & Systems Engin, Computer Engineering, Electrical Engineering
ECE 542  Intr to Pwr Mgmt & Reliability  3 Credit Hours
This course will give students an introduction to power and energy management systems. Students will be exposed to a broad range of topics including optimal power flow, Smart Grid technology, economic dispatch, unit commitment, and the impact of renewable energy on power and management systems. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or Can enroll if College is Engineering and Computer Science

ECE 5421  Grid Communication and System  3 Credit Hours
This course (1) includes communication models for monitoring and controlling the electrical system, specific legacy protocols and modern approaches, such as IEC 61850, and (2) covers introductory topics in cyber-physical systems (CPSs) security for power grids. This class includes assignments to reinforce learning and uses industry leading edge hardware to simulate control and monitoring of real world scenarios. (F, W).
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or Can enroll if Major is Computer & Information Science, Computer Engineering, Software Engineering, Industrial & Systems Engin, Mechanical Engineering, Automotive Systems Engineering, Electrical Engineering

ECE 5422  Grid Protection  3 Credit Hours
The goal of this course is to introduce protecting an electrical system from faults and other concerns in distribution system. Includes symmetrical component calculations and use; protection coordination; network, radial and ringed system protection; central station and distributed generator protection; and an overview of emerging topics. The focus of this class is on protection of radial fed system, fault studies and arc-flash calculations. (F, W).
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or Can enroll if Major is Computer & Information Science, Computer Engineering, Electrical Engineering, Software Engineering, Information Sys Engineering, Mechanical Engineering, Automotive Systems Engineering, Industrial & Systems Engin

ECE 5423  Advanced Grid Protection  3 Credit Hours
This course builds on ECE 5422 Grid Protection to include more advanced topics including a focus on networked and ringed systems, generation protection, grounding and protecting distribution networks with two-way power flow. (F, W).
Prerequisite(s): ECE 5422
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or Can enroll if Major is Computer & Information Science, Computer Engineering, Electrical Engineering, Software Engineering, Information Sys Engineering, Mechanical Engineering, Automotive Systems Engineering, Industrial & Systems Engin

ECE 5424  Data Analytics and Machine Learning for Power Systems  3 Credit Hours
The course is designed to provide introductory coverage of data analytics and machine learning with the major applications in power engineering. Students will be exposed to a broad range of topics including data collection, data processing, and data mining for electrical power systems. This course provides students with hands-on experience through computer-based simulation projects. Advisory prerequisite: Basic understanding of power systems and machine learning. (F).
Restriction(s):
Can enroll if Level is Graduate or or Doctorate

ECE 543  Kinem, Dynam Control Robots  3 Credit Hours
Full Title: Kinematics, Dynamics, and Control of Robots This course provides a systematic study of robotics, covering various topics in kinematics, dynamics, control, and planning for robot systems. The purpose of this course is to let students get familiar with the traditional mathematical description of a robotic system and understand fundamental concepts and principles in robotics, to enable students to derive equations of motion for robotic systems, analyze their kinematic and dynamic properties, and design control strategies, and also to have students gain knowledge and experience about commonly-used robotic systems and mechanisms. Starting with rigid body motion, we will learn a systematic way to describe a robot system that consists of multiple links connected through different kinds of joints. Kinematics will include forward and inverse kinematics and their analytical and constraints. Control will include the classic PID control, position and force control, and trajectory tracking. This course will also discuss some specific topics in robotics research, including robot manipulators, mobile and walking robots, and robot hands, in which we will see how the above principles and methods are being used together. Three lecture hours per week. (W)
Prerequisite(s): ECE 347
Restriction(s):
Can enroll if Class is Graduate or Doctorate
Can enroll if Level is Graduate or or Doctorate
Can enroll if College is Engineering and Computer Science

ECE 544  Mobile Robots  3 Credit Hours
This course gives an introduction to all the fundamentals of mobile robots, ranging from theory, such as kinematics, over hardware, such as sensors and motors, to core algorithms for sensory information processing, motion planning and control, and etc. A high level-overview of different types of mobile robots is presented first. Then, theoretical methods for analyzing the kinematic and dynamic properties of a mobile robot are discussed, followed by the discussion on the key subsystems of a mobile robot, including perception, localization, planning and control. For each subsystem, the discussion includes relevant methods for understanding and constructing the model of the environment or planning and controlling the motion of the robot. The course has three lecture hours per week. Students are expected to have knowledge of MATLAB or C/C++ programming and will be required to accomplish a course-related project. Three lecture hours per week. (F)
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Graduate or or Doctorate
Can enroll if College is Engineering and Computer Science
ECE 545  Intro Robot Syst  3 Credit Hours
Full Title: Introduction to Robotic Systems This courses introduces basic components of robotic systems, selection of coordinate frames, homogeneous transformations, solutions to kinematics of manipulators, velocity and force/torque relations, dynamic equations using Euler-Lagrange formulation, obstacle avoidance and motion planning, classical controllers for manipulators and controller design using torque method, and robot simulation tools. Sensing technologies including basic computer vision will be covered. Robot simulation technologies and tools will be introduced. Robotic systems other than manipulators will be introduced at the end of this course. Three lecture hours per week. (F)
Restriction(s):
Can enroll if College is Engineering and Computer Science

ECE 546  Electric Vehicles  3 Credit Hours
To introduce fundamental concepts and specifications of electric and hybrid vehicles; vehicle design fundamentals; motors for electric vehicles; controllers and power electronics; energy sources; engineering impact of electric vehicles and practical design considerations. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate

ECE 5462  Elec Aspects of Hybrid Vehicle  3 Credit Hours
To introduce fundamental concepts and the electrical aspects of HEV, including the design, control, modeling, battery and other energy storage devices, and electric propulsion systems. It covers vehicle dynamics, energy sources, electric propulsion systems, regenerative braking, parallel and series HEV design, practical design considerations, and specifications of hybrid vehicles. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 550  Communication Theory  3 Credit Hours
The basic limitations and alternatives for communications signaling are studied, using appropriate mathematical tools. The topics include: review of information measure; random process and vector description of signals and noise; optimum receiver principles; signaling alternatives; channel capacity; block and convolutional coding; waveform estimation concepts. Practical system examples are stressed.
Prerequisite(s): ECE 450
Restriction(s):
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 552  Fuzzy Systems  3 Credit Hours
A study of the concept of fuzzy set theory including operations on fuzzy sets, fuzzy relations, fuzzy measures, fuzzy logic, with an emphasis on engineering application. Topics include fuzzy set theory, applications to image processing, pattern recognition, artificial intelligence, computer hardware design, and control systems.
Prerequisite(s): IMSE 317
Restriction(s):
Can enroll if Class is Graduate or Doctorate

ECE 553  Sftware/Hrdware Rapid Prototyp  3 Credit Hours
Rapid prototyping technology is primarily aimed at reducing the lead times and costs associated with new product development. Rapid prototyping requires a good quality 3D CAD system. This course will cover the software and hardware widely used in the rapid prototyping, including Stereolithography (SLA) and virtual reality software and hardware used for rapid prototyping. (YR)
Restriction(s):
Can enroll if Class is Graduate

ECE 554  Embedded Systems  3 Credit Hours
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Software Engineering, Electrical Engineering, Computer & Information Science, Computer Engineering

ECE 5541  Embedded Networks  3 Credit Hours
Embedded network systems merge modern communications, networks, sensing, distributed control and mobile computing enabling novel applications in a broad area of control, automation, and distributed real time systems. The course will focus on vehicular communications and networking, autonomous vehicles and intelligent transportation systems, robotics networks, and smart grids. Topics include: an overview of embedded processors and microcontrollers, digital signal processors, field programmable gate arrays (FPGAs), sensors and actuators, embedded operating systems including various Linux and Android platforms, and embedded networks. Students will be exposed to advanced system design methods, modeling, simulation, and system verification and evaluation. A term project may be required. Three lecture hours per week.
Restriction(s):
Can enroll if Level is Doctorate or Specialist or Graduate or

ECE 5542  Embedded Sig Proc and Control  3 Credit Hours
This course bridges the gap between embedded software engineering principles and theoretical signal processing and control concepts. Topics include a survey of embedded software architectures, real-time principles and concerns, sensor and actuator interfacing, PIO feedback control systems, Audio/time-series filtering (FIR and IIR filters), embedded image processing, automatic code generation from higher level modeling languages such as MATLAB and Simulink, and working with single-board computers and digital signal processors (DSP). It is a project oriented course, with hands-on assignments, group projects and an individual research component. (F)
Prerequisite(s): ECE 473 or ECE 4951 or ECE 554
Restriction(s):
Can enroll if Class is Graduate or Doctorate
Can enroll if College is Engineering and Computer Science

ECE 5543  Embedded System Security  3 Credit Hours
This course introduces fundamental concepts of information security and threat models. In depth study of the principles, algorithms, techniques, protocols and applications of embedded security, including secure software development, light weight cryptographic algorithms, information security protocols for embedded applications, tamper detection, automotive security, embedded network transactions, and other emerging embedded applications in the areas of IoT and cyber-physical systems will be covered. (W.YR)
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate
ECE 5544  Intro. to CPS Security  3 Credit Hours
This course covers introductory topics in cyber-physical systems (CPSs) security. This course is intended to expose students to fundamentals of security primitives specific to CPSs and to apply them to a broad range of current and future security challenges that such systems are facing. Much of the course addresses Industrial Control Systems and smart grids. However, students will be expected to generalize the concepts for other CPSs. Students will work with various tools and techniques used by hackers to compromise computer systems or otherwise interfere with normal operations. Students will also use tools that are unique to interacting with cyber-physical systems. The purpose of this course is NOT to teach students how to become hackers, but rather to teach them about threat models and attack vectors for cyber-physical systems so that they can develop countermeasures to defend against threats. (F,YR)
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate

ECE 5545  Sec. & Privacy for Smart Grids  3 Credit Hours
Full Course Title: Security and Privacy for Smart Grids The goal of this course is to provide a comprehensive understanding of the challenges, issues, solutions, and state-of-the-art research and best practices pertaining to the cyber-security of the modern power grids, also known as "smart power grids". The course is intended to provide an overview of information security, CPS security, risk assessment and mitigation, network security, attack-resiliency for bulk power systems, attack surface analysis and reduction techniques, cyber-security testbeds, security standards and best practices for critical infrastructure, e.g., smart power grids. This course will build the skills needed to design and test the protocols, policies, and specifications for enabling technologies that will guarantee the security and integrity of the smart power grid while preserving personal privacy. (F)
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate

ECE 555  Stochastic Processes  3 Credit Hours
Review of probability and random variables. Introduction to stochastic processes; stationarity, ergodicity; auto correlation and cross correlation, linear systems with random inputs, spectral analysis, Wiener filtering, Kalman filtering. Applications to smoothing, parameters estimation, prediction, system identification.
Prerequisite(s): IMSE 317
Restriction(s):
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 560  Modern Control Theory  3 Credit Hours
Introduction to linear spaces and operators; mathematical description of multiple input-output systems; state variables and state transition matrix; controllability and observability and its application to irreducible realization of transfer function matrices; state variable estimation; controller synthesis by state feedback; stability of linear systems; analysis of composite systems.
Restriction(s):
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 565  Digital Control Systems  3 Credit Hours
Mathematical representation of digital control systems; z-transform and difference equations; classical and state space methods of analysis and design; direct digital control of industrial processes.
Prerequisite(s): ECE 460
Restriction(s):
Can enroll if Class is Graduate or Doctorate

ECE 566  Mechatronics  3 Credit Hours
Mechatronics, as an engineering discipline, is the synergistic combination of mechanical engineering, electrical engineering, control engineering, and computer science, all integrated through the design process. The course is to establish a working familiarity with the key engineering elements in the design and control of electro-mechanical systems in general and automotive systems in particular. The key engineering elements include microprocessor technology, electronics, sensors and actuators, data communication and interface, control algorithms, and mechanisms of machine elements. The course is to introduce a design methodology in an integrated system environment through case studies and design projects. (AY).
Prerequisite(s): ME 442 or ECE 365
Restriction(s):
Can enroll if Class is Graduate or Doctorate

ECE 567  Nonlinear Control Systems  3 Credit Hours
Nonlinearities in control systems; phase plane analysis; isoclines, equilibrium points, limit cycles, optimum systems; heuristic methods; harmonic balance, describing function, frequency response and jump phenomena, oscillations in relay systems; state space; optimum relay controls; stability; Liapunov's method.
Prerequisite(s): ECE 460
Restriction(s):
Can enroll if Class is Graduate or Doctorate

ECE 569  Computer-Based Automation  3 Credit Hours
Mechatronics, as an engineering discipline, is the synergistic combination of mechanical engineering, electrical engineering, control engineering, and computer science, all integrated through the design process. The course is to establish a working familiarity with the key engineering elements in the design and control of electro-mechanical systems in general and automotive systems in particular. The key engineering elements include microprocessor technology, electronics, sensors and actuators, data communication and interface, control algorithms, and mechanisms of machine elements. The course is to introduce a design methodology in an integrated system environment through case studies and design projects. (AY).
Prerequisite(s): ME 442 or ECE 365
Restriction(s):
Can enroll if Class is Graduate or Doctorate

ECE 570  Computer Networks  3 Credit Hours
A study of data communications and network architecture fundamentals. Topics include signals and data transmission, modulation, encoding, and public carriers and network architectures; data link network layer, and transport layer protocols; case studies of existing and emerging networks; wireless, embedded, and conventional wired systems. Three lectures hours per week.
Prerequisite(s): ECE 471
Restriction(s):
Can enroll if Class is Graduate or Doctorate

ECE 5701  Intro to Wireless Comm  3 Credit Hours
A basic introduction to modern wireless communication principles and architectures. Channel models, signal generation and reception are explored. Examples of current protocols and architectures of wireless data and voice networks are studied. Self guided lab assignments. A project is required. Three lecture hours per week.
Prerequisite(s): ECE 550 or ECE 570
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Electrical Engineering, Computer Engineering
ECE 5702  High-Speed and Adv Networks  3 Credit Hours
The course introduces concepts in protocols and architecture of high-speed and advanced networks with an emphasis on Internet, ATM networks, wireless local area networks, cellular systems and wireless sensor networks. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 571  Switching Theory  3 Credit Hours
Combinational and sequential logic design, minimization of combinational and sequential circuits, functional decomposition, reliable design and fault diagnosis; incompletely specified sequential machine design, asynchronous sequential circuits and interactive methods.
Prerequisite(s): ECE 273
Restriction(s):
Can enroll if Major is Computer Engineering, Electrical Engineering, Computer & Information Science

ECE 572  Sequential Machines  3 Credit Hours
Prerequisite(s): ECE 571
Restriction(s):
Can enroll if Major is Computer Engineering, Electrical Engineering, Computer & Information Science

ECE 574  Adv Sftwr Technq in Eng Appl  3 Credit Hours
Topics relating to Software Development for engineering applications will be discussed. These may include data structures, algorithm complexity, personal software development process, team software process, Six sigma, DFSS, software techniques, software engineering application, and software design. Three lecture hours per week.
Prerequisite(s): ECE 474
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Software Engineering, Electrical Engineering, Computer & Information Science, Computer Engineering

ECE 575  Computer Architecture  3 Credit Hours
This course addresses the basics of computer architecture including central processing architecture, instruction set design, input/output and RAID, main memory, Cache, and virtual memory. Three lecture hours per week.
Prerequisite(s): ECE 375
Restriction(s):
Can enroll if Class is Graduate or Doctorate
Cannot enroll if Major is

ECE 5752  Reconfigurable Computing  3 Credit Hours
This course addresses advances in reconfigurable computing techniques, design, and research. The course topics include introduction to RC, Hardware Description Language (HDL) such as VHDL and Verilog HDL, System-On-Chip (SOC), and Network-On-Chip (NOC). Three lecture hours per week.
Prerequisite(s): ECE 475
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Software Engineering, Electrical Engineering, Computer & Information Science, Computer Engineering

ECE 576  Information Engineering  3 Credit Hours
This course will cover fundamental concepts of information engineering, including theoretical concepts of how information is measured and transmitted, how information is structured and stored, how information can be compressed and decompressed, and information networks such as social networks, affiliation networks and online networks, mathematical theories of information networks. Information engineering applications will be discussed. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if Major is Software Engineering, Electrical Engineering, Computer & Information Science, Computer Engineering

ECE 577  Engineering in Virtual World  3 Credit Hours
An in-depth study of selected topics in design and development of virtual systems in industrial environments. Topics include cyberspaces, techniques for generating virtual worlds in engineering applications, building blocks of virtual environments including hardware and software. Case studies.
Prerequisite(s): ECE 273 and ECE 371
Restriction(s):
Can enroll if Major is Computer Engineering, Electrical Engineering, Computer & Information Science

ECE 5770  Autonomous UAS  3 Credit Hours
This course will introduce the basic concepts of autonomous unmanned aerial systems. Topics will include basic flight principles of fixed-wing and rotary-wing aircraft, inertial representations in 3D space, the principles of Bayesian state estimation, visual odometry, path planning, and autonomous navigation. This course will also cover aircraft actuation, sensors and perception (GPS, inertial measurements, ranging, and basic computer vision), sensor fusion technique, and motion control of unmanned aircraft. Students are expected to have knowledge of high-level programming language and will be required to accomplish a course project. Three lecture hours per week. (W)
Prerequisite(s): ECE 347 or IMSE 317
Restriction(s):
Can enroll if College is Engineering and Computer Science

ECE 578  Advanced Operating Systems  3 Credit Hours
Advanced techniques and uses in operating system design. Distributed operating systems. Message-based operating systems. Operating systems for parallel architectures. Layered techniques in operating systems. Formal models of operating systems. Current trends in operating system design.
Prerequisite(s): ECE 478 or CIS 450 or IMSE 450

ECE 579  Intelligent Systems  3 Credit Hours
Representative topics include: Intelligent systems design, training and evaluation, decision trees, Bayesian learning, reinforcement learning. A project will be required.
Prerequisite(s): ECE 479
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if Major is Software Engineering, Electrical Engineering, Computer & Information Science, Computer Engineering
ECE 5791  Vehicle Power Management  3 Credit Hours
This course provides graduate students with a clear understanding of the latest vehicle power management technologies with an emphasis on alternative fuel vehicles. The course will cover topics such as electrified powertrain configurations. Vehicle power management basic concepts, vehicle propulsion system modeling, vehicle power management approaches (analytical approach, wavelet transform technology, DP&QP, and intelligent systems methods). ESS (especially battery) management, power electronics in HESS and motor drive, HEV component optimization, HIL and SIL, vehicle power management future trends, and so on. Three hours per week.
Restriction(s):
Can enroll if Class is Graduate or Doctorate

ECE 580  Digital Signal Processing  3 Credit Hours
This course addresses the analysis and design of discrete time signals and systems. Students will become familiar with the mathematical tools needed for digital signal processing such as the Fourier transform, frequency response, the sampling theorem, and z-transform method. Topics covered will include the design of digital filters (IIR and FIR filters), characteristics of analog-to-digital and digital-to-analog converters, the spectral analysis of signals, and discrete filters. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate or Doctorate

ECE 5802  Multirate Sig Proc w/Appl  3 Credit Hours
This course provides an introduction to multirate digital signal processing with application in different fields of engineering, with a focus on the presentation of the theoretical foundation for all aspects of multirate digital signal processing. The course examines modern applications of multirate digital signal processing including the design of multirate filter banks, using the wavelets transforms to efficiently encode signals for compression purposes, spectral analysis and synthesis of signals. Students will apply software tools to analyze, design and simulate multirate digital signal processing systems. Three lecture hours per week.
Prerequisite(s): ECE 580
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or Can enroll if Major is Computer Engineering, Electrical Engineering, Software Engineering, Industrial & Systems Engin, Information Sys Engineering, Mechanical Engineering, Automotive Systems Engineering, Engineering Management

ECE 581  Arch for Digital Signal Proc  3 Credit Hours
This course introduces the architectural fundamentals and features of programmable digital signal processors. Numeric representations and arithmetic concepts are discussed, which include fixed-point and floating-point representation of numbers, native data word width, and IEE-754 floating-point representation. Memory architecture and memory structures of digital signal processors are examined. Programming concepts for DSP processors such as addressing, instruction set, execution control, pipelining, parallel processing and peripherals are discussed. Finally, students will work on related applications employing digital signal processors such as speech processing, instrumentation, and image processing. Three lecture hours per week.
Prerequisite(s): ECE 580
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Computer Engineering, Electrical Engineering, Computer & Information Science

ECE 582  Intro to Statistical DSP  3 Credit Hours
Review of discrete-time signals and systems, introduction of discrete-time random signals and variables, linear signal models, nonparametric power spectrum estimation, least-squares filtering and prediction, signal modeling and parametric spectral estimation, selected topics. (W).
Prerequisite(s): ECE 580*
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Electrical Engineering

ECE 583  Artificial Neural Networks  3 Credit Hours
Students will gain an understanding of the language, formalism, and methods of artificial neural networks. The student will learn how to mathematically pose the machine learning problems of function approximation/supervised learning, associative memory and self-organization, and analytically derive some well-known learning rules, including backprop. The course will cover computer simulations of various neural network models and simulations. Three lecture hours per week.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if Major is Software Engineering, Electrical Engineering, Computer & Information Science, Computer Engineering

ECE 5831  Pat Rec & Neural Netwks  3 Credit Hours
Students will gain understanding of the language, formalism, and methods of pattern recognition. Various solution approaches will be covered including statistical methods and neural network-based methods. Students will learn how to mathematically pose various pattern recognition problems and analytically derive some well-known statistical results and learning rules. In addition, the student will learn how to perform computer simulations of various statistical and neural network models, and learn how to select appropriate model parameters, such as network architecture, hidden layer size, and learning rate. Case Studies will be presented to illustrate a variety of applications.
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or

ECE 584  Speech Processes  3 Credit Hours
The course introduces the fundamentals of speech processing using digital signal processing methods and techniques. How speech is produced from the human vocal system and the different types of basic speech sound components is addressed, followed by methods to analyze speech signals in both the time domain and frequency domain. Applications of speech processing are also presented. Possible applications covered include speech synthesis, speech coding and speech recognition. A team-based term project may be required. Three lecture hours per week.
Prerequisite(s): ECE 580
Restriction(s):
Can enroll if Class is Graduate
ECE 585  Pattern Recognition  3 Credit Hours
Introduction to pattern recognition (PR) as a process of data analysis. Representation of features in multidimensional space as random vectors. Similarity and dissimilarity measures in feature space. Bayesian decision theory, discriminant functions and supervised learning. Clustering analysis and unsupervised learning. Estimation and learning. Feature extraction and selection. Introduction to interactive techniques in PR. Applications of PR.
Prerequisite(s): IMSE 317
Restriction(s):
Can enroll if Major is Computer Engineering, Electrical Engineering, Computer & Information Science

ECE 586  Digital Image Processing  3 Credit Hours
Monochrome and color vision in man and machines, image quantization edge detection, image enhancement, image restoration, color analysis and processing, multispectral image processing, texture analysis, image coding and compression, morphology, geometrical image modifications.
Prerequisite(s): ECE 450
Restriction(s):
Can enroll if Major is Computer Engineering, Electrical Engineering, Computer & Information Science

ECE 587  Sel Top:Image Proc/Mach Vision  3 Credit Hours
A special topics course providing an in-depth examination of one or several areas in image processing and/or machine vision. Possible areas include medical imaging, advanced concepts in morphology, stereovision, shape form shading, and active vision.
Prerequisite(s): ECE 586
Restriction(s):
Can enroll if Major is Computer Engineering, Electrical Engineering, Computer & Information Science

ECE 588  Robot Vision  3 Credit Hours
This course introduces important theory and modern technology in robot vision. Representative topics are sensors and image formation, advanced algorithms in object feature filtering, extraction and recognition, texture and colors, motion, 3D vision, and applications. Students cannot receive credit for both ECE 4881 and ECE 588. Three lecture hours per week.
Restriction(s):
Can enroll if Major is Computer Engineering, Electrical Engineering, Computer & Information Science

ECE 589  Multidimen Digital Signal Proc  3 Credit Hours
Topics include multidimensional signal analysis methodologies, signal representation, 2-D FIR filter, 2-D recursive systems and IIR filters, spectral estimation and methods, multidimensional signal restoration applications in 2-D and 3-D image processing, reconstruction, and feature estimation. Three lecture hours per week.
Prerequisite(s): ECE 580

ECE 590  Selected Topics  1 to 3 Credit Hours
Individual or group study, design, or laboratory research in a field of interest to the students. Topics may be chosen from any of the areas of electrical engineering. The student will submit a report on the project and give an oral presentation to a panel of faculty members at the close of the term.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 591  Directed Studies  1 to 3 Credit Hours
Special projects for laboratory or library investigation with the intent of developing initiative and resourcefulness. The student will submit a report of the project and give an oral presentation to a panel of faculty members at the close of the term.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 592  Directed Research  1 to 3 Credit Hours
Special problems centered on developing experimental skills. In consultation with a faculty advisor a student will prepare a proposal describing the work to be performed for approval by the department. An oral presentation and a final report on the research effort are required for completion. (F,W,S)
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 610  Analog IC  3 Credit Hours
****NO DESCRIPTION AVAILABLE****

ECE 612  Wireless Sensor Networks  3 Credit Hours
Advanced data communications, sensor motes, systems architecture and design, wireless communications standards and protocols, routing, security, operating systems, language support, and applications. Three lecture hours per week.
Prerequisite(s): ECE 570
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if Major is Mechanical Engineering, Electrical Engineering, Industrial & Systems Engin, Computer & Information Science, Computer Engineering

ECE 614  Ctrl Networks for Embedded Sys  3 Credit Hours
Networks have emerged in a wide range of embedded applications (e.g. aerospace, maritime, vehicular, industrial) as an enabler of flexible and robust system design. These embedded control networks differ from information technology (IT) networks in that the primary users are not humans, but sensors, actuators, and embedded processors. Thus, the data sets, performance requirements, operational environment, and need for reliability and robustness necessitate a different approach to network design. As the complexity of the systems grows, developers will be presented with significant challenges. It is important that engineers are acquainted with fundamental tools and strategies for designing and building such networks. Three lecture hours per week.
Prerequisite(s): ECE 570
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if College is Engineering and Computer Science
ECE 615  Advanced Power Electronics  3 Credit Hours
This course covers advanced technologies in power electronics with emphasis on hybrid vehicle and renewable applications. The course will cover topics such as resonant converters, vector control, field oriented control, battery chargers, vehicle to grid management, power factor correction and harmonic control, model predictive control, renewable energy systems (solar, wind and ocean) and their requirement for power converters, electric drive transportation components, silicon carbide power devices. Three hours per week.
Prerequisite(s): ECE 515
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or

ECE 616  Advanced Topics in Power Sys  3 Credit Hours
This course will cover the advanced topics of power system planning, operation, and control. The course will help students understand the algorithms and tools required to analyze electric power systems. The major focus of this course is to educate and train graduate students in developing research abilities through literature survey on advanced power system technologies and hands-on projects on modeling and analyzing smart grid applications. (F)
Prerequisite(s): ECE 541 or ECE 542
Restriction(s):
Can enroll if Level is Rackham or Graduate or Doctorate or
Can enroll if College is Engineering and Computer Science

ECE 620  Sensor Security and Data Integrity Validation  3 Credit Hours
This course covers sensor data security and integrity verification and its applications to transportation systems, robotics, IoTs, smart cities, and industrial control systems. It will provide threat modeling and risk assessment methods employed when developing security solutions for active and passive sensors. This course aims to cover attack surfaces, threat modeling and attack vector executions for commonly used sensors and develop countermeasures to defend against them. Much of the course aims to cover existing sensing modalities, e.g., LiDAR, Radar, Ultrasonic, Camera, Microphone, etc. Students will work with various tools and techniques used by attackers to compromise active as well as passive sensors. (F).
Prerequisite(s): ECE 580
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate
Can enroll if College is Engineering and Computer Science

ECE 643  Humanoids  3 Credit Hours
This course covers two major aspects of humanoid robots, locomotion and manipulation. The purpose of this course is to provide students with advanced techniques for generation and control of movement of a humanoid robot itself and its motion to change the environment. Articulated body dynamics, contact modeling, and contact dynamics will be presented first. Locomotion will cover balance control, footstep planning, walking gait generation, joint space trajectory planning, and human motion tracking. Manipulation will include grasping, optimal planning, and dynamic manipulation. Simulation techniques and software will be introduced. This course will include programming and simulation work and students will be required to accomplish a related course project. The course has three lecture hours per week. (W)
Prerequisite(s): ECE 5001 or ECE 543
Restriction(s):
Can enroll if College is Engineering and Computer Science

ECE 644  Advanced Robotics  3 Credit Hours
This course covers advanced topics related to current research in algorithms and artificial intelligence for robotics such as planning and control issues for robotic systems, taking into account the math and algorithms underneath state-of-the-art robotic systems. The majority of these techniques are heavily based on probabilistic reasoning and optimization-two areas with wide applicability in intelligent robotic systems. Students are expected to have knowledge of high-level programming language and will be required to accomplish a research-related course project. Three lecture hours per week. (W)
Prerequisite(s): (ECE 500 or ECE 5001) and ECE 544
Restriction(s):
Can enroll if College is Engineering and Computer Science

ECE 645  Coop Robots  3 Credit Hours
This course covers advanced topics related to research in algorithms and methods for robots to cooperate. Topics include cooperation, connectivity, navigation, localization, perception, and control. Students will be expected to read research papers and complete a project with actual robots, e.g., TurtleBots. Three lecture hours per week. (W)
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if College is Engineering and Computer Science

ECE 646  Adv Elec Drive Transportation  3 Credit Hours
This course gives in depth study in advanced technologies in the electrified vehicle powertrain. The course will cover topics such as hybrid powertrain architectures, dynamics of hybrid transmissions, battery management systems, battery control electronics, PHEV and HEV power management, survivability of military hybrid vehicles, packaging of PHEV electric drive components, optimization of PHEV components, optimization of electric drive efficiency through power management, vehicle to grid technology, emerging technology in electric drive transportation. Three hours per week.
Prerequisite(s): ECE 5462
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or
ECE 650  Info Theory in Elec Comm  3 Credit Hours
Source models and source coding, channel and channel models, 
information measure, mutual information and entropy, coding for discrete 
sources such as variable-length codes and optimum variable-length 
coding procedure, discrete memoryless channels and capacity, 
techniques for coding and decoding such as parity-check codes, cyclic 
codes, and Hamming codes, quantization and error analysis, coding 
techniques such as DPCM, run-length coding, sub-band coding, transform 
coding.
Prerequisite(s): ECE 555

ECE 661  Sys Ident and Adaptive Control  3 Credit Hours
Minimal state space models, on-line estimation schemes, parameter 
convergence for SISO and MIMO systems, direct and indirect adaptive 
prediction, minimum prediction error controllers (one-step ahead 
and model reference control), minimum prediction error adaptive controllers 
(direct and indirect approach), adaptive control algorithms for close-loop 
pole assignment, Kalman filter, extended Kalman filter.
Prerequisite(s): ECE 560

ECE 665  Optimal Control Systems  3 Credit Hours
Parameter optimization; optimization problems for deterministic 
systems; calculus of variations on optimal control; maximum principle 
of Pontryagin; dynamic programming; numerical solution of optimal 
programming and control problems; singular solutions.
Prerequisite(s): ECE 560

ECE 670  Adv Comp Netwk&WL Comm  3 Credit Hours
In depth study of advanced technologies in computer networks and 
wireless communications. The course will cover topics such as advances 
in Internet, wireless communications and sensor networks, wireless 
networked control systems, vehicular networks, smart grid, cloud 
computing, multimedia networking, and network security. Three lecture 
hours per week.
Prerequisite(s): (ECE 570 and ECE 5701) or CIS 627
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or 
Can enroll if Major is Computer & Information Science, Computer 
Engineering, Software Engineering, Industrial & Systems Engin, 
Information Sys Engineering, Mechanical Engineering, Automotive 
Systems Engineering, Electrical Engineering

ECE 675  Computer Architecture II  3 Credit Hours
Parallel and non-Von Neumann architectures. Supercomputers. 
SIMD and MIMD structures. Pipelining, vector processing, and array 
processing techniques. Associate processors. Data flow computers. 
RISC computers. VLSI computer structures. Advances in computer 
arhitecture.
Prerequisite(s): ECE 575

ECE 679  Adv Intelligent Sys  3 Credit Hours
This is a research seminar on advanced topics in intelligent systems. The 
course will focus on intelligent systems in solving complex problems. 
Topics include ensemble techniques, multi-objective optimization, and 
intelligent agents. The course will require student presentations and a 
substantial term project. Three lecture hours per week.
Prerequisite(s): ECE 579 or CIS 579
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or 
Can enroll if Major is Computer & Information Science, Computer 
Engineering, Software Engineering, Industrial & Systems Engin, 
Information Sys Engineering, Mechanical Engineering, Automotive 
Systems Engineering, Electrical Engineering

ECE 681  Adv Digital Sig Processing  3 Credit Hours
Topics include statistical signal processing, multi-rate systems, bank of 
filter design, multi-resolution formation of wavelet, the discrete wavelet 
transform, wavelet-based digital signal processing. The course has 
substantial computer simulation and research project components. Three 
lecture hours per week.
Prerequisite(s): ECE 580
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or 
Can enroll if Major is Computer Engineering, Software Engineering, 
Industrial & Systems Engineering, Mechanical Engineering, Computer & 
Information Science, Electrical Engineering

ECE 691  Adv Directed Studies  1 to 3 Credit Hours
Advanced Directed Studies for Doctoral Students: Special topic in 
electrical or computer engineering. A project report and a seminar are 
required.
Restriction(s):
Can enroll if Level is Doctorate or 
Can enroll if College is Engineering and Computer Science

ECE 695  Master's Project  3 Credit Hours
Application of the methodologies, tools and theory of software 
engineering to produce a specific validated software product. Projects 
can be faculty-generated, self-generated, and/or work related. All projects 
must be undertaken with one or more students under the supervision of 
the instructor. Prior to enrollment, a project proposal must be prepared 
and approved by the instructor and department chair. Standard software 
engineering documents must be prepared and approved at each phase 
of the project, and an oral presentation of the project is required. Course 
includes lectures and case studies. Permission of instructor required.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Software Engineering

ECE 699  Master's Thesis  3 or 6 Credit Hours
Graduate students electing the thesis option, working under the general 
supervision of a member of the department faculty, are expected to plan 
and carry out the work themselves. The student will submit a report on 
the project and give an oral presentation to a panel of faculty members at 
the close of the term.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or 
Can enroll if Major is Electrical Engineering, Computer Engineering

ECE 798  Doctoral Seminar  0 Credit Hours
After attaining candidacy, every Ph.D. student is required to attend and 
actively participate in research seminars given by CECS Dean's office or 
individual departments in CECS. A student gets a satisfactory grade if 
he/she attends at least two research seminars during the course period. 
(F,W,S)
Restriction(s):
Can enroll if Major is

ECE 980  Pre-Cand Dissertation Research  1 to 9 Credit Hours
Full Title: Pre-Candidate Dissertation Research Dissertation work by a 
pre-candidate student in Electrical and Computer Engineering program 
conducted under guidance of the faculty advisor. (F,W,S)
Restriction(s):
Can enroll if Level is or Doctorate
Can enroll if Major is
Energy Systems Engineering (ESE)

ESE 500 Sustainable Energy Systems 3 Credit Hours
The course provides an overview of energy technology from a broad perspective that encompasses technical and environmental aspects. It covers a wide range of traditional and alternative energy sources and presents assessments of their availability, sustainability, and environmental impacts as well as evaluation of their potential role in solving the global energy problem. Course work includes project.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate
Can enroll if College is Engineering and Computer Science

ESE 501 Energy Conversion 3 Credit Hours
This course covers fundamental engineering principles for converting available energy sources, renewable and nonrenewable, into other energy forms of direct utility. It may include such topics as steam and gas based power plants as well as devices for solar, wind, and hydraulic energy conversion.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate
Can enroll if College is Engineering and Computer Science

ESE 502 Energy Storage Systems 3 Credit Hours
This course introduces the basics of energy storage systems for EDV. It will cover battery basics, ultracapacitors, flywheels, and hybrid energy storage concepts. Battery management, battery charging, and battery safety will be covered. Finally, the requirements of EDV and renewable energy application examples will be explained. Lead acid, nickel metal hydride, and lithium ion batteries will be covered. Other energy storage systems such as super conducting magnetic, hydraulic, compressed air, and integrated (hybrid) energy storage systems, will be discussed as well.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate
Can enroll if College is Engineering and Computer Science

ESE 503 Energy Policy, Econ & Environ 3 Credit Hours
This course will give an overview of the current energy and environment policies, their origin and implementation, and the process of developing such policies. It will consider the public policy issues related to alternative and renewable energy systems at both national and international levels. The roles of government, industry and consumers in making these policies will be discussed. The economics of various alternative energies will be considered and trade-offs between them will be discussed from the viewpoint of availability, safety, environmental impact and related issues.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Engineering and Computer Science

ESE 504 Energy Eval/Risk&Optimization 3 Credit Hours
Formulation of economically efficient strategies and development plans for energy systems requires a sound understanding of energy supply, demand and allocation options as well as the interrelationships between the energy sector, environment, and the economy. Analysis of these energy policy decisions requires evaluation of investment decisions on potential energy projects (and programs) in terms of selected project viability indicators and comparison against a set of decision criteria. This course will provide students the knowledge and skills to identify, analyze, assess, and manage the risks inherent in selecting various energy sources, projects and portfolios of projects. The tools and techniques explored in this class will be applied to energy, environment and resource management policy and investment decisions which are multi-criteria including societal cost and environmental impacts.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Engineering and Computer Science

ESE 591 Guided Stud in Energy Systems 1 to 3 Credit Hours
Individual or group study of an energy systems engineering topic of contemporary interest.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate
Can enroll if College is Engineering and Computer Science

ESE 699 Master's Thesis 3 to 6 Credit Hours
Research for master's thesis under the direction of a faculty adviser.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Engineering and Computer Science

Engineering Core (ENGR)

ENGR 500 Full Time Curricular Practical Training 1 Credit Hour
This course is designed for international graduate students with valid student visas who are eligible for the Curricular Practical Training (CPT) and have been offered a Full Time (working 21 or more hours/week) position/internship that will provide the students with practical work experience related to their field of study in consultation with a faculty advisor. Students are required to submit a report which describes their CPT experience to the advisor at the end of the semester when this course is enrolled. The advisor assigns a pass/fail grade based on evaluation of the report. (F, S, W).
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if College is Engineering and Computer Science
ENGR 501  Part Time Curricular Practical Training  1 Credit Hour
This course is designed for international graduate students with valid student visas who are eligible for the Curricular Practical Training (CPT) and have been offered a Part Time (working 20 or fewer hours/week) position/internship that will provide the students with practical work experience related to their field of study in consultation with a faculty advisor. Students are required to submit a report which describes their CPT experience to the advisor at the end of the semester when this course is enrolled. The advisor assigns a pass/fail grade based on evaluation of the report. (F, S, W).

