UM-DEARBORN 2020-2021 CATALOG

The UM-Dearborn Catalog is a fundamental source of information concerning academic opportunities, policies, regulations, and procedures. It is each student’s responsibility to become familiar with the information contained herein.

The University of Michigan-Dearborn reserves the right to revise any content contained in this publication at its discretion and to make reasonable changes in requirements as approved by official action of the University of Michigan-Dearborn University Curriculum and Degree Committee. Except in the case of error or unless otherwise noted, approved changes made to program and degree requirements become effective the appropriate fall semester and apply to all students admitted to the University for that academic year.

CAPSULE HISTORY OF THE UNIVERSITY OF MICHIGAN-DEARBORN

The origins of the University of Michigan-Dearborn can be traced to a program in cooperation education component that would provide several periods of full-time work experience, alternating with regular terms of professional academic study. However, until Pearson and his associates were in touch with members of the top administration at the University of Michigan, the search had been futile. In late 1955, Pearson, with his associates, began negotiations with the University of Michigan officials that led to the establishment of the Dearborn Center of the University of Michigan.

The announcement on December 17, 1956 of a gift of land and capital development money from the Company to the University emphasized the building of an upper-division and master's level campus which would adopt a cooperative work-study requirement as a part of its regular degree program in engineering and business administration. The University was to provide the regular professional and liberal arts courses necessary to a University of Michigan bachelor's or master's degree, with the co-op work assignments forming an integral addition to the regular academic requirements. UM-Dearborn opened as the Dearborn Center of the University of Michigan on September 28, 1959.

The upper-division cooperative education program was the first important educational emphasis of what is now UM-Dearborn. Cooperative education is still a vital part of the professional programs, and not only has it expanded to include liberal arts students, but other kinds of off-campus experience for credit have been added as well. There are now regular program-related internships in political science, economics, social work, humanities, health studies and public administration. Nevertheless, it became apparent in the early days that the campus could not afford to be limited to a single focus, and over the years the University has gone through several stages of modifying its original purposes and structure.

From its inception in 1956 to about 1962, the cooperative education program was confidently set forth as a sufficient raison d'être for the campus, in spite of growing evidence that this admittedly fine and educational emphasis of what is now UM-Dearborn. Cooperative education is still a vital part of the professional programs, and not only has it expanded to include liberal arts students, but other kinds of off-campus experience for credit have been added as well. There are now regular program-related internships in political science, economics, social work, humanities, health studies and public administration. Nevertheless, it became apparent in the early days that the campus could not afford to be limited to a single focus, and over the years the University has gone through several stages of modifying its original purposes and structure.

From its inception in 1956 to about 1962, the cooperative education program was confidently set forth as a sufficient raison d'être for the campus, in spite of growing evidence that this admittedly fine and educationally sound opportunity was not drawing a sufficient number of campus, in spite of growing evidence that this admittedly fine and educationally sound opportunity was not drawing a sufficient number of students for economical use of the facilities. In the fall of 1962, William Stirton, the University of Michigan Vice President and UM-Dearborn's first chief executive, extended cooperative education to the liberal arts areas on an optional basis. Few liberal arts co-op work assignments were actually made before 1973, when the present liberal arts co-op program was officially established. This early attempt to extend the co-op program to liberal arts constituted the last major attempt to build the campus solely on the basis of the co-op programs and the upper-division/graduate structure. That effort came at about the same time as the change in the name of the institution from "Center" to "Campus" (to make its objectives seem less limited). Both events marked the beginning of a period in the mid-1960's characterized by growing uncertainty about the future of the institution. This period ended in 1969 with the recommendations of the Ross Committee (also referred to as the Balzhiser Committee, and officially called the Dearborn Campus Planning Study Committee), which radically changed the direction of the campus.

The 1969 report of the Dearborn Campus Planning Study Committee, appointed by University Vice President for State Relations and Planning Arthur Ross to consider the future of the campus, recommended the addition of the first two years of undergraduate education for the Dearborn Campus to become a full four-year institution along with expanding non-co-op programs. Those and other changes were implemented in 1971 giving the campus its present structure along with the newly designated title of "The University of Michigan-Dearborn" and a Chancellor as its chief executive officer. Two years later, the organizational structures changed from "divisions" to schools and colleges, and the Division of Education ("Urban Education" for the first few years) was created, with each of the major academic units headed by a dean. The Board of Regents appointed the first Chancellor of the UM-Dearborn, Dr. Leonard E. Goodall, in July 1971.

After that watershed change in 1971, UM-Dearborn grew rapidly from just under 1,000 students to over 6,000 in 1979. From 1971 through 1979 there was a scramble just to supply the courses and facilities needed to accommodate the soaring student population propelled by the transition into a University. New faculties were added at the rate of 10 to 20 per year, and the face of the campus changed as a new set of buildings (the former University Mall now remodeled as the University Center, the Fieldhouse, and the Library) was planned and constructed to the south of the original four buildings. These years of expansion also ushered in a period of severe retrenchment, when the debt burden of the new structures coincided with a recession and cuts in state aid to the campus. Dr. William Jenkins, appointed as UM-Dearborn's second Chancellor in 1980, took the helm at the beginning of what may be called the institution's "Years of Consolidation."

The early 1980's at UM-Dearborn were, as in the state of Michigan as a whole, a period of severe financial crisis. From 1979 through 1982, over a million dollars of funds allocated to UM-Dearborn by the state had to be recalled. During that same time, faculty and staff salaries were cut and student tuition rose 44 percent in three years. Nevertheless, student enrollment, after a slight drop from 1982 to 1984, resumed its steady rise that has continued to the present. Facilities were constructed also, including Manufacturing Systems Engineering Laboratory, the Social Sciences Building (formerly the School of Management Building), and the Computing Wing of the Science Building.

From about the time of the inauguration of Chancellor Blenda Wilson (1988), several developments in campus organization, administrative personnel, and academic offerings have highlighted what might be called the "Years of Redirection". At the center of this "redirection" has been a program of strategic planning, initiated in the summer of 1990 and reinforced by planning retreats for the whole campus in the fall terms of 1990, 1991 and 1992. A new campus mission statement arose out of the first retreat which rearticulates UM-Dearborn's commitment to providing an experience of academic excellence for a diverse body of students from the metropolitan Detroit area, encouraging full community attention to the traditions of free intellectual inquiry, critical thinking and ethical behavior through interactive teaching, research, creative and applied scholarship, and service. From the second retreat emerged the principal points of a set of learning goals for undergraduate students.

In 1993, the Board of Regents appointed Dr. James C. Renick as the fourth chancellor of UM-Dearborn. Under Chancellor Renick, UM-Dearborn experienced several important developments: (1) a new Mission
Statement was formulated; (2) a new set of Campus Bylaws provided for a newly formed Faculty Senate; and (3) funds were received from the State for the construction of four major new facilities for the School of Engineering, the College of Business, the Center for Corporate and Professional Development, and the College of Arts, Sciences, and Letters.

In July of 2000, the Board of Regents appointed Daniel Little as UM-Dearborn’s fifth Chancellor. Under Chancellor Little’s leadership the campus has achieved record enrollment growth, increased the academic quality of the student body, and improved the academic support system for student success. During these years the campus came to embrace a metropolitan vision that encourages engagement with the community by students, faculty, and staff. Particular areas of metropolitan focus include supporting advanced manufacturing, contributing to racial and ethnic equality, enhancing P-K-12 education, addressing urban environmental issues, and contributing to progress in health care and health equity. Little has helped to build strong relationships between UM-Dearborn and a wide range of community-based organizations to enhance the impact and partnership of the university in the Detroit metropolitan region. The Chancellor also led the campus in establishing a public-private partnership to offer a student-housing option for the first time on campus since the 1980s.

In 2009, UM-Dearborn welcomed its fourth Provost and Vice Chancellor for Academic Affairs, Dr. Catherine A. Davy. Under her leadership, the School of Education was transformed into the College of Education, Health, and Human Services with a focus on health studies. In addition, a new campus-wide general education program titled the Dearborn Discovery Core was developed. Finally, in the fall 2014, Provost Davy led the successful reaccreditation of UM-Dearborn by the Higher Learning Commission.

UNIVERSITY OF MICHIGAN-DEARBORN OFFICERS

Regents of the University
Jordan B. Acker, Huntington Woods
Michael J. Behm, Grand Blanc
Mark J. Bernstein, Ann Arbor
Paul W. Brown, Ann Arbor
Sarah Hubbard, Okemos
Denise Ilitch, Bingham Farms
Ron Weiser, Ann Arbor
Katherine E. White, Ann Arbor
Mark S. Schlissel, ex officio

Executive Officers of the University
Mark S. Schlissel, M.D., Ph.D., President
Domenico Grasso, Ph.D., Chancellor, University of Michigan-Dearborn
Debashish Dutta, Ph.D., Chancellor, University of Michigan-Flint
Sally J. Churchill, J.D., Vice President and Secretary of the University
Susan M. Collins, PhD, Provost and Executive Vice President for Academic Affairs
Martino Harmon, Ph.D., Vice President for Student Life
Brian T. Smith, B.A., (Interim) Executive Vice President and Chief Financial Officer
Rebecca Cunningham, M.D, Vice President for Research
Timothy G. Lynch, J.D., Vice President and General Counsel
Thomas A. Baird, A.B., Vice President for Development
Kallie Bila Michels, M.A., Vice President for Communications
Ravi Pendse, Ph.D., Vice President for Information Technology and Chief Information Officer
Marschall S. Runge, M.D., Ph.D., Executive Vice President for Medical Affairs
Chris Kolb, B.S., Vice President for Government Relations

University of Michigan-Dearborn Administrative Organization & Officers
Domenico Grasso, Ph.D., Chancellor
Gabriella Scarlatta, M., PhD, (interim) Provost & Executive Vice Chancellor for Academic Affairs
Keisha Blevins, B.A., J.D, Chief of Staff and Senior Advisor to the Chancellor
Bryan Dadey, M.B.A., Vice Chancellor for Business Affairs
Amy Finley, Ph.D., Dean of Students
Kenneth C. Kettenbeil, B.A., Vice Chancellor for External Relations
Maureen Linker, Ph.D., Associate Provost and Executive Vice Chancellor, Academic Affairs and Director, Mardigian Library
Carrie Shumaker, M.B.A., Director of Information Technology, Strategy and Operations and Chief Information Officer
Mitchell Sollenberger, Ph.D., Associate Provost for Undergraduate Education and Student Success and Executive Vice Chancellor, Academic Affairs
Melissa Stone, M.B.A., Vice Provost for Enrollment Management
Casandra Ulbrich, Ph.D., Vice Chancellor for Institutional Advancement
Amen Zakarian, Ph.D., Vice Provost for Research

Academic Deans
Raju Balakrishnan, Ph.D., College of Business

Directors
Katherine Allen, M.B.A., Director, Financial Aid and Scholarships
Rima Berry-Hung, M.A., Director, Human Resources
Andrew Beverly, M.A., Director, Student Advising Resource Team
Lindsey Tarrant Bookman, M.A., Director, Undergraduate Advising & Records, College of Education, Health, and Human Services
Perry V. Boyd II, M.P.A, Director, Office of TRIO Programs
Sara Byczek, Ph.D., L.P., Director, Counseling and Psychological Services & Disability Services
Shareia N. Carter, M.L.S., Director, Center for Social Justice and Inclusion
Becky Chadwick, B.A., Executive Director, Office of Institutional Research & Effectiveness
David A. Disney, M.S., Director, Student Union and Events
Cheryl Donohoe, M.P.A., Executive Director, Business & Foundation Engagement and Director of the Business Engagement Center
Laura Drabczyk, M.A., Director, Office of Emergency Management
Bryan Earl, M.S., Interim Director, Athletics & Recreation
Amy E. Finley, Ph.D., Dean of Students
Cristina M. Freno, B.A., Director, Alumni Engagement
Laura Garling, M.Des., Director, Web Strategy and Services
Susanne Gassel, M.A., Director, Undergraduate Academic Advising & Student Success, College of Arts, Sciences, and Letters
Carol L. Glick, P.E., M.S., Executive Director, Facilities Operations

A-Z Programs

List of Undergraduate Degrees

- Bachelor of Arts, AB
- Bachelor of Business Administration, BBA
- Bachelor of Science, BS
- Bachelor of Science in Engineering, BSE

List of Undergraduate Programs

- Accounting (p. 181), BBA
- Actuarial Mathematics (p. 89), AB, BS
- African and African American Studies (p. 89), AB
- Anthropology (p. 92), AB
- Applied Statistics (p. 93), AB, BS
- Art History (p. 95), AB
- Behavioral and Biological Science (p. 97), AB, BS
- Behavioral Sciences (p. 99), AB
- Biochemistry (p. 101), BS
- Bioengineering (p. 250), BSE
- Biological Sciences (p. 102), BS
- Business Studies (p. 182) (2nd major only), AB, BS
- Chemistry (A.C.S. Certified) (p. 104), BS
- Chemistry (Instructional) (p. 105), BS
- Children & Families (p. 197), AB
- CIS Mathematics (p. 252) (2nd degree only), BS
- Communications (p. 107), AB
- Computer and Information Science (p. 255), BS
- Computer Engineering (p. 253), BSE
- Criminology and Criminal Justice (p. 111), AB
- Cybersecurity and Information Assurance (p. 258), BS
- Data Science (p. 260), BS
- Digital Marketing (p. 184), BBA
- Early Childhood (p. 202), AB, BS, Elementary Certification
- Economics (p. 113), AB
- Electrical Engineering (p. 262), BSE
- Elementary Certification (p. 199), Certification only
- Engineering Mathematics (p. 264) (2nd degree only), BSE
- English (p. 114), AB
- Environmental Science (p. 115), BS
- Environmental Studies (p. 117), AB
- Finance (p. 185), BBA
- French Studies (p. 121), AB
- General Business (p. 187), BBA
- Geological Sciences (p. 123), BS
- Health and Human Services (p. 211), BS
- Hispanic Studies (p. 128), AB
- History (p. 129), AB
- Human Centered Engineering Design (p. 265), BSE
- Human Resource Management (p. 187), BBA
- Individual Program of Study, (p. 131) AB, BS
- Industrial and Systems Engineering (p. 267), BSE
- International Studies (p. 69), BBA
- Journalism and Screen Studies (p. 140), AB
- Language Arts (p. 205), AB, BS, Elementary Certification
- Management (p. 189), BBA
- Manufacturing Engineering (p. 269), BSE
- Marketing (p. 189), BBA
- Mathematics (p. 145), AB, BS
- Mathematics Studies (http://catalog.umd.umich.edu/undergraduate/college-education-health-human-services/elementary-school-certification-program/mathematics/), AB, BS, Elementary Certification
- Mechanical Engineering (p. 271), BSE

- Philosophy (p. 152), AB
- Physics (p. 159), BS
- Political Science (p. 160), AB
- Professional Writing and Rhetoric (p. 162), AB
- Psychology (p. 163), AB
- Reading (p. 209), AB, Elementary Certification
- Robotics Engineering (p. 274), BSE
- Science Studies (p. 222), AB, BS, Elementary Certification
- Secondary Certification (p. 222), Certification Only
- Small Business Management (p. 190), BBA
- Social Studies (p. 167), AB (College of Arts, Sciences and Letters)
- Social Studies (p. 210), AB, BS, Elementary or Secondary Certification (College of Education, Health, and Human Services)
- Sociology (p. 169), AB
- Software Engineering (p. 275), BS
- Special Education, (http://catalog.umd.umich.edu/undergraduate/college-education-health-human-services/elementary-school-certification-program/learning-disabilities-education/) AB, BS
- Supply Chain Management (p. 190), BBA
- Urban and Regional Studies (p. 171), AB
- Women’s and Gender Studies (p. 173), AB

List of Graduate Degrees

- Doctor of Engineering (DEng)
- Doctor of Education (EdD)
- Doctor of Philosophy (PhD)
- Education Specialist (EdS)
- Master of Arts (MA)
- Master of Arts in Educational Leadership (MAEL)
- Master of Arts in Teaching (MAT)
- Master of Business Administration (MBA)
- Master Public Administration & Policy (MPAP)
- Master of Science (MS)
- Master of Science in Accounting (MSA)
UM-Dearborn programs (non-Rackham) include:

- Master of Science in Engineering (MSE)
- Master of Science in Finance (MSF)

List of Graduate Programs

UM-Dearborn programs (non-Rackham) include:

- Accounting (p. 541), MSA
- Applied Behavioral Analysis (p. 569), MA
- Applied and Computational Mathematics (p. 526), MS
- Artificial Intelligence (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/artificial-intelligence/), MS
- Automotive Systems and Mobility, (p. 587) DEng
- Automotive Systems Engineering (p. 590), MSE
- Bioengineering (p. 592), DENG
- Business Administration (p. 543), MBA
- Business Analytics (p. 545), MS
- Community Based Education (p. 572), MA
- Computer and Information Science (p. 594), MS
- Computer Engineering (p. 599), MSE
- Criminology and Criminal Justice (p. 528), MS
- Cybersecurity and Information Assurance, (p. 601) MS
- Data Science (p. 260), MS
- Early Childhood Education (p. 572), MA
- Education (p. 574), MA, EdS, EdD
- Educational Leadership (p. 578), MAEL
- Educational Technology (p. 579), MA
- Electrical Engineering (p. 605), MSE
- Electrical and Computer Engineering (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/electrical-and-computer-engineering/), DENG
- Energy Systems Engineering (p. 609), MSE
- Engineering Management (p. 610), MS
- Environmental Science (p. 529), MS
- Finance (p. 560), MSF
- Health Information Technology (p. 580), MS
- Human Centered Design and Engineering (p. 611), MS
- Industrial and Systems Engineering (p. 612), MSE
- Information Systems Technology (p. 618), MS
- Information Systems (p. 562), MS
- Manufacturing Systems Engineering (p. 621), MSE
- Marketing, (p. 563) MS
- Materials Science and Engineering (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/materials-science-engineering/), MSE
- Mechanical Engineering (p. 622), MSE
- Program and Project Management (p. 626), MS
- Program Evaluation and Assessment (p. 580), MA
- Psychology (p. 530), MS
- Public Administration and Policy, (p. 533) MPAP
- Robotics Engineering (p. 627), MSE
- Software Engineering (p. 628), MS
- Supply Chain Management (p. 564), MS
- Teaching (p. 581), MAT

The UM-Dearborn programs offered under the auspices of the Horace H. Rackham School of Graduate Studies (hereafter Rackham) include:

- Computer and Information Science (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/computer-information-science/), PhD
- Electrical, Electronics and Computer Engineering, (p. 606) PhD
- Industrial and Systems Engineering (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/industrial-systems-engineering/), PhD
- Mechanical Sciences and Engineering (http://catalog.umd.umich.edu/graduate/college-engineering-computer-science/mechanical-sciences-engineering/), PhD

Current University of Michigan-Dearborn undergraduate students may be interested in pursuing a 4+1 accelerated option, formatted to save students time and money to earn both a bachelor’s and a master’s degree. This is achieved by combining a portion of both undergraduate and graduate coursework. Eligibility requirements vary by program.

- Accounting 4+1 Option (https://umdearborn.edu/cob/graduate-programs/degree-programs/ms-accounting/accounting-41-option/)
- Applied Behavior Analysis 4+1 Option (https://umdearborn.edu/cehhs/graduate-programs/areas-study/ms-applied-behavior-analysis/41-applied-behavior-analysis-accelerated-program/)
- Bioengineering 4+1 Option (https://umdearborn.edu/cecs/departments/mechanical-engineering/undergraduate-programs/41-bioengineering-program/)
- Criminology and Criminal Justice 4+1 Option (https://umdearborn.edu/casl/graduate-programs/programs/master-science-criminology-and-criminal-justice/41-option/)
- Dual Bioengineering/Mechanical Engineering Accelerated Undergraduate/Master’s Studies Option (https://umdearborn.edu/cecs/departments/mechanical-engineering/undergraduate-programs/beme-dual-accelerated-masters-program/)
- Educational Technology 4+1 Option (https://umdearborn.edu/cehhs/graduate-programs/areas-study/ma-educational-technology-online/41-educational-technology-accelerated-program/)

Withdrawal Policy (p. 30)

Academic Code of Conduct
I. General Principles
The Academic Code of Conduct (ACC) for the University of Michigan-Dearborn is based on the premise that undergraduate and graduate students will perform honestly and ethically on all tests, projects, and assignments. Students are expected to conduct themselves in a manner conducive to an environment of academic integrity and of respect for the educational process. Therefore, an individual should realize that deception for the purpose of individual gain is an offense against the members of the community.

All students and instructors are required to familiarize themselves with the ACC, its implications and effects.

Any alleged or affirmed violation of the ACC by undergraduate or graduate students will be dealt with in accordance with the procedures described below. An alleged violation is defined as an incident in which an instructor discovered a potential offense of the ACC by a student. An affirmed violation is defined as an incident for which the time has elapsed for an allegation the student did not appeal or if the student filed a timely appeal, the academic integrity board has entered a decision that the student is responsible for the misconduct.

II. Prohibited Academic Conduct
The actions cited as prohibited conduct should be used as a guide rather than an exhaustive list of behaviors that the University considers misconduct and subject to disciplinary action.

1. Plagiarism: includes representing the words, ideas, or work of others as one’s own in writing or presentations, and failing to give proper credit to the original source; failing to properly acknowledge and cite language from another source, including paraphrased text; failing to properly cite any ideas, images, technical work, creative content, or other material taken from published or unpublished sources in any medium, including online material or oral presentations, and including the author’s own previous work.

2. Cheating: includes copying from other’s exam or other evaluative assignment; referring to or using notes, books, digital devices or resources, or other materials for an exam or other evaluative assignment without explicit permission of the instructor; submitting work that was previously used for another class without the informed permission of the instructor; discussing or sharing information about questions or answers on an exam or other evaluative assignment without explicit permission of the instructor; allowing another person to take an exam or complete an assignment for the student; attempting to change the result of an exam or other evaluation.

3. Fabrication: includes alterations to transcripts, grades, letters of recommendation, or other evaluations of or for any current or former student.

4. Aiding and Abetting: includes altering documents affecting academic records; aiding others to commit any act prohibited by the ACC; effort to aid or encourage the academic misconduct of others, such as encouraging another student to share individually assigned work with other students; forging a signature of authorization or falsifying information on an official academic document, election form, grade report, letter of permission, petition, or any document designed to meet or exempt a student from an established University or unit academic regulation.

5. Interference: obstructing or hindering the work or study of a member of the faculty, or staff, or a student at the University.

III. Notice, Initial Finding, and Reporting to the Dean of Students Office
1. Notice. To the extent practical, an instructor has ten (10) academic calendar days from the discovery of a potential offense of the ACC to inform the student(s) of the offense. The instructor shall inform the student of the nature of the ACC charges; explain the possible sanctions that may be imposed as a result of the allegation; provide an opportunity to the student to meet with the instructor[2] (p. ) ; and inform the student that the case may be reported to the Dean of Students Office if the student does not respond in five (5) academic calendar days.

2. Initial Meeting. At the initial meeting with the instructor, the student will have the opportunity to be heard, ask questions, see all the evidence the instructor can obtain at the time, and accept or refuse the allegation. This meeting should occur in a timely fashion and, if practicable, within fifteen (15) academic calendar days from the instructor’s initial notice provided to the student. After the
meeting, the instructor will find the student either responsible or not responsible for the alleged violation of the ACC, and in the earlier case shall report the matter to the Dean of Students Office in a timely fashion and, if practicable, within twenty (20) academic calendar days from the initial contact with the student, as specified in Steps 3 and 4 below. If the student does not respond within five (5) academic calendar days of the instructor’s initial contact, or does not appear for the scheduled meeting, the instructor will proceed to find the student either responsible or not responsible for the alleged violation and report the matter to the Dean of Students Office in a timely fashion and, if practicable, within ten (10) academic calendar days from the initial contact with the student, as specified in Steps 3 and 4 below.  

3. **Reporting to the Dean of Students Office.** All cases where the instructor finds the student responsible shall be reported as outlined in this Policy to the Dean of Students Office. In the report, the instructor shall include all supporting documentation, and imposed sanctions, using the online reporting form[3] (p. ) and inform the student that a report of the incident has been submitted to the Dean of Students Office, and the student has the right to appeal after receiving a notification from the Dean of Students Office unless the violation is an informal one as specified in Step 4 below.  

4. **Instructor Resolution and Informal Reporting.** Instructors may wish to resolve a basic case of misconduct at the classroom level. Specifically, if the student has accepted responsibility for the allegation and course level sanctions, then the instructor may choose to check the option “informal if eligible” when reporting the matter to the Dean of Students Office outlined in this Policy. However, if the option is checked but the student is ineligible for a new informal violation, as specified below, then the student can still appeal the allegation. If the option “informal if eligible” is checked and the student has zero (0) or one (1) informal violation on records, then the student has one more informal violation recorded and the matter will be considered closed. The Dean of Students Office shall keep records of informal ACC violations, but not in the University Academic Integrity Database. Any undergraduate or graduate student can have a maximum of two (2) informal violations. Any alleged violation may be reported either to be with or without the option “informal if eligible” being checked; even the first time alleged violation of a student may be reported without the option “informal if eligible” being checked; and an alleged violation of a student with affirmed violations may be reported with the option “informal if eligible” being checked. Besides classroom sanctions, if required by the Dean of Students Office, students with informal violations shall attend ACC training programs.  

5. **Confirmation of Finding.** Upon receiving a report from an instructor, if the option “informal if eligible” is not checked or the student has two (2) informal violations on records and thus is ineligible for any more informal violations, the Dean of Students Office shall send an email or letter which secures a delivery receipt to the student within five (5) academic calendar days of receiving the report of the alleged violation with the following information: 1) allegation of misconducts, along with all documentation submitted by the instructor; 2) notification that the record of the alleged incident is in the University Academic Integrity Database; 3) explanation of the services and support provided by the Ombuds Services Office in the Division of Student Affairs in relation to ACC violations, and encourage students to contact the Ombuds Services Office regarding the alleged violation for their own protection; 4) the student has the right to appeal through the Academic Integrity Board in the college offering the course within ten (10) academic calendar days of receiving the notification letter from the Dean of Students Office, and the alleged violation becomes an affirmed violation and college wide sanctions specified in Section VII.2 apply if the student does not appeal on time; 5) if the student chooses to appeal, then the student needs to initiate an appeal by completing and submitting to the Dean of Students Office a copy of the Academic Appeal Form, along with supporting documentation; and 6) if the student has a prior affirmed violation in the University Academic Integrity Database, the Dean of Students will provide information related to the consequences of a repeat violation.  

Any instructional faculty member or proctoring service staff may submit an online report even if the member or staff does not have the direct authority to impose an appropriate penalty. The reporting person, if not the instructor of the student involved, shall first contact the instructor if possible. Under no circumstances should the reporting person share confidential information about the ACC process or case with others, except with the responsible Associate Dean/Department Chair/Program Head in the college offering the course, the Dean of Students Office, and the instructor of record.  

**IV. Academic Integrity Board Jurisdiction, Composition, and Conflict of Interest**  
In each college, there shall be established an Academic Integrity Board, which shall be a permanent standing committee and have jurisdiction over alleged violations of the ACC. The Board shall consist of at least three (3) full-time instructors and at least two (2) non-voting students, the Ombuds Services Office director or designee as an ex-officio, non-voting, advisory member, and the student conduct officer or designee from the Dean of Students Office as an ex-officio, non-voting, advisory member. The instructors shall be appointed by the college’s executive committee and the Student Government President shall select the student members who shall have no record of alleged or affirmed ACC violations. A chair of the Board, chosen from its members, shall function as the administrative head.  

Members of the Board shall disqualify themselves from hearing a case if they believe their capacity for making an objective judgment in the case is or may reasonably appear to be impaired. Members should not disqualify themselves for any other reason. Replacements for disqualified members shall be selected in the manner described in paragraph one of Section IV.  

**V. Academic Integrity Board Procedure for ACC Violations and Appeals**  
1. At each hearing or meeting, three voting Board members need to attend. A hearing of the Academic Integrity Board shall be called by the Dean of Students Office if a student appeals the finding(s) against them within ten (10) academic calendar days of receiving the letter from the Dean of Students Office.  

2. If the student does not appeal, the Dean of Students Office shall inform the instructor to confirm the accusation, and ensure that the affirmed ACC violations be entered into the University Academic Integrity Database, and shall conduct a search of the database for prior affirmed ACC violations by the student.  

3. If the student appeals, then the Dean of Students Office shall schedule a hearing by the Academic Integrity Board, with all documentation provided by the instructor and the student. To the extent practicable, the Dean of Students Office will redact unique identifying student and instructor information (i.e., name, UMID number). The Academic Integrity Board hearing shall be held in a
timely fashion and, if practicable, within thirty (30) academic calendar days after the student appeal.

4. The Board shall take no longer than ten (10) academic calendar days after its last hearing of a case to make its decision and convey the information to the Dean of Students Office.

5. The Board's decision/recommendation shall be based on a preponderance of the evidence standard of proof.

6. The Academic Integrity Board's decision over an ACC accusation is regardless of student intent; it is purely based on the facts contained in the files submitted by the instructor and the student. However, when the Board considers the nature of sanctions to be imposed on a student with repeat violations, the intent of the student may be considered; refer to Section VI.

7. The Board has the authority to sustain or overturn an instructor’s finding of an ACC violation.

8. The Board shall examine and evaluate all documentation within the files submitted. The Board has the authority, but is under no obligation, to meet with the instructor or student and/or to ask them for additional information. If the Board meets with one party, it shall also give the opposing side an opportunity to meet with the Board. Additionally, the Board may invite the parties to submit written statements from witnesses, which will be shared with all parties. For all other matters the Board shall promulgate its own policies.

9. Upon making its decision the Board’s chair shall inform the Dean of Students Office in writing who shall in turn notify the student and instructor within five (5) academic calendar days after the decision is made. If the Academic Integrity Board sustains the ACC charges, the Dean of Students Office shall inform the instructor to confirm the accusation, and ensure that the affirmed ACC violations be entered into the University Academic Integrity Database, and shall conduct a search of the database for prior affirmed ACC violations by the student. If the Board overturns an instructor’s decision then all records of the ACC violation shall be removed from the University Academic Integrity Database.

10. When a student presents details that would suggest that the challenged action stemmed from conduct violating a non-academic policy by the instructor, the student, or any other relevant people, such as sexual harassment and other forms of discrimination, then no further action will be taken pending the completion of the Office of Institutional Equity proceedings.

VI. Academic Integrity Board Procedure for Repeat Violations

1. To the extent practical, the process for repeat violations starts at the time when the Dean of Students Office informs the student of an ACC allegation with the opportunity to appeal. At that time point, the Office shall check whether the student has a prior affirmed violation in the University Academic Integrity Database; if so, the alleged ACC violation becomes a repeat violation if affirmed. Any student with multiple affirmed violations that have occurred in a short time window and are not counted as repeat violations, if required by the Dean of Students Office, shall attend ACC training programs.

2. If the Dean of Students Office finds that the student has repeat ACC violations, both formal and affirmed, then the Office shall call a meeting of the Academic Integrity Board in the home college of the student in a timely fashion and, if practicable, within thirty (30) academic calendar days of the affirmation, to recommend sanctions on the student, with all documentation provided by the instructor and the student. To the extent practicable, the Dean of Students Office will redact unique identifying student and instructor information (i.e., name, UMID number). The Dean of Students Office shall also contact the student to explain the nature of the Board meeting, and give the student opportunity to provide a letter that explains violations and lists preferred sanctions provided in Section G of the UM-Dearborn Student Rights and Code of Conduct[p. 4]. Such a letter, if provided, shall be forward to the Board meeting.

3. The Board recommends sanctions within ten (10) academic calendar days after its last meeting. Factors that may be considered in determining the nature of sanctions to be imposed include: 1) the intent of the student; 2) the effect of the conduct on the University community; 3) past disciplinary record of the student; and 4) any mitigating factors presented by the complainant (i.e., stress, personal illness, illness/death of family members, cultural misunderstandings, etc.). The Board shall make a recommendation to the Dean of the home college of the student calling for one or more of the sanctions provided in Section G of the UM-Dearborn Student Rights and Code of Conduct. The Board’s chair shall notify the Dean of the recommendation for review, revision, and approval.

4. The Dean of the home college of the student shall make the final decision in a timely fashion and, if practicable, within ten (10) academic calendar days of the Board issuing its recommendation. The Dean will decide the case on the basis of the records of the proceedings of the Academic Integrity Board, the written materials submitted by the student, and the results of consultations with the parties, if any.

5. The Dean’s decision shall be written and contain the Dean’s finding of fact and may (at the discretion of the author) include reasons for the decision. It shall be provided to the student, the responsible Associate Dean/Department Chair/Program Head in the student’s home college, and the chair of the Academic Integrity Board, and placed in the student’s file.

VII. Disciplinary Actions

1. Instructors have the authority to impose sanctions with respect to their classes. These penalties include, but are not limited to, reducing a student’s course grade or failing a student in the course(s). However, if the sanction affects a student’s final grade of a course posted 180 or more days ago, the grade change needs approval from the Dean of the home college of the student.

2. For all affirmed violations, with the help of the Dean of Students Office, all four colleges will impose the below sanctions, in addition to any sanction imposed by the instructor. The student is ineligible for one year:

   • Chancellor’s Medallion
   • Difference Maker
   • Dean’s List
   • any college Honor Scholar
   • any university compensated peer tutoring, mentoring, grading, or supplemental instruction position
   • any college scholarship (not including financial aid scholarships)

3. Each college may also choose to impose additional sanctions based on the nature of an affirmed violation. Any additional sanction imposed by a college shall be reviewed and approved by the Dean.
4. For repeat violations, the Board shall make a recommendation on additional sanctions to the Dean of the home college of the student, and the Dean shall make the final decision.

VIII. External Uses of ACC Violation Records
1. The Dean of Students Office shall keep records of informal ACC violations, but not in the University Academic Integrity Database. Records of informal ACC violations are not for any external uses.
2. The record of any alleged ACC violation is temporally in the University Academic Integrity Database, but will either become a record of an affirmed violation or be removed from the database, as specified in Section V. Records of alleged ACC violations are not for any external uses.
3. Records related to ACC violations that identify a student and which are maintained by the University are governed by the Family Educational Rights and Privacy Act. Alleged violations of the ACC are maintained in the University Academic Integrity Database. These records are expunged from the database within eight (8) weeks after the student’s graduation or after eight (8) years from the initial violation, whichever comes first. Students who want to provide these records to a third party (such as a potential employer) are required to submit a written FERPA consent for such records to be released.

IX. Automatic Procedural Review
The Office of the Provost shall conduct an automatic review to ensure no material procedural error in the process occurred. If the Provost Office determines there was a material procedural error then the case shall be remanded to a reconstituted Board for a new hearing.

X. Maintenance of Records
All records related to ACC violations shall be maintained in accordance with the Family Education Rights and Privacy Act.

XI. Responsible Administrator
The Provost and Vice Chancellor for Academic Affairs or designee is responsible for periodic and ad hoc review of this Policy and its procedures. The Faculty Senate is responsible for the approval of this Policy.

[1] (p. ) Excluding weekends, final exam periods, and University recognized holidays.
[2] (p. ) The meeting can be in-person, over the phone, or remotely.
auditing a course is charged the usual fee for that course. Any specific conditions must be enunciated by the instructor at the time permission is granted for the audit. Please consult your college's advising office for additional guidance. Non-degree seeking students should consult the advising office associated with the college offering the course. Students admitted to a program that requires auditing are exempt from this policy; however, the instructor may still place conditions on the audit through the end of the add/drop period for the semester.

CIP Code Assignment Policy

Process for Assigning CIP Codes to Academic Programs

Introduction

The federal government's Classification of Instructional Program (CIP) code taxonomy is part of a system which allows tracking and reporting of program enrollments and completion data at higher education institutions. Each academic program is assigned a CIP code describing the curriculum and occasionally the degree. The CIP code taxonomy facilitates comparisons of programs across colleges and universities more reliably than by just considering program names. Although CIP codes are mostly invisible to students and faculty, they are important administratively for federal financial aid, considerations related to visas for international students, and for federal reporting.

CIP Code Structure

A CIP code is a six-digit code, made up of three groupings of two digits. The first two digits define the most general grouping of related programs (call the CIP area). For example, all CIP codes that start with 26 are in the broad area called "Biological and Biomedical Sciences". The second two digits represent sub-areas within the two-digit sequence. For example, under the CIP code 26 are 26.01 (Biology), 26.02 (Biochemistry), and 26.03 (Botany). The full six-digit code represents a specific academic program. For example, 26.0205 is the CIP code for Molecular Biochemistry.

CIP Code Assignment

The appropriate CIP code is assigned by the department/unit faculty to an academic program when it is created and sent through the curriculum approval process. Responsibility for assigning CIP codes to new academic programs, or for changing existing CIP codes, rests with the respective college/unit with input from Institutional Research and Effectiveness, Office of the Registrar, Graduate Studies, Financial Aid, Office of International Affairs, and the Associate Provosts.

If input front the reviewing offices conflicts with the CIP code recommendation of the unit, the Office of the Provost will arrange for an additional evaluation and make the final determination on the most appropriate CIP code for the program. Changes to CIP codes must also follow the same process and be approved through the UCDC undergraduate or graduate curriculum committees (as a program change) to become effective at the start of the next Fall term.

Classroom and Learning Management System Course Access Policy

Classroom Course Access

The University of Michigan-Dearborn campus has based its classroom access policy on the following statements from Chapter 8.D.5. of the University of Michigan Faculty Handbook titled, "Authorized and Unauthorized Persons in the Classroom":

"Generally, persons not enrolled or otherwise officially authorized to attend a course should not be permitted to attend classes. Authorized individuals include prospective students who are visiting a class pursuant to a school or college admissions program."

Members of the faculty have some discretion in permitting guests into their classroom or laboratory. A guest is defined as anyone who is not officially enrolled in the particular course or laboratory and has received an explicit and time-limited invitation by the course instructor. Guests include faculty, staff, non-registered students, or community members. Faculty must be mindful of student privacy concerns and the need of the campus to comply with the Family Educational Rights and Privacy Act (FERPA). Faculty can permit guests to attend up to two weeks of classes before submitting a one-time petition to their department chair to extend the access period for an additional two weeks of classes. Department chairs shall consider safety, resources, privacy, and fairness in their decisions. University of Michigan Dearborn students with a need to attend a course for longer than four weeks have the option to elect the course under the University auditing policy.

Learning Management System Course Access

Instructors of record and officially registered students will automatically receive access to the University of Michigan-Dearborn Learning Management System (LMS). Waitlisted students will also automatically receive LMS access, but in a view-only state. In addition to these automatic additions from the student information system, the University permits adding teaching assistants, supplemental instructors, and inviting outside and/or guest speakers to the LMS in accordance with FERPA and privacy considerations.

Whereas students with incomplete grades from a previous semester may be granted limited guest access to the physical classroom or laboratory as above under the Classroom Course Access policy (two weeks), they will be granted extended access to the LMS course materials in the closed course/section in which they were enrolled for the duration of the time in their incomplete contract. Faculty can obtain extended access to closed courses with assistance from the LMS support staff.

For courses similar to independent study and directed research, faculty shall only use the LMS generated dedicated course shells, which may not be combined with other shells.

Note that this access policy does not apply to classroom visits- virtual or otherwise- arranged between the instructor and the college, department, or peer evaluators for purposes such as mentoring, promotion, evaluation, instructional design, or embedded academic and technical support.

Corequisites and Prerequisites

Students are required to follow all prerequisites and comments listed in the Schedule of Classes and Undergraduate or Graduate Catalog, or the "Course Descriptions" section. Special attention should be given to courses in which a concurrent election is required (e.g., Chemistry 134). For such courses, the student must also register for the Recitation/Laboratory if different from the course reference number (CRN) for the lecture. Students will be prevented from registering for courses for which the proper corequisites and prerequisites are missing. Any exceptions to
this policy requires approval from the department or college offering the course.

Course Load

Students at the undergraduate level may elect a maximum of 18 credit hours in a given semester. Students at the graduate level may elect a maximum of 12 credit hours in a 15-week semester and a maximum of 8 credit hours in a 7-week semester. For graduate programs, individual colleges may impose a lower limit than this campus-wide policy. All students should contact their college for policies and procedures regarding elective hours in excess of the maximum.

Cross-Listed Course Policy

Approval for all new and modified undergraduate and graduate courses begins at the discipline/program level. Normally, one or more faculty will draft a proposal to be considered by their discipline/program colleagues which – if approved – must be sent to the department executive committee for consideration. Once approved by the department executive committee, the college curriculum committee has sign-off authority on all course proposals. The next step is for the University Curriculum and Degree Committee (UCDC) to consider all undergraduate proposals. Graduate proposals need to be sent to the Graduate Subcommittee of UCDC.

UCDC has established the following policies regarding cross-listed courses among the colleges:

1. If a course is cross-listed, the originating discipline or department[1] (p. ) “owns” the course in the sense that they can determine when it will be offered and who will teach it.
2. If one party to a cross listing decides to delist the course, that is permitted but the other discipline or department must be told prior to the change being approved.
3. If there is a faculty departure, the home or originating discipline or department continues to “own” the course.
4. If a faculty member goes on sabbatical or other leave, the originating or home discipline or department determines whether the course will be offered and who will teach it.

Campus Definitions for Cross-Listed and Equivalent Courses

Cross-listed Courses: A cross-listed course is a single course that meets together but is offered under more than one discipline heading or course number. There are two major types of cross-listed courses:

1. Across discipline cross listing: The course number is usually the same (preferred), but occasionally one discipline will use a different number for the cross listed course. These courses must have the exact same curricula and course requirements. Therefore, they cannot be taught at different student levels (undergraduate and graduate) or course levels (lower level 100/1000-200/2000 vs. upper level 300/3000-400/4000)).

   • Courses must share a course title, credit hours, description, prerequisites, co-requisites, student level, meeting time and days, instructor, classroom, registration restrictions, grade mode and repeatability rules. If one course in a cross listed arrangement is offered, all courses in the cross listed arrangement must be offered.

   • Credit may only be earned for the course under one of the cross-listing designations.

2. Meets with or dual listed or split level or concurrently scheduled or cross level cross listing: These courses are distinguished from across discipline cross listed courses by the fact that only some portion of the academic experience is common between the classes, although they are likely to meet as one class. They may be taught as different student levels (undergraduate and graduate) or course levels (lower level and upper level). All students earn the same amount of credit for the course, but more rigorous work is required of students enrolled under the upper level number or graduate level number. Like across discipline cross listing, credits may only be earned for the course under one designation.

Equivalent Courses: Students may receive credit for only one course when courses are determined to be equivalent by the originating faculty. Unlike cross listed courses, equivalent courses usually do not meet together. Circumstances under which equivalency may occur:

1. A course has its number changed (e.g., a topics course becomes a regular course with a permanent new course number).
2. The courses have substantial overlap in curricula and course requirements (e.g., MATH104 and MATH105).

Students who receive credit for a course under one course number may not also receive credit for the equivalent course under a different course number.

---

[1] (p. ) The college that first approves the course through the actions of the college’s curriculum committee will be defined as the “originating discipline” or “originating department.”

Disruptive Student Behavior

I. PREAMBLE

When disruptive behavior occurs in the class, the instructor shall make reasonable effort to address the disruption with the student, preferably in private. Toward that end, the instructor and student may consult with Ombuds Services, the Dean of Students, the department chair, or other University offices to discuss ways to resolve the situation informally at any time during the process set forth in this policy.

II. DEFINITION

Disruptive student behavior in the classroom (on and off campus) is likely to negatively affect the educational experience of the students and instructor(s). Disruptive behavior is defined as any speech or actions that hampers the ability of the instructor(s) to teach or students to learn. Examples of disruptive behavior include, but are not limited to:

• Creating excessive noise
• Refusal to comply with instructor direction
• Unreasonable interference with class discussion including, but not limited to, failure to respect the rights of other students to express their viewpoints
• Talking when the instructor or others are speaking
• Verbal abuse or threat of instructor or other students (e.g., taunting, badgering, intimidation)
• Repeated obscenities
• Making/receiving personal phone calls
• Leaving and entering class frequently in the absence of notice to instructor of illness or other extenuating circumstances
• Persisting in disruptive personal conversations with other students

NOTE: The expectation at the University is that students must maintain appropriate behavior regardless of their viewpoints. This policy applies only to disruptive actions or speech by students that negatively impacts the educational environment, not the views or opinions of any individuals or groups.

III. PROCEDURE

Should the instructor elect to withdraw the disruptive student from class, the following procedures must be followed. Where this policy conflicts with the Non-Academic Code of Conduct, this policy will prevail with respect to disruptive behavior in the academic setting.

STEP ONE: INSTRUCTOR'S RESPONSE TO DISRUPTIVE BEHAVIOR

When non-threatening disruptive behavior occurs in a class:

A. The instructor will verbally or (in the case of online or hybrid class situations) via email warn the student that their behavior is disruptive and that it must cease immediately or the student may face removal from the class.

B. If the student fails to again comply with the instructor's warning to cease the disruptive behavior, the instructor may give a second warning and note that the next disruption will lead to the student being asked to leave the classroom or online space for the remainder of the class period.

C. If the student is asked to leave the classroom for the remainder of the period based on a third disruptive incident, but refuses, the instructor may summon the campus police to escort the student from the classroom. If online class, faculty can moderate and/or temporarily disable LMS functions to prevent the student from further activity until a resolution is determined.

D. At the conclusion of the class period the instructor should file a CARE report.

E. If at any time the instructor or student believes it would be beneficial to contact Ombuds Services, the student may consult an Ombudsperson in an effort to resolve the matter.

F. If the student’s non-threatening disruptive behavior persists in subsequent course meetings instructor(s) may proceed to Step Two, below.

When threatening disruptive behavior occurs in a class:

A. If the instructor believes the disruptive behavior poses an immediate threat to the safety of the instructor, the student, or any other students or persons, the instructor should summon the campus police to report the incident and remove the student from the class if on campus, regardless of whether a warning has been issued. At the conclusion of the class period the instructor should immediately file a CARE report.

B. If the instructor believes the student should not be permitted to return to the class to continue in that course, the student should proceed to Step Two, below.

STEP TWO: WITHDRAWAL PROCESS

A. THE INSTRUCTOR

1. If the instructor believes that withdrawing the student from the course is the appropriate course of action, the instructor shall, within one (1) business day of the disruptive incident, file a report with the Dean of Students' Office detailing the disruptive incident(s). The Dean of Students will immediately notify the faculty member's department chair.

2. If the instructor has the disruptive student in more than one class, and the instructor believes that the student is disrupting learning in more than one of those classes, or when the student is exhibiting threatening and/or intimidating behavior outside the class (e.g., in the instructor’s office, outside the classroom, 3 etc.), the instructor may recommend that the student is removed from all courses taught by that instructor.

B. DEAN OF STUDENTS

Except for extenuating circumstances, the following steps will be followed:

1. Upon receipt of the disruptive student report from the faculty member, the Dean of Students and the faculty member's department chair shall determine if the threshold for a formal process is required.

2. If the decision has been made to pursue a formal process, the Dean of Students shall notify the student via University of Michigan-Dearborn email within 3 business days of receiving the Instructor's report. The email shall include:

   • Notice to the student that a formal evaluation process has begun;
   • A written description of the disruptive behavior incident and faculty complaint;
   • A link to the Disruptive Student Conduct Policy, which includes a description of the appeals process;
   • A statement letting the student know of the 5 business day deadline to respond to the complaint; and
   • Ombuds Services contact information.

3. The Dean of Students and department chair have the authority to put interim measures into place until a resolution has been reached, as needed to serve the academic mission of the University. Interim measures may include separation from the class(es) or other interventions deemed appropriate. These measures may be kept in place until the end of any review or appeal process. To the extent possible the university will provide opportunities for the student to continue working on their coursework. Failure to abide by the interim interventions is a violation of this Policy and may lead to additional disciplinary actions.

4. The Dean of Students and department chair shall make themselves available to meet with the student as soon as possible within 5 business days after notice is provided to the student.

5. Within 5 business days after meeting with the student, or if the student does not avail himself/herself of the meeting option, the Dean of Students and department chair shall decide on the
appropriate outcome and send notice of their decision, with an explanation of the basis for the decision, to the student, instructor, and dean via University of Michigan-Dearborn e-mail. The decision may consist of:

- Allowing the student to return to course or courses, with or without conditions;
- Allowing or requiring the student to transfer to another course section or sections; or
- Withdrawing the student from the involved course or courses.

There shall be included in the email communication a notice that the student may appeal the decision to the college dean within 5 business days from the date of the email notice of the decision.

STEP THREE: THE APPEALS PROCESS

The student may appeal the decision of the Dean of Students and department chair to the college dean. The student’s appeal must be received by the college dean within 5 business days of the date of the decision. The college dean's decision shall be made and will be sent to the student via University of Michigan-Dearborn email within five 5 business days of receipt by the college dean of the student's appeal.

STEP FOUR: FINAL RESOLUTION

Students withdrawn for disruptive behavior from a course will receive a grade of W. If the charge of disruptive behavior is upheld, regardless of whether the student is allowed to return to the course, the student is responsible for any loss of financial aid. In the event a decision is made at any point in this process that the student was removed from class without sufficient cause, then the student will be allowed to immediately return to the course without penalty and the chair and instructor will work with the student to facilitate the completion of any work missed.

DISRUPTIVE STUDENT BEHAVIOR IN OTHER ACADEMIC SETTINGS

I. PREAMBLE

Just as each instructor should prepare their students regarding expectations for student behavior, so, too, should personnel in other academic settings. Work areas such as libraries and offices, unlike classrooms, are frequented by the public. Hence, personnel in these areas may not have as much control over who enters their space as does an instructor teaching a class. Preventive measures rely, in part, on the protocol established within offices or other university facilities. These measures can include signage, literature regarding how a student may file a complaint, training on communication techniques for staff who initially come into contact with people entering the area, and procedures for office personnel to follow should a disruption occur. These procedures should include a referral to the appropriate unit head so that a potentially disruptive student has a resource to which the student can be directed to address a concern.

II. DEFINITION

As is the case with disruptive student behavior in the classroom, disruptive student behavior in other academic settings can negatively affect the educational experience of students and instructor(s). Disruptive student behavior in other academic settings is speech or action that is disrespectful and/or threatening and either interferes with the learning activities of other students or instructor(s) or impedes the delivery of University services, including but not limited to:

- Campus and colleges offices/staff
- The library
- Learning centers
- Field trips
- Study abroad
- Study lounges and/or study rooms
- Other curricular or co-curricular units

III. PROCEDURE

STEP ONE: Response to the Disturbance

When non-threatening disruptive behavior occurs in an academic setting outside the classroom:

A. The staff or faculty member will verbally warn the student that their behavior is disruptive and that it must cease immediately or the student may face removal from the immediate setting.

B. If the student fails to again comply with the staff or faculty member’s warning to cease the disruptive behavior, the staff or faculty member may give a second warning and note that the next disruption will lead to the student being asked to leave the immediate setting for the day.

C. If the student is asked to leave the immediate setting for the remainder of the day based on a third disruptive incident, but refuses, the staff or faculty member may summon the campus police to escort the student from the immediate setting.

D. At the conclusion of the disruptive event the staff or faculty member should file a CARE report (https://umich.qualtrics.com/jfe/form/SV_0AQ9ConHqso2Qjr/).

E. If at any time the staff/faculty member or student believes it would be beneficial to contact Ombuds Services, the student may consult an Ombudsperson in an effort to resolve the matter.

F. If the student’s non-threatening disruptive behavior persists in subsequent interactions with the staff or faculty member proceed to Step Two, below.

When threatening disruptive behavior occurs in an academic setting outside the classroom:

If the staff or faculty member believes the disruptive behavior poses an immediate threat to the safety of the student, any other students or persons, or them, the staff member or faculty should summon campus safety to remove the student, regardless of whether a warning has been issued. At the conclusion of the disruptive incident the staff or faculty member should immediately file a CARE report (https://umich.qualtrics.com/jfe/form/SV_0AQ9ConHqso2Qjr/).

STEP TWO: DEAN OF STUDENTS REVIEW

The Dean of Students and the appropriate university personnel shall determine if the threshold for a formal process is met.

If the Dean and appropriate university personnel determine, based on the initial review of the complaint, that the alleged behavior is not actionable or that the matter would be better handled through another process or office, the Dean will notify the staff or faculty member via University of Michigan-Dearborn email that the matter is not actionable.

If the Dean of Students determines, based on an initial review, that the alleged behavior requires an additional response from the University,
the Dean will notify the staff or faculty member that the issue is being addressed. The student will be notified via University of Michigan-Dearborn e-mail within 3 business days to schedule a meeting. The email shall include:

- Notice to the student that a formal evaluation process has begun;
- A written description of the disruptive behavior incident;
- A link to the Disruptive Student Conduct Policy, which includes a description of the appeals process; and
- Ombuds Services contact information.

The Dean of Students shall have the authority to put interim measures into place until a resolution has been reached, as needed, to serve the academic mission of the University. Interim measures may include separation from the setting or other interventions deemed appropriate. These measures may be kept in place until the end of any review or appeal process. Failure to abide by the interim interventions is a violation of this policy and may lead to additional disciplinary actions.

Within 5 business days after meeting with the student (or if the student does not avail him/herself of the meeting option, the Dean of Students shall decide on the appropriate outcome and send notice of the decision, with an explanation of the basis for the decision, to the student, staff/faculty member, director or unit head of the staff/faculty member, and college dean via University of Michigan-Dearborn. The decision may consist of:

- Allowing the student to return to the academic setting in which the incident occurred, with or without conditions;
- Prohibiting the student from returning to the academic setting in which the incident occurred;
- Suspending the student through the Non-Academic Code of Conduct policy; or
- Other sanctions deemed appropriate.

There shall be included in the email communication a notice that the student may appeal the decision to the Provost or designee within 5 business days from the date of the email notice of the decision.

STEP THREE: THE APPEALS PROCESS AND FINAL RESOLUTION
The student may appeal the decision of the Dean of Students to the Provost or designee. The student's appeal must be received by the Provost or designee within 5 business days of the date of the decision. The Provost or designee decision shall be made and will be sent to the student via University of Michigan-Dearborn email within 5 business days of receipt of the student's appeal.

7 Staff includes student employees like Supplemental Instruction Leaders, Tutors, and Learning Centers consultants as well as full time staff members.

Exceptions and Petitions

Students are responsible for complying with all policies and deadlines at the University of Michigan-Dearborn. The University academic policies, procedures, and deadlines can be found online in the Undergraduate and Graduate Catalogs along with the Academic Calendar. A petition may be used to request an exception to some academic rules and policies.

Academic petitions are not automatically granted, but rather reviewed and evaluated with consideration of fairness and equity for all students, and on the basis of strong and well-documented arguments which clearly support a student's case for an exception. An exception to University policy is warranted only in cases involving unusual or extenuating circumstances that would normally not be faced by other students. Students should be aware that not every academic policy is petitionable. For a list of petitionable academic policies students should consult the Student Petitions webpage.

For cases unrelated to academic policies, such as disputing a grade, non-academic cases, or other equity concerns, students should seek the counsel of the University Ombuds for a referral to the correct policy or relevant office.

Procedures for Filing Petitions:
Petition requests must be submitted prior to graduating from the enrolled degree program and within three years of the petitionable event, unless otherwise specified in the policy governing the topic of the petition.

1. Complete the online Academic Policies Petition Form, found on the Student Petitions webpage, including preparing a well-supported rationale describing the request for an exception to policy.
2. Attach all supporting/relevant documentation to the form. Some examples are hospital records, a letter from a physician, a statement from a counselor, or court records. If the circumstances relate to a death, an obituary or death certificate should be submitted. Students are encouraged to make copies for their personal files

NOTE: When an academic action is reversed as a result of an approved petition, students may lose eligibility/benefits. There, students should consult with the appropriate offices (e.g., Financial Aid, Veterans Affairs, Athletics, etc.) to assess the potential consequences before submitting a petition. Once submitted, the petition and supporting documents become a part of a student’s educational record (link is external).

Please allow approximately four to six weeks for the petition to be reviewed. Students will be notified by email or mail of the decision.

Examples of Appropriate and Inappropriate Requests
If a student is hospitalized before the withdrawal deadline, ideally the student would withdraw before that date.

1. However, if a student is hospitalized and misses the semester withdrawal deadline, it may be appropriate for the student to file a petition requesting a retroactive withdrawal, which needs to include official documentation such as hospital records or a letter from their physician.
2. If the student was hospitalized and fully recovered before the withdrawal deadline, a petition would not be appropriate because the student would have been able to act within the deadline.

Petitions Evaluation Process
Petitions are reviewed on a regular schedule. Depending on the type of petition, the following offices are involved in the review and approval process:

1. College Advising Office
2. Graduate Staff
3. Faculty
4. Graduate Program Director
5. College Academic Standards Committee[^1]
6. Office of the Dean
7. Office of the Provost
Final Exam Scheduling: The week of classes preceding the scheduled
final examination period is set aside following the last day of classes for final
examinations. Neither students nor faculty members may make changes
in the published examination schedule without prior approval of the
Registrar.

Final Exam Rescheduling: For those rare circumstances when
there is a need to reschedule the final exam for the entire class, the
instructor of record must first obtain the approval of the department
chair and subsequently the signatures of all the students enrolled in
the class approving of the schedule change, which should be sent
to the Registration and Records. These approvals must be obtained
no later than 30 days prior to the scheduled exam day. Department
chairs will ensure that final exam rescheduling is reserved for only
rare circumstances. When department chairs approve such requests,
the department must inform the Registrar’s Office and obtain a new
classroom space for the exam.

Students with excessive final examinations may seek accommodation
with the assistance of the Registrar’s Office before the final day of
the regular drop period for the term. When students fail to make
arrangements via the Registrar’s Office by this deadline, accommodation
is not guaranteed. For timely requests, once notified by the Registrar’s
Office, it is the responsibility of the faculty to make reasonable efforts to
provide the student with an alternative examination time.

A student may address complaints related to the final examination
procedures in a course to the chair of the department or the dean of the
college in which the course is offered, or to the Office of the Student
Ombuds.

---

Face Covering Policy for COVID-19

The COVID-19 pandemic is forcing all of us to act differently, think
creatively and adapt frequently and quickly to new procedures and
expectations. The student experience at UM-Dearborn is different this
year, but what isn't different is the myriad of programs and activities
designed to foster growth opportunities and build community. Faculty
and staff have been working hard identifying ways to deliver innovative
and impactful learning experiences that meet the UM-Dearborn standard
of excellence.

UM-Dearborn is following guidance from the Michigan Department of
Health & Human Services, as well as the Center for Disease Control.
For the most up-to-date policies and procedures regarding face masks
on campus, please review the UM-Dearborn COVID-19 Response page
(https://umdearborn.edu/offices/external-relations/key-issues/umd-
dearborn-covid-19-response/students/).

Final Exams and Study Days

Within the first week of the term, each University of Michigan-Dearborn
instructor is expected to provide enrolled students in attendance with
a syllabus specifying the major requirements and evaluation methods
of the course. If a final exam is planned, it must be administered during
the period of time set aside following the last day of classes for final
examinations. Neither students nor faculty members may make changes
in the published examination schedule without prior approval of the
Registrar.

Final Assessment Policy

Assessment of student learning is an important element of maintaining
a high quality education at the University of Michigan-Dearborn. To that
end, the University considers the administration of a final assessment
(e.g., a final exam, a term project, a term paper, or similar) to be a
common practice.

It is the policy of the University to adhere to the final examination
schedule as published in the Schedule of Classes each semester. This
policy applies to all students.

1. Final Exam Scheduling: The week of classes preceding the scheduled
final examination period should be used primarily for continued
instruction in order to satisfy the number of contact hours required
for the course. No final examinations are to be given during the seven
days preceding the start of the examination period. Mid-term exams
are permitted, provided that there is a final examination or meaningful
assessment scheduled during the final examination period. Lab
practicums and seminar projects/presentations may be scheduled during
the last week of classes.

Individual students may be granted a variance from these policies,
provided the instructor is satisfied that the exception is based on good
and sufficient reasons, and that such an exception for an early or late
examination will not prejudice the interests of other students in the
course.

2. Examination Conflicts: A conflict occurs when a student has two or
more final examinations scheduled at the same time. For instances of
conflicts, adjustments are made according to this schedule:

- For Fall semester and Summer I semester the course section whose
  subject code abbreviation is nearest the beginning of the alphabet is
  adjusted.
- For Winter semester and Summer II semester the course the course
  section whose subject code abbreviation is nearest the end of the
  alphabet is adjusted.
- If the conflicting courses are in the same discipline/subject code, the
  higher course number is adjusted.
- If the conflict is the result of one course instructor changing their
  final examination day/time (see Number 4 below), the instructor
  who changed their day/time must work out the conflicts with their
  students.

3. Excessive Final Examinations: Excessive final Examinations occur
when a student has three or more final examinations scheduled in any
24 hour period (or on any day during the final examination period). A
course(s) may be moved from the 24 hour period (leaving a maximum of
two courses), using the following rules:

- For Fall and Summer I semesters, the course section whose subject
  code abbreviation is nearest the beginning of the alphabet should
  accommodate the student.
- For Winter and Summer II semesters, the course the course section
  whose subject code abbreviation is nearest the end of the alphabet
  should accommodate the student.
- If more than one course belongs to the same discipline/subject code,
  the higher course number should accommodate the student.

4. Final Exam Rescheduling: For those rare circumstances when
there is a need to reschedule the final exam for the entire class, the
instructor must first obtain the approval of the department chair and
subsequently the signatures of all the students enrolled in the class
approving of the schedule change, which should be sent to the Registration and Records. These approvals must be obtained
no later than 30 days prior to the scheduled exam day. Department
chairs will ensure that final exam rescheduling is reserved for only
rare circumstances. When department chairs approve such requests,
the department must inform the Registrar’s Office and obtain a new
classroom space for the exam.

Students with excessive final examinations may seek accommodation
with the assistance of the Registrar’s Office before the final day of
the regular drop period for the term. When students fail to make
arrangements via the Registrar’s Office by this deadline, accommodation
is not guaranteed. For timely requests, once notified by the Registrar’s
Office, it is the responsibility of the faculty to make reasonable efforts to
provide the student with an alternative examination time.

A student may address complaints related to the final examination
procedures in a course to the chair of the department or the dean of the
college in which the course is offered, or to the Office of the Student
Ombuds.
All final grades are due at 2:00 p.m. two days after the last final examination date, regardless of when each final assessment is scheduled.

**Grading System**

Grade point averages (scholastic averages) are computed by dividing the honor points a student has earned by the hours elected. The term grade point average and the cumulative grade point average are computed for each student at the end of each term and become part of the student's official UM-Dearborn academic record.

Symbols used in the grade reporting system common to all units are: F, failed (pass/fail option election); I, incomplete; NR, grade not reported; P, passed (pass/fail option election); S, satisfactory (courses graded S/E or S/U); NC, no credit; VI, audit; W, drop/withdrawal; X, absent from final examination; U, unsatisfactory (courses graded S/U only); Y, indicates the course extends beyond the term.

The grades of E, IE, UE or XE are not assigned honor points and thus will lower the student's grade point average. The grade NC is used only for certain courses. When this grade is officially granted, the grade NC and the course will appear on the student's transcript, but the course will not be used in computing a grade point average.

The recording of grades on a student's official academic record is governed by the following (4.0) grading system:

<table>
<thead>
<tr>
<th>Letter Grade</th>
<th>Honor Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>A,A+</td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
</tr>
<tr>
<td>B-</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
</tr>
<tr>
<td>C-</td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td>1.0</td>
</tr>
<tr>
<td>D-</td>
<td>0.7</td>
</tr>
<tr>
<td>E</td>
<td>0.0</td>
</tr>
</tbody>
</table>

Note: The A+ and D+ grades are not used by Engineering instructors. The A+ grade is not used by Education instructors.

Grades associated with transfer credit from other schools or colleges (including other University of Michigan campuses) are neither recorded nor used in computing grade point averages of students.

Students may repeat a course no more than two times. All grades received must appear on the transcript, but only the last grade received is counted in the grade point average (GPA). Please see the appropriate Graduate Repeat Course Policy (http://catalog.umd.umich.edu/academic-policies-graduate/exempting-waiving-repeating-courses/) or Undergraduate Repeat Course Policy (see below) for more information.

**Grades of D- in the College of Engineering & Computer Science**

A grade of D- is not considered passing in any CECS course. If a CECS student earns a D- in a course from another academic unit it will not count toward a CECS degree or certificate and must be repeated.

**Audit, Pass/Fail, and Non-Credit Courses in the College of Engineering & Computer Science**

CECS students cannot take required courses within their major on an audit or pass/fail basis. Any course audited or taken pass/fail will not count towards the degree, even as a general elective. In addition, CECS students cannot use non-credit courses towards their degree.

**Pass/Fail**

For certain courses, students may have the ability to elect a Pass/Fail grading mode. If chosen, the instructor will grade the student's work as a normal (A-E) course. Once the course is completed, the student's grade is converted to a "Pass" or "Fail" as follows:

1. Grades A through C- are posted on a transcript as P (Pass); counts toward residency requirement and credit hours toward graduation.
2. Grades D+ through E are posted on a transcript as F (Fail); no degree credit is earned.
3. A grade of UE is not converted to an F and is computed in the GPA the same as an E.
4. Neither a P nor an F is computed in the grade point average.

The Pass/Fail option is subject to the following conditions:

- No honor points will be awarded for courses taken as Pass/Fail.
- The Pass/Fail option is open only to students who are not on academic probation.
- Courses taken under the Pass/Fail option may not be used to fulfill requirements for majors, minors, concentrations, cognates, and/or teacher certification. However, up to four courses taken with the Pass/Fail option may be accepted for credit towards a degree.
- Students in the Honors Program must take all Honors Program requirements for a grade.
- Students in the Honors Program must take all Honors Program requirements for a grade.
- A student is limited to, at most, four courses taken under the pass/fail option. Courses specifically designated as "S/E only" are not counted in this limitation.

**Grading Benchmarks**

The University of Michigan-Dearborn seeks to provide greater clarification as to the characteristics for each grade level. The descriptions below provide general achievement targets for each grade level. The grading benchmarks do not establish a campus-wide mandate for faculty grading or grading outcomes. Instructors at the University of Michigan-Dearborn have the autonomy to formulate their own grading standards and system. Students should discuss and confirm with their instructor the grading system and requirements employed within their course(s).
Grading Benchmark Achievement Levels

Superior Achievement (A level)
The grade of A recognizes exceptional performance and achievement that exceeds course expectations and consistently demonstrates, where applicable, many of the following characteristics:

- Thorough, deep, and mature understanding.
- Genuine comprehension, insight, and synthesis.
- Significant mastery of challenging topics and issues.
- Extensive familiarity with relevant literature and previous work.
- Highly developed communication skills.
- Thorough preparation and extensive, thoughtful class participation.
- Integration of knowledge, concepts, and principles across disciplines.
- Originality of analysis and interpretation.
- Technical competence in skills and procedures.
- Precision of ideas and clarity of expression.
- Thinking that is independent, creative, and focused.
- Understanding of nuance and subtlety.
- Consistent coherence in argument and discussion.

Students who receive the grade of A consistently demonstrate, where applicable, the ability to:

- Analyze arguments using specific examples and original sources.
- Think logically, draw inferences, and make predictions in complicated situations.
- Communicate reasoning clearly and concisely.
- Identify strengths and weaknesses in arguments, policies, and practices.
- Integrate information to draw well-founded conclusions.
- Connect course content to issues of other courses and world affairs.
- Use models appropriately; recognize their strengths and accommodate their inherent limitations.
- Foresee and evaluate consequences of proposed policies and actions.
- Use technology creatively and effectively.

Good Achievement (B level)
The grade of B recognizes work that meets course expectations and typically demonstrates, where applicable, many of the following characteristics:

- Clear understanding without much originality.
- Competent grasp of course materials and subject matter.
- Familiarity with relevant literature.
- Competence in communication skills.
- Regular preparation for and participation in class.
- Integration of course knowledge, concepts and procedures.
- Some evidence of critical and creative thought.
- Clear connections between inferences and evidence.
- Care in the use of evidence and quotations with only occasional thinness in argument, detail, or precision.

Students who receive the grade of B typically demonstrate, where applicable, the ability to:

- Extend ideas by connecting with personal experiences, reading, or world events.
- Analyze data in various forms and from varied sources.
- Utilize information to explain events, draw conclusions, and apply results.
- Present comprehensive answers in a clear and logically correct style.
- Understand and compare various models.
- Distinguish inputs from outputs, and causes from effects.
- Recognize consequences of complex interactions.
- Use technology effectively.

Adequate Achievement (C level)
The grade of C recognizes work that is sufficient to prepare for continued study in the field and generally demonstrates, where applicable, some of the following characteristics:

- Think abstractly.
- Identify strengths and weaknesses in arguments, policies, and practices.
- Integrate information to draw well-founded conclusions.
- Connect course content to issues of other courses and world affairs.
- Use models appropriately; recognize their strengths and accommodate their inherent limitations.
- Foresee and evaluate consequences of proposed policies and actions.
- Use technology creatively and effectively.
• Adequate grasp of course concepts.
• Partial mastery of knowledge and skills required for understanding.
• Incomplete familiarity with relevant readings or references.
• Writing that lists facts rather than develops well-reasoned arguments.
• Frequent neglect of important information.
• Partial appreciation of the meaning or implications of a question.
• Answers that are insufficiently developed.
• Minimally complete assignments with many areas for improvement.

Students who receive the grade of C generally demonstrate, where applicable, some ability to:

• Assimilate and communicate simple knowledge and procedures.
• Extend ideas by making simple inferences.
• Make connections among and draw conclusions from course concepts.
• Interpret simple information provided in various formats.
• Organize and display data in tables and graphs.
• Use technology competently.

Limited Achievement (D level)
The grade of D indicates a lack of readiness to continue in the field. Students' work usually demonstrates, where applicable, some of the following characteristics:

• Minimal understanding of the subject matter.
• Poorly developed communication skills.
• Inability to apply subject matter understanding in other contexts.
• Little evidence of critical or creative thinking.
• Lack of apparent seriousness.
• Frequent carelessness in fulfilling assignments.

Inadequate Achievement (E)
The grade of E indicates that course work is insufficient to merit academic credit. Students who receive an E usually demonstrate some of the following characteristics:

• Inadequate understanding of subject matter.
• Inadequate or inconsistent preparation.
• Frequent failure to complete assignments in a timely manner.
• Little evidence of critical thought.
• Very poor communication skills.
• Frequent misunderstanding of facts or references.
• Little or no analysis.

• Confused or incomprehensible writing.

Little or no work offering evidence that course objectives have been met.

Grade Notations
The following notations may appear on a transcript to describe special situations in regard to a course.

NC No Credit. No honor points. Not computed in the grade point average. Used only in specially approved courses that are graded A, B, C, No Credit.

I Incomplete. No honor points. A student who is unable to complete the work for a given course, other than the final examination, may be granted an incomplete by the instructor if the following circumstances exist:

• The student has completed the majority of the coursework, such that the remaining work can be finished in five weeks or less
• Considering the student’s current grade, a passing grade could still be earned in the class upon the successful completion of all incomplete work
• The work is unfinished for reasons acceptable to the instructor
• The work needing to be completed can be finished outside of regular class sessions. If the student must be present in class to finish the work, the student must reregister for the course

If the instructor agrees to the incomplete, a contract outlining the remaining work and stipulating the due date must be completed by the instructor and student, approved by the student’s academic unit, and submitted to the Office of the Registrar. A grade of “I” will be recorded for the course. The deadline is up to five weeks after the start of the subsequent term (including the Summer term) to complete the coursework. The instructor has seven days after the due date to submit a grade. The “I” will remain in front of the final grade. Unfinished incompletes will lapse to a failing grade.

Students who are unable to complete their work within the five week period may petition their unit’s Academic Standards Committee to extend the deadline. The student must present documented unexpected circumstances that prevented completion of the course by the standard deadline, and the extension must be supported by the instructor.

X Absent from Final Examination. No honor points. A student who is unavoidably absent from a final examination may be granted the privilege of making up the examination within five weeks beginning from the first day of classes of the immediately following term. If granted this privilege, a mark of X will be recorded. Failure to take the examination within the specified time, or the denial of this privilege by the instructor, will result in a mark of E for the final grade. In extenuating circumstances an extension beyond the stated period may be requested by means of a petition that has been endorsed by the instructor. However, such arrangements for completing the work must be made within the above five-week period. The grade of X will automatically be converted to XE and reflected in the student’s grade point average as a failing grade if the Supplementary Grade Report is not submitted by the end of the five-week period.

Y Course extended beyond term end. No credit. No honor points. A mark of Y indicates that a course extends beyond the end of one term. This mark is only used for courses that have been specially designed and approved to extend beyond the end of one term. The student has up to one year (52 weeks) after the start of the subsequent term to complete the course. The faculty member then has one week to submit a grade. If the grade is not submitted by that time, the Y will be converted to
an E. Students who are unable to complete their work within the one year period may petition their unit’s Academic Standards Committee to extend the deadline. The student must present documented unexpected circumstances that prevented completion of the course by the standard deadline, a detailed plan and timeline to complete the remaining work, and the extension and plan must be supported by the instructor. A course with a Y mark may not be completed after graduation. If such a course is not completed, the Y will be converted to an E upon graduation.

Graduate students: The one year (52 week) limit does not apply to students enrolled in Masters or Doctoral programs however the Y grade will be converted to an E upon graduation. Students who are unable to complete their work before graduation may petition their unit’s Academic Standards Committee to convert the Y grade to a W prior to graduation.

NR Grade Not Reported. No honor points. Student should consult the Registrar immediately.

W Official Withdrawal. No credit. No honor points. Not computed in the grade point average. Students who drop a course or withdraw from all courses for a term before the deadline for official drops and/or withdrawals will receive for these courses the W notation. This notation may not be removed from the transcript.

S/E. Used only for specially approved courses. If a student passes, an S (satisfactory) is awarded. It is not computed into the grade point average. If a student does not pass, an E is awarded. If a student stops attending, without officially dropping, a UE is awarded. Both the E and the UE are computed in the GPA as failing grades. (Exception: Failing grades in additive credit courses that are graded S/E have no impact on the GPA.)

P/F Pass/Fail Option. No honor points. A student must elect to take a course under the Pass/Fail option.

UE Unearned Fail. This grade is assigned to any student who has never attended or stopped attending class during the semester and did not officially drop. It is computed in the GPA the same as an E.

VI Visitor-Official Audit. No credit. No honor points. Not computed into the grade point average. An official audit, or visitor status, allows a student to attend a course but not elect it for credit. The VI notation appears on the transcript. Regular tuition fees are assessed.

Change of Grades
The grade that an instructor records on the final grade sheet and that appears on the student’s subsequent transcript is assumed to be final; that is, the instructor’s official evaluation of all of a student’s performance and work completed by the official end of the term (the last day of the final examination week). The University permits a change of grade under the following circumstances:

• Recognizing that mistakes can be made, the University of Michigan-Dearborn permits a student to ask an instructor for a review of a grade within a five-week period after the end of the term involved. After the expiration of this deadline, a student may initiate a request for a review only through the petition process involving the student’s college Academic Standards Committee (or comparable group), whose decision shall be final. Such a review is entirely separate and distinct from the circumstances involving an X (Absent from Final Examination), I (Incomplete Coursework), or a Y (Course Extends Beyond Term).

• A student (or instructor) may initiate a grade change if the student discovers that a grade has been entered in error due to, but not exclusive to, the following:
  • possible omission by the instructor when computing the final grade, or material submitted by the student before the end of the term;
  • possible error in evaluation by the instructor of work submitted or final examination taken by the student before the end of the term;
  • possible error by the instructor in the computation of the final grade;
  • possible error in the recording of the grade by the instructor or staff; or
  • allegation of bias or prejudice on the part of the instructor in the assignment of the final grade. (This rare charge is to be handled according to the procedures established within the academic unit.)

Grade and Academic Grievances
All colleges follow the following process when handling student complaints related to grades:
1. The initial complaint regarding a course grade or assignment within a course shall be directed to the instructor
2. If the instructor determines that no change of grade should occur, the student may request the department chair to mediate a resolution
3. If the issue cannot be resolved at the department level, the student may petition the dean's office requesting a hearing on the matter

Specific policies may differ between colleges and departments. Please see the following for each college:

• The College of Arts, Sciences, and Letters has adopted its own college-wide and department-level grade appeal and change policies (https://umdearborn.edu/casl/undergraduate-programs/advising-student-records/policies-and-procedures/grade-appeal-policies/). Each department in the college has its own procedure for resolving grade complaints.

• The College of Engineering & Computer Science uses an Academic Grievance Policy (https://umich.app.box.com/s/ds21nulp04hylmm8m5gggb9auu7n3l92/) to manage student complaints related to grade disputes.

• The College of Business has a Grade Change and Grade Grievance Policy and Procedures (https://drive.google.com/file/d/0BxdK3tGusupSYTRjNGI1bnFiY2M/view/?usp=sharing).

• The College of Education, Health, and Human Services uses their Grade Change and Grade Grievance policy (https://umich.app.box.com/s/6ol812ghidkksi8t9afo79ay0fpzlvph/) for resolving grade complaints.
Repeating a Course (Undergraduate)

Students may repeat a course no more than two times. All grades received must appear on the transcript, but only the last grade received is counted in the grade point average (GPA).

Guidelines:
When a prior grade or mark other than "W" is recorded for a course a subsequent enrollment ("repeat") of the course, or its equivalent, or its cross-listing, will result in an adjustment of the grade point average and credits earned.

1. Students may repeat a course up to two times (total of three attempts).
2. Regardless of whether it is higher or lower than the previous grade(s), the last grade assigned in a course will be used in computing the student’s cumulative grade point average and credits earned toward degree.
3. If a student takes a course three times (the maximum allowed), the previous two grades will not be reflected in the GPA.
4. Most courses can be elected only once for credit. The maximum number of credits/elections allowed in courses designed for multiple enrollments are indicated in the catalog. For information regarding these courses, students may contact their Unit Academic Advisor.

This policy applies to all undergraduate degree and non-degree students in all academic units.

The policy applies only to courses elected Fall 2005 or later. Students who have repeated a course two or more times prior to Fall 2005 may repeat the course only one additional time. Only the two most recent previous grades will be affected by the new policy. Other previous grades will continue to be used in computing the grade point average.

Courses taken at institutions other than UM-Dearborn do not affect the grade point average.

The use of an Audit Grade Mode or Pass/Fail Grade Mode may not be used to adjust grade point averages for courses previously elected under any other existing grade mode. Exception - Winter 2020 term only: undergraduate students who repeated a course and elected a Pass/Fail grade, will have their prior course grade dropped from their GPA calculation.

For students who earned an undergraduate degree at UM-Dearborn and are now in the process of earning a second undergraduate degree at UM-Dearborn, the following rule will apply: If repeating a course in the second degree that was failed (with a grade of E) in the first degree, both course will be included in the GPA calculation and the course earned hours (assuming the course was passed) will be included in the earned hours of the second degree.

The limitation of the three-course rule will be monitored by the Office of the Registrar. Students who elect a course more than three times will be dropped from the course and notified of the election change.

Statement of Academic Integrity

The University of Michigan-Dearborn values academic honesty and integrity. Each student has a responsibility to understand, accept, and comply with the University’s standards of academic conduct as set forth by the Code of Academic Conduct, as well as policies established by the schools and colleges. Cheating, collusion, misconduct, fabrication, and plagiarism are considered serious offenses. Violations will not be tolerated and may result in penalties up to and including expulsion from the University.

Withdrawal Policy

A student who first registers and then withdraws from two consecutive terms may be placed on academic probation and may not register without the explicit written permission of the Associate Dean or the Associate Dean’s representative.

A student who is required to withdraw from one academic unit may not be admitted to another UM-Dearborn academic unit within the same term that the withdrawal action was taken.

Required Withdrawals

Unless extenuating circumstances are presented by petition, a student who is required to withdraw from one academic unit may not be admitted to another UM-Dearborn academic unit within the same term as that in which such withdrawal action is taken.
Goals for the Undergraduate Experience

Undergraduate education at the University of Michigan-Dearborn is based on the belief that the benefits of academic work are enhanced when classroom and intellectual rigor interact with community engagement and experiential learning. The University of Michigan-Dearborn is uniquely situated to address the complex challenges facing the metropolitan region by offering students rigorous academic offerings as well as the opportunity to apply that knowledge in real-world situations. Our goal is to graduate students who are able to apply theoretical and discipline-specific knowledge to discover creative solutions to problems and to successfully communicate those ideas both individually and as a part of a collaborative effort.

Undergraduate programs at UM-Dearborn provide students with the opportunity to develop particular skills and abilities; to think critically and creatively to solve problems; to cultivate an appreciation of aesthetic and ethical values; and to acquire both breadth of knowledge and the depth of understanding gained through the study of one or more academic disciplines. The UM-Dearborn faculty has a common commitment across units to provide students with foundational knowledge through content-specific courses, extra-curricular activities, and community-oriented experiences.

The goals for undergraduate student learning and experiences at UM-Dearborn are:

- Core Knowledge
- Critical Thinking
- Communication
- Collaboration
- Cultural Understanding
- Citizenship

Goals

1. Core Knowledge
Undergraduate student learning goal #1, "Core Knowledge," acknowledges that, each discipline at the University of Michigan-Dearborn, requires students to gain knowledge of and experience with their chosen academic discipline. Although the content-area goals within each discipline will likely be unique, all degree programs share fundamental educational values that include:
   - acquiring rigorous, discipline-specific inquiry skills.
   - learning to apply theories to and construct models for addressing real-world problems.
   - discussing and producing intellectual work using discipline-specific conventions for writing, research and communicating.

2. Critical and Creative Thinking
Undergraduate student learning goal #2, "Critical and Creative Thinking," acknowledges the students’ need to gain experience in problem solving, and to engage in analysis, synthesis and evaluation in creative ways using an ethical framework. Development of such habits of mind will be demonstrated by:
   - the ability to seek information and use inquiry to systematically explore situations, collect and analyze evidence, and make informed evaluations.
   - the synthesis of knowledge within and across courses and programs and the integration of theory and practice.
   - the ability to use qualitative and quantitative reasoning to develop a clear understanding of the problem being studied.
   - the generation of creative solutions to problems through original, imaginative, innovative, or artistic effort.
   - the ability to use ethical reasoning to generate meaningful solutions to problems.

3. Communication
Undergraduate student learning goal #3, "Communication," recognizes that there are a wide variety of modes of communication, including written and oral communication that are continually being shaped and expanded through rapid changes in technology. Student mastery of these myriad ways of communicating ideas and intellectual products will be demonstrated through the development of:
   - the ability to communicate clearly and effectively to an identified audience both in writing and orally.
   - the creation of communication that demonstrates content knowledge, deep reflection, creativity and critical thinking.
   - the appropriate use of technology in maximizing the clarity, impact and accessibility of student ideas.

4. Collaboration
Undergraduate student learning goal #4, "Collaboration," acknowledges that collaborating with peers, faculty and community members is an important part of the learning process in all disciplines. This element in the University’s educational plan for students will be promoted by providing students the opportunity to:
   - work actively and effectively as part of a team to answer questions and solve problems.
   - develop the ability to critically and effectively evaluate the collaborative products and processes.
   - grapple effectively with differences and diversity and resolve conflict that occurs in collaborative efforts.

5. Cultural Understanding
Undergraduate student learning goal #5 “Cultural Understanding,” acknowledges that appreciating global and cultural diversity within historical, artistic, and societal contexts is critical to individual and societal success in both professional and personal areas of life. Student achievement in this realm will be gained through:
   - reflecting on experiences with diversity to demonstrate knowledge and sensitivity.
   - demonstrating awareness of how diversity emerges within and across cultures.
   - developing the ability to collaborate in a global setting through awareness of language and cultural differences.

6. Citizenship
Undergraduate student learning goal #6, “Citizenship,” recognizes that engagement occurs in many ways for students, and manifests itself in different ways for each academic program and discipline. Active meaningful student involvement in course, community and societal affairs will also encourage student lifelong learning by providing the opportunity to use their skills, abilities and knowledge in a variety of roles and environments. Acquisition of these skills will be promoted through:
General Education Program: The Dearborn Discovery Core

The campus-wide general education program at the University of Michigan-Dearborn, known as the Dearborn Discovery Core, is designed to complement work in a student’s chosen area of study. These classes serve as a means of discovery for students, providing a foundation for learning, connecting to potential new areas of interest and building tools for success in whatever field a student pursues. Learning outcomes are guided by the qualities every student should develop as they move toward graduating with a University of Michigan-Dearborn degree.

The Dearborn Discovery Core requirements incorporate the Goals for the Undergraduate Experience to help ensure that students master the tools and techniques necessary to succeed in college and throughout their lives and careers. The Dearborn Discovery Core is divided into three sections: Foundational Studies, Areas of Inquiry, and Capstone Experience.

An overall Grade Point Average of 2.0 is required of students when completing the Dearborn Discovery Core.

A course can count for a maximum of three categories within the Dearborn Discovery Core.

Dearborn Discovery Core

Please see the Dearborn Discovery Core (General Education) webpage or additional information.

Foundational Studies

Writing and Communication (GEWO) – 6 Credits
Upper-Level Writing Intensive (GEWI) – 3 Credits
Quantitative Thinking and Problem Solving (GEQT) – 3 Credits
Critical and Creative Thinking (GECC) – 3 Credits

Areas of Inquiry

Natural Science (GENS) – 7 Credits
  • Lecture/Lab Science Course
  • Additional Science Course
Social and Behavioral Analysis (GESB) – 9 Credits
Humanities and the Arts (GEHA) – 6 Credits
Intersections (GEIN) – 6 Credits

Capstone

Capstone (GECE) – 3 Credits

Office of Admissions

4901 Evergreen Road
1145 University Center
Dearborn, MI 48128
313-593-5100
313-436-9167 [FAX]
umd-admissions@umich.edu (admissions@umd.umich.edu)
umdearborn.edu/admissions (http://www.umdearborn.edu/admissions/)

Student Expectations

The primary purpose of the Statement of Student Rights and Code of Student Conduct is to assist the University in providing an environment which supports the educational process and the well-being of the campus community. The responsibility for maintaining such an environment is shared by all members of the campus community including faculty, staff, current and prospective students. Therefore, any person expressing interest in enrolling at the University of Michigan-Dearborn is expected to demonstrate behavior consistent with the Code of Conduct. Behaviors inconsistent with the Code of Student Conduct will not be tolerated. The University seeks applicants that demonstrate the potential to be contributing members of the campus community and reserves the right to deny admission based upon violation(s) of the Code of Student Conduct.

Campus Visits/Tours

Visiting campus is the best way to explore what we offer you! The Office of Undergraduate Admissions offers multiple visit options. Choose the one that best fits your schedule by visiting our website at umdearborn.edu/visit.

Pre-Admission Counseling

Admissions counselors welcome the opportunity to discuss the educational opportunities available at UM-Dearborn with prospective students. Persons interested in enrollment should arrange a one-on-one appointment by visiting umdearborn.edu/admissions/contact-admissions. This includes students in high school or college or anyone wishing to return to school.

Degree-Seeking and Non-Degree Student

Degree-Seeking Student

A student who has been admitted as a first-year (freshman) or transfer into a regular degree program in an academic unit is called a degree-seeking student. After enrolling, a student may change from one degree program to another by following established procedures, as long as he/she is accepted by the new unit.

Non-Degree Student

Non-degree status offers the opportunity to elect courses to meet personal objectives without enrollment in a degree program. Consideration for admission as a non-degree student is specific to the non-degree program in which the student is interested.
UM-Dearborn offers the following Non-Degree Programs (https://umdearborn.edu/admissions/undergraduate/non-degree-returning-other/):

- Alumni Enrichment
- Certificates
- Dual Enrollment (Current High School Students)
- Guest
- Personal Enrichment
- Prospective Degree
- Retired Person Studies Program

First-Year Student Admission

Admission Procedures

UM-Dearborn welcomes applications from prospective first-year (freshman) students. The admission of all students is on a selective basis; admissions officials consider various factors in reaching individual decisions for admission. Applicants are evaluated based on the secondary school record (GPA, rigor of curriculum, trend of grades, and conduct).

Students can opt-in to submit a standardized test score to be considered as part of their application to the university, but it is not required. UM-Dearborn accepts scores from either of the following standardized tests: the Scholastic Aptitude Test (SAT) or the American College Test (ACT). If the student wants to provide a test score, student should make certain that the test results are forwarded to the UM-Dearborn Office of Undergraduate Admissions (SAT code #1861; ACT code #2074).

Incoming first-year students are expected to present a final official high school transcript as proof of graduating from an accredited high school or preparatory school. Failure to submit this document may impact your receipt of federal and state financial assistance.

Information provided on the Undergraduate Admission Application must be accurate and complete. Falsification or omission of information or credentials may result in the revocation of admission.

Application Deadline

It is recommended that students apply for admission online and are eligible to do so as soon as they complete their junior year in high school. There are application deadlines specific to each entry semester, please consult the how-to apply website (https://umdearborn.edu/admissions/undergraduate/incoming-freshmen/how-apply/) for the most current deadlines. UM-Dearborn continues to accept first-year student applications as long as space is available, however, students should apply by the dates on the website to ensure highest consideration for admission.

It is free and easy to apply online (umdearborn.edu/apply (http://www.umdearborn.edu/apply/)), and students may check the application status online.

Official high school transcripts are needed at the time of application for freshman admission. Students seeking admission to UM-Dearborn that took coursework from other institutions of higher learning must also submit official transcripts from all previous institutions. Official corrections made to transcripts by previous schools, whether high schools, colleges, or universities, must be submitted to the University no later than six months after the first day of classes. Students whose final official transcripts are not received will have a hold placed on their student account which prevents course registration for future semesters.

Admission Requirements

Students interested in enrolling at UM-Dearborn should have completed the Michigan Merit Curriculum as established by the State of Michigan (or equivalent coursework if outside of Michigan). Students graduating from a high school outside of Michigan should pay close attention to the requirements listed below.

A strong high school background in basic academic subjects is important in a student's preparation for college study. The following college preparatory curriculum should be followed:

- English Language Arts - 4 credits
- Mathematics - 4 credits
- An Online Learning Experience
- Physical Education & Health - 1 credit
- Science - 3 credits
- Social Studies - 3 credits
- Visual, Performing, and Applied Arts - 1 credit
- World Language - 2 credits

Special Recommendations

Students who intend to pursue their college work in business administration, computer science, engineering, or physical and natural sciences are encouraged to include the following subjects in their high school preparation:

- Mathematics: Coursework should include two years of algebra, one year of geometry and at least one semester of trigonometry.
- Biological and Physical Sciences: Coursework should include one year of chemistry and at least one year of physics or biological science.

Applicants intending to pursue a college program in science or engineering who have not completed the recommended mathematics and chemistry units may still be admitted if they satisfy the general admission requirements. However, they will be expected to establish proficiency in these areas during their freshman year.

Test Requirements (Optional)

Students can opt-in to submit a standardized test score to be considered as part of their application to the university, but it is not required. UM-Dearborn accepts scores from either of the following standardized tests: the Scholastic Aptitude Test (SAT) or the American College Test (ACT). If the student wants to provide a test score, student should make certain that the test results are forwarded to the UM-Dearborn Office of Undergraduate Admissions (SAT code #1861; ACT code #2074).

The results of standardized achievement tests in specific subject areas are not required as part of the application process. Many new freshmen enrolling at UM-Dearborn, must take the Mathematics Placement Examination for placement purposes. Placement exams are administered prior a student's orientation and class registration.

Enrollment Deposit

Upon admission, you are required to submit a $50 Enrollment Deposit. This non-refundable deposit signals your intent to enroll, reserves your
space for the semester, and will be credited to your student account and applied toward your tuition.

Online payment of the deposit can be submitted at umdearborn.edu/deposit (http://www.umdearborn.edu/deposit/).

Transfer Student Admission

Admission Requirements

The requirements for admission to UM-Dearborn depend upon the particular program of study to be followed. Admission is based on preparation, ability, and probability of success. All applicants should be in good standing and eligible to return to their previous institution.

Each of the four academic colleges of the University has its own GPA admission criteria:

<table>
<thead>
<tr>
<th>College</th>
<th>GPA Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>CASL</td>
<td>2.50</td>
</tr>
<tr>
<td>COB</td>
<td>2.70</td>
</tr>
<tr>
<td>CECS</td>
<td>2.75¹</td>
</tr>
<tr>
<td>CEHHS:</td>
<td>2.75</td>
</tr>
<tr>
<td>Teacher Certification Programs</td>
<td>2.75</td>
</tr>
<tr>
<td>Non-Teacher Certification Programs</td>
<td>2.50</td>
</tr>
</tbody>
</table>

¹ Students who have completed Calculus II (Math 116 or equivalent) elsewhere with a C grade or higher AND have an overall GPA of 2.75 or higher are admitted directly into their CECS major, all other students with a 2.75 or higher are admitted into pre-engineering.

Information provided on the Undergraduate Admission Application must be accurate and complete. Falsification or omission of information or credentials may result in the revocation of admission.

Admission Procedure

Prospective transfer students are required to submit an application for admission and an official transcript from each college or university previously attended. Failure to list all schools attended on the application may result in revocation of admission. To be considered, official transcripts must come directly from the previous college/university to UM-Dearborn’s Office of Undergraduate Admissions.

The prospective student is responsible for contacting each previous school attended to request that official transcripts be sent. While all transcripts are required for admission, only courses taken at an accredited college or university will be considered for transfer to the University of Michigan-Dearborn. UM-Dearborn utilizes the Transfer Credit Practices published by the American Association for Collegiate Registrars and Admission Officers (AACRAO) as a guideline to determine transferability of courses based on accreditation status and other criteria. A list of accredited U.S. and Canadian colleges and universities can be obtained from the U.S. Department of Education website at ope.ed.gov/accreditation.

It is free and easy to apply online (umdearborn.edu/apply (http://www.umdearborn.edu/apply/)), and students can check the application status online.

When the application and all official transcripts have been received, they will be evaluated and the student will be notified regarding admission status.

Transfer students with less than 24 transferable credit hours will be required to submit final official high school transcripts.

Admission granted while the student is enrolled at another institution is conditional and will become final only when the student meets the conditions set forth in the conditional admission letter and upon receipt by the Office of Undergraduate Admissions of the final official transcript from the student’s former institution(s). It is the student’s responsibility to see that the final transcript is provided following the completion of all courses. Students will not be allowed to register for subsequent terms until the final official transcript has been received.

Official corrections made to transcripts by previous schools, whether high schools, colleges, or universities, must be submitted to the Office of Undergraduate Admissions within six months of the first day of classes of the term of admission.

Transfer of Credits

Students transferring to UM-Dearborn from other two- or four-year institutions can use one or more of these resources below to ensure maximum number of transfer credits.

Course Transfer System

The Course Transfer System (CTS) (umdearborn.edu/cts (http://www.umdearborn.edu/cts/)) is a valuable resource. While it is not an official credit evaluation, the CTS can serve you in determining the transferability of courses from an accredited community college or four-year school. The information is always current and reflects courses that potentially transfer to UM-Dearborn, but does not necessarily indicate if or how these courses will be used toward your particular degree program.

Transfer Guides

Our Transfer Guides from select community colleges in Michigan outline courses that can be applied to specific majors. To view transfer guides by academic college for community colleges, visit the Transfer Hubs (see below).

Transfer Hubs

Students transferring to UM-Dearborn from a community college located in the metropolitan southeastern Michigan area should check out the customized websites for each of the community colleges. These sites can be accessed at umdearborn.edu/hubs (http://www.umdearborn.edu/hubs/).

Transfer Equivalency Worksheet

At the time of admission, a transfer student will receive a Transfer Equivalency Worksheet. This worksheet reflects only the overall hours potentially transferable to UM-Dearborn, but does not necessarily reflect the hours that will be used toward a degree program. An academic advisor will inform the student as to which hours actually fulfill program requirements. The number of hours that apply to a particular program will be determined by academic college for community colleges, visit the Transfer Hubs (see below).

Michigan Transfer Agreement

In the spring of 2014, UM-Dearborn signed the Michigan Transfer Agreement (MTA) to participate as a receiving institution. The program permits transfer students to complete the 30-credit hour MTA at a Michigan community college and transfer it as a block to satisfy most of the general education requirements at Michigan universities.

Students transferring to UM-Dearborn who want to take advantage of the MTA must have the "Michigan Transfer Agreement Satisfied" designation posted on their transcript. An Associate's degree is not required to use MTA. Students planning for transfer to UM-Dearborn are strongly encouraged to check with their community college to determine what courses are approved for inclusion in the above MTA categories and to learn the details for obtaining an MTA endorsement on their transcript. During the planning and course selection process at the community college, students are encouraged to refer to UM-Dearborn transfer guides to determine which MTA courses would be the best fit in their intended program. Community colleges will have a website for detailed information including approved courses for completing the MTA. Additional information can be found at: umdearborn.edu/mta (http://www.umdearborn.edu/mta/).

Mi Transfer Pathways

The University of Michigan-Dearborn is participating in MiTransfer Pathways, a statewide initiative among Michigan colleges and universities. MiTransfer Pathways aims to make the transfer experience more efficient and easy to navigate, while enabling students to optimize credit transfer.

Designed as a way to encourage and simplify degree completion, pathways courses will apply to both an associate's degree at a community college and a bachelor's degree at a university. Completion of the MTA is also recommended. Visit our webpage to get additional information about MiTransfer Pathways (https://umdearborn.edu/admissions/undergraduate/transfer-students/will-my-courses-transfer/mi-transfer-pathways/).

Advanced Placement (AP)

UM-Dearborn encourages high-achieving students to enroll in AP courses and take AP exams. Most exam subjects, with a score of 3 or better, typically earn credit for equivalent UM-Dearborn courses, and students may apply those credits toward their degree. For additional information, visit: umdearborn.edu/advancedplacement (http://www.umdearborn.edu/advancedplacement/).

Armed Forces

Veterans who have served in the armed forces may receive 2-6 general credits toward degree for their recruitment training if an honorable or general discharge was granted. The hours granted vary according to the ACE recommendations for credit based on the military branch of service. Additional Specialist Training credit may be petitioned for credit via a written petition during the first semester on campus. Veterans should meet with their academic unit to discuss possible options, write a petition, and arrange to meet with a discipline representative or department chair to review the military course work and experience. Based on the discussion and ACE recommendations, specific credit would be granted in the first semester after admission by the discipline representative or department chair through the academic unit advising office.

UM-Dearborn has a cap of 62 transfer hours from an accredited community college. The same cap is applied for all ACE credits. This includes the general credit granted for recruitment training for veterans. If a veteran attended the Community College of the Air Force the cap of 62 hours toward degree includes the general credits, attendance at the Community College of the Air Force and all petitioned credit to degree.

College Level Exam Program (CLEP)

UM-Dearborn encourages students who took College Level Examination Program (CLEP) tests to submit their scores electronically to the Office of Undergraduate Admissions prior to enrollment. To be eligible for credit, students must have enrolled in or after the Fall 2020 semester. Students cannot earn credit for tests that were taken after they enrolled at UM-Dearborn. Students who enroll at UM-Dearborn will work with an academic advisor to determine how these classes will apply to their degree program.

DANTES Subject Standardized Test (DSST)

UM-Dearborn encourages students who took DANTES Subject Standardized Tests (DSST) to submit their scores to the Office of Undergraduate Admissions prior to enrollment. To be eligible for credit, students must have enrolled in or after the Fall 2020 semester. Students cannot earn credit for tests that were taken after they enrolled at UM-Dearborn. Students who enroll at UM-Dearborn will work with an academic advisor to determine how these classes will apply to their degree program.

International Baccalaureate (IB)

UM-Dearborn will award credit for exams offered through the International Baccalaureate Diploma Programme, which is available in participating IB high schools. Most subjects earn credit for equivalent UM-Dearborn courses. UM-Dearborn typically accepts IB higher-level (HL) exams as well as a few standard-level (SL) exams for credit. For additional information, visit: umdearborn.edu/advancedplacement (http://www.umdearborn.edu/advancedplacement/).
Admission to the Honors Program

The Honors Program at UM-Dearborn is designed for qualified, highly-motivated students who want an extra level of challenge and stimulus in their college experience. Honors students take a special sequence of classes that satisfy basic requirements and, at the same time, provide a well-balanced undergraduate education. The program teaches students to think critically and independently, to perceive connections between diverse areas of knowledge, and to express their thoughts clearly and effectively. Honors Program classes are small, enabling students to interact closely with the faculty and each other.

Admission to the program is competitive and is based on the student’s interests and experience as well as the high school record.

For eligibility information and more details, visit umdearborn.edu/casl/sp_honorsprog (http://umdearborn.edu/casl/sp_honorsprog/).

Personal Enrichment

Personal Enrichment is an admission status that enables students to enroll in undergraduate courses for the purpose of personal or professional development. Personal Enrichment students must have already earned a baccalaureate degree and are not seeking an additional undergraduate degree. They may enroll for a maximum of 15 credit hours at the University. There is no limit on the number of semesters, but the total number of credit hours for all semesters enrolled may not exceed 15.

A Personal Enrichment student will have fees assessed and adjusted by fee regulations identical to those governing regular matriculated students. All courses taken under PE status are considered part of the undergraduate record.

Prospective Degree Student

The Prospective Degree Student (PDS) program provides an opportunity for an individual whose previous high school and/or college work does not qualify for admission as a degree-seeking student to enroll in undergraduate courses.

Eligibility

- Students who are at least five years beyond high school graduation (or beyond last high school attendance for applicants with a GED)

or

- Students who are at least five years beyond high school graduation, have completed some college coursework and have not been enrolled in college for at least two years.

Students in this category are subject to the following policies:

- Prospective Degree students will enroll in 14-16 UM-Dearborn credit hours toward a degree as a non-degree student. Students may take additive credits with the approval of an academic advisor, but these credits are not used in determining eligibility for degree-seeking status nor will they be applied toward a degree.

- Upon completion of 14-16 credit hours, students will apply for admission to a degree program. A maximum of 16 credit hours may be accepted by the academic unit as credit toward a degree. These credits must be at the 100-level or above and fulfill degree requirements.

- Prospective Degree students will be advised through the START Office.

- Upon being admitted, the student must call 313-593-5576 to schedule an advising appointment prior to registering for classes.

- Coursework in the PDS program must be completed within one full academic year (3 semesters) of admission.

- Students are responsible for taking all necessary placement exams in advance of, or within, the first semester of enrollment.

- A PDS student will have fees assessed and adjusted by fee regulations identical to those governing regular matriculated students. All courses taken under PDS status are considered part of the undergraduate record.

Financial Aid Eligibility Limitations

Prospective Degree Students have a special status at UM-Dearborn and are eligible to be considered for financial aid for up to 12 consecutive months before admission to a regular degree program. If a student is not admitted to a regular degree program at the end of the 12 consecutive months, the student is not eligible for additional financial aid.

Requirements for Admission to a Degree Program

During the final semester of PDS coursework, students are encouraged to apply for admission as a degree-seeking student and work closely with their START adviser regarding next steps. The application process includes submitting the Application for Admission and all required official transcripts and documents. Each of the four academic colleges has its own admission criteria:

- **College of Arts, Sciences, and Letters (CASL):** 2.50 cumulative GPA for PDS coursework at UM-Dearborn.

- **College of Business (COB):** 2.70 recalculated GPA, including PDS coursework at UM-Dearborn. If the student has attended other colleges/universities, the GPA is recalculated to include only courses which are potentially transferable.

- **College of Engineering and Computer Science (CECS):**
  - Direct to Engineering: Overall GPA 2.75 or higher and Calculus II (Math 116 or equivalent) elsewhere with a C grade
  - Pre-Engineering: Overall GPA 2.75 or higher and below Calculus II (Math 116 or equivalent)

- **College of Education, Health, and Human Services (CEHHS):**
  - Teacher Certification Programs: 2.75 GPA*
  - Non-Teacher Certification Programs: 2.5 GPA*

*recalculated GPA, including PDS coursework at UM-Dearborn.

If the student has attended other colleges/universities, the GPA is recalculated to include only courses which are potentially transferable.

Alumni Enrichment Program

The Alumni Enrichment Program is an opportunity for UM-Dearborn alumni to enhance their education and to provide additional exposure to a variety of subject areas on a non-credit basis. Each alumni’s selection of courses will be checked to ensure that the educational-broadening objective of this program is being pursued.

All courses must be taken on a pass/fail basis.
Eligibility

This program is available to UM-Dearborn alumni only. Upon acceptance, students are eligible to elect up to 9 hours per term of undergraduate coursework in one or more fields distinctly different from the field in which they earned their bachelor's degree (major or minor).

Undergraduate and graduate alumni from UM-Dearborn may pursue undergraduate courses. They are eligible to participate in the program one full term after graduation has been confirmed. Alumni participants are not eligible if currently enrolled in a degree or certificate program.

Course enrollments will occur on a space available basis. Alumni in this program will also have to meet the regular prerequisites for any courses they elect. Internship, cooperative education, and online courses are not available to program participants.

Assessment

A discounted per credit hour charge will be levied as an "enrollment fee." This means that a portion of the tuition will be covered by an Alumni Scholarship. The Alumni Enrichment student will also be expected to pay any fees associated with registration, course elections, and technology.

To Apply

Apply online at umdearborn.edu/otheradmission (http://www.umdearborn.edu/otheradmission/). Once admitted, students will be allowed to register for classes.

Guest Students

A guest student is a regular degree student in good standing at another institution who is admitted to UM-Dearborn for one term only. Work completed under such an arrangement is considered to be a part of the student's program elected under the jurisdiction of the home institution.

The process to apply can be found here (https://umdearborn.edu/admissions/undergraduate/non-degree-returning-other/guest-students/). The Guest application deadline for any term is the first day of class of that term.

Guest students are expected to receive academic advising from their home institution, although guest students are subject to all rules governing course prerequisites.

Enrollment is limited to a maximum of four semesters. A new application is required for each semester they wish to enroll. If a guest student has previously taken classes at UM-Dearborn, the admission decision will also be based on the UM-Dearborn GPA.

UM-Dearborn students wishing to elect courses at another institution of higher education should see "Coursework at Other Institutions (https://umdearborn.edu/students/registration-records/taking-courses-outside-um-dearborn/)."

Dual Enrollment Programs

High School Dual Enrollment

Dual enrollment provides an opportunity for high school students with demonstrated academic potential to enroll in selected UM-Dearborn courses while completing their high school graduation requirements.

The purpose of the program is to supplement and enrich the educational experience by allowing students to pursue course work which otherwise would not be available. Admission as a dual enrolled student is a non-degree status. Students are expected to complete all graduation requirements mandated by his/her high school. Dual Enrollment students are granted full privileges of UM-Dearborn students, including use of the library and recreational facilities and the opportunity to purchase student tickets to cultural and athletic events at the University of Michigan. Dual enrollment students may enroll for a maximum of eight credit hours per semester per semester unless additional hours are approved by the Director of Admissions.

Students seeking admission to a degree program after high school graduation must apply and meet all minimum admission criteria. Students will benefit from already having college credits achieved to apply toward their degree.

Admission Criteria

<table>
<thead>
<tr>
<th>Current Class Standing</th>
<th>Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Seniors and Juniors</td>
<td>• 3.0+ posted GPA on HS Transcript</td>
</tr>
</tbody>
</table>
| Sophomores and Freshmen¹ | • 3.90+ posted GPA on HS Transcript  
|                        | • A typed personal statement (up to 500 words) clarifying the student's interest in and commitment to taking college-level course(s) - to be submitted at the time of interview  
|                        | • Optional: provide any additional assessment scores if available (i.e. Explore, Plan, ACT, Compass, MME, PSAT, SAT, or Accuplacer) |

To Apply for Admission

Apply as early as possible. The deadlines for all documents to be submitted varies by semester, see the dual enrollment website (https://umdearborn.edu/admissions/undergraduate/non-degree-returning-other/high-school-dual-enrollment/) for current deadlines, and other important details. No admission decision will be made until all of the following have been completed and received:

1. The Dual Enrollment application.
2. Course Permission and Calculation Worksheet. Be sure to select alternative courses. Must be signed by your high school principal.
3. An official transcript (including test scores, if applicable).
4. Freshmen and Sophomores Only: Personal Statement and Test Scores (if applicable)

Dual Enrollment Orientation and Registration

Students will be notified of their admission status by the Office of Undergraduate Admissions and information about orientation and registration will be sent to you after you are admitted. Admission to dual enrollment status does not guarantee the ability to enroll in the class(es) specified on the Course Permission and Calculation Worksheet, but every effort will be made to accommodate the student’s request.
**Readmit**

An undergraduate student (that is, a candidate for a bachelor’s degree) who does not register for any courses at UM-Dearborn during a 12-month period must be formally readmitted in order to resume studies at UM-Dearborn. Such a readmitted student is then governed by the current Catalog.

Some academic units at UM-Dearborn may have more stringent regulations. It is the obligation of students who leave the University for an extended period of time to acquaint themselves with the specific requirements.

Since all I and X marks are permanently changed to IE and XE after four months, a readmit may not petition to make up I’s or X’s on his/her prior record.

Courses taken at other campuses will not count automatically toward graduation. Students should petition their academic unit for credit(s). Maximum transfer hours apply (see “Transfer Equivalency Worksheet” section).

Readmitting students complete a Readmission Form available to download at umdearborn.edu/ddc (http://www.umdearborn.edu/ddc/) and submit it directly to the academic unit in which they wish to enroll. Readmitted students are subject to the requirements in effect at the time of readmission. If students want to change their program of study, they should contact the academic unit of the program to which they would like to change.

**Deferring Admission**

Students who have been admitted but did not enroll may defer admission up to one year. After that, a new admissions application must be submitted.

To defer admission, students complete an Admission Information Change Form available to download at umdearborn.edu/ddc (http://www.umdearborn.edu/ddc/) and must disclose if there has been or will be any enrollment at another school prior to the new deferred semester. Students will have their application reviewed to determine if they are admissible for their deferred term of choice. Failure to disclose this information may result in the revocation of admission.

**Teacher Certification**

The College of Education, Health, and Human Services at UM-Dearborn (CEHHS) can assist qualified persons who hold a bachelor’s degree from an accredited institution to pursue a program of study leading to a recommendation for a Michigan Standard Teaching Certificate-Elementary (COE) or Secondary (COS).

**Initial Teacher Certifications**

Certificate-Only Elementary Program (COE), Certificate-Only Secondary Program (COS)

A student who already holds a bachelor’s degree from an accredited institution is able to earn a Michigan Elementary or Secondary Standard Teaching Certificate through one of our “certification-only” programs. Completers of these programs are prepared to be competent, caring and reflective educators who are ready to teach in their chosen teaching area.

Requirements for COE and COS Standard Teaching Certificates:

- Bachelor’s Degree with a minimum, cumulative GPA of a 2.75 posted on the transcript
- Certification-Only Application completed online

**Programs for Certified Teachers**

**Professional Education Certificate (PEC)**

CEHHS offers this program for teachers seeking to earn a Professional Education Certificate or to renew their Standard Teaching Certificate.

**Enhancement Program (EP)**

CEHHS offers this program for teachers who currently hold a Michigan Permanent, Standard or Professional Education Certificate and wish to enhance their certificate with an additional area of preparation or endorsement.

Requirements for PEC and EP:

- Bachelor’s Degree with a minimum, cumulative GPA of a 2.75 posted on the transcript
- PEC or EP Online Application
- Copy of Current Teaching Certificate
- Active State of Michigan Teaching ID (if available)

**Second Degree**

Applicants pursuing a second Bachelor’s degree must submit the Undergraduate Admission Application and meet the same admission requirements as transfer students. Each of the four academic schools and colleges of the University have their own admission criteria:

<table>
<thead>
<tr>
<th>Program</th>
<th>GPA</th>
</tr>
</thead>
<tbody>
<tr>
<td>CASL</td>
<td>2.50</td>
</tr>
<tr>
<td>COB</td>
<td>2.70</td>
</tr>
<tr>
<td>CECS</td>
<td>2.75</td>
</tr>
<tr>
<td>CEHHS</td>
<td></td>
</tr>
<tr>
<td>Teacher Certification</td>
<td>2.75</td>
</tr>
<tr>
<td>Non-Teacher Certification</td>
<td>2.50</td>
</tr>
</tbody>
</table>

1 Students who have completed Calculus II (Math 116 or equivalent) elsewhere with a C grade or higher AND have an overall GPA of 2.75 or higher are admitted directly into their CECS major, all other students with a 2.75 or higher are admitted into pre-engineering.

Refer to the Transfer Student Admission section for additional information.

**Retired Persons Scholarship Program**

The Retired Persons Scholarship Program (RPS) offers retirees the opportunity to attend classes alongside traditionally-aged students. The integration of younger students and older students into the mainstream academic curriculum bridges the generational gap. A limited number of
Retired Persons Scholarships for undergraduate and graduate study are available at UM-Dearborn.

Prospective RPSP students are required to:

- have reached their 60th birthday prior to the semester of their first registration under this program.
- have graduated from high school and have the potential to succeed at college-level studies.
- be a “retired person” have no current career or employment.

**Registration**

Given the intellectual enrichment nature of the RPSP program, students enrolled in it will register under the Non-Candidate for Degree (NCFD) option. RPSP students should consult the campus’ graduate and undergraduate academic policies for the number of credit hours allowed under the NCFD option. NCFD students cannot register for internship and co-op courses. In addition, students will be permitted to register only after degree-seeking students as specified in the Registrar’s Registration Timetable.

**Academic Credit**

Students enrolled in the RPSP program can only take courses under the audit option. It is important that students considering a degree at the university not enroll under the RPSP program, as courses taken under the audit option do not carry academic credit and are not transferable into a degree program.

For more information, visit umdearborn.edu/rpsp (http://www.umdearborn.edu/casl/rpsp/). Scholarship applications are available at umdearborn.edu/ddc (http://www.umdearborn.edu/ddc/). Students will complete an online application for admission at Online Non-Degree Application (https://umdearborn-portal.force.com/application/TX_SiteLogin/?startURL=).

**International Admission**

If you already have or are planning to obtain an F-1 or J-1 Visa, this admission section applies to you. If you are currently in the U.S. as a refugee, asylee, or on a temporary visa other than the F-1 student visa (such as F-2, B-2, H-4, etc.), and you wish to change to F-1 status to begin attending UM-Dearborn, please indicate this on your application.

Information on documents required to apply for admission can be found below. Admission applications will not receive a final evaluation until all required materials have been received. Documents required for your I-20 may be submitted as soon as possible, and will not prevent you from receiving an admission decision. All correspondence must be in English, and must contain the full name of the applicant with the family surname underlined.

**Academic Requirements for International Admission**

**Freshman/First-Year Students**

Freshmen who have attended secondary school abroad are expected to meet the same general admissions requirements as U.S. students. Admission is competitive. We encourage students to apply as soon as possible, either using the campus application or the Common Application. An application will not be reviewed until all required materials have been received. A completed application includes the following:

- Official high school academic documents
  - See academic records (https://umdearborn.edu/admissions/undergraduate/international-admissions/academic-records/) for details regarding requirements
  - Failure to disclose ALL schools you have attended may result in revocation of admission
  - See specific document requirements by country (https://umdearborn.edu/admissions/undergraduate/international-admissions/international-freshman-admissions/academic-requirements-documents-needed-country/)

- Standard college entrance examinations (https://umdearborn.edu/admissions/undergraduate/international-admissions/college-entrance-exams/) scores (optional)
  - UM-Dearborn will not require the submission of SAT or ACT scores for the 2021-2022 academic year. You will have the option to indicate on your application if you want your test score factored into the admission decision.
  - If you choose to submit scores, follow these links to request that your SAT and/or ACT results be sent to UM-Dearborn.
    - SAT (http://www.sat.org/) — school code 1861
    - ACT (http://www.act.org) — school code 2074
  - The highest composite test score is used in the Admission decision
  - Newer scores should be sent to the University as they are available

- English language proficiency (https://umdearborn.edu/admissions/undergraduate/international-admissions/undergraduate-english-language-proficiency/) (see more information below).

**Grade-point average (GPA) and course/curriculum requirements**

1. You must have earned a U.S. high school diploma or the equivalent secondary school completion credential in your country, by the time you would enroll at UM-Dearborn. Freshmen usually apply during their last year of secondary school. Any offer of admission is conditional upon successful completion of the secondary school program before enrollment at UM-Dearborn.

2. You must have pursued a general academic (non-vocational) program of study. Solid preparation in the traditional academic college-preparatory subjects is required (English, mathematics, science, social studies).

3. You must have maintained above-average grades throughout your secondary school studies. Admission is competitive, and to be a strong candidate for admission, grades received should be equivalent to an overall GPA of 3.0 on a 4.0 U.S. scale.

4. Please review the international records (https://umdearborn.edu/admissions/undergraduate/international-admissions/academic-records/) portion of the website for additional details.

**Transfer Students**

Transfer students are encouraged to apply early in their final semester prior to enrollment at UM-Dearborn and in advance of the deadlines found on the website (https://umdearborn.edu/admissions/undergraduate/transfer-students/apply-transfer-student/). An application will not be reviewed until all required materials have been received. A completed application includes the following:

- UM-Dearborn online application
- Official transcripts from ALL colleges and universities you have attended
If you have completed fewer than 24 transferable credit hours, you must also submit:

- Final, official high school academic documents
- Standard college entrance examinations (https://umdearborn.edu/admissions/undergraduate/international-admissions/college-entrance-exams/) scores (optional)
  - UM-Dearborn will not require the submission of SAT or ACT scores for the 2021-2022 academic year. You will have the option to indicate on your application if you want your test score factored into the admission decision.
- If you choose to submit scores, follow these links to request that your SAT and/or ACT results be sent to UM-Dearborn.
  - SAT (http://www.sat.org/) – school code 1861
  - ACT (http://www.act.org) – school code 2074
  - The highest composite test score is used in the Admission decision
- Newer scores should be sent to the University as they are available

General academic requirements for each unit are listed below. You should contact the Office of Undergraduate Admissions as early as possible in your academic career to be certain that you are completing courses that will not only transfer, but also count toward specific admission and/or graduation requirements at UM-Dearborn. All GPA requirements are given using the 4.0 U.S. scale.

All transfer applications are reviewed on an individual basis, and if you do not meet the stated requirements for your desired college, it is suggested that you discuss your situation with an admissions counselor (https://umdearborn.edu/admissions/undergraduate/contact-undergraduate-admissions/).

- **College of Arts, Sciences, and Letters**
  - Required GPA: 2.50
- **College of Business**
  - Required GPA: 2.70
- **College of Engineering and Computer Science**
  - Directly into Engineering: Overall GPA 2.75 or higher and completed Calculus II (Math 116 or equivalent) elsewhere with a C grade
  - Pre-Engineering: Overall GPA 2.75 or higher and haven’t completed Calculus II (Math 116 or equivalent)
- **College of Education, Health, and Human Services**
  - Teacher Certification Programs: GPA 2.75
  - Non-Teacher Certification Programs: GPA 2.50

### English Language Proficiency Requirements

If you are not a native speaker of English, you must prove an adequate level of English language proficiency to enroll in college credit courses, **even if you are currently a U.S. citizen or permanent resident and regardless of how long you have resided or been educated in the U.S.** You must fulfill the English language proficiency requirement in one of the ways described below before regular admission will be granted.

**Freshmen** may prove their English Language Proficiency without additional testing by:

- completing two full years of general track English courses in a U.S. high school with grades of “C” or better and
- achieving an acceptable score on the verbal section of the SAT or ACT. There is no specific SAT/ACT verbal score required, but this score will be used in conjunction with other factors to evaluate your academic English skills.

**Transfers** may prove their English proficiency without additional testing by:

- presenting acceptable performance as described in the freshmen section above. You must provide records to verify acceptable courses, grades, and SAT/ACT scores, or completing two semesters of regular-track, transferable English composition courses (equivalent to UM-Dearborn’s Composition 105 and 106), with grades of “C” or better in both courses (“C-” or below is not acceptable for transfer). If you are enrolled in the second semester of English composition when applying and earn a “C” or better in the first semester of English Composition, conditional admission may be possible.

If you have not demonstrated English language proficiency in one of the ways described above, you must take an English language proficiency test. The Office of Undergraduate Admissions will accept the Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS) Examination. You must take one of these tests; it is not necessary to take both of them.

The minimum score required for admission is dependent on the test you take. Achieving the minimum score does not guarantee admission, only consideration.

### Minimum Scores

<table>
<thead>
<tr>
<th>TOEFL: Paper-based</th>
<th>550</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOEFL: Computer-based</td>
<td>213</td>
</tr>
<tr>
<td>3 TOEFL: Internet-based</td>
<td>80</td>
</tr>
<tr>
<td>IELTS</td>
<td>6.5</td>
</tr>
</tbody>
</table>

The TOEFL and IELTS are offered throughout the world. You should take a test well in advance of your intended starting term. TOEFL scores arrive at UM-Dearborn 6-8 weeks after the test date and IELTS arrive ~3 weeks after the test date. You may take either test more than once, and all scores will be considered. Test scores more than two years old will not be accepted. For testing information and registration materials, please contact:

**TOEFL**

P.O. Box 6151, Princeton, NJ 08541, U.S.A.
Telephone: 609-771-7600
How to obtain I-20 or DS-2019

Please reference the Office of International Affairs website at https://umdearborn.edu/offices/office-international-affairs/incoming-international-students-prepare-arrive. All documents received by the Office of Undergraduate Admissions will be shared with the Office of International Affairs for the purpose of creating the I-20 or DS-2019.

Admissions Committees

The Admissions Review Committee meets regularly to review borderline admission cases and other unique admission circumstances.

The Conduct Review Committee is comprised of individuals from offices across campus, and reviews applicants with academic or criminal conduct history.

Orientation

The Office of Undergraduate Admissions conducts orientation programs for newly admitted first-year (freshmen), transfer students, and parents of incoming students. These programs focus on academic expectations, requirements at UM-Dearborn, and various aspects of campus life. The programs also make students aware of existing services available to them: counseling; tutoring; academic advising; life/work planning; and social and cultural activities. Registrations for a student’s first semester of classes takes place at Orientation. Once admitted to the University, each student will receive information about Orientation. It is expected that all new students, freshmen and transfers, will attend Orientation.

Placement Exams

Newly admitted students may be required to take one or more placement exams. Placement exams are used to assess the level of class into which a student should enroll. Placement exams should be taken well in advance of orientation or meeting with their academic advisor. Placement exams in Mathematics, and Foreign Language are offered. Placement exams are not used as a basis for awarding credit.

Financial Aid & Scholarships

Office of Financial Aid and Scholarships
4901 Evergreen Road
1183 University Center
Dearborn, MI 48128-2406
313-593-5300

It is the goal of the University of Michigan-Dearborn that no student should be denied an education because of limited financial resources. To meet this goal, the university maintains programs of grants, scholarships, loans, and part-time employment for eligible students who are accepted and enrolled in the university as a degree-seeking student in good standing.

Available Financial Assistance

There are three types of aid available through a single application (the Free Application for Federal Student Aid or FAFSA): grants, loans, and employment. Most assistance is offered as a package of two or more kinds of aid. Most financial aid sources require a minimum of at least half-time enrollment (6 or more credit hours per semester) in coursework that counts toward degree requirements.

Undergraduates (pursuing their first bachelor’s degree) are considered for grants, loans, and work-study employment, according to their eligibility and preference. Students pursuing a second bachelor’s degree are limited to loans and work-study employment.

Admission into an eligible program of study (i.e., a degree-granting program) is primary criterion to receive financial aid funding. All Personal Enrichment, English Proficiency, and Non-Candidate for Degree status students are ineligible for financial aid. Most Guest, Prospective Degree status, and Alumni Enrichment students are ineligible for financial aid – however, there are limited exceptions which may be applicable to specific situations. Students admitted via Guest, Prospective Degree, or Teaching Certificate status should contact the Office of Financial Aid and Scholarships to discuss their specific admission status and financing options.

Determining Need

How eligibility for need-based aid is determined

Financial aid programs were created with the assumption that the primary responsibility for paying for college rests with students and their family. Need-based financial aid is available to families demonstrating a need for additional resources. The formula used to determine whether you are eligible for need-based aid is:

\[
\text{Cost of Attendance/Budget (COA)} = \text{Expected Family Contribution (EFC)} + \text{Financial Aid Eligibility (Need)}
\]

COST OF ATTENDANCE: is the estimated cost of attending UM-Dearborn, including estimated tuition and fees, books and supplies, room and board, transportation plus a modest allowance for personal/miscellaneous expenses. The budget allows the same room and board allowance whether you live on or off campus, unless you live with your parents and then your allowance is lower.

EXPECTED FAMILY CONTRIBUTION (EFC): is derived from a formula applied uniformly to all aid applicants and considers the financial information provided on the Free Application for Federal Student Aid (FAFSA). The EFC determines eligibility for federal, state, and UM-Dearborn gift aid. If financial aid criteria determines a student to be...
considered dependent, the EFC will consist of two parts, a Parent and a Student Contribution. If financial aid criteria determines a student to be considered independent, the EFC will consist of only a Student Contribution:

1. The Parent Contribution – (if dependent): This is what your parents are estimated to be able to pay toward annual college costs, based on their income and assets (cash, checking, savings, and money market accounts; investments and real estate holdings; and business equity). Allowance for living expenses (based on family size), taxes paid, number of siblings in college, and retirement asset protection are built into the formula.

2. The Student Contribution – This is what you are estimated to be able to pay based on your income, percentage of savings, and other assets.

Your EFC is determined early in the process of assessing your financial need and, unless your financial circumstances change significantly, your EFC remains constant. Some financial aid programs can assist students and parents in replacing the EFC.

**SCHOLARSHIPS AND OTHER FINANCIAL RESOURCES:** are funds you may receive from sources outside your family, including private scholarships, merit scholarships, UM-Dearborn school or college scholarships, ROTC scholarships, benefits you or your parent have earned through military service or other employee benefits, awards, and scholarships from your state.

**How need-based aid is awarded:**

We determine your eligibility for need-based aid by taking your Cost of Attendance and subtracting your Expected Family Contribution and other financial resources. We first award federal, state, and University grants and scholarships (if you are eligible), such as Federal Pell Grant, Michigan Competitive Scholarships, and university scholarships. We then determine University gift aid eligibility based on total gift aid, EFC, and applicants who apply by the established priority dates. Applicants with financial need beyond grants and scholarships may be awarded Federal Work-Study program, which is awarded to students with need, and Federal Direct Loan Funds.

We attempt to distribute grant and Work-Study funds equitably among the population of all eligible applicants who apply by established deadline dates. Awards are determined by a combination of demonstrated financial need, federal award maximums and available funding, among other factors.

Because Federal Supplemental Educational Opportunity Grant (FSEOG) funds are limited, they are awarded only to applicants with the most need.

**A note about scholarships and other resources:**

Students may seek private scholarships and get help from UM-Dearborn schools and colleges to meet their college costs. According to federal regulations and/or university policies, these are considered as financial resources when determining eligibility for need-based aid. However, they will improve your overall aid package. In general, if you receive outside aid:

- It will first be applied against costs not accounted for in your financial aid package (i.e. the gap between the Cost of Attendance and your EFC plus the aid offered). Outside aid will not reduce your EFC.
- Next, it will reduce your loan or Work-Study award, reducing funds you must borrow or earn by working.
- Your grant aid will be reduced if all loan and Work-Study awards are replaced by scholarships or other resources.

Some important exceptions to this rule:

- Some Office of Financial Aid scholarships are awarded based on student need. This may reduce your UM Grant, but your total aid should remain the same or be higher. Your total aid should not be reduced. If you are awarded one of these, you will receive a letter.
- If the student owns a 529 plan, such as a Michigan Education Trust contract, receive a post-9/11 VA benefit, or if you receive a State-funded scholarship such as the Michigan Competitive Scholarship, Detroit Compact Scholarship, Wade McCree Scholarship, Kalamazoo Promise, or Detroit Promise, it will be applied against your need-based grants before reducing your loan or Work-Study.
- Receiving a HAIL Scholarship, Wade McCree, Detroit Compact, or Detroit Promise scholarship may reduce your eligibility for university-funded scholarships and for the Michigan Competitive Scholarship. Students receiving a full tuition scholarship would not be eligible for the Michigan Competitive Scholarship as a refund.

**Please note:** Some scholarships require full-time enrollment before disbursement.

**Cost of Attendance**

[umdearborn.edu/students/financial-aid/what-um-dearborn-costs](https://umdearborn.edu/students/financial-aid/what-um-dearborn-costs)

Each year, the Office of Financial Aid & Scholarships (OFAS) provides an estimated cost of attending UM-Dearborn. The estimated cost includes tuition and fees as charged on your student account (estimated until Census Date), housing allowance (living with or away from parents/family) and other costs which can include transportation, books, supplies, and personal expenses. Your actual expenses may vary; periodic student surveys determine some of these personal costs and estimate a typical financial aid budget.

Tuition and fees are subject to change without notice by action of the Board of Regents. For current tuition and fees, individuals should consult [umdearborn.edu/students/registration-records/tuition-fees](https://umdearborn.edu/students/registration-records/tuition-fees).

**How to Apply for Financial Aid**

Most assistance is committed at a certain time of the year, so be mindful of application dates. Dates assume entrance for the fall semester.

**Freshmen and Transfer Students**

1. After October 1, preceding Fall enrollment, complete the Free Application for Federal Student Aid (FAFSA). Students must apply online at studentaid.gov. Include student and parent (if applicable) FSA IDs. Release the FAFSA information to the University of Michigan-Dearborn by entering our Federal Title IV School Code 002326. Students and parents should use their Federal Income Tax Returns (Form 1040) to complete the FAFSA.

FAFSA results received in the Office of Financial Aid & Scholarships[42](#)
(OFAS) by the recommended priority deadline will receive first priority consideration for funds.

2. Upon review of your FAFSA, the Federal Processor will provide you with a Student Aid Report (SAR). The Federal Processor will forward an electronic SAR to the email address you provided on the FAFSA. The OFAS will receive your information electronically (assuming you have released the information to UM-Dearborn as described in #1 above).

**Continuing Students**

Students currently enrolled must apply every year at studentaid.gov (https://studentaid.gov/) after October 1 preceding fall enrollment. Applications, SARs, and/or ISIRs (resulting from the FAFSA) must be received in the Office of Financial Aid & Scholarships by the recommended priority deadline to receive priority consideration for funds.

**Summer**

Summer is a separate processing period. Applications for Summer aid are available in late March/early April. Funding for the Summer term(s) is dependent upon funding levels after the two regular terms.

**Reminders**

1. Financial aid applications are processed only after a student has been admitted, but students need not wait until they are admitted to apply for financial aid.
2. Applications submitted after the stated dates will be considered, subject to the availability of funds, but notification may not come until after the term has begun.
3. Students must re-apply for financial aid each year.
4. All correspondence and documents must include the student’s legal name and UMID number.

**Award Notification**

**New Students**

Incoming students are notified in writing via U.S. mail of their initial financial aid offer. Thereafter, communication is via Email and UM-Dearborn Connect (see below).

**Current/Returning Students**

Students are encouraged to regularly check their UM-Dearborn Email account and access their UM-Dearborn Connect account for award notification and other communication from the Office of Financial Aid & Scholarships. Email communication sent to student’s UM-Dearborn Email address directs students to recent notices or activity on UM-Dearborn Connect.

**Additive Credit**

Additive credits courses do not count toward any degree requirements. For financial aid purposes, only additive credit courses that are academic and developmental/remedial in nature will be considered (COMP 099, MATH 080 & 090, CHEM 090 & 091). Additive credits include most co-op/internship courses, which will not count towards enrollment for financial aid eligibility.

**Award Procedures**

All financial aid awards are made in accordance with three criteria: demonstrated financial need, the student’s ability to maintain satisfactory academic progress, and availability of funds. Completed files are processed on a first-come, first-served basis. A financial aid file is complete only after the following documents or information have been received:

- A completed FAFSA on file with the U.S. Department of Education. The processed FAFSA must be valid and have the University of Michigan-Dearborn school code (002326) listed so that OFAS can obtain the results electronically.
- The submission of all other information requested by the Office of Financial Aid & Scholarships (required prior to disbursement of federal aid), including verification documents if necessary.

Once a student’s financial aid file has been reviewed and deemed complete by a financial aid counselor, a financial aid package will be processed and an award notification will be mailed or Emailed to the student. The initial financial aid package will be based on assumed full-time status for the fall and winter semesters. Awards will be adjusted to actual enrollment. Financial aid awards can be viewed on UM-Dearborn Connect.

**Repeating Coursework**

Federal financial aid programs can only pay for one repeat of a passed course (passed meaning grade “D” or higher). For example, if a student enrolls and earns a grade of “D” in a course, the student’s enrollment status for financial aid will include that course attempt. If a student enrolls for a second time in the same course, the course will be included in the student’s enrollment status for financial aid. If the student enrolls for a third time, financial aid will not include the course in the student’s eligibility for aid. When a course is repeated, the previous enrollment is deducted from the calculation of successfully completed courses; therefore, this will lower your Cumulative Completion Rate.

The University of Michigan-Dearborn may allow a successfully-completed course to be repeated beyond financial aid limitations. Only the last grade received is counted in the CGPA.

**Types of Financial Aid**

There are three basic categories of financial aid: gift aid (scholarships and grants), loans, and part-time employment. Most assistance is offered as a package of two or more kinds of aid. Undergraduates (in pursuit of the first bachelor’s degree) who apply to the OFAS are considered for all three types of assistance. Undergraduates in pursuit of a second bachelor’s degree are considered only for loans and work assistance.

**Gift Aid**

Scholarships and grants do not require repayment or work. Gift aid takes the following forms:

**Freshman & Transfer Scholarships**

The University offers a variety of scholarship resources for freshman and transfer students. These scholarships have specific selection criteria. Some of the funds require prior commitment and participation, most do not. For detailed information regarding criteria for these scholarships, please refer to the OFAS website (umdearborn.edu/students/financial-aid/types-aid/scholarships/), or contact the Office of Admissions at 313-593-5100.

Most scholarships have terms and conditions. These can be found by following the steps to accept your scholarship online at umdearborn.edu/students/financial-aid/accepting-receiving-aid/accepting-scholarships
Grants
Eligibility for the following Federal, State and University grant funds are determined according to demonstration of need (based on the outcome of the FAFSA), and availability of funds. The grants are considered for undergraduate students pursuing a first bachelor’s degree. Unless otherwise stated, at minimum, eligibility requires adherence to Federal fund criteria, maintenance of the University’s Satisfactory Academic Progress guidelines, and enrollment of at least half-time (6 or more credit hours).

Federal Pell Grants
Pell Grant is a federal program with award currently ranging from approximately $672 to $6,495. An Expected Family Contribution (EFC) of 0 results in an award of $6,495 based on full-time enrollment for the academic year. The Federal Pell Grant Program is considered the foundation grant to which all other sources are added to create a financial aid package. Pell Grant is one of the few programs that permit some students to receive a prorated portion of the award at a less-than-half-time enrollment status.

The Federal Pell Grant Program has lifetime eligibility limitations for all Pell Grant recipients. Pell Grant recipients are eligible to receive a maximum of 12 full-time semesters of this grant. Once students have used 12 full-time semesters, they are no longer eligible for any additional Federal Pell Grant. There is no appeal for this restriction.

Students are able to track their eligibility used on the studentaid.gov (https://studentaid.gov/) Access is gained using your Federal Student Aid ID (FSA ID).

The limitations of financial aid eligibility impact financial aid and scholarship programs. It is important to work closely with your academic advisor to stay on track to meet degree requirements to make the best use of financial aid funds.

Census Date - Each semester, the enrollment level is locked upon the Census Date for all students by the Office of Records and Registration. The Census Date is defined as the end of the Add/Drop period. At this point, the Pell Grant will disburse based on the number of credits in which a student is enrolled. If an additional course is added after the Census Date, the Pell Grant is not adjusted for the increase in credits. No exceptions are made and appeals will not be considered.

Federal Supplemental Educational Opportunity Grants (FSEOG)
FSEOG is a federal campus-based program used to supplement the Pell Grant of the neediest Pell Grant recipients. At UM-Dearborn, FSEOG is reserved for students with a 0 Expected Family Contribution (EFC).

TEACH Grant
Teacher Education Assistance for College and Higher Education
Funded by the federal government, the TEACH Grant provides up to $3,764 per year for students whose intention is to teach in a “high need field” (subject area), in an elementary or secondary school serving students from low-income families. As a recipient, students agree (in advance of receipt) to teach a “high need field,” full-time, for a minimum of four years within the eight years following program completion (or progress interruption from the program for which the grant was awarded).

The FAFSA is required to be considered for a TEACH Grant. However, recipients do not have to demonstrate “need.”

The TEACH Grant will remain a grant if recipients meet the specific criteria. If recipients do not meet the criteria, the TEACH Grant converts to an unsubsidized loan with interest calculated back to the initial disbursement date(s). For this reason, UM-Dearborn has defined our eligibility criteria as cautiously as possible.

The population UM-Dearborn currently considers for the TEACH Grant are Seniors (at the undergraduate level) and graduate level students, with a high Cumulative Grade Point Average (CGPA), admitted into a degree-granting program of the College of Education, Health, and Human Services, and pursuing majors that align with the “high need fields.”

The minimum CGPA requirement for the TEACH Grant is 3.25 (on a 4.0 scale). The degree programs currently considered are: Bachelor of Arts and Bachelor of Science. Eligible majors at UM-Dearborn are: Education, General Science, Mathematics, Mathematics Studies, Reading Science Education, Science Studies, Special Education, and Teaching.

Michigan Competitive Scholarship (MCS)
Funded by the State of Michigan, the Michigan Competitive Scholarships are available to many Michigan high school graduates from the Office of Student Scholarships and Grants, Michigan Department of Treasury. Scholarships are awarded to qualifying undergraduates attending public colleges and universities in Michigan. To qualify for the scholarship, students must demonstrate aptitude based on their performance on the ACT or SAT, as well as financial need as determined by uniformly applied methodology via information from the FAFSA. Recipients must also meet Michigan residency requirements.

Children of Veterans’ Tuition Grant Program
The Children of Veterans’ Tuition Grant Program offers Tuition Grant assistance to the children of Michigan veterans who were killed while in service, died as a result of service-related disabilities, or are considered 100% disabled because of service-connected disabilities. The child must be a Michigan resident between the ages of 16 and 25. Upon admission to a Michigan institution of higher learning, eligible undergraduates may qualify for a Tuition Grant of up to $2800 each academic year for full-time enrollment (amounts are prorated for less than full-time enrollment). Students must maintain a 2.25 or higher cumulative grade point average. Inquiries may be directed to the State of Michigan’s Office of Student Scholarships and Grants at 888-447-2687.

University of Michigan-Dearborn Grant
Funded by the University of Michigan-Dearborn, UM-Dearborn Grants are awarded to help high need students defray tuition costs. The Expected Family Contribution (EFC) is used to determine eligibility for these grants. Given eligibility and funding, students who apply by the priority deadline are automatically considered for the appropriate type of grant.

Loans
Eligibility for the following Federal loan programs is determined according to demonstration of need (based on the outcome of the FAFSA) and also individual, annual, and aggregate borrowing parameters. Eligibility requires adherence to Federal fund criteria, maintenance of the University’s Satisfactory Academic Progress guidelines, and minimum enrollment of at least half-time (6 or more credit hours). Requirements are subject to change over time. Additional documents may be required
(e.g., Promissory Notes and Entrance Counseling) prior to disbursement of funds.

William D. Ford Federal Direct Loan Program

Federal Direct Loans are available through the William D. Ford Federal Direct Loan Program. Under the Federal Direct Loan Program, funds are lent to student or parent borrowers directly by the U.S. government. There are several types of Direct Loans: the Federal Direct Subsidized Loan (Subsidized FDSL), Federal Direct Unsubsidized Loan (Unsubsidized FDSL), Federal Direct Parent Loan for Undergraduate Students (FDPLUS), and the Federal Direct Consolidation Loan program.

Subsidized vs. Unsubsidized Federal Direct Loan

The Subsidized Federal Direct Loan is a need-based loan, while the Unsubsidized Federal Direct Loan is not. Students borrowing a Subsidized Loan are not assessed interest while they are enrolled at least half-time. Those borrowing an Unsubsidized Loan are assessed interest while enrolled in school, but payment of the interest is deferred until loan repayment begins. A student may pay interest while enrolled, which will result in lower loan payments over the life of the loan and a lower long-term cost.

Because Federal Direct Loan awards have origination fees, the Direct Loan amounts applied to your University student account will be lower than those listed on your Award Notice.

Direct Subsidized Loan Time Limitation

New Federal Direct Subsidized Loan borrowers are limited in the amount of time they qualify for an interest subsidy. Students who have exceeded 150 percent of the published length of their educational program will be:

• Ineligible for additional Federal Direct Subsidized Loans (though you may borrow a Federal Direct Unsubsidized Loan) and

• Responsible for interest on all loans accruing after exceeding the 150 percent limit.

New borrowers are defined as students with no outstanding federal loan principal balance when they take out a new loan after July 1, 2013. Transferring between programs does not reset loan eligibility. Interest not paid will be capitalized, effectively increasing your loan principal upon repayment.

Undergraduate students approaching graduation: If you are enrolled less than full-time during your final term, you may not be eligible for the full, annual maximum federal loan limit. Consult with an aid officer to discuss your situation.

Annual and Lifetime Federal Direct Student Loan Limits

| Debt From Direct Student Loans Upon Graduation | $138,500 (only $115,000 can be in subsidized loans) |
and the student's class schedule. Seven percent of the school's annual Federal Work-Study allocation will be used to fund community service jobs.

Work-Study awards are earned by working for Work-Study employers and earning a paycheck, typically paid bi-weekly through the employer's payroll system. Work-Study earnings will not credit to your tuition and fee bill. Employers pay a percentage of students' wages and federal funds pay the remaining wages.

University openings are posted on careers.umich.edu (http://careers.umich.edu). You can also contact the Office of Career Services (https://umdearborn.edu/students/office-career-services/) for assistance with Off-Campus openings. You must show the employer a copy of your Award Notice and proof that your enrollment is at least half-time (6 or more credit hours) and inform your employer if your Work-Study eligibility changes.

On-Campus Employment

On-campus employment is funded by UM-Dearborn, when not funded by Federal funds. There are many part-time and temporary jobs available in the academic departments and in the support offices. Eligibility for Federal financial aid funds is not a requirement for University employment. Students may contact the Office of Career Services (https://umdearborn.edu/students/office-career-services/) to inquire about job availability. The departments pay 100 percent of these wages. To locate an on-campus job, visit careers.umich.edu (http://careers.umich.edu/).

Other Sources of Financial Aid

Other sources of financial assistance are available through government agencies such as Vocational Rehabilitation, Veterans Administration, and Social Security. Students needing information on these programs should contact the nearest appropriate agency.

Assistance for educational expenses may also come in the form of tax allowances. The Internal Revenue Service publishes Publication 970. Publication 970 provides information on educational benefits allowed within the tax code. Publication 970 may be obtained from the Internal Revenue Service or viewed online at irs.gov/publications/p970 (http://www.irs.gov/publications/p970/).

Satisfactory Academic Progress

Satisfactory Academic Progress policy

Satisfactory Academic Progress (SAP) describes a student's successful completion of coursework toward a degree. SAP is monitored at the end of each semester (Fall, Winter, Summer). To maintain SAP, a student must:

- Undergraduates must successfully complete a minimum percent of attempted courses.
- Undergraduates must achieve a required 2.0 cumulative grade point average or higher, if required by your academic unit.
- Students must complete academic program within 150% of published length of program. For transfer students: The number of transfer hours accepted at the point of admission are used to calculate a student's remaining eligibility under the 150% standard and will be included in the quantitative calculation which includes the number of credits attempted and completed.
- Graduate students must complete at a minimum rate of 67% of attempted courses.
- Graduate students must maintain 3.0 CGPA or higher, if required by your academic unit.
- For second-degree undergraduate students: These students are eligible to receive only loan funds within the program aggregate. Second-degree students are given 150% of stated credit hours required for the second degree program.

Satisfactory Academic Progress Standards

Students who receive financial aid must demonstrate SAP as determined by the University of Michigan-Dearborn in accordance with federal regulations. Financial aid recipients are required to be in good academic standing and to maintain SAP toward their degree requirements for each semester in which they are enrolled. SAP is required to maintain eligibility for financial aid. The requirements for financial aid may be different than those required by one's academic unit. The standards of Satisfactory Academic Progress measure a student's academic progress using both qualitative and quantitative measurements. These measurements include a Cumulative Grade Point Average (CGPA) requirement, a Cumulative Completion Rate requirement, and a Maximum Timeframe requirement. In addition, certain types of courses are limited or excluded from eligibility. The standards apply to all federal financial aid programs and programs funded and administered by the University of Michigan-Dearborn Office of Financial Aid and Scholarships and include degree, certificate, and consortium guest students who receive financial aid. SAP is evaluated at the end of each term (Fall, Winter, and Summer). Federal regulations require the University of Michigan-Dearborn to evaluate all students for SAP regardless of whether or not they receive financial aid. SAP is evaluated based on the student's cumulative academic record, from the date of entry to the university.

Cumulative Grade Point Average (CGPA) The qualitative measurement assesses the student's Cumulative Grade Point Average (CGPA).

- Undergraduate Students: The minimum CGPA requirement is a 2.00 or higher, if required by your academic unit.
- Graduate/Professional Students: The minimum CGPA requirement is a 3.00 or higher, if required by your academic unit.

Completion Rate The quantitative measure assesses the pace at which a student progresses towards a degree. To ensure progress, students are required to complete a minimum percentage of all attempted courses (please see below for details). Attempted courses are those for which a student is enrolled at the conclusion of the Add/Drop period for a semester (those that appear on the academic transcript).

Students who fulfill this minimum rate of course completion and follow departmental recommendations on course selection should complete their degree within the Maximum Timeframe.

<table>
<thead>
<tr>
<th>Attempted Credit Hours/Status</th>
<th>Required Completion %</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 – 30 Hours</td>
<td>55%</td>
</tr>
<tr>
<td>31 – 60</td>
<td>62%</td>
</tr>
<tr>
<td>61 and above</td>
<td>67%</td>
</tr>
</tbody>
</table>

Maximum Timeframe (MTF) Federal regulations require that a student must complete his or her educational program within a Maximum Timeframe (MTF) no longer than 150% of the published length of the educational program measured in academic years, terms or credit hours attempted.