ENGR 700  Research Methodology  0 Credit Hours
Full Course Title: Doctoral Research Methodology Seminar This course provides doctoral students with the fundamental training for conducting high-level scholarly research used in the various fields of engineering. Topics include: evaluation of information resources, intellectual property, writing for journals and dissertation, effective work with scientific literature, literature review, plagiarism, publication, bibliographic management, library resources, and Students also complete the Responsible Conduct of Research (RCR) training workshops. The students will also be required to attend the GSI training workshop offered by CRLT at the UM Ann Arbor campus. The course is required to be completed for all doctoral students in the first year of enrollment and prior to taking the qualifying exam. (F, W, S)

Restriction(s):
Can enroll if Level is or Doctorate
Can enroll if College is Engineering and Computer Science

Engineering Management (EMGT)

EMGT 500  Management for Engineers  3 Credit Hours
This course provides the knowledge, skills, and attitude required to manage an efficient and productive engineering organization within the company, and manage effectively at upper cooperate levels. Topics include: integrating and coordinating people, functions and projects; managing technical resources; leadership and management; strategic planning for integrating and transferring technologies into products and processes; managing innovation, ethical behavior and legal compliance.

Restriction(s):
Can enroll if Level is Rackham or Graduate

EMGT 505  Systems Engineering  3 Credit Hours
Introduction to systems and systems engineering, tools in systems analysis, the system design process, design for operational feasibility and systems engineering management. (College of Engineering and Computer Science).

Prerequisite(s): IMSE 510

Restriction(s):
Can enroll if Level is Rackham or Graduate

EMGT 510  Managerial Finance and Econ  2 Credit Hours
This course covers foundation concepts in Financial Management, with emphasis on project evaluation. Topics include financial statement use and analysis, time value of money, valuation of stocks and bonds, capital budgeting and risk/return analysis. (College of Business).

Prerequisite(s): EMGT 540 or EMGT 541

Restriction(s):
Can enroll if Level is Rackham or Graduate

EMGT 515  Corporate Strategy  2 Credit Hours
This course seeks to develop an understanding of the management of technology as a strategic organization resource. Implementation policies are discussed within the context of personal, technological and social frames of values. Strategy topics include: the process of strategy development and integration of technological, functional, and corporate strategies. Implementation policies include organization design, and planning and control at the short-term and longer-term levels. (College of Business).

Prerequisite(s): EMGT 510 and EMGT 535 and (EMGT 541 or EMGT 540)

Restriction(s):
Can enroll if Level is Rackham or Graduate

EMGT 520  Prod & Oper Engineering I  3 Credit Hours
Production and operations management techniques including forecasting, inventory control, MRP, detailed scheduling, aggregate planning, process variability and its effects on throughput and inventory, factory physics principles, and lean methods.

Prerequisite(s): EMGT 505

Restriction(s):
Can enroll if Level is Rackham or Graduate

EMGT 525  Tot Qua Mgmt and Six Sigma  3 Credit Hours
This course covers implementing Total Quality Management (TQM), undertaking Six Sigma Projects, and applying Baldridge National Quality Award criteria and ISO 9000 principles to improve quality performances in an organization. Topics include Definitions and Importance of Quality, Quality Costs, Quality Function Deployment (QFD), Product Specification and Critical-to-quality Measures (CQM), Statistical Quality Control (SQC), Robustness Concepts, Quality System Design and Evaluation. Six Sigma and DMAIC Methodologies, Design for Six Sigma (DFSS) process, IDOV (Identity requirements, Deign alternatives, Optimize the design and Verify process capability) Methodology, and several other concepts and tools related to quality are also covered.

Prerequisite(s): IMSE 510

Restriction(s):
Can enroll if Level is Rackham or Graduate

EMGT 530  Info Sys for Engin Management  3 Credit Hours
This course covers the organizational foundations of information systems, their emerging strategic role, and the technical foundation for understanding computers and information systems. Topics include: introduction to management information systems; decision support systems; artificial intelligence and expert systems; end-user computing; data vs. information; data communication and connectivity; data management. (College of Engineering and Computer Science).

Prerequisite(s):
Can enroll if Level is Rackham or Graduate

EMGT 535  Marketing Mgt and Policy  2 Credit Hours
This course studies the salient features of technology-driven marketing and distinguishes technology-push from market-pull marketing. Highlights the technology-marketing interface in the context of strategy planning, market segmentation, product innovation, channels of distribution, promotional and pricing decisions. Particular attention will be paid to technology inventor-user interactions, process of adoption, and technological innovation. (College of Business).

Prerequisite(s): EMGT 510*

Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate
EMGT 541  Acct Fund for Decision Making  3 Credit Hours
This course introduces fundamental accounting concepts and applications that are useful in the evaluation of financial information and decision tools relevant to project planning. Students will achieve an understanding of basic accounting and cost management tools that are essential to decision making. Emphasis will be placed on assessing financial statement information through an understanding of accounting practice, the relationship between business activities and an organization's cash flows.

EMGT 545  Org Beh and Hum Res Mgt  2 Credit Hours
This course encompasses key areas of human resources management and organization behavior as they relate to technical work environments. Organization design and theory will be discussed, along with motivation, leadership, employee selection skills, group and team processes, and managing diversity. Techniques for devising a personal career development plan are covered. (College of Business).
Prerequisite(s): EMGT 500
Restriction(s):
Can enroll if Level is Rackham or Graduate

EMGT 550  Business Ethics/Law  2 Credit Hours
This course provides students with an overview of the legal environment of business. Concepts including product liability, intellectual property, and contracts are introduced within the context of the legal system. Ethical consideration in personal, professional, and organizational decision making are integrated throughout this course. (College of Business).
Restriction(s):
Can enroll if Level is Rackham or Graduate

EMGT 550  Business Ethics/Law  2 Credit Hours
This course provides students with an overview of the legal environment of business. Concepts including product liability, intellectual property, and contracts are introduced within the context of the legal system. Ethical consideration in personal, professional, and organizational decision making are integrated throughout this course. (College of Business).
Restriction(s):
Can enroll if Level is Rackham or Graduate

EMGT 560  Engin Mgt at Upper Levels  1 Credit Hour
This course provides the knowledge and skills in leadership and management required to build and manage the company's technical resources toward the attainment of corporate objectives. Topics covered include: technological forecasts; corporate strategic planning; corporate portfolios of technical programs; group and strategic planning; project collection; management of institutional time; corporate computer facilities; proposals; introducing new products and processes; inventorying and upgrading; engineering audits; and the role of engineering in joint ventures. (College of Engineering and Computer Science).
Prerequisite(s): EMGT 520 and EMGT 530 and EMGT 545
Restriction(s):
Can enroll if Level is Rackham or Graduate

EMGT 570  Enterprise Information Systems  3 Credit Hours
The purpose of this course is to provide a foundation for the analysis, design and implementation of enterprise information systems. Topics include systems and organization theories, and information systems planning and evaluation. Students will be also introduced to various systems development life cycle phases of an enterprise information system. Students will acquire an understanding of the flow of information (forecasts, financial, accounting and operational data) within an enterprise and the factors that should be considered in designing an integrated enterprise information system. This includes all systems in the business cycle from revenue forecasts, production planning, inventory management, logistics, manufacturing, accounts payable, sales, accounts receivable, payroll, general ledger and report generation. Specifications for some of these systems will be developed utilizing ERP software such as SAP R/3 application development software suite. (F,W)

EMGT 580  Mgt of Prod and Proc Design  3 Credit Hours
This course provides the knowledge and skills needed to manage the design of a product or process. Topics covered include: creativity, types of products, types of processes, generalized design process, identification and translation of customer needs into engineering specifications, designing for function and quality factors, design for manufacturability, life-testing, cost estimating, reporting on design projects, and concurrent engineering. (College of Engineering and Computer Science).
Prerequisite(s): EMGT 520 and EMGT 525 and ACC 505
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or

EMGT 590  Capstone Project  3 Credit Hours
Students will receive the opportunity and training to integrate and apply both the technical and program management aspects acquired in various courses to an engineering project or problem.
Prerequisite(s): IMSE 5215 and IMSE 5205 and IMSE 517
Restriction(s):
Can enroll if Level is Rackham or Graduate
Can enroll if Major is Program & Project Management

EMGT 591  Capstone Project in EMGT  2 Credit Hours
Students will receive the opportunity and training to integrate and apply both technical and managerial aspects acquired in various courses to an engineering project or problem.
Prerequisite(s): EMGT 580 and EMGT 500 and EMGT 570
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Engineering and Computer Science
Can enroll if Program is MS-Engineering Management

EMGT 699  Master's Thesis  1 to 6 Credit Hours
Graduate students electing this course, while working under the general supervision of a member of the program faculty, are expected to plan and conduct the work themselves, to submit a thesis for review and approval, and to present an oral defense of the thesis.
Restriction(s):
Can enroll if Level is Rackham or Graduate

English (ENGL)

ENGL 508  Shakespeare I: Earlier Works  3 Credit Hours
Intensive study of selected works from the first half of Shakespeare's career, designed to increase the student's critical appreciation and understanding. Students cannot receive credit for both ENGL 408 and ENGL 508.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 240 or ENGL 250)
Restriction(s):
Can enroll if Class is Graduate
ENGL 509  Shakespeare II: Later Works  3 Credit Hours
Intensive study of selected works from the second half of Shakespeare’s career, designed to increase the student’s critical appreciation and understanding. Student cannot receive credit for both ENGL 409 and ENGL 509.
Prequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 240 or ENGL 250)
Restriction(s):
Can enroll if Class is Graduate

ENGL 513  Shakespeare’s Contemporaries  3 Credit Hours
An examination of the performance and cultural contexts of plays by English Renaissance playwrights (Marlowe, Middleton, Webster, Jonson, etc.), working around the time of Shakespeare. A limited number of Shakespeare’s plays may be included.
Prequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)
Restriction(s):
Can enroll if Class is Graduate

ENGL 520  Maj Engl 18th-Century Authors 2 to 3 Credit Hours
An intensive study of two or three authors, such as Dryden, Behn, Pope, Swift, Burney, Austen, or Samuel Johnson. Students cannot receive credit for both ENGL 420 and ENGL 520.
Prequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Can enroll if Class is Graduate

ENGL 524  18th-Century English Novel  3 Credit Hours
A study of the rise and development of the English novel during the 18th Century. Consideration is given to such novelists as Defoe, Richardson, Fielding, Sterne, Austen, and Smollett. Students cannot receive credit for both ENGL 424 and ENGL 524.
Prequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Can enroll if Class is Graduate

ENGL 540  Maj Engl Amer 20th-Cent Author  3 Credit Hours
An intensive examination of the works of representative English and American authors since 1900. Students cannot receive credit for both ENGL 440 and ENGL 540.
Prequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Can enroll if Class is Graduate

ENGL 541  Major 20C/21C English Authors  3 Credit Hours
An intensive study of several modern English authors, such as Shaw, Joyce, Forster, Dylan Thomas, D.H. Lawrence, and Woolf. Students cannot receive credit for both ENGL 441 and ENGL 541.
Prequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)
Restriction(s):
Can enroll if Class is Graduate

ENGL 542  Studies in 20-21 Century Lit  3 Credit Hours
Intensive study of a special topic in 20th or 21st-century literatures in English. The course may treat a single author (e.g. E.M. Forster), a movement (e.g. Postmodernism) a genre (e.g. modern short story), or a theme (e.g. Literature of World War).
Prequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Can enroll if Class is Graduate

ENGL 545  20C/21C Women Authors  3 Credit Hours
An analysis of selected works of significant and emerging 20th and 21st century women authors writing in English, with special emphasis on issues of gender and social and cultural identity. Additional assignments will distinguish this course from its undergraduate version.
Prequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Can enroll if Class is Graduate

ENGL 550  Maj Amer Auth to the Civil War  3 Credit Hours
An intensive study of two or three authors, such as Charles Brockden Brown, Nathaniel Hawthorne, or Harriet Beecher Stowe, from the earlier periods of American Literature. Students cannot receive credit for both ENGL 450 and ENGL 550.
Prequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Can enroll if Class is Graduate

ENGL 551  Maj Am Auth: Civ War to WWI  3 Credit Hours
An intensive study of two or three major authors from the period between the Civil War and World War I, such as Emily Dickinson, Charles Chesnutt, or Henry James. Students cannot receive credit for both ENGL 451 and ENGL 551.
Prequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Can enroll if Class is Graduate
ENGL 522  Major 20C/21C American Authors  3 Credit Hours
An intensive study of several Modern American authors from World War I to the present, such as Langston Hughes, Frost, Hemingway, and Faulkner. Students cannot receive credit for both ENGL 452 and ENGL 552.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Can enroll if Class is Graduate

ENGL 553  Contemporary American Novel  3 Credit Hours
Study of selected American novels and novelists since WWII with an eye to their social, political, and literary contexts. Course will focus on major works by major authors and representative works by lesser-known writers in order to explore technical, thematic, and critical crosscurrents among the works. Students cannot receive credit for both ENGL 453 and ENGL 553.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Can enroll if Class is Graduate

ENGL 554  Postmodern Literature  3 Credit Hours
This course explores the expression of postmodernism in literature (primarily fiction) and critical theory. Selected works of fiction and creative non-fiction will be analyzed in terms of the problems and issues raised by the postmodern movement. Students cannot receive credit for both ENGL 454 and ENGL 554.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)
Restriction(s):
Can enroll if Class is Graduate

ENGL 556  Modern English Grammar  3 Credit Hours
The morphological and syntactic analysis of the structure of present day English considered in the light of modern linguistic science. Students cannot receive credit for both ENGL 461 and ENGL 561.
Prerequisite(s): LING 280 or LING 480 or LING 580
Restriction(s):
Can enroll if Class is Graduate

ENGL 568  Writing Young Adult Fiction  3 Credit Hours
In this course, participants will explore the young adult novel form the point-of-view of a reader and a writer. They will read recently published and critically acclaimed popular young adult novels. They will use these texts to explore such issues as gender, race and identity as they relate to young adult lives and their respective cultures generally. They will use these texts as models for the production of their own texts and will consider the constraints and benefits of constructing and writing to a particular audience. They will consider if and why young adult novels are abbreviated or limited in relationship to adult literature. In addition to reading about ten novels, they will complete several creative exercises leading up to a final portfolio. Additional reading assignments or projects will distinguish this course from its undergraduate version. Students will not receive credit for both ENGL 468 and ENGL 568.
Restriction(s):
Can enroll if Class is Graduate

ENGL 569  Contemp African American Lit  3 Credit Hours
This course surveys primarily contemporary literature by writers who identify as gay, lesbian, bi-sexual, transgender, or queer. By studying the self-representation and culturally unique perspective of this emerging canon of writers, students in this course understand the emergence of LGBTQ literary traditions and understand the cultural diversity within these traditions. Students learn to identify the aesthetic qualities (such as camp, performativity, coded subtexts, homoeroticism, and the relationship between creativity and sexuality), and historical, political, and social concerns that characterize LGBTQ literary production. Topics covered include the struggle for civil rights before and after Stonewall, coming out narratives, the negotiation of homophobic cultures, post-colonial writers, and memoirs of the LGBTQ experience, as well as the historical emergence of sexual categories and the literary critique of heteronormativity. This course counts toward the English discipline diversity requirement.
Restriction(s):
Can enroll if Class is Graduate

ENGL 572  Readings in Muticult Contexts  3 Credit Hours
An examination of the effect of different cultural backgrounds on reading and literature. Topics include contrastive rhetoric, folk narrative, and multicultural juvenile literature. This course does not satisfy requirements for the English concentration. Not open to English concentrators. (YR)
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)
Restriction(s):
Can enroll if Class is Graduate
ENGL 573 Arab American Women Writers 3 Credit Hours
This course examines the literary and cultural contributions of Arab and Arab American women novelists, poets, filmmaker and artists to the development and consolidation of cultures of understanding and coexistence; explores the relations between, among others, citizenship and belonging, race and national security, gender and geographical mobility, and ethnic minorities and mainstream consciousness; stresses how literary and artistic productions of Arab and Arab American women writers and artists foster alternative visions of socio-cultural coexistence, dialogue, and hospitality by means of technical and stylistic experimentation and renovation.

ENGL 582 History of the English Lang 3 Credit Hours
A thorough grounding in the history and structure of the English language. At issue are the linguistic and ideological origins of the concept of Standard English, and the strengths and limitations of different methods of analyzing the history of the language. The course will emphasize sound change, grammatical change, and their sociolinguistic context. (YR)
Prerequisite(s): LING 480 or LING 580
Restriction(s):
Can enroll if Class is Graduate

ENGL 588 Env Lit & Reps of Nature 3 Credit Hours
An interdisciplinary study of the ways in which the relationship between "nature" and humankind has been represented in literature and other forms of cultural expression. Emphasis on American and British texts of the 19th and 20th centuries, but assigned materials may include reading from other cultures and historical periods.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 205 or ENGL 206 or ENGL 200 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)
Restriction(s):
Can enroll if Class is Graduate

ENGL 590 Topics in English 1 to 3 Credit Hours
Examination of problems and issues in selected areas of English. Titles listed in the Schedule of Classes will change according to content. Course may be repeated for credit when specific topic differs. Only offered for graduate credit. (OC)
Restriction(s):
Can enroll if Class is Graduate

COMP 585 How Writing Works 3 Credit Hours
This course investigates why and how people write for particular audiences while investigating writing as it takes place in a variety of contexts. Subjects include: cognitive and social theories of writing and the writing process, theories of persuasion, writing across the curriculum, writing for multiple audiences, writing in the workplace, writing for self and for publics, and teaching writing. The course is appropriate and useful to students interested in teaching writing at the K-12 level, those interested in careers in communication and those who wish to better understand how writing promotes personal and societal change. Additional reading assignments or projects distinguish this course from its undergraduate version. Students will not receive credit for both ENGL 485 and COMP 485 and COMP 585.
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate
Can enroll if College is Arts, Sciences, and Letters

Entrepreneurship (ENT)

ENT 626 Intro to Entrepreneurship 3 Credit Hours
This course focuses on the process of new enterprise creation. It will examine how the interplay of personal and group creativity and market demand provides a basis for the conception, design and launch of new ventures. Although a variety of business options will be considered, emphasis will be placed on the creation of technology-driven growth enterprises. The course content will familiarize students with the tasks of capital formation, business planning, staffing, systems design, and operations management in the entrepreneurial context. Students taking the course should have an interest in creating a new firm or initiating an entrepreneurial venture within a larger organization. All students will develop a plan for their venture.
Restriction(s):
Can enroll if Class is Graduate

ENT 627 Manag the Entrepreneurial Firm 3 Credit Hours
This course addresses the issues of managing an existing enterprise. It gives special emphasis to the challenges associated with growth and maturation of the firm. These include second round and mezzanine financing, market penetration and new market entry, expanding the product lines, building the management team, formulating operating policies and procedures, strengthening the firm's competitive position and establishing market entry barriers, and creating harvest options.
Restriction(s):
Can enroll if Class is Graduate
Environmental Science (ESCI)

ESCI 504  Field Studies in Env  2 Credit Hours
A systematic analysis of the environment. This course will focus on the analysis of the Rouge River Watershed as an ecological unit. The student will make intensive analyses of the river water and the surrounding land surface at selected sites. The results will provide a composite of the water quality and land use of the various tributaries. Emphasis will be placed on proper sampling and testing techniques, field and lab safety procedures, aquatic chemistry, biological organisms as indicators of pollution, and the role of wastewater dumping on the watershed.

ESCI 525  Soil in the Environment  3 Credit Hours
The study of soil in the environment, including its formation, classification, physical attributes and engineering properties with an emphasis on soil-water statics and dynamics, chemical attributes and processes. Students are expected to have background knowledge of physical geology. The course will include field trips and field work, including the collection of soil samples from the Universities natural area. The course will also include a laboratory component in which students will perform a variety of test, e.g. bulk density, engineering properties on the soil samples collected. the course will typically be team taught. (S, AY)
Prerequisite(s): GEOL 118
Restriction(s):
Can enroll if Level is Rackham or Graduate
Can enroll if College is Engineering and Computer Science or Education, Health, and Human Services or Business or Arts, Sciences, and Letters

ESCI 572  Environmental Communications  3 Credit Hours
Preparation and presentation of both oral and written technical abstracts and reports, including environmental newsletters, thesis, and media releases. Professional scientists must be able to effectively communicate ideas and concepts to other scientists and to the general public. This course will provide the foundations in learning how to communicate ideas effectively and succinctly. (F, YR)
Restriction(s):
Can enroll if Class is Senior or Graduate
Can enroll if College is Arts, Sciences, and Letters

ESCI 574  Watershed Analysis  3 Credit Hours
An interdisciplinary study of watersheds, the most commonly used bioregional unit. The course integrates the analysis of many factors which contribute to the character of watersheds, including bedrock and surficial geology, surface and groundwater hydrology, social history, land use history, water quality analysis, biological diversity, laws and regulations, management models, drinking water and wastewater systems, best management practices, and educational programs. The Rouge River watershed will serve as the primary case study.
Restriction(s):
Can enroll if Class is Graduate

ESCI 585  Spatial Analysis and GIS  3 Credit Hours
Application of the principles of Spatial Analysis and the use of Geographic Information Systems as a research tool in Environmental Science. Emphasis will be placed on the use of commercially available software including: ESRI’s ArcView GIS, Golden Software’s Surfer and Adobe PhotoShop. Emphasis will also be placed on the use of the Michigan spatial data warehouse program and the Michigan geographic framework program for metadata specific to Michigan. (AY)
Restriction(s):
Can enroll if Class is Graduate

ESCI 595  Topics in Environmentl Science  3 Credit Hours
Problems or readings on specific topics or subjects in environmental science. (YR)
Restriction(s):
Can enroll if Class is Senior or Graduate
Can enroll if College is Arts, Sciences, and Letters

ESCI 595G  Topics in Environmental Sci  3 Credit Hours
Topic: Soil in the Environment. A study of the textural and chemical classification of soil as well as the biologic, engineering and geologic aspects of soil science including applications to agriculture and agronomic science. The course will explore topics such as soil formation, soil-water statics and dynamics, soil-energy balances, soil fertility and plant nutrition, biodiversity, soil and water management, soil pollution and remediation.

ESCI 597  Off-Campus Independent Study  1 to 3 Credit Hours
Provides opportunity for qualified graduate students in the MSES program to pursue independent research under the direction of a graduate faculty member off campus. A written proposal describing the project (including the nature of the project itself, dates, where the project will be done and the faculty member supervising the project) must be approved by the MSES program director/committee before the student can register for the course. Project must be appropriate to the student’s chosen track. It must be designed to produce a scholarly paper, papers, or other evidence(s) that reflect significant results from the course. (F, W, S).
Restriction(s):
Can enroll if Class is Graduate

ESCI 599  On-Campus Independent Study  1 to 3 Credit Hours
Provides opportunity for qualified graduate students in the MSES program to pursue independent research under the direction of a graduate faculty member. A written proposal describing the project (including the nature of the project itself, dates, and the supervising faculty member) must be submitted to the Program Director/committee for approval before the student can register for the course. Project must be appropriate to the student’s chosen track. It must be designed to produce a scholarly paper, papers, or other evidence(s) that reflect significant results from the course. (F, W, S).
Restriction(s):
Can enroll if Class is Graduate

ESCI 698  MSES Master’s Project  3 Credit Hours
Intended for students who present a plan for a project using methods of intellectual exploration and analysis. Possible projects include gathering data through laboratory or field based studies, using interviews and survey instruments to gauge human responses. They should involve creative representations, writing, and other forms of interdisciplinary analysis. To be carried out under the general supervision of a member of the graduate faculty in Natural Sciences. Project plan must be approved by the MSES Program Director/committee before student registers for this course. (F, W, S).
Restriction(s):
Can enroll if Class is Graduate

ESCI 699  MSES Master’s Thesis  1 to 6 Credit Hours
MSES students electing this thesis option in the last stage of the program will work under the general supervision of a member of the graduate faculty in Natural Sciences, but will plan and carry out the work independently. Prospectus and thesis plan must be approved by the MSES Program Director/committee before student registers for this course. (F, W, S).
Restriction(s):
Can enroll if Class is Graduate
Environmental Studies (ENST)

ENST 574  Environmental Education  3 Credit Hours
This course involves an in-depth analysis of the environmental education at both the elementary and secondary school level, particularly stressing the environment as a teaching resource. Community resources as they related to environmental education are also investigated. Graduate students will be expected to become knowledgeable about and complete a review of current research that involves the efficacy of environmental education.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate

ENST 588  Env Lit & Reps of Nature  3 Credit Hours
An interdisciplinary study of the ways in which the relationship between "nature" and humankind has been represented in literature and other forms of cultural expression. Emphasis on American and British texts of the 19th and 20th centuries, but assigned materials may include reading from other cultures and historical periods.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 205 or ENGL 206 or ENGL 200 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)
Restriction(s):
Can enroll if Class is Graduate

Exploratory Studies (EXPS)

EXPS 500  STEM2 Teaching and Learning  3 Credit Hours
The content of this course and the pedagogy employed will provide students with experiences in topics related to the integration of science, technology, engineering, health and mathematics (STEM2). Students will experience examples of STEM activities and will explore how STEM2 disciplines impact society. (YR)
Restriction(s):
Can enroll if Class is Graduate

EXPS 507  Inquiry-based Math and Science  3 Credit Hours
This inquiry-based laboratory course intends to support the learning of early childhood educators (birth to grade 2) in foundations of science and mathematics. The course integrates concepts and processes that arise in both disciplines, such as classification; units and measurements; shapes and structures and their properties; patterns; problem solving; representation; cause and effect; use of evidence (three credits).
Required for Early Childhood Comprehensive Major. Elective for Elementary Education Certification Students. Students cannot receive credit for both EXPS 407 and 507. Students seeking graduate credit should elect EXPS 507. The required lab fee is to cover course materials.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Graduate
Can enroll if Degree is Master of Arts
Can enroll if College is Education, Health, and Human Services
Can enroll if Major is Early Childhood, Education

EXPS 515  Evolution for Teachers  1 to 3 Credit Hours
Course is designed to meet the needs of grade K-12 teachers teaching about evolution. The Michigan Department of Education requires students to be able explain how scientists construct and scientifically test theories concerning the origin of life and evolution of species.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters

EXPS 520  Science Ed Action Research  3 Credit Hours
This is the culminating course that integrates prior experiences in the MSSE program. Each student will identify a research question related to his/her own classroom practice, review relevant literature, collect and analyze data, and complete a scholarly report.
Prerequisite(s): EDK 500
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters
Can enroll if Major is Environmental Science, Science Education, Education

EXPS 543  Family/School/Community Collab  2 Credit Hours
Characteristics, roles, and functions of contemporary families are described. Various communication and training strategies designed to promote collaboration and teamwork within and between the school staff, the families, and community are described and practiced through discussion, problem-solving activities, and roleplaying. Family effectiveness assessment instruments and strategies are also described and practiced.
Restriction(s):
Can enroll if Class is Graduate

EXPS 559  Individ Res in Lit in Educatio  1 to 3 Credit Hours
Requires the student to initiate, and carry to completion, a literature in education based research project under the supervision of a faculty member. May be elected more than once for a total of not more than three credits as approved by advisor.
Restriction(s):
Can enroll if Class is Graduate
EXPS 620  Action Research  3 Credit Hours
Students will learn about action research as a means to become a reflective practitioner to make improvements in an educational setting. Students will identify a research question related to his/her own professional practice, review relevant literature, collect and analyze data, develop and implement an action plan, and complete a scholarly report.
Prerequisite(s): EDK 500
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

EXPS 715  Evolution for Teachers  3 Credit Hours
Course is designed to meet the needs of grade K-12 teachers teaching about evolution. The Michigan Department of Education requires students to be able explain how scientists construct and scientifically test theories concerning the origin of life and evolution of species.
Restriction(s):
Can enroll if Class is Specialist or Doctorate

EXPS 720  Science Ed Action Research  3 Credit Hours
This is the culminating course that integrates prior experiences in the MSSE program. Each student will identify a research question related to his/her own classroom practice, review relevant literature, collect and analyze data, and complete a scholarly report.
Restriction(s):
Can enroll if Class is Specialist or Doctorate

EXPS 799  Ind. Res. in Lit in Education  1 to 3 Credit Hours
Requires the student to initiate, and carry to completion, a literature in education based research project under the supervision of a faculty member. May be elected more than once for a total of not more than three credits as approved by advisor.
Restriction(s):
Can enroll if Class is Specialist or Doctorate

EXPS 820  Action Research  3 Credit Hours
Students will learn about action research as a means to become a reflective practitioner to make improvements in an educational setting. Students will identify a research question related to his/her own professional practice, review relevant literature, collect and analyze data, develop and implement an action plan, and complete a scholarly report.
Prerequisite(s): EDK 500 or EDK 700

Other Content
* An asterisk denotes that a course may be taken concurrently.

Frequency of Offering
The following abbreviations are used to denote the frequency of offering:
(F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Finance (FIN)
FIN 531  Fin Fundament & Value Creation  3 Credit Hours
This course provides the fundamentals of the finance discipline with an emphasis of value creation as the primary objective of a corporation. Capital budgeting analysis and techniques are extensively discussed. Valuation of securities is presented along with an introduction to modern portfolio theory and market efficiency. Issues related to international financial management are also introduced.
Prerequisite(s): (Mathematics Placement with a score of 105 or MATH 104 or MATH 105 or MATH 113 or MATH 115) and (DS 520* or IMSE 510* or IMSE 514*) and ACC 505
Restriction(s):
Can enroll if Class is Graduate

FIN 581  Topics in Corporate Finance  3 Credit Hours
This course integrates theory and practice for major topics such as capital structure and dividend policy. Additional topics include leasing, corporate governance, mergers and acquisitions, short-term financial management, and risk management. These topics are examined from the perspective of the corporate financial manager.
Prerequisite(s): FIN 531 and BE 530 and ACC 505 and (DS 520 or IMSE 510 or IMSE 514) and (Mathematics Placement with a score of 105 or MATH 104 or MATH 105 or MATH 113 or MATH 115)

FIN 650  Corporate Valuation & Strategy  3 Credit Hours
This course examines a variety of financial management topics, such as project and enterprise valuation and risk analysis, corporate restructuring, dividend policy, corporate governance, and current asset management using case studies and readings.
Prerequisite(s): FIN 581 and BE 530

FIN 651  Invstmnt Proc, Analysis & Mgmt  3 Credit Hours
This course provides an examination of the process of investment analysis and management. Topics include: analysis of fixed income securities, stock valuation, and introduction to derivative securities; discussion of portfolio theory and management; and an overview of investment environment. Wherever it is appropriate, the above topics will also be discussed in a global context.
Prerequisite(s): FIN 531 and BE 530* and ACC 505 and (DS 520 or IMSE 510 or IMSE 514) and (Mathematics Placement with a score of 105 or MATH 104 or MATH 105 or MATH 113 or MATH 115)

FIN 652  Derivatives & Risk Management  3 Credit Hours
The focus of this course is on understanding the derivative securities and their use in risk management. This course provides an in-depth introduction to options and option pricing as well as an extensive overview of forward, future and swap contracts. This course will draw upon the intuition and analytic tools developed to examine sophisticated financial products or strategies that firms and investors have used in their risk management.
Prerequisite(s): FIN 531 and ACC 505 and (DS 520 or IMSE 510 or IMSE 514) and (Mathematics Placement with a score of 105 or MATH 104 or MATH 105 or MATH 113 or MATH 115)
Restriction(s):
Can enroll if Class is Graduate
FIN 653  Topics/Investments & Cap Mkts  3 Credit Hours
This course prepares students for career development and advancement in the challenging investment profession. The course provides an in-depth study of advanced contemporary topics in global investments and capital markets that are selected from the common body of knowledge of the Chartered Financial Analysts (CFA) program. Topics may include a subset of: advanced investment theory and valuation techniques, asset allocation, behavioral finance, hedge fund, emerging markets and global investing, ethics for investment professionals, financial statements and security analysis, market efficiency, market microstructure, portfolio management and performance evaluation, etc. The format and the topics may vary in each offering.

Prerequisite(s): FIN 651 and (DS 520 or IMSE 510 or IMSE 514)
Restriction(s):
Can enroll if Class is Graduate

FIN 654  Financial Intermediation  3 Credit Hours
Financial Intermediaries provide services to borrowers and lenders, often creating new securities or providing brokerage services broadly defined. Intermediaries include depository institutions such as commercial banks and non-depository institutions such as security firms, pension funds and insurance companies. This course studies the functions of intermediaries, the industry regulations, and competition in a deregulated environment. Special emphasis is placed on financial markets and fiscal instruments created by intermediaries, risk of intermediation, risk management, and financial innovations in the industry.

Prerequisite(s): FIN 531* and ACC 505 and (DS 520 or IMSE 510 or IMSE 514) and (Mathematics Placement with a score of 105 or MATH 104 or MATH 105 or MATH 113 or MATH 115)

FIN 655  International Financial Mgt   3 Credit Hours
This course views international finance at the micro level, but of necessity it will cover some aspects of macro-level international finance as well, such as the international financial system and balance of payments mechanism. The following topics will be covered: the international financial system, balance of payments, foreign exchange, exchange risk management, international financial markets, foreign investment, and foreign trade financing.