Up to 30 required remedial credits will be added onto the program length when determining compliance with the 150% of program length completion requirement.
Transfer Credits: Courses that are transferred from another institution and accepted toward an academic degree program at the University (at the time of SAP review) count as attempted and completed hours for Completion Rate and Maximum Timeframe (MTF). The CGPA is determined only with courses taken in residence at the University.

Grades, enrollment/withdrawal and repeated classes

GRADES: Only courses for which a student receives a grade of A, B, C, D, or P are acceptable. A grade of E, UE, F, ED, W, NR, or X is not acceptable. Students who fail to complete at least 67% of attempted credit hours because of incomplete grades or who withdraw from all classes will be placed on probation for one semester. If they still fail to meet the 67% completion rate, their financial aid will be terminated. A student may receive financial assistance for a course that was repeated and for which a non-passing grade was received.

REPEATED CLASSES: Students who receive a passing grade may repeat that class once and have that enrollment considered for financial aid. (Repeating classes that do not result in additional hours earned will not improve completion rate.)

TERMS WITH FAILING GRADES: Office of Financial Aid and Scholarships will be verifying attendance during a term in which all grades received are unacceptable (as defined above). Failure to verify attendance in each class will result in cancellation of all aid for the term.

REGAINING AID ELIGIBILITY: A student may regain eligibility by notifying the UM-Dearborn Office of Financial Aid and Scholarships when these three things have been accomplished:

1. Complete a minimum of 12 credit hours for undergraduates or 8 credits for graduate students at UM-Dearborn (or as specified in the Academic Plan) without the benefit of financial aid. Students may take the credits at another institution of higher education if approved by their academic advisor; and,

2. Achieve a minimum GPA of 2.0 for undergraduates or 3.0 for graduate students; and,

3. Complete 100% of attempted credit hours.

NOTE: For more information regarding Satisfactory Academic Progress and how it effects your financial aid see the complete policy online at umdearborn.edu/students/financial-aid/consumer-information/standards-academic-progress (https://umdearborn.edu/students/financial-aid/consumer-information/standards-academic-progress/).

Return of Title IV Funds

Students sometimes find it necessary to withdraw from all classes during a semester. Depending on when this occurs, students may receive a refund of all or part of tuition and fees. If the student is a financial aid recipient, the University and student may be required to return the aid, or a portion of it, to the federal government.

Tuition Refund Policy: The University has a tuition refund policy stipulating the amount of tuition and fees refunded to a student who withdraws from all classes during a term. The Registrar’s Office determines specific tuition refund dates each term (umdearborn.edu/students/registration-records/academic-calendar-important-dates (https://umdearborn.edu/students/registration-records/academic-calendar-important-dates/) and select “Registration Deadlines” for the specific semester). Students must notify the Registrar’s Office immediately by following specific withdrawal procedures. Visit umdearborn.edu/students/registration-records (https://umdearborn.edu/students/registration-records/) for hours of operation.

Unofficial withdrawals

The federal government considers an unofficial withdrawal one in which a failing grade is received when a student does not attend, or stops attending, a class for which he/she is enrolled. In these cases, students can be required to repay aid received. If you have questions about enrollment and aid eligibility, contact the Office of Financial Aid and Scholarships for assistance.

Allocating returned Title IV (federal) financial aid

Funds returned to the federal government reimburse the individual federal programs from which the student received the aid. Financial aid returned (by the university and/or the student or parent) must be allocated, in the following order, up to the net amount disbursed from each source:

1. Federal Unsubsidized Direct Loan
2. Federal Subsidized Direct Loan
3. Federal Direct PLUS (Parent) Loan or Grad PLUS Loan
4. Federal Pell Grant
5. Federal Supplemental Educational Opportunity Grant (FSEOG)
6. Other Federal Loan or Grant Assistance

Return of Title IV (federal) financial aid

The Office of Financial Aid and Scholarships is notified by the Registrar when a student has officially withdrawn from the University. The federal government mandates that students withdrawing from all classes may keep only the financial aid they have “earned” up to the time of withdrawal.

Title IV funds disbursed in excess of the earned amount must be returned by the University and/or the student to the federal government. The student could owe the University, the government, or both.

The calculation for Return of Title IV funds is based upon the date on which a student initiates the withdrawal process by indicating intent to withdraw. This is either by speaking with an academic advisor, member of the Registrar’s staff, or completing the University’s withdrawal form.

Students who withdraw will have academic activity confirmed by their instructors to determine the last date of attendance. Failure to receive attendance or participation, from instructors, will result in cancellation of all aid for that semester.

To determine what a student earns, we:

- Divide the number of calendar days the student has attended classes by the total number of calendar days in the semester (minus any scheduled breaks of 5 days or more).
- The resulting percentage is multiplied by total federal funds disbursed (either to the student’s University account or to the student directly by check or direct deposit) for the semester.
- This calculation determines the amount of aid earned that a student may keep. (For example, if the student attended 25% of the term, he will have earned 25% of the aid disbursed. The unearned amount must be returned to the federal government by the University and/or the student.)

We will notify students who are required to return funds to the government. In some instances, students who withdraw may be eligible
for a post-withdrawal disbursement of “earned” aid. The following conditions must be met for the student to be considered eligible:

- The student must have submitted a valid FAFSA to UM-Dearborn prior to the student's last day of attendance.
- UM-Dearborn must have made an offer of financial aid to the student. The University must have originated the loan with the U.S. Department of Education, and must have made the student sign a promissory note, and must be making the first disbursement of the loan.

Students considering withdrawal from all classes should contact the Office of Financial Aid and Scholarships and their academic advisor so that the consequences of withdrawing from all classes can be explained. Financial aid counselors can further explain this policy to students and parents.

**Student Consumer Rights and Responsibilities**

Section 493.A of the Higher Education Act requires post-secondary educational institutions to disseminate relevant, candid information on student financial aid programs available at the college. Any change in a student’s financial situation, address, or school enrollment must be reported to the Office of Financial Aid & Scholarships. Students have the right to request a review of their financial aid package when a change in family or personal circumstances occurs. Students also have a right to review their financial aid records and may do so during counseling hours.

**Information Dissemination and Report Disclosure**

The U.S. Department of Education requires UM-Dearborn to disseminate information and disclose certain information to students. This information includes, but is not limited to: Voter Registration, Equity in Athletics, Campus Crime and Security, Completion and Transfer-Out Rates, and Drug and Alcohol-Free Campus policies. For further information on the listed topics, please refer to the University website at umdearborn.edu/students/financial-aid/consumer-information (https://umdearborn.edu/students/financial-aid/consumer-information/).

**Registration & Records**

Office of the Registrar
4901 Evergreen Road
1169 University Center
Dearborn, MI 48128
313-583-6500
313-593-5697 [FAX]
registrars@umich.edu
umdearborn.edu/registration (http://umdearborn.edu/registration/)

The mission of the University of Michigan-Dearborn Office of the Registrar is to provide accurate academic record information and policy services to faculty, staff, students, alumni, the administration and external constituencies. The Office of the Registrar collects and disseminates student, course, and instructional information through processes that ensure the integrity and security of all academic records particularly with regard to the Family Educational Rights and Privacy Act (FERPA) as set forth by the Federal Government.

The Office of Registrar is responsible for all aspects of student registration and academic records. The office’s primary functions include schedule preparation, registration, grade processing and custodianship of student records. In addition, we are charged with the responsibility of communicating and administering academic policies, which we endeavor to enforce consistently and fairly. These activities are integral to the educational activities of the University, thereby supporting the primary mission, aspirations, and goals of the University of Michigan-Dearborn.

**Auditing**

All students, degree seeking or non-degree seeking, are expected to elect courses for credit. The student’s academic adviser, however, with the concurrence of the instructor involved, may grant official auditing privileges when they are warranted for educational reasons. A student auditing a course is charged the usual fee for that course. Any specific conditions must be enunciated by the instructor at the time permission is granted for the audit. Please consult your college’s advising office for additional guidance. Non-degree seeking students should consult the advising office associated with the college offering the course. Students admitted to a program that requires auditing are exempt from this policy; however, the instructor may still place conditions on the audit through the end of the add/drop period for the semester.

**Change of Fees and Refunds**

When appropriate, a change of fees will be processed by the Office of the Registrar when a student submits an "Add/Drop/Registration Form" or "Withdrawal Form" which affects the fee previously assessed. Individuals are also advised to see "Change in Course Elections" in this Catalog.

Refunds of tuition, fees, or student account credit balances are generated automatically. After authentication and processing, the refund is issued to the student.

**Adding**

A student who increases the number of hours elected will have a new fee assessment generated by the Office of the Registrar indicating the appropriate fees to be paid.

**Dropping (for Full, Half, and Four-Week Mini Courses)**

A student who, during the first two weeks of a full-term or the first week of a half term or four-week mini-term reduces the number of hours elected, will have a new fee assessment generated by the Office of the Registrar indicating the appropriate fees to be paid. No reduction in fee assessments will be made after the end of the second week of classes (first week of a half-term or four-week mini term) except in cases of withdrawal from the University.

**Dropping (for less than One-Month Mini Courses)**

A student may drop a less than one-month mini-course on or before the first class meeting of such a course without financial penalty. Thereafter, full tuition will be assessed and the academic record will reflect the symbol for withdrawal ("W").

**Withdrawing (for Full, Half, and Four-Week Mini Courses)**

A student who withdraws from UM-Dearborn is assessed as follows:
1. Students who withdraw prior to the first day of classes will not be charged any tuition assessments or fees.
2. Students who withdraw during the first week of a half term or four-week mini-term, or during the first two weeks of a full term, will not be charged any tuition assessments or fees.
3. Students who withdraw during the second through third week in a half term or four-week mini-term, or in the third through sixth week of a full term, will be charged 50% of the tuition assessed, as well as the non-refundable registration assessment. In addition, there is no reduction in lab/course fees.
4. Students withdrawing after the time periods indicated in Paragraph "3" will be assessed full tuition and fees.

**Withdrawing (For Less Than One-Month Mini Courses)**

1. Students who withdraw from a less than one-month mini course before the first class meeting of such a course will not be charged any tuition assessments or fees.
2. Students who withdraw from a less than one-month mini course on the first day of class will not be charged any tuition assessments or fees.
3. Students who withdraw from a less than one-month mini course on the second day of class will be assessed 50% of the tuition assessed, as well as the non-refundable registration assessment. In addition, there will be no reduction in lab/course fees.
4. After the second class meeting of such a course, the student shall pay all fees and assessments.

**Change in Course Elections: Add, Drop, Withdrawal**

(See Also “Change of Fees And Refunds”)

Changes in course elections include adding a course(s), dropping a course(s), substituting course(s), and withdrawing (discontinuing) all courses. All students will process their add/drop and withdrawals either online or by contacting the Office of the Registrar via email, registrars@umich.edu (with signatures when appropriate).

Please consult the section on “Change of Fees and Refunds” for the impact on tuition and fees.

**Add**

A student may add courses or change a standard graded course to Pass/Fail or Audit during the first two weeks of a full term, the first week of a half-term or four-week mini-term, or before the second class meeting of a less than one-month mini-term. Any exceptions for adding courses must be approved by the student’s academic unit.

**Drop**

A student may drop a course(s) during the first two weeks of a full term, the first week of a half-term or four-week mini-term, or before the second class meeting of a less than one-month mini-term. No record of the student’s brief enrollment will be recorded.

Courses may be dropped during the third through the ninth week of classes in a full term, during the second through the fourth week of classes in a half-term or four-week mini-term, and before the third class meeting in a less than one-month mini-term.

The effective date of the drop is the date the drop request is received by the Office of the Registrar.

Permission to drop courses under circumstances other than stated above will require the approval of the student’s academic unit.

**Withdrawal**

A student may discontinue all of his/her courses through the last day of classes (for the term) by withdrawing from the term. The completed form must be presented to the Office of the Registrar for processing. The effective date of the withdrawal is the date the withdrawal form is received and signed by the Office of the Registrar.

If a student withdraws (drops all courses) from a term during the first two weeks of classes in a full term, the first week of classes in a half-term or four-week mini-term, or before the second class meeting in a less than one-month mini-term, no record of the student’s brief enrollment will be recorded. Beyond those deadlines, the mark of W will appear on the transcript.

Permission to withdraw under circumstances other than stated above will require the approval of the student’s academic unit.

**Consecutive Withdrawals**

Every student's academic record is reviewed for the purpose of observing academic progress at the end of each term in which the student is enrolled. A student who has not enrolled for one calendar year or who has withdrawn for two consecutive terms must apply for readmission and may not re-register without the explicit written permission of the student’s unit office. (PDS/PE students see START Advising, Room 2149 UC.)

A student who first registers and then withdraws from two consecutive terms may be placed on academic probation and may not register without the explicit written permission of the Associate Dean or the Associate Dean’s representative.

**Required Withdrawals**

Unless extenuating circumstances are presented by petition, a student who is required to withdraw from one academic unit may not be admitted to another UM-Dearborn academic unit within the same term as that in which such withdrawal action is taken.

**Refunds and Financial Aid**

Students receiving Title IV financial aid may be required to repay some or all of the financial aid received for a term in which the student withdraws. Students required to repay financial aid funds will have the refunds allocated to financial aid programs in the following order: Federal Direct Loans, Federal Perkins Loans, Pell, SEOG, other Title IV, federal, state, private, and institutional programs and finally, to the student. Students receiving financial aid and considering withdrawal should seek the advice of a Financial Aid Officer prior to taking such action.

**Class Standing**

Class standing is determined by the total credits earned that apply toward the student’s degree program. The various classifications are as follows (numbers indicate semester hours):
Grades and Grading

- Grading System (p. 50)
- Grade Notations (p. 54)
- Change of Grade (p. 55)
- Grading Benchmarks (p. 55)

Grading System

Grade point averages (scholastic averages) are computed by dividing the honor points a student has earned by the hours elected. The term grade point average and the cumulative grade point average are computed for each student at the end of each term and become part of the student’s official UM-Dearborn academic record.

Symbols used in the grade reporting system common to all units are: F, failed (pass/fail option election); I, incomplete; NR, grade not reported; P, passed (pass/fail option election); S, satisfactory (courses graded S/E or S/U); NC, no credit; VI, audit; W, drop/withdrawal; X, absent from final examination; U, unsatisfactory (courses graded S/U only); Y, indicates the course extends beyond the term.

The grades of E, IE, UE or XE are not assigned honor points and thus will lower the student’s grade point average. The grade NC is used only for certain courses. When this grade is officially granted, the grade NC and the course will appear on the student’s transcript, but the course will not be used in computing a grade point average.

The recording of grades on a student’s official academic record is governed by the following (4.0) grading system:

<table>
<thead>
<tr>
<th>Letter Grade</th>
<th>Honor Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+, A</td>
<td>4.0</td>
</tr>
<tr>
<td>A</td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
</tr>
<tr>
<td>B-</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
</tr>
<tr>
<td>C-</td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td>1.0</td>
</tr>
<tr>
<td>D-</td>
<td>0.7</td>
</tr>
<tr>
<td>E</td>
<td>0.0</td>
</tr>
</tbody>
</table>

Note: The A+ and D- grades are not used by Engineering instructors. The A+ grade is not used by Education instructors.

Grades associated with transfer credit from other schools or colleges (including other University of Michigan campuses) are neither recorded nor used in computing grade point averages of students.

Students may repeat a course no more than two times. All grades received must appear on the transcript, but only the last grade received is counted in the grade point average (GPA). Please see the appropriate Graduate Repeat Course Policy (http://catalog.umd.umich.edu/academic-policies-graduate/exempting-waiving-repeating-courses/) or Undergraduate Repeat Course Policy (see below) for more information.

Grades of D- in the College of Engineering & Computer Science

A grade of D- is not considered passing in any CECS course. If a CECS student earns a D- in a course from another academic unit it will not count toward a CECS degree or certificate and must be repeated.

Audit, Pass/Fail, and Non-Credit Courses in the College of Engineering & Computer Science

CECS students cannot take required courses within their major on an audit or pass/fail basis. Any course audited or taken pass/fail will not count towards the degree, even as a general elective. In addition, CECS students cannot use non-credit courses towards their degree.

Pass/Fail

For certain courses, students may have the ability to elect a Pass/Fail grading mode. If chosen, the instructor will grade the student’s work as a normal (A-E) course. Once the course is completed, the student's grade is converted to a “Pass” or “Fail” as follows:

1. Grades A through C- are posted on a transcript as P (Pass); counts toward residency requirement and credit hours toward graduation.
2. Grades D+ through E are posted on a transcript as F (Fail); no degree credit is earned.
3. A grade of UE is not converted to an F and is computed in the GPA the same as an E.
4. Neither a P nor an F is computed in the grade point average.

The Pass/Fail option is subject to the following conditions:

- No honor points will be awarded for courses taken as Pass/Fail.
- The Pass/Fail option is open only to students who are not on academic probation.
- Courses taken under the Pass/Fail option may not be used to fulfill requirements for majors, minors, concentrations, cognates, and/or teacher certification. However, up to four courses taken with the Pass/Fail option may be accepted for credit towards a degree.
- Students in the Honors Program must take all Honors Program requirements for a grade.
- A student is limited to, at most, four courses taken under the pass/fail option. Courses specifically designated as "S/E only" are not counted in this limitation.

Grading Benchmarks

The University of Michigan-Dearborn seeks to provide greater clarification as to the characteristics for each grade level. The descriptions below provide general achievement targets for each grade level.

The grading benchmarks do not establish a campus-wide mandate for faculty grading or grading outcomes. Instructors at the University of Michigan-Dearborn have the autonomy to formulate their own grading standards and system. Students should discuss and confirm with their
instructor the grading system and requirements employed within their course(s).

### Grading Benchmark Achievement Levels

#### Superior Achievement (A level)
The grade of A recognizes exceptional performance and achievement that exceeds course expectations and consistently demonstrates, where applicable, many of the following characteristics:

- Thorough, deep, and mature understanding.
- Genuine comprehension, insight, and synthesis.
- Significant mastery of challenging topics and issues.
- Extensive familiarity with relevant literature and previous work.
- Highly developed communication skills.
- Thorough preparation and extensive, thoughtful class participation.
- Integration of knowledge, concepts, and principles across disciplines.
- Originality of analysis and interpretation.
- Technical competence in skills and procedures.
- Precision of ideas and clarity of expression.
- Thinking that is independent, creative, and focused.
- Understanding of nuance and subtlety.
- Consistent coherence in argument and discussion.

**Students who receive the grade of A consistently demonstrate, where applicable, the ability to:**

- Analyze arguments using specific examples and original sources.
- Think logically, draw inferences, and make predictions in complicated situations.
- Communicate reasoning clearly and concisely.
- Think abstractly.
- Identify strengths and weaknesses in arguments, policies, and practices.
- Integrate information to draw well-founded conclusions.
- Connect course content to issues of other courses and world affairs.
- Use models appropriately, recognize their strengths and accommodate their inherent limitations.
- Foresee and evaluate consequences of proposed policies and actions.
- Use technology creatively and effectively.

#### Good Achievement (B level)
The grade of B recognizes work that meets course expectations and typically demonstrates, where applicable, many of the following characteristics:

- Clear understanding without much originality.
- Competent grasp of course materials and subject matter.
- Familiarity with relevant literature.
- Competence in communication skills.
- Regular preparation for and participation in class.
- Integration of course knowledge, concepts and procedures.
- Some evidence of critical and creative thought.
- Clear connections between inferences and evidence.
- Care in the use of evidence and quotations with only occasional thinness in argument, detail, or precision.

**Students who receive the grade of B typically demonstrate, where applicable, the ability to:**

- Extend ideas by connecting with personal experiences, reading, or world events.
- Analyze data in various forms and from varied sources.
- Utilize information to explain events, draw conclusions, and apply results.
- Present comprehensive answers in a clear and logically correct style.
- Understand and compare various models.
- Distinguish inputs from outputs, and causes from effects.
- Recognize consequences of complex interactions.
- Use technology effectively.
Adequate Achievement (C level)
The grade of C recognizes work that is sufficient to prepare for continued study in the field and generally demonstrates, where applicable, some of the following characteristics:

- Adequate grasp of course concepts.
- Partial mastery of knowledge and skills required for understanding.
- Incomplete competency of important information.
- Partial appreciation of the meaning or implications of a question.
- Answers that are insufficiently developed.
- Minimally complete assignments with many areas for improvement.

Students who receive the grade of C generally demonstrate, where applicable, some ability to:

- Assimilate and communicate simple knowledge and procedures.
- Extend ideas by making simple inferences.
- Make connections among and draw conclusions from course concepts.
- Interpret simple information provided in various formats.
- Organize and display data in tables and graphs.
- Use technology competently.

Limited Achievement (D level)
The grade of D indicates a lack of readiness to continue in the field. Students' work usually demonstrates, where applicable, some of the following characteristics:

- Minimal understanding of the subject matter.
- Poorly developed communication skills.
- Inability to apply subject matter understanding in other contexts.
- Little evidence of critical or creative thinking.
- Lack of apparent seriousness.
- Frequent carelessness in fulfilling assignments.

Inadequate Achievement (E)
The grade of E indicates that course work is insufficient to merit academic credit. Students who receive an E usually demonstrate some of the following characteristics:

- Inadequate understanding of subject matter.
- Inadequate or inconsistent preparation.
- Frequent failure to complete assignments in a timely manner.
- Little evidence of critical thought.
- Very poor communication skills.
- Frequent misunderstanding of facts or references.
- Little or no analysis.
- Confused or incomprehensible writing.

Little or no work offering evidence that course objectives have been met.

Grade Notations
The following notations may appear on a transcript to describe special situations in regard to a course.

NC No Credit. No honor points. Not computed in the grade point average. Used only in specially approved courses that are graded A, B, C, No Credit.

I Incomplete. No honor points. A student who is unable to complete the work for a given course, other than the final examination, may be granted an incomplete by the instructor if the following circumstances exist:

- The student has completed the majority of the coursework, such that the remaining work can be finished in five weeks or less
- Considering the student's current grade, a passing grade could still be earned in the class upon the successful completion of all incomplete work
- The work is unfinished for reasons acceptable to the instructor
- The work needing to be completed can be finished outside of regular class sessions. If the student must be present in class to finish the work, the student must re-register for the course

If the instructor agrees to the incomplete, a contract outlining the remaining work and stipulating the due date must be completed by the instructor and student, approved by the student's academic unit, and submitted to the Office of the Registrar. A grade of "I" will be recorded for the course. The deadline is up to five weeks after the start of the subsequent term (including the Summer term) to complete the coursework. The instructor has seven days after the due date to submit a grade. The "I" will remain in front of the final grade. Unfinished incompletes will lapse to a failing grade.

Students who are unable to complete their work within the five week period may petition their unit's Academic Standards Committee to extend the deadline. The student must present documented unexpected circumstances that prevented completion of the course by the standard deadline, and the extension must be supported by the instructor.

X Absent from Final Examination. No honor points. A student who is unavoidably absent from a final examination may be granted the privilege of making up the examination within five weeks beginning from the first day of classes of the immediately following term. If granted this privilege, a mark of X will be recorded. Failure to take the examination within the specified time, or the denial of this privilege by the instructor, will result in a mark of E for the final grade. In extenuating circumstances an extension beyond the stated period may be requested by means of a petition that has been endorsed by the instructor. However, such arrangements for completing the work must be made within the above five-week period. The grade of X will automatically be converted to XE and reflected in the student's grade point average as a failing grade if the Supplementary Grade Report is not submitted by the end of the five-week period.

Y Course extended beyond term end. No credit. No honor points. A mark of Y indicates that a course extends beyond the end of one term. This
The University permits a change of grade under the following circumstances: The grade is not submitted by that time, the Y will be converted to an E. Students who are unable to complete their work within the one year period may petition their unit’s Academic Standards Committee to extend the deadline. The student must present documented unexpected circumstances that prevented completion of the course by the standard deadline, a detailed plan and timeline to complete the remaining work, and the extension and plan must be supported by the instructor. A course with a Y mark may not be completed after graduation. If such a course is not completed, the Y will be converted to an E upon graduation.

Graduate students: The one year (52 week) limit does not apply to students enrolled in Masters or Doctoral programs however the Y grade will be converted to an E upon graduation. Students who are unable to complete their work before graduation may petition their unit’s Academic Standards Committee to convert the Y grade to a W prior to graduation.

NR Grade Not Reported. No honor points. Student should consult the Registrar immediately.

W Official Withdrawal. No credit. No honor points. Not computed in the grade point average. Students who drop a course or withdraw from all courses for a term before the deadline for official drops and/or withdrawals will receive for these courses the W notation. This notation may not be removed from the transcript.

S/E. Used only for specially approved courses. If a student passes, an S (satisfactory) is awarded. It is not computed in the grade point average. If a student does not pass, an E is awarded. If a student stops attending, without officially dropping, a UE is awarded. Both the E and the UE are computed in the GPA as failing grades. (Exception: Failing grades in additive credit courses that are graded S/E have no impact on the GPA.)

P/F Pass/Fail Option. No honor points. A student must elect to take a course under the Pass/Fail option.

UE Unearned Fail. This grade is assigned to any student who has never attended or stopped attending class during the semester and did not officially drop. It is computed in the GPA the same as an E.

VI Visitor-Official Audit. No credit. No honor points. Not computed into the grade point average. An official audit, or visitor status, allows a student to attend a course but not elect it for credit. The VI notation appears on the transcript. Regular tuition fees are assessed.

Change of Grades

The grade that an instructor records on the final grade sheet and that appears on the student’s subsequent transcript is assumed to be final; that is, the instructor’s official evaluation of all of a student’s performance and work completed by the official end of the term (the last day of the final examination week).

The University permits a change of grade under the following circumstances:

- Recognizing that mistakes can be made, the University of Michigan-Dearborn permits a student to ask an instructor for a review of a grade within a five-week period after the end of the term involved. After the expiration of this deadline, a student may initiate a request for a review only through the petition process involving the student’s college Academic Standards Committee (or comparable group), whose decision shall be final. Such a review is entirely separate and distinct from the circumstances involving an X (Absent from Final Examination), I (Incomplete Coursework), or a Y (Course Extends Beyond Term).

- A student (or instructor) may initiate a grade change if the student discovers that a grade has been entered in error due to, but not exclusive to, the following:
  - possible omission by the instructor when computing the final grade, or material submitted by the student before the end of the term;
  - possible error in evaluation by the instructor of work submitted or final examination taken by the student before the end of the term;
  - possible error by the instructor in the computation of the final grade;
  - possible error in the recording of the grade by the instructor or staff; or
  - allegation of bias or prejudice on the part of the instructor in the assignment of the final grade. (This rare charge is to be handled according to the procedures established within the academic unit.)

Grade and Academic Grievances

All colleges follow the following process when handling student complaints related to grades:

1. The initial complaint regarding a course grade or assignment within a course shall be directed to the instructor
2. If the instructor determines that no change of grade should occur, the student may request the department chair to mediate a resolution
3. If the issue cannot be resolved at the department level, the student may petition the dean’s office requesting a hearing on the matter

Specific policies may differ between colleges and departments. Please see the following for each college:

- The College of Arts, Sciences, and Letters has adopted its own college-wide and department-level grade appeal and change policies (https://umdearborn.edu/casl/undergraduate-programs/advising-student-records/policies-and-procedures/grade-appeal-policies/).
- The College of Engineering & Computer Science uses an Academic Grievance Policy (https://umich.app.box.com/s/ds21nulp04hylmm8m5gsbb9anu7n3i92/) to manage student complaints related to grade disputes.
- The College of Business has a Grade Change and Grade Grievance Policy and Procedures (https://drive.google.com/file/d/0BxdK3tGusupSYTRjNGI1bnFiY2M/view?usp=sharing).
- The College of Education, Health, and Human Services uses their Grade Change and Grade Grievance policy (https://
Repeating a Course (Undergraduate)

Students may repeat a course no more than two times. All grades received must appear on the transcript, but only the last grade received is counted in the grade point average (GPA).

Guidelines:

1. Students may repeat a course up to two times (total of three attempts).
2. Regardless of whether it is higher or lower than the previous grade(s), the last grade assigned in a course will be used in computing the student’s cumulative grade point average and credits earned toward degree.
3. If a student takes a course three times (the maximum allowed), the previous two grades will not be reflected in the GPA.
4. Most courses can be elected only once for credit. The maximum number of credits/elections allowed in courses designed for multiple enrollments are indicated in the catalog. For information regarding these courses, students may contact their Unit Academic Advisor.

This policy applies to all undergraduate degree and non-degree students in all academic units.

The policy applies only to courses elected Fall 2005 or later. Students who have repeated a course two or more times prior to Fall 2005 may repeat the course only one additional time. Only the two most recent previous grades will be affected by the new policy. Other previous grades will continue to be used in computing the grade point average.

Courses taken at institutions other than UM-Dearborn do not affect the grade point average.

The use of an Audit Grade Mode or Pass/Fail Grade Mode may not be used to adjust grade point averages for courses previously elected under any other existing grade mode. **Exception - Winter 2020 term only:** undergraduate students who repeated a course and elected a Pass/Fail grade, will have their prior course grade dropped from their GPA calculation.

For students who earned an undergraduate degree at UM-Dearborn and are now in the process of earning a second undergraduate degree at UM-Dearborn, the following rule will apply: If repeating a course in the second degree that was failed (with a grade of E) in the first degree, both course will be included in the GPA calculation and the course earned hours (assuming the course was passed) will be included in the earned hours of the second degree. The limitation of the three-course rule will be monitored by the Office of the Registrar. Students who elect a course more than three times will be dropped from the course and notified of the election change.
grades in additive credit courses that are graded S/E have no impact on the GPA.)

**P/F Pass/Fail Option.** No honor points. A student must elect to take a course under the Pass/Fail option. Please check with your college for its policy on electing courses as pass/fail.

**UE Unearned Fail.** This grade is assigned to any student who has never attended or stopped attending class during the semester and did not officially drop. It is computed in the GPA the same as an E.

**VI Visitor-Official Audit.** No credit. No honor points. Not computed into the grade point average. An official audit, or visitor status, allows a student to attend a course but not elect it for credit. The VI notation appears on the transcript. Regular tuition fees are assessed.

**FCV Fail Covid.** No credit. No honor points. Not computed into the grade point average. Indicates a non-passing grade of D+ or lower for undergraduate students and C+ or lower for graduate students. This grade was used for the Winter 2020 semester only, during the COVID-19 pandemic.

**NRC No Record Covid.** No credit. No honor points. Not computed into the grade point average. Indicates a non-passing grade of D+ or lower for undergraduate students and C+ or lower for graduate students. This grade was used for the Fall 2020 and Winter 2021 semesters, during the COVID-19 pandemic.

## Change of Grades

The grade that an instructor records on the final grade sheet and that appears on the student’s subsequent transcript is assumed to be final; that is, the instructor’s official evaluation of all of a student’s performance and work completed by the official end of the term (the last day of the final examination week).

The University permits a change of grade under the following circumstances:

1. Recognizing that mistakes can be made, the University of Michigan-Dearborn permits a student to ask an instructor for a review of a grade within a five week period after the end of the term involved. After the expiration of this deadline, a student may initiate a request for a review only through the petition process involving the student’s college Academic Standards Committee (or comparable group), whose decision shall be final. Such a review is entirely separate and distinct from the circumstances involving an X (Absent from Final Examination), I (Incomplete Coursework), or a Y (Course Extends Beyond Term).

2. A student (or instructor) may initiate a grade change if he/she discovers that a grade has been entered in error due to, but not exclusive to, the following:
   - possible omission by the instructor when computing the final grade, or material submitted by the student before the end of the term;
   - possible error in evaluation by the instructor of work submitted or final examination taken by the student before the end of the term;
   - possible error by the instructor in the computation of the final grade;
   - possible error in the recording of the grade by the instructor or staff; or
   - allegation of bias or prejudice on the part of the instructor in the assignment of the final grade (This rare charge is to be handled according to the procedures established within the academic unit.)

## Grading Benchmarks

The University of Michigan-Dearborn seeks to provide greater clarification as to the characteristics for each grade level. The descriptions below provide general achievement targets for each grade level.

The grading benchmarks do not establish a campus-wide mandate for faculty grading or grading outcomes. Instructors at the University of Michigan-Dearborn have the autonomy to formulate their own grading standards and system. Students should discuss and confirm with their instructor the grading system and requirements employed within their course(s).

1. The University of Michigan-Dearborn has adopted the "Grade and Marking System" employed by St. Olaf College: catalog.stolaf.edu/academic-regulations-procedures/grades/

## Grading Benchmark Achievement Levels

### Superior Achievement (A level)

The grade of A recognizes exceptional performance and achievement that exceeds course expectations and consistently demonstrates, where applicable, many of the following characteristics:

- Thorough, deep, and mature understanding.
- Genuine comprehension, insight, and synthesis.
- Significant mastery of challenging topics and issues.
- Extensive familiarity with relevant literature and previous work.
- Highly developed communication skills.
- Thorough preparation and extensive, thoughtful class participation.
- Integration of knowledge, concepts, and principles across disciplines.
- Originality of analysis and interpretation.
- Technical competence in skills and procedures.
- Precision of ideas and clarity of expression.
- Thinking that is independent, creative, and focused.
• Understanding of nuance and subtlety.
• Consistent coherence in argument and discussion.

Students who receive the grade of A consistently demonstrate, where applicable, the ability to:

• Analyze arguments using specific examples and original sources.
• Think logically, draw inferences, and make predictions in complicated situations.
• Communicate reasoning clearly and concisely.
• Think abstractly.
• Identify strengths and weaknesses in arguments, policies, and practices.
• Integrate information to draw well-founded conclusions.
• Connect course content to issues of other courses and world affairs.
• Use models appropriately; recognize their strengths and accommodate their inherent limitations.
• Foresee and evaluate consequences of proposed policies and actions.
• Use technology creatively and effectively.

Good Achievement (B level)

The grade of B recognizes work that meets course expectations and typically demonstrates, where applicable, many of the following characteristics:

• Clear understanding without much originality.
• Competent grasp of course materials and subject matter.
• Familiarity with relevant literature.
• Competence in communication skills.
• Regular preparation for and participation in class.
• Integration of course knowledge, concepts and procedures.
• Some evidence of critical and creative thought.
• Clear connections between inferences and evidence.
• Care in the use of evidence and quotations with only occasional thinness in argument, detail, or precision.

Students who receive the grade of B typically demonstrate, where applicable, the ability to:

• Extend ideas by connecting with personal experiences, reading, or world events.
• Analyze data in various forms and from varied sources.
• Utilize information to explain events, draw conclusions, and apply results.
• Present comprehensive answers in a clear and logically correct style.
• Understand and compare various models.
• Distinguish inputs from outputs, and causes from effects.
• Recognize consequences of complex interactions.
• Use technology effectively.

Adequate Achievement (C level)

The grade of C recognizes work that is sufficient to prepare for continued study in the field and generally demonstrates, where applicable, some of the following characteristics:

• Adequate grasp of course concepts.
• Partial mastery of knowledge and skills required for understanding.
• Incomplete familiarity with relevant readings or references.
• Writing that lists facts rather than develops well-reasoned arguments.
• Frequent neglect of important information.
• Partial appreciation of the meaning or implications of a questions.
• Answers that are insufficiently developed.
• Minimally complete assignments with many areas for improvement.

Students who receive the grade of C generally demonstrate, where applicable, some ability to:

• Assimilate and communicate simple knowledge and procedures.
• Extend ideas by making simple inferences.
• Make connections among and draw conclusions from course concepts.
• Interpret simple information provided in various formats.
• Organize and display data in tables and graphs.
• Use technology competently.

Limited Achievement (D level)

The grade of D indicates a lack of readiness to continue in the field. Students’ work usually demonstrates, where applicable, some of the following characteristics:

• Minimal understanding of the subject matter.
• Poorly developed communication skills.
• Inability to apply subject matter understanding in other contexts.
• Little evidence of critical or creative thinking.
• Lack of apparent seriousness.
• Frequent carelessness in fulfilling assignments.

Inadequate Achievement (E)

The grade of E indicates that course work is insufficient to merit academic credit. Students who receive an E usually demonstrate some of the following characteristics:

• Inadequate understanding of subject matter.
• Inadequate or inconsistent preparation.
• Frequent failure to complete assignments in a timely manner.
• Little evidence of critical thought.
• Very poor communication skills.
• Frequent misunderstanding of facts or references.
• Little or no analysis.
• Confused or incomprehensible writing.

Little or no work offering evidence that course objectives have been met.

Graduation/Application for Diploma

Each candidate for a degree must file a Degree/Diploma Application with the Office of the Registrar, typically within ten days of the beginning date of classes for the term in which the student expects to complete the requirements for degree. Please consult the Applying to Graduate Webpage, umdearborn.edu/rr_apply-graduate (http://www.umdearborn.edu/rr_apply-graduate/), for specific dates. Applications accepted after the deadline will require a $35.00 non-refundable late application fee (cash or check only). Payment is due at the time of submission. Applications will not be accepted after the last day of classes for the specific term. If an application for a diploma
was filed for a previous graduation period in which the student did not graduate, a new application is necessary. Degrees are granted at the end of the fall, winter, and summer terms, even though commencement exercises are held only in April (or May) and December.

### Instructor Requested Drop
A student who is absent from class meetings of a course during the first week of any term and does not inform the instructor or the instructor’s department of his/her intention to continue as a class member may be administratively dropped from the course per the instructor’s request. The academic college will notify students who have been administratively dropped from the course.

### Registration Information

#### Steps to a Successful Registration

1. **Check Your Eligibility to Register**
   Students can view their eligibility to register, earned hours, academic status and any holds that will prevent registration via UM-Dearborn Connect (https://selfservice.umd.umich.edu/BANP/twkbwibs.P_GenMenu/?name=homepage).
   - Click on Registration
   - Select Prepare for Registration

2. **Meet with your Academic Advisor**
   Meet with an advisor as needed or if required by the college. Academic advising is available through the student’s college or graduate department office.

3. **Plan your Schedule**
   Use the Schedule Planner (https://umich.app.box.com/s/k33v4ovbeng36m5vsi5xdoy8msmda9y/) to simplify the registration process and help find classes that fit your busy schedule. You may also prepare to register (https://www.dropbox.com/s/mni00358vd39vgq/Self-Service%20Registration%20Instructions.pdf?dl=0) from the Student Educational Planner. Review your Degree Works worksheet (https://umdearborn.edu/students/office-registrar/degree-works/) and/or plan in preparation for registration.

4. **Confirm Your Registration Appointment Time**
   Continuing students who are eligible to register via the Web can determine their registration date based on credits earned as listed in the Registration Timetable (https://umdearborn.edu/students/office-registrar/registration/registration-timetable/). New students will receive written information regarding their registration appointment time.

5. **Register for Classes**
   All students who have been enrolled for at least one term within the last year, new graduate students, and readmitted students who do not have financial obligations, holds or other registration restrictions are eligible to register online (https://www.dropbox.com/s/mni00358vd39vgq/Self-Service%20Registration%20Instructions.pdf?dl=0). New transfer and new freshman students will register during New Student Orientation.

### Additional Registration Information

#### Closed Courses
Closed course information is available via UM-Dearborn Connect.

#### Course Load
Students may elect a maximum of 18 credit hours in a given semester. Students at the graduate level may elect a maximum of 12 credit hours in a 15-week semester and a maximum of 8 credit hours in a 7-week semester. For graduate programs, individual colleges may impose a lower limit than this campus-wide policy. All students should contact their college for policies and procedures regarding electing hours in excess of the maximum.

#### Holds
Students will not be allowed to register if they have a hold. A hold could result from having outstanding financial obligations to the University, academic probation, mandatory advising, or other academic or non-academic conditions that require resolution prior to registration. Students can check their holds on the Student Profile page (listed under Student Records) in UM-Dearborn Connect.

### Reporting of Grades
The Office of the Registrar reports term grades to students via a Final Grade Report in UM-Dearborn Connect. Grades are also reported on each student’s Academic Transcript. Updated Academic Transcripts are available to students two weeks following the close of the final examination period. Students requiring more immediate service may contact the Office of the Registrar for assistance. (Also see “Request for Transcripts.”)

### University of Michigan Guidelines for Qualifying for In-State Tuition

You may qualify for in-state tuition in any of the following three ways:

1. **Residence.** By demonstrating that you are a permanent legal resident of the State of Michigan as defined by these Guidelines (see Part I below);
2. **Attendance.** By demonstrating that you attended an accredited Michigan high school and accredited Michigan middle or junior high school (see Part II below); OR
3. **Service.** By demonstrating that you or a family member are serving or have served in the U.S. military or Public Health Service (see Part III below).

You may meet the criteria under more than one Part of these Guidelines. However, if you meet the criteria under one of the three Parts, you are not required to determine eligibility under the other two.

### I. Establishing Eligibility Through Michigan Residence

You may qualify for in-state tuition by demonstrating that you are a Michigan resident.

#### A. General Principles
The University of Michigan has autonomous, constitutional authority to establish residency guidelines that apply to the University. The University’s residency guidelines are independent of other state rules or
regulations governing residency for other purposes, including income and property tax liability or eligibility to vote or drive.

To qualify for in-state tuition at the University of Michigan on the basis of being a Michigan resident, you must establish that Michigan is your permanent legal residence. In other words, you must establish that the State of Michigan is your home and that you intend to remain in the State permanently. This will depend on, among other things, where you live, work, and attend school; where you have lived, worked, and attended school; where your parents or guardians live; and other evidence that you intend to make Michigan your permanent home.

The Board of Regents of the University of Michigan has charged the Residency Classification Office in the Office of the Registrar on the Ann Arbor campus with determining the residency of current and prospective students for all three University of Michigan campuses. If you are seeking in-state tuition on the basis of residence in the State of Michigan and your application, activities, and circumstances demonstrate that Michigan is your permanent legal residence, you will be classified as a resident. If, however, you seek in-state tuition on the basis of residence but your presence in the State is based on activities or circumstances that are determined to be temporary or indeterminate, you will be classified as a nonresident.

B. Process for Establishing Residency

1. Who Must Submit an Application for Resident Classification?

If you seek to qualify for in-state tuition as a Michigan resident and your application, circumstances, or activities suggest that you may have out-of-state activities or ties (as described below), you will be required to apply to be evaluated and classified as a resident or nonresident. This means completing an Application for Resident Classification truthfully and timely and submitting additional documentation.

Specifically, you must file an Application for Resident Classification if you seek in-state tuition on the basis of Michigan residence and have any of the following out-of-state activities or ties:

- you live outside the State of Michigan for any purpose, including, but not limited to, education, volunteer activities, travel, or employment;
- you attended or graduated from a college outside the State of Michigan;
- you lived or worked outside the State of Michigan at any time within the last three years;
- you are not a U.S. citizen;
- your spouse, partner, or parent is in Michigan as a nonresident student, medical resident, fellow, or for military assignment or other temporary employment;
- you are 24 years of age or younger and a parent lives outside the State of Michigan;
- you are 24 years of age or younger and attended or graduated from a high school outside the state of Michigan;
- you attended or graduated from an out-of-state high school and have been involved in educational pursuits for the majority of time since high school graduation;
- you attended any University of Michigan campus (Ann Arbor, Dearborn, or Flint) as a nonresident.

Other circumstances also may require you to file an Application for Resident Classification.

If Michigan is in fact your permanent legal residence, as demonstrated by your admissions application, activities, and circumstances, you have none of the out-of-state activities or ties listed above, and your admissions application truthfully asserts that Michigan is your permanent legal home, you may claim Michigan as your legal residence and will not be required to complete an Application for Resident Classification. The University in its discretion may require you to complete an Application for Resident Classification and submit supporting documentation to determine whether you are a resident or nonresident under the University’s Guidelines. The University also reserves the right to audit your information and re-classify you as a nonresident.

2. How Will Your Application For Resident Classification Be Evaluated?

If you are required to file an Application for Resident Classification, the University’s Residency Classification Office will evaluate the information you provide to determine whether you have presented clear and convincing evidence demonstrating that Michigan is your permanent legal residence. The next sections of these Guidelines are designed to explain in greater detail the standards the Residency Classification Office will apply as your Application for Resident Classification is considered.

a. Circumstances that may demonstrate permanent Michigan residence

The following circumstances and activities, though not conclusive or exhaustive, may lend support to a claim that Michigan is your permanent legal residence:

- Both of your parents or parents-in-law (or in the case of divorce, one parent or parent-in-law) are permanent legal residents of Michigan as demonstrated by permanent employment in the State, establishment of a primary household in Michigan, and severance of out-of-state ties. You must also show that you have severed all out-of-state ties that suggest another state is your legal residence.
- You are employed in Michigan in a full-time, permanent position, your employment is the primary purpose for your or your family’s presence in the State, and you have severed any out-of-state ties that suggest another state is your legal residence.
- Your spouse or partner is employed in Michigan in a full-time, permanent position, your spouse or partner’s employment is the primary purpose for your family’s presence in the State, and you have severed all out-of-state ties that suggest another state is your legal residence.

b. Circumstances that do not demonstrate permanent Michigan residence

The circumstances and activities listed below are most often temporary or indeterminate and do not demonstrate permanent residence in Michigan. Individuals whose claim to Michigan residence is based solely on one or more of the following will generally not be found to be Michigan residents for tuition purposes:

- you are enrolled in a high school, community college, or university in Michigan;
- you are in a medical residency program, fellowship, or internship in Michigan;
- your employment in Michigan is temporary or short-term or of the type usually considered an internship or apprenticeship;
- your spouse or partner’s employment in Michigan is temporary or of the type usually considered an internship or apprenticeship;
c. Immigrants and Aliens
If you are a permanent resident alien, an asylee or refugee, or possess an A, E, G, or L visa, you may be eligible for in-state tuition if you provide official documentation establishing your immigration status and demonstrate that Michigan is your permanent legal residence as defined under these Guidelines. Individuals holding temporary visas, including, but not limited to F, H, J, K, L, Parolee, TN, and TD visas, are not eligible for in-state tuition as a Michigan resident.

d. Dependent Students
You are presumed to be a dependent of your parents if you are 24 years of age or younger and (1) have been primarily involved in educational pursuits, or (2) have not been financially self-supporting through employment.

a. If you are a dependent student, and both your parents are legal residents of another state, you are presumed to be a nonresident.

b. If you are a dependent, your parents or parents-in-law are divorced, and at least one parent or parent-in-law is a permanent legal resident of the State of Michigan (as defined in these Guidelines), you are presumed to be a resident if you can demonstrate that (a) Michigan is your permanent legal residence and (b) you have severed all out-of-state ties.

c. If you are a student living in Michigan with your parents and a permanent legal resident of this State as defined by these Guidelines, you are presumed to retain resident status eligibility even if your parents leave the State if all of the following are true: (1) you have completed at least your junior year of high school before your parents’ departure; (2) you remain in Michigan, enrolled full-time in high school or an institution of higher education; and (3) you have not taken steps to establish a legal residence outside Michigan or any other action inconsistent with maintaining a permanent legal residence in Michigan.

e. Michigan Residents and Absences From the State
You may be able to retain your eligibility for resident classification under the conditions listed below if you are a permanent legal resident of Michigan under these Guidelines and leave the State for certain types of activities. However, if you have been absent from the State, you must file an Application for Resident Classification by the appropriate filing deadline to request resident classification and demonstrate your eligibility.

a. Absence for Active Duty Military Service (U.S. Army, Navy, Air Force, Marines, Coast Guard, Merchant Marine, Officers in the Public Health Service), Non-Administrative Missionary Work, Peace Corps, AmeriCorps, or Similar Philanthropic Work
If you are a permanent legal resident of Michigan as defined by these Guidelines when you enter active military duty, missionary work, Peace Corps, or similar service, you are presumed to retain your eligibility for resident classification if you (1) are on continuous active duty or in continuous service and (2) continuously claim Michigan as your state of legal residence for income tax purposes. If you are a dependent child of such an individual, you are presumed to be eligible for resident classification if both of the following are true: (1) you are coming to the University of Michigan directly from high school or have been continuously enrolled in college since graduating from high school; and (2) you have not claimed residency for tuition purposes elsewhere.

b. Absence Because of Temporary Foreign Assignment
If you are a dependent student and you and your parents are permanent legal residents of Michigan immediately preceding an absence for a temporary foreign assignment with a parent’s Michigan employer, you may retain your eligibility for resident classification if both of the following are true: (1) your family members hold temporary visas in the foreign country, and (2) you return directly to Michigan and remain in the State for educational purposes after leaving the foreign country.

c. Temporary Absence of Less Than One Year
If you are independently a permanent legal resident of Michigan immediately preceding a temporary absence of less than one year, you are presumed to retain eligibility for resident classification provided that, immediately upon your return to Michigan, you sever any out-of-state ties that suggest another state is your legal residence.

3. What Documents Must You Submit With Your Application For Resident Classification?
Along with your completed Application for Resident Classification form, you must submit additional documents.

a. All Applicants. All applicants must submit the following additional documents with an Application for Resident Classification:

• copies of your driver’s license and the license(s) of the person or persons upon whom you are basing your claim to resident eligibility;

• copies of the front and signature pages of the most recent year’s federal and state income tax returns and W2 forms for you and the person or persons upon whom you are basing your claim to resident eligibility; and

• any other documentation that supports your claim to resident eligibility.

b. Dependents. If you are claimed as a dependent on federal or state income tax returns, or are presumed to be a dependent under these Guidelines, you must also submit the following documents:

• copies of the front and signature pages of your parents’ most recent year’s federal and state income tax returns, along with accompanying W2s (and Schedule C and E if self employed) along with your parents’ most recent pay stubs showing Michigan income taxes being withheld.
c. Applicants Claiming Residency on the Basis of Employment. If you are seeking to establish that you are a Michigan resident on the basis of your permanent employment in the State, or the permanent employment of your parent, spouse, or partner, you must also submit the following documents:

- a signed letter from the employer, written on letterhead (including phone number), stating the position, status, and dates of employment; and
- a copy of the most recent pay stub showing that Michigan taxes are being withheld.

d. Applicants Born Outside the United States. All applicants born outside the United States seeking to establish eligibility for in-state tuition based on Michigan residency must also submit documents verifying U.S. citizenship or lawful permanent residence in the U.S.

4. Will You Be Required To Submit Additional Documentation? In addition to the documentation required above, the Residency Classification Office may request additional documentation after the initial review of your application.

5. What Happens To Materials Submitted With An Application For Resident Classification? Applications and accompanying documentation will be retained by the University of Michigan in accordance with its policies and procedures. All information will be kept confidential to the extent permitted by law.

6. What Information Does the Residency Classification Office Consider? In making residency determinations, the University considers all information provided with your Application for Resident Classification and any other available information it determines to be relevant.

7. How Do You File An Application for Resident Classification? Before filing an Application for Resident Classification, you must read Part VI below. The Application for In-State Tuition is available online at the link at the bottom of this page under the Applications for In-State Tuition section. Please read the instructions carefully before submitting your application.

II. Establishing Eligibility by Attending Michigan Schools

You also may qualify for in-state tuition by demonstrating all of the following: (1) you attended an accredited Michigan high school for at least three years and thereafter (a) graduated from an accredited Michigan High School or (b) received a Michigan General Educational Development High School Equivalency Certificate (GED); (2) you attended an accredited Michigan middle or junior high school for the two years preceding high school; and (3) you are commencing your education at the University within twenty-eight months of graduating from the Michigan high school or receiving your GED.

To establish eligibility by demonstrating attendance at Michigan schools, you must complete the following form truthfully and timely: Application for In-State Tuition on the Basis of Attendance. You do not need to be a legal resident of the State of Michigan or United States to qualify under Part II.

III. Establishing Eligibility Through Service

You also may qualify for in-state tuition, without regard to your legal residence, by demonstrating any of the following:

1. you are serving on active duty in the U.S. Army, Navy, Air Force, Marines, National Guard, Merchant Marine, or Coast Guard;
2. you are a reservist in one of those branches;
3. you were honorably discharged or received a general discharge under honorable conditions from one of those branches or their reserve component;
4. you are serving as an officer in the U.S. Public Health Service;
5. you are the spouse or dependent child of someone living or stationed in Michigan who is serving in the U.S. Army, Navy, Air Force, Marines, National Guard, Merchant Marine, or Coast Guard, whether on active duty or as a reservist; OR
6. you are the spouse or dependent child of someone living or stationed in Michigan who is serving as an officer in the U.S. Public Health Service.

To establish eligibility by demonstrating service, you must complete the following form: Application for In-State Tuition on the Basis of Service, truthfully and timely.

IV. Deadlines

It is important to file your materials in a timely fashion. You may apply for in-state tuition for any term in which you are enrolled or intend to enroll. Late applications will be assessed a nonrefundable $300 late fee and will be accepted up to the last published day of classes of the term for which you are applying. Late applications received after the last day of classes will be treated as applications for the following term. In all cases, decisions will be based only on those facts that are in place by the original filing deadline for the term under consideration.

- **Fall Term:** all required materials must be received by 5:00 p.m. on September 30 of that term.
- **Winter Term:** all required materials must be received by 5:00 p.m. on January 31 of that term.
- **Spring, Spring/Summer, and Summer Terms:** all required materials must be received by 5:00 p.m. on July 31 of that term.

If the deadline falls on a weekend or University holiday, all required materials must be received by 5:00 p.m. on the next business day.

These deadlines apply to all University of Michigan schools, colleges, and campuses. For the On-Job or On-Campus program only, filing deadlines are 30 calendar days after the first scheduled day of classes of the term for which you are applying.

V. Appeals

If your request for in-state tuition is denied, you may file an appeal as described below.

The Board of Regents has charged the Appeal Committee with reviewing decisions about eligibility for in-state tuition. The Appeal Committee is chaired by the Vice President and Secretary of the University and includes two other University administrators, a faculty member, and a student. Staff of the Residency Classification Office are not members of the Appeal Committee.

Any appeal must be in writing and must be received by the Appeal Committee no later than 5:00 p.m. on the 30th calendar day following the
date of the letter denying your request for in-state tuition. If the deadline falls on a weekend or University holiday, your appeal must be received by 5:00 p.m. on the next business day.

The mailing address for the Appeal Committee is as follows: Residency Appeal Committee, c/o 1210 LS&A Bldg., 500 S. State Street, Ann Arbor, MI 48109-1382.

If there is additional information you would like the Appeal Committee to consider beyond the materials you have already submitted, you should submit that additional information, in writing, with appropriate supporting documentation, with your written appeal. The Appeal Committee may consider the appeal letter and additional documentation along with all the information in your original request.

Personal contact with a member of the Appeal Committee about the subject of your appeal could disqualify him or her from participating in the decision regarding your appeal. The Appeal Committee does not meet in person with students, and appearances on behalf of students are not permitted at appeal meetings.

After the Appeal Committee has completed its deliberations, you will receive the Committee's final decision in writing. This will conclude the appeal process for the term covered by the application. The University will not conduct any further review of the decision.

VI. Misrepresentations, Falsifications, Omissions; Audits; And Adverse Consequences

Individuals who provide false or misleading information or who omit relevant information in an attempt wrongly to obtain in-state tuition will be subject to severe legal and disciplinary measures, including but not limited to expulsion from the University and retroactive tuition charges. The University routinely audits information and documentation submitted with requests for in-state tuition to ensure compliance.

VII. Where Can You Obtain Additional Information?

For questions on in-state tuition, please contact:

Residency Classification Office
Office of the Registrar
1210 LSA Building
500 South State Street
Ann Arbor, MI 48109-1382
Phone: 734-764-1400

Applications for In-State Tuition

The Application for In-State Tuition is available online. Your access to the online application may depend upon your progress and status in the admissions application process, so please read carefully. In order to log in and complete an application for in-state tuition, you will need:

Your University of Michigan issued eight digit ID (UMID) number AND:

1. EITHER a University of Michigan issued uniqname and Ann Arbor/Kerberos password,
2. OR A Friend Account.

   a. Admitted Students (All campuses) AND all applicants who have previously been issued all of the following: UM ID number, uniqname and Kerberos password, can authenticate using your uniqname and Kerberos password. NOTE: see footnote 1 if you need to reset your password.

Application for In-State Tuition: csprod.dsc.umich.edu/services/residency (https://csprod.dsc.umich.edu/services/residency/)

b. Applicants not yet admitted, or with no previously issued uniqname or password must apply using a verified Friend Account:
   i. Create a Friend Account: (friend.weblogin.umich.edu/friend/ (https://friend.weblogin.umich.edu/friend/))
   ii. Verify your Friend Account via Wolverine Access: wolverineaccess.umich.edu (https://wolverineaccess.umich.edu/)

Locate the New & Prospective Student Business (N&PS) link under the Students section on the Wolverine Access homepage. After logging in with your Friend Account and password, you will be immediately prompted to complete the one-time only Identity Verification steps (add University of Michigan ID (UMID) and birthdate). Once done, you will be prompted to Sign Out; this will bring you back to the Wolverine Access homepage. Navigate back to the N&PS link, and locate the link to the online In-State Tuition Application in the lower right of the page, or, you can login later using the Application for In-State Tuition link above; this will bring you directly to the application.

1 Ann Arbor/Kerberos Password:
For Flint and Dearborn students, this is NOT the password used to login to your campus’ Banner student information system (SIS). This is unique to the Ann Arbor campus. If you have been admitted and have a uniqname but are unable to log in to create an application, you might need to re-set your Ann Arbor/Kerberos password. Password assistance is different for each campus:

   • Dearborn campus students click here (https://umdearborn.edu/offices/information-technology-services/accounts-passwords/ passwords/) for help and instructions for changing your password.
   • Flint campus students click here (https://helpdesk.umflint.edu/customer/portal/articles/1627949-umich-password—usage-restrictions-and-how-to-change-it/) for help and instructions for changing your password.
   • Ann Arbor campus students click here (http://www.itcs.umich.edu/help/faq/uniqnames.php) if you need assistance with your password.

2 Friend Account Information:
Detailed instructions for setting up a Friend Account are provided at this link: itcs.umich.edu/friend (http://www.itcs.umich.edu/friend/)

PLEASE BE AWARE: If you originally logged in using a Friend Account and have since been admitted, your uniqname will be issued and the Friend Account log in will be disabled. You should be able to access your in-state tuition application information using your uniqname and password.

Need Help?
Please contact the ITS Service Center (4Help@umich.edu or 734-764-4357) if you encounter any login issues.

If you wish to check the status of an already submitted application, please do so through your Wolverine Access account: Students–Student Business–Residency.
Transcripts

Transcript Information

A transcript is a student’s complete academic record at the University of Michigan-Dearborn. The transcript(s) that were presented for admission have become an integral part of the files of the admitting offices and cannot be released, either directly or for copying purposes. It will be necessary for you to write directly to the institutions concerned to obtain copies of those previous records. In addition, documents such as SAT/ACT scores are not available from the Office of the Registrar. Transcripts will be released only upon the written request of the student. Requests are processed within three to five business days. Under certain circumstances, such as the end of the term or upon graduation, requests may take longer to process. Requests will not be processed if you have any financial obligations outstanding to the University. No fee is required for standard delivery transcripts.

Types of Transcripts:

Official Transcripts are printed on special protective paper or created with a secure PDF format. The transcript is only official if it has the University of Michigan-Dearborn seal and the Registrar’s signature. Official transcripts given directly to a student will be stamped Issued to Student and may not be accepted as official.

Unofficial Transcripts do not contain the University of Michigan-Dearborn seal or the Registrar’s signature. Students may obtain an unofficial transcript at any time via UM-Dearborn Connect.

Rackham Transcript Information

Students who attended Rackham, Winter 1998 through the present may direct the transcript request to the Dearborn campus as indicated above under "Dearborn Transcript Information."

Students who attended Rackham prior to Winter 1998 or have graduated prior to January 1998 from the Rackham Graduate School must direct the transcript request to:

University of Michigan
Transcript Department
5000 LSA Building
Ann Arbor, MI 48109-1382
Fax: 734-764-5556

Requesting Transcripts

The University of Michigan-Dearborn has partnered with the National Student Clearinghouse (NSC) to provide transcript ordering online. This partnership allows orders 24 hours a day, seven days a week, and tracking via text message or email. The NSC website provides instructions for submitting a request, including selecting delivery options. Through the online system, you can order multiple transcripts in a single session and include attachments.

Processing Time

Standard processing time is 1-2 business days after the University of Michigan-Dearborn receives the order.

Delivery Options

Electronic transcripts are the preferred method of transcript delivery. A secured link to the transcript will be delivered to the intended recipient within one hour, though it could take 1-2 business days if the record requires manual processing.

Mail

Transcripts will be mailed to the recipient via regular first-class U.S. mail within 1-2 business days after the University of Michigan-Dearborn receives the order from the NSC.

Pickup

Transcripts requested as hold for pickup will be available in 1-2 business days. Photo identification is required for the release of transcripts.

Rush Transcript Information

Students may request a rush copy. A $10.00 rush fee per transcript (cash or check only) will be required at the time of the request. Requests received prior to 12:00 noon will be ready for pickup on the same day after 4:00 p.m. Requests received after 12:00 noon will be available for pickup the following day after 12 noon.

Tuition Assessment and Fee Regulation

Tuition and fees are subject to the approval of the Regents of the University and are subject to change at any time. The Board of Regents shall determine the level of tuition and fees and a schedule of such shall be published. All other student tuition and fees shall be fixed by the Campus Fee Committee.

Payment of Tuition and Fees

All tuition and fees are payable in accordance with regulations established by the University providing only that said regulations may not defer payment beyond the end of the term for which they are assessed. Payment for tuition and fees may be made in full at the Student Accounts Office, or online, after registration. The laboratory and/or course fees are refundable if the course is dropped during the first two weeks of a full term, the first week of a half term or mini-term, or before the second class meeting of a less than one-month mini-term. The procedure for obtaining a refund is described in the section "Change of Fees and Refunds."

Application Fees

Graduate degree-seeking applicants must submit a $60 application fee. The application fee is nonrefundable and cannot be credited toward tuition or any other fees. When applying via the online application, the
application fee can be paid by credit or debit card (Visa, MasterCard, or Discover).

Graduate non-degree or guest applications do not require a fee.

Undergraduate applicants are not charged an application fee regardless of how they apply.

Students who have paid the appropriate application fee at another campus of the University will not be assessed a second fee.

Course Level Assessment
Graduate students electing Undergraduate course(s) will be assessed at the Undergraduate Tuition rate for Undergraduate course(s).
Undergraduate courses are numbered 499 and below. (Effective Fall 2006)

Please note: This tuition assessment is dependent on various factors and a change in tuition may not occur for some students.

Dual Status Tuition and Fees: Graduate And Undergraduate
Seniors who are within six hours of completing the requirements for graduation and who have been admitted to a UM-Dearborn graduate program may, with both undergraduate and graduate advisors’ approval, register simultaneously in a UM-Dearborn undergraduate unit and in a graduate program. Tuition and fees will be assessed at the graduate program level for graduate courses and the undergraduate program level for undergraduate courses.

Dual Enrollment Tuition and Fees: On Two Campuses Of The University
A student electing courses at UM-Dearborn and at another campus of the University, by means of a "Guest Admission," will pay the appropriate tuition and fees at each campus. The only exception is that the student will not be assessed tuition and fees totaling more than a full program tuition and fees at whichever campus may have the higher full program tuition and fees.

Undergraduate Credit By Examination (CBE)
See the Special Examinations in the Policies section.

Laboratory and/or Course Fees
Students will be assessed a laboratory or course fee if enrolled in any of the courses so designated in the Schedule of Classes (e.g., "Lab fee $50.00").

Late Registration Assessment
A late registration assessment of up to $45 will be assessed for anyone registering later than two weeks (one week for a half term) after the first day of classes. It should be noted that students are not ordinarily permitted to register after the first two weeks of a full term, the first week of a half term or mini-term, or after the second class meeting of a less than one-month mini-term.

In exceptional cases, a student might be permitted to enroll even after the first two weeks (and be charged a late fee) if the student has obtained the written approval of the dean (or a designated representative) of the college or school.

Fees Included Within Tuition
The tuition and fees assessed by the University include a nominal charge for parking and other transportation-related services, information technology services, the health referral service to the Henry Ford Hospital-Fairlane Clinic, facilities debt service, and support for student activities and organizations.

Exemption From Payment Of Fees
No exemption from the payment of fees shall be granted. Failure to fulfill financial obligations to the University may result in disciplinary action, including the withholding of degrees and transcripts.

New Student Fee
The New Student Fee of $75.00 is charged to all new incoming degree-seeking students at the time of registration. The fee will be automatically posted to the student’s account. This fee covers operational expenses required to deliver high-quality orientation programming for students. It also includes the administration of placement exams, regardless of participation in these activities. The New Student Fee is non-refundable unless a student withdraws from all courses in his/her first term on or before the end of the drop/add period (the first two weeks of the term).

Tuition and Fees
Students should obtain current tuition and fee information from the Office of the Registrar’s Tuition & Fees webpage, umdearborn.edu/rr_tuition-fees (http://www.umdearborn.edu/rr_tuition-fees/).

Additional Assessments
Course levels 300 and above are assessed an additional amount per credit hour. For current tuition and fee information, students should consult the Office of Registrar’s Tuition & Fees webpage, umdearborn.edu/rr_tuition-fees (http://www.umdearborn.edu/rr_tuition-fees/).

Special Tuition and Fee Adjustments
The Registrar and the Provost for Academic Affairs are authorized to make adjustments in the application of the policy stated above when, in their judgment, unusual circumstances warrant special consideration such as a serious illness or injury of a student. The student who wishes to have his/her case reviewed must petition and submit documentation to the Office of the Registrar by email, registrars@umich.edu or mail to 1169 University Center, Dearborn, MI 48128. It is the responsibility of the student to make sure that the required documents are submitted.

Except in rare and unusual circumstances, petitions will not be accepted after the last day of classes for the term concerned. Additionally, petitions will not be accepted once an account has been turned over for collection.

Enrollment Verification
When a loan agency, student loan provider, employer, insurance agency, etc. requires proof that a student enrolled at the University of Michigan-Dearborn, the student can obtain an Enrollment Verification Letter from the Office of the Registrar, at the student’s request, or online via the National Student Clearinghouse (NSC).
Enrollment Verification requests cannot be processed prior to the term’s official start date.

Requesting Enrollment Verification
The University of Michigan-Dearborn has partnered with the National Student Clearinghouse (NSC) to provide official enrollment verification online. This partnership allows students to access and print enrollment verification letters 24 hours a day, seven days a week. The NSC website provides instructions for obtaining an enrollment verification letter.

Loan Deferments
The University of Michigan-Dearborn uses the National Student Clearinghouse as the service for verifying enrollment for student loans. These verification requests will be processed by that agency within 10 business days of receipt of a request from the Office of the Registrar. The Printable Enrollment Verification Request Form is used for this purpose and is available on the Office of the Registrar website, umdearborn.edu/registration. When requesting verification for a student loan, you must submit the official forms sent to you by the loan agency along with your request to the Office of the Registrar.

All Other Requests
The Office of the Registrar processes requests for enrollment and degree verification, excluding student loan deferments. Requests are accepted via mail, email, or fax. If you are requesting enrollment verification on a document that you have received, complete the Printable Enrollment Verification Request Form (available on the Office of the Registrar website, umdearborn.edu/registration), and send it along with the document to the Office of the Registrar.

Scale
The following scale is used when verifying student enrollment status at UM-Dearborn:

<table>
<thead>
<tr>
<th>Status</th>
<th>Undergraduate</th>
<th>Graduate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full Time</td>
<td>12 or more hours</td>
<td>8 or more hours</td>
</tr>
<tr>
<td>Three-Quarter Time</td>
<td>9-11 hours</td>
<td>6-7 hours</td>
</tr>
<tr>
<td>Half Time</td>
<td>6 to 8 hours</td>
<td>4-5 hours</td>
</tr>
<tr>
<td>Less Than Half</td>
<td>5 or less hours</td>
<td>3 hours or less</td>
</tr>
</tbody>
</table>

Please forward completed Printable Enrollment Verification Request Forms to:

University of Michigan-Dearborn
Office of the Registrar
1169 UC
4901 Evergreen Road
Dearborn, MI 48128-2406

Or Fax to:

Veteran Affairs
The goal of the Office of Veteran Affairs is to provide support to a diverse community of student veterans and enhance the experience of veterans as they move through our academic programs. We accomplish this mission by:

- Providing academic assistance and tutoring
- Coordinating access to Counseling and Disabilities Services
- Providing veteran specific enrollment and certification services
- Maintaining a dialog with our Student Veterans of America Chapter and the Association of Women Veterans
- Retaining a conversation in Financial Aid, Cashiers/Student Accounting, and Office of the Registrar.
- Forging partnerships with business, industry, educational institutions, and government agencies.
- Scheduling veteran specific events

The veteran’s office space provides a friendly environment for our active-duty military and veterans to study, relax, socialize, converse, or just gain a moment of quiet reflection. Whether you were just discharged from active duty, currently on active duty, in the National Guard or Reserves, or a spouse or dependent of a disabled veteran, we will help you with your transition and academic goals. The Office of Veteran Affairs is located in the University Center in room 2170 UC.

Certification of Educational Benefits
The administration of veteran’s education benefits programs and enrollment certifications are handled by Veteran Affairs School Certifying Officials. Our goal is to effectively assist veterans, or the dependents of veterans, with the certification process. Students who are eligible for VA educational benefits are able to apply their respective benefits toward their educational endeavors at UM-Dearborn with assistance from the School Certifying Officials.

All students who are eligible for, and elect to receive education and training benefits while attending UM-Dearborn, may address inquiries for information to the:

Office of Veteran Affairs
4901 Evergreen Road
2170C University Center
Dearborn, MI 48128
313-436-9196 or umd-va@umd.umich.edu

Additional information regarding veteran services, certification, and the policies and procedures for certification of benefits can be found on our Veterans Affairs website (https://umdearborn.edu/students/center-social-justice-and-inclusion/veterans-um-dearborn/). Questions regarding the eligibility of a veteran or dependent can be answered by calling the Buffalo Regional Office at 1-888-GIBILL1 (442-4551) or connecting to the Department of Veteran Affairs website at: benefits.va.gov/gibill (http://www.benefits.va.gov/gibill).

Special Programs
Officer Education Programs
Students at UM-Dearborn may apply for admission to the two-year and four-year programs of Army or Air Force officer training. These programs
include some scholarship options and may lead to a commission either in
the Army or the Air Force.

These officer training programs are based in Ann Arbor. Interested
students may get further information by visiting the Office of the
Registrar in Dearborn (1169 UC) or by telephoning Ann Arbor: for Air Force
information, telephone (734) 764-2403; for Army information, telephone
(734) 764-2400.

**Army Officer Education Program (ROTC) (Not a Concentration)**

Upon graduation from the University and successful completion of the
program, students enrolled in the Army Officer Education Program receive
a commission as second lieutenant in the United States Army Reserve or
in the Regular Army. Many students enroll for the first two years in order
to sample career opportunities. No military obligation is incurred for the
first two years.

**Air Force Officer Education Program**

The program offers studies designed to prepare and commission
selected individuals to serve in the United States Air Force. Both a four-
year and a two-year program leading to a commission as a second
lieutenant are offered. The four-year plan comprises eight terms of
courses in aerospace studies plus a four-week field training course at an
Air Force base, between the sophomore and junior years. The two-year
plan comprises an initial six-week field training course followed by four
terms of aerospace studies (AS 310 through AS 411 series). Cadets may
enroll in either the four-year or two-year program by permission of the
chairman.

**Military Obligation**

After being commissioned, graduates of the program are called to active
duty with the Air Force in a field usually related to their academic degree
program. The period of service is four years for non-flying officers, five
years for navigators after navigator training, and eight years for pilots
after flight training. A contractual obligation is established for non-
scholarship students when they attend the first Professional Officer
Course (POC). Scholarship students in the four-year program incur a
contractual obligation upon entering the sophomore year of AFROTC,
whereas those in the two-year program incur one on entering the POC.

**UM-Dearborn Credit for Military Officer Education**

**College of Arts, Sciences, and Letters**

Up to six credit hours of Military Science / Aerospace Studies / ROTC
coursework may count as elective credit toward degree.

**College of Business**

Up to six semester credit hours will be granted to a student for
successful completion of advanced military science courses towards the
BBA degree requirements.

**College of Engineering and Computer Science**

Students who satisfactorily complete the requirements as established by
the Military Officer Education Program Chairman for a commission and
satisfactorily complete the engineering program of studies may count a
maximum of four credit hours of advanced military science courses
(300 and 400 level) as meeting program elective hours for an engineering
degree at the discretion of the academic department.

**College of Education, Health, and Human Services**

Courses do not carry credit toward degree requirements.

**Honors Program**

The Honors Program at UM-Dearborn is designed for qualified, highly-
motivated students who want an extra level of challenge and stimulus in
their college experience. Honors students take a special sequence of classes that satisfy
basic requirements and at the same time provide a well-balanced
undergraduate education. The program teaches students to think
critically and independently, to perceive connections between diverse
areas of knowledge, and to express their thoughts clearly and effectively.
Honors Program classes are small, enabling students to interact closely
with the faculty and each other. Because of the small size of the Honors classes and the emphasis on
active participation, students in the program gain close personal contact
with their professors from the beginning of the freshman year. The
instructors in the Honors Program are highly dedicated teachers. Many
have won UM-D’s Distinguished Teaching Award. All are committed to the
ideal of relaxed and collegial relations between students and professors.
The Honors faculty are readily available to Honors students for academic
advising and for informal conversation.

The core of the Honors Program is a carefully planned sequence of
courses. Instead of taking a smattering of classes in unrelated areas,
students in the program complete their basic college requirements with
courses that form an integrated and coherent curriculum. Apart from their
Honors requirements, Honors students follow a normal course of study
in their own area of concentration, together with the other students in
their unit. They are required to maintain a cumulative grade point average of
no less than 3.2 to remain in the Honors program. Any student falling
below an overall average of 3.2 at the end of any given semester will be
assigned probationary status in the Honors program for the succeeding
semester. Failure to improve the overall average to 3.2 or above during
that probationary semester will result in dismissal from the Program.
Honors students have a special niche within the college community.
They get to know each other and build close friendships because they
take many of the same courses together. The program regularly
sponsors social hours and organizes group outings to concerts, plays
and museums. Students and faculty in the program get to share valuable
experiences outside the classroom.

The Honors Program at UM-Dearborn is open to all entering freshmen
with a high school GPA of at least 3.5, Composite ACT 25 or SAT 1200
other evidence of superior academic ability. The program accepts
students from all units on campus, including CASL, Engineering,
Education, Health, and Business students. Admission to the program is
competitive and is based on the student’s interests and experience as
well as the high school record.

Academic Honors

William J. Branstrom (Freshman) Prize
First-term freshmen who rank in the upper five percent of their class and earn 14 credit hours and at least a 3.50 GPA on any campus and in any unit of the University of Michigan are named recipients of the William J. Branstrom Prize. This distinction is noted on the student's transcript as "William J. Branstrom Prize."

James B. Angell Scholars
Students who earn straight A's (A+, A, A-) for two or more consecutive terms with a minimum of 14 elected credit hours each term, 12 of which must be graded, are named James B. Angell scholars. This distinction is noted on the student's transcript.

University Honors
University Honors are awarded to all students who have achieved a 3.50 GPA and 14 credit hours (12 of which must be graded A-E). This distinction is noted on the student's transcript as "University Honors" after fall and winter terms only.

Honor Scholars Recognition
The Honor Scholar Award is presented each year to the one active undergraduate student per degree program with at least a 3.3 cumulative grade point average and a minimum of 90 credit hours earned by Fall term. Award recognition is also presented to one active graduate student per degree major with at least a 3.7 cumulative grade point average and a minimum of three-quarters of their program completed by the end of Fall term. The student, selected by the respective discipline faculty, also meets other criteria established by department, school or college including contributions to the discipline through research and service activities such as tutoring, mentoring and leadership in discipline based student organizations.

Dean's Lists

College of Arts, Sciences, & Letters Dean's List
A student is honored by inclusion in the Dean's List if they meet two conditions:

  1. complete at least 12 credit hours of graded coursework towards a degree during the term.
  2. achieve a 3.50 or higher term GPA.

The Dean's List is compiled after the Fall, Winter, and Summer terms. A part-time Dean's List is compiled after the Fall and Winter for students who meet the following conditions:

  1. complete at least a combined 12 credit hours over the course of the Fall and Winter of a given academic year, maintaining part-time status in each semester.
  2. the 12 credit hours must be graded coursework towards a degree.
  3. earn a minimum 3.50 GPA each term.

College of Business Dean's List
A student is honored by inclusion in the Dean's List if the student meets two conditions:

  1. has completed at least 12 credit hours in graded coursework toward a degree during the term, and
  2. has achieved a 3.50 or better term GPA. The Dean's List is compiled after the fall, winter, and summer terms.

College of Engineering & Computer Science Dean's List
Students in CECS programs receive Dean's list recognition for the semester in which they are enrolled full-time in courses that fulfill their degree requirements and achieve a term GPA of 3.5 or higher.

College of Education, Health, and Human Services Dean's List
At the end of each term, full-time students earning a GPA of 3.5 or better while carrying a minimum course load of 12 earned GPA hours will be added to the CEHHS Dean's List. Part-time students earning a GPA of 3.5 or better while carrying a combined total of 12 GPA hours for the fall and winter term will be added to a combined Fall/Winter Dean's List.

Academic Standing, Probation, Dismissal, and Reinstatement

Good Scholastic Standing
To be in good scholastic standing at the end of any term, a student must have an overall average of 2.0 or higher for all UM-Dearborn courses elected. Neither credit nor grade points are allowed for a course in which a student received an E grade. Any deficiency of grade points (below 2.0 average) resulting from one or more E grades must be made up while enrolled before the student is restored to good standing. A required course in which a grade of E has been assigned must be repeated on this campus during the student's next academic term.

Unsatisfactory Performance
The records of students are reviewed at the end of each term by the Academic Standing Committee. Three degrees of scholastic deficiency are used by the Committee to identify a student's unsatisfactory performance resulting from poor grades: warning, on probation, or required to withdraw.
In cases where the grade average for one term falls below 2.0 while the overall average remains above 2.0, the student normally will receive a warning letter from the Committee.

**Probation**

Probationary status (academic probation) is normally assigned to students who are not in good scholastic standing but whose records indicate a possibility for removal of deficiencies by continued enrollment. Students on academic probation are restricted to registering for no more than 13 credits per semester.

Students whose academic record is poor for two or three successive semesters are required to withdraw from the university. Students who have been required to withdraw may submit a formal written appeal to be readmitted at a later time, but must, in all cases, have had at least one semester of non-enrollment for their appeal to be accepted for consideration.

**College of Business**

While any D grade (D, D-, D+) is passing, it is not considered satisfactory performance. Any deficiency of grade points (below 2.0 overall average) resulting from one or more D grades must be made up before the student is restored to good standing. If the student receives a D grade in a course that is an important prerequisite for other courses, it is recommended that the course be repeated.

**College of Education, Health, and Human Services**

The College of Education, Health, and Human Services reviews the records of all its degree students at the end of each term. If a certification student’s grade point average for one term drops below 2.75, the student is placed on academic probation and may not register for education methods courses in the professional sequence. If the overall average remains below 2.75 for another term, the student may not be allowed to register as a student in a teacher certification program. Other undergraduate students (those not seeking a teaching certificate) must maintain a grade point average of at least 2.0.

**Academic Standing Appeals**

Students who wish to appeal decisions on their academic status, made by a unit’s committee on academic standing, may do so by addressing a petition to the executive committee of the unit in which they are admitted. If a negative decision is rendered, the student may, under unusual circumstances, appeal to the Provost Office.

**Consecutive Withdrawal**

A student who first registers and then withdraws from two consecutive terms may be placed on academic probation and may not register without the explicit written permission of the Associate Dean or the Associate Dean’s representative.

A student who is required to withdraw from one academic unit may not be admitted to another UM-Dearborn academic unit within the same term that the withdrawal action was taken.

**Required Withdrawals**

Unless extenuating circumstances are presented by petition, a student who is required to withdraw from one academic unit may not be admitted to another UM-Dearborn academic unit within the same term as that in which such withdrawal action is taken.

---

**Academic Reinstatement Policy**

The academic reinstatement process is designed to facilitate the return to good academic standing of students who have been dismissed and are seeking to re-enroll at UM-Dearborn. Reinstatement, however, is not automatically granted but is a privilege granted to former students at the discretion of the academic unit.

A former UM-Dearborn student is eligible for academic reinstatement, after an absence of one semester, if the student:

1. Had a cumulative grade-point average of less than 2.0 during their previous enrollment at UM-Dearborn;
2. Provides a petition which demonstrates an improved academic performance or a readiness for academic success;

A former UM-Dearborn student who is dismissed a second time will be eligible to petition for reinstatement after a period of one-academic year. All petitions granted are subject to a probation period of at least two semesters where the student must maintain a grade-point average of no less than 2.0. If a student fails to maintain the minimum grade-point average during that period then the student will be immediately placed on probation (see above).

**Class Standing**

Class standing is determined by the total credits earned that apply toward the students’ degree program. The various classifications are as follows (numbers indicate semester hours):

<table>
<thead>
<tr>
<th>Standing</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Freshman</td>
<td>(0-24)</td>
</tr>
<tr>
<td>Sophomore</td>
<td>(25-54)</td>
</tr>
<tr>
<td>Junior</td>
<td>(55-84)</td>
</tr>
<tr>
<td>Senior</td>
<td>(85+)</td>
</tr>
</tbody>
</table>

**Continuous Enrollment**

Students whose degree requirements are not completed and who have not been granted a temporary leave must register and maintain continuous enrollment. If a student does not maintain continuous enrollment for one calendar year or who has withdrawn for two consecutive semesters must apply for readmission and may not re-register without the permission of the student’s academic college.

Such students who have been readmitted are governed by requirements and regulations in effect at the time of readmission.

Since all I and X marks are permanently changed to IE and XE after four months, a readmit may not petition to make up I’s or X’s on their prior record.

Courses taken at other campuses will not count automatically toward graduation. Students should petition their academic unit for credit(s). Maximum transfer hours apply (see “Transfer Equivalency Worksheet” section).

Readmitted students complete a Readmission Form available to download at umdearborn.edu/ddc (http://www.umdearborn.edu/ddc/) and submit it directly to the academic unit in which they wish to enroll.
Credit by Examination

The UM-Dearborn will acknowledge proficiencies gained by students outside the bounds of traditional courses if such proficiency is certified by recognized examinations or departmentally prepared and/or approved alternatives. The University recognizes two types of such special examinations: 1) standardized examinations prepared and evaluated by nationally recognized organizations; and 2) placement examinations prepared, administered on campus, and evaluated by UM-Dearborn academic departments.

Standardized National Examinations
The Advanced Placement (AP), International Baccalaureate (IB), College Level Examination Program (CLEP), and Defense Activity for Non-Traditional Education Support (DANTES) are the chief examples in this category. If the relevant academic units and/or the academic departments award credit, the student is responsible for having the test results sent to the institution and the Office of Registration (current students) or the Office of Admissions and Orientation (for incoming students) will be responsible for the recording of the appropriate credit. The student is not charged a fee for such credit.

Individuals desiring recognition of CLEP examinations for credit at the University of Michigan-Dearborn must present official CLEP reports for all exams taken PRIOR to enrollment at the University of Michigan-Dearborn. No credit will be awarded for CLEP examinations taken after the start of a student's first semester/term of enrollment at the University of Michigan-Dearborn.

Credit for Cooperative Education, Independent Study and Other Experiential Courses

No more than 18 hours of credit may be counted toward graduation for cooperative education, independent/directed research, independent/directed studies, and internships.

Dearborn Discovery Core (General Education)

The campus-wide general education program (known as the Dearborn Discovery Core) at the University of Michigan-Dearborn is designed to complement work in a student's chosen area of study. These classes serve as a means of discovery for students, providing a foundation for learning, connecting to potential new areas of interest and building tools for success in whatever field a student pursues. The Dearborn Discovery Core is divided into three sections in order to accomplish the six goals for undergraduate student learning: Foundational Studies, Areas of Inquiry, and Capstone Experience.

Foundational Studies

- Writing and Communication (6 credits)
- Upper-Level Writing (3 upper-level credits)

Quantitative Thinking and Problem Solving (3 credits)

Critical and Creative Thinking (3 credits)

Areas of Inquiry

- Natural Science (7 credits with a lab)
- Social and Behavioral Analysis (9 credits)
- Humanities and the Arts (6 credits)
- Intersections (6 upper-level credits)

Capstone Experience

- Capstone Experience (3 credits)

Transfer Placement Policy

Only exact transfer equivalencies of courses approved by the Dearborn Discovery Core Subcommittee may be used to fulfill Dearborn Discovery Core requirements.

Readmit Policy

Students who were last enrolled between Fall 2015 and Summer 2017 and have no more than four courses or twelve credit hours to take in order to graduate have the option of returning under their college's old general education program or the Dearborn Discovery Core. Students who choose to return under their college's old general education program may only take advantage of this readmittance policy one time, and they must successfully complete the remaining courses. All other readmitted students and all transfer students entering the University of Michigan-Dearborn will come under the Dearborn Discovery Core requirements.

Students may petition for an exemption to the Readmit Policy if they satisfy only one of the criteria components:

1. were last enrolled at the University of Michigan-Dearborn between Fall 2015 and Summer 2017; or
2. have no more than four courses or twelve credit hours to take in order to graduate.

In addition, students must submit a rationale that provides a well-stated and reasoned explanation to the Dearborn Discovery Core Subcommittee for why it should approve an exemption to the policy.

Pass/Fail Policy

Courses taken with the pass/fail option by students will be accepted for credit within the Dearborn Discovery Core program. The default limit of pass/fail courses shall be 4.

Minimum Grade Policy

A student can satisfy a Dearborn Discovery Core category with a passing grade of D- in a Dearborn Discovery Core course. A student still must have an overall minimum grade point average of 2.00 in their block of Dearborn Discovery Core courses.

Transferring Quarter-Hour Credit Courses

Students transferring in a quarter-hour credit course may satisfy a specific Dearborn Discovery Core requirement. Students transferring in
Evaluating Transfer Courses for Credit

If a transfer course is in the Michigan Transfer Agreement and given exact equivalency for lower-level credit, then the university will grant the same transfer credit to all students and the course will count toward the relevant DDC category. For transfer courses not in the Course Transfer System that a student seeks to petition for DDC credit, the college advising office will send the petition to the discipline faculty for evaluation. The following list provides the results of the faculty evaluation process:

- If the faculty evaluates the petition as an exact equivalency for a UM-Dearborn course already in DDC, that course will qualify for DDC category(s) credit.
- If the faculty evaluates the petition as an exact equivalency for a UM-Dearborn course not in DDC, the course will not qualify for DDC credit.
- If the faculty evaluates the petition as Lower Level credit in the discipline, then it will automatically qualify for DDC credit in the category associated with the discipline (this outcome parallels how the Michigan Transfer Agreement operates).
- If the faculty evaluates the petition as General Credit, then the course will not qualify for DDC credit.

Transfer Course Credit for Intersections Category

If the college advising office grants the transfer course an equivalency for a specific UM-Dearborn course that is already approved for the Intersections category, then the student will receive Dearborn Discovery Core Intersections credit, and no petition is necessary. A student may receive all 6 credit hours of the Intersections requirement in this manner. If the college advising office grants the transfer course general upper-level credit, then the student would need to submit a petition to the Dearborn Discovery Core Subcommittee to have the course considered for Intersections credit. If the subcommittee finds that the evidence is insufficient and it cannot make a determination, the student has an opportunity to resubmit additional course materials for review, within one year of the first petition. The student may resubmit materials in support of a petition one time. Only 3 of the 6 credit hours Intersections requirement may be fulfilled using this petition process.

DDC Independent Study for Capstone

Colleges can allow a student to count an independent study for DDC Capstone credit when:

- The college follows an oversight process in which
  - The supervising faculty member provides a written rationale explaining how the independent study addresses the DDC Capstone learning outcomes and submits it to the Department Chair and Dean's office for approval.
  - The Department Chair and Dean’s office approves the independent study for DDC Capstone credit.
  - The approval is reported to the unit's Director of Academic Advising and to the Chair of the DDC Subcommittee.
- The supervising faculty member participates in the DDC Capstone category assessment reporting.

Notes:

- Under this policy, the Independent Study Capstone does not need to be approved by the DDC Subcommittee. The approval occurs among the discipline faculty (using a process determined by the discipline), department chair, and Dean’s office within the unit. Thus, the oversight occurs within the unit.
- When approved, the student receives DDC Capstone credit when the unit’s Academic Advising office adds the GECE attribute to the student’s independent study course in Degree Works.

Exemption for Second Bachelor’s Degree Policy

A student pursing a second bachelor’s degree who has previously been awarded a bachelor’s degree by an accredited university is exempt from the requirements of the Dearborn Discovery Core. For the purposes of this policy, accredited universities are defined as those accredited by accrediting agencies recognized by the United States Department of Education. Despite the exemption granted under this policy, students must satisfy all other major and degree requirements.

Petition Policy on the Critical and Creative Thinking, Natural Science, Social and Behavioral Analysis, Humanities and the Arts Categories

If a student wishes to transfer a course into the University of Michigan-Dearborn and have it count for the Dearborn Discovery Core (DDC) Critical and Creative Thinking, Natural Science, Social and Behavioral Analysis, or Humanities and the Arts categories, the following steps should be followed:

1. The student must submit the transfer course for review through the appropriate college advising office to be considered for either general lower-level credit or upper-level credit equivalency.
2. If the college advising office grants the transfer course an equivalency for a specific UMD course that is already approved for the Critical and Creative Thinking, Natural Science, Social and Behavioral Analysis, or Humanities and the Arts categories, then the student will receive DDC Critical and Creative Thinking, Natural Science, Social and Behavioral Analysis, or Humanities and the Arts credit, and no petition is necessary.
3. If the college advising office grants the transfer course general credit equivalency, either lower-level or upper-level[1], then the student would need to submit a petition to the DDC Subcommittee to have the course considered for Critical and Creative Thinking, Natural Science, Social and Behavioral Analysis, or Humanities and the Arts credit. The student must submit with the petition course materials demonstrating the course meets all learning outcomes in the category. Students are encouraged to include a course syllabus, graded assignments, and a statement explaining how the course fulfilled the learning outcomes for the DDC category. If the subcommittee finds that the evidence is insufficient and it cannot make a determination, the student has an opportunity to resubmit additional course materials for review, within one year of the first
petition. The student may resubmit materials in support of a petition one time.

[1] If the course is not granted equivalency credit in a discipline, then the course is ineligible for DDC Critical and Creative Thinking, Natural Science, Social and Behavioral Analysis, or Humanities and the Arts credit.

Degree and Program Definitions

Major
A major represents a degree-seeking student’s primary field of study which embodies a structured plan of study requiring a minimum of 30 credit hours. The major appears on a student’s official transcript. Courses taken to fulfill requirements for a major cannot also be applied to fulfill the requirements of a minor.

Declaring a Major
All students are required to declare a major when they reach 60 credit hours. Students transferring 62 credit hours or more are not required to declare a major before admission, but must do so during their first term at UM-Dearborn.

Double Major
Students who want a double major must meet all requirements in two fields and must officially declare, and be approved for, both majors. Courses that satisfy major and/or cognate requirements for more than one field can be applied simultaneously to both fields. The business studies major may only be a second major.

Degree
A bachelor’s degree at the University of Michigan-Dearborn is an award given for the completion of a series of courses and other requirements and requires at least 120 credit hours along with a focus of study within a major that is at least 30 credit hours for its completion.

For the definition of a second/dual degree and concurrent degree please see below.

Bachelor of Arts (AB)
A Bachelor of Arts degree usually encompasses an array of courses drawn from the liberal arts disciplines. The degree is intended to create a well-rounded program of study and should give students a broad perspective of the world through the study of diverse topics.

Bachelor of Science (BS)
A Bachelor of Science degree has a strong focus of study within the STEM fields (science, technology, engineering, and mathematics), or the applied sciences (social, behavioral, and health sciences). The degree emphasizes technical knowledge and scientific methodologies, including professional and practice-based skills learning, along with the requirement of a strong general education program in the Dearborn Discovery Core. Individual programs of study and majors define their own specific requirements for the degree. At a minimum, a Bachelor of Science degree shall have at least 40 credit hours of coursework (at least 20 credit hours of which are in upper-level courses 300 or above) in specified STEM or applied sciences fields.

UM-Dearborn Bachelor of Science Requirements:
- A minimum of 120 credits
- Completion of Dearborn Discovery Core course requirements
- A focus of study in the STEM fields (science, technology, engineering, and mathematics)
- At least 40 credit hours of coursework (at least 20 credits of which are in upper-level 300 or above) in specified STEM or applied sciences fields

Bachelor of Business Administration (BBA)
The Bachelor of Business Administration (BBA) is a professionally oriented degree that is designed to impart the knowledge and skills, and develop the diversified competencies required to manage and lead modern business enterprise. It also provides a rigorous preparation for graduate study in business or a variety of related areas.

To satisfy the requirements of the BBA program students must complete prerequisite courses developing fundamental skills in business analysis, writing, and mathematics as well as core courses providing a broad background in the functional areas of business. Students then choose a major field of study in which they develop an in-depth understanding of a business field. Further enhancements such as a second major, minor, or specialized certificate are also possible.

Bachelor of Science in Engineering (BSE)
The Bachelor of Science in Engineering (BSE) degrees, offered by the College of Engineering and Computer Science, provide rigorous engineering education built on a foundation in engineering principles, basic science and mathematics. The degrees deliver discipline specific knowledge that prepare graduates to model, analyze, design and realize systems, components and/or processes. Additionally, the BSE degrees emphasize ethical and professional responsibilities, communication skills, team work, and skills for acquiring and applying new knowledge. The BSE curricula are developed to fulfill the accreditation requirements of the Engineering Accreditation Commission of ABET.

UM-Dearborn BSE Requirements:
- A minimum of 120 credit hours
- A foundation in mathematics and science that fulfills the ABET accreditation requirements.
- A minimum of number of engineering and discipline specific topics that fulfill the ABET accreditation requirements.
- A culminating capstone design experience.

Concentration
A concentration is a structured plan of study within a major. The number of credit hours required for a concentration varies, but is included within the required credit hours for the major. If successfully achieved, the concentration appears on a student’s official transcript.

Minor
A minor is an approved, coherent concentration of academic study in a single discipline, involving at least 12 hours in courses numbered 300
or above in a particular area of study. Minors are recorded on students’ transcripts at the time the petition is granted.

Students in most majors may pursue one or more minors and, upon successful completion of the prescribed course work, have that accomplishment officially recognized on their transcript through established verification procedures that all requirements for the minor have been met and the college of the student’s major allows the official recognition of the minor.

Certain major and minor combinations may be deemed inappropriate either by the college or department of the major or minor. Courses taken as part of a minor may not count toward both a major degree and a minor. Courses taken as cognates can, however, be counted towards the requirements for a minor.

No more than three credit hours of transfer credit, field placements, internships, seminars, S/E-graded courses, and independent study/research may be applied to a minor.

A minimum grade point average (GPA) of 2.00 is required in the courses applied to a minor. The grades (including E’s) in all upper-level courses in the discipline of the minor will be reflected in the minor GPA. Courses elected pass/fail (P/F) cannot be used in a minor. Courses used in a minor cannot dually be used in a major.

**Undergraduate Certificate**

An undergraduate certificate is a non-degree credential, less extensive than a degree program, which is designed to provide students with a specialized set of courses that supplement a primary field of study, area of expertise, or provide an interdisciplinary experience within a defined body of knowledge. Certificates are encouraged in areas not currently addressed by an undergraduate degree program and where they might provide added benefits to students beyond existing degree programs. Certificates can be created within specific disciplines or departments, college-wide programs, across departmental/college boundaries with the issuing college having the responsibility for administering/monitoring the certificate program.

Degree-seeking and non-degree students may pursue an undergraduate certificate from the University of Michigan-Dearborn:

1. **Degree-Seeking:** Undergraduate students enrolled in a degree program have the opportunity to complete an undergraduate certificate. The student must formally declare the certificate program by completing a Declaration of Certificate Form during their enrollment in a degree program. Students can earn the certificate before obtaining their UM-Dearborn undergraduate degree if the certificate approval permits. Students must complete a Certificate Completion Application during the term in which they will be completing the certificate requirements. Program faculty must stipulate in their formal proposal whether the certificate can be posted before degree completion (Stand-Alone) or only upon degree conferral (Linked), along with any additional criterion needed to declare and pursue a certificate program.

2. **Non-Degree:** Non-degree students may pursue a certificate comprised of a distinct set of courses not wholly aligned with an existing degree program. Non-degree students interested in a certificate program should apply directly through standard non-degree seeking admissions procedures. Students who wish to obtain their certificate must complete the Certificate Completion Application during the term in which they will be completing the certificate requirements. Admissions stipulations regarding certificate programs must be provided in detail in the formal proposal.

All University of Michigan-Dearborn certificate programs must follow the below criteria:

- All students are required to complete a minimum of nine (9) undergraduate credit hours in order to receive any UM-Dearborn certificate and must meet the specific GPA minimum established for the certificate. Individual colleges or programs may specify a higher minimum credit hour requirement.
- Students may transfer from another accredited institution into a UM-Dearborn certificate program up to half of the credit hours required by the certificate, but no more than six (6) credit hours of credit. If a certificate requires nine (9) credits of coursework, only four (4) credits can be applied towards the certificate.
- If a certificate program permits its courses to be taken Pass/Fail, no more than a fourth of the credit hours can be taken as Pass/Fail.
- All applicable credits earned in the certificate program can be applied toward a University of Michigan-Dearborn degree program.
- Non-degree seeking students shall only take credits that apply for the certificate program they have been admitted.

**Second Bachelor’s Degree**

Applicants pursuing a second Bachelor’s degree must submit the Application for Undergraduate Admission and Scholarships and meet the same admission requirements as transfer students. Each of the four academic schools and colleges of the University have their own admission criteria:

| College of Arts, Sciences, & Letters | 2.50 |
| College of Business                  | 2.70 |
| College of Engineering & Computer Science* | 2.75 |
| College of Education, Health, & Sciences** | 2.75 |

*Students must also have a 2.75 recalculated math, science, and engineering GPA.

**Several select programs within CEHHS have a 2.50 GPA requirement. Contact the Office of Admissions and Orientation for more details.

**Major and Minor Counting**

A minor is an approved, coherent concentration of academic study in a single discipline, involving substantially fewer hours of credit than a corresponding major.

Students in most majors may pursue one or more minors and, upon successful completion of the prescribed course work, have that accomplishment officially recognized on their transcript through established verification procedures that all requirements for the minor have been met and the college of the student’s major allows the official recognition of the minor.

Certain major and minor combinations may be deemed inappropriate either by the college or department of the major or minor. Courses taken as part of a minor may count toward both the major core requirements
and the minor (minors requiring 12 credits may allow up to one course; minors requiring 15 credits or more may allow up to two courses). Courses taken as cognates, electives within the major, or towards a concentration may be counted towards the requirements for a minor at the discretion of the college or department of the major.

**College of Arts, Sciences, and Letters**

- The use of transfer credit, field placements, internships, seminars, S/E graded courses, and independent study/research courses is limited to 3 credits in a 12 credit hour minor and 6 credits in a 15 credit hour and above minor.
- A minimum grade point average (GPA) of 2.00 is required in the courses applied to a minor. The grades (including E's) in all upper-level courses in the discipline of the minor will be reflected in the minor GPA.
- Courses elected pass/fail (P/F) cannot be used in a minor.
- Integrative Studies majors may not declare a minor.

### Composition Placement

All students are required to take six credit hours of Written and Oral Communication courses within the Dearborn Discovery Core. Most FTIAC students will have initial placement into COMP 105, with the option for students to appeal their placement via the submission of a portfolio. Portfolios will be individually reviewed by COMP faculty. If the appeal is successful, students will be placed in COMP 106. If applicable, FTIAC student placement may be based on a student's test score Advanced Placement (AP) exam, International Baccalaureate (IB) exam, or dual enrollment credit.

For transfer students, UM-Dearborn will accept their COMP 105/106/270/280 equivalencies. If the transfer students have not brought in any COMP courses, then they will be placed in COMP 105 with the option for students to appeal their placement via portfolio and will need to satisfy the remaining requirements of the Dearborn Discovery Core.

### Mathematics Placement

Unless one or more of the following conditions are met, all undergraduate students at the University of Michigan-Dearborn are expected to take the Math Placement exam, either on campus or remotely, as soon as they are admitted.

- Students who have been awarded credit for AP Calculus with a score of 3 on Calculus AB or BC exam
- FTIAC students with a Math SAT score at or above 620
- Students awarded academic credit through dual enrollment with coursework equivalent to Precalculus (Math 105) with a C grade or better

Students who are not satisfied with their score or placement may choose to retake the placement exam on campus after a period of at least 14 days.

If a student remains unsatisfied with their placement after taking the exam for a second time, they may appeal the decision to the Department of Mathematics and Statistics which will consider the appeal based on the following criteria:

- Student's Math SAT score
- Results from student's mathematics class taken during senior year of high school
- Level and grade of student's last mathematics class completed in high school

In order to avail themselves of the appeals process, a student must provide their high school transcript to the Department of Mathematics and Statistics along with a brief statement which includes a rationale for why a different Math placement should be granted.

### Foreign Language Placement

The Foreign Language Placement Exam is strongly encouraged of all College of Arts, Sciences, and Letters students. Placement exams are offered in French, German, and Spanish as a computer-based exam, and Arabic as a paper-based exam. It will take approximately 2-3 weeks to receive your placement exam results in the mail.

[1] Students who place into COMP 106 or its equivalencies satisfy 3 credits of the Written and Oral Communication category of the Dearborn Discovery Core.

[2] Existing policies and practices around AP, IB, and dual enrollment will remain unchanged.

### Taking Courses at another College or University

Degree-seeking students in good academic standing may take courses as guest students elsewhere at another college or university. In so doing, students must adhere the following terms and conditions:

- Only those undergraduate courses earned at institutions that are regionally accredited or from a foreign university or college approved by the government or the official regulating agency of the country will be considered for transfer credit at UM-Dearborn;
- The University's Transfer Residency Requirement policy (see Section 2.1.2);
- A course may not transfer if a student is electing the course already completed at UM-Dearborn;
- Transfer courses will not alter a student's UM-Dearborn GPA;
- For final posting of a course, an official transcript is required;
- Courses taken at another university must meet all required course equivalencies as stated in the transfer residency requirements policy.

### Transfer Credit Review

The purpose of this policy is to establish minimum standards for the review and acceptance of undergraduate transfer coursework at another university. As stipulated by the Higher Learning Commission, it is the responsibility of each university to "determine its own policies and procedures for accepting transfer credits, including credits from accredited and non-accredited institutions, from foreign institutions, and from institutions which grant credit for experiential learning and for non-
traditional adult learner programs in conformity with any expectations in the Commission’s Assumed Practices.”

**Scope of Policy**

It is the policy of UM-Dearborn that normally any transfer courses accepted for credit must have been taken at a regionally accredited institution in the United States. Transfer courses may also be earned and accepted from institutions outside the United States if the institution is a recognized part of the system of higher education of another country and offers programs of study equivalent to degree programs at UM-Dearborn. Any accepted transfer course must have a final grade posted of a C or better, however, all transferable courses will be utilized in the calculation of the admission GPA, regardless of grade. Students can only transfer to UM-Dearborn the maximum number of credits as outlined in the Maximum Transferable Credits policy\(^2\), unless an articulation agreement stipulates otherwise.

All transfer courses seeking credit at UM-Dearborn must initially be reviewed and approved by the appropriate discipline faculty or delegate. In order to be accepted for credit, transfer courses must have substantially similar content and rigor as courses offered at UM-Dearborn. Transfer coursework will only be accepted if it is equivalent to a specific UM-Dearborn course or is not directly equivalent to a specific course but is consistent with a program’s content and rigor. Coursework will come in as equivalent, lower-level, or general credit. While some general education credits may be transferred in, course reviewers are not to be distracted by whether a course meets any requirements for general education (Dearborn Discovery Core) categories. Rather, the course review is solely about matching content.

Finally, in order to ensure and maintain the quality of the UM-Dearborn degree programs there shall be a five-year time limit maximum on all courses accepted for course credit at the university. Within the five-year period, the transfer course must be reviewed and accepted again by the discipline faculty or delegate in order to count for UM-Dearborn course credit.

**Credit for Education in the Armed Forces**

Effective Fall 2015 for new admits, veterans who have served in the armed forces may receive two to six general credits toward degree for their recruitment training if an honorable or general discharge was granted. The hours granted vary according to the ACE recommendations for credit based on the military branch of service. Additional Specialist Training credit may be petitioned for credit via a written petition during the first semester on campus. Veterans should meet with their academic unit to discuss possible options, write a petition, and arrange to meet with a discipline representative or department chair to review the military coursework and experience. Based on the discussion and ACE recommendations, specific credit would be granted in the first semester after admission by the discipline representative or department chair through the academic unit advising office.

UM-Dearborn has a cap of 62 transfer hours from an accredited community college. The same cap is applied for all ACE credits. This includes the general credit granted for recruitment training for veterans. If a veteran attended the Community College of the Air Force the cap of 62 hours toward degree includes the general credits, attendance at the Community College of the Air Force and all petitioned credit to degree.

**Credit for Military Officer Education**

**College of Arts, Sciences, and Letters**

Up to six credit hours of Military Science / Aerospace Studies / ROTC coursework may count as elective credit toward degree.

**College of Business**

Up to six credit hours will be granted to a student for successful completion of advanced military science courses towards the BBA degree requirements.

**College of Engineering and Computer Science**

Students who satisfactorily complete the requirements as established by the Military Officer Education Program Chairman for a commission and satisfactorily complete the engineering program of studies may count a maximum of four credit hours of advanced military science courses (300 and 400 level) as meeting program elective hours for an engineering degree at the discretion of the academic department.

**College of Education, Health, and Human Services**

Up to six credit hours of advanced military science courses can count as elective credit towards a CEHHS degree requirement.

**Michigan Transfer Agreement and the Dearborn Discovery Core**

If a course is in the Michigan Transfer Agreement, then the university will grant the same transfer credit to all students and the course will count toward the relevant Dearborn Discovery Core category, if given exact equivalency or lower level credit.

**Courses not in the Transfer Equivalency System**

The Unit advising office will send to the discipline faculty (or delegate) for evaluation.

- If the faculty (or delegate) evaluate it as exact equivalency for one of our courses already in DDC, the course will qualify for the DDC category(s) credit.
- If the faculty (or delegate) evaluate it as exact equivalency for one of our courses not in DDC, the course cannot quality for DDC credit. (The student can petition, but the DDC committee will reject the petition.)
- If the faculty (or delegate) evaluate it as Lower Level credit in the discipline, then it will automatically qualify for DDC credit in the category associated with the discipline (just as MTA does).
- If the faculty (or delegate) evaluate it as General credit, then it will not qualify for DDC credit. (A student could then petition for it to count as DDC, but such petitions should not be encouraged as they will most likely be rejected by the DDC committee.)

**University Undergraduate Degree Requirements**

**Graduation Requirements**

Undergraduate degree requirements consist of Dearborn Discovery Core, minimum grade point averages, minimum credit hours, placement exams, and a senior-residency requirement. Undergraduate students must elect to follow (a) the degree requirements in the catalog current in their first term of enrollment after admission or readmission or (b) degree
requirements in a subsequent catalogue as long as they were enrolled in a term in which it was in effect. Students may not mix catalogs.

**Minimum Total Credit Hours and Grade Point Average**
A minimum of 120 credit hours with an overall average of C (2.00) or better is required for graduation.

**Upper-Level Coursework**
A minimum of 48 hours of upper-level (courses numbered 300-499 and 3000-4999) coursework must be completed by each student.

**Pass/Fail Course Limit for Degree**
Up to four courses taken with the Pass/Fail option — excluding courses counting towards the major(s), cognates, or minor(s) — by students may be accepted for credit towards a degree.

**College of Engineering and Computer Science Upper-Level Coursework**
Students in the College of Engineering and Computer Science must complete at least 30 credit hours of upper-level CECS course work at UM-Dearborn of the degree program in which enrolled.

**Major Credit Hours Requirement**
A student must successfully complete at least half of the credit hours required for a major at the University of Michigan-Dearborn.

**Senior Residency for a Degree**
In order to qualify for an undergraduate degree at the University of Michigan-Dearborn, a student can take no more than the equivalent of two courses of the students’ last 36 credits for a degree at another higher education institution. Restrictions on maximum transfer credit hours must be observed.

**Transfer Residency Requirement**
Transfer students must complete at UM-Dearborn the last 30 to 58 credit hours before graduation. The precise number depends on the previously attended institution(s) and the maximum number of transferable credits. Institutions are classified into three categories: (2Y) includes all two-year institutions, (4Y) includes all four-year institutions other than the schools and colleges of the University of Michigan, (UM) includes only the schools and colleges of the University of Michigan. The table below gives the minimum residency requirements for transfer students.

<table>
<thead>
<tr>

Advanced Placement, International Baccalaureate and A level coursework is treated the same as coursework from a four-year institution.

**Foreign Language Requirement for the College of Arts, Sciences, and Letters**
The College of Arts, Sciences, and Letters requires all students to satisfy its foreign language distribution requirement in order to obtain a degree. The requirement can be met by:

- Successfully completing a two-semester beginning language sequence at UM-Dearborn, or
- Receiving the approval from the college to transfer the equivalent of 8 semester hours of a beginning language sequence from another institution, or
- Successfully completing a 3 or 4 hour foreign language course (not taught in English) at the 102 level or higher, or
- Completing at least 3 years of foreign language (in the same language) in high school with a grade of "C" or better in the final course. Submit a petition.

Those students who wish to meet the college’s foreign language requirement based on study or experience other than that outlined above may do so by:

- Completing the equivalent of a high school degree from a school that used a language other than English for instruction. (Appropriate documentation attesting to the language of instruction and graduation from the high school program is necessary and official English translations of foreign transcripts are required. *Submit a petition.*), or
- Passing an oral and written foreign language proficiency exam.

**Dual Degree Requirements**
Students may complete two or more degrees at UM-Dearborn at the same time. To earn both degrees, students must meet the requirements for each degree and earn at least 30 credit hours (at least a minimum of 150 credit hours) beyond the first degree (regardless of the number of credit hours completed for the first degree), if the first degree was earned at UM-Dearborn.

**Second Degree Requirements**
If a student chooses to complete a second degree as a post-baccalaureate student, then that student must complete an additional 45 credit hours beyond the first degree (regardless of the whether the degree was earned at UM-Dearborn or elsewhere). The GPA for the second degree will be based on the cumulative academic records of all courses taken at UM-Dearborn.

**Second Degree Requirements for Post-Baccalaureate Students in the College of Business**
Satisfactory completion of the BBA Prerequisite Requirements, Dearborn Discovery Core, BBA Core, and major coursework required for the degree sought.

Satisfactory completion of at least 30 semester hours of coursework while enrolled in the College of Business as a post-baccalaureate student; at least 21 hours of this course-work must be in courses offered by the College of Business.

Achievement of at least a 2.0 grade point average in all coursework and in courses offered by the College of Business.
Concurrent Degrees
UM-Dearborn also offers concurrent degrees for students where the two degree programs overlap significantly in course content. In order to obtain the concurrent degrees, students must complete at least 15 credit hours beyond the degree with the highest required credit hours. Both degrees must be earned at the same time.

Graduation Honors

Chancellor’s Medallion
The Chancellor’s Medallion is awarded at each Commencement Exercise to UM-Dearborn graduates. The students are selected based on their quality of character, vitality, intellect, integrity and academic record. The December awardees are selected from August degree recipients and December degree candidates. The April/May awardees are selected from April/May degree candidates.

With Distinction
Students who graduate and have obtained a cumulative grade point average of at least 3.2 but less than 3.6 are recommended for graduation “With Distinction”. Such distinctions are noted on transcripts and diplomas.

With High Distinction
Students who graduate and have obtained a cumulative grade point average of at least 3.6 are recommended for graduation “With High Distinction”. Such distinctions are noted on transcripts and diplomas.
College of Arts, Sciences, and Letters

Arts, Sciences, and Letters the Liberal Arts College at the University of Michigan-Dearborn

With a curriculum steeped in the liberal arts and sciences, the College of Arts, Sciences, and Letters (CASL) provides students with the necessary foundation to excel in their academic pursuits and to make a difference in the world beyond the classroom.

CASL’s varied undergraduate and graduate academic programs reflect our commitment to leadership, learning and student success. Various opportunities for interdisciplinary work, academic service learning, internships, and co-ops mean that our students leave this campus prepared not just for employment but for life.

CASL is home to five graduate programs and 37 undergraduate majors. Undergraduate programs range from Women’s and Gender Studies to Biochemistry, English to Environmental Science, Mathematics to International Studies, and Political Science to Criminal Justice. With our rich array of majors and minors in addition to certificate programs and an Honors Program, CASL offers a transformative experience which prepares citizens with a wide and critical perspective, a deep appreciation for humanity’s achievements, and the creative bent necessary for tomorrow’s work.

Mission of the College

The College of Arts, Sciences, and Letters is a transformative student-centered exploratory learning environment, regionally and globally focused, and deeply grounded in the values of inclusiveness and engagement, and informed by leading edge research. We develop and empower students to become future leaders who will guide the resurgence and renewal of southeastern Michigan and the world beyond.

Vision Statement

The College of Arts, Sciences, and Letters aspires to be the premier public liberal arts college in Michigan attracting individuals from all backgrounds and career interests and transforming their lives through education in mathematics, the humanities, and the social, behavioral and natural sciences.

Degree Requirements

Students may obtain a Bachelor of Arts (AB) or Bachelor of Science (BS), from CASL.

All of the following requirements must be successfully completed to earn a CASL AB or BS degree: Dearborn Discovery Core (DDC), Foreign Language (except Integrative Studies major), Foundations, all Major Requirements, Upper-Level Coursework, and Total Credit Hours.

Bachelor of Arts (AB)

To be recommended for the AB degree a student must have satisfied the Dearborn Discovery Core (DDC), Foundations, and Foreign Language requirements, senior residency, credit hours, grade point average, and upper-level work. For all programs except Integrative Studies, the student must also complete the requirements for the major. The AB degree in Integrative Studies does not involve a major, but three fields of study called Concentrations. Integrative Studies students do not need to complete the Foreign Language requirement.

Bachelors of Science (BS)

To be recommended for the BS degree a student must have satisfied all the requirements listed above for the AB degree and must have majored in one of the following programs: biochemistry, biological sciences, chemistry (ACS certified), chemistry/instructional, geological sciences, environmental science, microbiology, or physics. Alternatively, a student who earns 60 or more credit hours (at least 20 credit hours of which are in upper level courses 300 or above) in specified STEM or applied sciences coursework may, upon petition to the CASL Advising and Academic Success office, be granted the BS degree in the following majors: Actuarial Mathematics, Applied Statistics, Behavioral and Biological Sciences, Business Studies (as a 2nd major only), Individual Program of Study, Integrative Studies, and Mathematics.

Other Requirements

Total Credit Hours
A minimum of 120 credit hours with an overall grade point average of C (2.00) or better is required for graduation.

Upper-Level Coursework
A minimum of 48 hours of upper-level (courses numbered 300-499 and 3000-4999) coursework must be completed by each student. The College of Arts, Sciences, and Letters does not award upper-level credit to courses taken at a two-year institution except in the following circumstances:

- Courses are articulated as upper-level as part of the MiTransfer Pathways Project.
- Courses are articulated as upper-level as part of a current articulation agreement with the two-year institution. In this case, the upper-level credit is dependent upon the student meeting the criteria of the articulation agreement. If those criteria are not met, the credit will revert to lower-level.

Credit Hour Limitation

There are maximum credit hours in any one discipline which may be applied toward the 120 credit hours needed for graduation. See major requirements for specific rules.

A liberal arts degree program affords a student both breadth and depth of learning. The course requirements for a degree may be divided into types: courses that give a broad, general education, those that provide depth in a specialization, and those that offer the tools needed for success in college and life.

Dearborn Discovery Core (DDC), Foundations, and Foreign Language

Dearborn Discovery Core (DDC)

Students admitted to the College follow the Dearborn Discovery Core (DDC) curriculum to meet their general education requirements (see General Education Program (p. 32) section). Students meeting Michigan Transfer Agreement (MTA) should consult a CASL Advisor for review of their remaining DDC requirements.

Foundations Requirement

During the semester on campus, all incoming students in the College of Arts, Sciences, and Letters will choose one Foundations (FNDS) course to take from the more than 30 seminars offered. Your Foundations (https://umdearborn.edu/casl/undergraduate-programs/foundations-program/) seminar will ensure a firm start on your educational journey. The seminar
will give you a chance to learn about how you learn, how knowledge is produced in different fields, what faculty expect of you at the university level, and what resources and opportunities the university can offer you to support and enrich your time on campus. Each seminar fulfills at least one Dearborn Discovery Core (DDC) requirement, so this course will be helping you make progress toward your degree.

Students in the Honors Program may use HONS 300 for the required Foundations course.

Foundations is a required program and is not an elective. If you don’t register for a foundations course in your first year here, your student account will be put on hold until you register for a course in this program.

**Foreign Language**

All AB and BS students (excluding Integrative Studies major) are required to take a two-course sequence in one language. Integrative Studies students are exempt from the Foreign Language requirement.

**Foreign Language Requirement**

Complete a two-semester beginning language sequence.

**Language**

<table>
<thead>
<tr>
<th>Courses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ancient Greek I and II</td>
</tr>
<tr>
<td>Arabic I and II</td>
</tr>
<tr>
<td>Armenian I and II</td>

</tr>
<tr>
<td>French I and II</td>
</tr>
<tr>
<td>German I and II</td>
</tr>
<tr>
<td>Latin I and II</td>
</tr>
<tr>
<td>Spanish I and II</td>
</tr>
</tbody>
</table>

The foreign language distribution requirement can be met by:

- Successfully completing a two-semester beginning language sequence at UM-Dearborn, or
- Transferring the equivalent of 8 semester hours of a beginning language sequence from another college or university, or
- Successfully completing a 3- or 4-semester hour foreign language course (this course cannot be taught in English) at the 102 level or higher, or
- Having completed at least 3 years (in the same language) of foreign language in high school with a grade of C or better in the final course, or
- Having completed the equivalent of a high school diploma at a school that used a language other than English for instruction. (Appropriate documentation attesting to the language of instruction and graduation from the high school program is necessary, and official English translations of foreign transcripts must be provided), or
- Passing an oral and written proficiency exam.

A student with prior knowledge of Arabic, French, German or Spanish should take a placement examination before registering for a course in that language. Placement/proficiency exams in Arabic, French, German, and Spanish are scheduled through the Office of Admissions and Orientation; call 313-593-5100. A student wishing to take a proficiency exam in a language not mentioned above or not taught at UM-Dearborn should consult a CASL advisor; call 313-593-5293 for more information. Proficiency exams for a language other than those taught at UM-Dearborn must be administered at another four-year institution. A student wishing to waive the foreign language requirement must officially submit a request via petition. Please note that when the requirement is waived,
or proficiency is demonstrated by exam, credit will not be awarded for courses not taken.

**Majors**

**What is a Major?**

A college degree experience includes depth as well as breadth. Each student in an AB (Bachelor of Arts) or BS (Bachelor of Science) degree program must choose a field in which to specialize, which is called a major. A major is a program of specialized study that normally consists of a minimum of 30 credit hours of work at the upper-level (courses numbered 300 through 499 and 3000-4999) taken mainly during the student’s final two years. A major allows a student to develop independence and discrimination of thought and judgment and to learn to appreciate, assimilate, and apply a coherent body of knowledge.

The College offers the following majors that normally lead to the degree AB (Bachelor of Arts) or BS (Bachelor of Science) listed.

<table>

¹ Integrative Studies offers the student an opportunity to design an AB or BS degree program from three 12 or 15+ credit hour fields of study called Concentrations.

**Major Requirements**

Certain introductory courses, designated as pre-major or prerequisites, are designed to give students the knowledge and skills needed in the advanced courses. Undecided students will find these courses helpful in making a decision about majoring in the field.

A program of study in a major should be planned in consultation with a CASL academic advisor and faculty program mentor.

The following rules apply to most majors:

1. Generally in most single discipline majors, at least 30 upper-level credit hours are required. At least 24 credit hours must be taken in the field of the major and some majors require at least 6 credit hours of cognate courses. A cognate course is in a related field.
2. The courses used to fulfill the 30 or more upper-level credit hours must be numbered 300-499 or 3000-4999.
3. Courses taken as pre-major/prerequisites may not be counted in the major.
4. At a minimum, students must complete between 12 and 15 (or more) of the 30 credit hours at UM-Dearborn. Students transferring upper-level credits from other institutions should check with their academic advisor for specifics of this residency requirement.
5. Courses used in the major, cognate, or minor/concentration cannot be taken P/F (Pass/Fail)

**Major GPA**

CASL requires a 2.0 GPA in a student’s major for graduation. Unless otherwise stated in the major portion of the catalog, all courses that can fulfill requirements within a major, regardless of grade, will be used to calculate the major GPA. Courses used in a minor that are not shared with a major will not be used in the calculation. For the Integrative Studies major, each concentration must have a GPA of 2.0. All courses that can fulfill requirements within a concentration, regardless of grade, will be used to calculate the concentration GPA.

**Cognate GPA**

If a major has a cognate requirement, a 2.0 GPA is required for graduation. The courses included in the cognate GPA are only the courses used to fulfill the requirement.

**Double Major (Optional)**

Students who want a double major must meet all requirements in two fields and must officially declare, and be approved for, both majors, in the CASL Office of Advising and Academic Success, Room 1039 CB. Courses that satisfy major and/or cognate requirements for more than one field can be applied simultaneously to both fields. The Business Studies major may only be a second major. A double major results in only one degree.

**Recognition of A Minor (Optional)**

A student in an AB or BS degree program (other than Integrative Studies) may apply for recognition of a minor. A student may declare a minor (completed or not) by filing the appropriate form at the CASL Advising and Academic Success office. A final audit will be conducted at the...
time of graduation. Any posted minor that has not been successfully completed will be deleted from the student’s transcript.

A minor generally consists of a minimum of 12-18 credit hours of upper-level (300-499 and 3000-4999) coursework in a particular field of study. A minimum grade point average (GPA) of 2.00 is required in the courses applied to a minor. For minors offered by CASL, the grades (including Es) in all upper-level courses in the discipline of the minor will be reflected in the minor GPA. Courses elected pass/fail (P/F) cannot be used in a minor. Courses taken as part of a minor may count toward both major core requirements and the minor (minors requiring 12 credits may allow up to one course; minors requiring 15 credits or more may allow up to two courses). Courses taken as cognates, electives within the major, or towards a concentration may be counted towards the requirements for a minor at the discretion of the college or department of the major. No more than three credit hours of transfer credit, field placements, internships, seminars, S/E-graded courses, and independent study/research may be applied to any 12 credit hour minor, and no more than six credits for a 15+ credit hour minor.

Not all CASL majors are available as a minor. Furthermore, there are some areas of study that are only available as a minor. CASL students may also choose from several minors offered by the other academic units. Please see each unit’s section of the catalog for available minors and their requirements. The GPA for the CIS minor is based on CIS 150, CIS 200, CIS 275, and all upper-level CIS coursework. The GPA for the Business minors is based on all courses taken for the minor in the College of Business. Students who are not in the College of Business cannot elect or transfer more than 30 credit hours in upper level courses offered by the College of Business. A maximum of six credit hours of transfer credit, field placement, internships, seminars, S/E-graded courses, and independent study/research may be applied to any non-CASL minor.

Other Programs

Graduate Programs

The College offers a Master of Public Administration and Policy, a Master of Science in Applied and Computational Mathematics, a Master of Science in Criminology and Criminal Justice, a Master of Science in Environmental Science, and a Master of Science in Psychology with tracks in Health Psychology and Clinical Health Psychology. See the UM-Dearborn Graduate Catalog for admission requirements, complete program descriptions and a listing of graduate courses.

Certificates

The College offers many certificates: African and African American Studies, Arab American Studies, Arabic Translation, Comparative Literature, English Language and Linguistics, Food Studies, French Translation, Geospatial Analysis and Mapping, Global Engagement, LGBTQ Studies, Mathematics for Finance, Media Production, Medicinal and Aromatic Plants, Middle East Studies, Professional Language and Cross-Cultural Competency, Public Relations, Spanish for Health Care Professionals, and Writing.

Consult the program description in this Catalog for additional information and requirements.

Majors

- Actuarial Mathematics (p. 89)
- African and African American Studies (p. 89)
- Anthropology (p. 92)
- Applied Statistics (p. 93)
- Art History (p. 95)
- Behavioral and Biological Sciences (p. 97)
- Behavioral Sciences (p. 99)
- Biochemistry (p. 101)
- Biological Sciences (p. 102)
- Business Studies (as a 2nd major only) (p. 103)
- Chemistry (ACS Certified) (p. 104)
- Chemistry (Instructional track) (p. 105)
- Communication (p. 107)
- C (p. 111)riminology and Criminal Justice (p. 111)
- Economics (p. 113)
- English (p. 114)
- Environmental Science (p. 115)
- Environmental Studies (p. 117)
- French Studies (p. 121)
- Geological Sciences (p. 123)
- Hispanic Studies (p. 128)
- History (p. 129)
- Individual Program of Study (p. 131)
- Integrated Science (p. 131)
- Integrative Studies (p. 132)
- International Studies (p. 133)
- Journalism and Screen Studies (p. 140)
- Mathematics (p. 145)
- Microbiology (p. 149)
- Philosophy (p. 152)
- Physics (p. 159)
- Political Science (p. 160)
- Professional Writing and Rhetoric (p. 162)
- Psychology (p. 163)
- Social Studies (p. 167)
- Sociology (p. 169)
- Urban and Regional Studies (p. 171)
- Women’s and Gender Studies (p. 173)

Minor

- African and African American Studies (p. 89)
- Anthropology (p. 92)
- Applied Art (p. 92)
- Applied Statistics (p. 93)
- Arab American Studies (p. 94)
- Arabic (p. 94)
- Art History (p. 95)
- Astronomy (p. 97)
- Biochemistry (p. 101)
- Biological Sciences (p. 102)
- Chemistry (ACS Certified) (p. 104)
- Communication (p. 107)
- Community Change (p. 108)
- Comparative Literature (p. 109)
- Computer and Computational Mathematics (p. 110)
• Criminology and Criminal Justice (p. 111)
• Economics (p. 113)
• English (p. 114)
• Environmental Science (p. 115)
• Environmental Studies (p. 117)
• Film Studies (p. 120)
• French/ French Studies (p. 121)
• Geology (p. 123)
• Geography (p. 122)
• Global Cultures (p. 125)
• Hispanic Studies (p. 128)
• History (p. 129)
• Humanities (http://catalog.umd.umich.edu/undergraduate/college-arts-sciences-letters/hum-minor/)
• Journalism and Screen Studies (p. 140)
• Law and Society (p. 142)
• Leadership & Communication in Organizations (p. 143)
• Linguistics (p. 144)
• Mathematics (p. 145)
• Medieval and Renaissance Studies (p. 148)
• Microbiology (p. 149)
• Music (p. 151)
• Organizational Change in a Global Environment (p. 152)
• Philosophy (p. 152)
• Physics (p. 159)
• Political Science (p. 160)
• Psychology (p. 163)
• Religious Studies (p. 165)
• Science and Technology Studies (p. 166)
• Social Science Research Methodology (p. 166)
• Society and Technological Change (p. 169)
• Sociology (p. 169)
• Urban and Regional Studies (p. 171)
• Women’s and Gender Studies (p. 173)

Certificates
• African and African American Studies (p. 89)
• Arab American Studies (p. 94)
• Arabic Translation (p. 94)
• Comparative Literature (p. 109)
• English Language and Linguistics (http://catalog.umd.umich.edu/undergraduate/college-arts-sciences-letters/english-language-linguistics/)
• Food Studies (p. 120)
• French Translation (p. 122)
• Geospatial Analysis and Mapping (p. 124)
• Global Engagement (p. 127)
• LGBTQ Studies (p. 143)
• Mathematics for Finance (p. 147)
• Media Production (p. 147)
• Medicinal and Aromatic Plants (http://catalog.umd.umich.edu/undergraduate/college-arts-sciences-letters/medicinal-aromatic-plants/)
• Middle East Studies (p. 150)
• Professional Language and Cross Cultural Competency (p. 162)
• Public Relations (p. 165)
• Spanish for Health Care Professionals (http://catalog.umd.umich.edu/undergraduate/college-arts-sciences-letters/spanish-health-care-professionals/)
• Writing (p. 175)

Administration
Hershock, Martin J., PhD, Dean
Waung, Marie PhD, Associate Dean
Zeytuncu, Yunus, PhD, (interim) Associate Dean
Bachir, Nada, BA, Assistant to the Dean
Gassel, Susanne, MA, Director, CASL Advising and Academic Success
Gedert, Susan, BA, Communications Editor & Alumni Affiliate Coordinator
Gordon, Rita, PhD, Administrative Director
Judge-Gonzalez, Ellen, MA, Director, Student Outreach and Academic Resources (SOAR Program)
Kelly-Williams, Christine, BA, Business Process Analyst
Martin, Patricia, MPA, Cooperative Program Manager
Lennon, Nicole, BA, Administrative Assistant
Yuncker, Morgan, BA, Outreach Marketing and Event Coordinator

Chairs and Directors
Beauchesne, Patrick, Director, Foundations
Brainer, Amy, Director, Women’s and Gender Studies
Forsyth-Brown, Ivy, Director, African American and African Studies and Center for Ethnic and Religious Studies
González del Pozo, Jorge, Chair, Language, Culture, and Communication; Chair, Literature, Philosophy, and the Arts, and Director of International Studies
Hickey, Georgina, Chair, Social Sciences
Howell, Sally, Director, Center for Arab American Studies
Leonard, Michelle, Director, Psychology Graduate Program
Little, Daniel, Director, Honors Program
Martin, Lisa, Director, Women’s and Gender Studies
Morgan, Sven, Chair, Natural Sciences
Muller, Anna, Director, Women in Learning and Leadership
Napieralski, Jacob, Director, Masters of Science - Environmental Science
Pyrozhnenko, Vadym, Director, Master of Public Administration and Policy
Remski, Joan, Chair, Mathematics and Statistics
Rusch, Lara, Director, Urban and Regional Studies Program
Sanjian, Ara, Director, Center for Armenian Studies
Sethuraman, Nitya, Director, Behavioral and Biological Sciences
Shelton, Donald, Director, Criminology and Criminal Justice
Smith, Jonathan, Chair, Behavioral Sciences
Taylor, John, Director, Writing Center
Thomson, Dale, Chair, Social Sciences
Walters, Claudia, Director, Environmental Interpretative Center
Zhao, Jennifer, Director, Applied and Computational Mathematics

Professors Emeriti

Akiyama, Michael, PhD, Professor Emeritus of Psychology
Anderson, Donald F., PhD, Professor Emeritus of Political Science
Axsom, Richard, PhD, Professor Emeritus of Art History
Bjorn, Lars, PhD, Professor Emeritus of Sociology
Bogin, Barry A., PhD, Professor Emeritus of Anthropology
Bord, Donald J., PhD, Professor Emeritus of Physics
Brown, James W., PhD, Professor Emeritus of Mathematics
Clark, Elaine G., PhD, Professor Emerita of History
Constant, John G., PhD, Associate Professor Emeritus of Music
Crowell, Elizabeth, PhD, Associate Professor Emerita of Economics
Dahlke, Richard M., PhD, Professor Emeritus of Mathematics and Mathematics Education
DeCamp, Mark, PhD, Associate Professor Emeritus of Chemistry
Emery, Allan, PhD, Professor Emeritus of Chemistry
Fakler, Robert, PhD, Professor Emeritus of Mathematics
Fink, John F., PhD, Professor Emeritus of Mathematics
Flax, Neil M., PhD, Associate Professor Emeritus of Comparative Literature and German
Gardner, Gerald, PhD, Professor Emeritus of Psychology
Garland, Frank, PhD, Associate Professor Emeritus of Chemistry
Gelderloos, Orin G., PhD, Professor Emeritus of Biology and Environmental Studies
Gillespie, John A., PhD, Professor Emeritus of Mathematics and Statistics
Grewe, Eugene, PhD, Professor Emeritus of Rhetoric and English Composition
Gruber, James, PhD, Professor Emeritus of Sociology
Heady, Judith, PhD, Associate Professor Emerita of Biology
Higgs, Elton, PhD, Professor Emeritus of English Language and Literature
Höft, Margret, PhD, Professor Emerita of Mathematics
House, Gloria, PhD, Professor Emerita of African and African American Studies and Humanities
Hull, Brooks, PhD, Professor Emeritus of Economics
Jacobs, Claude, PhD, Associate Professor Emeritus of Behavioral Sciences
James, David A., PhD, Professor Emeritus of Mathematics
Kamachi, Noriko, PhD, Professor Emerita of History
Klein, Bernard W., PhD, Professor Emeritus of Political Science
Kotre, John, PhD, Professor Emeritus of Psychology
Lee, Dorothy A., PhD, Professor Emerita of Comparative Literature and English
Lempert, Lora Bex, PhD, Professor Emerita of Sociology
Lyjak, Robert, PhD, Professor Emeritus of Mathematics and Computer Science
Massey, Frank J., PhD, Associate Professor Emeritus of Mathematics and Computer Science
Milles, Stephen, PhD, Associate Professor Emeritus of Mathematics and Mathematics Education
Moerman, Daniel, PhD, Professor Emeritus of Anthropology
Moran, Gerald, PhD, Professor Emeritus of History
Morash, Ronald P., PhD, Professor Emeritus of Mathematics
Mostafapour, Kazem, PhD, Associate Professor Emeritus of Biochemistry and Chemistry
Nadasen, Arunajallam, PhD, Professor Emeritus of Physics
Norman, Richard, PhD, Associate Professor Emeritus of Biology
Otto, Charlotte, PhD, Professor Emerita of Chemistry
Papazian, Dennis, PhD, Professor Emeritus of History
Papp, F.J., PhD, Professor Emeritus of Mathematics
Pearson, Sheryl S., PhD, Professor Emerita of English Literature
Pebworth, Ted-Larry, PhD, Professor Emeritus of English Language and Literature
Perlove, Shelley K., PhD, Professor Emerita of Art History
Peter, Philip H., PhD, Associate Professor Emeritus of Music
Prentis, Jeffrey J., PhD, Professor Emeritus of Physics
Proctor, Donald, PhD, Professor Emeritus of History
Radine, Lawrence, PhD, Professor Emeritus of Sociology
Rahman, Ahmad, PhD, Associate Professor Emeritus (posthumously) of History
Riebesell, John, PhD, Associate Professor Emeritus of Biology
Roehl, Richard, PhD, Professor Emeritus of Economics
Rubenstein, Rheta N., PhD, Professor Emeritus of Mathematics Education and Mathematics
Faculty

College Wide Programs
Barak, Maya, PhD, American University, Assistant Professor of Criminology and Criminal Justice
Brainer, Amy, PhD, University of Illinois at Chicago, Associate Professor of Women’s and Gender Studies and Sociology
DeGregorio, Scott, PhD, University of Toronto, Professor of Honors and English
Lacey, Krim, PhD, Wayne State University, Assistant Professor of African and African American Studies and Sociology
Laws, Terri, PhD, Rice University, Assistant Professor of African and African American Studies
Martin, Lisa, PhD, University of Michigan, Associate Professor of Women’s and Gender Studies
Shelton, Donald, JD, PhD, University of Nevada, Associate Professor of Criminology and Criminal Justice and Sociology

Department of Behavioral Science
Aronson, Pamela, PhD, University of Minnesota, Professor of Sociology
Banner, Francine, JD, PhD, Arizona State University, Professor of Sociology
Beauchesne, Patrick, PhD, University of California at Berkeley, Assistant Professor of Anthropology
Chatkoff, David, PhD, University of Southern Mississippi, Associate Professor of Psychology

Sayles, Edward, PhD, Professor Emeritus of Philosophy
Schaum, Melita, PhD, Professor Emeritus of English Literature
Schneider, Michael J., PhD, Professor Emeritus of Biology
Sheldon, Jane, PhD, Professor Emeritus of Psychology
Simpson, Robert, PhD, Professor Emeritus of Biology and Environmental Science
Smith, Patricia, PhD, Professor Emerita of Economics
Snabb, Thomas E., PhD, Associate Professor Emeritus of Mathematics and Statistics
Spinelli, Emily L., PhD, Professor Emerita of Spanish
Spoiden, Ste`phane, PhD, Professor Emeritus of French
Stern, Jeffrey, PhD, Professor Emeritus of Psychology
Summers, Claude, PhD, Professor Emeritus of English Language and Literature
Tai, Julia C., PhD, Professor Emerita of Chemistry
Tentler, Leslie W., PhD, Professor Emerita of History
Thomson, William, PhD, Associate Professor of Emeritus Psychology
Twomey, Michael, PhD, Professor Emeritus of Economics
Vansant, Jacqueline, PhD, Professor Emeritus of German
Verhey, Roger, PhD, Professor Emeritus of Mathematics
Woodward, Wayne, PhD, Associate Professor Emeritus of Communication

Chenoweth, John, PhD, University of California Berkley, Assistant Professor of Anthropology
Clark-Foos, Arlo, PhD, University of Georgia, Assistant Professor of Psychology
Dolins, Francine, PhD, University of Stirling (Scotland), Assistant Professor of Psychology
Draus, Paul, PhD, Loyola University, Professor of Sociology
Early, Kevin, PhD, University of Florida, Associate Professor of Sociology
Forsythe-Brown, Ivy, PhD, University of Maryland, Assistant Professor of Sociology
Hymes, Robert W, PhD, Michigan State University, Associate Professor of Psychology
Lacey, Krim, PhD, Wayne State University, Assistant Professor of African and African American Studies
Leonard, Michelle, PhD, Wayne State University, Assistant Professor of Psychology
Liu, ZhongXu, PhD, University of Toronto, Assistant Professor of Psychology
Loeb, Roger C., PhD, Cornell University, Professor of Psychology
McAuslan, Pamela, PhD, Wayne State University, Associate Professor of Psychology
McKenna, Brian, PhD, Michigan State University, Associate Professor of Anthropology
Patel, Nehal, JD, PhD, Northwestern University, Associate Professor of Criminal Justice and Sociology
Pecina, Susana, PhD, University of Michigan, Associate Professor of Psychology
Price, Carmel, PhD, University of Tennessee at Knoxville, Assistant Professor of Psychology
Reppond, Harmony, PhD, University of California at Santa Cruz, Associate Professor of Psychology
Sethuraman, Nitya, PhD, University of California at San Diego, Assistant Professor of Psychology
Shelton, Donald, JD, PhD, University of Nevada, Associate Professor of Sociology
Siebert, Caleb, PhD, Adelphi University, Assistant Professor of Psychology
Swift, Dan J., PhD, University of New Hampshire, Associate Professor of Psychology
Waung, Marie, PhD, Ohio State University, Professor of Psychology
Wellman, Rose, PhD, University of Virginia, Assistant Professor of Anthropology
Wrobel, Nancy, PhD, Wayne State University, Professor of Psychology

Department of Language, Culture and Communication
Calzada-Orihuela, Sofia, PhD, University of Maryland, Lecturer IV of Spanish
Davis, Daniel, D.Phil., Oxford University, Professor of Linguistics
DeGenaro, William, PhD, University of Arizona, Professor of Composition and Rhetoric
Dika, Rifaat, PhD, Wayne State University, Lecturer IV of Arabic
Elmeligi, Wessam, PhD, Alexandria University (Egypt), Assistant Professor of Arabic
Gilmore, H James, MA, University of Iowa, Clinical Associate Professor of Communication
González del Pozo, Jorge, PhD, University of Kentucky, Professor of Spanish
Iannarino, Nicholas, PhD, University of Kentucky, Assistant Professor of Communication
Kiska, Timothy, MA, Wayne State University, Associate Professor of Communication
Lee, Jamie, PhD, University of Illinois, Associate Professor of Linguistics
Luckett, Anthony, MA, Wayne State University, Lecturer III of Film Studies
Luthra, Rashmi, PhD, University of Wisconsin-Madison, Professor of Communication
MacDonald, Michael Tyler, PhD, University of Wisconsin-Milwaukee, Assistant Professor of Composition and Rhetoric
Mannion, Jerilyn, MA, Bowling Green State University, Lecturer IV of French
Martinez-Valencia, Francia Eliana, PhD, University of Alabama, Associate Professor of Spanish
McMillan, Liana, MA, University of Michigan, Lecturer III of German
Murphy, Troy, PhD, University of Pittsburgh, Associate Professor of Communication
Murray, Margaret, PhD, University of Colorado-Boulder, Assistant Professor of Communication
Petrak, Samantha, MA, Bowling Green State University, Lecturer IV of Spanish
Potvin, Phillip, MFA, Bennington College, Lecturer IV of Composition and Rhetoric
Proctor, Jennifer, MFA, University of Iowa, Associate Professor of Journalism and Screen Studies
Rodriguez-McGill, Carlos, PhD, Ohio State University, Associate Professor of Spanish
Rohan, Elizabeth, PhD, University of Illinois Urbana-Champaign, Professor of Composition and Rhetoric
Scarlatta, Gabriella M., PhD, Wayne State University, Professor of French
Todoroff, Pamela, MA, University of Michigan, Lecturer III of Composition and Rhetoric
Willard-Traub, Margaret, PhD, University of Michigan, Associate Professor of Composition and Rhetoric

Department of Mathematics and Statistics
Agarwal, Mahesh, PhD, University of Michigan, Associate Professor of Mathematics
Cengiz-Phillips, Nesrin, PhD, Western Michigan University, Associate Professor of Mathematics Education
Clifford, John H., PhD, Michigan State University, Professor of Mathematics
Dabkowski, Michael, PhD, University of Wisconsin, Assistant Professor of Mathematics
Fiore, Thomas, PhD, University of Michigan, Professor of Mathematics
Georgieva-Hristova, Yulia, PhD, Texas A&M University, Associate Professor of Mathematics
Jabbusch, Kelly, PhD, University of Washington, Associate Professor of Mathematics
Kim, Hyejin, PhD, University of Maryland College Park, Associate Professor of Mathematics
Krebs, Angela, PhD, Michigan State University, Associate Professor of Mathematics Education and Mathematics
Lachance, Michael A., PhD, University of South Florida, Professor of Mathematics
Li, Gengxin, PhD, Michigan State University, Associate Professor of Statistics
Mikula, Margaret, MS, Western Michigan University, Lecturer III of Statistics

Department of Literature, Philosophy and the Arts
Abou-Zeineddine, Ghassan, PhD, University of Wisconsin-Milwaukee, Assistant Professor of English Literature
Ajaj, Imran, PhD, University of Auckland (New Zealand), Associate Professor of Philosophy
Bond, Erik, PhD, New York University, Associate Professor of English Literature
Erickson, Susan N., PhD, University of Minnesota, Professor of Art History
Finlayson, J. Caitlin., PhD, University of Toronto, Associate Professor of English Literature
Hughes, Paul, PhD, University of Illinois-Chicago, Professor of Philosophy
Jarenski, Michelle, PhD, Loyola University Chicago, Associate Professor of English Literature
Kirkland, Joseph, JD, University of Michigan Law School, Lecturer III of Philosophy
Linker, Maureen, PhD, City University of New York, Professor of Philosophy
Little, Daniel, PhD, Harvard University, Professor of Philosophy
Nesbitt, Sarah, MFA, Pennsylvania State University, Lecturer III of Art History
Ng, Diana, PhD, University of Michigan, Associate Professor of Art History
Rottner, Nadja, PhD, Columbia University, Associate Professor of Art History
Smith, Jonathan, PhD, Columbia University, William E Stirton Professor, Professor of English Literature, and Behavioral Sciences
Smith Pollard, Deborah, PhD, Michigan State University, Professor of English Literature and Humanities
Stojkovski, Velimir, PhD, Marquette University, Assistant Professor of Philosophy
Yeakel, Daniel, PhD, Wayne State University, Lecturer III of Philosophy

Department of Natural Science
Abramyan, John, PhD, University of Queensland (Australia), Assistant Professor of Biology
Al-Qaisi, Sami, PhD, University of Akron, Lecturer of Chemistry
Alteri, Christopher, PhD, University of Arizona College of Medicine, Assistant Professor of Biology and Microbiology
Bandyopadhyay, Krishanu, PhD, National Chemical Laboratory University of Pune (India), Professor of Chemistry
Bazzi, Ali, PhD, Wayne State University, Professor of Chemistry
Bazzi, Judith, MA, Wayne State University, Lecturer of Chemistry
Benore, Marilee B., PhD, University of Delaware, Professor of Biology and Biochemistry
Bianchette, Thomas, PhD, Louisiana State University, Lecturer III of Geology
Bowlin, Melissa, PhD, Princeton University, Associate Professor of Biology
Clarkson, William I., PhD, University of Southampton (UK), Associate Professor of Physics and Astronomy
Constantinides, Christos, PhD, University of Cambridge, Assistant Professor of Chemistry
Danielsson-Francois, Anne, PhD, University of Arizona, Associate Professor of Biology
Deng, Yiwei, PhD, Swiss Federal Institute of Technology, Professor of Chemistry
Donahue, Craig J., PhD, University of Massachusetts, Associate Professor of Chemistry
Fan, Jie, PhD, Beihang University, Assistant Professor of Biology
Hartshorn, Patricia, MS, Wayne State University, Lecturer IV of Natural Sciences
Heinicke, Matthew, PhD, Pennsylvania State University, Associate Professor of Biology
Hetrick, James, PhD, University of Illinois at Urbana-Champaign, Lecturer IV of Physics
Kamp, Ulrich, PhD, Technische University Berlin, Professor of Earth and Environment
Kondapalli, Kalyan, PhD, Wayne State University, Assistant Professor of Biology
LaCommare, Katherine S., PhD, University of Massachusetts, Lecturer III of Biology
Lawson, Daniel, PhD, Michigan State University, Associate Professor of Chemistry
Li, Xiaohua (Shannon), PhD, City University of New York, Associate Professor of Chemistry
Licata, Nicolas, PhD, University of Michigan, Associate Professor of Physics
Marincean, Simona, PhD, Michigan State University, Associate Professor of Chemistry
Morgan, Sven, PhD, Virginia Polytechnic Institute and State University, Professor of Geology
Murray, Kent, PhD, University of California-Davis, Professor of Geology
Naik, Vaman M., PhD, University of Michigan, Professor of Physics
Napieralski, Jacob, PhD, Purdue University, Professor of Geology
Nesmith, Judy M., MS, Michigan State University, Lecturer IV of Biology
Oelkers, Peter M., PhD, Wake Forest University, Associate Professor of Biology and Biochemistry
Price, Rachel, PhD, University of Kentucky, Professor of Biochemistry
Scribner, Steven, PhD, Wayne State University, Lecturer IV of Chemistry
Smith, Sheila, PhD, University of North Carolina, Associate Professor of Chemistry
Stewart, Ogie, PhD, Oakland University, Lecturer of Chemistry
Susko, David, PhD, University of Windsor, Associate Professor of Biology
Thomas, John, PhD, University of Arizona, Professor of Biology
Tiquia-Arashiro, Sonia, PhD, University of Hong Kong, Professor of Biology and Microbiology
Tripathy, Suvranta, PhD, University of Cincinnati, Assistant Professor of Physics
Wang, Jie, PhD, University of Queensland (Australia), Associate Professor of Physics
Zhang, Zhi "Elena", MD, PhD, Wesleyan University, Assistant Professor of Biology

Department of Social Sciences
Akers, Joshua, PhD, University of Toronto, Associate Professor of Geography and Urban and Regional Studies
Amin, Camron M., PhD, University of Chicago, Professor of History
Anderson, R. Warren, PhD, George Mason University, Associate Professor of Economics
Bawardi, Hani, PhD, Wayne State University, Associate Professor of History
Bergeron, Suzanne, PhD, University of Notre Dame, Professor of Women's Studies and Social Sciences
Borquez, Julio, PhD, University of Michigan, Associate Professor of Political Science
Czap, Hans, PhD, University of Nebraska - Lincoln, Associate Professor of Economics
Czap, Natalia, PhD, Moscow State University and University of Nebraska-Lincoln, Professor of Economics
Dye, Keith, PhD, University of Toledo, Assistant Professor of African and African American Studies and History
Edwards, Sheryl, MA, Wayne State University, Lecturer IV of Political Science
Hersch, Martin, PhD, University of Michigan, Professor of History
Hickey, Georgina, PhD, University of Michigan, Professor of History
Howell, Sarah (Sally), PhD, University of Michigan, Associate Professor of History
Koumpias, Antonios, PhD, Georgia State University, Assistant Professor of Economics
Kursman, Nancy, PhD, Rice University, Lecturer IV of Political Science
Lunn, Joe, PhD, University of Wisconsin-Madison, Professor of History
Foundations Program

During the first year on campus, all incoming students in the College of Arts, Sciences, and Letters will choose one Foundations course to take from the more than 30 seminars offered. Your Foundations seminar will ensure a firm start on your educational journey.