Prerequisite(s): FIN 531 and ACC 505 and BE 530 and (DS 520 or IMSE 510 or IMSE 514)

FIN 656  Fixed Income Securities  3 Credit Hours
The fixed income market, accompanied by the introduction of sophisticated financial engineering techniques, has grown enormously over the last two decades. Today, the fixed income market has been a vital segment of the global financial market. This course covers major topics associated with this market, including bond pricing, yields, and volatility; term structure of interest rates and yield curve; market structure and analytical techniques for Treasury, municipal, corporate bonds, mortgage-backed securities, asset-backed securities, and bonds with embedded options. The fundamental objective of this course is to help students develop analytical skills for pricing fixed income securities and managing interest rate risk. In addition, materials covered in this course are compatible with the Common Body of Knowledge in Analysis of Debt Investments that is required by the Chartered Financial Analysts (CFA) examination. Students will not receive credit for both FIN 456 and FIN 656.

Prerequisite(s): (MATH 113 or MATH 115 or Mathematics Placement with a score of 116) and FIN 651* and (FIN 581 or FIN 652 or FIN 654 or FIN 655)
Restriction(s):
Can enroll if Class is Graduate

FIN 657  Investment Fund Management   3 Credit Hours
This course introduces finance students to investing approaches and analytical techniques including both Intrinsic and Relativistic analyses used for security analysis employed and implemented by professional money managers. The course is recommended for finance students seeking to develop careers related to money management, investment analysis, financial analysis, portfolio management and related financial services careers. The main focus of the course is to gain the experience and skills of equity securities analyses through the Student Managed Investment Fund. The course requires application of fundamental and intrinsic equity analyses valuation. Graduate students are required to analyze data at a more advanced level than that required of undergraduate students. (F,W,OC) Students cannot receive credit for both FIN 457 and FIN 657

Prerequisite(s): FIN 651

Geology (GEOL)

GEOL 550  Glacial Geology  3 Credit Hours
The study of landforms and sediments created by glaciers both past and present. The glacial activities of the past 2 million years will be emphasized, particularly the evolution of landforms common to the upper Midwest. The influence of glacial deposits on development, construction methods, planning and environmental protection will also be discussed.

Prerequisite(s): GEOL 118 and GEOL 218
Restriction(s):
Can enroll if Class is Graduate

GEOL 560  Structural and Engineering Geology  4 Credit Hours
GEOL 460/560 is the application of structural geology and stratigraphy to the practice of geology and civil engineering. Emphasis is placed on the application of geologic analysis to facilitate the understanding of dynamic Earth processes such as faulting and folding as well as the successful completion of engineering projects. Case histories will be used to evaluate how geologic knowledge has been used in both successful and unsuccessful engineering projects.

Prerequisite(s): GEOL 118
Restriction(s):
Can enroll if Class is Graduate

GEOL 570  Geochemistry  3 Credit Hours
Application of the principles and techniques of geochemistry to the field of groundwater hydrology. Composition of natural water and the processes affecting the geochemical mobility of dissolved solids will be studied. Emphasis will be on the influence of the geochemical environment on water composition and water pollution. Course will include a review of analytical methods for the determination of water quality. Three hours lecture. (AY).

Prerequisite(s): GEOL 375 and CHEM 344
Restriction(s):
Can enroll if Level is Rackham or Graduate
Can enroll if College is Business

GEOL 574  Urban Watersheds  3 Credit Hours
Study of the geology, contamination and sustainable development in urban watersheds with a focus on the fate and transport of contaminants in the soil and water. Students are expected to have a rudimentary background in physical geology.
GEOL 575  Contaminant Hydrogeology  3 Credit Hours
Advanced lecture treatment of selected topics in subsurface hydrology including contaminant transport and fate of organic and inorganic constituents, aquifer test analysis, and the use of selected case histories. (AY)
Prerequisite(s): GEOL 375
Restriction(s):
Can enroll if Class is Graduate
GEOL 577  Geology Field Methods  1 to 2 Credit Hours
One to two week long intensive field course conducted at the end of the winter semester. The course will emphasize geological field methods and analysis of geologic terrains. Use of Brunton compass and clinometer, GPS, recognition and identification of geological structures, preparation and interpretation of geologic maps, satellite images and aerial photographs will also be covered. May be repeated for credit when destination varies. Two credit hours will be given for a field course which lasts two weeks. Alternatively, students may elect to take the shorter course (one-week to 10 days) for 2 credit hours if they are willing to serve as a teaching assistant. Organizational meetings will be held during the winter semester. (YR).
Prerequisite(s): GEOL 118 and GEOL 218
Restriction(s):
Can enroll if Class is Graduate
GEOL 578  Geology of the National Parks  3 Credit Hours
The study of the geology (stratigraphy, structure, geomorphology) of major national parks and monuments. Specific areas visited vary from year to year, enabling the course to be repeated for credit. Emphasis is placed on developing note taking skills in the field, describing rock sequences in outcrop, interpreting geologic maps and aerial photographs, and evaluating cratonic sequences, regional correlations, paleogeographic and paleoclimatic reconstructions, small and regional scale structural patterns, and facies changes related to rising and falling sea level.
Restriction(s):
Can enroll if Class is Graduate
GEOL 587  Groundwater Modeling  3 Credit Hours
Lecture and computer laboratory applications of two- and three-dimensional groundwater flow and contaminant transport problems. Visual Modflow, Modpath (-PLOT and SUTRA), MT3D, and Surfer will be used to evaluate remedial alternatives (e.g., pump and treat, funnel and gate or trench and drain systems). EPA's Basin software combined with ESRI's GIS software ArcView will be used to evaluate and compare the Rouge River watershed with other small-scale watersheds in Michigan. (AY)
Prerequisite(s): GEOL 375 or GEOL 498*
Restriction(s):
Can enroll if Class is Graduate
GEOL 590  Topics in Earth Science  1 to 4 Credit Hours
Current topics in Earth Science. One to four graduate credit hours. (OC)
Restriction(s):
Can enroll if Class is Graduate

Health and Human Service (HHS)

HHS 501  HHS Internship  3 Credit Hours
The Health and Human Services Internship is an academic, curriculum-based practical work experience in a health care setting, health insurance firm, or health policy agency that provides students with hands-on experience to enhance understanding of issues relevant to health policy and health service delivery. The internship is normally unpaid and, when taken as a three credit hour course, consists of 8 hours per week of field work over a 14-week semester. Students are required to attend an internship seminar that meets weekly and includes a series of lectures on organizational, ethical, and administrative topics, intended to link the work experience with students prior coursework. (F,W,S)
Restriction(s):
Can enroll if Level is Graduate
HHS 503  Medical Information Systems  3 Credit Hours
Medical Information Systems deals with how information is created, stored and used in health care settings. Areas of interest for this course include fundamentals of computers and data management, medical information documentation in the form of paper and electronic medical records, health data privacy issues, disease classification and scoring systems, quality assurance in health care delivery, commonly used health care statistics, reimbursement methodologies, health care monitoring by internal processes and external review agencies, and vital statistics and disease surveillance systems. The course also includes some hands-on computer applications instruction to familiarize students with commonly used software platforms utilized in health care administration. Student cannot receive credit for both HPS 403 and HPS 503.
Prerequisite(s): HPS 440 or HPS 540
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Program is
HHS 504  Financing Health & Medical Sys  3 Credit Hours
Full Course Title: Financing Health & Medical Systems The American health care system faces two problems: access to health services and high and rising costs. This course looks at the problems of uninsured citizens as well as the strains placed on health care facilities in providing services for them. Europeans have dealt with problems of access and costs controls through universal health care coverage and the course takes up various models in use today. The course also looks at American health insurance and “managed care” programs such as HMOs and PPOs as methods of providing health coverage as well as controlling costs. The course introduces students to services provided by the government including Medicare, Medicaid and State Children’s Health Insurance Program (SCHIP). Students will learn the basics of creating a budget under constraints such as contractual limitations and Diagnosis-Related Groups (DRGs). Students Cannot receive credit for more than one of the following: HHS 404, HPS 404, HHS 504, or HPS 504. (F,W,S)
Restriction(s):
Can enroll if Level is Graduate

German (GER)

GER 599  Advanced Individual Projects  1 to 4 Credit Hours
Advanced individual study project in German language, literature, or civilization may be pursued under the direction of a faculty supervisor. (OC).
HHS 505  Population Health  3 Credit Hours
Much too often, population health is understood to be either a “sum” of the health of individuals comprising the population or to be identical with public health. Yet, population health is distinct in its definition, determinants/risk factors, measurement/evaluation, and strategies for improvement from both individual health and public health. Population health encompasses traditional public health and individual-level preventive medicine but emphasizes the full range of health determinants affecting the entire population rather than only ill or high-risk individuals. The population health approach integrates the social and biological, the quantitative and qualitative, recognizing the importance of social and cultural factors in practice and research. Consequently, all these factors need to be appreciated when designing, implementing, and evaluating health and public policies aimed at improving population health. (F, W).
Prerequisite(s):
HHS 200 or CHE 101

HHS 506  Program Evaluation  3 Credit Hours
This course will provide an introduction to key concepts in program evaluation. Students will learn about the systematic steps involved in evaluating public programs for efficiency and effectiveness. The course will rely on case studies, text examples and discussion. This course is the graduate equivalent of HHS 406. Graduate students enrolled in this course will produce a paper that is substantively different with increased requirements than the paper produced by undergraduates enrolled in HHS 406. In addition, graduate student examinations will require deeper responses that focus on synthesizing both text and journal article materials. (OC)
Restriction(s):
Can enroll if Class is Graduate

HHS 510  Quantitative Research & Stats  4 Credit Hours
An introduction to methods of data collection and analysis. Also a discussion of research design and the philosophy of social sciences. Additional reading assignments or projects will distinguish this course from its undergraduate version HHS 410. Students cannot receive credit for both HHS 410 and HHS 510. (F,W,S)
Prerequisite(s):
SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Graduate

HHS 512  Principles of Epidemiology  3 Credit Hours
The study of frequency and distribution, as well as the causes and control, of disease in human populations. Using data analysis tools, one can identify causes of disease and the effects of prevention and treatment. This course is an application of research design to determine the extent to which environment (toxins, for instance), heredity, childhood, development, and lifestyle influence morbidity and mortality rates. Graduate students’ work will include re-analyzing original data in a confirmatory, in contrast to exploratory mode. (F,W,S)
Restriction(s):
Can enroll if Level is Graduate

HHS 515  Healthcare Administration  3 Credit Hours
This course introduces students to administrative models and skills that can be used at a supervisory level. These conceptions include strategic planning, marketing, organizational communications, quality assurance, project management and team skills, supervision and evaluation, conflict resolution and office cultures and politics. A critical and historical perspective is used to understand the origins and meanings of these conceptions and the extent to which they correspond with the service mentality of health and human services. Applications to the health and human services will be central to the course. Students cannot receive credit for both HHS 415 or HPS 405 and HHS 515 or HPS 505. (F,W,S)
Restriction(s):
Can enroll if Level is Graduate

HHS 530  Health Behavior & Health Educ  3 Credit Hours
Full Course Title: Health Behavior & Health Education
This course provides an overview of social and behavioral science theories that guide the development of health education and promotion interventions aimed at preventing, reducing, and eliminating public health problems. Part one of the course describes the relationship between behavior and health, through a review of several current health problems faced by people in the United States. Part two presents a survey of health behavior theories ranging from those aimed at individual behavioral change to community health education promotions. The final part of the course looks at the application of theory to real-world health promotion and education interventions. Students will learn how social and behavioral theory informs intervention design, implementation, and evaluation. (F,W,S)
Restriction(s):
Can enroll if Level is Graduate

HHS 533  Race/Ethnic Health  3 Credit Hours
Full Course Title: Race, Ethnicity and Community Health
This course provides a broad overview of health disparities in the United States, with a focus on the three types of social inequity—race (and nativity status), socioeconomic status (SES), and gender. Epidemiological issues, health behaviors, health care services, and health and social issues specific to various minority populations in the U.S are covered. The underlying position of the course is that understanding groups that are at higher risk of developing poor health outcomes is crucial to developing better health care and health policy. (OC)

HHS 535  Obesity and the Lifecourse  3 Credit Hours
This course aims to introduce students in the fundamentals of the lifecourse perspectives on health, while using “obesity” as a unifying example to illustrate its theoretical linkages to individual and population health, the practical implications for the administration and financing of the health care system, and for framing policy options. The course highlights the differential impact of obesity on (1) the health and socioeconomic achievement of individuals at various stages in the lifecourse; (2) the population health and economic needs or opportunities, as derived from the lifecourse profile of a specific population (i.e., age distribution and aging trends) and in the context of a changing structure of society; and (3) the demand for healthcare services and other stressors on the healthcare system. The course identifies the rationale, goals, scope, design, and potential for successful implementation of obesity-reducing policy interventions at different points during the lifecourse. (W).
HHS 540 Medical Sociology 3 Credit Hours
An analysis of health and illness behaviors from the point of view of the consumer, as well as the medical professionals, the structure, strengths, and weaknesses of the medical care delivery system in the U.S.; the impact of culture and personality on illness behavior; and a study of the institution of medicine and activities of health care professionals. Additional reading assignments or projects will distinguish this course from its undergraduate version HPS 440. Students cannot receive credit for both HPS 440 and HPS 540. (F).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

HHS 542 Medical Ethics 3 Credit Hours
Issues in medical ethics are among the most exciting and most urgent facing the world today. This course will explore some of these issues: the relationship between patient and health caregiver (truth-telling, informed consent, the right to refuse treatment, confidentiality), assisted suicide and euthanasia; treatment of defective newborns; scarce resources, social justice and the right to health care; cloning and genetic manipulation; new reproductive technologies; and others. We will discuss issues from the standpoint of patients, medical professionals, and citizens who shape policy in a democratic society. Ethical theories and concepts will be stressed. Students cannot receive credit for both HPS 442 and HPS 542. Prerequisite(s): any previous course in Philosophy or permission of instructor. (F,W,S)
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 445 or PHIL 485 or PHIL 490
Restriction(s):
Can enroll if Class is Graduate

HHS 548 Comparative Health Care Sys 3 Credit Hours
An introduction and overview of the English, Swedish, and People’s Republic of China health care systems. Focus on cultural and other organizational characteristics, unique features, approaches and ability to solve problems. Emphasis on how the three systems help us understand the American health care system. Additional reading assignments or projects will distinguish this course from its undergraduate version HHS 448 or HPS 448 and HHS 548 or HPS 548. (F,W,S)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Cannot enroll if Level is Graduate

HHS 556 Health Care and the Law 3 Credit Hours
A sociological study of legal issues in health care, including regulation of hospitals, consent for treatment, confidentiality, experimentation, family planning, children’s rights, access to health care. The emphasis will be on the organizational and personal consequences of legal requirements. Junior/Senior standing is a requirement. Students cannot receive credit for both HPS 456 and HPS 556. (W)
Prerequisite(s): SOC 200 or SOC 201 or POL 364
Restriction(s):
Can enroll if Class is Graduate

HHS 570 Information Science and Ethics 3 Credit Hours
Technological innovations in how individuals, organizations, and governments collect and share personal information have raised myriad concerns regarding how that information can be best protected. In today’s highly networked world, individuals must acquire the knowledge and skills to engage with technologies in a safe and secure manner. This course provides an interdisciplinary exploration of the social, legal, ethical, and design challenges that arise when it comes to securing personal information and helping individuals maintain desired levels of privacy at home, work, and everywhere in between. Graduate students interact with a local agency and produce a paper regarding a relevant security issue. Students may not receive credit for both HHS 470 and HHS 570. (OC)
Prerequisite(s): HHS 440 or HHS 540 or HPS 440 or HPS 540
Restriction(s):
Can enroll if Level is Graduate

HHS 591 Graduate Seminar 3 Credit Hours
Seminar focuses on current issues and practical problems in health care organization, delivery, and financing. The Case Method (where appropriate) is used to demonstrate and discuss real problems and approaches in functioning health care institutions in Southeastern Michigan. The course is primarily from the point of view of individuals responsible for administering or advising institutions. Students cannot receive credit for both HPS 402 or HHS 491 and HPS 502 or HHS 591. (F,W,S)
Prerequisite(s): HHS 440 or HHS 540 or HPS 440 or HPS 540
Restriction(s):
Can enroll if Level is Graduate

HHS 690 Graduate Research 3 Credit Hours
To provide masters candidates with the opportunity to undertake a research project under the supervision of a faculty member. The research topic is chosen by the student, in consultation with a faculty member in the appropriate discipline. Written approval must be obtained at least two weeks prior to registration on a form available in the Graduate Office. The request must include a comprehensive description of the proposed research project, as well as a time line for the project’s completion. (A maximum of 3 credit hours of research course work may be applied toward graduation requirements upon approval from the Program Advisor.)
Restriction(s):
Can enroll if Class is Graduate

HHS 691 Topics in Health IT 3 Credit Hours
This is a graduate seminar focused on the latest developments in Health Information Technology. Topics Vary. See schedule of classes for current offerings. May be elected more than once if topics differ.
Restriction(s):
Can enroll if Class is Graduate

HHS 692 Graduate Internship 3 Credit Hours
The internship provides real-world experience for students in a professional environment. Participating employers hire students within parameters set by the internship program. Students are required to submit a report and evaluation documents at the end of each work assignment and participate in an assessment session with the internship staff. (A maximum of 6 credit hours of internship course work may be applied toward graduation requirements upon approval from the Program Advisor.) (F, S, W).
Restriction(s):
Can enroll if Class is Graduate

Other Content

* An asterisk denotes that a course may be taken concurrently.
Frequency of Offering

The following abbreviations are used to denote the frequency of offering: (F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

### Health Information Technology (HIT)

**HIT 500  Economics of Healthcare  3 Credit Hours**
The course will focus on the special features of healthcare as a commodity, the demand for health and medical care services, the economics explanations for the behavior of medical care providers (i.e., physicians and hospitals) and the functioning of insurance markets. Also this course will examine the role of economic justification for government involvement in the medical care system. Finally, we will use the tools we have learned to compare different healthcare systems in the world. Topics include: Production of Health, Demand for Healthcare, and Grossman Model; The Health Economics of Bads; Role of Hospitals, Physicians, Healthcare Labor Market, and The Pharmaceutical Industry; Issues surrounding insurance such as Information Asymmetry, Moral Hazard, Adverse Selection and Lemon's Markets; Government Regulation and Intervention; Comparative Health Care Systems and the impacts of the ACA on health and healthcare.

**Restriction(s):**
Can enroll if Class is Graduate

**HIT 510  Management of Healthcare Data  3 Credit Hours**
This course discusses the nature of and important statistical methods for analyzing healthcare related data. The course begins by covering the structure and semantics of coding systems used in the healthcare industry while avoiding detailed coverage of the meaning of data values. Descriptive statistical methods (graphical and numerical) that depict the central tendency and variability of data; theoretical and empirical probability distributions for discrete and continuous data; point and interval estimations of unknown parameter values; parametric and nonparametric hypothesis tests for numerical, categorical, and ordinal data; analysis of variance; and regression analysis are then covered. A statistical software package will be used to analyze healthcare data.

**Restriction(s):**
Can enroll if Class is Graduate

**HIT 520  Clinical & Evidence Based Med  3 Credit Hours**
This course is a graduate course on Evidence Based Medicine. Course content includes the evidence and causes of inconsistency in healthcare, clinical decision processes, assessment of evidence supporting both diagnostic and treatment decisions, comparing the different research methods in clinical literature, and comparing evidence-based versus traditional approaches to clinical practice.

**Prerequisite(s):** HIT 510

**Restriction(s):**
Can enroll if Class is Graduate

### History (HIST)

**HIST 5312  European Encounters 1400-1800  3 Credit Hours**
During the early modern period, merchants, explorers and travelers set out from the European West in unprecedented voyages of discovery, intensifying interaction between cultures and initiating contact with previously unknown civilizations. In this advances seminar we examine original documents (in English) as well as current scholarship about encounters between groups of Europeans and inhabitants of other parts of the world from the perspective of both sides. Comparing these contradictory (and often incompatible) accounts of the same events, provides a more comprehensive understanding of the process of European expansion, and of the strengths (and limitations) of historical sources. Additional assignments will distinguish the undergraduate and graduate versions of this course.

**Restriction(s):**
Can enroll if Class is Graduate
Can enroll if College is Arts, Sciences, and Letters

**HIST 5401  Seminar: African Diaspora  3 Credit Hours**
Research seminar on the history of the African Diaspora in the Atlantic World. This course covers examples of classic texts in the field, as well as significant new scholarship, with an emphasis on critical reading, analysis, and the development of an independent research project. Students gain a deeper understanding of the significance of the African Diaspora in the New World, derived from lectures and discussions providing an overview of this subject, as well as the micro views gleaned from sharing classroom presentation about students’ individual research topics. The graduate version of this course includes weightier readings and assignments, with a research paper for potential publication.

**Restriction(s):**
Cannot enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if Level is Rackham or Graduate

**HIST 5505  Feminism & Mod. Mid. East  3 Credit Hours**
This course provides an analysis of the history, historiography, and sources for the study of feminism in the Middle East since 1800. Additional assignments will distinguish the graduate version of this course from the undergraduate version.

**Restriction(s):**
Can enroll if Class is Graduate

**HIST 5515  Culture& Hist. in Mod. Iran  3 Credit Hours**
Alongside the most influential academic studies of Iran, this course uses cultural sources (such as literature and film) as windows on the pivotal social and political movements in Iranian history since 1800. This study of cultural change factors in cultural debates inside Iran, the growth of the Iranian Diaspora, and the increased presence of Iranian culture in electronic media. Additional assignments distinguish the graduate version of this course from the undergraduate version.

**Restriction(s):**
Can enroll if Class is Graduate

* An asterisk denotes that a course may be taken concurrently.

Frequency of Offering

The following abbreviations are used to denote the frequency of offering: (F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally
HIST 5600  U.S. Cultural History  3 Credit Hours
The seminar concentrates on scholarly interpretations of U.S. history through a cultural lens. It features close analysis of classic texts in American cultural history as well as significant new works of scholarship, with an emphasis on critical reading, analysis, and historiography of the field. Students gain a deeper understanding of the cultural aspect of U.S. history and a familiarity with this mode of analysis, its guiding theories, newest trajectories and scholarly debates, and impact on the field of history as a whole. The graduate version of the course features a major research project. Cannot receive credit for both HIST 490A and HIST 5600.

Restriction(s):
Can enroll if Class is Graduate

HIST 565  The Family in History  3 Credit Hours
An analysis of the emergence of the modern family from the 16th century to the present with focus on the history of childrearing, family size and structure, intrafamilial and inter-generational relationships and population patterns. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (AY)

Restriction(s):
Can enroll if Class is Graduate

HIST 5650  Sem in US Women's History  3 Credit Hours
Seminar on the historiography and key primary sources related to U.S. Women’s History. The course covers examples of classic texts in the field as well as significant new works of scholarship, with an emphasis on critical reading, analysis, and historiography of the field. Students gain a deeper understanding of the field, its guiding concepts, foundational texts, newest trajectories, and impact on the field of history as a whole. The graduate version of this course includes weightier readings and assignments.

Restriction(s):
Can enroll if Class is Graduate

HIST 5678  Middle Eastern Diasporas  3 Credit Hours
This course explores the diasporas of Arabs, Turks, Assyrians, and Iranians living in Europe and the Americas that have occurred since the 1880s. It pays careful attention to how “aspects of diaspora” shape, mimic, transect, and undermine the political and economic regimes of which they are part. The reception of Middle Eastern communities in different national contexts and historical periods receive special attention as do their adaptive strategies as religious, ethnic, gendered, and racialized minorities. Those enrolled in the graduate level of the course pursue additional readings and assignments.

Restriction(s):
Can enroll if Class is Graduate

HIST 590  Topics in History  1 to 3 Credit Hours
Problems and issues in selected areas of history. Title changes according to content. Course may be repeated when specific topic differs. (OC).

HIST 599  Advanced Ind Studies in Hist  1 to 4 Credit Hours
Readings and analytical writing in history, in accordance with the interests of the student and approval of the instructor. Students must submit a written proposal of study for approval. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (F, W).

Restriction(s):
Can enroll if Class is Graduate

Human Resource Management (HRM)

HRM 561  Human Resource Management  3 Credit Hours
This course provides managers from different business functions with the principles, knowledge, and techniques for managing employees. Incidents and cases are used to diagnose human resource problems, and design and implement solutions. Topics include: employment law, job design and analysis, performance evaluation, human resource planning, recruitment, selection and assessment, training, managerial development, compensation and incentives, reductions-in-force, collective bargaining and labor relations, and human resource management for international operations. The course stresses the evaluation of human resource programs, and the need for human resource practices to be compatible with one another and to be supportive of the firm's strategy.

Prerequisite(s): OB 510

Restriction(s):
Can enroll if Class is Graduate

HRM 580  Compensation and HR Analytics  3 Credit Hours
This course will teach students how to use data-driven analysis to evaluate and improve the intended effects of HR practices such as staffing, training and development, compensation and benefits, and employee retention and engagement. The course prepares you to determine the HR metrics that align with your company's strategic goals.

Prerequisite(s): (DS 520 or IMSE 510 or IMSE 514 or STAT 530 or STAT 535 or STAT 555 or STAT 560) and HRM 561

Restriction(s):
Can enroll if Level is Rackham or Graduate

HRM 611  Staffing Training and Devlpmnt  3 Credit Hours
The course examines the design and management of personnel staffing, selection, training, and development activities as mechanisms for predicting and influencing individual and organizational performance. Key topics to be covered include: staffing strategy and planning; job design and analysis; external and internal recruiting; employee testing and assessment methods; measurement, validation, and decision-making issues in selection; instructional design and delivery; methods for developing employees and managers; career management; laws and regulation affecting staffing and training; evaluation methods for staffing and training activities; and issues in staffing and training of an international workforce.

Prerequisite(s): HRM 561

HRM 613  Management-Union Relations  3 Credit Hours
To study the rationale for, and processes of, union-management relations. Topics include: contract negotiation and administration; processes of organizing and collective bargaining; and content and philosophy of labor-management relations law. A major portion of the course is devoted to a bargaining simulation exercise.

Prerequisite(s): OB 510 or EMGT 545
**Humanities (HUM)**

**HUM 509  Feminist Theories   3 Credit Hours**
This course examines the different perspectives that feminist theorists have offered to analyze the unequal conditions of women's and men's lives. Students taking this course will develop an understanding of how theory functions as a way to know, understand and change the world. They will also be provided with a lens for comparing the assumptions and implications of alternative theoretical perspectives. A particular emphasis of this course is on theorizing the interrelationships among gender, race, class, sexuality and nationality. Course material includes applications of feminist theory to issues such as gender identity formation; sexuality; gender, law and citizenship; women and work; and the history and politics of social movements. Students will not receive credit for both WGST 409 and WGST 509. Additional reading assignments or projects will distinguish this course from its undergraduate version.

**Prerequisite(s):** LIBS 560

**HUM 533  Writing Women in Renaissance   3 Credit Hours**
This course will be taught in English, and will focus in the influence of Italian literary models for the construction of female literary types as well as female voices in France and Italy from 1300 to about 1600. Italian authors studied include three very influential Florentines, Dante, Petrarch and Boccaccio, as well as Castiglione and Ariosto. We will read women poets, patrons, prostitutes and queens from Italy and France such as Veronica Gambara, Isabella di Morra, Vittoria Colonna, Christine de Pizan, Louise Labe, and Marguerite de Navarre. At issue will be women's roles and women's images in city and court culture during the early modern period, and the interaction of their writings with the literary canons of Italy and France. (OC).

**Restriction(s):**
Can enroll if Class is Graduate

**HUM 557  American Cinema   3 Credit Hours**
This course will analyze how Hollywood as the nation's dream factory has manufactured fantasies and cultural myths that have constructed the image of American citizenship, both for Americans and non-Americans. It will establish the ideological function of Hollywood texts as providing unifying symbols for a fragmented society. Students who elect the course for graduate credit will do additional graduate-level work as outlined in the course syllabus.

**Prerequisite(s):** ENGL 248 or FILM 248 or HUM 248 or JASS 248

**Restriction(s):**
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate

**HUM 577  Ethnographic Film   3 Credit Hours**
**Prerequisite(s):** FILM 248 or ANTH 101 or ENGL 248 or HUM 248 or JASS 248

**Restriction(s):**
Can enroll if Class is Graduate

**HUM 590  Advanced Topics in Humanities   3 to 4 Credit Hours**
The presentation of a topic in a discipline of the Humanities or an interdisciplinary course involving humanities on an advanced undergrad/graduate level.

**Restriction(s):**
Can enroll if Class is Senior or Graduate

---

**Indus & Manufac Sys Engin (IMSE)**

**IMSE 500  Models of Oper Research   3 Credit Hours**
The method of mathematical modeling and its application to decision-making problems in organizations. Some widely used models and techniques: linear programming, queuing, inventory, and simulation.

**Restriction(s):**
Can enroll if Class is Graduate

**IMSE 501  Human Factors & Ergonomics   3 Credit Hours**
The analysis and prediction of human performance in industrial and other man-machine systems using work sampling, time-motion analysis, synthetic and standard time study, and learning curves, in the design of such systems. Lecture and laboratory. Cannot receive credit for both IMSE 442, and IMSE 501. This class may be scheduled at the same time as the undergraduate course IMSE 442. Graduate students will be required to do additional research paper and/or project.

**Prerequisite(s):** IMSE 317* or IMSE 510*

**Restriction(s):**
Can enroll if Class is Post-baccalaureate NCFD or Graduate

**IMSE 5010  Fundamentals of Program Mgt   3 Credit Hours**
An overview of the project/program management framework and knowledge areas including plan development and execution; management of scope, time, cost, quality, human resource, communications, risk, and procurement. Typical program phases and life cycles observed in defense, construction, automobile, and software industries. Program organizational structures, program management processes, international project management, role of software tools for program management, project development, applications of Lean Product Development techniques, cutting waste and lead time in program management.

**Prerequisite(s):** IMSE 510

**Restriction(s):**
Can enroll if Class is Post-baccalaureate NCFD or Graduate

**IMSE 502  Computer-Integrated Mfg   3 Credit Hours**
This course provides basic knowledge of elements in Computer-Integrated Manufacturing Systems, with particular emphasis on Computer-Aided Design (CAD), Computer-Aided Manufacturing (CAM), Computer-Aided Process Planning (CAPP), materials handling, and information flow in manufacturing systems. Hands-on experiments and course projects are required. Two lecture hours and three laboratory hours. Credit cannot be given for both IMSE 483 and IMSE 502. This class may be scheduled at the same time as the undergraduate course IMSE 483. Graduate students will be required to do additional research paper and/or project.

**Restriction(s):**
Can enroll if Class is Post-baccalaureate NCFD or Graduate

**IMSE 503  Computer-Aided M/C & Tool Desg   3 Credit Hours**
Study of the fundamentals of machine tool design, cutting tools, metal forming dies, and jig fixtures for practical applications in machining and assembly. Principles of design for manufacture and assembly as applied to tool and machine design. Laboratory exercise and projects are required using computer-aided design software. Two lecture hours and three laboratory hours. Credit cannot be given for both IMSE 484 and IMSE 503. This class may be scheduled at the same time as the undergraduate course IMSE 484. Graduate students will be required to do additional research paper and/or project.