In addition to studying a cool topic, your seminar will give you a chance to learn about how you learn, how knowledge is produced in different fields, what faculty expect of you at the university level, and what resources and opportunities the university can offer you to support and enrich your time on campus. Each seminar fulfills at least one general education requirement, so this course will be helping you make progress toward your degree.

Whichever course you choose, your Foundations seminar will teach you practical and academic skills that can be applied throughout your time on campus. The courses will deepen your understanding of the norms, expectations, and culture of the University.

You will also learn about the many resources and opportunities on campus as well as how to navigate the institution. Your Foundations seminar will help you develop a sense of belonging on campus as you build meaningful relationships with a faculty member and your peers. Foundations professors are committed to your success on campus.

In choosing your seminar, focus on what interests you (beyond your potential major). A liberal arts education is all about understanding the world broadly, through many lenses, and your Foundations seminar is a chance for you to do that. Whichever course you take, you will develop foundational intellectual and practical skills in communication, analytical thinking, and problem solving that you will be able to take with you into all your courses and your major field of study.

Foundations is a required program and is not an elective. If you don’t register for a foundations course in your first year here, your student account will be put on hold until you register for a course in this program.

Internships and Field Experiences

The CASL Internship Center helps all CASL majors interested in an internship, regardless of credit or program requirement. Please visit https://umdearborn.edu/casl/undergraduate-programs/casl-internship-center/ (https://umdearborn.edu/casl/undergraduate-programs/casl-internship-center/) for more information.

Criminology and Criminal Justice Internship

Criminology and Criminal Justice internships are designed to provide field experience for Criminal Justice majors. Actual field experience will provide students with valuable tools to help them achieve their goals and produce humane leaders with the technical skills and social and ethical sensitivity needed to succeed in their chosen field. The internship has a seminar component. The seminar helps students make informed decisions relative to their future career in Law Enforcement or Criminal Justice related fields. Both the internship and seminar provide opportunities for students to personalize their learning experience. Students are supervised by a faculty advisor.

For more information about the Criminology and Criminal Justice internship, contact the Internship Coordinator (313) 583-6404; email: criminal_justice@umd.umich.edu

Economics Internship

The economics internship offers students field experiences with businesses, non-profit organizations and government agencies. The
placement allows students to get hands-on experience applying the tools of economic analysis to specific job and project assignments. Student interns spend either eight or 16 hours per week in unpaid work at their placement site, for which they earn either three or six academic credits. Only three credit hours may be used to satisfy the concentration requirements in economics. All interns are assigned to an economics faculty advisor. This program is open to all declared economics majors, who, by the start of the internship, have completed at least two upper-level economics courses in addition to two of the following core courses: ECON 301, ECON 302 and ECON 305. Permission of the Internship Coordinator is required. To inquire, call the Economics Internship Faculty Coordinator in the Department of Social Sciences at 313-593-5164.

Environmental Studies Internship
The environmental studies internship, which is required of all environmental studies concentrations, involves students in a wide variety of positions with government organizations (Department of Environmental Quality, departments of health, city and county agencies), consulting firms, and non-governmental organizations as field assistants and researchers. Students work a prescribed number of hours per week as arranged by the advisor and employer, typically earning three credit hours. Written permission of instructor is required to participate. To inquire, contact the Department of Natural Sciences at 313-593-5339.

History and Humanities Internship
The history and humanities internship offers practical experience to students in art history, communication, English, foreign languages, history, humanities, music, and philosophy. Students develop job-entry experiences in humanities and history-related careers. The internship includes a required seminar. Although, in general, the internship is offered for elective credit, it may be used to satisfy the following concentration requirements: Three credit hours may be applied towards a Communication major/minor or toward an Art History/Museum Studies degree and six credit hours may be applied towards a Journalism concentration. For students with a foreign language focus, three credit hours may be used within the International Studies Support Studies component or toward the cognate requirement of the French or Hispanic Studies concentrations. Prerequisites are junior or senior standing. Students earn three to six credit hours per semester. The maximum total credit hours are 12. To inquire, contact the History/Humanities Internship Office, 3028 CB, 313-593-5136.

Ottawa Internship
The Ottawa Internship Program is designed to provide a first-hand learning experience in Canadian government through placement with a Member of Parliament or Senator in the capital of Canada. Students work in a parliamentarian’s office in Ottawa for a period of five weeks in the summer. All majors are welcome.

Psychology Internship
Psychology internship placements offer work experiences in a wide variety of human services organizations. These include programs related to child abuse, criminal rehabilitation, crisis intervention, geriatrics, human resources, mental illness, organizational development, special education, substance abuse, and women’s issues. Students spend six or 12 hours per week at their field placement and attend a weekly seminar involving training in listening and helping skills. Students may register for three or six credits. Prerequisites are PSYC 101 and permission of instructor. To inquire, contact the Department of Behavioral Sciences at 313-593-5520.

Politics, Policy, and Law Internship
The public affairs internship program allows students to participate in the political process through placements in a variety of governmental offices. Students in the local internship program work for state and local elected officials, law firms, and interest groups. Students in the Washington, D.C. program have worked in the White House, the Pentagon, and for Members of Congress. Students in the Ottawa, Canada program work in a Member of Parliament’s office for a period of five weeks. Admission is reserved primarily for qualified juniors and seniors of all majors. Six upper-level credits are granted for successful completion of either program. Scholarships are available. To inquire, contact the Department of Social Sciences at 313-593-5164.

Urban and Regional Studies Internship
The Urban and Regional Studies internships offer students the opportunity to learn and apply concepts learned in Urban and Regional Studies coursework to real world settings in municipal and regional government offices, non-profit and community organizations, or businesses dedicated to design, development, or data.

Women in Learning and Leadership (WILL)
The Women in Learning and Leadership (WILL) Program is an integral part of the Women’s and Gender Studies Program’s commitment to fostering student engagement on campus and in the greater metro-Detroit area.

WILL is a program for undergraduate students that integrates Women’s and Gender Studies curriculum with leadership opportunities outside of the classroom.

WILL is part of a national set of programs devoted to fostering, developing, and supporting collegiate women’s leadership. It is a co-curricular program founded on three core principles:

- Required women’s and gender studies-related coursework
- A student-run leadership development organization
- Women’s and gender-related programming outside of the classroom

The following are the main goals of the program:

- To encourage critical thinking and intellectual curiosity by providing active learning opportunities that empower students as leaders during and beyond their college years
- To foster a deeper understanding of women’s diverse roles and contributions to society
- To increase awareness of obstacles created by gender, racial, and social class stratification and develop individual and collective strategies to address these obstacles
- To enrich the campus, Metro Detroit, and global community through service and programming.

Requirements for WILL
Students accepted into WILL complete 4 courses in Women’s and Gender Studies and an internship or co-op experience in a field of their choice. There are two required courses for the program: Introduction to Women’s and Gender Studies, and a Women, Leadership and Social Change class. For their two electives, students may choose from the wide variety of courses offered by the Women’s and Gender Studies program. In addition to fulfilling these curricular requirements, WILL students spend a minimum of 15 hours per semester engaged in co-curricular activities related to gender equity and community building. Among their other activities, the WILL student group engages in volunteer opportunities...
with social service agencies in metropolitan Detroit. In addition, they have the opportunity to meet with locally and nationally known gender equity leaders for casual “fireside chats” and are offered annual training seminars by local women leaders. They organize speaker and film series on topics such as leadership for global gender justice, eating disorders and body image, and violence awareness on campus. They also run an innovative and successful mentoring program for middle school girls in Southwest Detroit. WILL students’ internship placements have allowed them to work with women in the criminal justice system, in programs for at-risk youth, in an oral history project interviewing Arab-American women, and in a variety of positions in legal, medical, business and education fields with women leaders as mentors.

The program recruits in April every academic year for acceptance into the program the following Fall term. Students accepted into the program have a minimum of a 3.0 grade point average, demonstrated leadership ability, and an interest in fostering gender equity.

For more information, please visit the WILL webpage.

**CASL Online and Blended Courses**

Regular credit-bearing courses are offered via online and blended formats to UM-Dearborn students (and guest students) who can benefit from the flexibility and convenience of online course delivery. Students who want to pursue a university education but have special constraints such as job demands, childcare or eldercare responsibilities, pregnancy or medical limitations may also find that online learning helps them stay on track. Online learning classes are taught by UM-Dearborn’s distinguished faculty and are equivalent in academic depth and rigor to face-to-face versions taught in the traditional classroom. New courses are added to the online repertoire each year. A few courses are in blended format; that is, the classes meet on campus for one or two class periods and online for the remainder.

Regularly enrolled students may elect online learning courses as part of the registration process. Guest students must submit the Michigan Uniform Guest Application, available in our Admissions/Registrar’s offices or in the Registrar’s office of the student’s home institution, and complete the admissions process before registering for classes.

Online courses usually require regular participation in online discussion groups established for the class. Required materials may be made available in various formats, including conventional textbooks and online resources, including video and/or audio recordings. Some online courses may require attendance on campus at an orientation session and/or for exams, though special proctoring arrangements can be made, especially for non-local students.

Canvas is the home for all online courses, as well as some assignments, discussions, and resources for hybrid and on-campus classes. This Canvas portal page will provide you with up-to-date Canvas policies, help & support (https://umdearborn.edu/canvas/canvas-help-support/), and other more specific information for faculty and students.

The Digital Education office is located in 1100 Social Sciences Building, email umd-digiteducation@umich.edu

**Japan Center for Michigan Universities**

Since 1989, the fifteen Michigan public universities have operated a unique program in Japanese language and culture in our sister state in Japan, the Shiga prefecture. The Japan Center for Michigan Universities is in Hikone, a beautiful, medium-sized, non-westernized city in central Japan. The $15 million facility, built by the Shiga government, includes classrooms, offices, and apartments with cooking facilities for student occupancy; home stays, of varying duration, may also be arranged.

The full academic program runs from September through the end of April; students may also select a one-semester program, or the Summer Intensive Program in the Japanese language. UM-Dearborn students receive 26 hours of credit for UM-Dearborn courses in Japanese language (see course descriptions under Japanese in this Catalog for the following: JPN 128-JPN 129, JPN 178-JPN 225, or JPN 228-JPN 229), Japanese Culture and Society (JPN 395, JPN 396), and two other courses taught by visiting professors. These have included Japanese art and painting, Japanese technology and business, energy and environment in Japan, modern Japanese history, and mass media.

For current information on program fees and housing, visit the Japan Center for Michigan Universities website. Applicants need not know Japanese, but they should have studied another foreign language and have had some foreign travel experience. They must have sophomore standing by the end of Winter term and a 2.5 or higher GPA. Students should contact the: Office of International Affairs (Room 108 in The Union at Dearborn) for additional information.

**Study Abroad**

Students interested in other study abroad programs should consult faculty in Modern and Classical Languages, their major advisor, or the Office of International Affairs (Room 108 in The Union at Dearborn) for additional information.

**Special Centers, Facilities and Services**

**CASL Advising and Academic Success**

The CASL Advising and Academic Success office helps students make informed decisions about their course of study and the liberal arts. CASL advisors are available to provide curricular and career option information, program requirements, University policies and procedures, and campus resources. The office also coordinates academic advising between students and faculty mentors, provides necessary College forms and materials, and reviews students’ academic progress and performance at specified intervals.

The CASL Advising and Academic Success office contact information: 1039 CB, 313-593-5293, and online at casladvising@umich.edu.

**University of Michigan-Dearborn Writing Center**

The University Writing Center, staffed by experienced student peer consultants under the supervision of full-time faculty in composition, provides support for all UM-Dearborn students wishing to improve their writing. Students needing regular one-on-one help in developing basic writing skills, as well as more advanced students wishing to improve their writing, will find the Writing Center useful.

The Writing Center is open five days a week during Fall and Winter terms and on a more limited basis during the summer term. It is strongly recommended that students make an appointment should they wish to work with a peer consultant. The center is equipped with personal computers and software for student use including word processing software, grammar programs and Internet access and research. For further information, contact the Writing Program Office, 3018 CB, or telephone 313-593-5238.

The center is located in 3035 CB with smaller satellite locations around campus. The center tries to accommodate walk-ins but prefers students make appointments online at umdearborn.edu/casl/writ_center.
Center for Arab American Studies

The Center for Arab American Studies focuses on scholarship, research, and engagement with the Arab-American community in Dearborn and Metropolitan Detroit. Faculty in Arab American Studies are actively engaged in research and scholarship on current issues facing Arab Americans as well as Arab American history and culture. As teachers, they seek to help all students understand the role of Arabs in American society, the role of America in Arab society, and the vibrant interplay between them. For additional information contact the Center in Room 2040 CB or call 313-593-4925.

Center for Armenian Research

The Armenian Research Center (ARC) was established for the documentation and the publication of materials in the field of Armenian studies and affairs. The ARC accomplishes this work in a variety of ways. It provides access to a computerized database of books, periodical articles, audiovisual material, and other items concerning Armenians. This database is gradually also becoming accessible through the on line catalog of the Mardigian Library. The ARC also regularly publishes scholarly books on Armenian topics. It supports both academic and public outreach by participating in forums, sponsoring conferences, exhibitions, public lectures and answering questions from scholars, students and the public media. Finally, the ARC sponsors and supports the teaching of Armenian language instruction courses on the University of Michigan, Dearborn campus. For additional information call 313-593-5181.

Center for Mathematics Education

The Center for Mathematics Education is dedicated to improving the quality of teacher preparation for prospective teachers and to making continuous professional development available for current teachers. The goal is to strengthen the teaching of mathematics and improve student learning. The professional development programs offered by the Center seek to deepen teachers’ understanding of the mathematics they teach and emphasize best teaching practices through the study and use of current research and standards-based curriculum resources. These professional development activities are offered at school district sites and at regional intermediate school districts, and carry at least 3 SB-CEU credits. It is also possible for classroom teachers to enroll for graduate credit. These credits can be applied towards the degree requirements for the Specialty in Middle Grades Mathematics program that is part of the College of Education, Health, and Human Services’ Master of Arts in Education degree. For additional information see the Center for Mathematics Education website.

Center for Ethnic and Religious Studies

In 2001, faculty in the College of Arts, Sciences, and Letters at the University of Michigan-Dearborn established a Center for the Study of Religion and Society.

This innovative and unique Center was designed to serve a number of purposes:

• Provide a focus for interdisciplinary and multidisciplinary scholarly research on Religion and its relationship to American society.
• House and support the existing interdisciplinary minor in Religious Studies.
• Coordinate with other activities on campus related to religion, the Harvard Pluralism Project being one example.

• Serve as a point of contact for members of the metropolitan community interested in issues related to religion and to engage that community in a dialog about those issues.

Faculty affiliated with the Center and the Religious Studies minor come from a range of disciplines including History, Anthropology, English, Political Science, Psychology, and Philosophy. Many are actively involved in research and outreach with religious communities in Dearborn and Metropolitan Detroit.

For more information, please see the Center website or call 313-583-6355.

Mathematics Learning Center (MLC)

The Department of Mathematics and Statistics supports a peer tutoring program for UM-Dearborn students needing assistance with their work in college algebra, pre-calculus, calculus, differential equations, linear algebra, statistics, and mathematics education courses. Peer tutors, who are carefully vetted, trained, and supervised by the Director of the Center, are available during posted hours throughout the week. Computer tutorials and videos are also available to assist students in their preparation for the Mathematics Placement Exam and in certain mathematics courses. Please call 313-583-6351 or visit the MLC website for a current list of programs available for student support. The MLC is located in Room 2076 CB. The department provides auxiliary tutorial support for developmental algebra courses (MATH 080 and MATH 090). Instructors for these courses will have information for students regarding the tutoring hours and location at the beginning of each semester.

Science Learning Center

The Department of Natural Sciences operates a Science Learning Center (SLC) for students enrolled in a variety of science courses. The SLC program ensures that all science students have adequate preparation for high achievement in science by providing self-paced, individualized instruction in essential mathematical, conceptual, and laboratory skills. Instructional modules are presented in one of several formats, including printed material and digital or multimedia tutorials that may be accompanied by specific laboratory instruments. All instructional modules are available online at the SLC website (https://umdearborn.edu/casl/undergraduate-programs/academic-support/science-learning-center/) and at the MCL website. Mastery of the subject matter is assessed by a short post test that is administered in the SLC. Students are encouraged to make advance reservations for post tests for instrument-based modules. Signup sheets are available in the SLC which is located in Room 1143 SB/CW. It is open Monday through Friday during all academic terms. Current hours of operation are listed on the SLC website.

SLC staff also manage a Supplemental Instruction (SI) Program for students in the natural sciences. Supplemental instruction is an academic assistance program that utilizes peer-assisted study sessions. The SI sessions are regularly-scheduled informal review sessions in which students compare their class notes, discuss assigned readings, practice problem solving, develop organizational tools, and predict test items. The participants learn how to integrate course content and study skills while working together. The sessions are facilitated by "SI leaders", students who have previously taken the courses and done well in them. The SI leaders also attend all the lectures, take notes, and are model students. The main purpose of this program is to improve students’ grades and increase student retention and graduation rates.
Actuarial Mathematics

Actuarial Mathematics is an interdisciplinary subject that straddles business, economics, mathematics, and statistics. In a single phrase its focus is on the management of risk. The curriculum of this program is designed to support students in becoming an Associate of the Society of Actuaries (SOA). Three of these requirements are pairs of courses that satisfy the Validation by Educational Experience (VEE) requirement of the Society. The balance of the coursework is in support of passing the SOA's exams: Probability, Financial Mathematics, and Investment & Financial Markets.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Total Credit Hours 37

Notes:

1. At least 18 of the 37 upper level credit hours must be elected at UM-Dearborn.
2. Students are strongly recommended to complete at least one Experiential Education experience, co-op or internship before graduation.
3. Students wishing to use graduate level courses (STAT 500+, MATH 500+) as a part of the 34 hours required for the major must submit a petition to obtain the approval of the Actuarial Studies faculty advisor prior to registering for the class.
4. Students not enrolled in the College of Business BBA Program cannot elect more than 30 upper-level (courses numbered 300 and above) credit hours offered by the College of Business.
5. A minimum 2.0 GPA in the major is required for graduation.

African and African American Studies

African and African American Studies (AAAS) is an interdisciplinary program housed in the College of Arts, Sciences and Letters at the University of Michigan-Dearborn. The AAAS major offers students a broad knowledge of essential aspects of the African American experience in the United States, as well as an understanding of the continuities between African civilization and the cultures of Africans in the Diaspora. Students will have a grasp of the critical movements for change in African and African American history, as well as the contributions of outstanding political leaders, intellectuals and artists.

Knowledge of the struggles of Africans and African descendants throughout the Diaspora for greater human rights and a higher quality of life will be a central feature of the major. These pedagogical objectives will be facilitated by a commitment to interdisciplinary scholarship and approaches that emphasize the value of an internationalist perspective.

In addition, students will master research and writing competence. They will have the opportunity to undertake independent research projects under the direction of faculty members. It is hoped that such projects will be tied to critical social issues facing the Metropolitan Detroit community or communities in the wider African diaspora.

Many of the courses offered in the African and African American Studies Program are cross listed with other disciplines, such as Anthropology, Communications, Economics, English, History, Music History, Psychology and Sociology.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

- AAAS 498 | Thesis
- AAAS 499 | Independent Study

**Total Credit Hours**: 30

**Notes**: At least 15 of the upper level credit hours in the AAAS major must be elected at UM-Dearborn

## Minor or Integrative Studies Concentration Requirements

To fulfill a minor or Integrative Studies concentration in African and African American Studies, a student must complete 15 credit hours of coursework (6 credit hours must be exclusively African/African-American in content – CAGF) in the program as outlined below.

### Required courses

<table>

</table>

Select 12 hrs of 300/400; 3000/4000 level courses: 12

AAAS 300 introduces students to important issues and debates within African and African American Studies. The course will always incorporate both African and African-American themes; however, the emphasis may vary to reflect the specialties of the professor(s) at a given time.

Each term, AAAS offers a wide variety of 300/3000 and 400/4000 level courses that are designed to fulfill the core requirements of the AAAS minor or concentration. See the listing of AAAS course offerings below. Successful completion of the program requires that a student...
complete at least six of the required 15 credit hours in courses that are exclusively African and African-American in content (CAGF), (AAAS 316, AAAS 333, AAAS 345, AAAS 368, AAAS 371, AAAS 385, AAAS 389, AAAS 393, AAAS 449, AAAS 469, AAAS 470).

Students pursuing a minor or concentration in AAAS may choose to complete their coursework with a final thesis project (AAAS 498) that reflects particular interests developed during their course of study. The thesis option can be used to fulfill three hours of the required 15 hours of upper-level coursework. The AAAS thesis project will be completed under the direction of a faculty member whose scholarly interests are compatible with the research interests of the student.

For more information about the African and African American Studies program, please contact the CASL College Wide Programs Coordinator in 2040 CB, 313-593-4925.

The African & African American Studies Certificate is an interdisciplinary undergraduate and post-baccalaureate certificate that compliments the already existing minor and major concentrations of study in the AAAS program. As such, it too affords students an opportunity to gain “a working knowledge of the history of African Americans in the United States, the cultural continuities in philosophy, religion and the arts linking African Americans to the African continent, as well as the critical social, political, and developmental issues facing African communities on the Continent and throughout the Diaspora.”

**NOTES REGARDING AAAS CERTIFICATE PROGRAM:**

1. A minimum 2.0 cumulative GPA is required for admission to the program.
2. A maximum of one course may be taken as pass/fail.
3. A maximum of one transfer course (three credit hours) may count toward the Certificate.
4. A maximum of 9 credits may share with the following majors: AAAS, BSCI, ENGL, HIST, PSYC, SOC, WGST).
5. Any AAAS related CASL internship may count in the certificate with permission of the AAAS program director by Petition.
6. A minimum 2.5 GPA in the courses counting toward the Certificate and a minimum 2.0 cumulative GPA are required at the time of graduation and/or posting of the certificate.

Anthropology

Anthropology, the comparative study of humanity and culture, seeks to explain both diversity and similarity in human behavior around the world. It is an academic discipline that integrates a number of specialized fields, including physical anthropology, archaeology, social and cultural anthropology, linguistic anthropology, and applied studies of human problems.

The University of Michigan-Dearborn Bachelor of Arts Degree in Anthropology emphasizes anthropology’s unique concern with the inter-dependence of human biology and culture, but also explores material culture in the past and present (through archeology), the varied experience of religion, race and gender, communication and language (through linguistic anthropology), and the critical evaluation of one’s own culture in the context of a globalized world. Many courses apply anthropological concepts to real-world problems and solutions.

A major or minor/concentration in anthropology opens doors in many fields, including law, medicine, public health, education, social work, criminal justice, international development, diplomacy, social justice work, communications, management, and various types of non-profit work. Anthropology prepares students for graduate work in anthropology, museum studies, and other social science fields. Anthropology is both a STEM science, which introduces students to multiple perspectives on the scientific method, improves scientific literacy, and develops critical thinking, as well as an interpretive endeavor in which the human experience is understood through multiple lines of evidence.

Anthropology also prepares students with the skills necessary in the modern workplace, including communication and cultural awareness, teamwork, problem solving, planning and organization, and both qualitative and quantitative analysis. The holistic approach to culture and biology is especially useful for careers in the medical sciences, while the cross-cultural exposure is essential preparation for students going into professions such as education, business, human services, or international development.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Additional 18 credit hours of anthropology (ANTH) courses numbered 300 or above

Cognates

Students will elect six hours in upper-level courses from the following disciplines: African and African American Studies (AAAS), Arab American studies (AAST), art history (ARTH), biology (BIOL), economics (ECON), English (ENGL), geography (GEOG), history (HIST), linguistics (LING), music history (MHIS), philosophy (PHIL), psychology (PSYC), sociology (SOC), urban and regional studies (URS), women’s and gender studies (WGST).

Total Credit Hours: 39

Notes:
1. At least 15 of the 24 upper level hours in ANTH must be elected at UM-Dearborn.
2. No more than 6 hours of independent study and no more than 6 hours of independent readings within the Behavioral Sciences (ANTH, PSYC, SOC) may be counted in the 120 hours required for graduation.

Field School and Field School Scholarship

Field schools teaching anthropological research methods can be life-changing experiences that provide essential training for careers in anthropology as well as practical field research experience applicable to other professions. Field schools take place all over the world and provide students with training in anthropological methods in archeology, human paleontology, bioarcheology, ethnology, linguistics, and primatology. UM-Dearborn students have attended field schools in Australia, Jordan, Kenya, Peru, Guatemala, Costa Rica, Mexico, Spain, France, Ireland, and various sites in the United States.

UM-Dearborn’s anthropology program helps provide these experiences in two ways. We offer a field school scholarship that helps students subsidize the cost of attending a field school in their chosen area. The scholarship program is competitive, and preference is given to students majoring or minoring in anthropology. Anthropology faculty also run their own field schools that can be elected for UM-Dearborn credit.

Minor or Integrative Studies Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in anthropology (ANTH).

Applied Art

Minor or Integrative Studies Concentration Only

Among the humanistic disciplines, Applied Art offers great opportunity for interdisciplinary inquiry and teaching. Art is often discussed as a universal form of communication, and the processes of visual interpretation and creation cut across human experience. In an image-centered society such as our own, the objects and critical methods of art creation provide a vital linkage point not only between disciplines, but also between students and the world around them. To provide more specific examples, students majoring in English, Anthropology, Journalism and Screen Studies, Biology, and Computer Engineering would benefit from an Applied Art minor/concentration to build both their knowledge of processes of human artistic creation and also the practical skills of digital image creation for different contexts and uses.

Applied Statistics

The ability to analyze and use such data requires a new set of skills that a Bachelor of Arts in Applied Statistics, or a Bachelor of Science in Applied Statistics offers.

Statistics is the science of learning from data. It includes planning for the collection of data, managing data, analyzing, interpreting, and drawing conclusions from data, and identifying problems, solutions and opportunities using the analysis. Massive amounts of data are being collected from digital applications and mobile devices in addition to those from the fields of engineering, environment, finance, healthcare, retail, and social sciences. The volume, variety and velocity of this data poses unique opportunities and challenges. The ability to analyze and use such data requires a new set of skills that an Applied Statistics major offers. This makes Applied Statistics one of the fastest growing career fields today. The Applied Statistics major builds critical thinking and problem solving skills in data analysis and empirical research. It prepares students for careers in business, industry, and government as well as for advanced degree programs in statistics and quantitative fields. The applied statistics major allows students to focus on their passions including genetics, healthcare, pharmaceuticals, public transportation, automotive areas, communication systems, financial markets, utilities, public policy, public health, government, manufacturing, quality control and others.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Prerequisites to the Major

Students majoring in Applied Statistics must take the following Prerequisites:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 113 or MATH 115</td>
<td>Calc I for Biology &amp; Life Sci</td>

Other courses by Petition. See the Applied Statistics Program Advisor.

Total Credit Hours 30

Notes:

1. At least 12 of the 24 upper level credit hours in Statistics (STAT) must be elected at UM-Dearborn
2. Students cannot receive credit for both STAT 301 and STAT 325. It is recommended that students complete STAT 325.
3. STAT 305 and STAT 455 may not count toward the upper level electives.
4. Students wishing to use graduate level courses (STAT 500+) as part of the 24 credit hours required for the major must submit a Petition to obtain the approval of the Applied Statistics Program Advisor.

**Minor or Integrative Studies**

**Concentration Requirements**

A minor or concentration consists of 12 credit hours of upper-level courses (300 or above level) in Applied Statistics (STAT). Additionally, the following courses that are not cross listed with AAST also count toward the minor: ENGL 238, ANTH 312, ANTH 373, SOC 4555, ENGL 351, ENGL 473, and CRJ 417. Students will be able to petition to include one additional course toward the minor/concentration with approval of the AAST faculty advisor.

The Arab American Studies (AAST) Certificate is an interdisciplinary undergraduate and post-baccalaureate certificate that prepares students for working and living in our diverse metropolitan region and world by concentrating on the historical and current experiences of Arab and Muslim Americans and the relevance of those experiences for understanding race and ethnicity in the U.S. and globally. The interdisciplinary approach of the certificate provides students with analytical frameworks for understanding how social, cultural, legal, and political factors influence the lives of Arab American individuals, families, and communities. The program of study examines a broad spectrum of diversity to understand the ways that immigration, racism and discrimination, gender and sexuality, class, ethnicity, culture, and religion intersect with one another in people’s lives.

</tbody>
</table>

Total Credit Hours 12

**NOTES:**
1. A maximum of 3 credit hours of transfer coursework may be counted toward the minimum 12 credit hours required for the program by Petition to the Program Director.
2. None of the courses applied to the certificate may be taken pass/fail.
3. A minimum 3.0 GPA in the UM-Dearborn courses counting toward the AAST certificate is required at the time of graduation and/or awarding of the certificate.

**Arabic Studies**

The minor/concentration in Arabic Studies offers a variety of courses in Arabic and cultural topics including Arabic literature, cinema, and modern history. The program welcomes both heritage students and students with no background in Arabic. While the entry-level courses focus on the basic skills of language proficiency, the upper-level courses focus on the cultural issues of the Arab world, and trains students in developing their analytical and critical skills.

**Minor or Integrative Studies**

**Concentration Requirements**

A minor or concentration consists of 12 credit hours of upper-level courses in Arabic (ARBC) (excluding ARBC 350).

**Prerequisites to the Minor/Concentration**

Non-native speakers of Arabic must successfully complete ARBC 202: Intermediate Arabic II (at or outside UM-Dearborn) or demonstrate equivalent Arabic Proficiency Exam offered by LCC Department.

**Arabic Translation**

The Certificate in Arabic translation is in line with the rising need for bilingual speakers of Arabic and English. The Certificate would enable non-native speakers, heritage learners, and native speakers not only
to improve their command of Arabic language, but also to achieve a professional level of using both dialect and MSA in translation.

Given the demographics of the Detroit Metro-Area, with the highest concentration of Arabic and Arab-American communities, interest in a translation certificate from among UM students and the Detroit and Dearborn communities. This is already evident in the use of Arabic in government documents, as basic as driver’s exams. Learners who obtain the Certificate of Arabic Translation have a good chance of working at government agencies, such as the state department, in addition to the Arab American National Museum, local schools, banks and private businesses, translation offices, legal and immigration services, health care, tourism, to name a few of local opportunities, not to mention international possibilities as well. As a leading Michigan institution located at the heart of an Arab-American hub, the University of Michigan-Dearborn should be able to pioneer such an educational translation project.

1. No courses may be taken as pass/fail.

2. A GPA of 2.5 is required to earn the certificate.

3. All credits earned in the certificate count towards the Arabic Minor, International Studies Major, Global Cultures minor.

### Art History

The Bachelor of Arts in Art History offers the student practical, critical, and historical studies in architecture, sculpture, painting, the decorative arts, printmaking, and photography. Each art is considered a creative process which, like language, has developed as an expression of human ideas, emotions, and life conditions. The history of these arts is presented as a visual record of the evolution of human societies, which can give the student a valuable introduction to the various world civilizations.

Students may elect one of two concentration tracks in Art History. Track A – Art History, or Track B – Museum Studies. The major programs offer the student a broad humanistic education within the context of an undergraduate degree and prepare the student for graduate work in academic, museum, or commercial fields.

The Art History program offers a wide variety of courses in western art and also in non-western areas like Chinese, Japanese and Islamic art and architecture. Research assignments in classes often take students to area art institutions like the Detroit Institute of Arts, the University of Michigan Museum of Art, the Kelsey Museum of Archaeology, and the Toledo Museum of Art. Majors are encouraged to be interns in these museums as well as area galleries, historic houses, and historical museums. The two tracks offer a broad humanistic education and prepare the student for work in academic, museum or commercial fields.

### Prerequisites to the Major

Students majoring in Art History (Concentration Track A) or Museum Studies (Concentration Track B) are required to take the following Prerequisites:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>

Minor or Integrative Studies Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in art history (ARTH).

Astronomy

The minor/concentration in Astronomy helps prepare students for entry into the competitive science, technology, engineering, and mathematics (STEM) workplace. Students gain exposure to the principles of astronomy, physics, and mathematics. They learn to think critically and evaluate, interpret, and solve problems related to astronomical, as well as other technical and general scientific topics.

Minor or Integrative Studies Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses from the following:

**Gateway courses:** Three (3) to six (6) credit hours from 300 level ASTR or PHYS 305.

**Advanced courses:** Six (6) to nine (9) credit hours from 400 level ASTR including up to 3 credit hours in independent study or directed research, ASTR 498 and/or ASTR 499 may be applied to the completion of the minor or concentration.

Behavioral and Biological Sciences

The study of Behavioral and Biological Sciences investigates the intersections between biochemistry, psychology, genetics, neurobiology, behavior, immunology and anthropology. Students choosing the Bachelor of Arts, or Bachelor of Science, in Behavioral and Biological Sciences will learn the foundations of both biological and psychological sciences as they apply to the study of human and animal behavior, as well as ethical considerations and implications of research. The student experience will include a selection of lectures and laboratory courses to develop foundational understanding, hands-on experimental understanding and critical thinking skills. Students trained in these areas will be prepared for business and research positions, for pursuing advanced degrees in medical school, pharmacy or graduate programs and will contribute in the following areas:

- Health and wellness, making a direct and significant impact in areas in which citizens have received “poor marks.”
- Health and the environment, indirectly, by working in research and within industry to change manufacturing processes and improve products.
- Leadership in business, industry and politics.
- K-12 education through service learning and outreach.

Please visit the Behavioral and Biological Sciences (https://umdearborn.edu/casl/undergraduate-programs/areas-study/behavioral-biological-sciences/) webpage for more information.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).
**Prerequisites to the Major**

Not counted in the minimum 36 credit hours required for the major.

Total Credit Hours 36-43

**NOTE:** At least 18 of the 36 credit hours for the major must be elected at UM-Dearborn.

**Recommended Electives:**

- ANTH 415 Nutrition and Health
- BIOL 304 Ecology
- BIOL 410 Diversity Issues Health Care
- HHS 435 Obesity and the Lifecourse
- PSYC 300 Life-Span Developmental Psych
- PSYC 320 Social Psychology
- PSYC 440 Abnormal Psychology
- PSYC 442 Child Psychopathology
- PSYC 446 Human Sexual Behavior
- PSYC 470 Advanced Physiological Psych
- PSYC 473 Clinical Neuropsychology
- PSYC 474 Animal Learning and Cognition

**Honors Designation in Behavioral and Biological Sciences**

In order to be considered for Honors designation, a student must complete and submit an honors application (attached) to the BBS Program committee Director via his/her/their advisor no later than the end of the term prior to graduation.

Honors in BBS will be earned by meeting all of the following criteria:

- cumulative GPA of 3.5 or higher in BBS major courses
- cumulative GPA of 3.3 or higher in all university courses
- completion of a minimum of 6 six credit hours of Independent/ Directed Research (BBS 498,499), spread over 2 or more years, under the supervision of one principal investigator, who will serve as thesis
advisor. This research must have a BBS program (broadly defined) focus.

- Completion of a thesis-like document that thoroughly describes the background, experimental design, methodology and discussion of data generated in the context of the scientific literature.
- Presentation of the research thesis before a committee of three faculty: the thesis advisor, two full-time Faculty from the BBS program committee or one BBS faculty member and one external member of the student’s choosing. The defense should be held a minimum of 2 weeks prior to the final-exams week of the semester in which the student is graduating. The committee must be provided with a draft of the thesis one week prior to the defense OR Presentation of the research in a public forum (e.g. scientific meeting, College of Arts, Sciences, and Letters (CASL) Research Day, Department of Natural Sciences Poster Day).

**Behavioral Sciences**

The major in Behavioral Sciences is an interdisciplinary program encompassing the disciplines of anthropology, psychology, and sociology. It is designed as a general preparation for a career in human services such as social work, counseling, criminology, or prevention/treatment programs in mental health.

The idea for combining the three fields is based on the belief that it is important for an individual who plans to work with people to understand human beings as individuals (psychologically) who function in groups (social psychologically) within a social context (sociologically) which varies across cultures (anthropologically).

It is also critical to have some exposure to the methods employed by behavioral scientists and some actual experience in the working world of the human services.

The Behavioral Sciences major requires the student to take three introductory-level behavioral sciences courses: Anthropology 101, Psychology 101, and Sociology 200 or 201. A minimum of 30 upper-division (300 and above) credits in the Behavioral Sciences, including at least two courses in psychology, two in sociology, and one in anthropology, is required, as is six credit hours of upper-level coursework in cognate areas outside of the behavioral sciences.

The Behavioral Sciences major encourages specific vocational tracks shaped to the student’s career goals. Faculty members in Behavioral Sciences are available to advise the student on careers and appropriate course selection.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

**Prerequisites to the Major**

The major requires the student to take three introductory courses, one in each of the primary disciplines:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANTH 101</td>
<td>Introduction to Anthropology</td>
<td>3</td>
</tr>
<tr>
<td>or ANTH 202</td>
<td>World Cultures</td>
<td></td>
</tr>
<tr>
<td>PSYC 101</td>
<td>Introduction to Psychology (PSYC 170 or PSYC 171 prior to Fall 2014)</td>
<td>3</td>
</tr>
<tr>
<td>SOC 200</td>
<td>Understanding Society</td>
<td>3</td>
</tr>
</tbody>
</table>

**Major Requirements**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>PSYC 101</td>
<td>Introduction to Psychology</td>
<td>3</td>
</tr>
<tr>
<td>SOC 200</td>
<td>Understanding Society</td>
<td>3</td>
</tr>
</tbody>
</table>

The major also requires a minimum of 39 upper-level (300/400; 3000/4000 level) credits in the Behavioral Sciences as outlined below, including at least three courses in psychology (PSYC), three in sociology (SOC), and two in anthropology (ANTH).

**Methods (CABM): Select one course from:** 3-4

| Notes: | |
1. PSYC 485 or CRJ 478 must be elected at UM-Dearborn.
2. At least 24 of the 39 upper level hours in ANTH, PSYC, and SOC for the Behavioral Science major must be elected at UM-Dearborn.
3. Many courses are cross listed between the ANTH, PSYC and SOC disciplines. Be sure to consult the Schedule of Classes for cross listed classes.
4. Any one course may be used to satisfy only one requirement within the major.
5. A maximum of 48 credit hours in any one discipline (ANTH, PSYC, SOC) is allowed toward degree.

Honors Program in Behavioral Sciences

Behavioral Science students are eligible for the Honors Program which provides special opportunities for outstanding students, including a research training seminar, followed by independent research conducted in collaboration with faculty members. Students are accepted into the Honors Program early in their junior year. Prospective students should plan on completing the statistics and methods requirements by their junior year. Requirements for entrance are 1) GPA of 3.2 or higher in behavioral science courses and overall UM-Dearborn courses, and 2) informal evidence of being a superior student, such as high motivation and ability to work independently. Requirements for graduation with honors in behavioral science are the successful completion of the following:

- Fulfillment of all requirements for Behavioral Sciences major
- PSYC 381 Principles of Statistics and Experimental Design
- PSYC 481 Computers in Psychology, normally taken Fall term, senior year
- PSYC 498 (Honors Seminars) normally taken Winter Term, junior year
- PSYC 499 (Honors Research) normally completed during senior year
- Research Proposal meeting, normally completed early in senior year
- Final Oral Defense, completed at least one month prior to graduation

Biochemistry

This degree program is designed to provide the student with an understanding of the structural and functional relationships between the chemical constituents of cells and their roles in life processes. The requirements include courses in biological sciences and chemistry, and appropriate courses in mathematics and physics. The degree in biochemistry prepares a student for careers in industry, medicine, teaching and research.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Prerequisites to the Major

A solid background in mathematics is essential to success in any of the scientific disciplines. Incoming students who intend to choose a major in Biochemistry should have completed at least three years of high school mathematics. First year students should plan to enroll in MATH 105, MATH 115 or MATH 116 based on the results of their math placement tests. The CHEM 134 and CHEM 136 or CHEM 144 and CHEM 146 sequence is a prerequisite to many other courses in the Natural Sciences Department; students should complete this sequence as early as possible.

Total Credit Hours 30-31
Elective credits needed may vary depending on biochemistry electives credits and statistics credits completed.

Notes:

1. A maximum of 65 hrs. in BCHM, BIOL, CHEM may count towards the 120 hours for degree.
2. At least 20 of the 30 upper level hours must be elected at UM-Dearborn.
3. At least 20 of the 30 upper level hours must be elected at UM-Dearborn.
4. BCHM 370 cannot be used in the major.

Honors Designation in Biochemistry

The Biochemistry program seeks to recognize exceptional biochemistry majors who are exemplary in coursework and productive in research.

Honors in Biochemistry will be earned by meeting all of the following criteria:

- cumulative GPA of 3.5 or higher in Biochemistry courses
- cumulative GPA of 3.3 or higher in all university courses
- completion of a minimum of 6 six credit hours of Independent/Directed Research (BCHM 495/498/499), spread over 2 or more years, under the supervision of one principal investigator, who will serve as thesis advisor. This research must have a biochemical (broadly defined) focus.
- presentation of the research in a public forum (e.g. scientific meeting, College of Arts, Sciences, and Letters (CASL) Research Day, Department of Natural Sciences Poster Day)
- completion of a thesis-like document that thoroughly describes the background, experimental design, methodology and discussion of data generated in the context of the scientific literature.
- defense of the research thesis before a committee of four faculty: the thesis advisor, two full time Faculty from the Biochemistry program committee and one external member of the student's choosing. The defense should be held a minimum of 2 weeks prior to the final-exams week of the semester in which the student is graduating. The committee must be provided with a draft of the thesis one week prior to the defense.

In order to be considered for Honors in Biochemistry, a student must complete and submit an honors application to the Biochemistry Program committee Chair via his/her advisor no later than the end of the term prior to graduation.

Minor or Integrative Studies Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in biochemistry (BCHM) from the following:

Required: BCHM 370 or BCHM 470 and BCHM 471

Additional biochemistry (BCHM) courses: 6-9 credits BCHM to equal 12 credits total.

A maximum of 3 credit hours of independent study/research (BCHM 495, BCHM 498, or BCHM 499) can be applied to meet the requirements of the minor or concentration.

If BCHM 370 is completed, BCHM 470 and BCHM 471 cannot be used in the minor/concentration. If BCHM 470 and BCHM 471 is completed, BCHM 370 cannot be used in the minor/concentration.

At least 9 of the 12 credits must be elected at UM-Dearborn.

Biology Sciences

Biology is an extensive field that covers biochemistry, molecular biology, cell biology, microbiology, genetics, anatomy, physiology, embryology, ecology, evolution, field biology, and animal behavior. The Bachelor of Science in Biological Sciences is recommended for students who wish to study biology as part of an undergraduate liberal arts degree, to prepare for graduate study in biology or any of the health professions, or to study for a secondary teaching certificate in biology.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Total Credit Hours: 39-40

Mathematics and chemistry are essential to success in biology and should be taken as early as possible. Chemistry and mathematics course serve as prerequisites for many biology courses.

Major Requirements

30 credit hours of 300/400; 3000/4000 level biological sciences (BIOL) courses.

- BIOL 491 Capstone Course in Biology
- BIOL 492 Capstone Research Experience
- BIOL 493 Capstone Teaching Experience

**Additional Upper Level (300+) Biology Courses (BIOL) 2** 8-11
1. BIOL 312 prior to Fall ‘15
2. To total a minimum of 30 credit hours.
3. Credit cannot be earned for both BIOL 105 and BIOL 305. BIOL 105 cannot be used in the biology major.

**Notes:**
1. A maximum of 6 credit hours combined of independent study/research in any natural science discipline may be applied toward the 120 credit hours required for degree.

**Minor or Integrative Studies Concentration Requirements**
A minor or concentration consists of 12 credit hours of upper-level courses in biological sciences (BIOL). Note that all BIOL courses include prerequisites in biology and some include prerequisites in chemistry or mathematics.

**Business Studies as a Secondary Major**
The Business Studies major is an optional second major for students pursuing a Bachelor of Arts or Bachelor of Science degree through the College of Arts, Sciences, and Letters (CASL).
The Business Studies major (BST) complements the critical thinking and acquired knowledge gained through a liberal arts and sciences education with foundational courses in business to develop the necessary leadership and analytical skills for careers in management related fields.
The BST graduate will acquire and possess a broad range of understanding, knowledge, and quantitative skills necessary for attaining a leadership role in business, education, community organizations, and government. Key to the BST is the comprehensive liberal arts and sciences education that provides a strong foundation in thinking creatively, seeing the world through a multi-perspective lens, and acquiring a broad based of knowledge, and an understanding of diverse cultures and literary works.
The Business Studies major is open to non-College of Business students and must be pursued as a second major in conjunction with the primary major in CASL.
For further information about Business Studies as a Second Major, contact CASL Advising and Academic Success.
In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

The Bachelor of Science in Chemistry at the University of Michigan-Dearborn is fully accredited by the American Chemical Society (ACS). This program is designed primarily for students who intend to go into Chemistry as a profession or who plan to continue their studies at the graduate level. A student may earn a Bachelor of Science degree in chemistry by completing the prerequisite, major, and cognate courses and by fulfilling the Dearborn Discovery Core (DDC) and graduation requirements.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Prerequisites to the Major

A solid background in mathematics is essential to success in any of the scientific disciplines. Incoming students who intend to major in Chemistry should have completed at least three years of high school mathematics. First year students should plan to enroll in MATH 105, MATH 115, or MATH 116 based on the results of their math placement tests. The CHEM 134 and CHEM 136 or CHEM 144 and CHEM 146 sequence is a prerequisite to many other courses in the Natural Sciences Department; students should complete this sequence as soon as possible.

Chemistry majors must complete the following 40 credit hours of prerequisite courses. These courses should be completed early in the student’s four-year curriculum.

Cognates

Students must complete at least six credit hours upper level (300+ level) from: Biology (BIOL), Biochemistry (BCHM), Environmental Science (ESCI), Geology (GEOL), Mathematics (MATH), Microbiology (MICR), Statistics (STAT), or Physics (PHYS). The six credit hours need not be from a single discipline.

Total Credit Hours | 37

1. CHEM 493 is a capstone portfolio course that requires data from various courses throughout the CACS curriculum. Students should discuss requirements with a Chemistry faculty mentor at the earliest opportunity and be aware of the benchmarks of the CHEM 493 course so that requirements will be completed by their final semester when they will register for CHEM 493.

2. Excluding MATH 386, MATH 387, MATH 391, MATH 442, MATH 443, MATH 444, MATH 445, MATH 446, MATH 447, MATH 449, MATH 486. Only one of STAT 301 or STAT 325.

Notes:

1. A maximum of 44 hrs. in CHEM (excluding CHEM 134, CHEM 136, CHEM 144, CHEM 146) may count in the 120 required for graduation.
2. At least 12 of the 31 upper level hours in CHEM must be elected at UM-Dearborn.
3. CHEM 470 and CHEM 471 can be used in place of CHEM 370, however, CHEM 470 alone cannot be used for this substitution. Students cannot take both CHEM 370 and CHEM 470 or CHEM 471 or any combination to fulfill major, cognate or minor requirements.
4. A maximum of 6 hrs. of independent study/research in any Dept. of Natural Sciences discipline may count towards the 120 hours required to graduate.

Minor or Integrative Studies

Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in chemistry (CHEM). A maximum of one credit hour of independent study/research may be used to fulfill the requirement (CHEM 495, CHEM 498, CHEM 499)

Chemistry (Instructional Track)

The Bachelor of Science in Chemistry (instructional track) is an interdisciplinary program for students who wish to teach chemistry and other science courses at the secondary school level. The program meets State of Michigan requirements as well as American Chemical Society (ASC) recommendations for teaching chemistry in high school. A student may earn a Bachelor of Science degree in Chemistry and qualify for a Michigan Secondary Standard Teaching Certificate by completing the professional sequence of education courses including one semester of directed teaching; by completing the prerequisite, major, cognate requirements and by fulfilling the Dearborn Discovery Core (DDC) graduation requirements. Students must also complete at least 100 credit hours of non-education courses; have a minimum 2.75 overall GPA; have a 2.75 or better GPA in their teaching major and in education courses; and have a 2.75 in their optional teaching minor, if desired.
Students must take the Michigan Test for Teacher Certification (MTTC) prior to being recommended for a Michigan teaching certificate.

In addition to the major requirements, students must complete all CASL degree requirements (p. 76).

**Prerequisites to the Major**
Chemistry/Instructional Track majors must complete 40 credit hours of prerequisite courses. These courses should be completed early in the student's curriculum.

**Cognates**
Chemistry/Instructional Track majors must complete at least six credit hours of courses numbered 300 or above in Biochemistry (BCHM), Biological Sciences (BIOL), Environmental Science (ESCI), Geology (GEOL), Mathematics (MATH), Microbiology (MICR), Physics (PHYS), or Statistics (STAT). The six credit hours need not be from a single discipline.

| 6 |

**Notes:**
1. A maximum of 44 hrs. in CHEM (excluding CHEM 134, CHEM 136, CHEM 144, CHEM 146) may count in the 120 required for graduation.
2. At least 12 of the 20 upper level hours in CHEM must be elected at UM-Dearborn.
3. CHEM 470 and 471 can be used in place of CHEM 370, however, CHEM 470 alone cannot be used for this substitution. Students cannot take both CHEM 370 and CHEM 470 or CHEM 471 or any combination to fulfill major, cognate or minor requirements.
4. The Chemistry Instructional major is open only to students who have been admitted to the College of Education, Health, and Human Services Secondary Certification Program.
5. A maximum of 6 hrs. of independent study/research in any Dept. of Natural Sciences discipline may count towards the 120 hours required to graduate.

**Education Requirements**
Please see the College of Education, Health, and Human Services (CEHHS) section of this Catalog for secondary certification requirements. (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/undergraduate-degree-programs/secondary-grades-6-12-certification/)
Teaching Minor Requirements

In order to obtain teaching certification, a student must complete the requirements for a teaching minor. Courses used to satisfy requirements for the minor and prerequisite may not be used to satisfy cognate or major requirements.

Teaching minors are available in mathematics, physical science, physics, and biology. Students should consult the College of Education, Health, and Human Services section in this Catalog for coursework requirements to complete the teaching minor (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/undergraduate-degree-programs/secondary-grades-6-12-certification/).

Communication

The Bachelor of Arts in Communications emphasizes three interrelated areas of public relations and organizational cultures, public advocacy and democratic cultures, and intercultural/international communication and global cultures. Each area has a practical focus in which written and oral communication skills and interpersonal awareness are developed; in addition, the communication degree is designed to emphasize the intellectual, historical, and critical perspectives emerging from the intersections between and among these larger areas of communication inquiry. This “triadic” approach presents communication as a challenging, creative skill to be mastered, and, moreover, as an integral process through which democratic and professional possibilities are shaped and social realities constructed.

A prominent emphasis on culture and community connects disciplinary work in communication with the integrative understanding of people’s needs and interests that characterizes the best work in anthropology, sociology, psychology, economics, and political science. The program combines this strong theoretical foundation with the practical skills training to prepare students for any number of opportunities in our globalized multicultural and highly technological environment.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Community Change

Minor or Integrative Studies Concentration Only

The Community Change Studies (CCS) minor or concentration prepares students to fill the need for talented, skilled individuals to work on issues of poverty, race and community-building.
Our interdisciplinary approach offers students the tools to be critical thinkers, team builders, organizers and agents of positive, social change in a range of careers and in their lives.

Students work on local and campus issues, and explore topics such as social and political power; race, culture, class and gender; the history of social movements; and listening skills, relationship building and critical analysis.

A minimum of 18 credit hours of upper-level coursework is required

Comparative Literature

Comparative Literature is the study of literature from different nations and cultures, as written in translation rather than in the original languages.

Minor or Integrative Studies

Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in comparative literature (COML).

The Comparative Literature Certificate reflects the values of Modern and Classical Languages of integrating cultures and languages and echoes two of College of Arts, Sciences and Letters, and UM-Dearborn’s, strengths: diversity and marketability. In order to serve students and the community better, the Comparative Literature Certificate offers a certificate for undergraduate degree-seeking students, non-degree students and post-degree students. The post-degree certificate component addresses the needs of college graduates, native speakers of Arabic, and community members seeking a post-degree professional certificate.

1. Objectives:

The Comparative Literature Certificate is a Stand-Alone certificate that aims at providing learners with training in the following areas of comparative literature:

1. Reading complex texts of world cultures in translation. This is a necessary skill for any cross-cultural profession.
2. Critical and comparative analysis. This is an important skill for critical thinking.
3. Making connections between original texts and their translations. This is significant for bi-lingual and multi-lingual learners.

In order to achieve proficiency in the main skills of studying Comparative Literature, the Certificate provides students with the following skills:

1. Writing-intensive skills as students respond to texts.
2. Ability to work/collaborate in groups through projects as students prepare presentations and creative work to culture-specific aspects of the various comparisons.
3. Critical and creative thinking as students are required to research and analyze the different cultural and historical contexts of the texts they study.

Certificate Requirements

The certificate requires 12 credits.
# Computer and Computational Mathematics

The courses in Computer and Computational Mathematics (CCM) develop skills in applying mathematical algorithms and scientific computing in real world situations.

- COML 340: Modern European Short Fiction
- COML 341: Mod Eur Poetry in Translation
- COML 344: Modern Literature: the Novel
- COML 347: Clas Lit in Engl Translation
- COML 375: The Hero in Literature
- COML 390: Topics in Comparative Lit
- COML 399: Independent Studies

**Total Credit Hours**: 12

**Notes:**

1. No courses may be taken as pass/fail.
2. Students are allowed to transfer up to 3 credits by petition.
3. A minimum of 2.5 GPA is required for courses within the certificate.
4. All credits earned in the certificate count towards the Arabic Minor, French Minor and Major, Spanish Minor and Major, German Minor, International Studies Major, Global Cultures Minor and other certificates.
Minor or Integrative Studies
Concentration Requirements

A minor or concentration consists of 12 hours of upper-level credit in courses specifically selected as CCM.

Criminology and Criminal Justice

Criminology and Criminal Justice Studies is a field that focuses on the study of criminal behavior and society’s response to it.

The field draws upon the insights of the social and behavioral sciences, the physical sciences, statistics, and the humanities to illuminate the issues of maintaining social order in a constitutional democracy committed to individual freedom, equality, and justice. The criminal justice system is composed of the police agencies, prosecutors, the legal profession, the courts, and correctional agencies, among others. The system is part of a larger social system which inevitably influences the effectiveness and fairness of criminal justice. Courses analyze system responses to changes in social structure and cultural values, and the reciprocal relationship between social values and the judicial system. The program in Criminology and Criminal Justice Studies at UM-Dearborn is intended to prepare students for careers in public security, criminal justice administration, law and paralegal professions, public administration, policy analysis, and graduate study in those fields.

Accelerated Program: 4+1 Option

The 4+1 Option (https://umdearborn.edu/casl/graduate-programs/programs/master-science-criminology-and-criminal-justice/41-option/) program allows current UM-Dearborn undergraduate Criminology and Criminal Justice majors to complete both the Bachelor of Arts and the Master of Science in Criminology and Criminal Justice in a format that offers substantial savings in both time and money. This is achieved by a double-counting allowance of up to 15 credits or 5 graduate level (500-level or above) courses. One additional year of graduate work (15-16 credits) would be needed to complete the Master’s program enabling students to earn two degrees in a total of five years.

Participation in the 4+1 program is limited to students who have completed at least 60 credit hours with a cumulative GPA of 3.0 or better. Admission to the 4+1 program is at the discretion of the Program Director and requires an admission interview. The "regular" online graduate application should be completed with a "Yes" response to the 4+1 accelerated program question. The only supplemental application materials required for 4+1 applicants are a personal statement describing career goals and a resume.

Once admitted to the 4+1 program, the student must attain a grade of B or better in each 500 level class elected. Failure to do so may result in removal from the 4+1 program. The courses to choose from are:

• CRJ 417/517 Crimmigration
• CRJ 453/553 Sociology of Law
• CRJ 465/565 Deviant Behavior
• CRJ 418/518 Criminal Justice Research methods
• CRJ 470/570 Current Issues in Criminal Justice
• CRJ 415/515 Principles of Restorative Justice
• CRJ 488/588 Criminal Procedure and the Constitution
• CRJ 409/509 Intelligence and Homeland Security
• CRJ 460/560 Law and Culture

• CRJ 466/566 Drugs, Alcohol and Society
• CRJ 482/582 Legal Ethics

For further information about the Accelerated 4+1 Program, please visit the CCJ 4+1 Option (https://umdearborn.edu/casl/graduate-programs/programs/master-science-criminology-and-criminal-justice/41-option/) webpage.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

CRJ 487 Forensic Science Evidence in Criminal Cases
CRJ 490 Topics in Criminal Justice

**Social Justice and Social Control (CAJC)**
Select two classes from the following: 6

- CRJ 316 The American Judicial Process
- CRJ 363 Crim Justice Syst and Policy
- CRJ 402 Probation and Parole
- CRJ 404 Sentencing
- CRJ 408 Police and the Community
- CRJ 415 Restorative Justice
- CRJ 417 Crimmigration
- CRJ 443/PSYC 405/SOC 443/WGST 405 Gender Roles
- CRJ/SOC/WGST 447 Family Violence
- CRJ/SOC 453 Sociology of Law
- CRJ 460 Law & Culture
- CRJ/SOC/WGST 461 Cops & Cons: Women in Prison
- CRJ/SOC 465 Deviant Behavior/Soc Disorganz
- CRJ/SOC 466 Drugs, Alcohol, and Society
- CRJ/SOC 467 Drugs, Crime, and Justice
- CRJ/SOC 469 Juvenile Delinquency
- CRJ 470 Current Issues in Crim Justice
- CRJ/AAAS/SOC 473 Race, Crime and Justice
- CRJ/SOC/WGST 476 Inside Out Prison Exchange
- CRJ 480 Criminal Justice Theory
- CRJ/ENST 483 Justice, Crime and Environment
- CRJ 484 White Collar Crime
- CRJ 489 Law, Crime, and Society

**Research Methods (CAQS)**
Select one class from the following: 3-4

- CRJ/POL 300 Political Analysis
- CRJ/HPS/SOC Quantitative Research and Statistics 410
- CRJ 4130/SOC 413 Qualitative Research
- CRJ 418 CJ Research Methods

**Internship/Co-op Experience**
An internship or co-op experience of 3 credit hours is required. The CRJ internship CRJ 478 provides supervised field experience in a variety of occupational agencies focusing on criminal justice and law enforcement. Each intern spends a minimum of 80 hours on site and attends a weekly seminar. Currently employed sworn federal, state, and local officers or agents may waive, through petition, the internship field experience. All students are required to register for and attend the weekly seminar.

**Notes:**
1. Any one course may be used to satisfy only one requirement within the major.
2. A maximum of 61 hrs. of CRJ can count toward the 120 hrs. required for graduation.
3. A maximum of 6 hrs. of internship (CRJ 478) credit may count in the minimum 33 hours for the major.
4. At least 15 of the upper level credit hours in CRJ must be elected at UM-D.
5. Some upper level CRJ courses may require SOC 200 or SOC 201, or PSYC 101.
6. Only 6 credit hours of academic transfer credit will be accepted for completion of police academy training programs meeting the standards of the Michigan Commission on Law Enforcement.

**Minor or Integrative Studies Concentration Requirements**
The minor or concentration consists of the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CRJ 200</td>
<td>Intro to Criminal Justice</td>
<td>3</td>
</tr>
<tr>
<td>CRJ 416/</td>
<td>Criminal Law</td>
<td>3</td>
</tr>
<tr>
<td>POL 4165</td>
<td></td>
<td></td>
</tr>
<tr>
<td>CRJ 468</td>
<td>Criminology</td>
<td>3</td>
</tr>
</tbody>
</table>

Select two courses from the following (CACR): 6

- CRJ 316 The American Judicial Process
- CRJ 324 Serial and Mass Homicide
- CRJ 363 Crim Justice Syst and Policy
- CRJ 402 Probation and Parole
- CRJ 404 Sentencing
- CRJ 408 Police and the Community
- CRJ 409 Intel and Homeland Security
- CRJ 415 Restorative Justice
- CRJ 417 Crimmigration
- CRJ 418 CJ Research Methods
- CRJ 470 Current Issues in Crim Justice
- CRJ 471 Int’l Criminal Justice Systems
- CRJ 472 Correctional Systems
- CRJ 474 Cyber Crimes
- CRJ 475 Digital Evidence

Students admitted to the 4+1 Option may substitute 500 level course for 400 level course from the following (15 credits maximum):

- CRJ 417/517 Crimmigration
- CRJ 453/553 Sociology of Law
- CRJ 465/565 Deviant Behavior
- CRJ 470/570 Current Issues in Criminal Justice
- CRJ 471/515 Principles of Restorative Justice
- CRJ 488/588 Criminal Procedure and the Constitution
- CRJ 409/509 Intelligence and Homeland Security
- CRJ 460/560 Law and Culture
- CRJ 466/566 Drugs, Alcohol and Society
- CRJ 482/582 Legal Ethics
Prerequisites to the Major

In addition to the major requirements, students must complete all upper level Economic classes. (having successfully completed at least one core theory course economics major, having a cumulative 3.25 GPA at UM-Dearborn, and earning a 3.5 GPA average in upper level economics courses. With an overall 3.25 GPA at UM-Dearborn and a 3.5 GPA in upper level economics courses, students are expected to apply for candidate status for the Honors Economics Capstone. To be recognized as graduating with honors in economics, students must complete all the requirements for the Bachelor of Arts in Economics and to take one year of calculus (excluding internships and independent studies).)

Students must complete at least six credit hours in cognate courses selected from the following list:

- ACC 298: Financial Accounting
- ACC 299: Managerial Accounting
- ISM 120: Bus Prob Solving w/ Comp Apps
- ISM 310: Info Systems in Management
- MATH 113: Calc I for Biology & Life Sci
- MATH 114: Calc II for Biology & Life Sci
- MATH 116: Calculus I
- MATH 1116: Calculus II
- CCM/CIS 150: Computer Science I
- CCM/CIS 150/1501: Computer Science I
- CIS 200: Computer Science II
- ISM 234: Symbolic Logic
- PHIL 350: Symbolic Logic
- PHIL/STS 485: Philosophy of Science

Any upper level courses in ANTH, GEOG, HIST, POL, SOC, URS (excluding internships and independent studies).

### Economics Honors Designation

To be recognized as graduating with honors in economics, students must complete all the requirements for the Bachelor of Arts in Economics at UM-Dearborn; earn a B+ or higher in each of at least two capstone 4000-level economics courses; complete an Honors research paper as part of a 3 credit hour Directed Research (ECON 499); and graduate with an overall 3.25 GPA at UM-Dearborn and a 3.5 GPA in upper level economics courses.

Students are expected to apply for candidate status for the Honors Award during or before the first term of their senior year at UM-Dearborn. Requirements for candidate status include being an Economics major, having a cumulative 3.25 GPA at UM-Dearborn, having successfully completed at least one core theory course (ECON 301/ECON 302/ECON 305), and earning a 3.5 GPA average in upper level Economic classes.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

</tbody>
</table>

**Note:** Students considering graduate study in economics are advised to take one year of calculus (MATH 113 & MATH 114 or MATH 115 & MATH 116), MATH 217 Introduction to Matrix Algebra, ECON 4015 Introduction to Econometrics and ECON 4065 History of Economic Theory.
Notes:

1. At least 15 of the 24 upper level credit hours of Economics (ECON) must be elected at UM-D.

Minor or Integrative Studies
Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level (300- and 400/4000-level courses) courses in Economics (ECON).

English

A major in English at the University of Michigan-Dearborn focuses on the dynamic intersection of language, literature, and society as well as the identities and communities shaped by this intersection.

English majors have the opportunity to explore the relationships between reading and writing printed text by becoming familiar with the strategies that writers use to shape conceptions of truth. The English faculty’s primary goal is to help students develop a sensitivity to the ways spoken and printed language frame how we conceive and discuss our identities throughout history, in the context of a global community both in — and beyond — Metropolitan Detroit. English majors may expect to develop a close relationship to the social ramifications of the written word and its potential for incorporating both communities and individuals into a larger, more internationally aware reading and listening audience.

The UM-Dearborn English faculty offer courses that contextualize language in terms of the various traditions and genres of British and American literature, and of world literature in English, and that provide the critical skills necessary to craft effective expository and creative prose.

The English faculty are both committed, innovative teachers and active scholars, and include recipients of the campus’s awards for Distinguished Teaching and Distinguished Research. Faculty frequently direct students in independent study projects, and often teach courses that connect literature to other fields, from history and the arts to religion, philosophy, science, and visual culture.

Humanities Internship Program

The Humanities Internship Program offers practical experience to students concentrating in English and other humanistic fields and those interested in communication or journalism. Students gain and demonstrate skills desired by employers, make important contacts, and explore a field of work before graduation. For more information on the Humanities Internship, see the Internship Coordinator, 3028 CB, 313-583-6376, or inquire at the Literature, Philosophy, and The Arts Department office in 3011 CB, 313-593-5433.

Independent Study

Independent Study (ENGL 399) provides an opportunity for students to extend the work of existing courses or to explore areas not included in the current course offerings. Consult the Literature, Philosophy, and the Arts Department Guidelines for Independent Study, available in the Department Office, 3011 CB, 313-593-5433. To enroll in an independent research project, students must have a prior, written Independent Study Contract with the instructor and prior, written permission of the Department Chair. One to three credit hours available.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Prerequisites to the Major

Students are required to complete the following as a prerequisite:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGL 200</td>
<td>Intro to English Studies</td>
<td>3</td>
</tr>
</tbody>
</table>

This course serves as the “gateway” to the major with enrollment limited to 20 students per section. ENGL 200 exposes students to the terms of English Studies, literary criticism and literary theory, knowledge essential to higher-level English courses.

Virtually all upper-level English courses require as prerequisites ENGL 200 and COMP 106 or equivalent. In addition, other prerequisites for a specific upper-level English course may be introduced by the instructor in the term in which the course is offered. Students are advised to consult the current Schedule of Classes for prerequisites each term. If a student has not satisfied the prerequisites of a course, the student may be enrolled by permission of the instructor, provided that there are other relevant qualifications.

Major Requirements

All students majoring in English must complete 30 credit hours of upper-level ENGL.

<table>
<thead>
<tr>
<th>Code</th>

<tr>
<td>Additional English Electives - 18 credit hours of upper level ENGL courses. The electives must include 1 class in English Diversity (CAED), 1 class in English Historical (CAEH), and 1 class in English Research Intensive or Independent Study. See below for CAED, CAEH, and CAER courses.</td>
<td></td>
<td>18</td>
</tr>
<tr>
<td>Total Credit Hours</td>
<td></td>
<td>30</td>
</tr>
</tbody>
</table>

1. Students are encouraged to take these surveys early in their careers so that they acquire an overview of literary history before taking more specialized upper-level courses. Students are required to take all four, but they can be taken at any time after ENGL 200 and are not prerequisites for other courses.

The English Diversity Requirement (CAED): English majors must elect one course with substantial inclusion of literature in English that expands the traditional Anglo-American literary curriculum. This literature may represent various national groups, ethnic groups, genders, and subcultures. The following courses satisfy the English “Diversity Requirement”:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGL/AAST 238</td>
<td>Intro to Lit: Arab American</td>
<td>3</td>
</tr>
</tbody>
</table>

ENGL 238 will not count in the 30 upper level credits required for the major.)
ENGL/AAAS 239  Intro to Lit: African American (ENGL 239 will not count in the 30 upper level credits required for the major.)  
ENGL 351  Arab Literature in English  
ENGL/AAAS 389  Black Men in America  
ENGL 443  Anglo-Irish Literature  
ENGL/WGST 445  20C/21C Women Authors  
ENGL/AAAS 469  Contemporary African Amer Lit  
ENGL/WGST 471  LGBTQ Literature  
ENGL/AAST/ WGST 473  Arab American Women Writers  
ENGL 4705/ AAAS 470/ HUM 4705/ WGST 470  Black Women / Lit, Film, Music  

Or other options that may be available on a semester by semester basis.

Courses that satisfy the English Diversity Requirement will be noted in the Schedule of Classes for any particular semester.

The **English Historical Requirement (CAEH):** English majors must elect one course which addresses literature prior to 1800. Choose from:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGL/HUM/ RELS 349</td>

</tr>
<tr>
<td></td>
<td>Or an &quot;Independent Studies in English&quot; (ENGL 399)</td>
<td>3</td>
</tr>
</tbody>
</table>

**Cognates**

English majors must also complete at least six credit hours of cognate courses which are to be selected from upper-level offerings in art history (ARTH), comparative literature (COML), communication (COMM), history (HIST) (excluding HIST 3085), humanities (HUM) (excluding HUM 485), journalism and screen studies (JASS), linguistics (LING), music history (MHS) or philosophy (PHIL). Other courses that can be shown to be specifically complementary to the study of literature are sometimes approved by Petition as cognates. Cross listed comparative literature, communication, journalism and screen studies, linguistics, and humanities courses may be elected either for major or for cognate credit, but not for both.

**Notes:**

1. A maximum of 54 hrs. in ENGL may count in the 120 hrs. required for graduation.
2. At least 15 of the 30 upper level credit hours in English (ENGL) must be elected at UM-D.

**Secondary Certification Supplement**

One of the following supplements is required for students seeking certification for high school teaching in English. A major consists of 30 hours, including one upper-level writing course (ENGL 323 or ENGL 327) and two linguistics courses (LING 280 or LING 281 and ENGL 461/ENGL 461). The balance of the thirty hours for the major must be selected with the approval of the degree and certification advisors in accordance with the English major and certification requirements.

A minor in English for certification consists of 20 hours, including the same required courses in writing and linguistics, with the balance to be selected with the approval of degree and certification advisors. See secondary certification (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/undergraduate-degree-programs/secondary-grades-6-12-certification/) for more information.

Both the major and the minor have as a supplementary requirement, not included in the 30 or 20 hours, LIBR 470 Literature for Young People.

**Minor or Integrative Studies Concentration Requirements**

A minor or concentration consists of 12 credit hours of upper-level courses in English (ENGL).

**Environmental Science**

The Bachelor of Science in Environmental Science provides students with a strong background in areas of science related to environmental concerns and with an opportunity to study environmental problems from a scientific point of view that integrates biology, chemistry, Earth science, and physics. The major leads to a Bachelor of Science degree...
and prepares students for careers in waste management, environmental consultation, teaching, environmental health and resource management.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

**Prerequisites to the Major**

<td></td>
</tr>
<tr>
<td>Select at least three upper-level credit hours in Environmental Science (ESCI)</td>
<td>3</td>
<td></td>
</tr>
</tbody>
</table>

**Research/Internship/Capstone**

Select 3 credit hours from the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENST 385</td>
<td>Environmental Internship &amp; Seminar in Environ Topics</td>
<td>4</td>
</tr>
<tr>
<td>ESCI 492</td>
<td>Capstone Research Experience</td>
<td>4</td>
</tr>
</tbody>
</table>

Total Credit Hours: 25

1 Credit cannot be earned for both ESCI 275 and ESCI 301. ESCI 275 cannot be used in the environmental science major. However, when students already have credit for ESCI 275, it is possible to substitute ESCI 275 for the ESCI 301 lectures, but must complete the ESCI 301 lab. This may be accomplished with approval to take ESCI 499 (independent study, contract required) where the required work is the ESCI 301 lab. See the Environmental Science faculty advisor to discuss.

2 Beyond courses applied to other portions of the major requirements

**Concentration (16-24 hrs)**

Must select one of the following concentrations:

**Environmental Biology Concentration**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>

</tr>
</tbody>
</table>

A minimum of 12 upper-level (300+) credit hours in natural sciences courses that address a common theme. 1

Total Credit Hours 16

1  Individualized concentration must be developed in consultation with the Environmental Science program advisor, and the proposed coursework must be approved by the Environmental Science Program Committee by Petition before the student achieves senior standing.

Notes:
1. A maximum of 72 credit hours in courses offered by the Department of Natural Sciences (ASTR, BCHM, BIOL, CHEM, ESCI, ENST, GEOL, MICR, NSCI, PHYS) may count in the 120 hrs. required for graduation.
2. At least 12 of the 41 upper level hours in the major must be elected at UM-D.
3. Students cannot take both CHEM 370 and CHEM 470 and/or CHEM 471 for any combination of major or minor requirements.
4. A maximum of 6 hrs. of independent study/research in any Dept. of Natural Sciences discipline may count towards the 120 hours required to graduate.

Minor or Integrative Studies Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in Environmental Science (ESCI).

Environmental Studies

The solutions to the current environmental problems are complex and require teamwork and understanding between specialists and generalists in many disciplines. The Bachelor of Arts in Environmental Studies focuses on the interdisciplinary nature of environmental problem solving at the local, regional and international level. Students can choose from among four (4) concentrations. Throughout their academic studies, students in this program interact with students in the Environmental Science program.

Career Opportunities

Upon completion of this program, the graduates have a great variety of career opportunities available in both the public and private sector. For example, recent graduates hold such positions as teacher, national park naturalist, resource policy planner, Regional Director of International Joint Commission, Director of Environmental Programs for SEMCOG, regional land use planner, public health officer, and director of a public interest group. All students who qualify for graduate school should seriously consider working toward an advanced degree, which is required for most leadership positions.

Internship Program

An important feature of this program is the internship requirement that allows the students to examine possible professional positions in an area of their interest through on-the-job experience. Some of the internships which environmental studies students have had are field analyst for the Michigan Department of Environmental Quality, hazardous waste analyst, marine safety inspector with the U.S. Coast Guard, public health sanitarian, researcher for a public interest group, national park naturalist, assistant to a state legislator, director of a community organic garden, summer camp nature director, and assistant analyst in a remote sensing operation.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

1  Individualized concentration must be developed in consultation with the Environmental Science program advisor, and the proposed coursework must be approved by the Environmental Science Program Committee by Petition before the student achieves senior standing.
CHEM 134 General Chemistry IA 4
GEOL 118 Physical Geology 4

Total Credit Hours 15

1 MATH 104, MATH 105, MATH 113 or MATH 115 is a required prerequisite for CHEM 134.

2 Other computer literacy courses may substitute for CIS 112 by Petition.

Other lower-level prerequisite courses vary according to upper-level courses students elect to take. Review the list of courses in the Environmental Core Courses and the Concentration Areas to determine the proper prerequisites. Some of the prerequisites may be fulfilled through the Dearborn Discovery Core requirements.

Environmental Core Courses (27-29 hrs)

The graduate in Environmental Studies requires a broad background of knowledge in the Natural Sciences, the Humanities, the Social Sciences, and the Behavioral Sciences as well as interdisciplinary courses which provide a synthesis among disciplines. Students in the program will also have an opportunity to interact with a variety of environmental professionals through seminars and an internship.

</table>

Choose one course from the following (CAVC):
- ENST/PHIL/STS 312: Environmental Ethics (3)
- ENST/ENGL/STS 488: Env Lit & Reps of Nature (3)
- JASS 334: Science and Environmental Journalism (3)
- JASS 421: Environmental Filmmaking (3)

Choose two courses from the following (CAES):
- ECON 483: Urban Economics (3)
- ENST/GEOG 201: Cultural Geography (3)
- ENST/GEOG 300/STS 308: Urban Geography (3)
- ENST/GEOG 310/STS 309: Economic Geography (3)
- ENST/POL/STS 325: Environmental Politics (3)
- ENST 326/ANTH 325: Anth of Health and Environment (3)
- ENST/GEOG 327: Michigan Geography (3)
- ENST/ECON 351: Environmental Economics (3)
- ENST 456: Ecological Economics (3)
- ENST/POL 467: Food Politics and Policy (3)

Choose two courses from the following (CAES):
- ENST/CRJ 483: Justice, Crime and Environment (3)
- ENST/POL 487: Comparative Enviro Policy (3)

Total Credit Hours 27-29

1 Credit cannot be earned for both ESCI 275 and ESCI 301. ESCI 275 cannot be used in the environmental studies major. However, when students already have credit for ESCI 275, it is possible to substitute ESCI 275 for the ESCI 301 lectures, but must complete the ESCI 301 lab. This may be accomplished with approval to take ESCI 499 (independent study, contract required) where the required work is the ESCI 301 lab. See the Environmental Studies faculty advisor to discuss.

Major Requirements

Must select one concentration below. A minimum of 18 credit hours of courses chosen from one of the following four Concentration Areas:

### Concentration A: Land Resources

<table>

**Total Credit Hours**: 30

**Notes:**

1 Cannot receive credit for both STAT 301 and 325.
1. Some upper level courses in concentrations A, B, C, and D may require additional prerequisites.

2. Courses used to satisfy ENST core area can also be used to satisfy concentration area requirements.

3. A maximum of 6 hrs. of independent study/research in any Dept. of Natural Sciences discipline may count towards the 120 hours required to graduate.

**Minor or Integrative Studies Concentration Requirements**

A minor or concentration consists of 15 credit hours upper-level courses in Environmental Studies (ENST).

**Film Studies**

Designed as an interdisciplinary program, the minor/Integrative Studies concentration provides an intellectually challenging and cross-culturally oriented approach to the study of cinema. Courses fulfilling the Film Studies Minor are housed in Journalism and Screen Studies (JASS).

**Minor or Integrative Studies Concentration Requirements**

**Food Studies**

The Food Studies Certificate prepares students to live and work in a world where food is central to human health and well-being, cultural identity, public policy, and ecological sustainability. The interdisciplinary field of food studies has emerged to provide richer and more complex understandings of the role of food in our society. Food is a powerful theme given that much of our lives are structured in and around obtaining, preparing and sharing food with family, friends and community. It also serves as an ideal focal point to demonstrate the deep connections and intersections between local and global forces, economic and social inequalities, race and gender, climate change and environmental sustainability, personal and public health, violent conflicts, and technology.

Our UM-Dearborn faculty, students and community partners are well poised to contribute to and engage with these issues because many of our students and their communities experience food insecurity and food-related health problems. This certificate will benefit students who plan to do graduate work or careers that will focus on the environmental, political, or health related problems of food production, distribution, or consumption. Students and community members from all disciplines and fields are welcome.

Students who complete the Certificate in Food Studies should expect to achieve the following:

1. Gain familiarity with the major concepts of Food Studies as an emerging multi-disciplinary area of study

2. Develop the skills to critically evaluate the ability of food systems to achieve goals of food security, health and wellness, environmental sustainability, and equity.

3. Integrate theory and practice from across the disciplines to address complex problems in food systems.

4. Ability to apply theory to practice through research, creative production, and/or community engagement/advocacy.

The Interdisciplinary Perspectives on Food, Culture and Society Certificate can complement your major, or it can be taken on its own as a stand-alone post-baccalaureate credential.

ANTH 430 Medical Anthropology
ANTH 495 Anthropology Capstone
HHS 330 Health Behavior Theory
SOC 350 Poverty and Inequality
WGST 481 Gender and Globalization

Notes
1. One course may be taken pass/fail.
2. A minimum GPA of 2.5 is required to earn the certificate.
3. A maximum of 3 transfer credits allowed by Petition.

French/French Studies

The Bachelor of Arts in French Studies offers students a thorough training in the language and culture of the 200 million people who live in France and other francophone areas in the world.

In so doing, it familiarizes them with a vital and influential tradition in literature and the arts which spans twelve centuries and a language of importance in the realms of business, politics, science and technology.

French Studies recognizes the need to provide today’s students with a broad education in French. Consequently, it requires concentrators to complete coursework in four general areas: language (including the specialized language of business), culture/civilization, film and literature. For the same reason, French Studies takes as its purview the French-speaking world as a whole. Although it places emphasis on France, the concentration also provides an introduction to the other French-speaking countries of Europe, Asia, Africa, North America and the Caribbean which are playing roles of increasing prominence in global affairs.

UM-Dearborn offers undergraduates two degree programs involving French: International Studies and French Studies. Both are designed to enable majors to take practical advantage of the study of one of the world’s leading languages and cultures. As they complete their degree requirements, International and French Studies majors acquire knowledge and skills that prepare them for careers in numerous fields, both in the United States and abroad.

As designed, the French Studies Program offers graduates a wide variety of educational and employment possibilities. It prepares them for careers in government service, in print and electronic journalism, and in language-related professions such as translating and interpreting. It also enables them to enter the teaching profession and to pursue advanced study in French at the master’s and doctoral level. With supplementary training in areas such as political science, law, and management, graduates of the program could embark on careers in international affairs, law, and business.

Students who do not major in International Studies or French Studies may wish to choose French as a minor or a concentration in the Integrative Studies major.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Prerequisites to the Major

Students majoring in French Studies must successfully complete FREN 202 or demonstrate equivalent French language proficiency.

Major Requirements

A minimum of 24 credit hours in upper-level French (FREN) classes must be completed as outlined below:

Cognates

Select two upper level courses from the following disciplines: AAAS, ANTH, ARBC, ARTH, COMM, COML, ECON, ENGL, ENST, GEOG, GER, GLOC, HIST, HUM, JASS, LIBS (excluding LIBS 395, 396, 397), MCL, PHIL, POL, RELS, SOC, SPAN, WGST.

Total Credit Hours 24

Majors are encouraged to strengthen their knowledge of French language and culture by participating in any of the approved study-abroad programs.

Notes:

1. FREN 339 and FREN 375 can be used as a literature or civilization/culture requirement, but not both.
2. A maximum of 54 hours in FREN may count in the 120 hours required for graduation.
3. At least 15 of the 24 upper level hours in French must be elected at UM-D.
4. A maximum of 3 credits of HUM 485 internship can be used in the cognate area.

Minor or Integrative Studies Concentration Requirements

Concentration for Integrative Studies or International Studies Only

A minor or concentration consists of 12 credit hours of upper-level courses in French (FREN).

French Translation

The Certificate in French Translation is designed to provide broad exposure to the interdisciplinary study and methods of translation as well as an academic grounding in translation theory and practice. During the certificate completion process, students combine the study of the culture and language of the Francophone world. The certificate allows students to explore the practice of translation from multiple perspectives: cultural, theoretical, interdisciplinary, and practical. The certificate also combines a rigorous study of the French language to the many obstacles in translating cultural concepts and idiomatic sentences that are very often different in the two languages, as well as practice in sociolect and standard French. Students will be exposed to a wide range of genres in both languages, including literary, business, advertisement, and business memorandums in order to improve the range of their linguistic skills.

The certificate in French Translation will provide students with the linguistic, cultural, and practical tools to tackle a variety of translation tasks in a professional setting, and thus, offer them technical skills in the fields of immigration, business, transportation, information, engineering, literature, and diplomacy such as in Consulates and Embassies, and Chambers of Commerce across the world. Indeed, in the Detroit metropolitan area alone, there are dozens of translation service agencies that need translators. Students with a Certificate in French Translation will be able to find work more easily and readily.

Notes:
1. No courses may be taken as pass/fail.
2. A GPA of 2.5 is necessary to earn the certificate.

Geography

Minor or Integrative Studies Concentration only

Geography is an integrative discipline that focuses on the interrelationships between the physical and human environments.

Geographers investigate the physical landscape (e.g., landforms, climate, biosphere) and spatial patterns of human activity within the environment (e.g., urbanization, migration, spread of diseases, desertification, global change). By integrating the physical and the human environments, Geographers bring a unique perspective to the study of pressing societal problems and issues, such as natural disaster relief and urban sprawl. This perspective is strongly enhanced by a suite of spatial analytical tools (e.g., cartography, remote sensing, Geographic Information Systems). With its spatial analytical tools and broad perspectives on the physical and cultural world, geography provides useful skills and knowledge for students in a variety of fields from urban and land use planning to business, resource management, and international development.

Geographic knowledge and thinking enables one to understand the constantly changing places, people, patterns, and connections in the world today. There has never been a time of more mobility of people, information, and ideas, which makes understanding the spatial context of places and interactions very important.

A student must complete the following requirements for the minor or concentration in geography.

Geography

The minor/concentration in Geology is open to students in all majors to provide curricular depth in geosciences. Selection of courses at the 300- or 400-level will depend on the major and interests of the student.

Minor or Integrative Studies Concentration Requirements

A minor or concentration in geology (GEOL) consists of 12 credit hours of upper-level courses in GEOL.

See Geospatial Analysis & Mapping (GAM) Certificate (p. 124)

Geological Science

The Bachelor of Science in Geological Sciences provides students with a strong background in geology, astronomy, and oceanography. It enables them to study and understand processes that have shaped the Earth and the solar system over the last 4.6 billion years.

Students will learn about both the internal and surface processes acting on the earth, including the forces behind plate tectonics and its surface manifestations, earthquakes and volcanoes. The Geological Sciences student will take advantage of new and developing technologies such as the use of global positioning systems and geographic information systems (GIS) in the mapping of geologic, soil, water and other environmental features.

The major leads to a Bachelor of Science degree that prepares students for graduate study in any of the geological sciences, for students who wish to qualify for a teaching certificate in Earth Science, or for students interested in the study of geology or astronomy as part of an undergraduate liberal arts education.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Research/Internship 2
newly acquired technical and critical thinking skills. Thus, when finished, students have a portfolio of deliverables that reflect where students use GIS, or develop tools, to solve real-world problems. Most of the courses are project-based, development of skill and confidence with the knowledge to solve complex spatial and temporal problems. Most of the courses are project-based, development of skill and confidence with the knowledge to solve complex spatial and temporal problems. The courses required for the program are “hands-on”, balancing the experience in GIS and remote sensing. People from diverse backgrounds and interests can benefit from gaining of geospatial technology across a variety of disciplines and fields, your particular area of study or practice! Because of the broad array even digital humanities. It is not hard to see how place influences public safety, transportation, education, health & human services, and natural resources, is not limited to) careers in public health, criminal justice, sociology, economics, social and natural science education, computer engineering, Earth and environmental science or studies, urban and regional studies, and anthropology/archaeology.

Most courses are offered in the evening, such that non-degree seeking students can attend; several are also hybrid in design with online lecture and laboratory sessions on campus.

Students of any UM-Dearborn major with a GPA of 2.5 or higher can apply for this program. Non-degree seeking postgraduates must apply through the CASL Campus Option Program.

Our Alumni

Students who have participated in this program have received internships/employment at Michigan Department of Transportation (MDOT), Michigan Tech Research Institute, numerous consulting firms (i.e. FTC&H), municipalities (i.e. Livonia, Novi), and private organizations. Additionally, several graduates have continued their GIS education in reputable postgraduate programs throughout the U.S.

Dearborn, MI 48128

Certificate Requirements

The GAM Certificate provides students with the experience and knowledge in the theory and application of GIS and remote sensing. Students learn the basic components of GIS and spatial data, understand problems that arise in the data acquisition and analysis and develop a sound background in cartographic principles. Many students could increase their marketability with a GAM certificate. This includes (but is not limited to) careers in public health, criminal justice, sociology, economics, social and natural science education, computer engineering, Earth and environmental science or studies, urban and regional studies, and anthropology/archaeology.

Most courses are offered in the evening, such that non-degree seeking students can attend; several are also hybrid in design with online lecture and laboratory sessions on campus.

Students of any UM-Dearborn major with a GPA of 2.5 or higher can apply for this program. Non-degree seeking postgraduates must apply through the CASL Campus Option Program.

1 498 (Independent Study) credits can be taken in any discipline but to count toward the certificate, it must be approved by GAM Program Director by Petition.

2 499 (Laboratory and Field Research) credits can be taken in any discipline but to count toward the certificate, it must be approved by GAM Program Director by Petition.

NOTES:

1. A minimum of 2.5 cumulative GPA and sophomore standing are required for admission to the program.
2. A maximum of four credit hours of transfer coursework may be counted toward the minimum 16 credit hours required for the program by Petition to the Program Director.
3. A maximum of 6 credit hours of Independent Study, Directed Research or Geospatial Internship may be counted toward the program and must be approved by the Program Director, by Petition, prior to completion.
4. A minimum 2.0 GPA in the UM-Dearborn courses counting toward the GAM certificate is required at the time of graduation and/or posting of the certificate.

Global Cultures

Minor or Integrative Studies Concentration Only

The minor or concentration in Global Cultures helps students understand global systems and processes in different world regions. Deeper understanding of global change and the interdependence of the United States with the rest of the world is important to students who wish to be well informed about the contemporary world and prepared for jobs that are affected by global dynamics.

A minor in Global Cultures provides a useful complement to students majoring in a number of different areas in any of the four colleges on campus. Students wishing to study or work abroad, students working with populations from different parts of the world, and students simply wishing to expand their horizons to a more global scale, will all benefit from combining their area of study with the Global Cultures minor.

**Total Credit Hours** 15

**Note:**

1. The same course cannot be used in more than one group.
2. Students studying a foreign language can include up to two of the following upper level courses in the four courses required for Core Area II (however, as noted above, courses from at least two different groups 1-4 above must be included as well).
Global Engagement

The Global Engagement Certificate is designed to provide students with powerful tools to understand the international dynamics of the past, present, and future world scenario, as well as allow students to be able to apply knowledge in the contemporary market.

This Certificate can enhance other programs by providing an additional area-study of specialization. Furthermore, it is designed to complement and combine with a wide range of existing majors. In order to focus on the study and dialogue between the global and the local realities, students will be able to take advantage of existing courses in areas such as Global Mediated Cultures, Gender and Multicultural Issues in the Global World, Migration and Diasporas, and American Studies in the Global Age, as well as cognates related to global themes.

Certificate Requirements

The Global Engagement Certificate requires the following courses (12 credits total):

Hispanic Studies

With more than 400 million Spanish speakers, Spanish is one of the most important languages in our globalized world.

Globalization is part of the reality of the twenty-first century and speaking Spanish has almost become a necessity. Thus, the study of the Spanish language and its culture is quite practical. Given the Hispanic presence in the United States and the proximity of our Spanish-speaking neighbors in Latin America, proficiency in Spanish is increasingly advantageous and even necessary for numerous professions and careers.

The Spanish area faculty members recognize the need to provide today’s students with a broad education and perspective. To that end the Bachelor of Arts in Hispanic Studies offers three different majors as well as a minor. The three majors are:

1. Hispanic Studies
2. International Studies-Spanish concentration (see International Studies (p. 134))
3. Integrative Studies - Hispanic Studies as one of three concentrations

The College of Education, Health and Human Services offers a Secondary Certification Program for teaching Spanish to grades 7-12 (More information and details are available on secondary certification page).

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Prerequisites to the Major
Students desiring to major in Hispanic Studies must successfully complete SPAN 202 or exhibit equivalent Spanish language proficiency.

Major Requirements
A minimum of 24 credit hours in upper level Spanish (SPAN) classes must be completed as outlined below.

<table>

Other Spanish Area Offerings

Select any one 300+ level SPAN 3

Cognates
Select upper level courses from the following disciplines: AAAS, ANTH, ARBC, ARTH, COMM, COML, ECON, ENGL, ENST, FREN, GEOG, GER, GLOC, HIST, HUM, JASS, LIBS (excluding LIBS 395, LIBS 396, LIBS 397), MCL, PHIL, POL, RELS, SOC, WGST.

Total Credit Hours 30

Notes:

Majors must take at least one course that deals specifically with Spanish (peninsular - CAPH) topics such as SPAN 321, SPAN 351, SPAN 356, SPAN 358, SPAN 451, or SPAN 465 and at least one course that deals specifically with Latin American topics (CALA) such as SPAN 350, SPAN 353, or SPAN 357.

Majors are encouraged to spend a semester or year in one of the many approved study-abroad programs.

1. A maximum of 54 hours in SPAN may count in the 120 hours required for graduation.
2. At least 18 of the 24 upper level hours in Spanish (SPAN) must be elected at UM-D.
3. A maximum of 3 credits of HUM 485 internship can be used in the cognate area.

Minor or Integrative Studies Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in Spanish (SPAN).

History

History students at UM-Dearborn research a wide variety of topics, periods and areas of the world, and practice many modes of historical thinking.

At the end of their studies, history majors are able to frame and investigate questions about the actions, contexts, and meanings of earlier human lives from cultural, economic, political, and social perspectives. Producing original historical research, students locate and interpret primary sources as evidence, place their inquiries in the context of relevant historiography and broader frameworks of interpretation, and integrate varied sources in a coherent argument.

Advising

History majors should consult with an adviser before the beginning of each semester.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Prerequisites to the Major

Students desiring to major in history are required to elect three of the following courses as prerequisites. The faculty strongly advises that students take these courses during their freshman or sophomore year.

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>HIST 101</td>

**Capstone**
Select 3 credit hours of courses at the 400 or 4000 level. 2 3

**Upper Level Electives in History**
Select 6 credit hours any upper level HIST 6

**Portfolio**
Approval required by the History faculty advisor. 3

**Cognates**
Six credit hours upper level courses in African and African American Studies (AAAS), American Studies (AMST), Anthropology (ANTH), Arab American Studies (AAST), Arabic (ARBC), Art History (ARTH), Communications (COMM), Economics (ECON), English (ENGL), French (FREN), Geography (GEOG), German (GER), Humanities (HUM), Linguistics (LING), Music History (MHIS), Philosophy (PHIL), Political Science (POL), Psychology (PSYC), Religious Studies (RELS), Spanish (SPAN), Sociology (SOC), Urban and Regional Studies (URS), and Women and Gender Studies (WGST). 6

**Total Credit Hours** 33

1 May count as U.S. or Non U.S., but not both.
2 May include HIST 4999 (Senior Research Seminar), HIST 498 (Senior Honors Thesis), HIST 499 (Advanced Independent Studies in History), and any of the 400 or 4000 level advanced seminar courses.
3 Completion of an electronic history portfolio is required. Please see the History Portfolio (https://umdearborn.edu/casl/undergraduate-programs/areas-study/history/history-portfolio/) page for more information.

**Notes:**
1. At least 15 of the 27 upper level credit hours in history (HIST) must be elected at UM-Dearborn.
2. A maximum of 3 hours of History Internship (HIST 3085) may count in the major.

Portfolio

In order to graduate with a degree in history, students must compile an electronic portfolio of papers written in history courses. The History Portfolio (https://umdearborn.edu/casl/undergraduate-programs/areas-study/history/history-portfolio/) is an archive of at least four significant papers from upper-division history courses taken at UM-Dearborn. It must include the HIST 300 paper and at least one paper from a capstone (400/4000 level) course, along with a capstone reflection essay that highlights those papers that best demonstrate mastery of learning outcomes for history majors.

Minor or Integrative Studies Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in history (HIST).

Individual Program of Study

The Individual Program of Study (IPS) is an option for first year students at UM-Dearborn under the new Dearborn Discovery Core general education requirements. The Individual Program may not duplicate an already existing major in the College of Arts, Sciences, and Letters and it is recommended that an interdisciplinary curriculum, in the true spirit of a Liberal Arts education, be created.

- **Example 1**: German Studies; language and culture, as well as the history of German speaking countries. An interdisciplinary major could be created including course work in language, philosophy, history, art history, music history, global studies and environmental science at the 300 and above level.
- **Example 2**: Middle Eastern History; Arabic culture and literature as well as early civilization history courses. An interdisciplinary major could be created including course work in Islamic Art History and Philosophy, along with Middle East Economics and Political Science at the 300 and above level.

After completing 30 hours at UM-Dearborn with a 3.25 or higher GPA, a rising sophomore would seek out a Professor on a tenure track faculty appointment to propose their individual major idea. Anyone interested should plan to write up the proposal before meeting with the possible faculty advisor, or if meetings have already occurred, frame the discussions that have occurred in the written proposal with a possible title.

Approval requires:

- A title
- A formal program of study, unlike any other taught in the College
- The student rationale
- The faculty rationale
- A proposed regular advising schedule so student and faculty member will remain in regular communication

Once written up, the proposal must move to the Department Executive Committees from which curriculum has been pulled for approval. Followed by approval from the IPS Committee and UCDC.

For more information, contact CASL Advising and Academic Success: room 1039 CB; casladvising@umich.edu or 313-593-5293.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Major Requirements

A minimum of 24 hours of 300 level or above course work is required. Keep in mind the title will go on the official transcript at graduation. If the proposed faculty advisor is an Assistant Professor, an Associate or Full Professor must also be brought into the plan before approval will be granted.

Integrated Science

The Bachelor of Science in Integrated Science is a degree designed for students seeking to teach science in high schools. The sixty credit hour degree meets the State of Michigan’s requirements for 12 credit hours each in Biology, Chemistry, Earth Science and Physics. An additional 12 credit hours in any one of these areas provides the required minor in science. Students successful completing this program and passing the Michigan Test for Teacher Certification in Integrated Science (secondary) will meet the standards for the ‘highly qualified’ designation. This degree is only for those students who are also seeking a certificate in secondary education from the College of Education, Health, and Human Services. It is also a degree intended for students who wish to teach in smaller school districts. Students seeking employment in large districts should consider majoring in Biology, Chemistry, Earth Science or Physics and minoring in another of these 4 areas.

The degree requires that certain courses in each of the four areas be taken. The remaining hours will consist of electives from the list of courses below. Other courses may be possible. Students should consult with their advisor about course selection. In addition to regularly offered courses in Natural Sciences, students must also elect at least one of the NSCI 331, NSCI 332 or NSCI 333 courses. These latter courses will also count towards the 12 hrs for the minor.

Students will need to consult with advisors in the College of Education, Health, and Human Services in order to meet the certification requirements (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/undergraduate-degree-programs/secondary-grades-6-12-certification/) for teaching in secondary schools.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

- NSCI 331
- Phy. Sci. & Everyday Thinking

Notes:

1. At least one course from NSCI 331, NSCI 332, or NSCI 333 must be elected.
2. The credits for NSCI 331 can be attributed to both Chemistry and Physics.
3. Any upper division courses accepted for credit towards a degree in the area will meet this requirement.
4. Students choosing Biology must include at least one course from each of the following categories: Cellular and Molecular (CACM); Organismal (CAOB); Population and Environmental (CAPE). See Degree Works for list of courses.

Concentration in one of the Four Areas Above: Biology; Chemistry; Earth Science; Physics. 4

Students will select 12 additional upper level credit hours in one of the four areas listed above. 3

Total Credit Hours

Notes:

1. Up to three credit hours of independent study in one of the four areas listed above may be applied towards the minor.
2. Students may graduate from the College of Arts, Sciences, and Letters with a Bachelor of Science in Integrated Science only if also being awarded secondary certification, as recommended by the College of Education, Health, and Human Services. Students who declare Integrated Science but do not subsequently qualify for secondary certification, or otherwise choose not to pursue secondary certification, must choose another major.

Integrative Studies

Integrative Studies at UM-Dearborn is intended for students who wish to customize their degree program to fit their own interests and aspirations. Students create their own curriculum path, choosing three individual concentrations, or minors, instead of a traditional major. Students may further customize their degree by enrolling in internships or cooperative education. All students must complete a minimum of 39 credit hours for the Integrative Studies major, which includes LIBS 450 Capstone. Integrative Studies leads to an interdisciplinary Bachelor of Arts or Bachelor of Science degree, depending on the concentrations selected. Aside from giving students the opportunity to build an individualized program suited to their own personal and/or career goals, Integrative Studies can also provide an excellent foundation for graduate and professional education in many areas, including law, business, public administration, counseling, and social work.

More about Integrative Studies

Integrative Studies includes all the academic minors (which become concentrations for this major)—interdisciplinary as well as disciplinary—in CASL, plus the programs in the College of Business; College of Education, Health and Human Services (excluding teacher certification minors); and Computer and Information Science from the College of
Engineering and Computer Science. An advisory committee of faculty and staff oversees the program. See an academic advisor in CASL Advising and Academic Success, 1039 CB, for additional information about this major.

- Students transferring from a community college with an Associate Degree may transfer a maximum of 30 credit hours of general credit courses (GENL).
- The Foreign Language requirement not needed for this major.
- LIBS 450 Capstone is required.

For more information, contact CASL Advising and Academic Success: room 1039 CB; casladvising@umich.edu or 313-593-5293.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

**Major Requirements**

Integrative Studies students must select three concentrations. Concentrations are divided into three groups:

- **Group I—CASL Concentrations**

  12 credit hours at the upper level required (plus prerequisites as needed) in each concentration chosen. You may choose one, two, or all three concentrations from Group I.

  Anthropology (p. 92), Applied Statistics (p. 94), Arabic (p. 94), Art History (p. 97), Biochemistry (p. 102), Biological Sciences (p. 103), Chemistry (p. 105), Comparative Literature (p. 109), Computer and Computational Mathematics (p. 111), Economics (p. 114), English (p. 115), Environmental Science (p. 117), French Studies (p. 122), Geology (p. 123), Hispanic Studies (p. 129), History (p. 131), Linguistics (p. 144), Mathematics (p. 147), Microbiology, (p. 150) Music (p. 151), Philosophy (p. 159), Physics (p. 160), Political Science (p. 162), Psychology (p. 164), Sociology (p. 171)

- **Group II—CASL Concentrations**

  12-18 credit hours required at the upper level (plus prerequisites as needed) in each concentration chosen. Most concentrations in Group II have specific courses required. You may choose one, two, or all three concentrations from Group II.

  African and African American Studies (p. 90), Applied Art (p. 93), Arab American Studies (p. 94), Astronomy (p. 97), Communications (p. 108), Community Change Studies (p. 109), Criminology and Criminal Justice (p. 112), Environmental Studies (p. 120), Film Studies (p. 120), Geography (p. 122), Global Cultures (p. 125), Journalism and Screen Studies (p. 141), Law and Society (p. 142), Leadership & Communication in Organizations (p. 143), Living, Working, Adapting, and Connecting During a Pandemic (http://catalog.umd.umich.edu/undergraduate/college-arts-sciences-letters/living-working-adapting-connecting-pandemics/), Media Roles and Responses to Pandemics (p. 148), Medieval and Renaissance Studies (p. 148), Organizational Change in a Global Environment (p. 152), Pandemics and Infectious Disease (p. 152), Religious Studies (p. 165), Science and Technology Studies (p. 166), Social Science Research Methodology (p. 167), Society and Technological Change (p. 169), Urban and Regional Studies (p. 173), Women’s and Gender Studies (p. 175).

- **Group III—Concentrations Outside of CASL**

  You may choose only one concentration from Group III. Each area requires a minimum of 15 credit hours at the upper level (plus prerequisites as needed). See a CASL academic advisor for details.

  Accounting (p. 182), Artificial Intelligence (http://catalog.umd.umich.edu/undergraduate/college-engineering-computer-science/artificial-intelligence/#minortext), Computer and Information Science (p. 258), Digital Marketing (p. 184), Entrepreneurship (p. 184), Finance (p. 186), Financial Planning (p. 191), Game Design (http://catalog.umd.umich.edu/undergraduate/college-engineering-computer-science/game-design/#minortext), Human Resources Management (p. 188), Information Systems Security (p. 189), Information Systems Management (p. 189), Management (p. 189), Marketing (p. 190), Pre-Health Professional Studies (p. 220), Public Health (p. 220), Public Health and Pandemics (p. 164), Supply Chain Management (p. 191).

  **Capstone Course** - all students must complete LIBS 450

**International Studies**

The Bachelor of Arts in International Studies combines foreign language and cultural studies with a thorough grounding in a professional area such as business and management, economics, computer information science, communication, or political science. The major is designed to prepare students for careers in international relations and business or other fields with an international dimension.

The major consists of three components at the upper level:

I. Foreign Language and Cultural Concentration (18 credit hours upper level plus lower level prerequisites) devoted to foreign language, culture, and civilization (including optional study abroad). Languages: Arabic, French, Spanish.

II. Professional Concentration (generally 15 credit hours upper level plus lower level prerequisites) devoted to the basic skills of art administration (museum studies), business and management, communications, computer and information science, economics, engineering, environmental studies, history, journalism and screen studies, natural sciences, or political science (international affairs).

III. Cognates (9 credit hours upper level) devoted to studies (and optional internship experiences) which will provide the larger international context and additional useful skills to coordinate the subjects of Concentrations I and II.

This program is also eminently suitable as a second major for students who want to add a strong international component to their major field of interest. In this case, courses taken for their first major may also fulfill “Professional Concentration” requirements in International Studies; e.g., students majoring in art history, business and management, communications, computer information science, economics, engineering, environmental studies, history, natural sciences, or political science (international affairs) can add International Studies as a second major by fulfilling requirements of Concentration I (Foreign Languages and Culture).
and III (Cognates) and counting their first major as Concentration II (Professional).

AdvISING

International Studies majors are urged to consult with a faculty mentor in the foreign languages and the other professional areas before the beginning of each semester.

Students with a high school background of three to four years study of Arabic, French, or Spanish would be able to begin their studies of the same foreign language at UM-Dearborn with the 201, 202, or even 301 foreign language class. The curriculum for such students would be more flexible than that previously described. Students with a high school foreign language background would have an additional 8-11 hours for electives in areas of their special interests.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

**Major Requirements**

**Concentration I. Foreign Language and Culture**
(Select one language: Arabic, French, or Spanish)

</tbody>
</table>

A literature course in the chosen language is highly encouraged.

**Notes**

Students are encouraged to spend a semester or year in one of the many approved study-abroad programs.

Students who wish to study two foreign languages within the framework of the International Studies Program should see the International Studies Director to design an acceptable balanced curriculum.

Normally students will not be permitted to count the Humanities Internship (HUM 485) as a part of the concentration requirements. They are encouraged to elect an internship as part of their Cognates.

**Concentration II. Professional Studies**

Select one Professional Studies concentration from:

Required Courses
Select four courses from four different areas: 12

Asian/Non-Western (CAAS):
- ARTH/HUM 311 Art of China
- ARTH/HUM 312 Art of Japan
- ARTH/HUM 313 Chinese Painting
- ARTH/HUM 315 Early Chinese Art and Culture
- ARTH 384 Islamic Architecture
- ARTH 385/RELS 384 Islamic Decorative Arts
- ARTH/WGST 416 Early Mod Jpn Paint & Wood Prnts

Ancient and Classical (CAAC):
- ARTH 319 Egyptian Art
- ARTH 321 Greek Art
- ARTH 322 Roman Art
- ARTH/RELS 327 Gods, Myth and Worship
- ARTH/WGST 425 Women in Classical Antiquity

Medieval (CAME):
- ARTH/RELS 331 Erly Christian Byzant Art
- ARTH 332 Early Med and Romanesque Art
- ARTH 333 Gothic Art and Architecture
- ARTH 334 The 14th Century
- ARTH/HUM/RELS/WGST 335 Women in Medieval Art

Renaissance & Baroque (CARB):
- ARTH 341 Art & Arch in Early Ren Florence
- ARTH 342 High Renaissance and Mannerism
- ARTH 343 Renaissance & Reformation Art
- ARTH 344 Italian Renaissance Sculpture
- ARTH 351 Southern Baroque Art
- ARTH 352 Northern Baroque Art
- ARTH/HUM 434 Renaissance and Baroque Rome
- ARTH 454 Rembrandt
- Modern (CAMA):
  - ARTH/HUM/HIST 305 The Arts & Culture of Detroit
- ARTH 360 Art of Glass
- ARTH 361 American Art
- ARTH 362 Impressionism and Post-Impress
- ARTH 363 Arts of the Twentieth Century
- ARTH 364 Picasso
- ARTH 365 Modern Architecture
- ARTH 366 The Modern Print
- ARTH 367 Contemporary Art
- ARTH 368 American Photography
- ARTH 375 Urban Design Perspectives
- ARTH 469 Collage, Montage, Assemblage

Also Required
- ARTH 410 Museum Practice Seminar I

Total Credit Hours 21

Option E. Political Science (International Affairs)

<table>

</table>

Select one of the following courses (CAIM):
- CIS/CCM 150 Computer Science I
- PSYC 381 Prin of Stat and Exper Design
- STAT 263 Introduction to Statistics

Required Courses
Select five of the following 3 credit hour courses (CAIP): 15

- LIBS 364 The European Union
- POL 341 Canadian Politics
- POL 350 Pol of the Developing Areas
- POL/RELS 355 Religion and Politics
- POL 361 American Foreign Policy
- POL 371 Problems in Intl Politics
- POL 375 Great Pwrs Comp and Conflict
- POL 385 Israeli-Palestinian Conflict
- POL 450 Revolution
- POL 451 Peace and War
- POL 471 American Foreign Policy I
- POL 472 American Foreign Policy II
Option H. Engineering

Required Courses
Fulfillment of all requirements for a degree in any of the Engineering disciplines will satisfy all Component II (Professional) requirements for the International Studies major.

Due to the high number of prerequisites needed to get into upper-level engineering classes, there is no regular 15-hour (professional) component for the various engineering disciplines.

Option I. Communication

Required Courses
Select one of the following:
- A minimum of 15 hours 300-4999 level in any one Dept. of Natural Science discipline from: ASTR, BIOL, BCHM, CHEM, ESCI, GEOL, MICR, PHYS (plus all lower level prerequisites).
- Fulfillment of all major requirements in any natural science discipline.

Option J. Journalism and Screen Studies

Required Courses
Select five courses from the following:
- Media Tools (CAJB):
  - Select two courses from:
  - JASS 303 Media Design & Animation
  - JASS 307 Copy Editing
  - JASS/COMP/ENGL 310 Narrative Journalism
  - JASS 312 Media Performance
  - JASS 315 Media Production for Metro Comm
  - JASS/ENGL 330 Feature Writing
  - JASS/COMP/ENGL 331 Online Reporting, Research Writing
  - JASS 345 Audio Production
  - JASS 350 Digital Film & Television
  - JASS 3015 Advanced Reporting
  - JASS 401 Interpretive Journalism
  - JASS 402 Investigative Reporting
  - JASS 405 New and Emerging Media
  - JASS 410 Advanced Media Production
  - JASS 423 Design for Web & Mobile
  - JASS/ENGL/HUM 467 Script Writing Workshop
- Genres, Modes, and Contexts of Storytelling (CAJM):
  - Select two courses from:
  - JASS 302 Media Law and Ethics
  - JASS/ART 332 Creating the Graphic Novel
  - JASS 333 Sports Reporting and Writing

Note: Environmental Science (ESCI) courses (some of which have additional prerequisites) may be substituted by Petition.
JASS 334  Science and Environmental Journalism
JASS/MHIS  Multimedia and Music
  335  or JASS 336 Film and Music
JASS 338  Business/Automotive Reporting
JASS/HUM  National Cinemas
  357  JASS/ENGL  Narratives of Film and Lit
  370  JASS 378  History of U.S. Broadcasting
JASS 380  History of American Journalism
JASS/COMM/  Postwar European Cinema
MCL 381  JASS/AAAS/  Black Cinema
          HUM 385  JASS/WGST  Gender, Sex, Power Screen Studies
          387  JASS 390  Topics in JASS
JASS 398  Independent Study in JASS
JASS/STS 403  Issues in Cyberspace
  403  JASS 406  History & Theory of Documentary
JASS 413  Photojournalism
JASS/COMP/  Memoir and Travel Writing
ENGL 436  JASS/HUM  American Cinema
  457  JASS/ANTH/  Ethnographic Film
          HUM 477  COMM 430  International Communications
The remaining one course (3 credits) may be any upper level JASS course

Total Credit Hours  18

Component III. Cognates

This component is designed to enhance the international dimension of the major and to coordinate the language and culture studies with professional preparation. Students will take three courses (9 hours, 300+ level) in fields such as anthropology, art history, business and management, economics, foreign cultures, history, and political science.
Courses should be selected in accordance with students’ particular needs. See below for the approved list of courses.

Notes:

1. Highly recommended course because of its international content and/or the likelihood that it coordinates the language and professional concentrations.

The senior thesis is available only to students who have prior JASS industry experience.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Journalism and Screen Studies

The Bachelor of Arts in Journalism and Screen Studies (JASS) is dedicated to storytelling—its forms, techniques, and technologies. We offer individual courses on the genres, including news, features and photojournalism; narrative journalism/creative nonfiction; documentary and feature film. In all courses, JASS stresses convergent media, interdisciplinary, and the underlying research and writing skills that connect us as journalists, documentarians and filmmakers.

The program looks at storytelling as a means to both inform and entertain. The ability to analyze and interpret work in a specific medium and to view it within a variety of interpretive contexts provides a foundation for all forms of storytelling, from news reportage to feature films.

While we offer individual courses in each medium, all courses include analytical components and assignments, and all stress the interdependency of theory and practice, form and content. JASS makes current and emerging technologies available to all its students, emphasizing these technologies, not as ends in themselves but as tools of intellectual and creative expression.

Experiential Education (Internship, Co-op, or Senior Thesis)

All JASS students are required to participate in an internship, co-op or senior thesis. There is a seminar component to both the internship and the co-op.

<td></td>
</tr>
</tbody>
</table>

**Total Credit Hours**: 21

**Notes**:
1. A maximum of 63 credit hours of JASS may count toward the 120 credit hours required for graduation.
2. At least 15 of the 27 upper level credit hours in the JASS major must be elected at UM-D.
3. The Thesis option (JASS 497) is only available to students who have significant professional experience in their area of specialization within Journalism or Screen Studies and requires the approval of the JASS faculty advisor.
4. Students wishing to undertake an independent study (JASS 398) must first secure the approval of the JASS faculty member willing to serve as advisor.
5. A maximum of 6 credits of internship (HUM 485) or co-op (LIBS 395, LIBS 396, LIBS 397) may count toward the major (3 credits to fulfill the experiential education requirement and 3 credits as a second internship/co-op taken in a term separate from the first internship/co-op and may apply toward the Genres, Modes, and Contexts area II).

### Minor or Integrative Studies Concentration Requirements

A minor or concentration in Journalism and Screen Studies (JASS) consists of 12 credit hours of approved upper-level courses. At least two of the courses (6 credits) must be in the “Media Tools” area and at least two courses (6 credits) must be in the “Genres, Modes and Contexts of Storytelling” area.

## Law and Society

### Minor or Integrative Studies Concentration only

The Law and Society minor/concentration is a program of study that is intended for the understanding of law in its historical and social contexts. Through study of the evolution of law from ancient societies to our contemporary day, students are encouraged to see law as a dynamic institution shaped by historical forces and social values. Substantively, emphasis is given to the study of such contemporary legal issues as human freedoms and civil rights, social responsibility and the treatment of criminals, constitutional interpretation and the enunciation of citizen rights.

The Law and Society field takes up studies of the legal environment of various institutional sectors in our society. The health care, the family, and mental health systems all have detailed legal environments setting standards for professional conduct, responsibilities of various participants and enabling legislation of various kinds. Other fields, such as communications media, business enterprises, and the military also have fully elaborated legal environments.

### Minor or Integrative Studies Concentration Requirements

The Law and Society Minor/Concentration is structured as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>

Leadership & Communication in Organizations

The minor/concentration in Leadership and Communication in Organizations provides interdisciplinary study of the leadership of organizations, preparing students to critically assess the effectiveness of leaders in a wide range of organizations including business, government, and non-profit. The minor also prepares students to be more effective leaders in their careers and as citizens.

Minor or Integrative Studies Concentration Requirements

15 credits of upper level course work. Include courses from three areas as indicated:

Total Credit Hours 15

LGBTQ Studies

The LGBTQ Studies Certificate prepares students to work and live in our diverse world by concentrating on forms of sexual orientation, gender identity, and gender expression that are frequently left out of traditional fields of study.
The interdisciplinary approach of the certificate provides students with analytical frameworks for understanding how social, cultural, legal, and political factors influence the lives of LGBTQ individuals, families, and communities. The program of study examines a broad spectrum of diversity to foreground ways that sexuality and gender intersect with race, ethnicity, class, age, religion, disability, and nationality in people’s lives.

The LGBTQ Studies Certificate can complement your major or stand alone as a post-baccalaureate credential.

Knowledge of LGBTQ issues and competency in serving gender and sexually diverse populations is relevant to many different fields, from education, law, and healthcare to business, counseling, and social work, among others. We warmly welcome students from all colleges as well as community members to participate in the program.

Students who complete the Certificate in LGBTQ Studies should expect to achieve the following:

1. Knowledge about the history and current issues facing LGBTQ individuals, families, and communities;
2. Knowledge about modes of resistance and community responses to these issues;
3. Familiarity with major concepts and methods in the fields of lesbian, gay, bisexual, transgender, and queer studies;
4. Ability to analyze the ways that sexual orientation and gender identity intersect with race, ethnicity, class, age, religion, disability, and nationality in people’s lives;
5. Ability to apply theory to practice through research, creative production, practicum experience, and/or advocacy.

</table>

**Notes:**

1. A minimum 2.0 cumulative GPA is required for admission to the program.
2. A maximum of one course may be taken as pass/fail.
3. A maximum of one transfer course (three credit hours) may count toward the certificate.
4. A maximum of nine credits may share with the declared major.
5. Any LGBTQ related CASL internship may count in the certificate with permission of the LGBTQ Program Director by Petition.
6. A minimum 2.5 GPA in the courses counting toward the certificate is required at the time of graduation and/or posting of the certificate.

## Linguistics

The scientific discipline of linguistics emerged in the twentieth century.

It is distinguished from earlier approaches to language chiefly by its focus on spoken and signed language as well as written, and by its emphasis on describing actual language as it is used rather than prescribing what is correct and proper. In pursuing these aims a set of rigorous methods and an extensive technical vocabulary have been devised. Spoken language is a complex system of organized sound, and any adequate analysis requires precision and detail at several levels.

UM-Dearborn Linguistics faculty focus on sociolinguistics and the structure, history, and social functions of the English language in contact with other languages, drawing on the methods and theoretical insights of the World Englishes approach.

The Linguistics Discipline offers courses contributing to the following programs: the ESL Endorsement Certificate (College of Education, Health, and Human Services), the Language Arts Elementary Education major (College of Education, Health, and Human Services), the English major with Secondary Certification (CASL and College of Education, Health, and Human Services), and the Linguistics minor or concentration for the Liberal Studies major (CASL). Linguistics courses also fulfill the role of cognates within certain CASL majors.

## Minor or Integrative Studies Concentration Requirements

Students may earn a minor in Linguistics or have Linguistics as a concentration for the Integrative Studies major by completing 12 credit hours of upper-level courses in Linguistics (LING). (minor only)
For Language Arts for Elementary Education please follow the link here (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/undergraduate-degree-programs/elementary-k-8-certification-program/).

For English with Secondary Education Certification, please follow the link here (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/undergraduate-degree-programs/secondary-grades-6-12-certification/).

Students majoring in Language Arts Education and English with Secondary Education are required to take:

<table>
<thead>
<tr>
<th>Code</th>

Mathematics

Mathematics is one of the most precise and versatile human languages.

With it, mathematical scientists have described and understood complex physical phenomena, supported the infrastructure of the internet era, optimized production in industrial processes, and cultivated the creativity of young minds. As a language, together with its axiomatic underpinnings, mathematics is also a much-explored structure in itself. In recent decades, the boundary between pure and applied mathematics has dissolved, and training in both is important for every mathematician. The 21st century, with its growing importance of big data and computation, offers many opportunities to mathematicians.

The Department of Mathematics and Statistics offers a B.A. / B.S. degree in Mathematics, minors in Mathematics or in Computer and Computational Mathematics and a certificate in Mathematics for Finance. Mathematics Education courses are also available.

Mathematics and Applied and Computational Mathematics 4+1 Option

The Accelerated Masters Studies Option (4+1 Option) in Mathematics and Applied and Computational Mathematics (MATH-ACM) is designed to allow motivated students to earn both a B.S. or A.B. in Mathematics and an M.S. in Applied and Computational Mathematics with one additional year of coursework. This is achieved by a double-counting allowance of up to 15 credits or five graduate level (500-level or above) courses. One additional year of graduate work (15 credits) would be needed to complete the Master's program enabling students to earn two degrees in a total of five years.

The courses double counted must be elected at the 500 level and include:

Math 551 (Advanced Calculus), Math 562 (Math Modeling), and either Math 572 (Numerical Analysis) or Math 573 (Matrix Computations).

This satisfies part of both the Analysis/Algebra option and the Applied Courses for the B.S. and all of the Core requirements for the M.S. degree.

And either Option I, II or III:

- **Option I**: Two additional electives that satisfy both the B.S. degree electives and the Modeling Specialization requirements of the M.S. degree. Choices include: Math 504, Math 520, Math 525, Math 554, Math 558, Math 523, Math 514, Math 516.

- **Option II**: Two courses that satisfy the cognate option for the B.S. degree. Choices include: Stat 530, Stat 535, Stat 545, Stat 560, or select courses at the graduate level from CIS, ECE, ECON, IMSE, ME, PHYS and others.

- **Option III**: One course from Option I and one course from the Option II.

A student may not receive credit for both a 400 and 500 level equivalent courses (for example, both Math 455 and Math 555).

Please see the Applied and Computational Mathematics 4+1 Option (https://umdearborn.edu/casl/graduate-programs/programs/master-
science-applied-and-computational-mathematics/applied-and-computational-mathematics-41-option/) webpage for additional information.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

**Prerequisites to the Major**

Students desiring to major in mathematics are required to have successfully completed:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 115</td>
<td>Calculus I</td>
<td>4</td>
</tr>
<tr>
<td>MATH 116</td>
<td>Calculus II</td>
<td>4</td>
</tr>
<tr>
<td>MATH 215</td>
<td>Calculus III</td>
<td>4</td>
</tr>
<tr>
<td>MATH 227</td>
<td>Introduction to Linear Algebra</td>
<td>3</td>
</tr>
<tr>
<td>MATH 228</td>
<td>Diff Eqns with Linear Algebra</td>
<td>4</td>
</tr>
<tr>
<td>Select one of the following:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>CCM 172</td>
<td>Computing Environ for Math</td>
<td>3-4</td>
</tr>
<tr>
<td>CIS/CCM 150</td>
<td>Computer Science I</td>
<td></td>
</tr>
<tr>
<td>or CIS 1501</td>
<td>CS I for Data Scientists</td>
<td></td>
</tr>
</tbody>
</table>

Total Credit Hours 22-23

**Major Requirements**

A total of at least 33 credit hours of coursework must be elected in mathematics (MATH) and cognate areas at the upper level (300-400 level courses). Students are required to elect 27 hours of coursework in mathematics (MATH) including:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 300</td>
<td>Math Lang Proof &amp; Struct</td>
<td>3</td>
</tr>
</tbody>
</table>

Courses chosen in accordance with one of the following options: 12

Algebra Option or Analysis Option:

**Algebra Option:**

- MATH 412 First Course in Modern Algebra
- MATH 413 Linear Algebra
- MATH 451 Advanced Calculus I

Select at least one of the following:

- MATH 452 Advanced Calculus II
- MATH 492 Introduction to Topology
- MATH 455 Func of a Complex Var with App

**Analysis Option:**

- MATH 412 First Course in Modern Algebra
- MATH 451 Advanced Calculus I
- MATH 452 Advanced Calculus II
- or MATH 492 Introduction to Topology

Select at least one of the following:

- MATH 331 Survey of Geometry
- MATH 395 Elementary Number Theory
- MATH 413 Linear Algebra
- MATH 455 Func of a Complex Var with App

Applied Courses

Select at least two applied mathematics courses (CADM): 6

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 325</td>
<td>Probability</td>
</tr>
<tr>
<td>MATH 396</td>
<td>Introduction to Cryptography</td>

<tr>
<td>PHYS</td>
<td></td>
</tr>
<tr>
<td>STAT (Only one of STAT 301, STAT 325 can be used to satisfy this requirement)</td>
<td>6</td>
</tr>
</tbody>
</table>

Total Credit Hours 33

1 Courses joined with "and" count together as one course.

2 Cannot receive credit for both PHIL 234 and PHIL 350. PHIL 234 cannot be used in Cognates.

**Notes:**

1. Students who wish to use graduate-level courses, numbered 500 or higher, as part of the 27 credit hours of upper-level MATH coursework required for the major, must submit a Petition to obtain the approval of the faculty Program Advisor in Mathematics.

2. Students seeking secondary teacher certification must take MATH 331, MATH 486, EDD 450 and EDD 451. Also, MATH 395 and a course in statistics (STAT) are recommended for such students. None of the following MATH courses may be used to fulfill any requirements of either a Mathematics major or a Mathematics minor.
Mathematics for Finance Certificate provides students, with a strong mathematical background, the opportunity to gain the skills and knowledge to apply mathematics in solving problems arising in economics, finance and risk management.

Mathematics for Finance Certificate will:

- Teach students modern mathematical and computational skills motivated by applications in finance and economics.
- Expose the students to the mathematics of randomness with a rigorous but applied probability course.
- Prepare students for graduate programs in the field of Financial Mathematics.

Certificate Requirements

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 385</td>
<td>Math for Elemen Teachers I</td>
<td>3</td>
</tr>

</tr>
<tr>
<td>MATH 486</td>
<td>Sec School Math for Teachers</td>
<td>3</td>
</tr>
</tbody>
</table>

3. Applied Statistics courses (STAT) cannot be used to fulfill the Math major or minor/concentration requirements.

4. At least 12 of the 27 upper level credit hours in mathematics (MATH) must be elected at UM-Dearborn in order to graduate.

5. In order to enroll in a mathematics class, a student must have earned a grade of at least C- in all prerequisite mathematics courses; a grade below C- signals that the student should immediately repeat the class in order to build a stronger foundation for subsequent study. The same principle applies when a mathematics course is a prerequisite for courses of other disciplines.

7. Students admitted to the 4+1 Option may substitute a maximum of 15 credits from the following: MATH 504 for MATH 404, MATH 520 for MATH 420, MATH 525 for MATH 425, MATH 551 for MATH 451, MATH 554 for MATH 454, MATH 558 for MATH 458, MATH 562 for MATH 462, MATH 572 for MATH 472, MATH 573 for MATH 473, STAT 530 for STAT 430, STAT 545 for STAT 445, STAT 560 for STAT 460

Credit by Examination

The department grants credit for Calculus I to those students who have received a score of three, four, or five on the AB Exam or a score of three on the BC Exam of the Advanced Placement Program Tests of the College Entrance Examination Board. Credit is granted for both Calculus I and Calculus II to those students who have received a score of four or five on the BC Exam of the Advanced Placement Program Tests. In each case, the student is then eligible to elect the next calculus course in the calculus sequence.

Minor or Integrative Studies

Concentration Requirements

A minor or concentration consists of 12 credit hours in mathematics (MATH) courses approved for upper-level credit in the mathematics major. (Excluding MATH 385, 386, 387, 391, 442, 443, 444, 445, 446, 447, 449, 486).

Mathematics for Finance

In the last two decades, financial markets and their impact on world economies have significantly increased their reliance on sophisticated mathematically based methods in assessing risk and implementing financial strategies.

These methods are rooted from the fields of probability, statistics and differential equations. The Mathematics for Finance Certificate provides students, with a strong mathematical background, the opportunity to gain the skills and knowledge to apply mathematics in solving problems arising in economics, finance and risk management.

Media Production

The Media Production Certificate offers students a carefully tailored program in digital media practices including video production and audio production in the field and studio, broadcasting, and new media. The certificate provides technical training while building skills in multiple
models of storytelling and creative expression, including narrative, documentary, and experimental forms. Courses in the program also link practical and applied work with theoretical concepts in film and media studies.

Total Credit Hours: 15

## Notes

1. A minimum 3.0 GPA is required for courses in the certificate.
2. No pass/fail classes allowed in the certificate.
3. Maximum of 6 credits of transfer courses allowed.
4. Maximum of 9 credits may share with the Journalism and Screen Studies major.
5. Sharing with other minors/concentrations allowed.
6. Maximum of 9 credits may share with other certificates.

## Media Roles and Responses to Pandemics

### Integrative Studies Concentration only

The COVID-19 pandemic presents a number of critical challenges to journalism and social media: How we get accurate information in the midst of a public health crisis, how do we evaluate it, and how do we warn the public about the dangers of the plague without causing needless panic? In terms of media literacy, the pandemic exposed the danger of unreliable information on the Internet (both the "Plandemic" video, filled with falsehoods, and a viral news report out of Fresno where two urgent care physicians with no training in epidemiology downplayed the seriousness of the virus are particularly chilling examples). Journalists, meanwhile, have been forced to reassess who and what they cover.

On the national level, President Donald Trump turned his daily press briefings about the virus into a kind of national campaign appearance. What responsibility does the press have to cover such an event? More locally, a group of men in camouflage and brandishing rifles showed up on the steps of the state capitol to protest the Governor’s quarantine. Did the media get drawn into a glorified photo op? Or was this a legitimate news story? Ultimately, the courses in this concentration will include assignments about the relationship between information and public health.

## Medieval and Renaissance Studies

Medieval & Renaissance Studies is cross-cultural in design and covers the time-period from Late Antiquity (ca. 400) to the seventeenth century. Through the interdisciplinary study of history, art, religion, language and literature, students will develop an integrated understanding of medieval and early modern civilization. Its legacy, along with its intellectual and social diversity, enhances our understanding not only of the past but of present society.

## Minor or Integrative Studies Concentration Requirements

The minor/concentration in Medieval and Renaissance Studies consists of 15 credit hours from the courses (CABR) listed below. Students must include courses from three disciplines.

### Art History

1. Prerequisite JASS 2015 required.
Microbiology

Microbiology is the study of organisms that usually require the aid of a microscope in order to be seen.

Micro-organisms include viruses, bacteria, archaea bacteria, algae, fungi, and protozoa. Microbiologists seek to understand the interactions between these organisms and components of our biosphere. Many micro-organisms are essential for life, as we know it, to exist on earth. Many of these organisms produce useful biologically active products, such as enzymes and antibiotics. A small number of them cause diseases in plants and animals, including humans.

The study of micro-organisms has led to many important discoveries concerning:

- the complexities, universality and mechanism of expression of the genetic code;
- the transfer of genetic information between species and modulation of the gene pool;
- the mechanism of antigen-antibody reactions and cellular immunity;
- the synthesis of proteins, nucleic acids and other cellular constituents;
- the structure, function and biogenesis of membranes; and,
- the process of molecular and cellular differentiation.

Students majoring in Microbiology will understand basic principles relating to molecular, cellular and organismal biology. In addition to these, students will exhibit proficiency in selected empirical laboratory skills, develop knowledge of contemporary research using the scientific method and demonstrate competence in oral and written communication. This background of knowledge and experience will prepare the students for entry into professional/graduate school or for employment in government, academic or industrial positions. The learning goals are divided into five parts including (1) Conceptual knowledge; (2) Critical and independent thinking skills; (3) Communication skills; (4) Collaborative skills; and (5) Societal impact.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Pre-Major Requirements

A solid background in mathematics is essential to success in any of the scientific disciplines. Incoming students who intend to choose a major in Microbiology should have completed at least three years of high school mathematics. First year students should plan to enroll in MATH 104 or MATH 105; MATH 113 or MATH 115; or MATH 114 or MATH 116 based on the results of their math placement tests. CHEM 134 or CHEM 144 and CHEM 136 or CHEM 146 are prerequisites to many other courses in the Natural Sciences Department; students majoring in any of the sciences should complete this sequence as soon as possible.

Major Requirements

A minimum of 29 upper level credit hours in Microbiology (MICR) or Biological Sciences (BIOL) must be completed as outlined below.

Note: Students should begin the chemistry sequence before electing any MICR/BIOL course.

Required Courses

</tbody>
</table>

Total Credit Hours 35

Other appropriate cognate courses may be permitted with approval of the faculty program advisor by petition.

Notes:

1. No more than a total of six credit hours combined in MICR 495, MICR 498, and MICR 499 may be applied toward the 120 credit hours required for graduation. Both MICR 498 and MICR 499 require independent study contracts agreed upon by a faculty member.

2. All 400-level MICR courses have MICR 385 as a prerequisite.

3. When topic is appropriate – must Petition.

4. STAT 301 or STAT 327 may be used as a pre-major requirement or as a cognate requirement but not both.

5. In the entire minimum 35 credit hours required for both the microbiology major and cognates, students may use either BIOL/BCHM/CHEM 370 or BIOL/BCHM/CHEM 470 and/or 471.

Minor or Integrative Studies Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in microbiology (MICR).

Middle East Studies

The Middle East Studies Certificate (MEST) is a credential for students who have studied the history and culture of the Middle East from a variety of disciplinary perspectives. Requiring a minimum of 12 upper level credits after the completion of prerequisites, the MEST Certificate can complement your major or stand alone as a post baccalaureate credential.

**Total Credit Hours**: 12

### NOTES REGARDING MIDDLE EAST STUDIES CERTIFICATE PROGRAM:

1. Application to the MEST Certificate Program requires the following: Completion of all pre-requisite courses and ONE course from Group A or B (with a grade of B or better in the Group A or B course).
2. Students may replace one course in Group A with a Group B course.
3. A minimum 3.0 GPA in the courses counting in the MEST Certificate is required at the time of graduation and/or posting of the certificate.
4. At least 6 of the 12 credits for the certificate must be completed at UM-Dearborn.
5. All courses must be taken as standard grade mode (no pass/fail mode allowed), with the exception of a maximum of 3 credits of internship/co-op (approved by Petition).
6. A maximum of 3 credit of internship or co-op may satisfy a Group B requirement by Petition.
7. A maximum of 3 credits may share with major, minor, other certificate program.
8. Students may Petition the MEST Chair for use of upper level research based independent study credit.
9. Students with upper level credit in any of the following Middle Eastern languages (with a grade of B or higher) from another institution may Petition to apply that credit to satisfy the Group B requirement: Berber, Persian, Kurdish, Hebrew, Urdu, Dari, Pashto, Baluch, Armenian, Azeri Turkish, Turkish, Uzbek, and Tajik. This is not an exhaustive list. Research languages such as French or German may also be considered if the Petition demonstrates applicability to student’s program study of the Middle East.

Post-baccalaureate students may apply directly through the standard undergraduate non-degree admissions procedure, meeting the following stipulations:

1. Must have a bachelor’s degree completed (any field) with minimum 3.0 GPA, or have completed a minimum of 90 credits in a declared major and be in good standing with a minimum 3.0 GPA.
2. If pre-requisites have not been met at time of application, provisional admission may be granted with the stipulation that pre-requisites must be completed within two semesters and that no certificate will be granted unless pre-requisites are complete.

### Music

The discipline of Music is made up of three areas: Music History (MHIS), Applied Music (MAPP), and Music Theory (MTHY).

These programs share an interest in the music-making of the entire world and a fascination for why human beings, societies, and subcultures make the kinds of music they do.

Total Credit Hours: 18

It is strongly advised that all students pursuing a minor in music take at least one semester of applied music (MAPP 125 Class Piano or MAPP 135 Class Guitar), in addition to the required course work; or that they join one of the musical ensembles active on campus such as Jazz Ensemble, African Drum and Dance Society, or the Gospel Choir for at least one calendar year.

Pandemics and Infectious Disease

Integrative Studies Concentration only

This concentration offers a science-based curriculum to provides students with knowledge and applications to better understand the interplay between pathogens and humans with emphasis on challenges faced in medicine and public health.

1 Note: All courses in the concentration have prerequisites.

Philosophy

The Bachelor of Arts in Philosophy uses reason to reflect upon the most basic and profound questions that human beings can ask.

Does life have a meaning? Is there a God? What is truth? How ought one to live one’s life?

Philosophy teaches us how to think and write about these and other basic questions in a reasoned and critical fashion. Because philosophy deals with the fundamental issues that underlie all of our investigations into nature and ourselves, the study of philosophy serves students who are interested in the foundations of the sciences, arts, and social institutions.

The study of philosophy is an excellent preparation for graduate and professional school. Philosophy concentrators are more successful in being admitted to schools of law and medicine than students from almost any other field.

Members of the UM-Dearborn philosophy faculty are committed to excellence in both teaching and scholarly research. They are available both for formal advising and informal discussion. We at UM-Dearborn try to create a relaxed and friendly environment, a community of teachers and students dedicated to philosophical inquiry and discussion. Please call on us whenever we can help.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

### Alternative I or II

A student may choose either a traditional major in philosophy (Alternative I) or a program that stresses the relationship of philosophy to other areas of study (Alternative II).

With regard to both Alternatives, students are strongly encouraged to work closely with a philosophy faculty adviser to develop a coherent program. Alternative I requires a total of 24 credit hours in philosophy (PHIL) courses at the upper level (300 or 400 level) and six upper-level hours from an approved list of cognate courses in one or more disciplines outside philosophy. Alternative II requires a total of 18 credit hours in philosophy courses at the 300 or 400 level and 12 credit hours upper-level of cognate courses from the approved list. Satisfactory completion of PHIL 301 Ancient Philosophy and PHIL 302 Modern Philosophy will be counted as part of the 24 hours in philosophy in Alternative I or as part of the 18 hours in philosophy in Alternative II.

Addition Notes: 1. A maximum of 44 credit hours in PHIL may count in the 120 hours required to graduate. 2. Credit cannot be given for both PHIL 234 and PHIL 350. 3. At least 15 credit hours of upper level Philosophy (PHIL) required for the major must be elected at UM-Dearborn.

### Cognates (CALC)

As noted above, cognate requirements depend on the student’s choosing between Alternative I and Alternative II.

**List of approved Cognate courses (CALC):**

Minor or Integrative Studies Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in philosophy (PHIL).

Physics

Physics is the study of the most fundamental properties of matter and energy.

The Bachelor of Science in Physics has been designed with the recognition that a student might choose to concentrate in physics for a variety of reasons. In addition to meeting the needs of those planning to continue their physics education in graduate school, the program serves students planning to pursue technical careers immediately after graduation, those seeking to enter medical, dental or other professional schools, and those planning to earn certification as high school teachers.

After completing a core curriculum in physics and mathematics and an introduction to the life and other physical sciences, students have the opportunity to gain first-hand experience in basic and applied physics research. Most advanced students are able to participate in the research projects of faculty members during any of three University terms. Similar experiences may be arranged in hospital, industrial or government research facilities in the area.

The physics faculty have concentrated their efforts in atomic physics, condensed matter physics, biophysics and astrophysics. Physics majors have worked in these areas and also on projects in the interdisciplinary application of physics in medicine and the environment.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Pre-Major Requirements

A solid background in mathematics is essential to success in any scientific discipline.Incoming students who intend to major in physics should have completed at least three years of high school mathematics. First-year students should plan to enroll in MATH 105, MATH 115 or MATH 116 based on the results of their math placement tests. PHYS 150 and PHYS 151 are prerequisites to all other physics courses. Students should complete these courses as soon as possible.
Cognates

Students must complete at least six additional credit hours in upper-level cognate courses selected from: ASTR, BIOL, BCHM, CHEM, ESCI, ENST, GEOL, MICR, NSCI, MATH (excluding 385, 386, 387), STAT, BENG, CIS, ECE, ENGR, IMSE, ME or other subject areas intimately related to physics and approved by the physics faculty advisor by Petition.¹

Total Credit Hours: 37

¹ Courses leading to knowledge of computer programming in languages such as Fortran, C++, or JAVA are particularly recommended.

Notes:

1. A maximum of 44 credit hours of PHYS may count in the 120 hours required to graduate.
2. At least 12 of the 31 upper level credit hours in PHYS must be elected at UM-Dearborn.
3. A maximum of 6 credit hours of independent study/research in any Dept. of Natural Sciences discipline may count towards the 120 credit hours required to graduate.

Minor or Integrative Studies Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in physics (PHYS).

Political Science

Political Science, broadly defined, is the study of political power and the ends to which that power is used. It is “political” in the sense that it concentrates on the institutions and processes of political systems that exercise power in an authoritative way. It is “scientific” in the sense that there is a systematic body of knowledge about political behavior which can be studied empirically, normatively, and experientially. But in a broader sense, political science also studies the larger issues of justice and the ways in which the use of political power advances or retards the achievement of justice.

Politics deals with “who gets what,” and political science is the study of that process of getting and maintaining power. It is an attempt to define and analyze the processes by which individuals define their interests and interact to promote those interests. At the same time it is the study of the moral ends to which power is used. The six officially defined areas of specialty within the Bachelor of Arts in Political Science are: American Politics, Political Theory, Public Policy, Comparative Politics, International Relations, and Research Methodology.

The Bachelor of Arts in Political Science prepares students for possible careers in public administration; federal, state, and local elected office; public policy analysis; lobbying, journalism, political consulting, law, and graduate work leading to teaching, research, or administration at the university level.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Pre-Major Requirements

Students majoring in political science must take two Prerequisites:

Major Requirements

Students must complete 30 credit hours of upper-level political science (POL) courses. Students are advised to complete required classes as soon as possible to prevent schedule conflicts. Those who ignore this advice may have difficulties completing their major requirements as they planned.

Minor or Integrative Studies
Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in political science (POL).

Professional Language and Cross-Cultural Competency

Modern and Classical Languages offers a certificate which is designed to advance linguistic proficiency while at the same time develop cross-cultural competency and sharpen critical thinking skills.

Certificate Requirements

11 credit hours required in one of the following languages: Arabic, French, German, Spanish. All courses must be in a single language.

Total Credit Hours 11

If foreign language placement is 202 or above, 305/306 will be required and additional courses that focus on culture and/or professional topics from the following to total minimum of 11 credits:

ARBC 332, 350, 351
FREN 336, 337, 338, 339, 375 or 388
GER 376, 377
SPAN 321, 356, 357, 353, 358, 450, 451, 465

Notes:
1. No courses may be taken as pass/fail.
2. A 3.0 GPA in the courses within the certificate is required.
3. Certificate credit can be shared with a major, or minor, or other certificate.

Professional Writing and Rhetoric

The Professional Writing & Rhetoric Major affords students disciplined instruction in writing alongside dynamic opportunities for writing, collaboration, and revising for diverse audiences (academic, professional, and public) and in diverse genres and media. Students will work with faculty to develop identities as writers and plan a workable career path that centers on critical inquiry, cultural analysis, and document drafting. This multifaceted approach to writing will help students see how writing works in different contexts and for different occasions, and how to leverage their expertise in writing to gain a competitive foothold in the many arenas writing takes place in the professional world.

The program focuses on student-centered learning and high-impact practices such as peer review, reflective writing, audience and genre analysis, and content creation.

Faculty in the program value:
- rhetorical effectiveness
- intellectual rigor
- critical inquiry
- creativity
- meta-awareness

Students who pursue the PWR major will learn to:
- move between multiple audiences and genres;
- constructively critique the writing of their peers as well as their own;
- approach different writing occasions in creative, analytical, and reflective ways;
- and understand the experiences of others in an effort to promote inclusivity and accessibility through writing.

Writing Across Contexts 9

Select 3 courses from the following:
COMP/ENGL 223 Intro to Creative Writing
COMP 227 Intermed Expo and Arg
COMP 270 Tech Writing for Engineers
COMP 280 Business Writing & Rhetoric
COMP/ENGL 327 Advanced Exposition
COMP 390 Topics in Composition

Mid-major Requirement

COMP 341 Writing in the Professions

Writing Specializations

Select 4 courses from the following:
COMP/COMM Transnational Rhetorics
462
COMP/COMM Contemporary Rhetorical Theory
464
COMP/COMM/ WGST Arguing Feminism: Rhetoric, Writing & Advocacy
466
COMP/ENGL Read/Writ Young Adult Fiction
468
COMP 475 Supporting Literacies
COMP 485 How Writing Works

Capstone Experience

COMP 300 Writing Studio
COMP/COMM Writing for Civic Literacy
364

Cognate

Any one upper level course from: COMM, ENGL, JASS, LING

Total Credit Hours 37

Notes:

1. If students place out (with English Placement Exam) of COMP 105, this pre-major requirement is met
2. At least 15 of the 31 credit hours must be taken at UM-Dearborn.
3. Composition and Rhetoric faculty will advise students on curriculum plan to take COMP 341 during second semester of sophomore year.

Psychology

As the science of behavior and psychological processes, psychology has a vast range. At one end, it borders on natural sciences such as biology and physiology, and at the other, it shares interests with social science disciplines such as anthropology and sociology. With the goal of understanding, predicting, and modifying behavior and psychological processes, psychologists must include in their studies a variety of perspectives.