**Prerequisite(s):** IMSE 382 or ME 381

**Restriction(s):**
Can enroll if Class is Post-baccalaureate NCFD or Graduate
IMSE 504  Metal Forming Processes  3 Credit Hours
This course focus is on fundamentals of metal forming processes; mechanics of metal forming; formability of manufacture; and economic aspect of the process. Emphasis is placed on analysis of bulk and sheet metal forming processes as applied to practical cases such as automobile manufacturing. Laboratory and course project are required. Credit cannot be given for both IMSE 488 and IMSE 504. This class may be scheduled at the same time as the undergraduate course IMSE 488. Graduate students will be required to do additional research paper and/or project.
Prerequisite(s): IMSE 382 or IMSE 381
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Graduate

IMSE 505  Optimization  3 Credit Hours
Prerequisite(s): IMSE 300 or IMSE 500

IMSE 508  Modeling of Large-Scale Sys  3 Credit Hours
The modern and classical concepts and tools required for modeling, analysis and synthesis of large-scale dynamic systems. Topics include system dynamics, interpretive structural modeling, cross-impact analysis, information theory, theory of hierarchical systems. Emphasis is on constructing models of real world problems taken from urban, industrial, transportation, and health care systems. Students are asked to select problems of interest and present final project reports.
Prerequisite(s): IMSE 505 and IMSE 506

IMSE 510  Probability & Statistical Mod  3 Credit Hours
Prerequisite(s): IMSE 317

IMSE 511  Design and Analysis of Exp  3 Credit Hours
One factor, two factor, and multifactor experiments. Fixed random and mixed models. Blocked confounding, incomplete blocks, factorial experiments, fractional factorial experiments. Introduction to response surface analysis.
Prerequisite(s): IMSE 510

IMSE 512  Taguchi Method of Quality Eng  3 Credit Hours
Quality engineering methodology developed by Genichi Taguchi. Design and analysis of experiments using orthogonal arrays and linear graphs. Accumulation analysis for categorized data. Signal-to-noise ratio as a measure of quality characteristics. Simulation using orthogonal arrays. Parameter design for reducing variability around the target without cost increase. Tolerance design for reducing variability with minimum cost increase. Evaluation and improvement of measurement.
Prerequisite(s): IMSE 510

IMSE 513  Robust Design  3 Credit Hours
Students will learn models and methods in the context of overall strategies to empirically study the design of products and manufacturing processes to reduce variability and to reduce sensitivity to parameter variation. Topics include: process capability studies and measures, basic DOE concepts, factorial experiments, evaluating sources of variation, evolutionary operation and adaptive statistical process control.
Prerequisite(s): IMSE 510

IMSE 514  Multivariate Statistics  3 Credit Hours
Linear statistical models used in simple and multiple regression, and analysis of variation. Principles and techniques of principle component analysis are studied and applied to business and engineering problems using statistical computer software. (YR)
Prerequisite(s): IMSE 510

IMSE 515  Fundamentals of Program Mgt  3 Credit Hours
An overview of the project/program management framework and knowledge areas including plan development and execution, scope management, time management, cost management, quality management, human resource management, communications management, risk management, and procurement management. Typical Program Phases and Life Cycles observed in Defense, Construction, Automobile, and Software Industries. Program Organizational Structures, Program Management Processes, and International Project Management are covered. Role of software tools for Program Management and Product Development are discussed. Applications of Lean Product Development Techniques are considered. Cutting waste and lead time in program management are covered. Case studies are used extensively throughout the course.
Prerequisite(s): IMSE 510
Restriction(s):
Can enroll if Level is Rackham or Professional Development or Graduate

IMSE 516  Project Management and Control  3 Credit Hours
Project Planning, Scheduling, and Controlling functions are discussed in detail including work breakdown structure, CPM and PERT methods, resource allocation and leveling techniques, cost control and minimization, trade-off analysis, learning curves, overlapping relationships and concurrent engineering, multiple project execution and optimization. Applications of Lean Techniques in program management are discussed as well as the role of IT in accelerating the product development and reducing the program time. The importance of integrating the Supply Chain in the Product Development is also considered. Case studies and project management software are used throughout the course.
Prerequisite(s): IMSE 510
Restriction(s):
Can enroll if Level is Rackham or Professional Development or Graduate

IMSE 517  Managing Global Programs  3 Credit Hours
This course focuses on some of the central strategic and organizational problems that arise in managing global programs, including cultural conflicts, developing and managing international managers, global and local brands, and organizing to resolve global-local conflicts. The course uses a combination of case studies, problems, lectures and discussion, over a wide variety of companies and countries.
Prerequisite(s): IMSE 515
Restriction(s):
Can enroll if Level is Rackham or Professional Development or Graduate

IMSE 519  Quan Meth in Quality Engin  3 Credit Hours
This course introduces the advanced quantitative and analytical methods used in quality measurement, prediction, control and improvement. The topics include sampling design and plan, control charts, statistical quality control, time series, process capability analysis and quality cost analysis. Quality related topics in robust and tolerance design are also included.
Prerequisite(s): IMSE 510
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate
IMSE 520 Managerial Decision Analysis  3 Credit Hours
Normative decision analysis, decisions, structures, and trees. Utility
theory, game theory, and statistical decision theory are introduced.
Applications of the theories to management studies in capital
investment, bidding, purchasing, and risk analysis are discussed.
Prerequisite(s): IMSE 510

IMSE 5205 Eng Risk-Benefit Analysis  3 Credit Hours
Analysis risk assessment, decision and cost-benefit analysis, and fault-
tree methods for describing and making decisions about societal risks
associated with large engineering projects. Balancing risks and benefits
in situations involving human safety, environmental risks, and financial
uncertainties. Presentations of major risk assessment and the public
decision process associated with them.
Prerequisite(s): IMSE 510
Restriction(s):
Can enroll if Class is Graduate

IMSE 521 Mfg Cost Estimation & Control  3 Credit Hours
In this course, concepts of strategic costing in product development
and manufacturing are introduced. Engineering economy techniques
are used in the study of life cycle cost elements. Equipment acquisition
and replacement justification methods under risk and uncertainty are
presented.
Restriction(s):
Can enroll if Class is Graduate

IMSE 5215 Program Budget, Cost Est & Con  3 Credit Hours
This course focuses on cost estimation and control for program
managers and engineers. The course introduces a systematic approach
for applying engineering economy techniques in cost estimating,
resource planning, cost planning, cost management and control, and the
study of life cycle cost elements. An introduction to decisions under risk
and uncertainty as well as an introduction to project crashing are also
presented.
Prerequisite(s): IMSE 510
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Graduate
Can enroll if College is Business

IMSE 525  Information for Manufacturing  3 Credit Hours
Acquiring and organizing design and manufacturing information
(including geometric modeling, group technology, and automated data
acquisition). Identifying kinds needed, sources, and recipients. Ensuring
information quality; establishing criteria for selecting processing
modes and media. Designing, installing, commissioning, and operating
information-handling systems. Handling information in production
systems.
Prerequisite(s): (ECE 539 or ME 588) and IMSE 530
Restriction(s):
Can enroll if Class is Graduate

IMSE 532 Manufacturing Systems  3 Credit Hours
This course introduces methodologies and tools for modeling, design
and operations planning of manufacturing systems. Topics include
introduction to integrated manufacturing systems, manufacturing system
and data modeling methodologies, process planning, group technology,
machine tools layout, scheduling, push and pull production
systems. Industrial case studies are presented and discussed.
Restriction(s):
Can enroll if Class is Graduate

IMSE 533 Metal Machining Processes  3 Credit Hours
Detailed study of the principles of conventional and non-traditional metal
removing processes, machine tools accuracy, cutting fluids, and cutting
tools. The course emphasis will be on the mechanics of metal cutting,
machining processes, cutting tool materials and tool geometry, selection
of cutting conditions, planning for machining and optimization of
manufacturing process. Role of numerical control in improving machining
process and productivity of manufacturing system.
Prerequisite(s): ME 381 or IMSE 382 or AENG 587

IMSE 536 Machinery Diagnostics  3 Credit Hours
Introduction to diagnostic system design. Fundamentals of mechanical
vibration and noise. Vibration-generating sources in machinery. Sensing
and data acquisition methods. Data interpretation by statistical and
spectral analysis methods. Fault classifications methods. Computer
implementation.
Prerequisite(s): IMSE 510
Restriction(s):
Can enroll if Class is Graduate

IMSE 537 Intelligent Manufacturing  3 Credit Hours
A comprehensive and integrated approach to topics associated with the
science of artificial intelligence and their role in today's manufacturing
environments. Design and management issues including information
systems in an automated and integrated manufacturing environment.
Prerequisite(s): IMSE 317
Restriction(s):
Can enroll if Class is Graduate

IMSE 543 Industrial Ergonomics  3 Credit Hours
Effective ergonomic interventions in industrial environment enhance
productivity, safety and job satisfaction. This course introduces
engineers and engineering students how to apply ergonomic principles
in designing industrial and manufacturing operations in which people
play a significant role, so that human capabilities are maximized, physical
fatigue is minimized, and performance is optimized. Case studies and
topics emphasize industrial applications.
Prerequisite(s): IMSE 442
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Graduate

IMSE 544 Industrial Biomechanics  3 Credit Hours
This course introduces the mechanical behavior of the musculoskeletal
systems as related to physical work activities. Fundamentals of human
body mechanics (Kinetic and Kinematic aspects of locomotion, body
link systems, muscle strength and performance), muscle fatigue and
musculoskeletal injury mechanism are covered with application to design
of physical work activities and equipment. (YR).
Prerequisite(s): IMSE 442
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Graduate

IMSE 545 Vehicle Ergonomics I  3 Credit Hours
Overview of drive characteristics, capabilities, and limitations. Human
variability and driver demographics, driver performance measurements.
Driver information processing models, driver errors and response
time. Drive sensory capabilities: vision, audition, and other inputs.
Vehicle controls and displays. Driver anthropometry, biomechanical
consideration.
Prerequisite(s): IMSE 442
Restriction(s):
Can enroll if Class is Graduate
IMSE 546  Safety Engineering  3 Credit Hours
Safety requirements for production processes, equipment, and plants; organization and administration of safety programs, current safety laws, current occupational safety research.
Prerequisite(s): IMSE 442

IMSE 548  Res.Meth.Human Fctrs/Ergonomic  3 Credit Hours
Full Course Title: Research Methods in Human Factors and Ergonomics
-This course covers principals and guidelines of Human Factors and Ergonomics (HFE) practices applied to complex human machine systems. The emphasis is on understanding advanced HFE assessment and surveillance methods in describing and quantifying human-machine-environment interaction. Key topics include, human modeling and simulation, information processing and related motor behavior, and ergonomics design and evaluation tools.
Prerequisite(s): IMSE 442

IMSE 549  Product Design and Evaluation  3 Credit Hours
Design approaches and processes used in developing customer/user-oriented products. Study of widely used product evaluation techniques: methods of observation, communication and experimentation; subjective (e.g., psychological scaling) and objective measurement methods. Review of product design and evaluation case studies. Laboratory projects to evaluate several products.
Prerequisite(s): IMSE 442

IMSE 550  Data Management  3 Credit Hours
Topics in computer organization; principle data structures (stacks, trees, linked lists) and their use; searching and sorting; algorithm specification, and recursion. Programming assignments will deal with applications of these subjects.

IMSE 551  Compiler Construction  3 Credit Hours
The design and construction of compilers and programming systems. Lexical scan; parsing techniques; code generation and optimization; storage allocation. Applications of formal language theory in compiler design. Translator writing systems; XPL.
Prerequisite(s): IMSE 550

IMSE 552  Design/Analysis of Algorithms  3 Credit Hours
Design, evaluation, and communication of algorithms for solving problems using a digital computer. Topics include problem-solving approaches, algorithm notation, determination of algorithm correctness, measures of efficiency, improvement of algorithms. Examples and homework in designing algorithms for data processing, scheduling, combinatorial optimization, and elementary computer graphics, and numerical analysis.
Prerequisite(s): IMSE 550

IMSE 553  Software Engineering  3 Credit Hours
Program design methodologies; control flow and data flow in programs; program measurement. Software life cycle; large program design, development, testing, and maintenance. Software reliability and fault tolerance. Evolution dynamics of software.
Restriction(s):
- Can enroll if Level is Graduate or Rackham or Doctorate
- Can enroll if Major is Software Engineering, Info Systems and Technology, Computer & Information Science
Prerequisite(s): IMSE 550

IMSE 554  Management Info Systems  3 Credit Hours
Basic systems concepts, role of a system analyst in an information system, systems investigation, feasibility study, output/input design, hardware/software evaluation and selection, data management, security considerations, systems implementation, information systems documentation, systems projects estimation and control. Students will be asked to develop a complete information system from case studies.
Prerequisite(s): IMSE 454

IMSE 555  Decision Support/Expert Sys  3 Credit Hours
Decision support process and decision support systems, development tools, executive support systems, expert systems and their development processes, expert shells, integration of decision support and expert systems.
Prerequisite(s): IMSE 350

IMSE 556  Database Systems  3 Credit Hours
Introduction to database system concepts and techniques. Topics covered include: database environment, ER model, relational data model, object-oriented databases, object-relation databases, database design theory and methodology, database languages, query processing and optimization, concurrency control, database recovery, and database security. No credit given to both CIS 421 and CIS 556.
Restriction(s):
- Cannot enroll if Class is
- Can enroll if Level is Rackham or Graduate or Doctorate or
- Can enroll if Major is Software Engineering, Info Systems and Technology, Computer & Information Science

IMSE 557  Comp Networks and Comm  3 Credit Hours
To study the nature of computing communication and distributing processing techniques, compare networking options, introduce specific business applications that require data communication and networks, and examine the role of communication software in the system, and discuss the related management issues.
Prerequisite(s): IMSE 454

IMSE 5585  Electronic Commerce  3 Credit Hours
This course examines how new information technologies and networks affect the exchange of goods and services between buyers and sellers in firms. What are economics of different electronic commerce models for firms? The course combines critical evaluation of business strategies with hands-on experience in building supporting electronic commerce systems utilizing electronic data interchange (EDI) software. (YR).
Restriction(s):
- Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate

IMSE 559  System Simulation  3 Credit Hours
The modeling and simulation of discrete-change, continuous-change and combined-change stochastic systems. Conducting simulation studies using contemporary software such as SLAM II or random number generation, distribution sampling, and output analysis. Comparisons with analytical queuing models.
Prerequisite(s): IMSE 510
IMSE 561  Tot Qual Mgmt and Six Sigma  3 Credit Hours
This course covers implementing Total Quality Management (TQM), undertaking Six Sigma Projects, and applying Baldrige National Quality Award criteria and ISO 9000 principles to improve quality performances in an organization. Topics include Definitions and Importance of Quality, Quality Costs, Quality Function Deployment (QFD), Product Specification and Critical-to-quality Measures (CQM), Statistical Quality Control (SQC), Robustness Concepts, Quality System Design and Evaluation. Six Sigma and DMAIC Methodologies, Design for Six Sigma (DFSS) process, IDOV (Identity requirements, Design alternatives, Optimize the design and Verify process capability) Methodology, and several other concepts and tools related to quality are also covered.
Prerequisite(s): IMSE 510  
Restriction(s): 
Can enroll if Class is Graduate

IMSE 564  Applied Data Analytics and Modeling for Enterprise Systems  3 Credit Hours
This course explores the theory, practice and application of data analytics to consolidate, arrange, analyze and model vast amount of data for organizations which supports forecasting and prediction of future events. In-depth studies and hands on exercises will be covered in Data Warehousing, Business Intelligence for ERP systems, Data Mining, Predictive Analysis, Provisioning and Modeling of In-memory Analytics system. Various software tools, such as SAP HANA Cloud Analytics, Lumira and Modeling Software, will be introduced and used in this class. 
Restriction(s): 
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate

IMSE 5655  Supply Chain Management  3 Credit Hours
This course will address theories, concepts, models, methodologies and techniques for managing a supply chain. Topics include supply chain strategy, drivers and metrics of performance, designing global and regional supply chain networks using optimization models, planning demand and supply in a supply chain using forecasting, aggregate planning, and inventory optimization models, designing the transportation systems, pricing, and employing IT systems effectively in supply chains.
Prerequisite(s): IMSE 500 and IMSE 510  
Restriction(s): 
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate

IMSE 567  Reliability Analysis  3 Credit Hours
Statistics of reliability and life testing. Application of stochastic models for failure based on Poisson and related processes. Use of exponential and extreme value distribution in reliability. Use of Markov process in the areas of equipment reliability, maintenance and availability.
Prerequisite(s): IMSE 510

IMSE 569  Sys Simulation in Auto Engin  3 Credit Hours
The modeling and simulation of discrete, continuous and combined change stochastic systems. Conducting simulation studies using contemporary software such as ARENA and WITNESS. Topics in simulation methodology include random number generation, distribution sampling, input and output analysis. Integration techniques for continuous simulation, application to design of manufacturing and automotive systems.
Prerequisite(s): IMSE 510

IMSE 570  Enterprise Information Systems  3 Credit Hours
The purpose of this course is to provide a foundation for the analysis, design and implementation of enterprise information systems. Topics include systems and organization theories, and information systems planning and evaluation. Students will be also introduced to various systems development life cycle phases of an enterprise information system. Students will acquire an understanding of the flow of information (forecasts, financial, accounting and operational data) within an enterprise and the factors that should be considered in designing an integrated enterprise information system. This includes all systems in the business cycle from revenue forecasts, production planning, inventory management, logistics, manufacturing, accounts payable, sales, accounts receivable, payroll, general ledger and report generation. Specifications for some of these systems will be developed utilizing ERP software such as SAP R/3 application development software suite. (YR).
Restriction(s): 
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate

IMSE 5715  Modeling of Int Info Syst  3 Credit Hours
A review of approaches for modeling of integrated information systems. ARIS architecture. Data, control, function, and organization views of an information system. Requirements definition, design specification, and implementation definition of the different views. Process chain diagrams. Management of ERP projects. (YR).
Restriction(s): 
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate

IMSE 5725  Object Oriented System Design  3 Credit Hours
Students will be introduced to fundamental concepts and methods of object oriented design and development. Topics that will be covered include object oriented database concepts, data models, schema design (conceptual schemas and physical schemas), query languages, physical storage of objects and indexes on objects, version management, schema evolution and systems issues such as concurrent control and recovery from failure. For application programming, a programming language such as C++ will be used for database design and query language. (YR).
Restriction(s): 
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate

IMSE 5755  Bus Proc Int using Entrpr Tech  3 Credit Hours
Full Title: Business Process Integration using Enterprise Technology
This course introduces the concept of integration, optimization and configuration of strategic business processes across the enterprise using ERP software technology. Use cases and specifications for some of these systems are introduced in different functional areas, such as Finance, Human Capital Management, Logistics, and Project Systems utilizing ERP software. (F).
Restriction(s): 
Can enroll if Level is Rackham or Graduate
IMSE 577  Human-Computer Interaction  3 Credit Hours
Full Course Title: Human-Computer Interaction for UI and UX Design - This course introduces current theory and design techniques concerning how user interfaces (UI) and user experience (UX) should be designed and assessed to be easy to learn and use. Course includes flowing general modules introduction of HCI & UX; Interface/Interaction design strategy; Advanced Issues in HCI; and Evaluation methods.
Prerequisite(s): CIS 553
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or

IMSE 580  Prod & Oper Engineering I  3 Credit Hours
Production and operations management techniques including forecasting, inventory control, MRP, detailed scheduling, aggregate planning, process variability and its effects on throughput and inventory, factory physics principles, and lean methods.
Prerequisite(s): IMSE 510

IMSE 581  Prod & Oper Engineering II  3 Credit Hours
This course addresses the advanced theory and techniques of production and inventory systems. Topics include advanced forecasting methods, production scheduling and lot-sizing, stochastic single-and multi-item inventory systems, and service operations. This course also includes discussions of research articles on production and inventory systems.
Prerequisite(s): IMSE 580 or EMGT 520

IMSE 5825  Industrial Controls  3 Credit Hours
This course introduces the principle aspects of computers and their applications in systems control, principles of automation, with emphasis on manufacturing industries. Discussion on the hardware and software associated with this task and other topics such as integrated systems modeling, sensor technologies, digital and analog signal processing and control, and information communication are also included. Laboratory exercises and projects are required. Credit cannot be given for both IMSE 482 and IMSE 5825. This class may be scheduled at the same time as the undergraduate course IMSE 482. Graduate students will be required to do additional research paper and/or project.
Prerequisite(s): ECE 305
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Graduate

IMSE 584  Logistical Systems  3 Credit Hours
Introduction to concepts of physical distribution and logistics management. Quantitative treatment of topics in materials management, transportation, forecasting, warehouse location. Logistical system design techniques which synthesize the above topics in order to design a fundamental system.
Prerequisite(s): IMSE 580

IMSE 585  Material Handling Systems  3 Credit Hours
Studies of material handling methods and equipment, study of techniques used in the analysis and design of material handling systems, study of storage and warehousing systems.
Prerequisite(s): IMSE 500

IMSE 586  Big Data Anal & Visualiztn  3 Credit Hours
Introduction to big data analytics and visualization. This course provides students with hands-on experience of using analytical and predictive modeling techniques and software for practical applications. Topics include data visualization principles and techniques, data processing and manipulation, and statistical learning methods such as linear regression, classification, model selection, clustering, principal components analysis, and time-series analysis. (F).
Prerequisite(s): IMSE 510
Corequisite(s): IMSE 510

IMSE 587  Facilities Planning  3 Credit Hours
Analysis, planning and design of physical facilities utilizing operations research, engineering and economic principles. Synthesis of physical plant equipment and man into an integrated system for either service or manufacturing activities. Design of material handling systems. Students are required to select problems of interest and present design project reports. Credit may not be given for both IMSE 474 and IMSE 587. This class may be scheduled at the same time as the undergraduate course IMSE 474. Graduate students will be required to do additional research paper and/or project.
Prerequisite(s): IMSE 500

IMSE 588  Bldg High Perf Learning Org  3 Credit Hours
The purpose of this course is to develop students’ knowledge and skills to explore and experience how the disciplines of systems thinking, personal mastery, mental models, team learning and shared vision impact on organizational learning and influence management practices for building highly performing organizations.

IMSE 590  Grad Study in Sel Topics I  1 to 3 Credit Hours
Individual or group study in selected topics in industrial and systems engineering.
Restriction(s):
Can enroll if Class is Graduate

IMSE 591  Grad Study in Sel Topics II  1 to 3 Credit Hours
Continuation of IMSE 590.
Restriction(s):
Can enroll if Class is Graduate

IMSE 593  Vehicle Package Engineering  3 Credit Hours
Vehicle package specifications related to exterior and interior design reference points, dimensions and curb loadings. Benchmarking package studies, ergonomic tools and design practices used in the automobile industry. Driver positioning considerations; seat height, heel points, hip points, steering wheel location, seat pan, and back angles. Pedal design issues, gear shift positioning. Visibility of instrument panel space. Armrest and console design considerations. Principles and considerations in selecting and location types and characteristics of controls and displays on instrument panels, doors, consoles, and headers. Engine compartment packaging issues. Perception of interior spaciousness and visibility of the road over cowl and hood.
Prerequisite(s): IMSE 442
Restriction(s):
Can enroll if Class is Graduate

IMSE 599  Research in IMSE  1 to 3 Credit Hours
Individual or group study or research in a field of interest to the student. Topics may be chosen from any of the areas of industrial and systems engineering. The student will submit a project report and give an oral presentation at the close of the term.
Restriction(s):
Can enroll if Class is Graduate
IMSE 605 Advanced Optimization 3 Credit Hours
This course will cover selected advanced optimization methods for engineering disciplines and information systems. Topics include nonlinear programming, network optimization, dynamic programming and optimal control. Theories related to optimality and convergence, population-based optimization, etc. will be covered. Students will be expected to write computer program code to implement optimization methodologies.
Prerequisite(s): IMSE 500
Restriction(s):
- Can enroll if Class is Graduate
- Can enroll if Level is Doctorate or Rackham or Graduate or

IMSE 606 Advanced Stochastic Processes 3 Credit Hours
This course introduces the theory and applications of discrete and continuous stochastic processes and models. The topics include Poisson process, renewal theory, discrete-time and continuous-time Markov chains, martingales, random walks, and Brownian motion. Other Markov processes with applications to queuing, simulation, and operations research in manufacturing and service systems will also be covered.
Prerequisite(s): IMSE 510
Restriction(s):
- Can enroll if Level is Doctorate or Rackham or Graduate or
- Can enroll if College is Engineering and Computer Science

IMSE 610 Adv Top Enterprise Info Sys 3 Credit Hours
This course introduces advanced topics in the development, management and improvement of information systems in the context of supporting large enterprises. It covers emerging issues and solutions in modeling, IT infrastructure and technologies, critical enterprise functions, knowledge engineering, security and governance of enterprise information systems. It focuses on the changing requirements posed by the dynamics of their residing environment and information technology.
Prerequisite(s): IMSE 5715
Restriction(s):
- Can enroll if Class is Graduate
- Can enroll if Level is Doctorate or Rackham or Graduate or

IMSE 662 Seminar in Comp Proc Contl 3 Credit Hours
Advanced treatment of the design of process control systems with emphasis on the modeling of a process of computer control and the design and analysis of a control strategy. Each student is expected to select a project and design and program the control strategy or support software on a mini-computer.
Prerequisite(s): IMSE 582

IMSE 699 Master’s Thesis Project 1 to 6 Credit Hours
Graduate students electing this course, while working under the general supervision of a member of the department faculty, are expected to plan and conduct the work themselves, to submit a thesis for review and approval, and to present an oral defense of the thesis.
Restriction(s):
- Can enroll if Class is Graduate

IMSE 980 Ph.D. diss research precand 1 to 9 Credit Hours
Full Title: Ph.D. dissertation research pre-candidate Dissertation research by a pre-candidate student of the Ph.D. in Industrial and Systems Engineering (I&SE) Program conducted under guidance of the faculty advisor. The credits earned in this dissertation research course count towards (fulfill) 24 credit hours of dissertation research requirements of the Ph.D. I&SE program. (F,W,S)
Restriction(s):
- Can enroll if Level is Doctorate or
- Can enroll if Major is Industrial & Systems Engineering

Information Sys Engineering (ISE)

ISE 798 Doctoral Seminar 0 Credit Hours
After attaining candidacy every Ph.D. student is required to attend and actively participate in seminars each semester until graduation. In addition, each Ph.D. student is required to present a one hour seminar about his/her research or an assigned research topic, and lead a follow-up discussion on the future trends in his/her field.
Corequisite(s): ISE 990
Restriction(s):
- Can enroll if Class is Doctorate
- Can enroll if Level is Doctorate or
- Can enroll if College is Engineering and Computer Science
- Can enroll if Major is Information Systems Engineering

ISE 990 Doctoral Dissertation 1 to 9 Credit Hours
Dissertation work by a Ph.D. student who has been admitted to the candidacy status. The student must be registered during the semester of the dissertation defense. (1 to 9 credit hours per semester)
Restriction(s):
- Can enroll if Class is Doctorate
- Can enroll if Level is Doctorate or
- Can enroll if College is Engineering and Computer Science
- Can enroll if Major is Information Systems Engineering

Information Systems Management (ISM)

ISM 525 Computer and Info Systems 3 Credit Hours
This course focuses on the management concepts and information technology needed to create effective information systems. Topics include: a survey of information technology, information systems and organizations, strategic information systems, management support systems, and ethical and social issues in information systems.
Restriction(s):
- Can enroll if Class is Graduate

ISM 526 IT Services Management 3 Credit Hours
Students in IT Services Management will learn how to organize and operate in an IT environment centered on processes and services. Students will learn to use major models like ISO 20000 and the Information Technology Library (ITIL) as tools for managing and controlling the IT function within an organization. Upon completion of the course, students should be prepared for the ITIL Foundations examination.
Prerequisite(s): ISM 525* or MIS 525*
ISM 527 Programming & Data Structures 3 Credit Hours
This course introduces the basic concepts of program design, emphasizing an event-driven environment. Students will develop an understanding of fundamental programming logic and learn to use basic programming structures to solve simple business problems. Students are introduced to the program development cycle and programming principles, basic programming logic and structures, and common data types. Topic coverage may include an introduction to object-oriented programming and other next generation programming environments.
Prerequisite(s): ISM 525* or MIS 525*

ISM 575 Information Management 3 Credit Hours
This course examines the basic concepts of information management for business organizations. Database systems are examined as a key tool for managing information. The goal of this course is to provide adequate technical detail while emphasizing the organizational and implementation issues relevant to the management of computerized information in an organizational environment. Topics include data modeling, database design, data definition and manipulation languages, database administration, data standards and policies, data, quality, data integration, data warehousing and data mining.
Prerequisite(s): ISM 525* or MIS 525*

ISM 585 Network App Development 3 Credit Hours
This course is designed for students to explore the unique concerns in developing applications designed to run in a networked environment. The goal of this course is for students to gain proficiency in network-based programming languages, while at the same time understanding concerns specific to networked applications, such as security and latency. Topics include client-server development, distributed object models, training in specific languages such as PHP and PERL, programming and security, and networked application tuning.
Prerequisite(s): MIS 527 or ISM 527

ISM 640 Info Systems Development 3 Credit Hours
This course provides a foundation in systems analysis and design concepts, methodologies, techniques, and tools. Students will learn to analyze an organizational program, define user requirements, design an information system, and plan an implementation. Methodologies covered include the traditional life cycle approach as well as newer methodologies such as an object-oriented approach, joint application development (JAD), and prototyping. A semester-long project gives students the opportunity to apply these techniques to a business problem. This project will use technologies such as computer-aided software engineering (CASE) tool, a database management system (DBMS), fourth generation language.
Prerequisite(s): MIS 575* or ISM 575*

ISM 641 Enterprise Architecture Network 3 Credit Hours
In this class, students will learn the principles of managing the hardware, software, networks, and data centers that are used in modern enterprises. Students will learn the interfacing of IT systems to business goals and objectives. Traditional architecture frameworks will be discussed, along with the integration of more contemporary topics like cloud networking, green computing, mobile enterprise/BYOD, and virtual services.
Prerequisite(s): MIS 525 or ISM 525

ISM 642 Information Assurance 3 Credit Hours
This course will provide the students with an exposure to the unique concerns and realities of assuring information and managing risks in the IT environment today. The course will cover principles of security from a managerial point of view, but will provide the students with enough of a technical focus to actively participate in the process of organizational security. Students will be exposed to the problems and dangers from insecure IS and the means, including physical, technical and administrative controls, to prevent security breaches, while also learning to respond to a breach when it does happen. Students will take this knowledge to learn to develop security plans and conduct security audits. Coursework will include extensive reading and seminar participation as well as time in the laboratory to explore and reinforce concepts.
Prerequisite(s): MIS 525 or ISM 525

ISM 643 Info Tech Project & Chg Mgmt 3 Credit Hours
This course examines the management of information systems projects in business organizations as well as human and organizational reactions to the changes brought about by new information systems. Topics include project planning, change control, project controls, project reporting, information systems projects and organizational change, factors affecting project success and failure, and project management software.
Prerequisite(s): MIS 525* or ISM 525*

ISM 644 IT Policy and Strategy 3 Credit Hours
This course provides an overview and an understanding of the issues involved in the strategic management of the information technology (IT) and information systems (IS) of an organization and the development of organizational strategies and polices considering environmental constraints. A broad range of issues and problems associated with the information assets of the organization and their alignment with the strategic goals of the organization is examined. An example of topics covered might include: ethical, privacy, and social issues arising within the new information environment; current laws and currently proposed laws and their implications; competition and monopoly in software and hardware markets; and online content and access. Since the course focuses on current issues, the reading each week consists of basic text chapters as well as readings contributed by the professor and class. These readings will change to reflect the dynamic environment of IT/IS. The course prepares students for IT strategy and policy analysis and development. Coursework includes extensive reading, seminar participation, case analysis, research projects, and examinations.
Prerequisite(s): MIS 525* or ISM 525*

ISM 645 Global Outsource IS Activities 3 Credit Hours
This course provides an overview and an understanding of the issues involved in extensive outsourcing in the global environmental. There exists a growing relationship between globalization, outsourcing, and information technology and the technological and social issues that support or inhibit this relationship is the focus of this class. An example of topics covered might include: national culture, the global IT manager, managing a global IT project, cultural diversity, and ethical and social issues. Since the course focuses on current issues, the reading each week consists of basic text chapters as well as current academic and practical articles. These readings will change to reflect the dynamic environment of IT/IS. Coursework will include extensive reading, seminar participation, case analysis, research projects, and examinations.
Prerequisite(s): (MIS 525 or ISM 525) and (ISM 643 or ISM 644 or MIS 644)
ISM 646  HCI Interface & Design  3 Credit Hours
This course introduces students to the fields of human computer interaction (HCI), interface design, and usability engineering. The cognitive aspects of HCI will be explored as well as several methods for usability evaluation/inspection. The course will include an examination of the emerging discipline of information architecture. Topics will include: HCI definitions, theories, and history; interface design principles and interaction methods; usability evaluation techniques; usability heuristics and design guidelines; perspectives of designers versus users; and user centered design.
Prerequisite(s): MIS 525 or ISM 525

ISM 647  Advanced Programming  3 Credit Hours
This course allows students to build on their programming skills learned in ISM 527. Students will be exposed to advanced programming topics, such as multi-threading, multimedia, exception handling, networks, database connections, component-based programming, Web-based applications, and technical issues in programming and application development. Students will be introduced to a computer-aided software environment and collaborate on building more complex applications based on business requirements.
Prerequisite(s): MIS 527 or ISM 527

ISM 648  Information Management II  3 Credit Hours
This course examines the processes and tools used to develop and administer database systems in business. Database systems used to support both transactions processing and decision-making in organizations are studied. A class project involving the development of a database using a client/server database management system is performed. Topics include database development, client/server databases, concurrency control, database security, administration of database privileges, and complex data retrieval commands.
Prerequisite(s): MIS 575 or ISM 575

ISM 649  Business Intelligence  3 Credit Hours
This course will introduce students to the fundamentals of data warehouses (DW) and data mining (DM). Topics will focus on how to leverage big data to support business decisions. Going through major activities involved in a data warehousing project, students will study the principles of dimensional data models, data warehouse architecture and infrastructure, techniques for data extraction, cleaning, transformation, and loading, online analytical processing (OLAP), and managerial issues of data warehouse implementation. Common data mining techniques and applications, such as decision trees association rules, text mining, rule based classification, cluster analysis, machine learning, will be introduced.
Prerequisite(s): MIS 525 or ISM 525

ISM 650  Info System Quality  3 Credit Hours
This course examines two related areas of study: (1) the concepts of information systems analysis and design in business organizations and (2) the management of information quality in organizations. Students will learn to plan and manage information systems projects, determine information requirements, model information process requirements, model system logic requirements, design user interfaces, and implement and maintain information systems. Students will also gain an understanding of the dimensions of information quality, the assessment and improvement of information quality in organizational settings, cognitive and behavioral aspects of information quality, and the effect of information quality on organizational decision making. The implications of information quality for system analysis and design and applications of systems analysis and design methodologies for the management of information quality will be examined.
Prerequisite(s): MIS 525 or ISM 525

Journalism and Screen Studies (JASS)

JASS 503  Issues in Cyberspace  3 Credit Hours
This course will explore some of the current social, political, legal, and technological issues associated with the use of new media technology to move ideas and information in a democratic society. Examples of areas to be explored include the Internet and World Wide Web, privacy, the future of the mass audience, and the meaning of the First Amendment in the 21st century. (YR).
Restriction(s):
Can enroll if Level is Rackham or Graduate

JASS 536  Memoir and Travel Writing  3 Credit Hours
A course in narrative nonfiction that focuses on memoir and travel writing. Reading involves several books as well as classic essay-length examples. Assignments include both short and analytical papers and the writing and revising of three original articles, based on research, interviews, memory, and observation, and drawing on literary techniques. In addition to these assignments, graduate students must prepare a substantial critical analysis focusing on a particular writer or theme, and present their work to the class as well as in writing. (YR).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
Restriction(s):
Can enroll if Level is Rackham or Graduate

JASS 557  American Cinema  3 Credit Hours
This course will analyze how Hollywood as the nation's dream factory has manufactured fantasies and cultural myths that have constructed the image of American citizenship, both for Americans and non-Americans. It will establish the ideological function of Hollywood texts as providing unifying symbols for a fragmented society. Students who elect the course for graduate credit will do additional graduate-level work as outlined in the course syllabus.
Prerequisite(s): ENGL 248 or HUM 248 or JASS 248
Restriction(s):
Can enroll if Level is Rackham or Graduate

JASS 577  Ethnographic Film  3 Credit Hours
This course will analyze ethnographic films as a medium for the construction of meaning in and across cultures. It will teach students to understand how putatively "real" content of documentary film creates a mixture of fantasy, news and "science". Covering texts as varied as National Geographic photographic layouts, traditional ethnographic films made by anthropologists, and auto-ethnographies of cultural groups such as Native Americans and the Trobriand Islanders of Papua New Guinea, the course will aim to deconstruct such oppositions as indigene vs. alien, us vs. them, and self vs. other. (AY)
Prerequisite(s): ENGL 248 or HUM 248 or JASS 248 or ANTH 101
Restriction(s):
Can enroll if Level is Rackham or Graduate
Law & Environment (LE)

LE 510  Commercial Transactions  3 Credit Hours
This course provides both the content and context needed to understand the legal impact of business decisions with particular emphasis on commercial transactions. Topics include law of contracts and sales, commercial paper, secured transactions, and debtor-creditor relationships. Student completing LE 453 or equivalent may waive LE 510.

Restriction(s):
Can enroll if Class is Graduate

LE 523  Legal Environment for Managers  3 Credit Hours
This course equips the student to develop a logical approach to problem solving based on critical legal thinking, sound business judgment, and ethical considerations. The student will be introduced to the principal ways the law is made and enforced, including the development of the common law, statutory interpretation, and agency processes. The course surveys the impact of regulation on the relationships between the business and its customers, suppliers, products or services, employees, and owners. Graduate standing required.

Prerequisite(s):
BE 530 or BE 504

LE 556  Business Govt&Regulatory Env  3 Credit Hours
This course focuses on an interdisciplinary approach to the evaluation of contemporary business issues utilizing elements of law, political economy, international business, ethics, social responsibility and management. Heavy emphasis is placed on case analysis and the development of legal research and critical thinking skills. The goals of the course are to enhance student awareness of the societal influences on business; establish the context from which government regulation arises; and, explore the roles of the free market, government intervention, and individual and corporate ethics in affecting business behavior. Credit not given for more than one of: LE 556, LE 649, BA 649. (F,W,S)

Prerequisite(s): BE 530 or BE 504

LE 606  Legal Environment for Managers  3 Credit Hours
This course equips the student to develop a logical approach to problem solving based on critical legal thinking, sound business judgement, and ethical considerations. The student will be introduced to the principle ways that law is made and enforced, including the development of the common law, statutory interpretation, and agency processes. The course surveys the impact of regulation on the relationships between the business and its customers, suppliers, products or services, employees, and owners. (AY)

Restriction(s):
Can enroll if Class is Graduate

Liberal Studies (LIBS)

LIBS 528  Roman Art and Memory  3 Credit Hours
In this course, we examine Roman art closely associated with personal commemoration and cultural memory, including portraiture, funerary monuments, imperial monuments, and public architecture. We explore these objects’ relationship to Roman literary culture’s theories of mnemotechnics, and in the social context of the Roman obsession with memory perpetuation. We also examine how art historians apply modern theories of collective and social memory in their scholarship on Roman art, creating new ways of understanding Roman sculpture, painting, and architecture. Finally, we investigate Roman spectacle and performance as a vehicle of cultural memory. Graduate students enrolled in this seminar will be exposed in greater depth to the theoretical and historiographical scholarship of cultural and collective memory, as well as to current topics in Roman art. Graduate students are responsible for additional reading assignments and more lengthy and substantial oral presentations and final papers, as outlined below. Students cannot earn credit for both ARTH 428 and ARTH/LIBS 528.

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106

Restriction(s):
Can enroll if Class is Graduate

LIBS 583  Early Mod Era/New & Old World  3 Credit Hours
This is a course on the history of the early modern West from multiple perspectives, with special emphasis on the role played by the Old and New World, together, in the creation of the modern. Course fulfills the Liberal Studies track core seminar requirement. (OC).

Prerequisite(s): LIBS 560

Restriction(s):
Can enroll if Class is Graduate

LIBS 599  Independent Studies - MALS  1 to 3 Credit Hours
Provides opportunity for qualified graduate students in the MALS program to pursue independent research under the direction of a graduate faculty member. Project must be defined in advance, in writing, and must be appropriate to the student’s chosen track. It must be designed to produce a scholarly paper or papers which reflect significant results from the course.

Prerequisite(s): LIBS 560

Restriction(s):
Can enroll if Class is Graduate
Can enroll if Major is Liberal Studies

LIBS 690  Topics in Liberal Studies  3 Credit Hours
Presents topics of current interest in graduate liberal studies. Topics vary from term to term. (OC).