The Bachelor of Arts in Psychology at UM-Dearborn is designed to accommodate non-majors who seek personal enrichment, majors who will go on to psychology in a human services career or in a related field, and majors intending to pursue an advanced degree in psychology. The Program thus includes courses in the following areas:

- Developmental (the process of human growth)
- Social (the influence of groups)
- Clinical/Abnormal (understanding and treating people with psychological disorders)
- Industrial/Organizational (applying psychological principles to the work place)

Psychology provides direct training for employment in four major areas. It can be applied to careers:

- promoting individual health (clinical psychology, counseling psychology, community psychology, health psychology)
- in educational settings (school psychology, college teaching)
- in business settings (industrial and organizational psychology, engineering psychology, consumer psychology)
- in the public domain (environmental psychology, law and psychology, psychology and public police)

Psychology is also an excellent preparation and aid for careers in such fields as medicine, law, business, education, and social work. Honors and internship programs provide opportunity for students to develop research skills and to gain practical experience in an applied setting.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Pre-Major Requirement

Students desiring to major in psychology are required to take the following or their equivalent.

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>PSYC 101</td>
<td>Introduction to Psychology (upper level PSYC courses require a minimum grade of C- in PSYC 101)</td>

</tbody>
</table>

Total Credit Hours 3

Major Requirements

Students must complete at least 37 credit hours in psychology (PSYC). Six of these credits will be at the lower level (200 level) and 31 credits will be at the upper level (300 level or above). For those transferring from a community college this requirement will mean that the 31 upper level credit hours will be completed during the junior and senior years.

- PSYC 301 Psych of Infant Development
- PSYC 302 Psych of Child Development
- PSYC 315 Personality Development
- PSYC/CRJ 407 Psychology of Adolescence
- PSYC 412 Psychology of Aging

Social/Organizational Psychology (CASP)
Select one course from the following:  
- PSYC 320/CRJ 382/SOC 382 Social Psychology
- PSYC/AAAS/CRJ 322 Psychology of Prejudice
- PSYC/CRJ 325 Psyc of Interpersonal Relation
- PSYC 3955 Diversity and the Workplace
- PSYC 426 Applied Social Psychology
- PSYC 427 Media Psychology
- PSYC 428 Self & Identity
- PSYC 4305 Psychology in the Workplace

Statistics and Experimental Design
- PSYC 381 Prin of Stat and Exper Design (must be taken before Methods course)

Cognates
Students must also complete at least six credit hours in cognate courses at the upper level (300 level or above), (excluding co-ops, internships or independent studies), from: any CASL discipline (excluding psychology); College of Business disciplines; College of Engineering and Computer Science disciplines; College of Education, Health, and Human Services (EDA and EDC Education disciplines only).

Notes:
1. At least 15 of the 31 upper level credit hours in PSYC must be elected at UM-Dearborn.
2. No more than 6 credit hours of Independent Study and no more than 6 credit hours of Independent Research within the Behavioral Sciences (anthropology (ANTH), psychology (PSYC) and sociology (SOC)) may be counted in the 120 credit hours required to graduate.

Honors Program in Psychology
Psychology offers an honors program which provides special opportunities for outstanding students, including a research training seminar followed by research in collaboration with faculty members. Students are formally accepted for the honors program early in their junior year. Prospective students should plan on completing PSYC 381 and a Methods course by the end of fall term in their junior year. Requirements for entrance are: a) GPA of 3.2 or higher in psychology and overall UM-Dearborn courses, and b) informal evidence of being a superior student, such as high motivation and ability to work independently. Requirements for graduation with honors in psychology are the successful completion of:
- All requirements for the psychology major
- PSYC 481 Computers in Psychology, normally taken in the fall semester, senior year
- PSYC 498 Honors Seminar normally taken winter term, junior year
- PSYC 499 Honors Research normally completed during senior year
- Research proposal meeting completed early in senior year
- Final Oral Defense completed at least one month prior to graduation

Psychology Internship
Juniors and seniors can obtain practical experience working under supervision in a setting relevant to psychology. Internship students will spend approximately 6 or 12 hours per week at their field placement and will attend a weekly seminar on campus. Students may register for PSYC 485 Psychology Internship for 3 or 6 credits. Application should be made to the director of the psychology internship program.

Minor or Integrative Studies Concentration Requirements
A minor or concentration consists of PSYC 101 and 12 credit hours of upper-level courses in psychology (PSYC). Upper-level PSYC courses require a minimum grade of C- in PSYC 101.

Public Health and Pandemics
Integrative Studies Concentration only
Public Health and Pandemics is an Integrative Studies concentration that prepares students to take evidence-based and data-driven action in response to global health crises. Students completing this concentration...
will be able to identify the social and environmental determinants of health that leave certain populations especially vulnerable. In addition, students will develop essential skills in health policy formation, health administration and logistics, health education, risk communication, and epidemiology. While the next public health challenge might still be unknown, the core requirements of any coordinated comprehensive approach are explored in this concentration.

**Public Relations**

The Certificate in Public Relations (PR) offers students practical training in the contemporary skills of public relations.

For communication majors, it provides an ideal way to complement their broad-based study of communication with the practical skills necessary for entry level work in public relations.

This certificate is also open to all majors across campus, and provides a useful toolkit that will be an excellent complement for any major in liberal arts, business, education, or engineering. The addition of a public relations certificate to these areas highlights the practical skills necessary for a variety of careers in the business, non-profit, or government sector.

By the time students complete the PR certificate they should have met the following program goals:

- Understanding the history and evolution of the public relations field.
- Understanding public relations principles as applicable to a variety of contexts and publics.
- Appreciating the ethical dimensions of public relations practice.
- Writing public relations materials using a variety of traditional and new tools, including social media applications.
- Applying public relations principles in analyzing a variety of situations in multiple cultural contexts.
- Integrating the theory and practice of public relations in multiple contexts.

**Religious Studies**

**Minor or Integrative Studies Concentration Only**

University of Michigan-Dearborn is a part of one of the most ethnically and religiously diverse regions in the nation, with a history of religious centers dating to 1701.

Since the establishment of that first place of worship, Ste. Anne de Detroit Roman Catholic Church, Southeastern Michigan has become home to people of many faiths, including a wide array of Christians, Jews, Muslims, Sikhs, Janis, Buddhists, Baha’is, and others. It is impossible to understand even our own Western cultural context without some detailed knowledge of the traditions, influence and rationale of its religious underpinnings. Thus, the Religious Studies Program at UM-Dearborn has been established to provide a focus for discussions of the ethical standards and the cultural orientations which have been fostered by various religions.

Science and Technology Studies

Minor or Integrative Studies
Concentration Only

Science and Technology Studies (STS) is a multidisciplinary field. It uses the perspectives and approaches of the humanities and social sciences to examine the social contexts in which science and technology are produced, and the social consequences and cultural reactions to them. The STS Program gives special attention to the impact of the automobile and automobile industry on American culture.

The STS Program at UM-Dearborn was launched in 2002 by a group of interdisciplinary faculty from the College of Arts, Sciences, and Letters and the College of Engineering and Computer Science. It is the first in the nation to provide a special focus on a particular technology and particular industry—the automobile—with national and global impact. The STS Program is thus designed to bring together students and faculty who want to understand the societal dimensions of science and technology, whether they are studying science, engineering, the humanities, social or behavioral sciences, or business.

STS is an ideal complement for almost any major, whether in physics or philosophy, engineering or economics, management or math, communications or chemistry. In a world that’s increasingly shaped by science and technology, and in a region where many jobs are still connected to an automobile industry undergoing its most profound changes in over a century, STS provides new ways of understanding the scientific and technological issues facing us in our lives and our careers.

The STS minor/concentration consists of an introductory course, STS 300 (Introduction to Science and Technology Studies), and at least one course from each of three groups of upper-level course offerings on “Science, Technology, and Cultures,” “Science, Technology, and Labor,” and “Science, Technology, and Environments.” Many of the Program’s courses, including the introductory one, contain at least some focus on the automobile, but students are also able to study a variety of other topics, from environmental ethics to the legal and political issues raised by the internet to women and science.

Social Studies

The Bachelor of Arts in Social Studies provides students with a broad range of courses through which to examine and appreciate the processes and institutions that shape civilizations and social orders. It seeks to recreate the context of changing human activities, be they cultural, economic, geographic, political, or social, and to explain and understand the contemporary human condition. Because of its interdisciplinary structure, the Social Studies major is valuable for those who want a multidimensional understanding of the human past and future, and of the contemporary world and their own place in it.

The degree was especially designed for students seeking to become secondary school teachers, but it could also provide background for those who seek a career in government work, law or business.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

Pre-Major Requirements

The Social Studies major requires the student to take two introductory courses.

Society and Technological Change

An interdisciplinary approach to the questions of technology and society is required in order to keep pace with rapid technological change and an increasingly complex digital future. This area of study also develops analytical abilities, verbal and written communications skills, and critical thinking.

Notes:
1. At least 15 of the 27 upper level credit hours required for the major must be elected at UM-Dearborn.

For Secondary Education Certification Students

Please see the College of Education, Health, and Human Services secondary certification (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/undergraduate-degree-programs/secondary-grades-6-12-certification/) section for specific courses required.

Sociology

Sociology is the study of society and how it is shaped by individual and collective action.

A "sociological imagination" helps us to see the connections between private troubles, experience individually, and public issues, experienced collectively. It also explains how individual attitudes and behaviors are distributed in patterned and predictable ways according to the position of the individual society's institutional structure. These institutions include those of economy, government, family, education, and religion.

Sociologists are cross-disciplinary in their research as well as teaching. This means that they are active in related programs on campus, such as Criminology & Criminal Justice Studies, Urban and Regional Studies, Women's and Gender Studies, African and African-American Studies, Religious Studies, and Law and Society.

The field of sociology has grown in scope and importance as society has grown more complex and pluralistic. The modern individual is involved in a tightly integrated, sometimes conflicting, network of social groups, families, institutions, governmental, economic, educational and religious bodies, and specialized community organizations. Sociology studies the internal structure by which society is organized, the development and dynamics of the various groupings within it and the influences of these upon the individual. The Bachelor of Arts in Sociology provides a focus for general liberal education, as well as for preparation for careers in sociology. These include careers in social work and related human services, law, criminal justice, labor relations, public administration, business management, human relations, marketing and public opinion research.

Internship, Co-op, and Research Opportunities

Sociology students are provided with supervised field experience in a variety of occupational agencies focusing on social work and/or criminal justice. Students are placed in sites appropriate to their occupational goals. Students may also pursue cooperative educational opportunities, which provide paid career-related work experiences.

The CRJ Internship provides supervised field experience in a variety of occupational agencies focusing on criminal justice. Students are placed in sites appropriate to their occupational goals. Each intern spends a total of 80 hours on site and attends a weekly seminar. Students may elect to take this course for 3-6 credits.

The Sociology faculty encourages students to develop their own research projects in the form of independent studies (SOC 398/498). To find an appropriate faculty member for either one of these courses, students should start by consulting the list of faculty members and their specializations. Often, faculty members are involved in research in which students can take part as data collectors or analysts.

Sociology students frequently present the results of their research at undergraduate research conferences like Meeting of the Minds and the Michigan Undergraduate Research Forum, and even at professional meetings.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).
### Pre-Major Requirement

<table>
<thead>

</table>
The program in Urban and Regional Studies (URST) provides opportunities for in-depth study of some of the major challenges facing individuals and groups living and working in major metropolitan regions such as Detroit. These challenges include economic development, urban poverty and income inequality; preserving and promoting culture, architecture and art; land use conflicts; and the provision of adequate and sustainable transportation and housing services. The focus of the URST program is to provide you with the knowledge, techniques and critical analytical skills that will enable you to effectively participate in changing your city and region.

The URST program is interdisciplinary by design, meaning that courses draw upon a variety of traditional academic disciplines – e.g. Anthropology, Economics, English, Geography, History and Sociology. Students are encouraged to rigorously and creatively integrate the theory and methods learned in these courses. In addition, a unique feature of the program is that students gain hands-on experience by working in the community through internship, academic service learning and/or community-based research.

Pursuing a degree in Urban and Regional Studies at UM-Dearborn offers you the opportunity to combine real-world practice and theory. Students can specialize in areas such as urban and regional policy, community development, urban design and the environment.

Help change the world (or your corner of it) by pursuing a degree in Urban and Regional Studies at UM-Dearborn!

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

The Major

The Urban and Regional Studies major requires the completion of 36 credits. The majority of these credits are filled through courses in three separate concentration tracks:

- Concentration Track I Urban Problems and Policy
- Concentration Track II Community Development, Culture and History
- Concentration Track III Environment, Design and Space

Students select one concentration track from which they must take a specific number of credits. They take the balance of their concentration track-related credits from the other two tracks.

Students must also take a specific number of credits in academic-based community research through an internship, independent student, or upper-level courses designated as academic service-learning.

The three-credit Urban and Regional Studies: Theory and Practice (URS 300) provides an introduction to urban and regional studies, and the three-credit Senior Capstone in Community Research (URS 450) rounds out the required URST courses. Students take additional credits within a single academic discipline (i.e. cognate courses) to ensure a well-rounded understanding of urban issues and how to study and address them.

Minor or Integrative Studies

Concentration Requirements

A minor or concentration consists of 12 credit hours of upper-level courses in sociology (SOC).

Urban and Regional Studies

The program in Urban and Regional Studies (URST) provides opportunities for in-depth study of some of the major challenges facing individuals and groups living and working in major metropolitan regions such as Detroit.
Independent Study

Designated approved 300/400, 3000/4000 level academic service learning (ASL) courses

1  Students may elect to participate in any CASL Internship program with approval from their URST faculty advisor by Petition and the Internship Program Director.

2  3 credits of which can also be used to satisfy the credit requirements in a single track, with the approval of the URST program faculty director by Petition.

3  For the list of ASL courses for each semester, see Civic Engagement http://umdearborn.edu/asl/.

Concentration Tracks

Must declare one of the following concentration tracks:

Concentration Track I: Urban Problems and Policy (CAUP)

Cognates

Six credit hours of upper-level (300/400; 3000/4000 level, excluding internships, co-ops and MATH 385, MATH 386, MATH 387) coursework in a single discipline, in addition to any courses already elected in that discipline used to satisfy urban and regional studies requirements.
Cognate courses will provide supporting skills or contexts for the study of urban issues.

Notes:

1. At least 18 of the 36 upper level credit hours required in the major must be elected at UM-Dearborn.
2. In satisfying the academic based community research requirement, students must obtain approval of the URST faculty program advisor for internships, independent study, and “other” approved forms of academic service learning, prior to enrolling in the courses. Courses already designated as academic service learning (ASL, 300/400; 3000/4000 level only) do not require approval. ASL courses vary by semester.

Minor or Integrative Studies Concentration Requirements

The minor/concentration requires 15 credit hours of upper-level coursework including URS 300 and at least one course from each of the three tracks below.

Women's and Gender Studies

Women’s and Gender Studies at the University of Michigan - Dearborn is a vibrant interdisciplinary community of faculty, students and alumni dedicated to excellence in scholarship, teaching, learning and activism.
Are you interested in a program of study that allows you to pursue your interest in gender equity and social justice while developing the skills employers and competitive graduate programs desire?

In Women's and Gender Studies you will examine the ways that gender – through its connection with other forms of power such as race, class, sexuality and national location – shape lives, bodies, institutions and worlds.

You will also develop your analytical and critical thinking skills, and your ability to integrate and apply knowledge across the disciplines – skills that are needed to succeed in today's ever-changing and dynamic labor market.

The community service orientation of our program provides experiences that will contribute to both your intellectual growth and post-graduate employment opportunities.

Our students are campus and community leaders. They are Difference Makers, Honors scholars, Commencement speakers, and Chancellor medallion winners. Graduates of our program have gone on to successful careers in social work, health care, education, arts administration, human resources and community change, and scholarship funded graduate study in a variety of fields.

In addition to the major requirements, students must complete all CASL Degree Requirements (p. 76).

### Major Requirements

The major requires 30 credit hours in Women’s and Gender Studies (WGST):

<table>
<thead>
<tr>

Total Credit Hours 30

Notes:
1. Any 3 credit hours UM-Dearborn internship or WGST 498 with approval of the WGST program director by Petition.

Cognates
Six credit hours of upper-level (300/400; 3000/4000 level) coursework in a single CASL discipline. Excluding courses in Women's and Gender Studies (WGST) or cross-listed courses with Women's and Gender Studies, and MATH 385, MATH 386, MATH 387. Internships may not be used to satisfy the cognate requirement.

Notes:
1. A maximum of 44 credit hours in WGST may count in the 120 credits hours required to graduate.
2. At least 15 of the 30 upper level credit hours required in WGST must be elected at UM-Dearborn.
3. Any one course may be used to satisfy only one requirement within the major.

Minor or Integrative Studies Concentration Requirements
The minor/concentration requires 15 credit hours of upper-level WGST coursework including WGST 303, Introduction to Women's and Gender Studies.

Writing
The Writing Certificate provides students of all majors the opportunity to enhance their writing abilities and have this expertise appear as a credential on their transcripts. There is a national demand for employees who have strong skills in writing. This certificate provides a vehicle for enhancing the intellectual and personal development of students by allowing them to strengthen their writing skills and, at the same time, explore new topics and issues related to their personal interests.

Practicum experience required (minimum 30 clock hours; must include substantial writing/editing component). Possible ways to fulfill practicum requirement include:

- Independent Study
- Internship (HUM 485/HIST 3085)
- Co-op (LIBS 395)
- Peer Consulting in Writing Center
- Community Service Work
- Volunteerism/Civic Engagement

**Notes Regarding Writing Certificate Program:**

1. Students, at the time that they are completing the Writing Certificate, must submit a Memorandum of Reflection, a sample of written work, and a Writing Certificate Completion Sheet. See LCC Department for details.
2. Courses used toward another major, minor or certificate program may simultaneously count toward the Writing Certificate.
3. A minimum 3.0 GPA in the courses counting toward the Writing Certificate and a minimum 2.0 cumulative GPA are required at the time of graduation and/or posting of the certificate.
College of Business

Vision and Mission

The vision of the University of Michigan-Dearborn’s College of Business is to build on the quality tradition of the Block M by being a thoughtful leader, known for creating positive impact on the communities we serve, and for promoting a global perspective through active learning, relevant teaching, and influential research.

The mission of the University of Michigan-Dearborn’s College of Business is to offer a challenging and engaging business education that broadens our students’ intellectual perspectives and career opportunities in an inclusive environment through a balanced emphasis on active learning, and rigorous and relevant teaching and research. Our mission is supported by:

• A faculty committed to teaching that supports student development and preparation for a wide range of business opportunities.
• Collaborative research that has sustained impact on the thoughts and activities of our academic and professional colleagues.
• Service by faculty and staff that supports an evolving curriculum and the needs of our students, personnel, community, and external partners.

Since 1959, the College of Business at the University of Michigan-Dearborn has been committed to providing practice-oriented business programs that address the needs of business, industry, and government. Our undergraduate and graduate students are taught by faculty who have close ties with the business community as well as expertise from participating in the business, professional, and academic realms.

The exceptional performance of our faculty has provided that the College of Business is one of more than 900 schools worldwide to be accredited by AACSB International. This accreditation not only speaks to the quality of the faculty but also to the relevancy and practical nature of the courses offered in the College.

When students graduate from the College of Business, they take with them the skills and knowledge to lead in a rapidly-changing business environment, both regionally and nationally. Whether it is through their participation in our internship program or their experiences in iLabs, the College’s Center for Innovation Research, our students gain real experience and are positioned to immediately contribute to their employers’ success and advance their career.

Bachelor of Business Administration Program

The Bachelor of Business Administration (BBA) program is a professionally oriented program that develops the diversified competencies called for in the management of a modern business enterprise. The program also is designed to impart the relevant knowledge, competencies, and skills demanded to manage and lead modern public and private organizations. It also provides a rigorous preparation for graduate study in business administration, law, and related areas.

BBA Program Learning Goals

The following Learning Goals have been developed by the faculty in the College of Business. These goals describe what we want all of our students to know and be able to accomplish upon graduation.

1. Students will be knowledgeable about the business disciplines.
2. Students will be effective communicators.
3. Students will be effective team members.
4. Students will be competent in the application of technology.
5. Students are able to understand and integrate knowledge across diverse disciplines, cultures, and context.
6. Students will be knowledgeable about ethical principles and their application.
7. Students will apply critical thinking skills to business situations.

BBA Program Planning for UM-Dearborn

Pre-business Students

Programs of undergraduate study in business administration leading to a bachelor’s degree involve approximately four years of college study, the first two years of which can be considered pre-professional preparation in foundation courses covering fundamental subject matter. The third and fourth years constitute the more specialized professional phase of the degree program. It is in the offering of this professional phase that the faculty of the College of Business has principal responsibility.

Students seeking the BBA degree who are admitted to UM-Dearborn as freshmen enter the pre-business program of the College of Business. The pre-business program is designed to provide students with a liberal arts foundation. Pre-business students declare their major in the BBA program during the term in which they complete their sophomore year and the specific course requirements. Students not enrolled in the BBA program cannot elect more than 30 credit hours in coursework offered by the College of Business.

Admission

Admission to the BBA program is competitive and requires that the student has high promise as evidenced by the record compiled in the first two years of study. A student must have completed at least 55 credit hours to be considered for admission to the BBA program. These credit hours must include necessary prerequisites for admission to the BBA program.

Courses required for admission to the BBA Program, including those courses that are prerequisite to the required courses, in which a grade of C- or below has been received, must be repeated during the student’s next academic term. Prerequisite courses are COMP 105, COMP 280, ECON 201, ECON 202, MATH 104 or MATH 105, BA 100, ISM 120, ACC 298, ACC 299, and DS 301. In addition, students must complete a minimum of 9 credits from the BBA core and/or any additional upper-level business courses. A minimum overall 2.80 GPA is required in DS 301 and all other BBA core and/or upper-level business courses for admission to the BBA program.

Appropriate and timely sequencing of the required math courses is critical for the successful admission to the BBA program. Students entering as freshmen are required to have completed math through college algebra or pre-calculus (MATH 104 or MATH 105) by the end of their sophomore year. Freshmen are required to take the math placement exam prior to their first term of enrollment and begin their math courses in their first term of enrollment.
BBA Program Planning for Transfer Students

Programs of undergraduate study in business administration leading to a bachelor’s degree involve approximately four years of college study, the first two years of which can be considered pre-professional preparation in foundation courses covering fundamental subject matter. The third and fourth years constitute the more specialized professional phase of the degree program. It is in the offering of this professional phase that the faculty of the College of Business has principal responsibility.

Admission

A transfer student seeking the BBA degree enters the College of Business as a Pre-business student. The transfer student will consult junior standing and the required courses for admission to the BBA Program. Prerequisite courses are UM-Dearborn’s COMP 105, COMP 106, 270, or 280; ECON 201 and 202; MATH 104 or 105; BA 100; ACC 298 and 299; and DS 301. In addition, students must complete a minimum of 9 credits from the BBA core and/or any additional upper-level business courses. A minimum overall 2.80 GPA is required in DS 301 and all other BBA core and/or upper-level business courses for admission to the BBA program.

The UM-Dearborn Undergraduate Admissions Office provides local community colleges with equivalency tables. These tables should be consulted when planning course scheduling. Transfer students with credit for DS 301 from an AACSB accredited school will be required to complete BE 401 or FIN 401 as a substitution for DS 301 towards the upper-level business credits for admission to the BBA Program.

Admission is based on the quality and content of both the high school and the college academic records, and standards of evaluation are designed to ensure that each student who is admitted has the intellectual capacity and the preparation to pursue advanced undergraduate work successfully. Admission criteria are applied to all students without regard to race, color, sex, creed or national origin.

Students who plan to transfer to the BBA program at UM-Dearborn after completing two academic years of course work should plan to complete most of the General Education requirements (Dearborn Discovery Core) prior to transfer. Please refer to the University’s website at: https://umdearborn.edu/faculty-staff/academic-program-and-course-development/dearborn-discovery-core-general-education/ for complete information regarding general education requirements.

Appropriate and timely sequencing of the required math courses is critical for the successful admission to the BBA program. Pre-business students are encouraged to take the math placement exam prior to their first term of enrollment. Transfer students must progress with math every term of their enrollment until they complete the math requirement.

Transfer of Credit

Full credit will be given for all acceptable courses in which a student has earned at least a C grade at an accredited college. A maximum of 62 credits from a community college and a maximum of 75 credits from a non-UM university or college may be applicable towards degree requirements; the total maximum number of non-UM credits applied not to exceed 75. A maximum of 90 applicable credits from another UM unit may be applicable towards degree requirements. The minimum number of hours at UM and in the College of Business as stated in the section on BBA Degree Requirements must also be earned.

Michigan Transfer Agreement (MTA)

Refer to this topic under Admissions in the General Information section of this Catalog.

Articulation Agreements

The College of Business has articulation agreements with Henry Ford College, Macomb Community College, Oakland Community College, and Schoolcraft College. Please refer to the University’s website at: https://umdearborn.edu/cob/undergraduate-programs/admission/transfer-students/community-college-transfers/ for information.

BBA Degree Requirements

The BBA degree will be granted to those students who meet the following requirements:

Satisfactory completion of at least 120 hours of college-level work distributed as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>BBA Prerequisite requirements</td>
<td>29</td>
<td></td>

<td>18-21</td>
<td></td>
</tr>
</tbody>
</table>

1 Transfer students may fulfill the general education requirements with the Dearborn Discovery Core or in part with the completion of the Michigan Transfer Agreement (MTA). Please contact an advisor for information.

Electives to meet the minimum 120 credits for graduation will vary student to student. Courses may count for more than one area requirement. Satisfactory completion of 48-58 hours at UM-Dearborn is required. A student may elect no more than the equivalent of two courses within their last 36 credits at another higher education institution. A minimum of 30 credits must be completed as a student in the BBA Program. Students are encouraged to meet with their advisor regularly to ensure a timely graduation.

Achievement of a minimum 2.0 grade point in all UM-Dearborn coursework, in all courses offered by the College of Business, and in the major is required to earn a BBA degree.

**Major Requirements (18-21 hrs)**

All BBA students must declare and fulfill the requirements for a major in Accounting, Digital Marketing, Finance, General Business, Human Resource Management, Information Systems Management, Marketing, Small Business Management, or Supply Chain Management.

**Note:** Only one independent study can be applied toward the General Business, Marketing, and Human Resource Management majors. Marketing majors may do more than one if they are iLabs related.

**Minor**

Students pursuing any degree may wish to complement their academic program with a minor. A list of available minors and requirements are available on the website at: https://umdearborn.edu/academics/undergraduate-studies/majors-minors.

**BBA Elective Courses**

Students must complete a minimum of 120 credits to earn the BBA degree. Elective credits are the non-specific credits each students needs to reach degree completion. College-level courses in any discipline which bear UM-Dearborn or transferable academic credit can apply. College of Business internships (BI 350, etc.) may also apply. Additive credit courses do not carry college-level credit toward program. Courses below the 100 level are additive credit.

Internship & Career Management Center (ICMC)
The Internship and Career Management Center (ICMC) strives to be an integral part in preparing our College of Business students for gainful employment by honing their career-ready competencies and equipping them with valuable career development tools. We coach our students through rewarding internship and experiential learning opportunities, targeted career fairs, career development workshops, mock interviews and much more.

We are focused on creating collaborative partnerships among our office, other campus entities and the business community in order to provide comprehensive programming, counseling and career opportunities for our students. We offer a variety of services which are tailored to each individual student and their specific needs. Please contact our office with any questions or to make an appointment. Remember, the ICMC means business!

Internship Program
Students who are formally admitted to the College of Business and have secured an internship may choose the option to utilize their internship for academic credit. Eligibility is determined by reviewing your curriculum with your academic advisor to ensure that you have the appropriate credits available to utilize. Once this is determined, an intake appointment with the Internship Program Manager is required in order to complete the
necessary requirements and procedures prior to enrollment. Enrollment for any BI course must be approved by a representative of the ICMC.

For additional information regarding ICMC programs, please visit the website at: umdearborn.edu/cob/life-cob/internship-career-management-center (http://umdearborn.edu/cob/life-cob/internship-career-management-center/).

iLabs
iLabs is the University of Michigan-Dearborn’s Center for Innovation Research, an office dedicated to understanding the impact of innovation through research and promoting experiential learning and entrepreneurship on campus. Students, who can participate in the 3 credit-hour iLabs independent study as student researchers, gain valuable soft skills like time management, communication, project management, and collaboration. Similar to an internship, students can expect to manage and complete real world projects for both the University as well as external clients. Projects are conducted every semester, and both graduate and undergraduate students from all majors can apply to participate.

For additional information and to apply, visit the website at: umdearborn.edu/cob/business-community/ilabs-center-innovation-research (https://umdearborn.edu/cob/business-community/ilabs-center-innovation-research/)

Academic Honors
Dean's List
A student is honored by inclusion in the Dean's List if he or she meets two conditions:

1. has completed at least 12 credit hours in graded coursework toward a degree during the term, and
2. has achieved a 3.50 or better term GPA. The Dean's List is compiled after the fall, winter, and summer terms.

Beta Gamma Sigma
Beta Gamma Sigma is the national honor society for business schools accredited by AACSB International. Membership in Beta Gamma Sigma is one of the highest scholastic honors that a student in the BBA program can achieve. It is based on outstanding scholastic achievement as measured by overall grade point average. Invitation for membership to Beta Gamma Sigma is extended to qualified BBA juniors and seniors in the top 10 percent of their class.

Honor Scholars
Every year, an honor scholar from each major may be selected and recognized at the Annual Honors Convocation. Selection is made by the College of Business’s Scholarship Committee based on the students’ GPA (both cumulative and major GPA) and achievement of 90 credit hours or more toward degree.

Chancellor’s Medallion
The Chancellor’s Medallion is awarded at each Commencement Exercise to UM-Dearborn graduates including one from the College of Business. The student is selected by the Scholarship Committee based on his/her quality of character, vitality, intellect, integrity and academic record. The Fall awardee is selected from students who were graduated in August and those who are to be graduated in December. The Winter awardee is selected from students who are to be graduated in April/May.

Graduation with Distinction
Students who are degree candidates in Business and have obtained a cumulative GPA of at least 3.20 but less than 3.60 are recommended for graduation “With Distinction.” Such distinctions are noted on the transcript and diploma.

Graduation with High Distinction
Students who are degree candidates in Business and have obtained a cumulative GPA of at least 3.60 are recommended for graduation “With High Distinction.” Such distinctions are noted on the transcript and diploma.

Accounting
The Accounting major provides the student with a foundation to pursue a career in accounting. Whether you are interested in entering the corporate world or preparing to be a CPA, we have a program flexible enough to serve your needs. Our students are challenged to recognize and define complex business problems, explore alternatives, and effectively communicate successful solutions. Students in the Accounting major at UM-Dearborn can complete the CPA exam preparation course through CPAexcel® at a significant discount, and even qualify to receive a 100% reimbursement.

Accounting 4+1 Option
The Accounting 4+1 Option allows students to earn both the BBA in Accounting and the Master of Science in Accounting at a substantial savings in time and money. Students in the program may count four graduate accounting courses toward the BBA Accounting major and the MS-Accounting at the same time, thereby saving four courses. Students will receive scholarships to reduce the net cost of these four shared courses to undergraduate tuition rates. Please see the College’s website for admission requirements and program details.

In addition to major requirements, students must complete the BBA Degree Requirements (p. 178).

Total Credit Hours 15

Finance majors may use ACC 358 towards an accounting minor.

**Business Studies as a Secondary Major**

*(not available to College of Business majors)*

The Business Studies major combines foundational courses in business with the liberal arts. It is meant to complement a non-business student’s program of study by offering primary business topics as well as the necessary analytical tools required for careers in management related fields. Students cannot pursue this major either on its own or in conjunction with a business major.

Prerequisites for all courses must be met. Students not enrolled in the College of Business BBA program cannot elect more than 30 credit hours in courses offered by the College of Business.

**Prerequisites to the Major**

Digital Marketing

Digital marketing is where marketing meets digital media, such as the internet, social media, cell phones and video games. Digital marketing covers activities such as search engine optimization, viral marketing, web analytics, social network marketing, experiment-based market research, and reputation management. Majoring in digital marketing and marketing is not permitted.

In addition to major requirements, students must complete the BBA Degree Requirements (p. 178).

Entrepreneurship

**The Minor and Certificate in Entrepreneurship can complement any field of study.**

Gain the tools and skills you need to familiarize yourself with tasks such as market assessment, capital formation, business planning, effective communication, staffing, systems design, financial planning and operations management. The minor and certificate focus on the research, planning, and strategies that are critical to start a new business, take over a family business, or quickly advance in your field. Both programs are open to all undergraduate students at UM-Dearborn.

Current UM-Dearborn undergraduate students:

- Open to anyone with a GPA of at least 2.0.
- Must declare the Entrepreneurship certificate by submitting the declaration of certificate form (https://umich.app.box.com/s/4dt8koj3qwwwryyp2qjaxyj6pcanyvx/) to their academic unit office.

**Goals of the Certificate**

**Goal 1:** Students will apply a working knowledge of the principles of entrepreneurship to analysis and problem solving. Objectives: Students will be able to:

- 1a Creatively analyze the business environment for opportunities
- 1b Recognize problems and convert them into opportunities

**Goal 2:** Students will understand how to apply entrepreneurial techniques in an organizational setting. Objectives: Students will be able to:

- 2a Use the entrepreneurial mindset in various business settings
- 2b Apply the concepts of entrepreneurship in their chosen field of work

**Goal 3:** Students will gain an understanding of the steps that might take in their own entrepreneurial pursuits. Objectives: Students will be able to:

- 3a Identify local resources for starting their own entrepreneurial ventures

**Entrepreneurship Minor**

Required Capstone Activity
Select one course (3 credits) from the following: 3
BA 491 Bus Experiential Learning
ENT 403 Social Entrepreneurship 3

Total Credit Hours 12

1. BPS 441 can satisfy either Tier 1 or Tier 2, but not both.
2. ENT 401 can satisfy either Tier 1 or Tier 2, but not both.
3. ENT 403 can satisfy only one of the following Tier 1 or Tier 2 or Required Capstone Activity. If ENT 403 is used to satisfy the Capstone requirement, then BPS 441 and ENT 401 must be elected to satisfy the Tier 1 requirement.

Certificate Requirements
The Certificate in Entrepreneurship requires 9 credits.

Finance
The Finance major offers flexibility for developing careers in investments, financial institutions and corporate finance. The program offers analytical rigor, theoretical knowledge and teaching methods that stress hands-on applications. The Program also equips students for the relevant professional examinations such as Chartered Financial Analysts (CFA), Certified Financial Management (CFM), and Certified Financial Planning (CFP). Finance internships historically have proven to be among the most numerous and challenging available. Students majoring in Finance may choose an optional concentration in Financial Management or Financial Services.

In addition to major requirements, students must complete the BBA Degree Requirements (p. 178).

---

1 Finance majors may be eligible to apply internship credit (BI 350 or 450) towards a Finance elective course. These internships must be approved in advance by the discipline faculty and department chairperson. Please see an advisor for specific details.
Financial Planning

The Financial Planning certificate complements a number of fields, such as finance, marketing, accounting, and economics.

Gain the tools and skills you need to familiarize yourself with tasks such as personal financial planning, investment planning, retirement planning, tax planning, estate planning, and risk management. The program is open to all undergraduate students at UM-Dearborn.

Students interested in preparing for the professional financial planning examinations may wish to complete the Financial Planning minor (p. 186), which includes the courses in this certificate program.

Admission

The certificate in Financial Planning is available to current UM-Dearborn undergraduate students:

- Open to any UM-Dearborn undergraduate student with a GPA of at least 2.0.
- Must declare the Financial Planning certificate by submitting the declaration of certificate form (https://umich.app.box.com/s/4dt8koj3qwwwruyp2qjaxyj6pcanyvx/) to their academic unit office.

Goals of the Certificate

Goal 1: Students will explain the components of financial planning.

Goal 2: Students will be able to develop a retirement savings plan for an individual.

Goal 3: Students will describe an ethics framework for a personal financial planner.

Certificate Requirements

The Certificate in Financial Planning requires 4 courses or 12 credit hours.

- FIN 407 Investment Fundamentals
- MKT 434 Sales Mgmt & Personal Selling

Total Credit Hours 12

Note that the required courses have a prerequisite (FIN 401). This course is required of College of Business students but would be in addition to the 12 credit requirement for most students not in the College of Business.

General Business

The major in general business has been designed for students seeking a broad business background rather than a specialization in any one functional area of business. Coursework to complete the General Business major must be upper division business credits beyond the BBA core (excluding business internship). Students majoring in General Business may choose an optional concentration in Pre-Law. General Business students will not be permitted to combine this major with any other College of Business major.

In addition to major requirements, students must complete the BBA Degree Requirements (p. 178).

General Business Major (18 credit hours)

18 credit hours from College of Business course work beyond the BBA core.

General Business Major with a concentration in Pre-law

Human Resource Management

The Human Resources Management major courses are designed as fundamental preparation for positions in human resource management, industrial relations, or general management. A Human Resources Management major would also be valuable to students who are not contemplating a career in human resources, as these courses provide knowledge and skills for selecting, developing, motivating, retaining, evaluating, and directing employees - skills needed by managers in any technical or business domain.

In addition to major requirements, students must complete the BBA Degree Requirements (p. 178).

Information Systems Management

The Information Systems Management major is designed to prepare students for positions in system development, system analysis, database administration, networking, and as ISM specialists in user departments such as finance, human resource management, marketing, and operations management. The major is also designed to prepare students to assume increasing levels of managerial responsibility as their career progresses. This course of study includes the components of computer-based information systems: hardware, software, telecommunications, databases, people (the people who develop, manage, run, program, maintain, and use the systems), and procedures (strategies, policies, methods, and rules involved in all aspects of information systems). This program teaches these principles and their application in a holistic and integrated fashion using a combination of traditional classroom instruction, case studies, projects, and hands-on methods.

In addition to major requirements, students must complete the BBA Degree Requirements (p. 178).

## Information Systems Security Minor

Information Systems Security is a rapidly growing field which is very important to business and governmental organizations. Information security jobs, in both the private and public sectors, are growing at a very fast pace, based on bureau of labor statistics data. Information Systems professionals are increasingly being required to have exposure in information security.

**Total Credit Hours:** 21

## Marketing

Marketing covers the creation of new products and services, the distribution of products from suppliers and manufacturers down to the final consumers, the pricing of products, as well as advertising, sales, and other promotional initiatives. The marketing major provides students an opportunity to develop skills for careers in marketing management, advertising, sales, marketing research, new product development, retailing, international business, purchasing, management of nonprofit organizations, and general business management. Their functional visibility enables high-achieving marketing persons to be aptly recognized, promoted, and compensated. Marketing is also an excellent major for students who are considering starting their own business.

Majoring in digital marketing and marketing is not permitted.

In addition to major requirements, students must complete the BBA Degree Requirements (p. 178).

**Management**

The Management minor is not available to College of Business students. Prerequisites for all courses must be met. Students not enrolled in the College of Business BBA program cannot elect more than 30 credit hours in courses offered by the College of Business.

**Management Minor**

*(not available to College of Business students)*
Small Business Management

The small business management major is designed to offer students a broad range of knowledge and skills in order to prepare them to lead or contribute to a small or medium enterprise. Small businesses present unique opportunities and challenges, which students in this major will be equipped to navigate. In addition to learning about diverse business disciplines, students will be exposed to the fundamental processes of starting and managing a small business.

In addition to major requirements, students must complete the BBA Degree Requirements (p. 178).

Supply Chain Management

The major in Supply Chain Management provides students with opportunities for careers in e-business, startups, manufacturing, high tech, service and consulting companies. Supply Chain Management encompasses a set of approaches utilized to efficiently integrate suppliers, manufacturers, warehouses and stores so that merchandise is produced and distributed at the right quantities, to the right locations, and at the right time, in order to minimize system-wide costs while satisfying service level requirements. SCM is an interdisciplinary field that emphasizes cross-functional links and seeks to manage those links to enhance a company’s competitive advantage.

In addition to major requirements, students must complete the BBA Degree Requirements (p. 178).

College of Education, Health, and Human Services

Our Work: Education, Health, and the Human Services

The College of Education, Health, and Human Services aims to prepare and sustain exemplary practitioners and administrators for work in the interrelated fields of education, human health, and human services through an emphasis on scholarship, diversity, inclusion, and excellence in service delivery.

The College draws broadly upon institutional resources including faculty and programs in other colleges of the University. Additionally, facilities in local school districts, health-related settings, public agencies and private corporations regularly provide students with a spectrum of rich experiences.

The College contributes to the University of Michigan-Dearborn’s impact as a dynamic metropolitan university in which teaching and research interact to develop leaders and new knowledge in the tradition of the University of Michigan. Students in CEHHS have the opportunity to participate in many organizations within the College, campus, and community.

History of the College

Shortly after UM-Dearborn opened in 1959, a small teacher certification program was added to the liberal arts division. By 1969 the teacher certification program had grown into one of the largest academic departments on the campus. During 2012-13, the Regents of the University of Michigan authorized the addition of the Department of Health and Human Services (HHS), and the creation of the College of Education, Health, and Human Services (CEHHS).

Undergraduate Degree Programs

At the College of Education, Health, and Human Services (CEHHS), our undergraduate programs help develop the skills and experiences to both transform your life and make a difference in your community. With a wide variety of undergraduate programs including, Bachelor of Arts, Bachelor of Science, minors, and certificates. Whether preparing for careers in child life, public health, social work, or medicine or focused on education with degrees such as Instructional Technology, Children and Families, or teacher certification, students have the opportunity to select the ways in which they hope to improve their world.

For a listing of undergraduate offerings and opportunities, see our Undergraduate Programs page (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/).

Details regarding any of the programs can be found in later sections of this Undergraduate Catalog.

Admission to the College of Education, Health, and Human Services

Come join the College of Education, Health, and Human Services, and be a part of transforming our region, community, and world. Whether you are just starting your undergraduate experience, or are transferring to join us, contact a CEHHS advisor for a prospective student appointment (https://umdearborn.edu/cehhs/cehhs-office-student-success/academic-advising/undergraduate-advising/), schedule a visit, and make a difference at CEHHS.

- Admission of Freshman Students (https://umdearborn.edu/admissions/undergraduate/incoming-freshmen/)
- Admission of Transfer Students (https://umdearborn.edu/admissions/undergraduate/transfer-students/)
- Admission of Post-Degree Students (https://umdearborn.edu/cehhs/professional-development-training/post-degree-certification/)

Office of Student Success

The Office of Student Success for the College of Education, Health, and Human Services is located in 262 FCS. All matters relating to CEHHS student needs including academic advising, pre-health professions advising, field placement, teacher certification, and student records and forms are handled here. To schedule an advising appointment or for more information, the Office of Student Success can be reached at 313-593-5090 or cehhs-oss@umich.edu.

Academic Advising (https://umdearborn.edu/cehhs/cehhs-office-student-success/academic-advising/undergraduate-advising/)

The College has professional Academic Advisors that specialize in CEHHS programs and can help students navigate their coursework and requirements from beginning to end. Students are encouraged to meet with an Academic Advisor at least once a semester to support student success and progress.

Field Placement (https://umdearborn.edu/cehhs/cehhs-office-student-success/field-placement-office/)

Field placements allow for each learner to build skills, knowledge, and confidence in his/her own pathway toward becoming a professional in real world placements. All required clearances, paperwork, and placements for field assignments are handled within the CEHHS Office of Student Success.

Department of Education

Education is not one career; it is many. Individuals specializing in education are qualified to pursue a wide variety of attractive and rewarding professions including teaching, corporate training, recreation, social service, and childcare. Wherever there is a need for people specifically prepared to teach others, there is a need for individuals with a background in education.

Still, most college graduates seeking a career in education elect to become classroom teachers. Teaching offers a wide choice of opportunities to work with persons of different age levels in a variety of specialized fields. It is a satisfying career for those who like to inspire growth in others and continue their own development.

Students admitted to any of the education programs offered at UM-Dearborn are provided with an academic and professional background suited to the challenges of education in a multicultural society. For further information, please visit the College of Education, Health, and Human Services website at http://umdearborn.edu/cehhs/ (http://www.umdearborn.edu/cehhs/).
Accreditation (https://umdearborn.edu/cehhs/departments/education/about/accreditation/)

The University of Michigan-Dearborn Teacher Certification program is designed to produce graduates who are knowledgeable in their content areas and their use of pedagogy with diverse learners and who are prepared to become caring and reflective professionals. The Michigan Department of Education approval enables the College to offer programs and make recommendations resulting in state-issued certification of teachers and administrators. Additionally, certification is accredited by the Council for the Accreditation of Educator Preparation (CAEP). This accreditation certifies that the program has provided evidence that it adheres to CAEP’s standards. The Early Childhood Education Center is accredited by the National Association for the Education of Young Children (NAEYC).

Department of Health and Human Services

The Department of Health and Human Services (HHS) prepares leaders, professionals, and scholars to improve the health and welfare of persons and communities in local, national, and global settings. HHS provides an innovative academic environment for students interested in improving the lives and health of vulnerable populations. HHS faculty enhance student learning by connecting classroom instruction with ongoing intervention research, meaningful field experiences and community outreach efforts. Students complete a rigorous interdisciplinary program of study and master valuable professional skills. HHS students are well prepared to launch their careers or pursue additional graduate training to help solve pressing problems and deliver exceptional health and human services.

Course Offerings

Courses offered by the College of Education, Health, and Human Services are numbered following the general course numbering system. Courses numbered 100–299 are lower-division courses. Courses numbered 300–499 are undergraduate upper-division courses. Courses numbered 500 and above are graduate courses.

Each education course also carries an alphabetical letter designation. This designation reflects the course’s location in the subject-matter classification system used by the College of Education, Health, and Human Services.

Cooperating Faculty
Cengiz-Phippils, Nesrin, PhD, Associate Professor of Mathematics Education
Hartshorn, Patricia, MS, Lecturer IV in Biological Sciences
Krebs, Angela, PhD, Associate Professor of Mathematics Education
Martinez-Valencia, Francisca Eliana, PhD, University of Alabama, Associate Professor Spanish
Nesmith, Judy, MS, Senior Lecturer of Natural Sciences
Rathouz, Margaret, PhD, Associate Professor of Mathematics Education
Swift, Carrie, Lecturer II of Natural Sciences

Special Facilities and Services
The College of Education, Health, and Human Services is recognized for its concentrated focus in several areas. This concentrated focus is designed to marshal available expertise at the institution in pursuit of regional needs and goals in several particular emphasis areas, including early childhood learning and instruction and inquiry-based science instruction.

- Curriculum Knowledge Center (CKC) (https://umdearborn.edu/cehhs/centers-institutes/curriculum-knowledge-center-ckc/)
- Early Childhood Education Center (https://umdearborn.edu/cehhs/centers-institutes/cecec/)
Applied Behavior Analysis Certificate

The Board Certified Assistant Behavior Analyst (BCaBA) certificate (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/applied-behavior-analysis-certificate-bcaba/) prepares students with training in the science of learning and behavior and prepares them to work as Board Certified Assistant Behavior Analysts (BCBA). Applied Behavior Analysis (ABA) is a scientific approach to the study of behavior. Behavior analysts work directly with individuals to improve their social, educational, health, adaptive skills, and behavioral outcomes through the development of programming based upon the principles of ABA. Behavior analysts are trained to describe behavior, explain, predict, and analyze the occurrence and non-occurrence of behavior, and change behavior through the development of programming based on ABA strategies and tactics.

Through coursework firmly grounded in theory, with an emphasis on the application of theory to socially significant and effective practice, the BCaBA certificate program provides students with an excellent foundation to meet the proficiencies mandated by the Behavior Analyst Certification Board (BACB) (https://www.bacb.com/). Students will be prepared to complete the required supervised field work and sit for the Board Certified Assistant Behavior Analyst (BCaBA) examination. Pass-rate data for University of Michigan-Dearborn candidates are not available at this time. Pass-rate data are not published for sequences with fewer than six first-time candidates in a single year or for sequences within their first four years of operation. Pass-Rate Data (https://www.bacb.com/verified-course-sequences/) are available at the BACB website (https://www.bacb.com/). BaCBAs provide services within mental health, educational, and human services environments that may include collecting and analyzing data, writing and evaluating behavior intervention plans, training others to implement components of treatment plans, and overseeing the implementation of treatment plans, under the supervision of Board Certified Behavior Analysts (BCBAs). BCBAs are qualified to provide services to individuals with a variety of needs such as academic performance, skill deficits (e.g., communication, adaptive behavior and functional skills), and problem behavior (e.g., aggression, self-injurious behavior), and social interactions. BCBAs also provide supervision to Registered Behavior Technicians (RBT).

For more information: 313-593-5090, cehhs-oss@umich.edu

Certificate Program Goals

After completion of the certificate courses, the student will:

1. Describe and provide examples of the critical concepts and principles of Applied Behavior Analysis (ABA);
2. Describe and apply research methodology and measurement strategies used in the implementation and management of ABA;
3. Describe and apply the principles of ABA in relation to individuals with a variety of disabilities in a range of clinical, educational, pre-vocational/vocational, home and community settings;
4. Describe and apply behavioral assessment procedures, including identification of target behaviors, developing operational definitions, conducting functional behavior assessment/functional analysis;
5. Accurately graph, visually analyze and interpret behavioral data, including functional analysis data;
6. Describe ethical issues related to ABA service delivery with individuals with developmental disabilities and other mental health needs;
7. Describe and apply principles of experimental design including single-subject research methodology; and
8. Develop Behavior Intervention Plans based upon the results of functional analysis.

The Association for Behavior Analysis International has verified the following courses toward the coursework requirements for eligibility to take the Board Certified Behavior Analyst® or Board Certified Assistant Behavior Analyst® examination. Applicants will need to meet additional requirements before they can be deemed eligible to take the examination.

Total Credit Hours: 19

1. Completion of this academic certificate leads to, but does not equate to certification through the Behavior Analyst Certification Board (BACB).
   a. In order to become a Board Certified Assistant Behavior Analyst (BCaBA) a student must complete the required courses of this certificate, obtain supervision in an ABA setting, and successfully pass the BCaBA exam.

# ONSET OF EXPERIENCE: Supervisees may not start accumulating experience hours until they have done all of the following: • Started qualifying coursework (may begin accruing hours after attending first class meeting of a course within the Verified Course Sequence) • Passed the Experience Standards Training Module • Secured a qualified supervisor

# DURATION OF EXPERIENCE: The start and end dates of the experience may not be more than five years apart.

# ACCRUAL OF EXPERIENCE: For all categories, no fewer than 10 hours but no more than 30 hours, including supervision hours, may be accrued per week. Supervisees may accrue experience in only one category per supervisory period.

2. In order to be eligible to take the BCBA exam and complete practicum hours, a student must complete all the required courses with a C or better.

Business Studies as a Secondary Major

The Business Studies major is an optional second major for students pursuing a Bachelor of Science in Health and Human Services through the College of Education, Health, and Human Services (CEHHS).

The Business Studies major (BST) complements the critical thinking and acquired knowledge gained through an education focused on health and human services with foundational courses in business to develop the necessary leadership and analytical skills for careers in management related fields.

The BST graduate will acquire and possess a broad range of understanding, knowledge, and quantitative skills necessary for attaining a leadership role in business, education, community organizations, and government. Key to the BST is the comprehensive education that provides a strong foundation in thinking creatively, seeing the world through a multi-perspective lens, and acquiring a broad based of knowledge, and an understanding of diverse cultures and literary works.

The Business Studies major is open to non-College of Business students and must be pursued as a second major in conjunction with the primary major in CEHHS.

For further information about Business Studies as a Second Major, contact CEHHS Advising.

Children and Families

This Bachelor of Arts degree empowers you to become a strong, skilled advocate for children and families, by developing both a deep understanding of child development and the challenges children and families face within today’s diverse socio-economic and cultural contexts.

After you complete your studies, you can put your passion and expertise to use in a variety of settings. Our graduates work as educators in Head Start and childcare centers, serve as teachers or administrators in programs designed for young children, and help power agencies that advocate for young people and families.

Early Childhood

The Bachelor of Arts in Early Childhood is paired with elementary teacher certification to qualify you to teach all subjects in grades K-5; with the option to become certified to teach early childhood upon meeting the endorsement requirements. Within the basic elementary education degree curriculum, it enables students to meet State requirements for a Michigan Elementary Standard Teaching Certificate and the Early Childhood Endorsement (ZS) as well as to gain special competencies in the area of early childhood. It prepares individuals for careers in childcare centers, working with young children and their families, birth through kindergarten, as well as in the elementary grades 1-5. The program includes a concentrated study of the young child in infant/toddler, preschool, and early school contexts with extensive opportunities for field experiences in a variety of settings.

Core Course Requirements
Core courses are generally completed in the freshman and sophomore year.

Pre-Professional Requirements
Pre-professional courses are generally completed in the freshman and sophomore year.

Major Requirements
A minimum of 34 semester hours from the following:

Program Notes:
1. Two of the three NSCI core courses may be transferred to UM-Dearborn. A) an introductory physical science will satisfy NSCI 231, B) an introductory earth/planetary science will satisfy NSCI 232, and C) an introductory life science course will satisfy NSCI 233. BIOL 240/BIOL 242 and NSCI 120/NSCI 121 cannot be used for science credit.

Major Notes:
1. With the approval of the Early Childhood Program Coordinator, a maximum of six credit hours of freshman and sophomore level transfer courses in early childhood will be considered for general credit toward the early childhood major.
2. An overall GPA of 2.75 or better is required for the major.
3. At least 15 semester hours in UM-Dearborn courses required for a major.
4. A grade of S is required in EDD 411.

Program Notes:
1. All College of Education, Health, and Human Services undergraduate students are required to take the Composition Placement Test by the end of the first semester they are enrolled in classes.

2. Students transferring in COMP 105 or COMP 106, but receiving the prescription of 099 from the Composition Placement Test, must complete COMP 227 before taking EDD courses.

3. Minimum GPA's are required for program completion: 2.75 cumulative, 2.75 in major, 2.75 in optional minor(s), and 2.75 in Professional Studies.

4. Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog as well as on the Four Phase Checklist. Students are expected to meet with their College of Education, Health, and Human Services advisor at least once per year and in the term prior to graduation.

5. Courses taken on a PASS/FAIL basis will NOT be accepted toward program completion.

6. The minimum number of semester hours required to graduate is 128.

7. CEHHS recommends successful program completers for State of Michigan Certificate, however, it is ultimately up to the State of Michigan to issue certificates. Certain offenses on a criminal record can keep individuals from obtaining teacher certification. Please refer to The Revised School Code, Act 451 of 1976, section 380.1539b.

8. Students must meet Dearborn Discovery Core requirements. See http://umdearborn.edu/696973/ for details.

**Elementary Teacher Certification Program**

This program was designed for students to meet the requirements for both a bachelor’s degree and the Michigan Elementary Standard Teaching Certificate. Completers of this program will be eligible to teach K-5th grade in a self-contained classroom and subject specific courses in 6-8th grade depending on the major selected. The curriculum consists of two parts, the first involving academic study, and the second consisting of professional preparation, including passing scores on the Michigan Test for Teacher Certification (MTTC) Elementary Education exam, prior to student teaching.

**Certification**

The College of Education, Health and Human Services recommends students for the Michigan Elementary Standard Teaching Certificate upon successful completion of the program. The Michigan Department of Education ultimately awards the certification.

**Elementary Standard Teaching Certificates**

The initial teaching certificate awarded the beginning elementary school teacher is the Michigan Elementary Standard Teaching Certificate. This certificate is valid for teaching all subjects in kindergarten through fifth grade and subject specific classes 6-8th grade if an endorsement is obtained. Students are able to obtain endorsements by completing the course work in a major and optional minor and successfully passing the Michigan Test for Teacher Certification (MTTC) in their content area. Students who complete the Special Education major and pass the corresponding MTTC are eligible to teach in a resource room K-12th grade. The Standard Teaching Certificate is valid for five years and can be renewed an unlimited number of times provided that renewal conditions are met. Legislative or other state action may change these specifications. Therefore, students are advised to contact the College of Education, Health, and Human Services’ Office of Student Success, located in room 262 Fairlane Center South (FCS), to learn of the most recent policies.

**General Requirements for a Teacher’s Certificate**

In order to be awarded an elementary or secondary Standard Teaching Certificate, students at UM-Dearborn must be recommended for the certificate by the Governing Faculty of the College of Education, Health, and Human Services. The general procedure to be followed in obtaining such a recommendation is outlined below. It should be noted, however, that progression from one step to another is not automatic; students are expected to be individually responsible for understanding and meeting the requirements and provisions of the programs they pursue.

**Qualifying for a Standard Teaching Certificate**

To qualify for certificate recommendation, an individual must fulfill the following requirements:

1. Earn a bachelor’s degree from UM-Dearborn or another accredited institution with an overall GPA of 2.75; a minimum GPA of 2.75 in the major; a minimum GPA of 2.75 in an optional minor; and a minimum GPA of 2.75 in the Professional Studies Sequence. Irrespective of where the degree is earned, each candidate shall satisfactorily complete directed teaching and all required methods courses and practica at UM-Dearborn.

2. If acquiring both the bachelor’s degree and a teacher’s certificate from UM-Dearborn, the individual shall complete the degree with the appropriate number of semester hours depending on the program selected.

3. Comply with the Four-Phase Checklist described below.

4. Meet all Michigan Department of Education Teacher Certificate requirements including state mandated tests.

5. Satisfy the College faculty that the applicant possesses attributes that are necessary and desirable for successful teaching.

**Professional Semester/Directed Teaching (Student Teaching)**

Each student enrolled in a teacher certification program at UM-Dearborn, whether pursuing an elementary or a secondary Standard Teaching Certificate, is expected to spend one full academic term exclusively in professional work. This period of time is called the "professional semester" Directed Teaching (student teaching) and its related seminar serve as the core for this particular term. This entails a full day's teaching load and all school-related activities at a University-negotiated site. The professional semester for elementary certification students is as follows:

**Elementary Professional Semester**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>EDD 435</td>
<td>Dir Teaching: Elementary Sch</td>
<td>12</td>
</tr>
<tr>
<td>EDD 437</td>
<td>Sem: Teaching Elementary Grds</td>
<td>1</td>
</tr>
</tbody>
</table>

Total Credit Hours: 13

Opportunities for directed teaching are available only in the University’s fall and winter terms. Students wishing to elect directed teaching in the fall term are required to attend an application meeting the preceding
September and those desiring to elect it during the winter term are required to attend an application meeting the preceding March. Meeting dates, times, and locations will be posted on the Field Placement Office website and in the Fairlane Center South. Requirements for acceptance into the professional semester are outlined in the Four-Phase Checklist.

Incompletes, Unsatisfactory Grades, and Withdrawals

No student will be assigned to, or registered for, directed teaching with incomplete work in the Professional Sequence of courses. Moreover, once a student has been assigned to a directed teaching placement and then has had registration denied because of incomplete work, the student will be prohibited from receiving any future directed teaching assignment for that semester.

Any student, who has withdrawn from or received an unsatisfactory grade in directed teaching, whether through the action of a school district, the University, or by personal choice, will have a request for future placement carefully reviewed by the college. Reassignment to directed teaching is not guaranteed, nor is it an automatic process.

Students must file petitions for reassignment consideration.

General Field Placement Policy

Students in the teacher preparation program are assigned field placements, either as practicum students or as student teachers, in public or private schools. Field placement shall be made in accordance with the policies and procedures set forth by the College of Education, Health, and Human Services and in compliance with accreditation standards.

The student is expected to maintain professional dispositions in order to conform to the expectations of the placement school and the University. Appropriate academic preparation is required as outlined in the elementary and secondary programs of the College. Professional responsibilities during the Directed Teaching term are detailed in the "UM-Dearborn Directed Teaching Handbook" which is located on the CEHHS Student Teaching Eligibility website (https://umdearborn.edu/cehhs/cehhs-office-student-success/field-placement-office/student-teaching-eligibility/).

The public and private schools exercise the right to screen the University's students. Acceptance or rejection of students is not controlled by the University. A placement school may reject a University student for several reasons, including a lack of placement positions in the school or a determination that the University student's presence in the school or classroom may disrupt or interfere in some way with the educational process.

Currently there is no way in which the University can require the placement school to state specific reasons for rejection.

If a University student is repeatedly denied placement by the field schools, the College of Education, Health, and Human Services will recommend career counseling and terminate matriculation in the teacher certification program.

College of Education, Health, and Human Services Four-Phase Checklist

The College of Education, Health, and Human Services (CEHHS) at the UM-Dearborn is committed to the ideal of quality in the field of teacher education. A screening procedure is employed to help identify those people most likely to achieve the level of excellence defined by the college. This screening procedure is divided into four successive phases. Requirements at one phase must be successfully completed before continuing on to the next. Students are also responsible for meeting all program requirements for their selected degree as listed in Degree Works.

Phase One - Initial Admission to Education

All requirements listed below must be completed for progression to Phase Two:

1. Three types of students are considered for admission to the College of Education, Health, and Human Services at this entry level phase:
   • First time in any college (FTIAC) students - Campus admission standards for SAT, ACT, and high school Grade Point Average (GPA) are used in determining admission.
   • Transfer students - College of Education, Health, and Human Services admission standards (a minimum cumulative GPA of 2.75/4.0 scale) are used for transfer students.
   • Post-degree certification students - College of Education, Health, and Human Services admission standards are used for individuals with a bachelor’s degree earned at a regionally accredited institution. The individual must have a cumulative GPA of 2.75 or higher in their major, optional minor, and overall to be admitted to the College of Education, Health, and Human Services and the Teacher Certification Program.

2. Admission to College of Education, Health, and Human Services:
   • having declared one of the elementary certification majors, or
   • having declared the pre-secondary certification attribute

3. A Criminal Background Check Consent form must be submitted online to CEHHS-assigned MBox prior to a student’s first field experience.

4. Video Recording Consent form must be submitted online to CEHHS-assigned MBox prior to a student’s first field experience.

5. Infectious Diseases/Blood-borne Pathogens training must be completed in the Curriculum Knowledge Center (FCS 267) prior to a student’s first field experience.

Phase Two - Preparation for Admission to the Teacher Certification Program

All requirements listed below must be completed for progression to Phase Three:

1. Successful completion of
   • COMP 105 (Writing & Rhetoric I), transfer credit equivalent, or waiver by university accepted high school Advanced Placement (AP) test score (not required for students admitted to the post-degree certification only program).
   • EDA 205 (Introduction to Education) or transfer credit equivalent.
   • EXPS 298 (Exploring Writing to Communicate, Learn and Teach) or COMP 106 (Writing & Rhetoric II).

2. Minimum of 55 earned credit hours, including transfer credit, or previously earned bachelor’s degree if applicable, minimum cumulative GPA of 2.75 on a 4.0 scale as well as a minimum GPA of 2.75 in the major(s) and optional minor(s).

3. Undergraduate students must complete at least 12 credit hours of study at UM-Dearborn.

4. Application for Admission to Teacher Certification Program (Phase II) form, which includes a moral turpitude statement, must be submitted online to CEHHS-assigned MBox.
5. Change of Degree Program, Major and/or Minor Petition form, to officially declare teacher certification must be submitted to the CEHHS Office of Student Success, 262 FCS.

Phase Three - Admission to Teacher Certification Program
All requirements listed below must be completed for progression to Phase Four:

1. Successful completion of the appropriate MTTC Certification Tests listed below and official score reported directly to the University of Michigan-Dearborn (institution code 29):
   - Elementary certification students must pass the MTTC Elementary Education Test (#103)
   - Secondary certification students must pass the MTTC tests in their major(s) and optional minor(s).
2. Undergraduate students must meet Senior Residency Requirements and Post-Degree students must take a minimum of six credits at UM-Dearborn in order to receive recommendation.
3. Completion of Professional Studies sequence of courses.
4. Minimum cumulative GPA of 2.75 on a 4.0 scale as well as a minimum GPA of 2.75 in the major(s), optional minor(s) and the Professional Studies sequence.
5. Attendance at a Student Teaching Application Meeting and completion and submission of all forms online to the CEHHS Office of Student Success.
6. Completion of an MDE approved CPR and First Aid certification.

Phase Four - Teacher Certification Program Completion
All requirements listed below must be completed for recommendation for a degree and/or a State of Michigan Standard Teaching Certificate:

1. Attendance at the mandatory Student Teaching Orientation Meeting.
2. For undergraduate degree seeking students: Submission of completed Degree/Diploma application to the Office of the Registrar. This application can be submitted online or printed and submitted in person, and can be found at https://umdearborn.edu/students/registration-records/graduation-commencement/applying-graduate-0 (https://umdearborn.edu/students/registration-records/graduation-commencement/applying-graduate-0/).
   - Elementary certification students apply to graduate as a student in the College of Education, Health, and Human Services.
   - Secondary certification students apply to graduate as a student in the College of Arts, Sciences, and Letters.
3. Successful completion of the chosen program, major(s), optional minor(s) and professional studies sequence, including student teaching, and supplementary requirements with a minimum cumulative grade point average of 2.75 on a 4.0 scale, as well as minimum grade point average of 2.75 in the major(s), optional minor(s) and professional studies sequence.
4. Successful completion of any additional MTTC certification tests and official score reporting directly to the University of Michigan-Dearborn (Institution Code 29) for any optional additional endorsements sought. These scores must be reported to the University of Michigan-Dearborn College of Education, Health, and Human Services before recommendations are prepared for the state by the University of Michigan-Dearborn Certification Officer.
   - Additional content area major(s) or minor(s), beyond the minimum requirement, for elementary certification students.

Based on this record of achievement, a decision to recommend or not to recommend for certification will be made by the College of Education, Health, and Human Services.

Elementary Teacher Certification Program
The program as outlined meets the State’s teacher certification requirements at the time of this writing. However, changes by the University or the State may affect some program requirements. Therefore, students are strongly advised to inquire about possible changes by checking with their advisor in the College of Education, Health, and Human Services.

Academic Program Requirements (Majors and Minors)
Students entering this program are required to complete all core courses, pre-professional courses, and all course requirements for any selected major. Students are required to select at least 1 of the degree majors listed below. Minor endorsements are optional. Courses in the major and/or minor may not be elected on a pass/fail basis. Courses that apply to the majors and minors are listed below under “Areas of Study for Majors and Minors.”

</tr>
</tbody>
</table>

**Major Notes:**

1. With the approval of the Early Childhood Program Coordinator, a maximum of six credit hours of freshman and sophomore level transfer courses in early childhood will be considered for general credit toward the early childhood major.
2. An overall GPA of 2.75 or better is required for the major.
3. At least 15 semester hours in UM-Dearborn courses required for a major.
4. A grade of S is required in EDD 411.

**Program Notes:**

1. All College of Education, Health, and Human Services undergraduate students are required to take the Composition Placement Test by the end of the first semester they are enrolled in classes.
2. Students transferring in COMP 105 or COMP 106, but receiving the prescription of 099 from the Composition Placement Test, must complete COMP 227 before taking EDD courses.
3. Minimum GPA’s are required for program completion: 2.75 cumulative, 2.75 in major, 2.75 in optional minor(s), and 2.75 in Professional Studies.
4. Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog as well as on the Four Phase Checklist. Students are expected to meet with their College of Education, Health, and Human Services advisor at least once per year and in the term prior to graduation.
5. Courses taken on a PASS/FAIL basis will NOT be accepted toward program completion.
6. The minimum number of semester hours required to graduate is 128.
7. CEHHS recommends successful program completers for State of Michigan Certification, however, it is ultimately up to the State of Michigan to issue certificates. Certain offenses on a criminal record can keep individuals from obtaining teacher certification. Please refer to The Revised School Code, Act 451 of 1976, section 380.1539b.

**Minors (Optional)**

- English as a Second Language (p. 203)
- Language Arts (p. 206)
- Mathematics Studies (p. 208)
- Reading (p. 210)
- Science Studies (p. 205)

**Elementary Certification Teaching Major - Early Childhood**

The Early Childhood Education Program is designed for those intending to work with children, birth through eight years of age. Within the basic elementary education degree curriculum, it enables students to meet State requirements for a Michigan Elementary Standard Teaching Certificate and the Early Childhood Endorsement (ZS) as well as to gain special competencies in the area of early childhood. It prepares individuals for careers in childcare centers, working with young children and their families, birth through kindergarten, as well as in the elementary
8. Students must meet Dearborn Discovery Core requirements. See http://umdearborn.edu/696973/ for details.

Notes:

1. Enrollment in all the required EDD courses is open only to those who are officially admitted to and in good academic standing in the Teacher Certification Program at UM-Dearborn. See Four-Phase Checklist for more information.

2. Eligibility for directed teaching requires meeting all the requirements listed on the Four-Phase Checklist as well as submission of passing scores from the MTTC (Michigan Tests for Teacher Certification) subject area test: Elementary Education (#103).

3. Recommendations for other certification endorsements require passing scores from relevant MTTC subject area tests.

4. Minimum number of hours to graduate is 128 semester hours.

Elementary Certification Teaching Minor - English as a Second Language

This course of study is designed to meet the State of Michigan requirements for teacher certification in English as a Second Language (ESL). To obtain this endorsement, students must pass the certification test in this area, and obtain a Michigan teaching certificate

Minor Requirements

Students must demonstrate experience in learning a modern second language or coursework in a modern second language or permission of Program Coordinator or take one semester course in a modern language. A minimum of 21 semester hours from the following:

<table>

Total Credit Hours: 21

Minor Notes:

1. LING 480 or LING 280 is a pre-requisite for LING 461/ENGL 461, LING 561/ENGL 561, LING 482/ENGL 482, LING 582/ENGL 582.

Program Notes:

1. A minimum GPA of 2.75 is required for a minor.

2. Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog as well as on the Four Phase Checklist. Students are expected to meet with their College of Education, Health, and Human Services advisor at least once a year and in the term prior to graduation.

3. Courses taken on a PASS/FAIL basis will NOT be accepted toward program completion.

4. In order to be recommended for endorsements, students must pass the appropriate MTTC exam in addition to completing the coursework.

5. MTTC test scores must be reported by electronic delivery or direct mail from Pearson Evaluation Systems to the University of Michigan-Dearborn College of Education, Health, and Human Services. No hand carried scores will be accepted.
Elementary Certification Teaching Major/Minor - Integrated Science

We're helping future generations develop a passion and appreciation for science.

Do you have an innate curiosity about the natural world? Would you like to share that passion with young learners through hands-on experiments? This bachelor's degree program in Science Studies prepares you for leading diverse classrooms in their study of science's fundamental concepts and disciplines.

Pair your studies with elementary teacher certification and you'll be qualified to teach all subjects in grades K-5 with the option to become certified to teach science in grades 6-8. Either way, you'll be part of a balanced program that combines academic studies, professional training, multiple field experiences in local schools, and thorough training in how to use technology in the 21st-century classroom.

And with successful completion of the program, you'll earn both a bachelor's degree and faculty recommendation for the Michigan Elementary Standard Certificate.

3. Astronomy satisfies Earth/Planetary Science requirement.
4. Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog as well as on the Four Phase Checklist. Students are expected to meet with their College of Education, Health, and Human Services advisor at least once a year and in the term prior to graduation.
5. Courses taken on a PASS/FAIL basis will NOT be accepted toward program completion.
6. In order to be recommended for endorsements, students must pass the appropriate MTTC exam in addition to completing the coursework.
7. MTTC test scores must be reported by electronic delivery or direct mail from Pearson Evaluation Systems to the University of Michigan-Dearborn College of Education, Health, and Human Services. No hand carried scores will be accepted.

Elementary Certification Teaching Major/Minor - Language Arts

Few things can empower a person like the ability to read, write and communicate.

Do you dream of helping children learn to read, write, speak and listen? Our bachelor’s degree program in Language Arts thoroughly prepares you for teaching and motivating young readers and writers in diverse classrooms. Pair your studies with elementary teacher certification and you’ll be qualified to teach language arts in grades 6-8 upon meeting the endorsement requirements. Either way, you’ll be part of a well-rounded program that combines academic studies, professional training and multiple field experiences in local schools.

With successful completion of the program, you will earn both a bachelor’s degree and faculty recommendation for the Michigan Elementary Standard Certificate

Total Credit Hours 38

Program Notes:

1. Minimum GPA’s are required for program completion: 2.75 cumulative, 2.75 in major, 2.75 in optional minor(s), and 2.75 in Professional Studies.
2. Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog as well as on the Four Phase Checklist. Students are expected to meet with their College of Education, Health, and Human Services advisor at least once per year and in the term prior to graduation.
3. Courses taken on a PASS/FAIL basis will NOT be accepted toward program completion.
4. The minimum number of semester hours required to graduate is 128.
5. CEHHS recommends successful program completers for State of Michigan Certification, however, it is ultimately up to the State of Michigan to issue certificates. Certain offenses on a criminal record can keep individuals from obtaining teacher certification. Please refer to The Revised School Code, Act 451 of 1976, section 380.1539b.
6. Students must meet Dearborn Discovery Core requirements. See umdearborn.edu/696973/ for details

**Professional Requirements**

The professional sequence of education courses consists of a minimum of 42 semester hours of credit. This concentration of study represents the core of your professional preparation. At least two practicums are required prior to student teaching. The semester hours are distributed as follows:

1. Core courses included in minor semester hours.
2. Practicum is optional in the minor.

**Program Notes:**

1. A minimum GPA of 2.75 is required for a minor.
2. Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog as well as on the Four Phase Checklist. Students are expected to meet with their College of Education, Health, and Human Services advisor at least once a year and in the term prior to graduation.
3. Courses taken on a PASS/FAIL basis will NOT be accepted toward program completion.
4. In order to be recommended for endorsements, students must pass the appropriate MTTC exam in addition to completing the coursework.
5. MTTC test scores must be reported by electronic delivery or direct mail from Pearson Evaluation Systems to the University of Michigan-Dearborn College of Education, Health, and Human Services. No hand carried scores will be accepted.