Prerequisite(s): LIBS 560

Restriction(s):
Can enroll if Class is Graduate
Can enroll if Program is MALS-Liberal Studies
LIBS 697  MALS Capstone Experience  3 Credit Hours
This course is designed as a capstone experience for students in the MALS program who are interested in a non-thesis/non-project option. Its aim is to allow students to reflect and draw upon the knowledge they gained in MALS, and then apply this knowledge in class discussions, essays, and research projects on an interdisciplinary topic chosen from an agreed-upon list of topics that relate to the general MALS curriculum. In the first section of the course, students will reflect upon the interdisciplinary nature of their graduate training, drawing connections between diverse courses they have taken, pinpointing applications to the outside world, and examining the ways that interdisciplinary work has transformed their thinking. The remainder of the class will be organized around an interdisciplinary exploration of one of the following interrelated topics: "Memory", "Identity", "Place", "Community", or "Ways of Knowing". Students will examine how different disciplines and scholars approach the topic. They will also consider the relevance of this broad theme for contemporary issues and debates. Also, students should have completed at least 24 credits in the MALS program, if enrolled concurrently in a LIBS graduate course, or 27 credit otherwise, with a minimum GPA of 3.0.
Restriction(s):
Can enroll if Class is Graduate

LIBS 698  MALS Master's Project  3 or 6 Credit Hours
An alternative to the usual master's thesis for students who can present a feasible plan for a project using methods of intellectual exploration and analysis other than the document-based research typically used in preparing a thesis. Might include gathering data through the use of human subjects, as with interviews and survey instruments; creative representation, as in painting; creative writing, and other forms of artistic expression; or devising new modes of interdisciplinary analysis of human experience and thought. To be carried out under the general supervision of a member of the graduate faculty in CASL. Project plan must be approved by the MALS program director before student registers for this course. Report and oral presentation to a panel of faculty members required when the project is completed. (F,W,S).

LIBS 699  MALS Master's Thesis  3 or 6 Credit Hours
MALS students electing the Thesis option in the last stage of the program will work under the general supervision of a member of the graduate faculty in CAS&L, but will plan and carry out the work independently. A prospectus for the thesis must be approved by the MALS program director before the student registers for this course. The student will submit a report on the thesis and give an oral presentation to a panel of faculty members when the thesis is completed. (F,W,S).

Library Science (LIBR)

LIBR 575  Issues Lit Child/Yng People  3 Credit Hours
This course is designed to heighten the awareness and sensitivity of teachers to the treatment of issues in modern and traditional literature for elementary and middle school children. Among these issues will be justice, ethics, abuse, conformity, aging, death, sibling problems, alienation, friendship, prejudice, gender, and other areas of concern. Techniques and activities for fostering discourse and open inquiry in the classroom, relative to the literature, will be explored and presented. (F, YR).
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

Other Content

Linguistics (LING)

LING 525  Language and Society  3 Credit Hours
An examination of the social functions of speech through readings and exercises, emphasizing schools and other applied settings. Topics include ethnic and social class dialects, codeswitching, and the organization of conversation. (OC).
Prerequisite(s):
Can enroll if Class is Graduate

LING 561  Modern English Grammar  3 Credit Hours
The morphological and syntactic analysis of the structure of present day English considered in the light of modern linguistic science. Students cannot receive credit for both LING 461 and LING 561.
Prerequisite(s):
Can enroll if Class is Graduate

LING 564  Contemporary Rhetorical Theory  3 Credit Hours
An examination of contemporary rhetorical theories through study of representative practitioners and related developments in linguistics, philosophy, psychology, communication, and composition and rhetoric. Additional work will distinguish this course from its undergraduate version. Students may not receive credit for both COMP 464 and COMP 564.
Prerequisite(s):
Can enroll if Class is Graduate

LING 565  Discourse Analysis  3 Credit Hours
An examination of the syntactic and semantic devices and structures underlying communication in written text and oral interaction. Material to be analyzed will vary from term to term (technical reports, scholarly articles, newspaper stories) but examples will be drawn primarily from the written language. (OC)
Prerequisite(s):
Can enroll if Class is Graduate
LING 574  Second Lang Acquisition: Engl  3 Credit Hours
A survey of fundamental concepts and major concerns in the study of English as a Second Language (ESL). The course examines a variety of psycholinguistic and sociolinguistic issues related to second language acquisition (SLA), ranging from theoretical to pedagogical. A primary focus is on developmental patterns and cognitive processes of SLA and individual variation in ESL speakers in terms of their social motivations and learning strategies. Implications for practical concerns such as the ESL teaching profession, instructional materials and curriculum development will be addressed where relevant. Graduate students will be assigned additional readings from a graduate course text and be required to submit an extra data analysis assignment and write a longer research paper.
Prerequisite(s): LING 480 or LING 580
Restriction(s):
Can enroll if Class is Graduate

LING 575  Lang Diversity: Arab Amer Comm  3 Credit Hours
The study of the development, features, functions, and significance of varieties of English in southeastern Michigan, with a focus on the Arab American community. A range of sociolinguistic approaches are explored and applied to the subject matter. Topics to be addressed include code switching, language shift and maintenance, style shifting, and the role of language in identity formation. Students cannot receive credit for both LING 475 and LING 575.
Prerequisite(s): LING 480 or LING 580

LING 576  Sociolinguistics  3 Credit Hours
An examination of sociolinguistic approaches to the issue of variation in language. Areas to be considered include ways of defining and constructing language, different types of language varieties, how variation is structured in language, the role of sociolinguistic variation in linguistic change, and the significance of linguistic acts of identity. (YR)
Prerequisite(s): LING 480 or LING 580
Restriction(s):
Cannot enroll if Level is Undergraduate

LING 577  African American English  3 Credit Hours
An examination of the structure, history and use of African-American English. Topics will include the pronunciation, grammar and vocabulary of African-American English, theories of origin, linguistic repertoire and code-switching in African-American communities, the Ebonics controversy, and the role of this variety in education and identity formation. Additional reading assignments or projects will distinguish this course from its undergraduate version LING 477. Student cannot receive credit for both LING 477 and LING 577.
Prerequisite(s): LING 280 or LING 281 or LING 480 or LING 580
Restriction(s):
Can enroll if Class is Graduate

LING 580  Concepts in Linguistics  3 Credit Hours
An examination of foundational concepts in linguistics and sociolinguistic theory, which explores the intellectual and philosophical problems raised by these concepts. Issues covered include the metalinguistic nature of language studies, the relation of language to the communication systems of other species, the physiological basis of language, language variation, language function and instrumentality, and innate versus learned behavior. (YR)
Restriction(s):
Can enroll if Class is Graduate

LING 582  History of the English Lang  3 Credit Hours
A thorough grounding in the history and structure of the English language. At issue are the linguistic and ideological origins of the concept of Standard English, and the strengths and limitations of different methods of analyzing the history of the language. The course will emphasize sound change, grammatical change, and their sociolinguistic context. (YR)
Prerequisite(s): LING 480 or LING 580
Restriction(s):
Can enroll if Class is Graduate

LING 584  World Engishes   3 Credit Hours
A study of the origin and significance of different forms of English throughout the world. Contact with other languages, pidginization, creolization, standardization, and the formation of the three circles of English are examined. (YR)
Prerequisite(s): LING 480 or LING 580
Restriction(s):
Cannot enroll if Level is Undergraduate

LING 599  Graduate Independent Studies   1 to 3 Credit Hours
Graduate-level research project in accordance with the needs and interests of those enrolled and agreed upon by the student and advising instructor.

Local Government Management (LGM)

LGM 507  Strategic Communication   1 Credit Hour
This Internet course addresses three levels of administrative communications - individual, group and organization - and examines the concepts and skills needed to be an effective communicator. Students will develop written and oral applications emphasizing goal-oriented communications and making strategic choices in content, structure, style and delivery. An emphasis is given to applications in the Local Government context. The course also covers basic ethical and legal issues of workplace communications.
Restriction(s):
Can enroll if Level is Graduate or Professional Development

LGM 509  Pub Relations and News Media   1 Credit Hour
LGM 509 is presented in three modules that examine: (1) how the news media operate, (2)“Getting the news” and how to deal with these special constituencies in your community and (3) how to work with the news media as a primary channel of communication to reach residents with information or to influence public opinion. The course includes assignments designed to test your knowledge, improve your media relations skills and help you plan for both proactive and reactive situations involving the news media.
Restriction(s):
Can enroll if Level is Graduate or Professional Development
LGM 511  Citizen Participation for LGM  1 Credit Hour
Local Government Management 511 examines the concepts associated with public participation and develops skills needed by local government administrators in their interaction with the public. Course objectives include: 1) Improve the awareness and recognition of the public and some of the principles of citizen participation in local government. 2) Identify and explore different techniques for enhancing and increasing the public’s participation in local government. 3) Increase the understanding of, and compliance with, the legal obligations of local government regarding public hearings and discuss techniques for maximizing the benefit derived from such hearings.
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Graduate

LGM 512  Professionalism/Ethics for LGM  1 Credit Hour
Local Government Management 512 examines the concepts and develops skills needed by local government administrators in ethical decision making and professional behavior. This one hour course encourages local government officials to continually cultivate personal integrity and to respond ethically to challenging situations. Given the recent abundance of ethical failures in government and business (from Watergate to Enron and beyond); and the increasing pressures of complex social and scientific dilemmas, it is essential that leaders see ethics as the greater part of expertise. The course will cover many of the ethical issues local officials encounter, and will analyze means by which local officials can respond ethically and professionally to difficult situations. Finally, the course will explore strategies for influencing a culture of high ethical and professional standards within organizations.
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Graduate

LGM 541  LGM Finance I  1 Credit Hour
Local Government Management 541 examines the concepts and develops skills needed by local government administrators in performing the budgetary and financial requirements of their local community. It identifies the characteristics of an effective budget development process. It also examines and provides guidance on essential financial practices such as managing cash and investments and debt management in the local government context. Course objectives include: 1) Improve the budget development process in your local community. 2) Assess your community’s debt situation and develop strategies and policies addressing the local debt. 3) Know how to properly manage cash, revenue and cash disbursements including the management of investments.
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Graduate

Marketing (MKT)

MKT 515  Marketing Management  3 Credit Hours
This course examines the concepts, problems and techniques associated with the activities of bringing both consumer and industrial products to the marketplace. Topics include: consumer and industrial buyer behavior, market segmentation, target marketing, as well as product, place, promotion and pricing strategies. Particular emphasis is placed on analysis of cases.
Restriction(s):
Can enroll if Class is Graduate

MKT 564  Graduate Market Research  3 Credit Hours
The goal of this course is to familiarize students with marketing research concepts and techniques. The collection, analysis and interpretation of data for better managerial decision making will be emphasized. Topics include: problem definition, research design, questionnaire construction, sampling, statistical analysis, presentation and evaluation of research findings. (F, S, W)
Prerequisite(s): (DS 520 or IMSE 510 or IMSE 514 or STAT 530 or STAT 535 or STAT 555 or STAT 560) and MKT 515
Restriction(s):
Can enroll if Level is Rackham or Graduate

MKT 565  Advanced Marketing Management  3 Credit Hours
This course examines the current challenges facing the marketers, ranging from industry deregulation, Internet revolution to globalizing. Looked at closely are the emerging issues impinging on marketing decision, particularly in regard to focused marketing, relationship marketing, competitive advantage, positioning, and the marketing mix strategies. Term project and case analyses are important components of the course.
Prerequisite(s): MKT 515

MKT 515  Understanding Customers  3 Credit Hours
This course introduces students to concepts and theories developed in the behavioral sciences (economics, marketing, psychology, sociology, and anthropology) in relation to their influence on consumer behavior. The course is designed to provide students with an in-depth understanding of consumer markets in order to develop effective marketing strategies.
Prerequisite(s): MKT 515

MKT 521  Advertising and Promotion  3 Credit Hours
This course approaches advertising and promotional strategies and tactics from an integrated marketing communications perspective. The course is designed to provide students with an understanding of the various marketing mix elements, including advertising, sales promotion, public relations, direct marketing, event sponsorship, and the Internet in order to develop effective marketing communication strategies.
Prerequisite(s): MKT 515

MKT 522  Global Marketing  3 Credit Hours
This course draws from key concepts in marketing, business economics, and operations management to provide a comprehensive account of global marketing issues and strategies. This course is designed to give students several opportunities to apply the theories and concepts they have learned in class, primarily through the use of Country Manager simulation and a series of case analyses.
Prerequisite(s): MKT 515 and BE 530 and (OM 521 or IMSE 580 or EMGT 520)
MKT 623  Business to Business Marketing  3 Credit Hours
This course examines the differentiating aspect of industrial (business to business) marketing and the operational and strategic issues associated with them. Covers target marketing, marketing mix and strategic decisions involved in business markets. Case studies are an important feature of the course.
Prerequisite(s): MKT 515

MKT 624  Service Marketing  3 Credit Hours
This course examines the development and management of services in a changing and growing global marketplace. Among the challenges addressed will be the development of global service marketing strategies, the process for the development of new services, the role of climate and culture within the organization, strategies for customer retention, quality management and measurement in a service organization, and insights into service demand and the structure of the service industry.
Prerequisite(s): MKT 515

MKT 625  Global Sourcing and Logistics  3 Credit Hours
This course examines concepts in international purchasing and logistics to provide an in-depth understanding of the international supply chain. The course will examine how sourcing and logistics activities change and become more complex in the global environment. These aspects will be discussed in terms of the opportunities, challenges, and changing customer requirements presented by trading blocs, emerging markets, and developing countries.
Prerequisite(s): MKT 515

MKT 626  E-Tailing and Retailing  3 Credit Hours
Increasingly immune to traditional media, shoppers make bulk of their brand decisions in-store. Retailers (brick-and-mortar and Internet) play a vital role in a brand's success in the marketplace. This course provides a comprehensive understanding of the current retail landscape. It introduces students to significant issues and analysis frameworks of 21st century retailing strategy and management, including retailing over the Internet, or “E-tailing.” The Internet presents challenges and opportunities to all retailers. Shoppers shape retail success. Retailers, brick-and-mortar and Internet, are challenged to enhance customer experience, customer service and customer satisfaction. The students will learn the complexities and nuances of shopper behavior, shopper demographics, and how shopper decisions are influenced by store design, store environment, store atmosphere and merchandizing, in brick-and-mortar and Internet stores. The course will elevate and enhance students’ readiness and advancement in retail, brand management and marketing careers. Format: Lecture and discussion, industry reports, group presentations and guest speakers. Regular attendance, class discussions, assignments, written reports and exams.
Prerequisite(s): MKT 515
Restriction(s):
Can enroll if Class is Graduate

MKT 628  MKT Turning Data into Revenue  3 Credit Hours
The objective of this course is to provide a systematic approach to harnessing data to drive more effective marketing decision making and implementation. This course assumes a basic understanding of statistics but does not emphasize the mathematics behind the concepts. Combines with conceptual knowledge about the markets of interest, data is used to build a more profitable marketing practice. Topics covered include segmentation and targeting, positioning, customer value assessment, and new product and service design. By completing this course, you will be well on your way to making the ROI case for expenditures that companies are increasingly asking of the executives.
Prerequisite(s): MKT 515
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate

Mathematics (MATH)

MATH 504  Dynamical Systems  3 Credit Hours
The aim of this course is to survey the standard types of differential equations. This includes systems of differential equations, and partial differential equations, including for each type, a discussion of the basic theory, examples of applications, and classical techniques of solution with remarks about their numerical aspects. Also included are autonomous and periodic solutions, phase space, stability, perturbation techniques and Method of Liapunov. Additional reading assignments or projects will distinguish this course from its undergraduate version MATH 404. Students cannot receive credit for both MATH 404 and MATH 504. (AY)
Prerequisite(s): (MATH 216 or MATH 228) and (MATH 217 or MATH 227)
Restriction(s):
Can enroll if Level is Rackham or Graduate

MATH 508  Topics for Elem and Mid Tchrs  1 to 4 Credit Hours
Topics such as problem solving, calculators, microcomputers, applications, algebraic and geometric concepts, probability and statistics are to be considered. Emphasis is on developing skills in these topics and their uses in the curriculum.
Prerequisite(s): MATH 385

MATH 508AF  Topics in Math education  2 Credit Hours
Topic: Graphing Calculators in Algebra and Data Analysis. This is one of the courses for special education teachers and their general education partners teaching algebra at the middle or high school level. The sequence emphasizes a deep understanding of the mathematics and of the pedagogical issues in student learning the mathematics with a particular emphasis on the use of the graphing calculator on students understanding and fluency in algebraic thinking and data analysis concepts. This course is for 2 credits.

MATH 508AJ  Topics in Mathematics Educ  2 Credit Hours
Topic: Teaching Geometry with the Nspired Dynamic Geometry Software. This course is part of a sequence of courses for teachers of secondary school mathematics. This course focuses on the use of the dynamic geometry software Nspired to impact the teaching of geometry and student conceptual understanding of geometry. It will also discuss the pedagogical issues in the use the software. This is a two-credit course.
MATH 508N  Topics in Mathematics Educ  2 Credit Hours
Topic: Pedagogical Issues in Mathematics for Struggling Middle School Students. This course continues a sequence of courses for middle school teachers of mathematics offered by the Center of Mathematics Education in collaboration with Wayne RESA. Wayne RESA supports this sequence for districts and teachers who are not supported by either ITQ or MSP grants. It is a follow-up to the course Math 508L which focused on issues in student understanding of algebra. This course expands the focus to consider surrounding pre-algebra topics such as ratios and proportionality as well as geometry and measurement. The sequence emphasizes a deep understanding of the mathematics and the pedagogical issues in supporting struggling students attaining the expectations of Michigan’s Grade Level Content Expectations. The course will be for 2 credits.

MATH 508Q  Topics for Elem and Mid Tchrs  2 Credit Hours
Topic: Elementary School Mathematics: Data Analysis and Probability. This course focuses on topics in data analysis and probability for teachers of elementary school mathematics. The data analysis topics include the construction, reading and interpretation of tables and graphs, understanding and calculating measures of central tendency and issues such as scaling, and maximum and minimum and range. The probability topics include the concept of probability and expressing probabilities of simple events as fractions. Important aspects of the work are representation and problem solving. This course will be 2 credit hours.

MATH 508T  Topics for Elem and Mid Tchrs  2 Credit Hours
Topic: Explorations and Investigations in Mathematics in the Upper Elementary Grades. This course is part of a sequence of courses for upper elementary grades teachers of mathematics. The sequence emphasizes a deep understanding of the mathematics and of the pedagogical issues in students’ learning the mathematics embodied in the upper elementary grades standards-based curricula. This course will emphasize the content of topics in the Everyday Math series for the upper elementary grades. Its particular focus will be the explorations and investigations that engage students in learning the mathematics with particular attention paid to the use of calculators and games. This course is for 2 credit hours.

MATH 508X  Topics in Teacher Mathematics  3 Credit Hours
Topic: Focal Points in Algebra and Geometry: Middle School to High School. This course is part of a sequence of courses for teachers of middle school mathematics. This course focuses on the application of recently published Michigan middle school curriculum focal points to support student learning and deepen teacher knowledge of the mathematics undergirding the focal points. Important to this study is teacher understanding of the essential understanding students need to be successful in high school algebra and geometry. This is a two-credit course.

MATH 512  First Course in Modern Algebra  3 Credit Hours
Introduction to groups, subgroups, group homomorphisms, factor groups, simple groups, cyclic groups. Sylow theorems, rings, ideals, integral domains, field, polynomial rings, Kronecker’s theorem, also properties of the integral, rational, real and complex numbers. Additional reading assignments or projects will distinguish this course from its undergraduate version MATH 412. Students cannot receive credit for both MATH 412 and MATH 512. (W)
Prerequisite(s): MATH 300 and MATH 228
Restriction(s):
Can enroll if Level is Rackham or Graduate

MATH 513  Linear Algebra  3 Credit Hours
Vector Spaces, linear transformations and matrices, determinants, inner product spaces, bilinear and quadratic forms. Hamilton-Cayley theorem, eigenvalues and eigenvectors spectral theorem. Additional reading assignments or projects will distinguish this course from its undergraduate version MATH 413. Students cannot receive credit for both MATH 413 and MATH 513. (Y)
Prerequisite(s): MATH 300 and (MATH 217 or MATH 227)

MATH 514  Fin Diff Meth for Diff Equat  3 Credit Hours
This course studies the numerical solution of ordinary and partial differential equations using finite difference methods. Topics include convergence, stability, efficiency, numerical simulation and applications of these methods. (OC)
Prerequisite(s): MATH 216 and (MATH 217 or MATH 227)
Restriction(s):
Can enroll if Class is Graduate or Doctorate

MATH 516  Fin Elemnt Meth for Diff Equat  3 Credit Hours
This course studies the numerical solution of ordinary and partial differential equations using finite element methods. Topics include convergence, stability, efficiency, numerical simulation and applications of these methods. (OC).
Prerequisite(s): MATH 216 and (MATH 217 or MATH 227)
Restriction(s):
Can enroll if Class is Graduate

MATH 520  Stochastic Processes  3 Credit Hours
Review of distribution theory. Introduction to stochastic processes, Markov chains and Markov processes, counting, Poisson and Gaussian processes. Applications to queueing theory. Additional reading assignments or projects will distinguish this course from its undergraduate version MATH 420. Students cannot receive credit for both MATH 420 and MATH 520. (OC).
Prerequisite(s): MATH 325 or STAT 325 or IMSE 317
Restriction(s):
Can enroll if Level is Rackham or Graduate

MATH 523  Linear Algebra w/Applications  3 Credit Hours
Vector spaces, linear transformations of vector spaces and their representations as matrices and canonical forms for similarity. Inner product spaces, diagonalization of the Hermitian forms by unitary transformations. Applications to linear programming and to the solution of systems of differential equations. (AY)
Prerequisite(s): (MATH 216 or MATH 228) and (MATH 217 or MATH 227)
Restriction(s):
Can enroll if Level is Rackham or Graduate

MATH 525  Mathematical Statistics II  3 Credit Hours
Internal estimation and pivotal quantities; maximum likelihood estimation; hypothesis tests; linear models and analysis of variance; bivariate normal distribution, regression and correlation analysis; nonparametric methods. Additional reading assignments or projects will distinguish this course from its undergraduate version, MATH 425. Students cannot receive credit for both MATH 425 and MATH 525. (OC)
Prerequisite(s): MATH 325
Restriction(s):
Can enroll if Level is Rackham or Graduate
MATH 5385  Nmbr Sys & Oper Tchr  2 or 3 Credit Hours
This course is designed to deepen grades 3-5 elementary teachers’ understanding of the whole number and rational number systems. Major topics include interpretations of whole number operations, the extension of whole number operations to rational numbers, the representations of rational numbers and the conceptual underpinnings of non-standard and standard algorithms. Other topics include analyzing number theoretic concepts such as prime numbers and divisibility. Pedagogical and curriculum issues will be addressed as they relate to teaching for understanding and developing computational fluency. The topics of the 2-credit hour course will include whole numbers and operations. The 3-credit course will extend topics covered to rational numbers. Open only to certified teachers. (OC)
Restriction(s):
Can enroll if Class is Graduate

MATH 5386  Geom & Meas 1 Tchr  2 or 3 Credit Hours
This course will provide participants an opportunity to develop a deeper understanding of the mathematics they teach through a thorough development of the geometric and measurement concepts associated with two-dimensional figures. Topics will include characteristics and properties of geometric shapes with an emphasis on developing mathematical arguments about geometric relationships, transformations and use of symmetry to analyze mathematical situations, measurable attributes of objects and processes of measurement, and appropriate techniques, tools, and formulas to determine measurements. Coursework will focus on developing mathematical thinking and will highlight interactive learning styles. A three-credit course extends measurement to the real numbers by introducing the Pythagorean Theorem. Open only to certified teachers. (OC)

MATH 5387  Geom & Meas 2 Tchr  2 or 3 Credit Hours
This course will provide participants an opportunity to develop a deeper understanding of the mathematics they teach through a thorough development of the geometric and measurement concepts associated with three-dimensional figures. Topics will include characteristics and properties of geometric shapes with an emphasis on developing mathematical arguments about geometric relationships and use of symmetry to analyze mathematical situations, measurable attributes of objects and processes of measurement, and appropriate techniques, tools, and formulas to determine measurements. In addition, topics to be covered include the Pythagorean Theorem. Coursework will also focus on developing mathematical thinking and will highlight interactive learning styles. Open to only certified teachers. (OC)
Restriction(s):
Can enroll if Class is Graduate

MATH 5385  Nmbr Sys & Oper Tchr  2 or 3 Credit Hours
This course is designed to deepen grades 3-5 elementary teachers’ understanding of the whole number and rational number systems. Major topics include interpretations of whole number operations, the extension of whole number operations to rational numbers, the representations of rational numbers and the conceptual underpinnings of non-standard and standard algorithms. Other topics include analyzing number theoretic concepts such as prime numbers and divisibility. Pedagogical and curriculum issues will be addressed as they relate to teaching for understanding and developing computational fluency. The topics of the 2-credit hour course will include whole numbers and operations. The 3-credit course will extend topics covered to rational numbers. Open only to certified teachers. (OC)
Restriction(s):
Can enroll if Class is Graduate

MATH 543  Algebra for Teachers  3 Credit Hours
Algebraic structure is emphasized, especially as it relates to arithmetic. Emphasis is on the development of algebraic reasoning and generalizations with appropriate pedagogy. Curriculum issues relevant to teaching algebra for conceptual understanding are included. Major topics include algebraic representations of linear, exponential, power and quadratic patterns, systems of equations, and applications. An investigative approach involving problem solving, reasoning and proof, connections, and communication will be emphasized. Classroom resources and materials are considered as well as calculators and computer technology as problem solving tools to aid in algebraic thinking. Open only to certified teachers or elementary education students. (F, W, S).
Prerequisite(s): MATH 386

MATH 544  Data Anlys,Prob&Stat for Tchr  3 Credit Hours
Concepts of elementary probability using both experimental and theoretical models are considered with an emphasis on the use of probability models to describe physical phenomena and to make and interpret predictions. Topics in data analysis and statistics include drawing inferences from visual displays of data, applying techniques of inferential statistics, sampling and simulations to generate solutions to problems, and making appropriate inferences using best fit techniques. Evaluation of data and arguments to establish validity, interpreting, calculating and solving problems related to correlation, distributions, percentiles and standard scores are also included. An investigative approach involving problem solving, reasoning and proof, connections and communication will be emphasized. Calculator and computer technology will support the investigation of these topics. Open only to certified teachers or elementary education students.
Prerequisite(s): MATH 387

MATH 540  Pedagogy Content Alg Tchr I  2 or 3 Credit Hours
This is the first in a sequence of courses for secondary school teachers of mathematics. The sequence emphasizes a deep understanding of the mathematics and the pedagogical issues in students learning the mathematics embodied in the algebra components of secondary school mathematics as defined in the Michigan Merit Exam in mathematics for graduation from high school. The first two courses in this sequence emphasize the algebra and the algebraic reasoning basic to student success in Algebra I, and the beginning of Algebra II. The three credit hour course furthers teachers’ understanding of the use of mathematical models to represent quantitative relationships. Pedagogical and curriculum issues will be addressed as they relate to teaching for students? understanding of patterns and algebraic content.
Restriction(s):
Can enroll if Class is Graduate
MATH 5441  Pedagogy Content Alg Tchrs II  2 or 3 Credit Hours
This is the second in a sequence of courses for secondary school teachers of mathematics. The sequence emphasizes a deep understanding of the mathematics and the pedagogical issues in students learning the mathematics embodied in the algebra components of secondary school mathematics as defined in the Michigan Merit Exam in mathematics for graduation from high school. The first two courses in this sequence emphasize the algebra and the algebraic reasoning basic to student success in Algebra I and the beginning of Algebra II. The three credit hour course furthers teachers' understanding of the use of mathematical models to represent quantitative relationships. Pedagogical and curriculum issues will be addressed as they relate to teaching for students? understanding of patterns and algebraic content.
Restriction(s):
Can enroll if Class is Graduate

MATH 5442  Geom & Meas 3 Tchrs  2 or 3 Credit Hours
This course will provide participants an opportunity to develop a deeper understanding of the mathematics they teach through a thorough development of the geometric and measurement concepts associated with two- and three-dimensional figures. Topics will include characteristics and properties of geometric shapes with an emphasis on developing mathematical arguments about geometric relationships, transformations and use of symmetry to analyze mathematical situations, measurable attributes of objects and processes of measurement, and appropriate techniques, tools, and formulas to determine measurements. In addition, topics to be covered include Pythagorean Theorem and right-angle trigonometric concepts. Coursework will also focus on developing mathematical thinking and will highlight interactive learning styles. Open only to certified teachers. (OC)
Restriction(s):
Can enroll if Class is Graduate

MATH 5443  Patterns Algebra 2 Tchrs  2 or 3 Credit Hours
This course is designed to deepen in-service teachers' understanding of patterns and algebraic concepts. Major topics include the representation, analysis, and generalization of a variety of linear and non-linear patterns (including exponential and quadratic) with tables, graphs, words, and symbolic rules; the comparing and contrasting of linear and non-linear patterns; the representation and analysis of mathematical situations and structures using algebraic symbols; the use of mathematical models to represent and understand quantitative relationships; and the analysis of change in various contexts. Pedagogical and curriculum issues will be addressed as they relate to teaching for students' understanding of patterns and algebraic concepts. Open only to certified teachers. (OC)
Restriction(s):
Can enroll if Class is Graduate

MATH 5445  Nmbrs Oper&Prop Reas Tch  2 or 3 Credit Hours
This course is designed to deepen middle school mathematics teachers' understanding of the whole number system and its operations and its extensions to the rational number system and their operations. The primary focus is on proportional reasoning as a major ingredient for success in mathematics. Pedagogical and curriculum issues will be addressed as they relate to teaching for understanding. Materials include exemplary curriculum materials and records of student thinking. Only open to certified teachers. (OC)
Restriction(s):
Can enroll if Class is Graduate

MATH 545  Number & Prop'l Rsng for Tchrs  3 Credit Hours
This course deepens previous work on rational number ideas and applications and explores the concepts of ratio and proportion. Content includes a variety of situations involving proportions, for example, real-world problems involving ratios, rates, and percents; geometry involving similarity; algebra involving linearity; probability involving assigning a probability to an event; and trigonometry involving slope. Distinguishing proportional situations from those that are not and reasoning proportionally in appropriate situations are emphasized. The course includes problem solving, reasoning and proof, connections, communication, and multiple representations. Open only to certified teachers or elementary education students. (YR).
Prerequisite(s):
(MATH 442 or MATH 542) and (MATH 443 or MATH 543)
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCDF or Graduate

MATH 546  Discrete Math/Modeling for Tch  3 Credit Hours
This course interweaves the ideas of discrete mathematics with the approaches and strategies of mathematical modeling. It gives pre- and in-service teachers opportunities to deepen their understanding and use of mathematical models based on the concepts of discrete mathematics. Topics include recurrence, induction, permutations, combinations, binomial distributions, circuits, critical paths, minimal spanning trees, adjacency matrices, algorithm design and optimization. Systems thinking and multiple representations are emphasized. Open only to certified teachers or elementary education students. (YR).
Prerequisite(s):
(MATH 442 or MATH 542) and (MATH 443 or MATH 543)
Restriction(s):
Can enroll if Class is Professional Development or Graduate

MATH 549  Concepts of Calc for Teachers  3 Credit Hours
Concepts of Calculus for Teachers focuses on calculus concepts appropriate for middle school mathematics teachers and teacher candidates. The course provides a deep understanding of the major concepts of calculus: rates of change, accumulation (net change), area, and limits. Students will experience concrete approaches to the various topics using problem solving, manipulatives and technology as appropriate, with the intent being to help the learners discover how the ideas of calculus are useful in a variety of settings. Visual, numeric, and commonsense approaches will be used. Open only to certified teachers or elementary education students. (YR).
Prerequisite(s):
(MATH 442 or MATH 542) and (MATH 443 or MATH 543)
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCDF or Graduate

MATH 551  Advanced Calculus I  3 Credit Hours
Properties of the real number system; point set theory for the real line including the Bolzano-Weierstrass theorem; sequences, functions of one variable; limits and continuity, differentiability, Riemann integrability. Additional reading assignments or projects will distinguish this course from its undergraduate version MATH 451. Students cannot receive credit for both MATH 451 and MATH 551. (YR).
Prerequisite(s):
(MATH 300 and (MATH 216 or MATH 228)) and (MATH 217 or MATH 227)
Restriction(s):
Can enroll if Class is Graduate
MATH 552  Advanced Calculus II  3 Credit Hours
Includes the rigorous study of two and more variables, partial differentiation and multiple iteration. Special topics include: Taylor Series, Implicit Function Theorem, Weierstrass Approximation Theorem, Arzela-Ascoli Theorem. Additional reading assignments or projects will distinguish this course from its undergraduate version MATH 452. Students cannot receive credit for both MATH 452 and MATH 552. (AY)

Prerequisite(s): MATH 451 or MATH 551
Restriction(s):
Can enroll if Class is Graduate

MATH 554  Fourier and Boundary  3 Credit Hours
Fourier series and integrals. Their use in solving boundary value problems of mathematical physics by the method of separation of variables. Sturm-Liouville theory and generalized Fourier series, including those involving Bessel functions and Legendre polynomials, with applications. Students cannot receive credit for both MATH 454 and MATH 554. (YR)

Prerequisite(s): (MATH 216 or MATH 228) and (MATH 205 or MATH 215)
Restriction(s):
Can enroll if Class is Graduate

MATH 555  Func of a Complex Var with App  3 Credit Hours
Complex number system. Functions of a complex variable, their derivatives and integrals. Taylor and Laurent series expansions. Residue theory and applications, elementary functions, conformal mapping, and applications to physical problems. Students cannot receive credit for both MATH 455 and MATH 555. (FS)

Prerequisite(s): (MATH 216 or MATH 228) and (MATH 205 or MATH 215)

MATH 558  Introduction to Wavelets  3 Credit Hours
This course will introduce the students to theory and application of wavelets using linear algebra. Topics will include the discrete Fourier transform, the fast Fourier transform, linear transformations, orthogonal decomposition, discrete wavelet analysis, the filter bank, Haar Wavelet family, and applications. Additional reading assignments or projects will distinguish this course from its undergraduate version MATH 458. Students cannot receive credit for both MATH 458 and MATH 558. (OC)

Prerequisite(s): (MATH 217 or MATH 227)
Restriction(s):
Can enroll if Class is Graduate

MATH 559  Topics in Math & Stat  3 Credit Hours
A course designed to offer selected topics in different areas of mathematics. The specific topic or topics will be announced together with the prerequisites when offered. Course may be repeated for credit when specific topic differs. (OC)

Prerequisite(s): MATH 216 and (MATH 217 or MATH 227)
Restriction(s):
Can enroll if Class is Graduate

MATH 590  Topics in Math & Stat  3 Credit Hours
A course designed to offer selected topics in different areas of mathematics for teachers of mathematics. The specific topic or topics will be announced together with the prerequisites when offered. Course may be repeated for credit when specific topic differs. (OC)

Prerequisite(s): MATH 300
Restriction(s):
Can enroll if Level is Rackham or Graduate

MATH 592  Introduction to Topology  3 Credit Hours
Metric spaces, topological spaces, continuous maps, connectedness, compactness, separation axioms. Additional reading assignments or projects will distinguish this course from its undergraduate version MATH 492. Students cannot receive credit for both MATH 492 and MATH 592. Prior experience in a proof based course is recommended. (OC)

Prerequisite(s): MATH 300
Restriction(s):
Can enroll if Level is Rackham or Graduate

MATH 597  Indep Studies in Mathematics  1 to 3 Credit Hours
Independent Study in mathematics for topics at the graduate level. Topics and objectives chosen by agreement between students and instructor.

Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate
MATH 599  Independent Research Project  1 to 3 Credit Hours
Independent research project in applied mathematics or statistics with a faculty or industrial collaborator under the supervision of a faculty member. (YR).
Restriction(s):
Can enroll if Class is Graduate

Mechanical Engineering (ME)

ME 510  Finite Element Methods  3 Credit Hours
Overview and applications of FE theory in linear static and dynamic systems. Review of matrices, strain and stress tensors. Variational and energy principles in FEA. Applications in linear stress analysis; 1D, 2D and 3D. Transient solutions; modal analysis. Modeling concepts. Use of general purpose codes like ANSYS, NISA, ARIES. Project work. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Class is
Can enroll if Major is Mechanical Engineering-NCFD, Bioengineering, Mechanical Engineering

ME 512  Structural Dynamics  3 Credit Hours
Advanced treatment of dynamic structural theories. Topics covered include: Rayleigh and Timoshenko beams and plates; free and forced vibration response of structural components; static and dynamic stability; and impact.
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Mechanical Engineering-NCFD, Mechanical Engineering

ME 514  Advanced Mechanics of Materials  3 Credit Hours
Stresses and deformations in mechanical and structural elements and systems; theory, analysis and applications. Topics selected from among the following in applied elasticity and advanced mechanics of materials: stress and strain transformation; plane theory of elasticity and stress functions; energy methods; thick-walled cylinders and spinning disks; torsion of non-circular and hollow sections; unsymmetric bending and shear center; curved beams; beams on elastic foundations; plates and shells; elastic stability. Graduate standing or permission of instructor. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Mechanical Engineering-NCFD, Mechanical Engineering

ME 515  Advanced Mechanics of Solids  3 Credit Hours
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Mechanical Engineering-NCFD, Mechanical Engineering

ME 516  Special Topics in Mech Eng  1 to 3 Credit Hours
Selected topics pertinent to mechanical engineering. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Class is
Cannot enroll if Level is
Can enroll if Major is , Mechanical Engineering-NCFD, Mechanical Engineering

ME 518  Advanced Engineering Analysis  3 Credit Hours
The course emphasizes the exact methods used in the solution of the partial differential equations that arise in advanced engineering problems. Examples are taken from heat transfer, fluid dynamics, solid mechanics, electromagnetic theory, vibrations, etc. Linear integral equations, time dependent boundary conditions, nonlinear boundary conditions, and other topics. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Class is
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 521  Dyn and Therm of Comp Flow  3 Credit Hours
Review of basic equations of fluid mechanics and thermodynamics in control volume form. One-dimensional, compressible flow involving area change, normal shocks, friction, heat transfer, and combined effects. Two-dimensional supersonic flow including linearization, method of characteristics, and oblique shocks. One-dimensional, constant area, unsteady flow. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Class is
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 522  Advanced Fluid Mechanics  3 Credit Hours
Graduate level course of fluid mechanics. Review of fluid flow phenomena based on common principles of transfer of mass, momentum, and energy. Introduction of the fundamental concepts and methods of analysis of fluid flows in industrial and environmental settings. Navier Stokes equations; viscous and inviscid flows; laminar and turbulent flows; boundary layers; drag; thermal convection. Prerequisite: Full course of undergraduate thermodynamics, fluid dynamics, and heat transfer. Course is the equivalent of ME 520. Students who have already taken ME 520 with a grade of B or better will not receive additional credit for ME 522. (W,YR)
Restriction(s):
Cannot enroll if Class is
Can enroll if Major is Mechanical Engineering-NCFD, Bioengineering, Mechanical Engineering
ME 525  Computational Thermo-Fluids  3 Credit Hours
Prerequisite(s): ME 518
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 532  Combustion Processes  3 Credit Hours
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 535  Advanced Thermodynamics  3 Credit Hours
Advanced treatment of engineering thermodynamics as applied to producing mechanical power and refrigeration. Involves rigorous application of the first and second laws. Topics to be discussed are energy/entropy generation, thermodynamics relations, nonreacting mixtures, and reacting mixtures. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 537  Automotive Air Conditioning  3 Credit Hours
Applications of HVAC fundamentals to analysis and design of automotive air conditioning systems. Topics include psychrometrics, thermal comfort, refrigeration cycles and system design, heating system design, air flow circuits, air space diffusion, compact heat exchanger design, and instrumentation/controls.
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 538  Vehicle Thermal Management  3 Credit Hours
This course covers fundamental thermo-fluid principles and advanced topics in thermal management of conventional and electric drive vehicles (EDVs). The topics include: principles of energy conservation, heat transfer, and fluid mechanics; vehicle thermal management system and components; electrification of vehicle thermal management system; EDV thermal management; battery thermal management in EDVs; and waste energy recovery.
Restriction(s):
Cannot enroll if Class is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 540  Mechanical Vibrations  3 Credit Hours
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Bioengineering, Mechanical Engineering

ME 542  Advanced Dynamics  3 Credit Hours
An advanced treatment of analytical mechanics for particles, systems of particles and rigid body motions with special emphasis on three-dimensional motion. Lagrange's equation of motion will be introduced and utilized in the analysis of multiple-mass systems. Computer methods will be covered. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Bioengineering, Mechanical Engineering

ME 543  Vehicle Dynamics  3 Credit Hours
A treatment of the response, ride, and maneuvering of motor vehicles. Road loads, suspension systems, mechanics of pneumatic tires.
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 545  Acoustics and Noise Control  3 Credit Hours
Fundamentals of acoustical waves, sound propagation and intensity, instruments for vibration and noise, HVAC system noise, automobile and aircraft noise, noise control techniques. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 547  Powertrains I  3 Credit Hours
Topics in vehicle powertrain kinematics and dynamics, engine output characteristics, vehicle road load analysis, engine-transmission matching, design and analysis of gears and gear systems, planetary gear trains, design of powertrain components, clutch design and analysis, transmission design and analysis, torque and ratio analysis of automatic transmissions. (YR).
Restriction(s):
Cannot enroll if Class is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 548  Automotive Powertrains II  3 Credit Hours
Simulation of vehicle performance; dynamics in gear shifting; engine balance, fuel economy, and performance related to powertrains; powertrain arrangements, manual and automatic transmissions, automotive axles, four-wheel-drive systems; design and manufacturing of gearing systems.
Prerequisite(s): AENG 547 or ME 547
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering
ME 552  Sustainable Energy Systems  3 Credit Hours
The course provides an overview of energy technology from a broad perspective that encompasses technical and environmental aspects. It covers a wide range of traditional and alternative energy sources and presents assessments of their availability, sustainability, and environmental impacts as well as evaluation of their potential role in solving the global energy problem. Course work includes project.

Restriction(s):
Cannot enroll if Class is
Can enroll if Major is , Mechanical Engineering-NCFD, Mechanical Engineering

ME 554  Theory of Gearing and Application  3 Credit Hours
The course emphasizes the theory and methodology for the design, manufacturing, and analysis of gears and other engineering surfaces. Topics include differential geometry, kinematics of conjugate motions, surface enveloping, curvatures, cutter design, machine tool settings, simulation of machining processes, tooth contact analysis, geometry modeling, and design of power transmissions. Graduate standing or special permission. (YR).

Restriction(s):
Cannot enroll if Class is
Cannot enroll if Level is
Can enroll if Major is , Mechanical Engineering-NCFD, Mechanical Engineering

ME 556  Stress and Strength in Design  3 Credit Hours
Treatment of stress and strength aspects of machine design. Analytical and experimental determination of stresses in machine members. Evaluation of strength under steady and fatigue loadings. Post-yield behavior, residual stress, temperature, and corrosion effects. Graduate standing or special permission. (YR).

Restriction(s):
Can enroll if Level is Rackham or Graduate
Can enroll if Major is , Mechanical Engineering-NCFD, Mechanical Engineering

ME 558  Fracture and Fatigue in Design  3 Credit Hours
A comprehensive review of fracture and fatigue processes in engineering material with emphasis on mechanics instead of mechanisms of failure. Design methodology based on fracture toughness and fatigue crack propagation is presented. Laboratory test methods and data interpretations are also presented. Graduate standing or permission of instructor. (YR).

Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Mechanical Engineering-NCFD, Mechanical Engineering

ME 563  Advanced Instrumentation and Control  3 Credit Hours
Analysis of design techniques in modern control theory are presented. State space concepts, digital control, and adaptive control methods are covered, along with information on practical implementation problems experienced with these control techniques. Graduate standing or special permission. (YR).

Restriction(s):
Can enroll if Level is Rackham or Graduate
Can enroll if Major is Mechanical Engineering-NCFD, Bioengineering, Mechanical Engineering

ME 564  Linear Systems Control  3 Credit Hours
This course covers fundamental properties of linear dynamic systems. Topics include linear space, linear operators, eigenvalues/vectors, canonical form, representation, solution of state equations, stability, controllability, observability, design of state feedback control and development of observers with application examples in mechanical engineering. (OC)

Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate
Can enroll if Major is Mechanical Engineering

ME 565  Mechatronics  3 Credit Hours
Mechatronics, as an engineering discipline, is the synergistic combination of mechanical engineering, electrical engineering, control engineering, and computer science, all integrated through the design process. The course is to establish a working familiarity with the key engineering elements in the design and control of electro-mechanical systems in general and automotive systems in particular. The key engineering elements include microprocessor technology, electronics, sensors and actuators, data communication and interface, control algorithms, and mechanisms of machine elements. The course is to introduce a design methodology in an integrated system environment through case studies and design projects. (AY).

Restriction(s):
Cannot enroll if Class is
Can enroll if Major is , Mechanical Engineering-NCFD, Mechanical Engineering

ME 566  Materials Thermodynamics and Kinetics  3 Credit Hours
A lecture course that provides an understanding of thermodynamics and kinetics in materials and materials processing. Students will develop skills to evaluate the stability of materials under various external conditions, design processes to produce desired materials structures (microstructure and nanostructure), and predict the evolution of materials structures under different operating conditions. Topics will include laws of thermodynamics, equilibrium of single and multiphase systems, chemical thermodynamics, statistical thermodynamics of solid-solutions, equilibrium phase diagrams (unary, binary, and ternary), chemical kinetics, diffusion in solids, nucleation and growth processes, coarsening, glass transition, and phase transformations. Students will be exposed to various software commonly used in industries to evaluate materials thermodynamics and kinetics: Thermo-Calc, CALPHAD, and JMatPro. (YR).

Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate
Can enroll if Major is , Mechanical Engineering

ME 567  Reliability Consideration in Design  3 Credit Hours
Theory and application of common statistical distributions to the analysis of both life and strength data for components. Introduction to system reliability. Emphasis on use of digital computer in reliability simulation and analysis. Graduate standing or special permission. (YR).

Restriction(s):
Cannot enroll if Level is
Can enroll if Major is , Mechanical Engineering-NCFD, Mechanical Engineering
ME 568  Computational Materials Design  3 Credit Hours
The course introduces the fundamentals of modeling and simulations in materials engineering. It covers atomic scale molecular dynamics simulations, mesoscale phase-field simulations, and data-driven machine learning modeling. Software tools including LAMMPS (Large-scale Atomic/Molecular Massively Parallel Simulator), VMD (Visual Molecular Dynamics), MATLAB, and ParaView will be introduced. Students are expected to develop models across different scales, run programs, and analyze the results. (YR).
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if Major is  , Mechanical Engineering

ME 569  Introduction to Materials Characterization  3 Credit Hours
Designed for graduate students to gain an in-depth understanding of principal methods in materials characterization and analysis. This course will survey bulk as well as nanoscale structural characterization, such as identity, chemical composition and hierarchical arrangement. Analysis techniques such as optical microscopy, X-ray diffraction, electron microscopy, scanning probes and spectroscopy will all be reviewed. Students will learn principles of image formation and interpretation, resolution, contrast and chemical analysis. Focuses on fundamental concepts of different methods as well as practical applications. The intent is to allow the student to make an educated selection of characterization techniques, or critical analysis of data, for materials and defect analysis. (YR).
Restriction(s):
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if Major is  , Mechanical Engineering

ME 570  Powertrain NVH of Elect Veh  3 Credit Hours
This course focuses on the Noise, Vibration and Harshness (NVH) characteristics of Electric Vehicles (EV), Hybrid Electrical Vehicles (HEV), and Plug-In Electric Vehicles (PHEV). Topics include principles of mechanical vibration and acoustics, driveline induced noise/vibration from both conventional internal combustion engine and electrical motor/generator, cooling fan noise, regenerative braking system and electrical accessory noise. The potential countermeasures for typical noise/vibration sources will be presented. The course consists of classroom lectures and experimental laboratory sessions. The laboratory sessions will provide the student with hands-on experience on noise/vibration measurements and analyses. The student will be required to carry out a course project on NVH related subject of electrified vehicles.
Restriction(s):
Cannot enroll if Class is
Can enroll if Major is  , Mechanical Engineering-NCFD, Mechanical Engineering

ME 571  Conduction Heat Transfer  3 Credit Hours
Conduction heat transfer in steady and transient state, including heat sources. Analytical, numerical, graphical, and analog methods of solution for steady and fluctuating boundary conditions. Thermal stresses. Dynamics of thermal instrumentation and heat exchangers. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD,  , Bioengineering, Mechanical Engineering

ME 572  Convection Heat Transfer  3 Credit Hours
The course is primarily concerned with the determination of the rate of heat transfer due to the transport of energy to or from surfaces by both molecular conduction processes and gross fluid movement inside channels and over external surfaces. Emphasis will be placed on basic understanding of the convection heat transfer phenomena and the necessary mathematical techniques for the solution of such problems along with engineering applications. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD,  , Bioengineering, Mechanical Engineering

ME 573  Radiative Transport of Heat  3 Credit Hours
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is  , Mechanical Engineering-NCFD, Mechanical Engineering

ME 574  Energy Conversion  3 Credit Hours
Full Course Title: Battery Systems, Modeling, and Control This course will cover modeling, control, and estimation techniques for battery systems. Students will learn how electrochemical systems work and how they can be mathematically described. A simple phenomenological electrical circuit model and a detailed physics-based model that can capture diffusion dynamics will be covered. The thermal behavior of a battery system and its modeling will be covered as well. Students will learn the basic functions of battery management systems for monitoring state-of-charge, state-of-power, and state-of-health in applications to automotive and consumer electronics. (OC).
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if Major is  , Automotive Systems Engineering

ME 575  Battery Sys Modeling & Ctrl  3 Credit Hours
This course covers fundamental engineering principles for converting available energy sources, renewable and nonrenewable, into other energy forms of direct utility. It may include such topics as steam and gas based power plants as well as devices for solar, wind, and hydraulic energy conversion.
Restriction(s):
Cannot enroll if Class is
Cannot enroll if Level is
Can enroll if Major is  , Mechanical Engineering-NCFD, Mechanical Engineering
ME 580  Advanced Engineering Materials  3 Credit Hours
A second course in materials which expands the philosophy that all materials possess common traits which allow: (1) interchange of classes of materials to perform the same function, e.g., metals, polymers, ceramics, composites, etc.; and (2) understanding of the mechanisms of property controls in new materials. There is an attempt to provide equal representation of the science and the phenomena of engineering materials. Greater emphasis is placed on thermodynamics, stress-strain relations, multicomponent phase equilibria, and such other areas as received minimal exposure in the first course in materials. As a result of present technology trends, more time is spent on composites and achievement of design specifications through synthesis. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 582  Injection Molding  3 Credit Hours
This is an in-depth course on injection molding processes, which include the conventional injection molding process, low pressure injection molding, structural sandwich molding, gas assisted injection molding etc. Material, process and tool design parameters are emphasized. The roles of rheology and flow modeling are discussed. Design issues for injection molded products are also discussed. Injection molding applied to other materials, such as ceramics, is also described. (YR).
Restriction(s):
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 583  Mechanical Behav of Materials  3 Credit Hours
Mechanical behavior of materials are covered in relation to their structures, deformation characteristics and failure mechanisms. Means of improving strength, fracture toughness and other mechanical properties are discussed. Environmental effects on mechanical behavior are also included. The emphasis is on metals; however, polymers and ceramics are also covered. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 584  Mechanical Behavior of Polymer  3 Credit Hours
Mechanical behavior of polymers and ceramics are considered in relation to their structures, processing and applications. Emphasis is given on their deformation, fatigue and fracture characteristics. Strengthening mechanisms for both materials are discussed. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 585  Cast Metals in Eng Design  3 Credit Hours
An understanding of the properties of the most important cast metals is obtained by melting, casting, and testing. In addition to measurement of mechanical properties, resistance to heat, wear, and corrosion is discussed. The application of these properties in the design of critical parts in the aircraft, automotive, chemical, mining, and railroad industries is presented by case histories and examination of castings. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 586  Materials Consid in Manufactur  3 Credit Hours
Manufacturability of materials and influence of processing variables on the properties of manufactured products are important considerations in materials selection and product design. These issues are addressed on the basis of mechanical deformation and thermal characteristics of materials during processing. Test methods to measure formability, castability, machinability, etc., are critically discussed. Defects in manufactured products including their origin and detection are also discussed. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 587  Automotive Composites  3 Credit Hours
The emphasis in this course is on automotive composites, such as SMC, SRIM and RTM. In addition to properties and applications of these materials, this course covers manufacturing processes, design considerations, test methods and quality control techniques used for automotive composites. The use of continuous fiber composites in automotive applications, such as leaf springs, drive shafts and energy absorbing structures, are also discussed. (YR).
Restriction(s):
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering

ME 588  Composite Materials  3 Credit Hours
This course will consider four different aspects of composite materials; namely, materials, mechanics, manufacturing and design. Recent developments on fiber reinforced plastics and metals will be covered. Fundamental analytical concepts on micro and macro mechanics will be emphasized to create a better understanding of the design principles of composite materials. Graduate standing or special permission. (YR).
Restriction(s):
Cannot enroll if Class is
Cannot enroll if Level is
Can enroll if Major is Mechanical Engineering-NCFD, Mechanical Engineering
ME 591 Degradation of Materials  3 Credit Hours
The course will introduce students to the fundamentals of corrosion and degradation behavior of materials. The degradation of metals, polymers and composites will be discussed. Monitoring and life prediction techniques will be covered. Preventive measures such as a materials selection and design, protective coating, surface treatments, inhibitors, and electrochemical techniques are applied, when they should be used, and how various techniques can be integrated to solve complex problems. (AY).

Restriction(s):
Cannot enroll if Class is Mechanical Engineering
Can enroll if Major is Mechanical Engineering-NCFD

ME 592 Fuel Cells  3 Credit Hours
This course covers fundamentals of fuel cell systems for both automotive and distributed power applications. Detailed descriptions of the principles and component designs of various types of fuel cells including proton exchange membrane fuel cell (PEMFC), phosphoric acid fuel cell (PAFC), solid oxide fuel cell (SOFC), and molten carbonate fuel cell (MCFC). Discussions on water and thermal management, and balance of power plant. Review of hydrogen storage and safety consideration. Challenges and future opportunities.

Restriction(s):
Cannot enroll if Class is Mechanical Engineering
Can enroll if Major is Mechanical Engineering-NCFD

ME 593 Powder Materials & Processing  3 Credit Hours
A lecture course that provides a comprehensive understanding of the theory and principles, the associated synthesis, processing, and characterization techniques; and the applications of powder and particulate materials. The students will gain knowledge of the following: fundamentals of powder and particulate materials (metals and ceramics), various metallic and non-metallic powder synthesis/production techniques, diverse techniques of powder characterization, and the principles and methods of homogenization, compaction, and sintering. Students will be exposed to the relevant criteria for designing parts/components based on powder and particulate materials and, will familiarize themselves with a wide range of applications as structural, functional, and biomedical components made of metallic, ceramic, and composite powders-in various industries. (OC)

Restriction(s):
Can enroll if Major is Mechanical Engineering-NCFD

ME 594 Engine Emissions  3 Credit Hours
This course introduces students to the fundamentals of engine exhaust emissions, including their formation mechanisms and abatement techniques. The students will be familiarized with the present emission control technologies and future challenges. The topics covered include: engine emissions and air pollution; review of emission regulations; catalyst fundamentals; catalyst aftertreatment techniques for gasoline, diesel, and lead-burn engines; discussion of cold start emission control and breakthrough catalytic technologies. (AY).

Restriction(s):
Cannot enroll if Class is Mechanical Engineering
Can enroll if Major is Mechanical Engineering-NCFD
ME 600  Study or Res in Sel Mech Eng  1 to 3 Credit Hours
Individual or group study or design in an area of Mechanical Engineering under the supervision of a member of the graduate faculty. The student will submit a report on the project and give an oral presentation to a panel of faculty members at the close of the term. Graduate standing or special permission. (YR).
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Rackham or Graduate

ME 601  Exper Research in Mech Eng  1 to 3 Credit Hours
Laboratory investigation in an area of Mechanical Engineering under the supervision of a member of the graduate faculty. The student will submit a report on the project and give an oral presentation to a panel of faculty members at the close of the term. Graduate standing or special permission. (YR).
Restriction(s):
Can enroll if Class is Graduate

ME 602  Guided Study in Mech Eng  1 to 6 Credit Hours
Independent Study of specified material in an area of Mechanical Engineering under the guidance of a member of the graduate faculty. The student will submit a report on the project and give an oral presentation to a panel of faculty members at the close of the term.
Restriction(s):
Can enroll if Class is Graduate

ME 607  Adv Mechanical Engin Problems  3 Credit Hours
A graduate-level analytical study of selected topics in mechanical engineering. The subjects of study in each term usually depend on student and instructor interest. Typical areas of study include vibrations of continuous or lumped systems, fluid mechanics, devices, thermodynamics, heat transfer, mechanics of solids, materials, or processing, etc. The course can be organized to meet the subject needs of a group of students with mutual interests.
Restriction(s):
Can enroll if Class is Graduate

ME 610  Finite Elem Methods--Nonlinear  3 Credit Hours
Review of FE theory in linear static. FEA in dynamics. FEA in heat transfer. FEA in fluid mechanics. FEA in nonlinear problems; material and geometrical nonlinearities, total and updated Lagrangian formulations, solution techniques. Use of FE codes. Graduate standing or special permission. (YR).
Prerequisite(s): ME 510
Restriction(s):
Can enroll if Class is Graduate

ME 611  Modeling of Engr Mats  3 Credit Hours
Full Course Title: Modeling of Engineering Materials This course will present the mathematical models and constitutive behavior of engineering materials subjected to mechanical and non-mechanical loads. It will consider both linear and non-linear models to describe elastic, plastic, viscoelastic, viscoplastic, hypo- and hyper-elastic response of materials to mechanical loads. Non-mechanical loads will include thermal and electro-mechanical fields. Micro-scale and multi-scale mechanical modeling will also be introduced. (OC)
Prerequisite(s): ME 518
Restriction(s):
Can enroll if Level is Graduate or Rackham or Doctorate
Can enroll if Program is

ME 622  Adv Topics in Fluid Mechanics  3 Credit Hours
The course presents selected topics of contemporary advanced fluid mechanics, such as the hydrodynamic stability theory, turbulence, multiphase flows, magnetohydrodynamics, interfacial flows, flows of nonnewtonian fluids, micro- and nano-fluid mechanics, biofluid mechanics, etc.
Prerequisite(s): ME 522
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Doctorate or Rackham or Graduate or
Can enroll if Program is PHD-Automotive Engineering, MSE-Mechanical Engineering, MSE-Automotive Engineering

ME 640  Advanced Vibration Theory  3 Credit Hours
The course will emphasize the similarities between various types of continuous systems as well as common features of continuous and discrete systems. Variational principle will be introduced as a notion of natural modes of vibration for discrete systems is reviewed. Natural modes of vibration for continuous systems will be discussed using the boundary value formulation, the general formulation of the eigenvalue problem and orthogonality. These concepts will be applied to bars, rods, membranes, and plates. Approximate methods will be introduced to determine the natural modes of vibration for complex continuous systems. A few methods to be considered include the Rayleigh-Ritz, Galerkin, Collocation, Myklestad, and Lumped-parameter methods. All the approximate methods presented will allow expedient numerical solution by means of high-speed computers. The damped and undamped response to deterministic excitations will be considered for various systems. Graduate standing or special permission. (YR).
Prerequisite(s): ME 540
Restriction(s):
Can enroll if Level is Rackham or Graduate

ME 642  Simulation of Mechanic Systems  3 Credit Hours
Analysis, synthesis, and optimization of linear, multilinear and nonlinear mechanical systems with the electronic analog computer. Graduate standing or special permission. (YR).
Prerequisite(s): ECE 365
Restriction(s):
Can enroll if Level is Rackham or Graduate

ME 645  Predictive Control of Dynamic Systems  3 Credit Hours
This course covers predictive control of dynamic systems to students working on controls. The topics will include unconstrained and constrained optimization, discrete-time optimal control problems, dynamic programming, stability, invariance, reachability, and linear predictive control problems with application examples in mechanical engineering. (OC).
Prerequisite(s): ME 564 or ECE 560

ME 699  Master's Thesis  1 to 6 Credit Hours
Graduate students electing the course, while working under the general supervision of a member of the department faculty, are expected to plan and carry out the work themselves and submit a thesis for review and approval, and also present an oral defense of the thesis. Students must satisfactorily complete 6 credit hours in ME 699, but these hours may be spread over more than one term. Graduate standing or special permission. (YR).
Restriction(s):
Can enroll if Class is Graduate
ME 791  Advanced Guided Research  1 to 6 Credit Hours
Independent study and research work on the material related to the
doctoral research project under the guidance of the faculty advisor.
The course is for doctoral students who have not completed the PhD
program's coursework requirements. A report and an oral presentation
are required. (F,W,S)
Restriction(s):
Can enroll if Level is or Doctorate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is

ME 798  Doctoral Seminar  0 Credit Hours
After attaining candidacy, every Ph.D. students is required to attend and
actively participate in research seminars given by CECS Dean's office or
individual departments in CECS. A student gets a satisfactory grade if
he/she attends at least two research seminars during the course period.
(F,W,S)
Restriction(s):
Can enroll if Level is or Doctorate
Can enroll if Major is

ME 980  Pre-Cand Dissertation Research  1 to 9 Credit Hours
Full Title: Pre-Candidate Dissertation Research Dissertation work by a
pre-candidate student in Mechanical Sciences and Engineering program
conducted under guidance of the faculty advisor. (F,W,S)
Restriction(s):
Can enroll if Level is Doctorate or
Can enroll if Major is

ME 990  Doctoral Dissertation  1 to 12 Credit Hours
Dissertation work by a student of the Ph.D. in Mechanical Sciences and
Engineering Program conducted under guidance of the faculty advisor.
The student must be admitted to the Ph.D. candidacy status.
Restriction(s):
Can enroll if Level is Doctorate or
Can enroll if Major is

Microbiology (MICR)

MICR 505  Applied & Environ Microbiology  3 Credit Hours
Advanced treatment of the interplay of microorganisms and the
environment. Topics will include soil and water microbiology (bacteria,
archaea, fungi, algae) and plant-microbe interactions (pathogenic and
symbiotic) as well as the role of microorganisms in decomposition,
nutrient cycling, and bioremediation. Three hours lecture. Students
cannot receive credit for both BIOL/MICR 405 and MICR 505. (W, AY)
Restriction(s):
Can enroll if Level is Rackham or Graduate

Modern & Classical Language (MCL)

MCL 501  Images of Women in Germany  3 Credit Hours
This course will focus on the position of women in Germany after WWII
and up to and after the unification of East and West Germany. Particular
attention will be given to the gendered history of working through the
National Socialist past, the division and reconstruction of the two nation-
states, and the terrorism in West Germany in the 1970's. Students
will examine images of women in films and tie them to the ideologies
of gender and status of women in these larger issues of German
history. Course readings will be in English. Additional assignments will
distinguish this course from its undergraduate version. Students cannot
receive credit for both MCL 401 and MCL 501.
Restriction(s):
Can enroll if Class is Graduate

MCL 555  This American Life  3 Credit Hours
The course "This American Life: Immigrant Literature and the American
Dream" is a literary and cultural analysis of the literature of immigration.
The readings are from works of fiction in a variety of genres, and are
written by American and non-American prize-winning authors. Their
common denominator is the pursuit of the American Dream and its
many multifaceted aspects. The themes explored include: assimilation,
acculturation, diversity, language, subculture, intertextuality, nostalgia,
belonging, and double identity. This course will be distinguished from
its undergraduate counterpart, MCL 455, by the inclusion of additional
readings and assignments.
Restriction(s):
Can enroll if Class is Graduate

Natural Science (NSCI)

NSCI 531  Adv Learning Inquiry: Phys Sci  3 Credit Hours
This course is designed to provide in-service teachers with additional
tools and knowledge to teach physical science concepts to elementary
and middle school students. Topics selected from the science
benchmarks in the Michigan Curriculum Framework (MCF) will be
explored at significant depth. Students will be expected to integrate major
themes of the physical sciences and understand how the topics covered
in the course fulfill the National Science Education Standards (NSES) and
the MCF. The learning cycle and inquiry methods of instruction will be
modeled and students will be expected to use these in their assignments.
(YR).
Prerequisite(s): NSCI 231
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate
NCFD or Graduate
Can enroll if College is Education, Health, and Human Services
NSCI 532  Adv Inquiry: Earth/Planet Sci  3 Credit Hours
This course is designed to provide in-service teachers with additional tools and knowledge to teach the concepts of Earth and planetary science to elementary and middle school students. Topics selected from the science benchmarks in the Michigan Curriculum Framework (MCF) will be explored at significant depth. Students will be expected to integrate major themes and understand how the topics covered in the course fulfill the National Science Education Standards (NSES) and the MCF. The learning cycle and inquiry methods of instruction will be modeled and students will be expected to use these in their assignments. (YR).
Prerequisite(s): NSCI 232
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate
Can enroll if Level is Rackham or Graduate

NSCI 533  Adv Inquiry: Life Science  3 Credit Hours
This course is designed to provide in-service teachers with additional tools and knowledge to teach biological science concepts to elementary and middle school students. Topics selected from the life science benchmarks in the Michigan Curriculum Framework (MCF) will be explored at significant depth. Students will be expected to integrate major biological themes and understand how the topics covered in the course fulfill the National Science Education Standards (NSES) and the MCF. The learning cycle and inquiry methods of instruction will be modeled and students will be expected to use these in their assignments. (YR).
Prerequisite(s): NSCI 233
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate
Cannot enroll if Level is Graduate
Can enroll if College is Education, Health, and Human Services

NSCI 598  Independent Study in NSCI  1 to 3 Credit Hours
Provide an opportunity for students to pursue graduate level independent library-based research under the direction of a faculty member. For students who wish to study an area that is interdisciplinary rather than an area focused on a specific science. The student and the faculty member must complete a contract outlining the area to be studied and the product of the research. The project must be approved by the program director and the faculty member before students register for the course.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Arts, Sciences, and Letters

NSCI 599  Laboratory Research in NSCI  1 to 3 Credit Hours
Provide an opportunity for students to pursue graduate level independent laboratory-based research under the direction of a faculty member. For students who wish to study an area that is interdisciplinary rather than an area focused on a specific science. The student and the faculty member must complete a contract outlining the area to be studied and the product of the research. The project must be approved by the program director and the faculty member before students register for the course.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Arts, Sciences, and Letters

Operations Management (OM)

OM 521  Operations Management  3 Credit Hours
Operations Management is concerned with the efficient transformation of inputs that will effectively achieve customer satisfaction. In dynamic, competitive world, a company’s effectiveness depends significantly on how well the firm’s resources are managed. This course focuses on managerial tools for understanding the processes that are required for developing and delivering appropriate products and services. It prepares managers to use the results of analysis to constantly improve the firm’s operational performance.
Prerequisite(s): OM 521* or IMSE 580* or EMGT 520*

OM 571  Supply Chain Management  3 Credit Hours
This course aims to develop an understanding of key concepts of global supply chain management performance and their interrelationship with the firm’s strategy. Special emphasis is given to tools and skills necessary to develop solutions for a variety of supply chain design problems. The overarching course objective is to develop and in-depth understanding of integrative managerial issues and challenges related to developing and implementing a firm’s strategy.
Prerequisite(s): OM 521 or IMSE 580 or EMGT 520

OM 631  Service Operations Management  3 Credit Hours
This course examines both traditional and new approaches for achieving operational competitiveness in service businesses. Major Service sectors such as health care, banking and financial services, transportation, restaurants, hotels, and resorts are examined. The course addresses both strategic and operational decision making. Among topics covered are: the service concept and operations strategy, design of effective service delivery systems, productivity and quality management, response time (queuing) analysis, capacity planning, yield management, and the impact of information technology.
Prerequisite(s): OM 521 or IMSE 580 or EMGT 520

OM 650  Supply Chain Analytics  3 Credit Hours
The purpose of this course is to equip students with decision support models and tools to recognize, analyze, and resolve supply chain problems. Compared to other supply chain management courses, it is designed for a more analytical oriented audience, including applications of advanced analytics as well as business intelligence and reporting aspects of supply chain management. This course focuses on identifying and reformulating problem statements and provides students with hands-on experience to solve those identified problems by applying analytical tools and models.
Prerequisite(s): OM 521 or IMSE 580 or EMGT 520

OM 661  Supply Chain Logistics Mgmt  3 Credit Hours
The overarching course objective is to develop and in-depth understanding of integrative managerial issues and challenges related to developing and implementing a firm’s logistics strategy. Attention is directed to the logistical mission confronted by varied types of business organization. Logistics is positioned as a value-added process that achieves time and place synchronization of demand stimulation and operations fulfillment. Emphasis will be place on challenges related to providing logistical support for procurement, manufacturing and market-distribution.
Prerequisite(s): OM 521 or IMSE 580 or EMGT 520
Restriction(s):
Can enroll if Class is Graduate
OM 662  Product Dvlpmnt & Tech Mgmnt  3 Credit Hours
The objective of this course is to provide in-depth knowledge of the frameworks, policies, and issues that arise in the design and development of new products and the management of technology. In particular, the integration of new product development and innovative technology management within a supply chain forms the basis of knowledge offered in this course including the set of activities and processes associated with new product introduction and the development of new technologies. Topics include the product design and development phases, firm capabilities, product architectures, the make vs. buy decision, supplier involvement, industrial design, design-for-manufacturing, prototyping, and the management of technological change. Part of the course is project-based and covers modern tools and methods for product design and development.
Prerequisite(s): OM 521 or IMSE 580 or EMGT 520
Restriction(s):
Can enroll if Class is Graduate

OM 663  Lean & Six Sigma  3 Credit Hours
The purpose of this course is to provide a broad exposure to the principles and philosophies behind lean production and Six Sigma methodologies. Lean production and Six Sigma are widely adopted by a variety of firms and organizations in different industries for their abilities to generate significant and lasting operational improvement. A management overview of both methodologies with an emphasis on best business practice is provided in addition to coverage of fundamental tools and concepts.
Prerequisite(s): DS 520 or IMSE 514
Restriction(s):
Can enroll if Level is Rackham or Graduate

OM 664  Strategic Sourcing  3 Credit Hours
This course presents the integrative role of procurement function within the business organization. Specific topics addressed from strategic, financial, and global perspectives include purchasing process, procurement and commodity strategy, insourcing/outsourcing, supplier evaluation and selection, supplier management and development, global sourcing, cost and price analysis, negotiation and contract management. Both theoretical and quantitative perspectives will be offered in covering these topics. Learning will be emphasized through review of articles published in academic and professional journals; discussion of case studies focusing on problems and issues involving sourcing; formulation of sourcing models using statistical and optimization software and application of various problem-solving algorithms; and working on a term project focusing on investigating a key sourcing problem.
Prerequisite(s): OM 521 or IMSE 580 or EMGT 520
Restriction(s):
Can enroll if Class is Graduate

OM 665  IT in SCM  3 Credit Hours
This course covers concepts in enterprise resource planning (ERP). The main focus of this course is to show how ERP systems integrate business processes across functional areas and support business management and performance analysis. This course will also examine how ERP systems evolved from early computer systems and manufacturing, and will evaluate the benefits and costs of implementing an ERP system. Example software, such as SAP, will be used extensively to illustrate how ERP systems work. Learning will be emphasized through review of articles published in academic and professional journals; discussion of case studies focusing on problems and issues involving enterprise resource planning; application of various problem-solving algorithms such as in forecasting and inventory management; and working on a term project focusing on investigating a key enterprise resource management problem.
Prerequisite(s): OM 521 or IMSE 580 or EMGT 520
Restriction(s):
Can enroll if Class is Graduate

OM 666  Sustainable Supply Chain Mgmt  3 Credit Hours
This course describes various issues and problems encountered in designing and maintaining a supply chain that deals with environmental concerns of product disposal, and re-manufacturing. Various types of sustainable supply chains, such as green supply chain, reversible supply chain, closed-loop supply chain etc., will be discussed along with tools and techniques to design and manage them.
Prerequisite(s): (OM 521 or IMSE 580 or EMGT 520) and MIS 525
Restriction(s):
Can enroll if Class is Graduate

Organizational Behavior (OB)

OB 510  Organization Behavior  3 Credit Hours
A survey course which provides a basic understanding of individual, inter-personal and group behavior in organizations, and its application in the practice of management. Topics include: personality and attitudes, motivation, groups and teams, leadership, power, ethics, structure and organizational design, culture, and decision-making.
Restriction(s):
Can enroll if Class is Graduate

OB 560  Management Skills Development  3 Credit Hours
To present the concepts, problems, and techniques of managing the human resources of an organization with emphasis on application and skill building. Topics include skills development for interviewing, counseling, and appraising employees; work team leadership and development of inter-group relationships, and conflict resolution.
Prerequisite(s): OB 510 or EMGT 545

OB 610  Intrnatl Dimensions of Managmt  3 Credit Hours
This course aims to provide a systemic review of international environmental forces and their influence on all management areas of corporate entities. Emphasis is placed on the issues confronting managers in international arenas as they attempt to plan, organize, staff and control global operations of multinational companies. The course will offer in-depth coverage of managing organizations in the global context, including issues related to cross-cultural management.
Prerequisite(s): OB 510 and BE 530 and MKT 515
OB 612 Org Change & Development 3 Credit Hours
To introduce theories, methods, and practice of organizational change and development; to provide a conceptual framework for examples of planned organizational change. Topics include: sub-processes in organizational change, intervention methods, sequencing and integration of change processes, change roles and role relations, change objectives and criteria.
Prerequisite(s): OB 510 or EMGT 545

Philosophy (PHIL)
PHIL 542 Medical Ethics 3 Credit Hours
Issues in medical ethics are among the most exciting and most urgent facing the world today. This course will explore some of these issues: the relationship between patient and health caregiver (truth-telling, informed consent, the right to refuse treatment, confidentiality); assisted suicide and euthanasia; treatment of defective newborns; scarce resources, social justice and the right to health care; cloning and genetic manipulation; new reproductive technologies; and others. We will discuss issues from the standpoint of patients, medical professionals, and citizens who shape policy in a democratic society. Ethical theories and concepts will be stressed. Students cannot receive credit for both HPS 442 and HPS 542. Prerequisite(s): any previous course in Philosophy or permission of instructor. (F, W, S).
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 335 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 445 or PHIL 485 or PHIL 490
Restriction(s): Can enroll if Class is Graduate

Physics (PHYS)
PHYS 503 Electricity & Magnetism 3 Credit Hours
The study of electrostatics, magnetostatics, and electrodynamics using Maxwell's equations. The course focuses on the development of Maxwell's equations from observation and experiment and on the application of these equations to electromagnetic phenomena. Additional reading assignments and/or projects will distinguish this course from its undergraduate version PHYS 403. Students cannot receive credit for both PHYS 403 and PHYS 503. (W)
Prerequisite(s): (MATH 205 or MATH 215) and PHYS 151
Restriction(s): Can enroll if Class is Graduate

PHYS 553 Quantum Mechanics 3 Credit Hours
A course in non-relative quantum mechanics emphasizing the basic postulates of quantum theory, the concepts of eigenstates and eigenvalues, and the role and use of operators and communication relations in the development of the subject. Application of the Schrodinger and Heisenberg formalisms to the solution of single-particle systems subject to a variety of potential functions, including simple step/barrier potentials, the harmonic oscillator potential and the Coulomb potential, will be made. Additional reading assignments and/or projects distinguish this course from its undergraduate version PHYS 453. Students cannot receive credit for both PHYS 453 and PHYS 553.
Prerequisite(s): MATH 216 and PHYS 305
Restriction(s): Can enroll if Class is Graduate

POL 513 American Constitutional Law 3 Credit Hours
A major theme of this course is the development of the constitution, especially focusing on the themes of judicial review: judicial self-restraint and judicial activism; the expansion of executive and legislative powers; and the rise of “substantive due process of law”. Prerequisite or equivalent recommended. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (AY).
Prerequisite(s): POL 101
Restriction(s): Can enroll if Class is Graduate

POL 514 Civil Rights and Liberties 3 Credit Hours
An analysis of the Bill of Rights and the 14th Amendment, with particular emphasis upon recent landmark or controversial Supreme Court decisions dealing with freedom of speech and religion, rights of criminal defendants; cruel and unusual punishment, right to privacy; civil rights and equal protection clause; and apportionment. Prerequisite or equivalent recommended. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (YR).
Prerequisite(s): POL 101
Restriction(s): Can enroll if Class is Graduate

POL 517 Constitution & National Security 3 Credit Hours
This course focuses on the issue of national security and how the federal government has used power to protect its citizens. It analyzes relevant national security issues in order to understand how government action is constrained by the Constitution and social norms. The course examines the historical development of national security in the United States including habeas corpus, wiretapping, military tribunals, state secrets, and extraordinary rendition. Particular close attention is paid to the modern development of national security. The emphasis in reading will be on cases, executive orders, congressional hearings, and statutes. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research.
Restriction(s): Can enroll if Class is Graduate

POL 550 Revolution 3 Credit Hours
A consideration of violent political change and the conditions which promote it. The course covers both revolutionary theories and empirical research. Specific revolutions are considered. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. Students cannot receive credit for both POL 450 and POL 550. (YR).
Restriction(s): Can enroll if Class is Graduate

POL 551 Peace and War 3 Credit Hours
An examination of the causes of war and the means of securing peace. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (YR).
Restriction(s): Can enroll if Class is Graduate
POL 560  Science, Tech & Pub Policy  3 Credit Hours
This course explores the intersection of science, technology, and public policy. Scientific knowledge and technological innovations are exceptionally powerful resources for policy-makers and for societies; they also pose great challenges and risks. This course will look at how science and technology affect the pursuit of policy goals in areas such as public health, environmental sustainability, economic growth, and national security. Students will not receive credit for more than one of POL 460, POL 560, and PPOL 560.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate

POL 566  Politics&Policies Soc Welfare  3 Credit Hours
FULL TITLE: The Politics and Policies of Social Welfare. The course examines the relationship between politics and public policy as related to the provision of social welfare programs in the United States.
Restriction(s):
Can enroll if Level is Graduate

POL 571  American Foreign Policy I  3 Credit Hours
American foreign policy in Western Europe, Russia, and Latin America. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (OC)
Restriction(s):
Can enroll if Class is Graduate

POL 572  American Foreign Policy II  3 Credit Hours
American foreign policy in the non-western world. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (OC).
Prerequisite(s): POL 101 or POL 201
Restriction(s):
Can enroll if Class is Graduate

POL 573  International Security Affairs  3 Credit Hours
International Security is a branch of world politics concerned with the threats, primarily military in nature, to the peace and security of the nation, states, and the international community. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (AY).
Prerequisite(s): POL 101
Restriction(s):
Can enroll if Class is Graduate

POL 574  Comparative Enviro Policy  3 Credit Hours
This course explores environmental policy as a result of political processes involving diverse participants and entailing movement through several stages – from defining an issue as an environmental problem to placing it on a political agenda and then receiving a response at domestic governmental or international levels. This course analyzes environmental issues from a cross-cultural and comparative perspective, with a particular attention given to political institutions, political change, levels of development, political culture, public participation, and international commitments that shape the nature and dynamics of environmental politics and policy in different countries. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research.
Restriction(s):
Can enroll if Class is Graduate

POL 577  Topics in Political Science  1 to 3 Credit Hours
Problems and issues in selected areas of political science. Title changes according to content. Courses may be repeated when specific topic differs. (OC)

POL 579  Seminar in Urban Politics  3 Credit Hours
Selected topics in urban politics. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research.
Restriction(s):
Can enroll if Class is Graduate

POL 580  Directed Studies  1 to 6 Credit Hours
Directed individual study of any subject agreed upon by the student and the instructor. May not duplicate a formal course offering. (F, S, W).

POL 587  Seminar in Urban Politics  3 Credit Hours
Problems and issues in selected areas of political science. Title changes according to content. Courses may be repeated when specific topic differs. (OC)

POL 591  Seminar in Political Science  3 Credit Hours
Selected topics in political science. Course may be repeated for credit when topics differ. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (AY).
Restriction(s):
Can enroll if Class is Graduate

POL 592  Seminar in Political Analysis  3 Credit Hours
An advanced in-depth look at the problems and techniques of empirical research. Gives special attention to research design, data collections, measurement, and validity. Statistics for social scientists will also be covered. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (OC).
Restriction(s):
Can enroll if Class is Graduate

POL 598  Directed Studies  1 to 6 Credit Hours
Directed individual study of any subject agreed upon by the student and the advising instructor, which shall not duplicate a formal course offering. This course is distinguished from its 400 level counterpart by the requirement of additional readings and research. (F, W, S).
Restriction(s):
Can enroll if Class is Graduate
Professional Education (PDED)

PDED 505 SpEd Legisln and Litigation 3 Credit Hours
Content traces the historical development of special education through landmark litigation and legislation, parent advocacy, and national economic and social needs. The provisions of federal and state special education mandates, judicial interpretations, and Michigan state guidelines regulating the delivery of educational and vocational services to persons with handicaps will also be addressed.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

PDED 515 Museum Resources for Teaching 3 Credit Hours
Explores the use of museums as educational resources by elementary and secondary teachers. Various museums in the greater Detroit metropolitan area will be visited and studied. Students will review how to plan educational trips and how to use museum resources in meeting their own particular individual needs.
Restriction(s):
Can enroll if Class is Junior or Graduate
Can enroll if College is Education, Health, and Human Services

PDED 516 Internship in Museum Education 2 or 3 Credit Hours
The museum education internship will prepare students with the knowledge and skills they need to plan, implement, and evaluate educational and interpretive programs in the context of museums. The educational functions of museums will be explored. The students will apply their knowledge and experiences to K-12 instruction in the core content areas.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Post-baccalaureate NCFD or Graduate
Can enroll if Level is Rackham or Professional Development or Graduate
Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters

PDED 518 Thch Mid Sch Math/Spec Needs 1 to 3 Credit Hours
This course is intended to introduce students to the characteristics and assessment of persons with ASD, as well as the best practices related to educating students with Autism Spectrum Disorders (ASD). Specifically, students will learn evidence based practices for assessing students with ASD, creating an appropriate educational environment for students with ASD, and providing academic instruction and behavioral interventions to students with ASD in special education and general education settings. Instruction will emphasize specific assessment and teaching tools and behavior management principles and practices associated with educating K-12 student with ASD.
Prerequisite(s): EDD 512
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Education, Health, and Human Services

PDED 518A Topics in Education 2 Credit Hours
TOC TITLE: Application of Distance Learning. Overview of common types of distance learning covering advantages, disadvantages, and relative costs. Discussion of research regarding student achievement and satisfaction, learner characteristics, and necessary factors for success. Students demonstrate a videoconference lesson, create an internet lesson and write research for internet publication. This course is part of the Adult Instruction and Performance Technology program and activities are based on the Instructional Design Process.
Prerequisite(s): EDT 512 or EDT 400

PDED 518AM Topics in Education 1 Credit Hour
Topic: Creating Online Learning Experiences. This course will provide students with instruction on a variety of tools they can use to create online learning experiences for their students in order to fulfill the Online Learning requirement mandated by the State of Michigan. Participants will also learn various strategies for teaching online.

PDED 518BJ Topics in Education 1 Credit Hour
TOPIC TITLE: Transdisciplinary Teaming to Support students with Challenging Behaviors This course explores the concept of transdisciplinary teaming for the purpose of supporting children/youth with challenging behaviors. Topics of study in this course include multi-level systems for preventing and remediating inappropriate behaviors, school-wide, class-wide, and individual research-based interventions including Functional Behavior Assessment (FBA).

PDED 518BN Gamifying your Classroom 1 Credit Hour
Participants will learn a variety of strategies that can be used to "gamify" learning experiences for students. This includes learning how to provide students with a more customizable learning experience and focusing on mastery learning rather than just assignment completion. Participants will be introduced to a gamified learning management system that can be used to facilitate their own gamified classroom. (OC)
Restriction(s):
Can enroll if Class is Graduate

PDED 518BO Intro to Google Apps for Education 1 Credit Hour
Participants will be introduced to the suite of Google Apps for Education including Google Classroom, Drive Docs, Sheets, Presentations, Hangouts, Blogger, Picasa, Sketch-up and Google Earth. Participants will learn how to utilize these various applications to design technology enhanced learning activities and enhance their overall productivity. (OC)
Restriction(s):
Can enroll if Level is Rackham or Graduate

PDED 518BS The Educational Escape Room 1 Credit Hour
Topic Title: The Educational Escape Classroom: Participants will learn how to develop educational escape rooms that can be used to engaged students in different content areas. Focus will be placed on crafting a relevant scenario, creating logical hints, and integrating the escape room activity into the curriculum. Participants will be introduced to a variety of tools and technologies that can be used to create escape room activities. (OC)

PDED 518BT Tech Tools for the College Student 1 Credit Hour
Participants will learn about a wide range of technologies that can be used to help them be successful college students. Topics covered in this class will include technologies for writing, research, time management, stress reduction, presentations, group collaboration and communication. As a result of this course, participants will be better prepared to meet the rigorous demands of college. (OC)
Restriction(s):
Can enroll if Level is Graduate

PDED 518BU Creating a Maker Space 1 Credit Hour
Topic Title: Creating a Maker Space: Participants will learn how to create a Maker Space within their own school or classroom. A variety of resources will be shared to help reduce the cost of developing a Maker Space. Participants will also learn about ways to design learning activities that utilize a Maker Space in order to advance the curriculum in different content areas. (OC)
PDED 518C  Topics in Education  2 Credit Hours
TOPIC TITLE: Teaching Geometry in Secondary School. This summer institute in geometry is modeled after the High School Teacher Program of the Park City Mathematics Institute. The high school teachers from Michigan who are involved in that program will lead sections which enhance teachers’ understanding of geometry topics relevant to the new standards, pedagogy that enhances student learning of geometry and the application of technology to the teaching of geometry. Students will complete a project based on the institute.

PDED 518CA  Topics in Education- Technology for the Flipped Classroom  1 Credit Hour
Participants will learn how to use a variety of different technologies in order to flip* their current or future classroom. This will include using a learning management system (LMS) to create an online learning space and learning to create a variety of multimedia elements (screen capture tutorials, animations, digital videos) for instructional purposes. *In the context of this course, a flipped classroom is one in which in instructional content is provided by the teacher online through multimedia elements such as videos and podcasts and classroom time is devoted to students working on assignments that would normally be given as homework. The classroom is considered “flipped” because the instruction happens outside of class and homework is completed in class where students have easy access to the teacher. (OC).

Restriction(s):
Can enroll if Level is Rackham or Graduate

PDED 518D  Topics in Education  1 Credit Hour
TOPIC TITLE: Technology in Education - Module 1: Teaching and Learning with Basic Technology Skills. The primary focus will be to develop and utilize courseware and class management materials using the word processor, spreadsheet, database, and presentation applications.

PDED 518E  Topics in Education  1 Credit Hour
TOPIC TITLE: Technology in Education - Module 2: Teaching and Learning with the Internet. Participants will cover the basics of electronic communication, the use of the World Wide Web, the creation of Web pages and Web-based activities, and the issues related to the use of the Internet in schools.

PDED 518F  Studies in Education  1 Credit Hour
TOPIC TITLE: Technology in Education - Module 3: Teaching and Learning with Multimedia. Use of the computer to combine text, sound, video, still images, animation, and interactivity to create constructive problem solving will be covered.

PDED 518H  Studies in Education  1 to 2 Credit Hours
TOPIC: Intervention Strategies for Young Children with Disabilities. Participants will gain knowledge of ways to plan for and address individualized goals in early education settings. Emphasis will be on developing functional goals and objectives, intervening during classroom routines and activities, and using naturalistic strategies which promote language, social and cognitive development.

PDED 518I  Studies in Education  1 to 2 Credit Hours
TOPIC: Designing Instruction for the Internet. The course is designed for teachers who are competent in word processing and familiar with the Internet and web searches. Each teacher or graduate student will experience Internet learning through a guided lesson introducing them to UM-D’s electronic resources, various teacher oriented web-pages, sample Internet lessons, and guide them through an initial search for possible topics of their own Internet lesson.
An asterisk denotes that a course may be taken concurrently.

Frequency of Offering

The following abbreviations are used to denote the frequency of offering:
(F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Psychology (PSYC)

PSYC 505  Gender Roles  3 Credit Hours
This course will investigate the development of gender roles in childhood and adolescence due to either innate physiological differences or sociological patterning, the effect of gender roles upon male-female relationships within our society, and the possibility of transcending sociological gender roles in alternate modes of living. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 443. Students cannot receive credit for both SOC 443 and SOC 543. (YR).

Prerequisite(s): PSYC 170 or PSYC 171 or SOC 200 or SOC 201

Restriction(s):
Can enroll if Class is Graduate

PSYC 507  Psychology of Adolescence  3 Credit Hours
Considers adolescence as an interaction of rapid biological and social change. Examines the theoretical and empirical literature in some detail. Additional reading assignments or projects will distinguish this course from its undergraduate version PSYC 407. Students cannot receive credit for both PSYC 407 and PSYC 507. (YR).

Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

Restriction(s):
Can enroll if Class is Graduate

PSYC 512  Psychology of Aging  3 Credit Hours
This course examines development of the individual from middle adulthood through old age. Special emphasis is given to the understanding of developmental theories and issues in adulthood. Topics include biological basis, socialization, family relationships, personality, and intellectual development in the aging individual. (F,W)

Restriction(s):
Can enroll if Level is Graduate

PSYC 523  Multicultural Counseling  3 Credit Hours
This course will explore multicultural issues in counseling and clinical psychology. The central focus for this course will be ethnic and racial diversity, although attention will be given to gender, sexual orientation, age and socio-economic status as they relate to issues of diversity in counseling. Students will gain an appreciation of the complexities of the influence of culture on social, emotional, behavioral and cognitive development, and the major issues involved in assessment and treatment of diverse clients and their families. (F)

Restriction(s):
Can enroll if Class is Graduate

PSYC 530  Psychology in the Workplace  3 Credit Hours
This course introduces students to some of the core content areas of Industrial/Organizational (I/O) psychology. These content areas include: selection, training, performance appraisal, work teams, job design, motivation, leadership, union-management relations, and stress and health in the workplace. Additional reading assignments or projects will distinguish this course from its undergraduate version PSYC 4305. Students cannot receive credit for both PSYC 4305 and PSYC 530. (YR).

Prerequisite(s): PSYC 170 or PSYC 171 or OB 354 or PSYC 101

Restriction(s):
Can enroll if Class is Graduate

PSYC 531  Organizational Entry  3 Credit Hours
An in-depth consideration of the psychological aspects of the organizational entry process. Topics include recruitment, selection, orientation, socialization, and training. Additional reading assignments or projects will distinguish this course from its undergraduate version. Students cannot receive credit for both PSYC 431 and PSYC 531. (OG).

Prerequisite(s): PSYC 170* or HRM 405* or PSYC 171*

Restriction(s):
Can enroll if Class is Graduate

PSYC 540  Abnormal Psychology  3 Credit Hours
An introduction to the field of psychopathology, the study of mental disorders. Includes exposure to a number of historical and theoretical perspectives, each with their own theories, methodologies, and treatment approaches. Disorders covered will include: anxiety and mood disorders, personality disorders, schizophrenia, sexual disorders, and psychosomatic disorders. Additional reading assignments or projects will distinguish this course from its undergraduate version PSYC 440. Students cannot receive credit for both PSYC 440 and PSYC 540. (YR).

Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

Restriction(s):
Can enroll if Class is Graduate

PSYC 542  Child Psychopathology  3 Credit Hours
A review of the major psychological disorders of children from birth to adolescence. These disorders are considered from a clinical and theoretical point of view. In addition to an examination of causes, approaches to treatment and behavior modifications are considered. Additional reading assignments or projects will distinguish this course from its undergraduate version PSYC 442. Students cannot receive credit for both PSYC 442 and PSYC 542. (YR).

Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

Restriction(s):
Can enroll if Class is Graduate

PSYC 544  Personality Assessment  4 Credit Hours
This is a course in methods of assessing personality. The theory and methods of observation, interviewing, and psychological testing are discussed and then employed in brief, individually-designed studies. Additional reading assignments or projects will distinguish this course from its undergraduate version PSYC 4445. Students cannot receive credit for both PSYC 4445 and PSYC 544. (AY).

Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

Restriction(s):
Can enroll if Class is Graduate
PSYC 545  Advanced Psychopathology  3 Credit Hours
This course is designed for graduate students who require an advanced knowledge of psychological disorders and their diagnosis. Course content includes an overview of the symptoms, etiology, and treatment alternatives for major psychological disorders. The emphasis includes both an overview of research based knowledge and practical application of the current diagnostic system.

Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Graduate
Can enroll if College is Arts, Sciences, and Letters
Can enroll if Program is MS-Psychology

PSYC 546  Human Sexual Behavior  3 Credit Hours
A comprehensive review of facts about human sexuality. The emphasis is on psychological aspects of sex, but there is also a consideration of genetic, physiological, and anatomical aspects of sex, and contemporary issues. Additional reading assignments or projects will distinguish this course from its undergraduate version PSYC 446. Students cannot receive credit for both PSYC 446 and PSYC 546. (AY).

Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

Restriction(s):
Can enroll if Class is Graduate

PSYC 547  Therapeutic Intervention  4 Credit Hours
This course provides an introduction to the theories, practice, and ethical issues in clinical psychology. The emphasis is on the application of psychotherapeutic processes. Topics include ethical practices, formation of a therapeutic relationship, use of basic counseling skills, differing clinical orientations, and a review of relevant research. (W)

Restriction(s):
Can enroll if Class is Graduate
Can enroll if Program is MS-Psychology

PSYC 548  Psychological Assessment I  4 Credit Hours
This course is the first of a two-course sequence for graduate students who require an advanced knowledge of psychological assessment. Course content includes an overview of interviewing, behavioral observations, and personality tests used in clinical practice. The emphasis includes both an overview of research-based knowledge and practical application of assessment techniques through supervised lab experience. Only individuals admitted to the Clinical Health Psychology program can enroll. (S,YR)

Prerequisite(s): PSYC 545

Restriction(s):
Can enroll if Program is MS-Psychology

PSYC 549  Psychological Assessment II  4 Credit Hours
This course is the second of a two-course sequence designed for graduate students who require an advanced knowledge of psychological assessment. Course content includes an overview of tests and measures used in clinical practice, particularly those used in the assessment of intelligence, achievement, adaptive behavior, and child evaluation. The emphasis includes both an overview of research-based knowledge and practical application of assessment techniques through supervised lab experience. (F)

Prerequisite(s): PSYC 545

Restriction(s):
Can enroll if Class is Graduate

PSYC 550  Personality Theory  3 Credit Hours
A comparative review and examination of leading theories of personality, their basic concepts, similarities and differences, applications in clinical psychology, in education, social planning and in research. Additional reading assignments or projects will distinguish this course from its undergraduate version PSYC 450. Students cannot receive credit for both PSYC 450 and PSYC 550. (YR).

Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

Restriction(s):
Can enroll if Class is Graduate

PSYC 552  Adv Tech in Therapeutic Inter  3 Credit Hours
This course introduces clinical health psychology graduate students to the theory and application of cognitive-behavioral therapy and mindfulness therapies. The course is aimed at providing students with a thorough understanding of the theory behind these modalities, as well as the experiential application of the associated therapy techniques in a clinical setting.

Prerequisite(s): PSYC 547

Restriction(s):
Can enroll if Program is MS-Psychology

PSYC 555  Health Psychology  3 Credit Hours
A discussion of the research on health promotion, psychological factors in the development of illness, cognitive representations of health and illness, stress and coping, social support, nutrition and exercise. Focus will be on the factors related to the development and maintenance of optimal health. (YR).

Restriction(s):
Can enroll if Class is Graduate

PSYC 557  Advanced Health Psychology  3 Credit Hours
This course will examine the research on psychological factors associated with the development and/or progression of illness, as well as psychological and social factors in health promotion. Topics include cognitive and social representation of health and illness, stress and coping, factors and interventions for behavioral change and the development of healthy lifestyles, and the treatment of psychological and behavioral risk factors for illness.

Restriction(s):
Can enroll if Class is Graduate
Can enroll if Program is MS-Psychology

PSYC 561  Learning and Memory  3 Credit Hours
A consideration of major theories and research results related to learning and memory. Additional reading assignments or projects will distinguish this course from its undergraduate version PSYC 461. Students cannot receive credit for both PSYC 461 and PSYC 561. (YR).

Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

Restriction(s):
Can enroll if Class is Graduate

PSYC 563  Sensation and Perception  3 Credit Hours
Analysis of basic sensory and perceptual phenomena with a review of relevant behavioral and physiological literature. Additional reading assignments or projects will distinguish this course from its undergraduate version PSYC 463. Students cannot receive credit for both PSYC 463 and PSYC 563. (YR).

Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

Restriction(s):
Can enroll if Class is Graduate
PSYC 564  Applied Cognitive Psych   3 Credit Hours
The focus will be on the application of principles of cognitive psychology (defined broadly to include sensation and perception) to benefit the student in real-life settings. Specific areas might include human factors, retention, recall, attention, reasoning, problem-solving, decision making, reading, comprehension, learning, and language. (S,YR)

PSYC 565  Ind&Grp Tech in Cln Hlth Psyc  3 Credit Hours
An introduction to the variety of assessment and intervention procedures used by health psychologists in medical settings; issues in medical consultation and liaison. Techniques discussed fall in areas such as stress management, smoking cessation, weight management, and the treatment and prevention of cardiovascular disease, cancer, and HIV/AIDS. The theoretical, conceptual, and empirical bases of intervention will be stressed. Prerequisites required or permission of instructor. Preference will be given to students enrolled in the Master of Science in Health Psychology Program. (YR).

Prerequisite(s): PSYC 547

Restriction(s):

Can enroll if Class is Graduate

PSYC 570  Advanced Physiological Psych  3 Credit Hours
Further study of the subject matter of PSYC 431. Advanced study of topics in the area of psychology. Additional reading assignments or projects will distinguish this course from its undergraduate version PSYC 470. Students cannot receive credit for both PSYC 470 and PSYC 570. (YR).

Prerequisite(s): PSYC 370

Restriction(s):

Can enroll if Class is Graduate

PSYC 574  Animal Learning and Cognition  3 Credit Hours
Animal Intelligence involves the study of human and non-human animal behavior and cognition in an evolutionary and comparative framework. As an introduction to human and non-human animal cognition and though processes this course will examine topics such as problem-solving, spatial cognition, categorization, memory, number concepts, tool-use and tool-production, insight, imitation, social cognition, self-recognition and language-like behavior. In addition to discussing basic experimental findings about cognition in animals, an emphasis is placed on the logic and evidence used to justify theoretical conclusions. The course requires reading and critiquing original journal articles in addition to textbook chapters for foundational concepts.

Prerequisite(s): PSYC 372 or PSYC 363 or PSYC 461 or BIOL 419 or BIOL 456 or ANTH 336

Restriction(s):

Can enroll if Class is Graduate

PSYC 575  Bio Foundations of Health Psy  3 Credit Hours
Advanced study of the anatomical, physiological, and chemical correlates of behavior and mental processes, including the relationships among brain and body functions/structure (neurochemistry, histology, anatomy), psychological variables (motor behavior, motivation, emotion, perception, learning, memory), health, and mental and physical illness. Integrates experimental and clinical research methodologies. Prerequisites or permission of instructor. Preference will be given to students enrolled in the Master of Science in Health Psychology Program. (YR).

Prerequisite(s): PSYC 555 or PSYC 455 or PSYC 557

Restriction(s):

Can enroll if Class is Junior or Senior or Graduate

PSYC 579  Psychopharmacology  3 Credit Hours
This course will provide students with an introduction to the use of psychotropic medications for the treatment of various mental health conditions. The course is designed to give students historical and current knowledge of pharmacodynamics, therapeutic indication, side effects, and efficacy treatment. The course will also examine the ethical and societal factors that are involved in the use of psychotropic medications. (W, OC)

Prerequisite(s): PSYC 545 or PSYC 575

PSYC 5825  Basic Methods Health Psych  3 Credit Hours
This course assumes a basic background in statistics and methodology and builds from there, with special emphasis on methodological issues and statistical techniques appropriate to Health Psychology. Computer skills related to statistical packages, databases, etc. will be stressed. Specific methods and analyses include multiple regression, ANOVA, ANCOVA, MANOVA, factor analysis, power, validity, experimental design, placebo effects, and random sampling. Preference will be given to students enrolled in the Master of Science in Health Psychology Program. (F).

Restriction(s):

Can enroll if Class is Senior or Graduate

PSYC 5835  Adv Methods Health Psy  3 Credit Hours
As a continuation of PSYC 5825, this course assumes a more advanced background in statistics and methodology. The course focuses on methodological issues and statistical techniques appropriate to Health Psychology. Computer skills related to statistical packages, databases, etc. will be stressed. Specific methods and analyses include survey research, program evaluation, epidemiological research, qualitative research, MANCOVA, multiple regression, logistic regression, cluster analysis, and meta-analysis. Preference will be given to students enrolled in the Master of Science in Health Psychology Program. (F).

Prerequisite(s): PSYC 5825

Restriction(s):

Can enroll if Class is Senior or Graduate

PSYC 584  Research Methods in Beh Med  3 Credit Hours
This course introduces graduate health psychology students to laboratory based research methods typically used in behavioral medicine. The focus is on laboratory methods of cardiovascular and pain research, specifically cardiovascular reactivity, heart rate variability, acute and chronic pain responses. The class also includes several special topics related to health psychology research (e.g., skin conductance, cortisol sampling, etc.). Students are responsible for physical implementation of research protocols, data analysis, and presentation of research findings. (W, YR).

Prerequisite(s): PSYC 557

Restriction(s):

Can enroll if Program is

PSYC 585  Psychology Internship  3 Credit Hours
The psychology internship offers experience in a wide variety of placements dealing with human services. These include programs related to child abuse, crisis intervention, developmental disabilities, geriatrics, human resources/staff development, probation departments, teenage runaways, substance abuse, and women's issues. The program involves training in listening and helping skills. Written permission of instructor is required. Additional reading assignments or projects will distinguish this course from its undergraduate version PSYC 485. (F,W).

Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101

Restriction(s):

Can enroll if Class is Graduate
PSYC 588  Primatology Field Course  3 Credit Hours
This Primatology Field course will take students through an exploration of the scientific approach and methodology to the study of animal behavior. Students will gain experience in creating research projects and collecting data on free-ranging animals in a naturalistic environment. Preparation in lectures and activities on the campus of The University of Michigan-Dearborn will include learning about observational methods in detail, practicing developing ethograms and operational definitions, pilot data collection to modify the ethograms at the Detroit or Toledo Zoo, and use of GPS for data collection. Lecture materials will also cover topics of primate behavior and ecology. Students will spend a week observing a primate species (for example, one possible site for this field course may be to observe free-ranging lemurs at a reserve in Florida). Student's data collection at the field site will be for five continuous days. This field course provides a unique opportunity to study rare and endangered primates species in a safe and accessible environment. Short day trips to other facilities are possible, such as a visit to an ape sanctuary. Topics covered in this field course include advanced observational methods stemming from the field of Ethology, practical development of ethograms (check sheets) and research design, best practices in GPS data collection methods, and collating and summarizing data on animal behavior into a research paper. Lecture topics will address ethological methods and research design and also how to conduct research with free-ranging nonhuman primates. In addition there will be a strong focus on health and safety precautions in the field for human and nonhuman primates, acclimation to the field site, and practicalities of data collection. For graduate credit on this course, extra journal articles and longer written papers required than for the undergraduate requirements.
Restriction(s):
Cannot enroll if Class is Freshman
PSYC 590  Adv Topics in Psychology  1 to 3 Credit Hours
This course provides an introduction to the field of psychoneuroimmunology. This area of study is concerned with the multidirectional communication between psychological processes such as stress or depression and central/peripheral nervous system, endocrine system, and immune system functioning. Ultimately, this field seeks to understand the relative contribution of psychological processes to traditional disease states (cardiovascular disease, pregnancy complications, etc). Students will learn the basic functioning of the immune system, and pathways via endocrine and nervous system functioning by which psychological processes influence immune functioning. Finally, students will learn the current state of research examining the relationship between psychological processes and disease outcomes. Students cannot receive credit for both PSYC 590 and PSYC 490.
Prerequisite(s): PSYC 455 or PSYC 555
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate
PSYC 590E  Advanced Topics in Psychology  2 Credit Hours
The topic: Research and Clinical Ethics. Provides graduate psychology students with extended examination of current information and decision making strategies on professional and ethical issues associated with service delivery, research, and teaching.
PSYC 592  Individual Research  1 to 3 Credit Hours
No more than 6 hours may be counted for concentration. Arrangements will be made for adequately prepared students to undertake individual research under the direction of a member of the staff. The students, in electing, should indicate the staff member with whom the work has been arranged. Additional reading assignments or projects will distinguish this course from its undergraduate version PSYC 492. Students cannot receive credit for both PSYC 492 and PSYC 592. (YR).
Restriction(s):
Can enroll if Class is Graduate
PSYC 593  Ethical Issues  3 Credit Hours
Provides graduate psychology students with current information and decision making strategies on professional and ethical issues associated with service delivery, research, and teaching. (F,YR)
Restriction(s):
Can enroll if Class is Graduate
PSYC 697  Health Psych Thesis Research  3 to 6 Credit Hours
Students electing the Thesis option in the last stage of the Master of Science in Health Psychology program will work under the general supervision of a member of the graduate faculty in the Behavioral Sciences Department but will plan and carry out the work independently. A prospectus for the thesis must be approved by the Master of Science in Health Psychology program director before the student registers for the course. The student will submit a report on the thesis and give an oral presentation to a panel of faculty members when the thesis is completed. (YR)
Restriction(s):
Can enroll if Class is Graduate
PSYC 698  Pract. Clinical Health Psyc  3 to 6 Credit Hours
The Practicum in Clinical Health Psychology offers students supervised clinical experience in a variety of clinical health and human service settings. The practicum is designed for students in the MS in Clinical Health Psychology program who have completed all coursework related to clinical diagnoses, assessment and therapy. Written permission of instructor or Program Director required.
Prerequisite(s): PSYC 545 and PSYC 547 and PSYC 548 and PSYC 549 and PSYC 565 and PSYC 593
Restriction(s):
Can enroll if Program is MS-Psychology

Public Administration and Public Policy (PAPP)

PAPP 500  Topics in Pub Admin & Policy  1 to 3 Credit Hours
This course will examine a major topic or set of related topics in public administration and/or public policy. The topics may change and, therefore, it is possible to take the course more than once. (OC)
Restriction(s):
Cannot enroll if Level is Graduate
PAPP 502  Politics of Public Policy  3 Credit Hours
This course explores how public policy is made in the United States, with a special emphasis on inter-relationship of policy and politics. We examine how political and other variables converge to create an often maddening, but inescapable, set of contradictions (a.k.a. paradoxes) that both hamper rationality and enable sustainability of our governmental systems. Policy and politics are inseparable. This course will help you understand why and assess the benefits and disadvantages of this reality. (W,YR)
Restriction(s):
Can enroll if Level is Rackham or Graduate

PAPP 505  Intro to Public Admin  3 Credit Hours
This introductory course provides an overview of topics encountered in government or nonprofit administrator positions. Topics emphasized in the seminar include decision making, finance, human resource, leadership, performance, accountability, organizational responsiveness, and strategic management. (F,YR)
Restriction(s):
Can enroll if Level is Rackham or Graduate

PAPP 520  Govt & Nonprofit Leadership  3 Credit Hours
This course examines the complex but critical top of leadership in public affairs. It examines leadership theories, styles, and practices and how these affect the way that public and nonprofit organizations operate. (F,A,Y)
Restriction(s):
Can enroll if Level is Rackham or Graduate

PAPP 523  Administrative Law  3 Credit Hours
This class will focus on important legal and regulatory issues as they relate to public, education, and nonprofit organizations. It will consider the various court and administrative decisions which affect these. Numerous case situations will be used to facilitate the students' learning. (F,A,Y)
Restriction(s):
Can enroll if Class is Graduate

PAPP 527  Pub Relations for Govt/Nonprof  3 Credit Hours
This seminar explores the interaction of government and nonprofit organizations with the public. It is particularly concerned with the way these organizations communicate with citizens and organizations and engage them in their operations and decision-making. (S,A,Y)
Restriction(s):
Can enroll if Level is Rackham or Graduate

PAPP 537  Behavioral Public Policy  3 Credit Hours
This course teaches you to apply the insights from behavioral economics and psychology to public policy design. Empirically-based behavioral science offers policy makers the opportunity to decrease the impact of psychological limitations of lazy or boundedly rational individuals. In this course we consider various public policies that are informed by behavioral science research in the areas of retirement savings, household borrowing, health care, energy use and choice of nutrition. (S,A,Y)
Prerequisite(s): ECON 201 and ECON 202
Restriction(s):
Cannot enroll if Class is
Can enroll if Level is Graduate

PAPP 540  Government & Nonprofit Finance  3 Credit Hours
This course provides a critical understanding of finance for governmental and nonprofit organizations. Students examine how revenue is derived and spent, how organizations craft and manage budgets, and how accounting and financial reporting aid operations and transparency. Special attention is given to the ways in which the publicness of government and nonprofit organizations creates significant differences between their finances and those of business. (F,W)
Restriction(s):
Can enroll if Level is Rackham or Graduate

PAPP 545  Grant Writing & Management  3 Credit Hours
This course prepares students planning careers in public and nonprofit organizations to win and manage grants for their organization. Students will learn how to research and identify strong grant prospects, build relationships with foundation program officers, draft letters of intent and full proposals, and manage grant funds once they are received. Students will also become familiar with public sector risk management associated with grant stewardship. (S,Y)
Restriction(s):
Can enroll if Level is Rackham or Graduate

PAPP 548  Fundraising  3 Credit Hours
The course provides a thorough grounding in the principles and practice of fundraising. It examines the lifecycle of fundraising from planning your fundraising strategy to reporting to donors about the impact of their support. Broad topics, such as the history of fundraising, ethics of fundraising, and donor behavior will, as well as specific practices, such as developing a case for support and developing relationships with donors will be covered. (F,YR)
Restriction(s):
Can enroll if Class is Graduate

PAPP 555  Network Collaboration  3 Credit Hours
This course focuses on collaboration as a form of service delivery by government and nonprofits. It examines different types of collaboration across sectors, focusing on collaborative governance. Emphasis is placed on practical skills such as designing, managing, and evaluating collaborations, but critical conceptual aspects of network collaboration are also addressed. NOTE: The online course may require some synchronous participation in simulations and group exercises; dates and time will be determined by student groups. (GR)
Restriction(s):
Can enroll if Level is Graduate

PAPP 560  Admin of Human Resources  3 Credit Hours
This seminar will examine human resource administration activities in public, educational and nonprofit settings. Issues such as recruiting, selection, planning, performance appraisal, contracting and collective bargaining will be related to the overall administrative activities. Emphasis will be placed on the connections between human resource issues in public, education, and nonprofit organizations.
Restriction(s):
Can enroll if Level is Graduate

PAPP 561  Organization Develop & Theory  3 Credit Hours
This course focuses on organizational change. Students will learn why and how organizations pursue planned change to improve outcomes. They will explore topics of organization theory, such as organization culture, structure, power, and environmental influences on organizations, as well as behavioral science theories on individual and group behavior. Students will apply this knowledge in examining specific techniques used to stimulate and guide organizational change. (F,A,Y)
Restriction(s):
Can enroll if Level is Graduate
PAPP 562 Govt & Nonprof Labor Relations 3 Credit Hours
The seminar considers conceptual and practical aspects of management-labor relations in public and nonprofit settings, with an emphasis on labor unions, collective bargaining, and civil service. It also develops initial competency in the various activities associated with collective bargaining situations. (OC)
Restriction(s):
Can enroll if Level is Graduate

PAPP 564 Performance Appraisal 3 Credit Hours
Evaluating the performance of employees is crucial to the motivation of the individual and the success of the organization. Evaluating the performance of organizations helps leaders direct resources to areas where they can have the most impact. This class will consider the available methods for assessing individual and organizational performance in public and nonprofit settings. (S,AY)
Restriction(s):
Can enroll if Level is Graduate

PAPP 580 Stat Method for Decisionmaking 3 Credit Hours
This course introduces students to descriptive and basic inferential statistics and how organizational leaders can use them to aid decision making. (FW)
Restriction(s):
Can enroll if Level is Rackham or Graduate

PAPP 581 Strategic Mgt for Pub Admin 3 Credit Hours
This course examines concepts, tools, and actions used by administrators to ensure that their organizational resources are continually devoted to accomplishing the organization's mission. Crafting and communicating effective missions and visions, developing and implementing strategic plans, measuring & assessing performance, monitoring environmental influences, conducting needs assessments, and incorporating mission-oriented criteria into financial and human resources management are examples of the topics covered. (S,AY)
Restriction(s):
Can enroll if Level is Graduate

PAPP 582 Policy Analysis & Development 3 Credit Hours
Policy formulation involves two different activities: 1) identifying and assessing alternative courses of action, i.e., deciding what, if anything, needs to be done about a problem; and 2) developing the policy, regulation or law that will carry an agreement in principle into effect. Both aspects of policy development will be covered in the course.
Restriction(s):
Can enroll if Class is Graduate
Can enroll if Level is Graduate

PAPP 583 Program Evaluation 3 Credit Hours
This class will examine procedures for evaluating programs in public, education and nonprofit settings. The concern will be to examine the various techniques available to determine whether a program is doing what it was intended to do. Students will utilize various techniques in examining a variety of case situations.
Restriction(s):
Can enroll if Class is Graduate

PAPP 584 Revitalizing Cities 3 Credit Hours
What have we done to address decline in city neighborhoods and downtowns? Why? How has it worked? Why? What's the hope for the future? This course uses a public policy lens to engage students in a request for answers to these questions. (YR)

PAPP 585 Admin Tech in Organizations 3 Credit Hours
We examine strategies and practices used by government and nonprofit administrators to plan for and manage technology effectively within their organizations. (OC)
Restriction(s):
Can enroll if Level is Graduate

PAPP 586 Ethics of Admin & Public Pol 3 Credit Hours
This course critically examines ethical issues encountered by public administrators and policymakers. It examines ethical considerations related to managing people and other organizational resources and designing and implementing public policy. It seeks to help students identify, understand, and deal effectively with the ethical dimensions of leadership in the public and nonprofit sectors. (FW)
Restriction(s):
Can enroll if Level is Graduate

PAPP 650 Admin & Policy Capstone 3 Credit Hours
This "capstone" seminar involves the assessing MPAP degree candidates' knowledge, skills and abilities in core program areas. Students complete capstone projects, finalize and present professional portfolios, and assess their experience in the MPAP program. (FW)
Restriction(s):
Can enroll if Level is Graduate

PAPP 690 Direct Study in Pub Adm/Policy 1 to 3 Credit Hours
This course will permit students to explore subjects not currently offered in regular course but within the capacity of existing faculty and under that faculty member's supervision. To be elected only with the permission of the program director and an instructor. (OC)
Restriction(s):
Can enroll if Level is Graduate

Religious Studies (RELS)

RELS 501 Religion in Contemp US Culture 3 Credit Hours
The purpose of this course is to provide people in contemporary multi-religious America foundational information about beliefs and practices of several of the world's religions sufficient to engage in inter-religious dialogue. Special emphasis will be given to changes in the American religious landscape after 1965 with the passage of new immigration laws. The course will combine lectures and visits to a variety of Metropolitan Detroit religious centers including Hindu, Buddhist, Jain, Sikh, Jewish, Christian, Muslim, and Native American. (YR,S)
Restriction(s):
Can enroll if Class is Graduate

Can enroll if Level is Graduate
Sociology (SOC)

SOC 200 or SOC 201

SOC 385 Minority Groups 3 Credit Hours
The status of racial and ethnic minorities in the United States with particular reference to the social dynamics involved with regard to majority-minority relations. Topics of study include inequality, segregation, pluralism, the nature and causes of prejudice and discrimination and the impact that such patterns have upon American life. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 403. Students cannot receive credit for both SOC 403 and SOC 503. (AY)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 504 Dissed: Differ, Power, Discrim 3 Credit Hours
Have you ever been dissed? Why are some people targets of disrespect? This class examines the unequal distribution of power - social, economic, and political - in the United States and other countries that results in favor for privileged groups. We will examine a variety of institutional practices and individual beliefs that contribute to disrespect. We'll look at ways that beliefs and practices, like viewing inequality as consequence of a 'natural order', obscure the processes that create and sustain social discrimination. We will engage in the intellectual examination of systems, behaviors, and ideologies that maintain discrimination and the unequal distribution of power and resources. Students will not receive credit for both SOC 404 and SOC 504. This course is distinguished from its 400-level counterpart by the requirement of additional assignments, including a required additional paper.
Restriction(s):
Can enroll if Class is Graduate

SOC 509 Feminist Theories 3 Credit Hours
This course examines the different perspectives that feminist theorists have offered to analyze the unequal conditions of women's and men's lives. Students taking this course will develop an understanding of how theory functions as a way to know, understand and change the world. They will also be provided with a lens for comparing the assumptions and implications of alternative theoretical perspectives. A particular emphasis of this course is on theorizing the interrelationships among gender, race, class, sexuality and nationality. Course material includes applications of feminist theory to issues such as gender identity formation; sexuality; gender, law and citizenship; women and work; and the history and politics of social movements. Students will not receive credit for both WGST 409 and WGST 509. Additional reading assignments or projects will distinguish this course from its undergraduate version.
Prerequisite(s): LIBS 560

SOC 510 Quantitative Research & Stats 4 Credit Hours
An introduction to methods of data collection and analysis. Also a discussion of research design and the philosophy of social sciences. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 410. Students cannot receive credit for both SOC 410 and SOC 510. (F,W,S)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 511 Program Evaluation 3 Credit Hours
The application of social research procedures in assessing whether a human service program is needed, likely to be used, conducted as planned and actually helps people in need. The course will cover research and measurement as well as issues of how to get research findings utilized. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 411. Students cannot receive credit for both SOC 411 and SOC 511. (YR)
Prerequisite(s): SOC 200 or SOC 201 or PSYC 170 or PSYC 171 or POL 101 or PSYC 101
Restriction(s):
Can enroll if Class is Graduate

SOC 523 American Social Classes 3 Credit Hours
Stratification of American communities and society; a review of the findings of major studies and an introduction to methodology. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 423. Students cannot receive credit for both SOC 423 and SOC 523. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 526 Society and Aging 3 Credit Hours
Personal, interpersonal, and institutional significance of aging and age categories. Sociological dimension of aging based on social, psychological, and demographic factors. Attention to social networks and institutionalization. Additional assignments or projects will distinguish this course from its undergraduate version SOC 426. Students cannot receive credit for both SOC 426 and SOC 526. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 533 Race/Ethnic Health 3 Credit Hours
Full Course Title: Race, Ethnicity and Community Health This course provides a broad overview of health disparities in the United States, with a focus on the three types of social inequality-race ethnicity (and nativity status), socioeconomic status (SES), and gender. Epidemiological issues, health behaviors, health care services, and health and social issues specific to various minority populations in the U.S. are covered. The underlying position of the course is that understanding groups that are at higher risk of developing poor health outcomes is crucial to developing better health care and health policy interventions. (OC)
SOC 535  Urban Sociology   3 Credit Hours
A descriptive study of the form and development of the urban community
with respect to demographic structure, spatial and temporal patterns,
and functional organization. The relationship of city and hinterland.
Social planning and its problems in the urban community. Additional
reading assignments or projects will distinguish this course from its
undergraduate version SOC 435. Students cannot receive credit for both
SOC 435 and SOC 535. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 540  Medical Sociology   3 Credit Hours
An analysis of health and illness behaviors from the point of view of
the consumer, as well as the medical professionals, the structure, strengths,
and weaknesses of the medical care delivery system in the U.S.; the
impact of culture and personality on illness behavior; and a study of
the institution of medicine and activities of health care professionals.
Additional reading assignments or projects will distinguish this course from its
undergraduate version HPS 440. Students cannot receive credit for both
HPS 440 and HPS 540. (F).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 542  Sociology of Work   3 Credit Hours
The study of work roles in modern society. The impact of industrialization,
professionalization, and unionization on the conditions of work, worker
motivation and job satisfaction. Career choice processes and
career patterns, occupational status and prestige, and occupational
associations are among the topics to be considered. Additional
reading assignments or projects will distinguish this course from its
undergraduate version SOC 442. Students cannot receive credit for both
SOC 442 and SOC 542. (YR)
Prerequisite(s): SOC 201 or SOC 200
Restriction(s):
Can enroll if Class is Graduate

SOC 543  Gender Roles   3 Credit Hours
This course will investigate the development of gender roles in childhood
and adolescence due to either innate physiological differences or
sociological patterning, the effect of gender roles upon male-female
relationships within our society, and the possibility of transcending
sociological gender roles in alternate modes of living. Additional
reading assignments or projects will distinguish this course from its
undergraduate version SOC 443. Students cannot receive credit for both
SOC 443 and SOC 543. (YR)
Prerequisite(s): PSYC 170 or PSYC 171 or SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 545  The Family   3 Credit Hours
The family is an institution shaped by other aspects of society, as a social
system with its own dynamics, and as a primary group affecting the lives
of its members. Historical and contemporary materials from the United
States and other cultures. Additional reading assignments or projects will
distinguish this course from its undergraduate version SOC 445. Students
cannot receive credit for both SOC 445 and SOC 545. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 546  Marriage and Family Problems   3 Credit Hours
A sociological analysis of problems encountered within the institution of
marriage with particular reference to such issues as choosing a marriage
partner, sexual adjustment, occupational involvement, conflict resolution,
child rearing, divorce and readjustment. Additional reading assignments
or projects will distinguish this course from its undergraduate version
SOC 446. Students cannot receive credit for both SOC 446 and SOC 546.
(YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 547  Family Violence   3 Credit Hours
Sociological analyses of various forms of family violence which occur
disproportionately in the lives of girls and women. Topics such as
incest, sexual abuse, date rape, wife battering, and elder abuse will be
situated within the social and cultural context of contemporary gender
relationships. Social and political responses to the phenomena will be
examined. Additional reading assignments or projects will distinguish
this course from its undergraduate version SOC 447. Students cannot
receive credit for both SOC 447 and SOC 547. (F).
Prerequisite(s): SOC 200 or SOC 201 or SOC 301 or SOC 443 or PSYC 405
or WST 405 or PSYC 505 or WST 505 or SOC 543
Restriction(s):
Can enroll if Class is Graduate

SOC 548  Comparative Health Care System   3 Credit Hours
An introduction and overview of the English, Swedish, and People's
Republic of China health care systems. Focus on cultural and other
organizational characteristics, unique features, approaches and ability to
solve problems. Emphasis on how the three systems help us understand
the American health care system. Additional reading assignments or
projects will distinguish this course from its undergraduate version HPS
448. Students cannot receive credit for both HPS 448 and HPS 548. (F, S,
W).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 550  Political Sociology   3 Credit Hours
Examines how society effects the distribution and exercise of
power through analyzing linkages between power, participation, and
perspectives. Studies of political participation and social organization,
ideology, and social conflict, as well as political socialization, represent
some of the major parameters. Additional reading assignments or
projects will distinguish this course from its undergraduate version SOC
450. Students cannot receive credit for both SOC 450 and SOC 550.
(YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 553  Sociology of Law   3 Credit Hours
Various aspects of the relationship between law and society are
explored. After a look at processes of law-making, attention is turned
to the administration of law. This involves a study of the activities
of legislatures, courts, police and correctional agents. Additional
reading assignments or projects will distinguish this course from its
undergraduate version SOC 453. Students cannot receive credit for both
SOC 453 and SOC 553. (YR)
Prerequisite(s): SOC 200 or SOC 201 or PSYC 101
Restriction(s):
Can enroll if Class is Graduate
SOC 554  Mental Health and the Law  3 Credit Hours
Courts and legislatures now control much of the work of mental health professionals such as social workers, counselors, therapists, and psychologists. This course looks at problems encountered in putting laws and policies into effect. These implementation problems are much the same in other areas of government action, such as poverty programs and pollution control. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 454. Students cannot receive credit for both SOC 454 and SOC 554. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 555  Sociology of Religion  3 Credit Hours
Religion as a social institution; its purposes, methods, structures, and beliefs, and its relation to other institutions. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 455. Students cannot receive credit for both SOC 455 and SOC 555. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 556  Health Care and the Law  3 Credit Hours
A sociological study of legal issues in health care, including regulation of hospitals, consent for treatment, confidentiality, experimentation, family planning, children's rights, access to health care. The emphasis will be on the organizational and personal consequences of legal requirements. Junior/Senior standing is a requirement. Students cannot receive credit for both HPS 456 and HPS 556. (W)
Prerequisite(s): SOC 200 or SOC 201 or POL 364
Restriction(s):
Can enroll if Class is Graduate

SOC 558  Sociology of Education  3 Credit Hours
Education as a social institution; its purpose, methods, structure, and philosophy, and its relation to other institutions, particularly in the urban setting. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 458. Students cannot receive credit for both SOC 458 and SOC 558. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 560  America in a Global Society  3 Credit Hours
Social studies in America are studied from an internal and an external perspective. The internal dynamics of social change emphasize the role of social movements, e.g. the impact of the civil rights movement on American culture and politics. The external perspective sees America as part of a changing global society. The development of the capitalist world system from its origins in Western Europe to its present global reach is examined. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 460. Students cannot receive credit for both SOC 460 and SOC 560. (OC)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 565  Deviant Behavior/Soc Disorganz  3 Credit Hours
A general analysis of the concept of social deviance and social disorganization: factors producing each condition, the effects of social control measures on the course of deviance and disorganization, consequences for the social system, and the relationship between the two. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 465. Students cannot receive credit for both SOC 465 and SOC 565. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 566  Drugs, Alcohol, and Society  3 Credit Hours
Analyses of the sociology of substance use and abuse. Provide a sociological framework for understanding issues and evaluating our nation's responses to the phenomenon of drug use. Drawing on sociocultural and social psychological perspectives, this course systematically examines the social structure, social problems, and social policy aspects of drugs in American Society. Additional assignments will distinguish this course from its undergraduate version.
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 567  Comparative Hlth Systems:Trip  3 Credit Hours
A unique combination of lectures, field trips, visits with general practitioners, specialists, hospital observations, talks with health policy planners, researchers, and many others. Personal experience in two health care systems. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 479. Students cannot receive credit for both SOC 479 and SOC 567. (AY)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 568  Gender and Globalization  3 Credit Hours
Mass media, politics, and academia are full of references to globalization, and a future "world without borders." This interdisciplinary course considers the implication of globalization for women's lives, gender relations, and feminism. Topics covered include the global factory, cross-cultural consumption, human rights, global communications, economic restructuring, nationalism, and environmental challenges. Rather than survey international women's movements, this course explores how globalization reformulates identities and locations and the political possibilities they create. Students cannot receive credit for both SOC 481 and SOC 581. (AY).
Restriction(s):
Can enroll if Class is Graduate
Can enroll if College is Arts, Sciences, and Letters
SOC 583 Images of Organizations 3 Credit Hours
Formal bureaucratic organizations such as government agencies, hospitals, and colleges are distinctive features of modern industrialized societies. Analysis of types of formal organizations, their goals, structure, and consequences for intra- and inter-organizational behavior helps to understand how to deal with a complex world. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 483. Students cannot receive credit for both SOC 483 and SOC 583. (YR)
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

SOC 590 Advanced Topics in Sociology 3 Credit Hours
A seminar in which selected topics pertaining to sociology are studied in depth. (YR).
Restriction(s):
Can enroll if Class is Graduate

SOC 590A Advanced Topics in Sociology 3 Credit Hours
TOPIC: Diasporas and (Trans) Nationalism: Gender, Race, and Post/Coloniality. An interdisciplinary and comparative inquiry into historical & contemporary linkages between gender regimes, national formations, and legacies of colonialism as they interact at "home" and in "diasporas." Using multi-media and multi-genre pedagogical tools (conceptual and methodological writings; narratives and biographies; guest lectures; films), we study & critique different perspectives on how the dialectics of geography, positionality, and social structures shape the ways in which we imagine "home", "homeland", and "back home." We examine gendered politics of the colonial project 1) in early days of colonialization; 2) during struggles of decolonization; and 3) "post-colonial" geographies While becoming familiar with "classics" in nationalism/transnationalism, gender, colonialism, and diaspora, we will explore their applicability to specific case studies in European and American contexts as well as in Africa, Asia, and the Middle East.

SOC 598 Independent Study 1 to 6 Credit Hours
Analytical assignments in sociology.
Restriction(s):
Can enroll if Class is Graduate

Spanish (SPAN)

SPAN 521 Advanced Translation 3 Credit Hours
The course will continue to apply the translation theory and techniques introduced in Spanish 420, and it will continue to focus on English-to-Spanish and Spanish-to-English non-literary translation. Emphasis will be placed on materials selected from the fields of business, advertising, and legal discourse. Class projects will include translation of advertisements, legal documents, and business brochures. (AY,W).
Prerequisite(s): SPAN 305 and SPAN 420
Restriction(s):
Can enroll if Class is Graduate
Cannot enroll if Level is Undergraduate

Speech (SPEE)

SPEE 530 Small Group Communications 3 Credit Hours
A survey of small group behavior from the perspectives of theory, research, and practice. Activities and discussion will emphasize skills in leadership, problem solving, policy making, and the development of consensus. (F,W,S)
Prerequisite(s): SPEE 101
Restriction(s):
Can enroll if Class is Graduate

Statistics (STAT)

STAT 530 Applied Regression Analysis 3 Credit Hours
Topics include single variable linear regression, multiple linear regression and polynomial regression. Model checking techniques based on analysis of residuals will be emphasized. Remedies to model inadequacies such as transformation will be covered. Basic time series analysis and forecasting using moving averages and autoregressive models with prediction errors are covered. Additional assignments in logistic regression and forecasting will distinguish this course from its undergraduate version, STAT 430. Statistical packages will be used. Students cannot receive credit for both STAT 430 and STAT 530.
Prerequisite(s): STAT 425 or STAT 325 or IMSE 317
Restriction(s):
Can enroll if Level is Rackham or Graduate

STAT 535 Data Analysis and Modeling 3 Credit Hours
Linear models including models with factors associated with both fixed and random effects together with covariates. Models containing more complex covariance structure including repeated measures and time dependence. The statistical processing package SAS will be used extensively to analyze data associated with such models. The SAS procedures Proc GLM, Proc REG, and Proc Mixed will be used extensively in examples, assignments, and projects. (OC).
Restriction(s):
Can enroll if Class is Graduate

STAT 545 Reliability & Survival Analys 3 Credit Hours
Parametric and nonparametric modeling of reliability data from industrial experiments and survival data from biological experiments where the data may be censored. This includes models where covariates are present and where the data may be from the Weibull, log-normal, or the gamma distribution and also the nonparametric proportional hazards model and Cox regression. The statistical processing package SAS will be used extensively to analyze data associated with such models. The SAS procedure Proc LIFEREG will be used to analyze parametric regression models and the procedure Proc LIFETEST will be used to analyze nonparametric regression models in examples, assignments, and projects. (OC).
Restriction(s):
Can enroll if Class is Graduate

STAT 550 Multivariate Stat Analysis 3 Credit Hours
An introduction to commonly encountered statistical and multivariate techniques, while assuming only a limited knowledge of higher-level mathematics. Topics include: multivariate analysis of variance, multivariate regression, principal components and factor analysis, canonical correlation, and discriminant analysis.
Prerequisite(s): STAT 530
STAT 555  Environmental Statistics  3 Credit Hours
A wide variety of statistical tests important in environmental sciences will be covered through the use of case studies. Theory and applications of datasets, data displays, and formal statistical inference will be discussed. Students will obtain direct experience with the study and analysis of data, do projects, and write reports. (W, AY)
Restriction(s):
Can enroll if Class is Graduate

STAT 560  Time Series Analysis  3 Credit Hours
An-Introduction to time series, including trend effects and seasonality, while assuming only a limited knowledge of higher-level mathematics. Topics include: linear Gaussian processes, stationarity, autocovariance and autocorrelation; autoregressive (AR), moving average (MA) and mixed (ARMA) models for stationary processes; likelihood in a simple case such as AR(1); ARIMA processes, differencing, seasonal ARIMA as models for non-stationary processes; the role of sample autocorrelation, partial autocorrelation and correlograms in model choice; inference for model parameters; forecasting: dynamic linear models and the Kalman filter.
Prerequisite(s): STAT 530

STAT 590  Topics in Applied Statistics  3 Credit Hours
A course designed to offer selected topics in applied statistics. The specific topic will be announced together with the prerequisites when offered. Course may be repeated for credit when specific topic differs. (OC)
Restriction(s):
Can enroll if Level is Rackham or Graduate

STAT 597  Ind Studies in Statistics  1 to 3 Credit Hours
Independent Study in statistics for topics at the graduate level. Topics and objectives chosen by agreement between students and instructor.

Women's and Gender Studies (WGST)

WGST 501  Images of Women in Germany  3 Credit Hours
This course will focus on the position of women in Germany after WWII and up to and after the unification of East and West Germany. Particular attention will be given to the gendered history of working through the National Socialist past, the division and reconstruction of the two nations, and the terrorism in West Germany in the 1970's. Students will examine images of women in films and tie them to the ideologies of gender and status of women in these larger issues of German history. Course readings will be in English. This course will be distinguished from its undergraduate counterpart, WGST 401, by the inclusion of additional readings and assignments.

WGST 504  Dissed: Differ, Power, Discrim  3 Credit Hours
Have you ever been dissed? Why are some people targets of disrespect? This class examines the unequal distribution of power-social, economic and political in the United States and other countries that results in favor for privileged groups. We will examine a variety of institutional practices and individual beliefs that contribute to disrespect. We'll look at ways that beliefs and practices, like viewing inequality as consequence of a "natural order," obscure the processes that create and sustain social discrimination. We will engage in the intellectual examination of systems, behaviors and ideologies that maintain discrimination and the unequal distribution of power and resources. Student will not receive credit for both WGST 404 and WGST 504. This course is distinguished from its 400-level counterpart by the requirement of additional assignments, including a required additional paper.
Restriction(s):
Can enroll if Class is Graduate

WGST 505  Gender Roles  3 Credit Hours
This course will investigate the development of gender roles in childhood and adolescence due to either innate physiological differences or sociological patterning, the effect of gender roles upon male-female relationships within our society, and the possibility of transcending sociological gender roles in alternate modes of living. Additional reading assignments or projects will distinguish this course from its undergraduate version. WGST 406. Students cannot receive credit for both SOC 443 and SOC 543. (YR).
Prerequisite(s): PSY 170 or PSYC 171 or SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Graduate

WGST 506  Culture and Sexuality  3 Credit Hours
The study of women, men, children, socialization practices and the genesis of sex roles cross-culturally. Additional reading assignments or projects will distinguish this course from its undergraduate version. WGST 406. Students cannot receive credit for both WGST 406 and WGST 506.
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Graduate

WGST 508  Sex, Gender and the Body in International Development  3 Credit Hours
This course provides an overview of sexuality and gender issues in development in the global South, including the differential effects of development policies by gender and sexual orientation, and the role of social movements in transforming development policy frameworks. Students may not receive credit for both WGST 408 and 508. Additional assignments will distinguish this course from its undergraduate counterpart (WGST 408).
Restriction(s):
Can enroll if Class is Graduate

WGST 509  Feminist Theories  3 Credit Hours
This course examines the different perspectives that feminist theorists have offered to analyze the unequal conditions of women's and men's lives. Students taking this course will develop an understanding of how theory functions as a way to know, understand and change the world. They will also be provided with a lens for comparing the assumptions and implications of alternative theoretical perspectives. A particular emphasis of this course is on theorizing the interrelationships among gender, race, class, sexuality and nationality. Course material includes applications of feminist theory to issues such as gender identity formation; sexuality; gender, law and citizenship; women and work; and the history and politics of social movements. Students will not receive credit for both WGST 409 and WGST 509. Additional reading assignments or projects will distinguish this course from its undergraduate version.
Prerequisite(s): LIBS 560

WGST 516  Pts & Prints Early Mod Japan  3 Credit Hours
Painting and woodblock prints of the Edo/Tokugawa (1600-1868) and Meiji II (1868-1912) periods are considered in light of competing developments that on the one hand looked to Japan's classical tradition and on the other to the influence of arts and artists from China and the West. Special attention is given to female artists and images of women.
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 106 or ARTH 241
Restriction(s):
Can enroll if Class is Graduate
WGST 520 Kinship and Marriage 3 Credit Hours
A study of the diversity of kinship and marriage systems, and of the history of kinship theory which has played a seminal role in the development of general anthropological history. Additional reading assignments or projects will distinguish this course from its undergraduate version WGST 420. Students cannot receive credit for both WGST 420 and WGST 520.
Prerequisite(s): ANTH 101 or ANTH 201
Restriction(s):
Cannot enroll if Class is Graduate

WGST 525 Women in Classical Antiquity 3 Credit Hours
This course examines the evidence for the lives of women in Greek, Etruscan and Roman Antiquity, from the Bronze Age through the Imperial Period. Special emphasis will be placed on the archaeological evidence, especially works of art which illustrate women's lives and their relationships with men. Documents such as dedicatory and funerary inscriptions, the poetry of Sappho and Sulpicia, and selections from the writings of Homer, Hesiod, Aristotle, Pliny, Juvenal, and other ancient authors, will also be examined critically, particularly in relationship to the works of art.
Prerequisite(s): ARTH 101

WGST 533 Writing Women in Renaissance 3 Credit Hours
This course will be taught in English, and will focus on the influence of Italian literary models for the construction of female literary types as well as female voices in France and Italy from 1300 to about 1600. Italian authors studied include three very influential Florentines, Dante, Petrarch and Boccaccio, as well as Castiglione and Ariosto. We will read women poets, patrons, prostitutes and queens from Italy and France such as Veronica Gambara, Isabella di Morra, Vittoria Colonna, Christine de Pizan, Louise Labe and Marguerite de Navarre. At issue will be women's roles and women's images in city and court culture during the early modern period and the interaction of their writings with the literary canons of Italy and France.
Restriction(s):
Can enroll if Class is Graduate

WGST 545 20C/21C Women Authors 3 Credit Hours
An analysis of selected works of significant and emerging 20th and 21st century women authors writing in English, with special emphasis on issues of gender and social and cultural identity. Additional assignments will distinguish this course from its undergraduate version.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Can enroll if Class is Graduate

WGST 546 Marriage and Family Problems 3 Credit Hours
Sociological analysis of problems encountered within the institution of marriage with particular reference to such issues as choosing a marriage partner, sexual adjustment, occupational involvement, conflict resolution, child rearing, divorce and readjustment. Students cannot receive credit for both WGST 446 and WGST 546. Additional reading assignments or projects will distinguish this course from its undergraduate version.
Prerequisite(s): SOC 200 or SOC 201 or WGST 275 or WST 275 or PSYC 275 or SOC 275 or ANTH 275 or HUM 275 or WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303

WGST 547 Family Violence 3 Credit Hours
Sociological analyses of various forms of family violence which occur disproportionately in the lives of girls and women. Topics such as incest, sexual abuse, date rape, wife battering, and elder abuse will be situated within the social and cultural context of contemporary gender relationships. Social and political responses to the phenomena will be examined. Additional reading assignments or projects will distinguish this course from its undergraduate version SOC 447. Students cannot receive credit for both SOC 447 and SOC 547. (F).
Prerequisite(s): SOC 200 or SOC 201 or SOC 301 or SOC 443 or PSYC 405 or WST 405 or PSYC 505 or WST 505 or SOC 543
Restriction(s):
Can enroll if Class is Graduate

WGST 550 Feminism & Mod. Mid. East 3 Credit Hours
This course provides an analysis of the history, historiography, and sources for the study of feminism in the Middle East since 1800. Additional assignments will distinguish the graduate version of this course from the undergraduate version.
Restriction(s):
Can enroll if Class is Graduate

WGST 555 Gender and Media Studies 3 Credit Hours
The course will focus on several feminist approaches used in understanding the media and attempting to create social change through the media. The role of media in the definition and reproduction of gender-based hierarchies and in the renegotiation of gender boundaries will both be explored. To this end, both mainstream and women's media will be examined. The course will take a multicultural and international perspective, incorporating concerns of class, race, ethnicity and nation as these intersect with the study of gender and media. Mainstream and alternative media will be analyzed through readings, films, case studies, in-class collaborative exercises and longer term projects. News, entertainment and advertising genres will be examined in a variety of media such as the printed press, television, video film and the Internet.
Prerequisite(s): WGST 275 or WGST 303
Restriction(s):
Can enroll if Class is Graduate

WGST 555 Immigrant Cultures and Gender 3 Credit Hours
The history and culture of immigration since 1850, including: (1) formation and perseverance of immigrant communities and interethnic boundaries; (2) relations between the homeland and the immigrant; and (3) impact of migration on family life and gender roles. Prerequisite and junior or senior standing. Students may not receive credit for both WGST 4555 and WGST 5555. For graduate credit take WGST 5555. This course is distinguished from its 400-level counterpart by the requirement of additional assignments.
Prerequisite(s): LIBS 560
Restriction(s):
Cannot enroll if Class is Graduate

WGST 5650 Sem in US Women's History 3 Credit Hours
Seminar on the historiography and key primary sources related to U.S. Women's History. The course covers examples of classic texts in the field as well as significant new works of scholarship, with an emphasis on critical reading, analysis, and historiography of the field. Students gain a deeper understanding of the field, its guiding concepts, foundational texts, newest trajectories, and impact on the field of history as a whole. The graduate version of this course includes weigter readings and assignments.
Restriction(s):
Can enroll if Class is Graduate
WGST 571 LGBTQ Literature 3 Credit Hours
This course surveys primarily contemporary literature by writers who identify as gay, lesbian, bi-sexual, transgender, or queer. By studying the self-representation and culturally unique perspective of this emerging canon of writers, students in this course understand the emergence of LGBTQ literary traditions and understand the cultural diversity within these traditions. Students learn to identify the aesthetic qualities (such as camp, performativity, coded subtexts, homoeroticism, and the relationship between creativity and sexuality), and historical, political, and social concerns that characterize LGBTQ literary and cultural production. Topics covered include the struggle for civil rights before and after Stonewall, coming out narratives, the negotiation of homophobic cultures, post-colonial writers, and memoirs of the LGBTQ experience, as well as the historical emergence of sexual categories and the literary critique of heteronormativity. This course counts toward the English discipline diversity requirement.

Restriction(s):
Can enroll if Class is Graduate

WGST 573 Arab American Women Writers 3 Credit Hours
Examines the literary and cultural contributions of Arab and Arab American women novelists, poets, and artists to the development and consolidation of the cultures of understanding and coexistence; explores the tensions between citizenship and belonging, race and the politics of fear, gender and geographical mobility, and ethnic minorities and mainstream consciousness; discerns how Arab women writers and artists retool their various artistic endeavors to channel socio-political disenchantment, critique and civil disobedience; stresses how literary and artistic productions of heterogeneous number of Arab American women writers and artists can indeed foster alternative visions of socio-cultural coexistence, dialogue, and hospitality via artistic commitments to technical and stylistic experimentation and renovation. Additional reading assignments or projects will distinguish this course from its undergraduate version WGST 473. Students cannot receive credit for both WGST 473 and WGST 573.

WGST 581 Gender and Globalization 3 Credit Hours
Mass media, politics and academia are full of references to globalization, and a future “world without borders.” This interdisciplinary course considers the implication of globalization for women’s lives, gender relations and feminism. Topics covered include the global factory, cross-cultural consumption, human rights, global communications, economic restructuring, nationalism and environmental challenges. Rather than survey international women’s movements, this course explores how globalization reformulates identities and locations and the political possibilities they create. Students cannot receive credit for both WGST 481 and WGST 581.

Restriction(s):
Can enroll if Class is Graduate

WGST 590 Topics in Women’s Studies 3 Credit Hours
Examination of problems and issues related to Women and Gender Studies. Title as listed in Schedule of Classes will change according to specific content.

Prerequisite(s):
WGST 275 or WST 275 or LIBS 580 or WGST 303

Restriction(s):
Can enroll if Class is Graduate

WGST 599 Independent Studies 1 to 3 Credit Hours
Provides opportunity for qualified Women and Gender Studies students to pursue independent research under the direction of a qualified faculty member. Project must be defined in advance, in writing and must be in a subject not currently offered in the regular curriculum.

Restriction(s):
Can enroll if Class is Graduate