**Elementary Certification Teaching Major - Learning Disabilities**

As a learning disabilities major, you'll train to be an educator who works capably and compassionately with students who have intellectual, social or behavioral challenges. Throughout the program, you'll explore the newest methods for assisting learners with diverse needs, learn to use technology effectively in the 21st-century classroom, and complete multiple field experiences that put you side-by-side with students in local schools.

Plus, this bachelor's degree comes with a faculty recommendation for the Michigan Elementary Standard Certificate with the Learning Disabilities Endorsement.

# Elementary Certification Teaching Major/Minor - Mathematics Studies

Are you ready to help students become problem solvers?

Do you want to help children learn mathematics with understanding? A bachelor’s degree in Mathematics Studies will prepare you to support students who reason about mathematical ideas rather than rely on rules and procedures.

Our program will ready you to become a classroom teacher for all subjects in grades K-5 with the option to become certified to teach mathematics in grades 6-8 upon meeting the endorsement requirements. Either way, you’ll be ready to work with diverse learners with a program that combines academic studies, professional training and multiple field experiences in local schools.
With successful completion of the program, you will earn both a bachelor's degree and faculty recommendation for the Michigan Elementary Standard Certificate.

Elementary Certification Teaching Major - Social Studies

Help young learners understand the social forces that shape our society. From the study of history to understanding how our government works, social studies curriculum is essential for young citizens.

This program will train you in the latest strategies for teaching students about the important cultural, economic, geographic, political and social dimensions of human society, with an emphasis on evidence-based lessons and creative projects that enhance learning.

A bachelor’s degree in social studies with elementary teacher certification will prepare you to teach all subjects in grades K-5 with the option to become certified to teach social studies subjects in grades 6-8 upon meeting endorsement requirements. Plus, with successful completion of the program, you’ll earn both a bachelor’s degree and faculty recommendation for the Michigan Elementary Standard Certificate.

Total Credit Hours  36

Major Notes:
1.  12 semester hours required at UM-Dearborn.
2.  9 semester hours at 300 level or above required.

Program Notes:
1. Minimum GPA's are required for program completion: 2.75 cumulative, 2.75 in major, 2.75 in optional minor(s), and 2.75 in Professional Studies.
2. Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog as well as on the Four Phase Checklist. Students expected to meet with their College of Education, Health, and Human Services advisor at least once per year and in the term prior to graduation.
3. Courses taken on a PASS/FAIL basis will NOT be accepted toward program completion.
4. The minimum number of semester hours required to graduate is 128.
5. CEHHS recommends successful program completers for State of Michigan Certification, however, it is ultimately up to the State of Michigan to issue certificates. Certain offenses on a criminal record can keep individuals from obtaining teacher certification. Please refer to The Revised School Code, Act 451 of 1976, section 380.1539b.
6. Students must meet Dearborn Discovery Core requirements. See http://umdearborn.edu/696973/ for details.

Professional Requirements

The professional sequence of education courses consists of a minimum of 42 semester hours of credit. This concentration of study represents the core of your professional preparation. At least two practicums are required prior to student teaching. The semester hours are distributed as follows:

Total Credit Hours: 45

Notes:

1. EDD 467 and EDD 471 are to be taken concurrently. Both require EDD 468 as a prerequisite.

1. Enrollment in all the required EDD courses is open only to those who are officially admitted to and in good academic standing in the Teacher Certification Program at UM-Dearborn. See Four-Phase Checklist for more information.
2. Eligibility for directed teaching requires meeting all the requirements listed on the Four-Phase Checklist as well as submission of passing scores from the MTTC (Michigan Tests for Teacher Certification) subject area test: Elementary Education (#103).
3. Recommendations for other certification endorsements require passing scores from relevant MTTC subject area tests.

Health and Human Services

The Bachelor of Science in Health and Human Services (HHS) focuses on preparing students to identify and meet the needs of vulnerable individuals, families and communities. Using evidence-based best practices, graduates will be able to develop, offer, and evaluate programs that help people and groups function more effectively and overcome considerable individual and social challenges. The bachelor's degree in Health and Human Services has three rigorous and complementary concentrations: (1) Public Health; (2) Human Services; and (3) Pre-Health Professions.

Students in all three concentrations will be grounded in multidisciplinary, ethical, and state-of-the-art approaches to the delivery of public health interventions, human services, and medical care. This program is rooted in strong academics, innovative research, and active learning. The Health and Human Services major emphasizes community engagement and academic service learning. Students are encouraged to connect their classroom lessons to professional activities through mentored internships with non-profit organizations, community and social service agencies, governmental departments, hospitals and health care organizations across our region and beyond.

This program is intended for students interested in careers and additional graduate degree training in public health, social work, child life, health policy and administration, child and family services, addiction and recovery services, as well as specialized health care professions including medicine, physician assistant studies, pharmacy, physical therapy, occupational therapy, dentistry, optometry, and nursing.

HHS-2-MSW Program

Students selecting the Human Services Concentration (p. 212) as part of the B.S. in Health and Human Services have the option to apply for the HHS to MSW program in their Junior year. Acceptance to the program allows undergraduate students to take 4 graduate level Social Work classes that double count toward undergraduate and graduate degree requirements. Full-time students have the ability to complete both a B.S. in Health and Human Services with Human Services concentration and a Masters of Social Work (MSW) in just 5 years. More information can be found on the HHS to MSW webpage (https://umdearborn.edu/cehhs/undergraduate-programs/areas-study/health-and-human-services/hhs-um-dearborn-leads-msw-um-ann-arbor-school-social-work/).

Program Goals

The overall goals of the Health and Human Services program are to prepare students to:

1. Promote health, wellness, and effective functioning in individual, family, group, community, and organizational settings;
2. Demonstrate knowledge of the many determinants of individual and population health including specific risk factors for physical and mental illness, substance use and addiction, poverty and income inequality, attitudes and behaviors, and their impacts on the health and human services delivery system; and

3. Employ appropriate research methods, data analytic techniques, and human subjects protections to enhance our understanding and delivery of effective public health programs and human services.

**Learning Outcomes**

The Health and Human Services program provides future professionals with a strong behavioral and social science orientation that also draws on considerable expertise in the natural sciences, humanities, education, and statistics. Students study important perspectives that broaden and deepen their understanding of health, human service systems, and the delivery of health care. The goal is to provide students with analytic frames of reference, as well as research and evaluation approaches that illuminate issues and provide a sound basis for approaching contemporary social and medical problems. Students participate in undergraduate coursework that prepares them for professional work, strengthens their position for admission to graduate programs, and enhances their cultural competencies. HHS students achieve specific professional skills in:

- Problem solving: Identify and respond quickly to health and human services challenges.
- Components of the health and human services system: Understand how policy, behavior, race, place, income, the environment, and other influences converge to affect individuals, families, and communities.
- Leadership: Learn community outreach, public policy, and advocacy skills.
- Management and teamwork: Gain organizational and team-building skills that facilitate cross-sector collaboration, effective interprofessional activities, and change management.
- Global approach: Become aware of cultural and geopolitical factors that shape human and institutional behavior and that have consequences for vulnerable populations.
- Policy: Understand the policy process so that professionals can advocate for meaningful institutional and social change.
- Analytic methods: Know scientific method and appropriate analytic approaches so that students can solve problems using qualitative and quantitative data.
- Technology and information: Use information technology effectively.
- Budgeting and finance: Learn basic skills for making decisions that involve budgetary and financial concerns.
- Communications – Write and speak effectively to reach multiple audiences.

**Dearborn Discovery Core**

Please see the Dearborn Discovery Core (General Education) ([https://umdearborn.edu/faculty-staff/academic-program-and-course-development/dearborn-discovery-core-general-education/](https://umdearborn.edu/faculty-staff/academic-program-and-course-development/dearborn-discovery-core-general-education/)) webpage or additional information.

**Foundational Studies**

Writing and Communication (GEWO) – 6 Credits

Upper-Level Writing Intensive (GEWI) – 3 Credits

Quantitative Thinking and Problem Solving (GEQT) – 3 Credits

Critical and Creative Thinking (GECC) – 3 Credits

**Areas of Inquiry**

Natural Science (GENS) – 7 Credits
- Lecture/Lab Science Course
- Additional Science Course

Social and Behavioral Analysis (GESB) – 9 Credits

Humanities and the Arts (GEHA) – 6 Credits

Intersections (GEIN) – 6 Credits

**Capstone**

Capstone (GECE) – 3 Credits

**Major**

The Health and Human Services major includes 50 credit hours of core courses, 30-31 credit hours in concentration-specific required courses, plus 39-40 credit hours in tailored elective courses selected to meet professional goals and any graduation admissions requirements as desired. Students should also refer to the Dearborn Discovery Core requirements to ensure that those are met.

**Tailored Elective Courses**

Students should work closely with their advisors to select elective coursework that completes their upper level credit and minimum degree requirements. Students are encouraged to choose elective courses to meet their personal and professional goals, prepare for graduate entrance exams, and complete any prerequisite courses required of graduate programs and medical schools. Please note some elective classes may require additional prerequisite courses. Course elections must be different from concentration requirements.

## Human Services

Human Services workers are committed to helping individuals, families, and groups function more effectively and overcome considerable individual and social challenges. These professionals help people deal with economic inequality, physical and mental health challenges including addictions; as well as difficulties with housing, employment, and education. The minor in human services provides students with important content drawn from the fields of social work, counseling, addiction and recovery services, and child life. The minor prepares future human services professionals to successfully navigate social and community contexts, institutional resources and barriers, as well as individual and group dynamics.

Total Credit Hours: 15
Instructional Technology

Program Description

The Bachelor of Arts in Instructional Technology prepares students with regards to developing the knowledge and skills to be able to improve the learning and performance of individuals by using technology across a broad spectrum of employment settings.

This program is also consistent with the mission of the College of Education, Health and Human Services (CEHHS) with its commitment to excellence rooted in strong academics, innovative research and engaged learning. Students will have the opportunity to engage in real-world learning experiences through internships in professional settings.

The curriculum outlined for the undergraduate degree in instructional technology provides students with a choice of a focus in either health informatics or education.

Digital technology is a key factor in almost every industry, business, educational setting and health care environments. Instructional technologists are needed in work places to train employees to use technology efficiently, to learn to use and apply new technologies as they emerge and to create training materials. Therefore, a wide variety of jobs are available for a student with a major in instructional technology including:

- Instructional Designer
- Training Developer
- Computer User Support
- Web-based Training

Instructional Technology is a field concerned with improving the efficiency and effectiveness of learning, performance improvement, and instructional delivery by using appropriate technology. The programs goals include:

- Design instruction using needs assessment
- Apply learning theory to instructional design
- Select a delivery system for the specific learning environment
- Integrate instruction with other factors that influence human performance
- Use technology in support of the development and delivery of instruction

4+1 Educational Technology Accelerated Program

The Master of Arts in Educational Technology Accelerated Program, or 4+1 program, is designed for undergraduate students in the Instructional Technology major who have the interest, and demonstrated ability, to pursue the MA in Educational Technology. The program is designed to allow students who complete the BA in Instructional Technology to fulfill the requirements of the MA in Educational Technology with one additional year of graduate study. This will be achieved by combining a portion of undergraduate and graduate coursework as described below.

Eligibility

To be eligible for the program, a student must:

- Have a 3.0 cumulative GPA or better.
- Have earned at least 60 credits at the undergraduate level.

Double Counting Credits

1. The 4+1 Masters program allows current UM-Dearborn undergraduate Instructional Technology majors to complete both the BA in Instructional Technology and MA in Educational Technology degrees in an accelerated format. 4+1 students can double-count up to 15 credits of 500-level or above courses. Double-counting these 15 credits between the BA in Instructional Technology and MA in Educational Technology saves students a total of 5 classes. The courses eligible to be double-counted include: EDT 501, 502, 510, 514, 520, 522, 562. Students must complete the graduate level coursework with a “B” or better to maintain their eligibility in the 4+1 program.

2. At least one additional year of graduate work (at least 15 credits) would be needed to complete the Master’s program.

3. The double-counted classes appear on both the undergraduate and graduate transcripts. Students are graded based on the graduate grading scheme for all graduate courses elected. Only graduate level courses can be double counted towards both the undergraduate and graduate degree. Students are not allowed to count undergraduate coursework towards a graduate degree.

Total Credit Hours for the Major: 45

Electives

Additional Electives will be required to meet minimum credit hours for graduation. Please refer to Dearborn Discovery Core requirements to ensure these are met.

Total Hrs. for Degree: 120 total credit hours required for graduation.

Program Notes:

1. **All College of Education, Health, and Human Services undergraduate students are required to take the Composition Placement Test by the end of the first semester they are enrolled in classes.**
2. **The minimum grade point average requirement for program completion is 2.0 cumulative and 2.0 in major.**
3. **Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog and is expected to meet with their College of Education, Health, and Human Services advisor at least once a year and in the term prior to graduation.**

**Language Arts**

Few things can empower a person like the ability to read, write, and communicate.

Do you dream of helping children learn to read, write, speak, and listen? Our bachelor’s degree program in Language Arts thoroughly prepares you for teaching and motivating young readers and writers in diverse classrooms. Pair your studies with elementary teacher certification and you’ll be qualified to teach all subjects in grades K-5 with the option to become certified to teach language arts in grades 6-8 upon meeting the endorsement requirements. Either way, you’ll be part of a well-rounded program that combines academic studies, professional training and multiple field experiences in local schools.

With successful completion of the program, you will earn both a bachelor’s degree and faculty recommendation for the Michigan Elementary Standard Certificate.

**Program Notes:**

1. Minimum GPA's are required for program completion: 2.75 cumulative, 2.75 in major, 2.75 in optional minor(s), and 2.75 in Professional Studies.
2. Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog as well as on the Four Phase Checklist. Students are expected to meet with their College of Education, Health, and Human Services advisor at least once per year and in the term prior to graduation.
3. Courses taken on a PASS/FAIL basis will NOT be accepted toward program completion.
4. The minimum number of semester hours required to graduate is 128.
5. CEHHS recommends successful program completers for State of Michigan Certification, however, it is ultimately up to the State of Michigan to issue certificates. Certain offenses on a criminal record can keep individuals from obtaining teacher certification. Please refer to The Revised School Code, Act 451 of 1976, section 380.1539b.
6. Students must meet Dearborn Discovery Core requirements. See http://umdearborn.edu/696973/ for details.

**Pre-Professional Requirements**

Pre-professional courses are generally completed in the freshman and sophomore year.

**Program Notes:**

1. Two of the three NSCI core courses may be transferred to UM-Dearborn. A) an introductory physical science will satisfy NSCI 231, B) an introductory earth/planetary science will satisfy NSCI 232, and C) an introductory life science course will satisfy NSCI 233. BIOL 240/BIOL 242 and NSCI 120/NSCI 121 cannot be used for science credit.
1. A minimum GPA of 2.75 is required for a minor.
2. Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog as well as on the Four Phase Checklist. Students are expected to meet with their College of Education, Health, and Human Services advisor at least once a year and in the term prior to graduation.
3. Courses taken on a PASS/FAIL basis will NOT be accepted toward program completion.
4. In order to be recommended for endorsements, students must pass the appropriate MTTC exam in addition to completing the coursework.
5. MTTC test scores must be reported by electronic delivery or direct mail from Pearson Evaluation Systems to the University of Michigan-Dearborn College of Education, Health, and Human Services. No hand carried scores will be accepted.

Mathematics Studies

Are you ready to help students become problem solvers?

Do you want to help children learn mathematics with understanding? A bachelor's degree in Mathematics Studies will prepare you to support students who reason about mathematical ideas rather than rely on rules and procedures.

Our program will ready you to become a classroom teacher for all subjects in grades K-5 with the option to become certified to teach mathematics in grades 6-8 upon meeting the endorsement requirements. Either way, you’ll be ready to work with diverse learners with a program that combines academic studies, professional training and multiple field experiences in local schools.

With successful completion of the program, you will earn both a bachelor's degree and faculty recommendation for the Michigan Elementary Standard Certificate.

Post-Degree Programs

Standard Teaching Certificate Renewals

The Standard Teaching Certificate is a five-year teaching certificate with unlimited renewals. Each renewal adds five years to the certificate's validity. A renewal can be requested any time after January 1 of the expiration year. Please visit the Michigan Department of Education webpage for the most current information on requirements for renewing the standard teaching certificate.

Progressing to the Professional Teaching Certificate

Holders of a Standard Teaching Certificate may advance to the Professional Teaching Certificate. The Professional Teaching Certificate is a five-year teaching certificate with unlimited renewals. Each renewal adds five years to the certificate's validity. A renewal can be requested any time after January 1 of the expiration year.
Please visit the Michigan Department of Education webpage for the most current information on requirements for advancing to the Professional Teaching Certificate or this webpage for the most current information on requirements for renewing the Professional Teaching Certificate.

Certification Only Program (Elementary-COE, Secondary-COS)
Candidates with a degree from an accredited institution and wishing to earn a Michigan Elementary or Secondary Standard Teaching Certificate, must meet the following requirements for these programs:

1. A bachelor’s degree from an accredited institution is required. Students must have a 2.75 GPA overall and in their Elementary or Secondary major and minor (optional) to be admitted to the College of Education, Health, and Human Services teacher certification program. Once admitted to the teacher certification program, students must continue to maintain a 2.75 GPA.

2. To be eligible for directed teaching (student teaching), students must pass the relevant MTTC test: Elementary Education Test (#103) for seekers of elementary certification; the major MTTC test for seekers of secondary certification.

3. When the desired major/optional minor is incomplete and/or the GPA for the major and/or optional minor is between 2.50 and 2.74, a minimum of 12 semester hours for the major and nine (9) semester hours for a minor must be completed with UM-Dearborn courses and the cumulative GPA must be 2.75 or better.

4. Potential candidates must observe established procedures in having their credentials evaluated for the certification program. Students are required to submit a Transcript Evaluation Request Form (https://umdearborn.formstack.com/forms/transcript_evaluation_request_form/) in order for credentials to be evaluated for acceptable majors, optional minors, and those supplementary courses, required by the program.

5. At least two practica at UM-Dearborn shall be required of all COE/COS students prior to student teaching.

6. A maximum of six semester hours (non-UM-Dearborn courses) will be accepted, if applicable, toward the professional studies sequence, not including directed teaching or seminar. The cumulative GPA in the professional sequence must be 2.75 or better. No community college courses must be used for credit in the EDD (methods) sequence of required courses. Grades earned in professional studies sequence courses must observe the criteria established for directed teaching eligibility.

7. When there is evidence to warrant an adjustment in requirements for an admitted COE/COS student, the Professional Standards Committee will act accordingly. Students desiring re-evaluations may use the established petition process.

8. To be eligible for certification, students must have acceptable scores from the Michigan Tests for Teacher Certification Subject Area Tests for every major, optional minor and endorsement desired.

9. No credit toward program is allowable for ROTC and/or physical education.

10. An English language proficiency test may be required for non-native English speakers.

11. For all practica and student teaching, the following are required:
   a. CPR and First Aid Certification (Adult/Infant/Child)
   b. Bloodborne Pathogens and Infectious Diseases Training
   c. Criminal background check consent form
   d. Video Recording consent form

Individuals entering this program are required to meet the basic certification requirements at the time they are admitted, and which are appropriate for the particular certificate desired. To enroll, it is necessary to apply for admission (https://umdearborn.edu/cehhs/professional-development-training/post-degree-programs/post-degree-certification-application/) to the UM-Dearborn as a “Certification Only Student,” through the College of Education, Health, and Human Services.

Students holding degrees from international institutions must have their credentials evaluated, course by course, with a posted grade point average from one of the following evaluators:

Educational Credential Evaluators, Inc.
PO Box 514070
Milwaukee, WI 53203-3470
https://www.ece.org
Telephone: (414) 289-3400

or

World Evaluation Services
BOWLING GREEN STATION
PO BOX 5087
NEW YORK NY 10274-5087
http://www.wes.org/support/
Telephone: (212) 966-6311

Possible majors and minors for Elementary Certification can be found on the college’s Certification-Only Elementary (COE) website (https://umdearborn.edu/cehhs/professional-development-training/post-degree-and-endorsement-programs/certification-only-elementary-program-coe/).

Possible majors and minors for Secondary Certification can be found on the college’s Certification-Only Secondary (COS) website (https://umdearborn.edu/cehhs/professional-development-training/post-degree-and-endorsement-programs/certification-only-secondary-program-cos/).

Professional Education Certification Program (PEC)
The Professional Education Certificate Program is for persons with a Michigan Standard Teaching Certificate wishing to obtain a renewal of their Standard Teaching Certificate or upgrade to the Professional Teaching Certificate. Individuals with a Michigan Professional Teaching Certificate can also utilize this program to renew their current certificate.

Curriculum
Certified teachers can qualify for a renewal of their Standard Teaching Certificate or upgrade to the Professional Teaching Certificate (if all other State of Michigan requirements are met) by completing the 6 semester hour post-degree program offered at UM-Dearborn through the College of Education, Health, and Human Services. This program is ideal for the working teacher who wants to maintain a valid teaching credential but is not interested in pursuing a graduate degree.

The Professional Education certificate program is tailor-made to fit the particular professional needs and goals of the individual teacher. To meet residency requirements, students must satisfactorily complete at least 3 semester hours of advisor-approved courses in a planned 6-hour program. The entire course of study, however, can be completed at UM-
Dearborn by attending classes during late afternoons, early evenings, summers, and in some cases, in online courses.

More information can be found on the:

- PEC for Elementary Teachers website (https://umdearborn.edu/cehhs/professional-development-training/post-degree-programs/pec-program-elementary-teachers/)
- PEC for Secondary Teachers website (https://umdearborn.edu/cehhs/professional-development-training/post-degree-programs/pec-program-secondary-teachers/)

**Admission**

1. Admission to this post-degree program (PEC) requires formal application to the program, a Michigan Standard Teaching Certificate, and an approved bachelor's degree. Official copies of transcripts and a copy of the teaching certificate are required.
2. The plan of study is agreed upon with an advisor who will meet regularly with the student to advise and monitor progress of the 6 semester hour plan of work. It is the student's responsibility to make annual appointments with the advisor.
3. Correspondence courses may not be used in this program for either renewal or continuing certification.
4. Workshops, online courses from other universities, and conferences offering graduate credit must be approved by the Professional Standards Committee prior to enrollment.
5. When the Professional Education Certification Program is being used to earn an additional major/minor or endorsement all required coursework for the major, minor or endorsement must be completed prior to recommendation. Also, the Michigan Tests for Teacher Certification (MTTC) Subject Area Tests must be taken and acceptable scores earned prior to recommendation.

**Enhancement Program (EP)**

This program (EP) is for persons with a Michigan Standard or Professional Teaching Certificate who wish to enhance their certificate with an additional major, minor, or endorsement. Individuals entering this program are required to meet all requirements leading to the desired additional endorsement on their teaching certificate. Additionally, the MTTC Subject Area Test must be taken and acceptable scores achieved before a recommendation can be made to the state. For a full list of majors, minors and endorsements available and to apply, please visit

**Pre-Health Professional Studies**

Students who plan to apply to graduate clinical and medical training programs can benefit from a pre-health professions minor. This collection of specialized courses provides students with the additional knowledge, vocabulary, and skills valued by professional schools and future employers. Students preparing for application and admission to professional schools including dentistry, medicine, optometry, pharmacy, occupational and physical therapy, among others, gain mastery of material covered on standardized entrance exams and interviews. Students who complete this minor can differentiate themselves through their knowledge of epidemiology, study design, health law and ethics, social determinants of health, and causes of systematic health disparities.

**Public Health**

The multidisciplinary field of public health is committed to preserving, protecting, and promoting the health of individuals, populations, and the communities where they live, learn, work, and play. Public health professionals employ a wide range of tools to prevent disease and illness, improve physical and mental health outcomes, and ensure health equity. Students who complete the public health minor select courses that allow them to develop such practical skills as health education and communication, community organizing, epidemiology, program planning and evaluation, fundraising, grant writing, and public policy formation.

Reading
Empower students with the skills that will support them in all of their future educational opportunities.

A bachelor’s degree in Reading with elementary teacher certification will prepare you to become a classroom teacher for all subjects in grades K-5 with the option to become certified to teach developmental/remedial reading classes upon meeting the endorsement requirements. Either way, you’ll be ready to work with diverse learners with a program that combines academic studies, professional training and multiple field experiences in local schools.

With successful completion of the program, you will earn both a bachelor’s degree and faculty recommendation for the Michigan Elementary Standard Certificate.

Secondary Teacher Certification Program

Secondary Teacher Certification Program

Secondary Teacher Certification Program

UM-Dearborn students may earn a bachelor’s degree while securing a recommendation for a Secondary Standard Teaching Certificate. Programs are intended for those who wish to teach in either a middle school or senior high school. Students in this program will have two advisors, one in the College of Arts, Sciences, and Letters (CASL) to help plan the degree program and another, in the College of Education, Health, and Human Services, to assist in planning the teacher certification program.

Note: Education courses, or courses in the major or minor, may not be elected for pass/fail credit.

Certification

In recommending students for teacher's certificates, the College of Education, Health, and Human Services functions, indirectly, as an arm of the Michigan Department of Education. All such certificates awarded to students at the UM-Dearborn are issued at the request of an appropriate faculty body by the Michigan Department of Education in Lansing irrespective of the particular campus attended (Ann Arbor, Dearborn, Flint).

Campus Degree/Certification Program

Students, upon the successful completion of certification requirements, will receive their certification recommendation through the College of Education, Health, and Human Services and their degree recommendation from CASL. Therefore, they should be properly enrolled in the College of Education, Health, and Human Services and CASL. Students are responsible for meeting all of the appropriate degree requirements legislated by the particular unit that is to recommend their degree. The College of Education, Health, and Human Services and its faculty, therefore, can accept no responsibility for seeing that students are properly acquainted with their various degree requirements. Instead, students are to seek such information from the advisors available in their own particular degree recommending unit.

Certification Advising

All secondary certification students are assigned an academic advisor in the College of Education, Health, and Human Services. It is the policy of the College of Education, Health, and Human Services that all undergraduates and others seeking to earn the Standard Teaching Certificate are to meet with their certification academic advisor at least once per academic year. By means of this practice, the individual secondary certification student can be kept abreast of periodic modifications in the curriculum and in certification regulations.

Certification Requirements

A person desiring to earn a secondary standard teaching certificate must meet all of the conditions listed below.
1. The satisfactory completion of a degree program with an overall GPA of 2.75 or higher.
2. The satisfactory completion of a teaching major and a teaching minor, each with a GPA of 2.75 or higher.
3. The successful completion of EDA 205 Introduction to Education and EDT 211 Designing Tech-Based Learning Solutions is required of everyone desiring to qualify for a secondary teacher certification recommendation.
4. All requirements as identified in the College’s Four-Phase Checklist must be met for a teaching certificate recommendation.

The teaching certificate awarded to the beginning secondary school teacher is the Michigan Secondary Standard Teaching Certificate. This certificate is valid for teaching in grades six through twelve in those areas where the applicant has completed a major or minor, and passed the appropriate state mandated tests. It is valid for five years and may be renewed an unlimited number of times provided that renewal conditions are met. Legislative or other state action may change these specifications. Therefore, students are advised to contact the Office of Student Success in the College of Education, Health, and Human Services to learn of the most recent policies.

**College of Education, Health, and Human Services Four-Phase Checklist**

The College of Education, Health, and Human Services (CEHHS) at the UM-Dearborn is committed to the ideal of quality in the field of teacher education. A screening procedure is employed to help identify those people most likely to achieve the level of excellence defined by the college. This screening procedure is divided into four successive phases. **Requirements at one phase must be successfully completed before continuing on to the next.** Students are also responsible for meeting all program requirements for their selected degree as listed in Degree Works.

**Phase One - Initial Admission to Education**

All requirements listed below must be completed for progression to Phase Two:

1. Three types of students are considered for admission to the College of Education, Health, and Human Services at this entry level phase:
   - **First time in any college (FTIAC) students** - Campus admission standards for SAT, ACT, and high school Grade Point Average (GPA) are used in determining admission.
   - **Transfer students** - College of Education, Health, and Human Services admission standards (a minimum cumulative GPA of 2.75/4.0 scale) are used for transfer students.
   - **Post-degree certification students** - College of Education, Health, and Human Services admission standards are used for individuals with a bachelor’s degree earned at a regionally accredited institution. The individual must have a cumulative GPA of 2.75 or higher in their major, optional minor, and overall to be admitted to the College of Education, Health, and Human Services and the Teacher Certification Program.

2. **Admission to College of Education, Health, and Human Services:**
   - having declared one of the elementary certification majors, or
   - having declared the pre-secondary certification attribute
3. **A Criminal Background Check Consent form** must be submitted online to CEHHS-assigned MBox prior to a student’s first field experience.

4. **Video Recording Consent form** must be submitted online to CEHHS-assigned MBox prior to a student’s first field experience.
5. **Infectious Diseases/Blood-borne Pathogens training** must be completed in the Curriculum Knowledge Center (FCS 267) prior to a student’s first field experience.

**Phase Two - Preparation for Admission to the Teacher Certification Program**

All requirements listed below must be completed for progression to Phase Three:

1. Successful completion of
   - **COMP 105 (Writing & Rhetoric I), transfer credit equivalent, or waiver by university accepted high school Advanced Placement (AP) test score (not required for students admitted to the post-degree certification only program).**
   - **EDA 205 (Introduction to Education) or transfer credit equivalent.**
   - **EXPS 298 (Exploring Writing to Communicate, Learn and Teach) or COMP 106 (Writing & Rhetoric II).**
2. Minimum of 55 earned credit hours, including transfer credit, or previously earned bachelor’s degree if applicable, minimum cumulative GPA of 2.75 on a 4.0 scale as well as a minimum GPA of 2.75 in the major(s) and optional minor(s).
3. Undergraduate students must complete at least 12 credit hours of study at UM-Dearborn.
4. **Application for Admission to Teacher Certification Program (Phase III) form,** which includes a moral turpitude statement, must be submitted online to CEHHS-assigned MBox.
5. **Change of Degree Program, Major and/or Minor Petition form,** to officially declare teacher certification must be submitted to the CEHHS Office of Student Success, 262 FCS.

**Phase Three - Admission to Teacher Certification Program**

All requirements listed below must be completed for progression to Phase Four:

1. Successful completion of the appropriate MTTC Certification Tests listed below and official score reported directly to the University of Michigan-Dearborn (institution code 29):
   - **Elementary** certification students must pass the MTTC Elementary Education Test (#103)
   - **Secondary** certification students must pass the MTTC tests in their major(s) and optional minor(s).
2. Undergraduate students must meet Senior Residency Requirements and Post-Degree students must take a minimum of six credits at UM-Dearborn in order to receive recommendation.
3. Completion of Professional Studies sequence of courses.
4. Minimum cumulative GPA of 2.75 on a 4.0 scale as well as a minimum GPA of 2.75 in the major(s), optional minor(s) and the Professional Studies sequence.
5. Attendance at a **Student Teaching Application Meeting** and completion and submission of all forms online to the CEHHS Office of Student Success.
6. Completion of an MDE approved CPR and First Aid certification.

**Phase Four - Teacher Certification Program Completion**

All requirements listed below must be completed for recommendation for a degree and/or a State of Michigan Standard Teaching Certificate:
1. Attendance at the mandatory Student Teaching Orientation Meeting.

2. For undergraduate degree seeking students: Submission of completed Degree/Diploma application to the Office of the Registrar. This application can be submitted online or printed and submitted in person, and can be found at https://umdearborn.edu/students/registration-records/graduation-commencement/applying-graduate-0 (https://umdearborn.edu/students/registration-records/graduation-commencement/applying-graduate-0/).
   - Elementary certification students apply to graduate as a student in the College of Education, Health, and Human Services.
   - Secondary certification students apply to graduate as a student in the College of Arts, Sciences, and Letters.

3. Successful completion of the chosen program, major(s), optional minor(s) and professional studies sequence, including student teaching, and supplementary requirements with a minimum cumulative grade point average of 2.75 on a 4.0 scale, as well as minimum grade point average of 2.75 in the major(s), optional minor(s) and professional studies sequence.

4. Successful completion of any additional MTTC certification tests and official score reporting directly to the University of Michigan-Dearborn (Institution Code 29) for any optional additional endorsements sought. These scores must be reported to the University of Michigan-Dearborn College of Education, Health, and Human Services before recommendations are prepared for the state by the University of Michigan-Dearborn Certification Officer.
   - Additional content area major(s) or minor(s), beyond the minimum requirement, for elementary certification students.
   - Additional content area major(s) or minor(s), beyond the minimum requirement, for secondary certification students.

Based on this record of achievement, a decision to recommend or not to recommend for certification will be made by the College of Education, Health, and Human Services.

Secondary education students pursuing a bachelor’s degree in the College of Arts, Sciences, and Letters should not confuse the requirements for their teaching major with those for their academic major in CASL. The courses required to complete a teaching major are determined by the College of Education, Health, and Human Services in compliance with the state certification code. The courses required for a degree major are prescribed by the CASL and are a part of the student’s degree program. Often the two sets of requirements overlap so that by fulfilling concentration requirements, the student also, in most cases, completes most of the requirements for a teaching major. Occasionally, however, students must exercise caution when electing individual courses so that one set of requirements is not ignored while fulfilling the other. The student’s academic advisor in the College of Education, Health, and Human Services will be able to assist in planning an overall certification program that simultaneously meets both sets of requirements in an expeditious manner.

**Professional Requirements**

Preparation for a teaching credential consists of required courses in education. At least two practicums and methods courses in the academic major and minor are required prior to directed teaching.

**Notes:**

1. *Enrollment in all the required EDD courses is open only to those who are officially admitted to and in good academic standing in the Teacher Certification Program at UM-Dearborn. See Four-Phase Checklist for more information.*

2. *Eligibility for directed teaching requires meeting all the requirements listed on the Four-Phase Checklist as well as submission of passing scores from the MTTC (Michigan Tests for Teacher Certification) subject area tests in the student’s major and minor.*

3. *Recommendations for other certification endorsements require passing scores from relevant MTTC subject area tests.*

The program as outlined above meets the Michigan Department of Education teacher certification requirements at the time of this writing. However, changes by the University or the Michigan Department of Education may affect some program requirements. Therefore, students are strongly advised to inquire about possible changes by checking with the College of Education, Health, and Human Services Office of Student Success and/or with their academic advisor.
Areas of Study for Majors and Minors

The teaching majors and minors currently available for secondary certification students are listed below:

- Biology (p. 225)
- Chemistry (p. 226)
- Earth Science (p. 227)
- Economics (p. 228)
- English (p. 229)
- English as a Second Language (p. 230)
- French (p. 230)
- Geography (p. 231)
- History (p. 231)
- Integrated Science (p. 232)
- Learning Disabilities (p. 233)
- Mathematics (p. 234)
- Physics (p. 235)
- Political Science (p. 236)
- Psychology (p. 236)
- Social Studies (p. 237)
- Spanish (p. 237)
- Speech (p. 238)

Areas of Study for Minor (Optional)

- Biology (p. 226)
- Chemistry (p. 227)
- Earth Science (p. 228)
- Economics (p. 228)
- English (p. 229)
- English as a Second Language (p. 230)
- French (p. 230)
- Geography (p. 231)
- History (p. 231)
- Integrated Science (p. 232)
- Mathematics (p. 234)
- Physics (p. 235)
- Political Science (p. 236)
- Psychology (p. 236)
- Spanish (p. 237)
- Speech (p. 238)

Electives
Select 0-4 credit hours from above: 0-4

Total Credit Hours 28-37
One course in genetics: either BIOL 306 or BIOL 360, must be selected.

Major Notes:

1. A minimum GPA of 2.75 is required for a major.
2. For the major, 16 semester hours must be in courses numbered 300 or above.
3. At least 15 semester hours in UM-Dearborn courses required for a major.
4. Additional courses may be required to satisfy program and 32 semester hour requirement.

Program Notes:

1. Minimum GPAs are required for program completion: 2.75 cumulative, 2.75 in major, 2.75 in minor, and 2.75 in Professional Studies.
2. Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog as well as on the Four Phase Checklist. Students are expected to meet with their College of Education, Health, and Human Services advisor at least once per year and in the term prior to graduation.
3. Courses taken on a PASS/FAIL basis will NOT be accepted toward program completion.
4. CEHHS recommends successful program completers for State of Michigan Certification, however, it is ultimately up to the State of Michigan to issue certificates. Certain offenses on a criminal record can keep individuals from obtaining teacher certification. Please refer to The Revised School Code, Act 451 of 1976, section 380.1539b.
5. Initial certification program students must have passing scores on the appropriate MTTCC subject area test reported to the University of Michigan-Dearborn College of Education, Health, and Human Services by electronic delivery or direct mail from Pearson Evaluation Systems prior to student teaching.
6. Certified teachers pursuing an endorsement in a post-degree program must complete all program requirements and have passing scores on the appropriate MTTCC subject area test reported to the University of Michigan-Dearborn College of Education, Health, and Human Services by electronic delivery or direct mail from Pearson Evaluation Systems prior to a recommendation being made to the State of Michigan Department of Education.

**Program Notes:**

1. Minimum GPA’s are required for program completion: 2.75 cumulative, 2.75 in major, 2.75 in minor, and 2.75 in Professional Studies.
2. Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog as well as on the Four Phase Checklist. Students are expected to meet with their College of Education, Health, and Human Services advisor at least once per year and in the term prior to graduation.
3. Courses taken on a PASS/FAIL basis will NOT be accepted toward program completion.
4. CEHHS recommends successful program completers for State of Michigan Certification, however, it is ultimately up to the State of Michigan to issue certificates. Certain offenses on a criminal record can keep individuals from obtaining teacher certification. Please refer to The Revised School Code, Act 451 of 1976, section 380.1539b.
5. Initial certification program students must have passing scores on the appropriate MTTC subject area test reported to the University of Michigan-Dearborn College of Education, Health, and Human Services by electronic delivery or direct mail from Pearson Evaluation Systems prior to student teaching.
6. Certified teachers pursuing an endorsement in a post-degree program must complete all program requirements and have passing scores on the appropriate MTTC subject area test reported to the University of Michigan-Dearborn College of Education, Health, and Human Services by electronic delivery or direct mail from Pearson Evaluation Systems prior to a recommendation being made to the State of Michigan Department of Education.

**Minor Requirements**

A minimum of 22 semester hours is required.

Total Credit Hours 32

Minor Notes:

1. A minimum GPA of 2.75 is required for a major.
2. For the major, 18 semester hours must be in courses numbered 300 or above.
3. At least 15 semester hours in UM-Dearborn courses required for a major.

Program Notes:

1. Minimum GPA’s are required for program completion: 2.75 cumulative, 2.75 in major, 2.75 in minor, and 2.75 in Professional Studies.
2. Advising Policy: The student is responsible for complying with requirements described in the Undergraduate Catalog as well as on the Four Phase Checklist. Students are expected to meet with their College of Education, Health, and Human Services advisor at least once per year and in the term prior to graduation.
3. Courses taken on a PASS/FAIL basis will NOT be accepted toward program completion.
4. CEHHS recommends successful program completers for State of Michigan Certification, however, it is ultimately up to the State of Michigan to issue certificates. Certain offenses on a criminal record can keep individuals from obtaining teacher certification. Please refer to The Revised School Code, Act 451 of 1976, section 380.1539b.
5. Initial certification program students must have passing scores on the appropriate MTTC subject area test reported to the University of Michigan-Dearborn College of Education, Health, and Human Services by electronic delivery or direct mail from Pearson Evaluation Systems prior to student teaching.
6. Certified teachers pursuing an endorsement in a post-degree program must complete all program requirements and have passing scores on the appropriate MTTC subject area test reported to the University of Michigan-Dearborn College of Education, Health, and Human Services by electronic delivery or direct mail from Pearson Evaluation Systems prior to a recommendation being made to the State of Michigan Department of Education.

- SPEE 310 Interpersonal Communication
- SPEE 320 Public Argument and Advocacy
- SPEE 330 Argumentation and Debate
- SPEE 340 Persuasion & Social Movements
- SPEE 430 Small Group Communication

Select two courses from the following:

- JASS 302 Media Law and Ethics
- COMM 420 Critical Media Studies
- COMM 430 International Communications

Total Credit Hours 22

**Areas of Inquiry**

- Natural Science (GENS) – 7 Credits
  - Lecture/Lab Science Course
  - Additional Science Course

- Social and Behavioral Analysis (GESB) – 9 Credits

- Humanities and the Arts (GEHA) – 6 Credits

- Intersections (GEIN) – 6 Credits

**Capstone**

Capstone (GECE) – 3 Credits

Core Course Requirements

Core courses are generally completed in the freshman and sophomore year.

Selections must be from courses numbered 100-200 unless otherwise stated.

**Social Studies**

Help young learners understand the social forces that shape our society. From the study of history to understanding how our government works, social studies curriculum is essential for young citizens.

This program will train you in the latest strategies for teaching students about the important cultural, economic, geographic, political and social dimensions of human society, with an emphasis on evidence-based lessons and creative projects that enhance learning.

A bachelor’s degree in social studies with elementary teacher certification will prepare you to teach all subjects in grades K-5 with the option to become certified to teach social studies subjects in grades 6-8 upon meeting endorsement requirements. Plus, with successful completion of the program, you’ll earn both a bachelor’s degree and faculty recommendation for the Michigan Elementary Standard Certificate.

**Dearborn Discovery Core**

Please see the Dearborn Discovery Core (General Education) (https://umdearborn.edu/faculty-staff/academic-program-and-course-development/dearborn-discovery-core-general-education/) webpage or additional information.

**Foundational Studies**

Writing and Communication (GEWO) – 6 Credits

Upper-Level Writing Intensive (GEWI) – 3 Credits

Quantitative Thinking and Problem Solving (GEQT) – 3 Credits

Critical and Creative Thinking (GECC) – 3 Credits

**Pre-Professional Requirements**

Pre-professional courses are generally completed in the freshman and sophomore year.

Teaching English to Speakers of Other Languages
Teaching English to Speakers of Other Language (TESOL)
There are many opportunities for teaching English to speakers of other languages (TESOL). The UM-Dearborn certificate program is specifically designed for individuals seeking opportunities locally or internationally and will prepare students with the requisite content knowledge and pedagogy to teach English to students or adults outside of the PK-12 public school system. Certificate holders may find careers with non-U.S. agencies/institutions in order to meet international needs to provide English instruction to their student populations.

This certificate does not lead to state teacher certification or a state endorsement. For those interested in PK-12 certification, please refer to the ESL endorsement.

The TESOL Certificate Program requires 15 undergraduate credit hours.

Program Goals:
The TESOL Certificate Program goals are twofold:

- Provide students with the requisite content knowledge and pedagogy to teach English to non-native speakers locally and abroad in short- and/or long-term English language programs.
- Provide non-native English speakers who are currently teaching abroad with the requisite content knowledge and pedagogy to effectively teach their non-native English-speaking students.

How to Apply:
For current UM-Dearborn students, please complete the Declaration of Certificate form (https://umich.app.box.com/s/d72ondd18nnngpfpvsvxaxb6hm304xb/).
For individuals not enrolled in a UM-Dearborn degree program, please complete the Certificate Program Application (https://umdearborn-portal.force.com/application/TX_SiteLogin/?startURL=).

College of Engineering and Computer Science

Engineering: The Profession

Engineers are the link between scientific knowledge and practical applications. Engineers combine various roles and functions in their job. What are engineers?

- Engineers are science-knowledgeable individuals who use mathematics, chemistry, and physics for an applied purpose.
- Engineers invent, design, or improve products that people want to buy or use.
- Engineers are business people who design, manufacture, or sell a technical product or service to customers, taking into consideration safety, cost, quality, reliability, societal impact, and ease of use.
- Engineers are planners and integrators who bring together skills and knowledge from many disciplines and fields for some technical purpose or application.
- Engineers are creative problem-solvers and doers: they make decisions and get things done in a combined science/technical/business/applied profession.
- Engineers analyze problems, develop design solutions, and pay close attention to detail.
- Engineers interact with a variety of people, including clients, scientists, other engineers, technicians, managers, and government officials.
- Engineers are interested in how and why things work and like practical challenges.
- Successful engineers are known for their analytical, imaginative, and creative skills, for using common sense, for being team players, for being able to pick up new knowledge and skills quickly, and for their commitment to continue to improve and learn.

Computer Science: The Profession

Computer and information scientists offer expertise in the effective and efficient use of computers for tackling a broad spectrum of practical challenges, usually in a team environment. Computer and information science includes the following sub-specialties: operating systems, compilers, computer graphics, computer game design, computer networks and network administration, security, enterprise computing technologies, information and database systems and database administration, information retrieval, artificial intelligence and machine learning, robotics, theoretical computer science, programming languages, software engineering and web technologies. Software engineering is the area within computer science that is concerned with the theoretical and practical aspects of the detailed design, building, testing, modification, optimization, and maintenance of large, high quality, software systems for a wide range of applications across society. Software engineers analyze users’ needs and work as part of a core team to design, create, and implement high quality and cost effective new software, computer applications, and utility programs. A core team may be composed of software engineering, manufacturing, design, management, and marketing people who work together until the software product is released and implemented.

Data scientists use programming, mathematics/statistics, and modeling skills to convert data for companies, governments, and other institutions into actionable information and insight. Cybersecurity and Privacy is the area of computer science concerned with fundamental security and privacy concepts including confidentiality, integrity, access control, security architecture and systems, and attack/defense in various application areas, ranging from computer security to network security, from wired security to wireless security, from data security to application security, from every day security to enterprise security.

The College of Engineering and Computer Science offers undergraduate degrees in four computer science fields: Computer and Information Science, Cybersecurity and Information Assurance, Data Science, and Software Engineering.

Career Choice

What can help students to decide to pursue a career in engineering or computer science? Some of the clues are an interest in and successful completion of science, mathematics, and computer science courses; a desire and ability to investigate the "why" as well as the "how" of things; and an interest in the creative development of devices or systems that meet specific needs. Not all of these signs or interests will fit everyone, but they can be used as a guide.

Individuals with interests in using science and mathematics to benefit others will find that engineering and computer science professions offer a wide variety of career and employment choices and opportunities.

Admissions counselors at UM-Dearborn and academic advisors of the College of Engineering and Computer Science are glad to talk with students about career choices or choosing the school that best suits their interest and abilities. Prospective students are welcome to contact the College of Engineering and Computer Science and to read the information on the College's web page.

Educational Goals and Programs

The mission of the College of Engineering and Computer Science is to be a leader in providing quality undergraduate and graduate programs in an environment integrated with engineering practice, research, and continuing professional education, in close partnership with the industrial community.

The College of Engineering and Computer Science's (CECS) educational objective is to prepare its students to take positions of leadership commensurate with their interests and abilities in a world where science, engineering, and human relations are of basic importance.

Programs of study integrate fundamental mathematical and scientific theory with experiments, advanced analysis, and design practice to produce the coherent educational preparation required of professional engineers and computer scientists.

Both the CECS academic curriculum and cooperative education placements are planned to prepare students to become practicing engineers or computer scientists, administrators, or investigators. The knowledge, skills, and discipline gained from the CECS degree programs are broad and fundamental and also constitute excellent preparation for other careers, such as law and medicine.
Undergraduate Requirements

The College of Engineering and Computer Science (CECS) offers undergraduate programs leading to the Bachelor of Science in Engineering (BSE) degree in the following fields: Bioengineering, Computer Engineering, Electrical Engineering, Human Centered Engineering Design, Industrial and Systems Engineering, Manufacturing Engineering, Robotics Engineering, and Mechanical Engineering. (Students in these BSE programs may also choose to earn a concurrent second degree in Engineering Mathematics.) The College also offers an undergraduate degree program leading to a Bachelor of Science (BS) in the following fields: Computer and Information Science, Cybersecurity and Information Assurance, Data Science, and Software Engineering. The CIS program has three concentrations: computer science, information systems, and game design. The CIA program has two concentrations: digital forensics and cybersecurity and privacy. (Students in these BS programs may also choose to earn a concurrent second degree in CIS Mathematics.)

The minimum credit-hour requirement for the degree programs in engineering is 125 to 128 semester credits, depending on the specific major. The BS in Software Engineering, Data Science, Cybersecurity and Information Assurance, or in Computer and Information Science requires a minimum of 120 to 123 semester credits of course work, depending on the specific major.

CECS students can also choose from several concurrent undergraduate degree programs, an opportunity to earn two engineering or computer science degrees by completing an additional 15-18 credits.

The scholastic requirements for graduation are given under the “Academics” sections of this Catalog. For the detailed requirements specified by the College of Engineering and Computer Science for each of its undergraduate programs, see the sections below.

Students have the option of earning a minor in addition to their major. CECS offers minors in Artificial Intelligence, Computer and Information Science, and Game Design. The College of Arts, Sciences, and Letters and the College of Business offer various minors of interest to CECS students. See the relevant sections of this Catalog.

The CECS Office of Advising and Academic Success, 313-593-5510, umd-cecs-undergrad@umich.edu, is the primary contact for undergraduate students for academic advising and for information about all undergraduate degree programs of the College of Engineering and Computer Science.

Admission to the College of Engineering and Computer Science

Undergraduate students interested in Engineering or Computer Information Science majors can be admitted into the College of Engineering and Computer Science (CECS) in one of two ways:

1. Admission directly into a CECS major

Freshman Requirements for Direct Admission:

- Students with a GPA of 3.5 or higher AND an SAT of 1200 (ACT of 25) or higher, or
- Students who have completed at least Pre-Calculus (Math 105 or equivalent) with a C grade or higher, or
- Students who place into Calculus 1 (Math 115) or higher on their placement exam or via the following automatic placements:
  - SAT math section score of 620 or higher
  - ACT math score of 26 or higher
  - 3, 4, or 5 on an AP Calculus exam
  - 5 or higher on an IB Mathematics SL exam or a 4 or higher on an IB Mathematics HL or HL Further exam

Transfer Requirements for Direct Admission:

- Students who have completed Calculus II (Math 116 or equivalent) elsewhere with a C grade or higher AND have an overall GPA of 2.75 or higher.

2. Admission into the Pre-Engineering Program

Freshman Requirements:

- Students who satisfy the university's undergraduate admissions standards, but do not meet the above admission criteria for direct admit into CECS.

Transfer Requirements:

- Students will be required to show an overall transfer GPA of 2.75 or higher.

What is Pre-Engineering?

This program is designed to support students in building a stronger math and science foundation to be successful in the rigorous CECS curriculum. Pre-Engineering students will have excellent campus support in developing the fundamental knowledge our faculty have identified as key predictors of success in the engineering and computer science fields.

Transitioning from Pre-Engineering into a CECS Major:

Pre-Engineering students will work closely with Academic Advisors to enroll in appropriate classes to help ensure their chances are optimized to be successful in the intensive curriculum that lies ahead. Students following the Pre-Engineering path are expected to complete the transition expectations (below) within one calendar year or within their first 30 credit hours at UM-Dearborn, whichever comes first. At the completion of one year or 30 credit hours, students are required to declare a major in CECS (if they qualify), or in a different academic college on campus (if they do not qualify). Some students may complete their Pre-Engineering coursework within one semester.

- Freshmen can transition once they successfully complete Pre-Calculus (Math 105) with a C grade or higher
- Transfer students can transition once they successfully complete Calculus II (Math 116) with a C grade or higher.
- All students transitioning into a CECS major are expected to be in good academic standing overall (2.0 GPA or higher).

CECS Office of Advising and Academic Success

The College of Engineering and Computer Science (CECS) Office of Advising and Academic Success is the primary contact for undergraduate students for academic advising and for information about all undergraduate CECS programs. The office provides the following services to CECS undergraduate students:
The CECS Office of Advising and Academic Success is located on the first floor of the Engineering Lab Building, (phone: 313-593-5510).

**Majors**
- Bioengineering (p. 251) (also offered as Dual Degree)
- CIS Mathematics (p. 252)
- Computer and Information Science (p. 256) (also offered as Dual Degree)

**Administration**
Ghassan Kridli, PhD, Dean

Di Ma, PhD, Associate Dean for Graduate Education and Research

Brahim Medjahed, PhD, Associate Dean for Undergraduate Education

John Cristiano, PhD, Assistant Dean for Research Development and Strategic Initiatives and Co-Director, Institute for Advanced Vehicle Systems,

Anthony Delarosa, MA, Assistant Director, Experiential Learning and Co-op Education

Eric Kirk, Director, Facilities and Laboratory Safety

Leigh McGrath, BS, Director, Business Operations

Lisa Remsing Hall, PhD, Director, Advising and Academic Success

Susan Guinn, MA, Director, CECS Online

**Chairs and Directors**
Ben Q. Li, Chair, Department of Mechanical Engineering

Paul Richardson, Chair, Department of Electrical and Computer Engineering

Armen Zakarian, Chair, Department of Industrial and Manufacturing Systems Engineering

Qiang Zhu, Chair, Department of Computer and Information Science

**Professors Emeriti**
Aswad, A. Adnan, PhD, Professor Emeritus of Industrial and Manufacturing Systems Engineering

Bolling, Fredric, PhD, Professor Emeritus of Mechanical Engineering

Chang, Chia-hao, PhD, Professor Emeritus of Industrial and Manufacturing Systems Engineering

Despres, Thomas A., PhD, Professor Emeritus of Mechanical Engineering

England, Anthony, PhD, Professor Emeritus of Electrical and Computer Engineering and Dean Emeritus College of Engineering and Computer Science

Habib, Izzeddin S., PhD, Professor Emeritus of Mechanical Engineering

Kachhal, Swatantra K., PhD, Professor Emeritus of Industrial and Manufacturing Systems Engineering

Kampfner, Roberto, PhD, Associate Professor Emeritus of Computer and Information Science
Knight, James W., PhD, Associate Professor Emeritus of Industrial and Manufacturing Systems Engineering

Miller, John, PhD, University of Toledo, Associate Professor of Electrical and Computer Engineering

Murtuza, Syed, PhD, Professor Emeritus of Electrical and Computer Engineering

Tsui, Louis, PhD, Associate Professor Emeritus of Computer and Information Science

Varde, Keshav, PhD, Professor Emeritus of Mechanical Engineering

Faculty

Department of Computer and Information Science
Abouelenien, Mohamed, PhD, University of North Texas, Assistant Professor of Computer and Information Science
Akingbehin, Kiumi, PhD, Wayne State University, Professor of Computer and Information Science
Bacha, Anys, PhD, Ohio State University, Assistant Professor of Computer and Information Science
Eshete, Birhanu, PhD, University of Trento, Assistant Professor of Computer and Information Science
Guo, Jinhua, PhD, University of Georgia, Associate Professor of Computer and Information Science
Hassan, Foyzul, PhD, University of Texas at San Antonio, Assistant Professor of Computer and Information Science
Kessentini, Marouane, PhD, University of Montreal, Associate Professor of Computer and Information Science
Lu, Jin, PhD, University of Connecticut, Assistant Professor of Computer and Information Science
Ma, Di, PhD, University of California-Irvine, Professor of Computer and Information Science
Maxim, Bruce, PhD, University of Michigan, Professor of Computer and Information Science
Medjahed, Brahim, PhD, Virginia Tech University, Professor of Computer and Information Science
Meneghetti, Niccolo, PhD, State University of New York at Buffalo (SUNY Buffalo), Assistant Professor of Computer and Information Science
Neji, Sana, MBA/MS, University of Quebec, Lecturer III IV of Computer and Information Science
Ortiz, Luis, PhD, Brown University, Associate Professor of Computer and Information Science
Ortiz, Luis, PhD, Brown University, Associate Professor of Computer and Information Science
Roy, Probir, PhD, College of William and Mary, Assistant Professor of Computer and Information Science
Shen, Jie, PhD, University of Saskatchewan, Professor of Computer and Information Science
Song, Zheng, PhD, Virginia Tech, Ph.D., Beijing University of Posts and Telecomm., Assistant Professor of Computer and Information Science
Wang, Shengquan, PhD, Texas A M University, Associate Professor of Computer and Information Science
Xu, Zhiwei, PhD, Florida Atlantic University, Associate Professor of Computer and Information Science
Yoon, David, PhD, Wayne State University, Associate Professor of Computer and Information Science
Zhu, Qiang, PhD, University of Waterloo, Professor of Computer and Information Science

Department of Electrical and Computer Engineering
Awad, Selim Saad, PhD, Polytechnic Institute of Grenoble, Professor of Electrical and Computer Engineering
El Kateeb, Ali, PhD, Concordia University, Associate Professor of Electrical and Computer Engineering
Farooq, Junaid, PhD, New York University, Assistant Professor of Electrical and Computer Engineering
Hafeez, Azeeem, PhD, University of Michigan-Dearborn, Lecturer III of Electrical and Computer Engineering
Hong, Junho, PhD, Washington State University, Assistant Professor of Electrical and Computer Engineering
Kim, Taeyhun, PhD, Texas A M, Associate Professor of Electrical and Computer Engineering
Kwon, Jaeock, PhD, Texas A&M University, Assistant Professor of Electrical and Computer Engineering
Lakshmanan, Sridhar, PhD, University of Massachusetts Amherst, Associate Professor of Electrical and Computer Engineering
Malik, Hafiz, PhD, University of Illinois At Chicago, Professor of Electrical and Computer Engineering
Mohammadi, Alireza, PhD, University of Toronto, Assistant Professor of Electrical and Computer Engineering
Murphey, Yi Lu, PhD, University of Michigan, Professor of Electrical and Computer Engineering
Putty, Michael, PhD, University of Michigan, Lecturer IV of Electrical and Computer Engineering
Rawashdeh, Samir, PhD, University of Kentucky, Associate Professor of Electrical and Computer Engineering
Richardson, Paul C., PhD, Oakland University, Professor of Electrical and Computer Engineering
Shaout, Adnan, PhD, Syracuse University, Professor of Electrical and Computer Engineering
Su, Wencong, PhD, North Carolina State University, Associate Professor of Electrical and Computer Engineering
Wang, Mengqi, PhD, North Carolina State University, Associate Professor of Electrical and Computer Engineering

Watta, Paul, PhD, Wayne State University, Associate Professor of Electrical and Computer Engineering

Wei, Lu, PhD, Aalto University, Assistant Professor of Electrical and Computer Engineering

Xiang, Weidong, PhD, Tsinghua University, Professor of Electrical and Computer Engineering

Yi, Yasha, PhD, Massachusetts Institute of Technology, Professor of Electrical and Computer Engineering

Zhao, Dongming, PhD, Rutgers University, Professor of Electrical and Computer Engineering

Department of Industrial Manufacturing Systems Engineering

Ayoub, Georges Y., PhD, University of Lille, Assistant Professor of Industrial and Manufacturing Systems Engineering

Bao, Shan, PhD, University of Iowa, Associate Professor of Industrial and Manufacturing Systems Engineering

Bayram, Armagan, PhD, University of Massachusetts, Assistant Professor of Industrial and Manufacturing Systems Engineering

Chehade, Abdallah, PhD, University of Wisconsin-Madison, Assistant Professor of Industrial and Manufacturing Systems Engineering

Chen, Yubao, PhD, University of Wisconsin-Madison, Professor of Industrial and Manufacturing Systems Engineering

Feng, Fred, PhD, University of Michigan, Ann Arbor, Assistant Professor of Industrial and Manufacturing Systems Engineering

Hu, Jian, PhD, Northwestern University, Associate Professor of Industrial and Manufacturing Systems Engineering

Hu, Zhen, PhD, Missouri University of Science and Technology, Assistant Professor of Industrial and Manufacturing Systems Engineering

Jia, Bochen, PhD, Virginia Polytechnic Institute and State University, Associate Professor of Industrial and Manufacturing Systems Engineering

Kim, Sang-Hwan, PhD, North Carolina State University, Associate Professor of Industrial and Manufacturing Systems Engineering

Klungle, Roger, D.Sc., George Washington University, Lecturer III of Industrial and Manufacturing Systems Engineering

Kridli, Ghassan, PhD, University of Missouri-Columbia, Professor of Industrial and Manufacturing Systems Engineering

Lee, Cheol, PhD, Purdue University, Associate Professor of Industrial and Manufacturing Systems Engineering

Tolbert, DeLean, PhD, Purdue University, Assistant Professor of Industrial and Manufacturing Systems Engineering

Ulgen, Onur, PhD, Texas Technological University, Professor of Industrial and Manufacturing Systems Engineering

Zakarian, Armen, PhD, University of Iowa, Professor of Industrial and Manufacturing Systems Engineering

Zhou, Feng, PhD, Georgia Institute of Technology, Assistant Professor of Industrial and Manufacturing Systems Engineering

Department of Mechanical Engineering

Argento, Alan, PhD, University of Michigan, Professor of Mechanical Engineering

Casquero Penelas, Hugo, PhD, Universidade da Coruña, Assistant Professor of Mechanical Engineering

Chen, Lei, PhD, National University of Singapore, Assistant Professor of Mechanical Engineering

Cheng, John G., PhD, University of Tennessee, Professor of Mechanical Engineering

Esquivel, Amanda, PhD, Wayne State University, Associate Professor of Bioengineering

Ghosh, Gargi, PhD, University of Kentucky, Associate Professor of Bioengineering

Huntley, Hugh, PhD, University of Michigan, Associate Professor of Mechanical Engineering

Jayaraman, Tanjore, PhD, University of Utah, Assistant Professor of Mechanical Engineering

Jung, Dohoy, PhD, University of Michigan, Professor of Mechanical Engineering

Kanapathipillai, Mathumai, PhD, Iowa State University, Associate Professor of Bioengineering

Kang, Hong Tae, PhD, University of Alabama, Professor of Mechanical Engineering

Kim, Doo hyun, PhD, University of Michigan, Assistant Professor of Mechanical Engineering

Kim, Youngki, PhD, University of Michigan, Assistant Professor of Mechanical Engineering

Lee, Byungchan, PhD, University of Michigan, Lecturer III of Mechanical Engineering

Li, Ben Q., PhD, University of California-Berkeley, Professor of Mechanical Engineering

Lo, Joe Fu-Jiou, PhD, University of Southern California, Associate Professor of Bioengineering

Mallick, Pankaj K., PhD, Illinois Institute of Technology, Professor of Mechanical Engineering

Mei, Carole, PhD, University of Auckland, Professor of Mechanical Engineering

Mohanty, Pravansu, PhD, McGill University, Professor of Mechanical Engineering

Pannier, Christopher, PhD, University of Michigan, Assistant Professor of Mechanical Engineering
Ratts, Eric, PhD, Massachusetts Institute of Technology, Associate Professor of Mechanical Engineering
Reyes-Villanueva, German, PhD, University of Liverpool, Associate Professor of Mechanical Engineering
Sengupta, Subrata, PhD, Case Western Reserve University, Professor of Mechanical Engineering
Shim, Taehyun, PhD, University of California-Davis, Professor of Mechanical Engineering
Zhang, Yi, PhD, University of Illinois at Chicago, Professor of Mechanical Engineering
Zikanov, Oleg, PhD, Moscow State University, Professor of Mechanical Engineering

Cooperative Education
The College of Engineering and Computer Science recognizes that experience-based learning, through cooperative education and internship programs, is an integral component to a student's college experience that provides life-changing learning opportunities. The Cooperative Education Program is an optional program for students who desire paid practical work experiences related to their academic program of study and to their career interest. Co-op students may perform their assignments in alternating semesters of full-time employment and full-time course work, or by completing the co-op assignments in the summer. Students who complete the Cooperative Education program requirements receive recognition on their transcripts.

Cooperative education assignments are supervised by representatives of both the University and the employer. The work experience is considered an integral part of the educational process, and both the College and the participating employer share responsibility for this integration. These assignments can be in-state or out-of-state. Students in the Cooperative Education Program are required to complete a minimum of two-credit hours (two co-op assignments) to receive the transcript recognition.

Students with majors in the Computer and Information Science Department, may use multiple cooperative education credits (see your advisor to determine maximum permitted credits) towards fulfilling the basic requirements for their degree program. Students with majors in all other CECS Departments may use up to 1 (one) cooperative education credit towards fulfilling the basic requirements for their degree program.

Students are encouraged to complete a minimum of two full-time co-op work semesters with a participating employer; however, the co-op assignments may be completed with different employers. Students may enroll in up to two academic classes concurrently with their cooperative education assignment.

Student Counseling and Placement
The Director of the CECS Cooperative Education Program counsels co-op students with respect to career interests and aptitudes, and arranges interviews with appropriate cooperating employers. These interviews furnish the opportunity for a professional work assignment that is agreeable to the University, the student and the employer.

Evaluation, Eligibility and Recognition of Achievement
At the end of the cooperative education assignment (end of semester) each student is formally evaluated by the employer. The participating student submits a technical report to the faculty member responsible for the cooperative education class for grading.

The grade for the cooperative education class is determined based on the quality of the technical report and the employer evaluation (details on the grading rubric will be provided to the students in the cooperative education course syllabus.) If the cooperative education assignment is counted for academic credit toward the degree, it is graded on a scale from A to E. However, if the cooperative education course is completed for additive credit, the assigned grade will be either S for satisfactory or NC (no credit) for unsatisfactory. Failure to submit the report by the due date will result in failing the course (receiving a grade of E or NC).

Students are eligible to participate in the Cooperative Education Program and register for co-op courses by meeting pre-requisite courses. These pre-requisite courses are specific to the student's academic program of study. Transfer students are eligible to participate in the Cooperative Education Program once they have completed one semester of enrollment in one of the academic programs offered by the College and have met the appropriate pre-requisite courses.

Participating employers and the University expect that students engaged in the Cooperative Education Program will be able to demonstrate a considerable increase in academic knowledge after each term of classroom study. Therefore, students in the CECS Cooperative Education Program must be full-time students during their alternated class terms; that is, must satisfactorily complete at least 12 credit hours of their degree program course work during each scheduled class term.

To earn cooperative education recognition on their transcripts, students must complete at least two full-time assignments. With prior registration, one cooperative education credit-hour may be earned for each full-time cooperative education assignment. A full-time assignment requires at least 34+ hours of work per week for 12 to 15 consecutive weeks in a semester.

In engineering programs, with departmental faculty pre-approval, one of the cooperative education assignments may also be counted for academic credit (i.e. to satisfy the requirements of the undergraduate degree program.) In such a case, the recognition on the transcript requirements for the Cooperative Education Program can be fulfilled with only one additional credit hour of cooperative education beyond the requirements of the degree program. For students with majors in the Computer and Information Science Department, both of the cooperative education assignments may be completed for academic credit towards the undergraduate degree program.

Admission to the Cooperative Program
Students who have completed the pre-requisite courses and have good academic standing, can join the CECS Cooperative Education Program. Typically, students meet these requirements towards the end of their sophomore year. Transfer students admitted to the CECS are eligible to participate in the Cooperative Education Program after completing the pre-requisite courses and one semester as a full-time student, or 12 credit hours. A GPA of at least 2.00 is a pre-requisite to admission into the program.

The basic course requirements include the calculus sequence, differential equations, linear algebra, college chemistry, the engineering physics sequence, and introductory courses in engineering that include computer-aided tools for design and analysis.

In addition to the basic entrance-level requirements there are also specific courses that must be satisfactorily completed before beginning
the first co-op work period. These specific courses, which differ according to the degree programs, are all courses normally scheduled in the sophomore year under CECS’s basic freshman-sophomore curriculum (the equivalent course at another college may be acceptable for a transfer student).

- For students majoring in computer and information science, cybersecurity and information assurance, data science, or software engineering, the pre-requisite to the Cooperative Education Program is: Discrete Structures I (CIS 275).
- For students majoring in computer engineering, electrical engineering or robotics engineering, the pre-requisites to the Cooperative Education Program are: (1) Circuits (ECE 210) and (2) Digital Systems (ECE 273).
- For students majoring in industrial and systems engineering or manufacturing engineering, the pre-requisites to the Cooperative Education Program are: (1) C Programming (IMSE 255) and (2) Engineering Probability and Statistics (IMSE 317).
- For students majoring in bioengineering or mechanical, the pre-requisites to the Cooperative Education Program are: (1) Engineering graphics (ENGR 126) and (2) Computer Methods (ENGR 216) and (3) Engineering Materials (ENGR 250), and (4) [Thermodynamics (ME 230) or Design Stress Analysis (ME 260)].

The purpose of these course requirements is to prepare the co-op student academically for professional work assignments where there will be continual daily association with practicing engineers. Through fulfillment of these requirements the co-op student will have sufficient competence to perform technical work and function as a member of an engineering group.

Registration in the Cooperative Education Program

Each co-op work assignment extends for one term (four months) and occupies the student full-time. From a group of co-op courses available, the co-op student, in consultation with the Director of the CECS Cooperative Education Program, elects a course whose content is appropriate to the level of practice being undertaken that term. Three such registrations are recommended (two are required) for satisfactory completion of the Cooperative Education Program. Since the student co-op work assignment is full-time, enrollment in courses other than the co-op course is strongly discouraged. However, a student on a co-op assignment may register for a maximum of two other courses during the semester (the recommendation is no more than one course along with the co-op course).

In some instances students may be involved in a cooperative-type educational program prior to their eligibility for and/or acceptance into the Engineering Cooperative Education Program. Such cooperative-type programming might occur either while enrolled at UM-Dearborn or at another educational institution. However, employment completed prior to formal enrollment in the CECS Cooperative Education Program cannot be used for satisfying the requirements of the CECS Cooperative Education Program or degree program.

CECS Internship Program

The Cooperative Education Office also provides students with degree-related internship opportunities. The College of Engineering and Computer Science defines internships as flexible work experiences performed on a part-time basis during the academic year and possibly full-time in the summer. Internships provide valuable work experience, but are performed without supervision of a university representative and students do not receive transcript recognition for their internship work.

Like the Cooperative Education Program co-op assignments, students are paid by their employers for their internship work. Since internships are part-time employment, they do not require university registration in a special internship course. Furthermore, students engaged in an internship may enroll full-time in additional academic courses. However, students pursuing an internship are strongly recommended to discuss their overall workload (academic and employment) with an academic advisor in the CECS Office of Advising and Academic Success.

CECS Experiential Honors Program

The CECS Experiential Honors Program inspires the intellectual and leadership growth of students beyond academics. The program equips students with knowledge and skills that enhance their leadership and their preparedness to meet the challenges of their future engineering careers.

Program Features

The Experiential Honors Program has two groups of elements: An Academic Element and Experiential and Leadership Elements. The Academic Element provides knowledge on design innovation and entrepreneurship. The Experiential and Leadership Elements focus on implementing academic knowledge in professional experience, engineering design, and/or engineering research.

Students will earn recognition for each element of the program by enrolling in a faculty supervised Experiential Honors course associated with the program element. Those who complete 1) the Academic Elements, 2) a faculty supervised internship (ENGR 399), 3) an Experiential Honors Research project, and 4) an Experiential Honors Design project, will receive an Experiential Honors notation on their transcripts upon graduation. It is worth noting that all program requirements can be completed within the academic requirements of the student’s degree program.

Who is eligible to participate?

The program is open to all students at CECS who are in good academic standing and who are interested in extending their educational experience beyond the classroom. The program is open to freshmen and transfer students who have completed at least one semester of study on campus.

Students can join the program by completing an application form indicating their goals, their commitment to achieving these goals and their vision for incorporating the goals into their education. The program is open to all students and has no GPA requirement; however, to receive recognition, the students must accomplish the program elements and spend at least 4 full semesters of active participation.

How to Apply

1. Attend an informational session about the program or meet with the program director.
2. Identify a Faculty Advisor from your academic program who will guide you and mentor you in the Experiential Honors program.
3. Submit the program application by the due date.

For more information, visit [https://umdearborn.edu/cecs/undergraduate-programs/](https://umdearborn.edu/cecs/undergraduate-programs/)

Why Apply to the Program

1. Work on experiential projects that bridge the gap between engineering education and practice.
2. Work on experiential research or design project above and beyond the requirements of the regular curriculum.
3. Develop leadership skills.
4. Receive recognition on your transcripts for participating in the program.

**Elements of the Program**

**Academic Elements:**
- Complete at least one of the following courses (3 to 4 credit hours) that may also count as electives in your academic program:
  1. ENGR 360 (4 cr. hrs.): Design Innovation: Process, Method and Practice
  2. ENT 400 (3 cr. hrs.): Introduction to Entrepreneurship
  3. ENGR 400 (3 cr. hrs.): Applied Business Techniques for Engineers

**Experiential and Leadership Elements:**

Students are expected to enroll in a minimum of one credit hour (ENGR 399, ENGR 492 or ENGR 493) for each semester of active participation of the program. These count toward fulfilling the professional elective requirements of the student’s academic degree.

- Complete a semester long faculty supervised professional experience (ENGR 399, 1 cr. hr.)
- Complete 3 credit hours (1 cr. hr. per semester) in one or both of the following courses:
  a. Experiential Honors Directed Research Project (ENGR 492, 1 to 3 cr. hrs).
  b. Complete Experiential Honors Directed Design Project (ENGR 493, 1 to 3 cr. hrs.) for performing hardware or software design for one of the CECS student club teams (e.g. SAE, MASA, etc.). Credit for ENGR 493 can also be earned for completing an industry/community/NGO sponsored “honors” design project*.

*The “Honors” Design Project is completed under the guidance of an “expert” who will challenge you to recognize and address global, economic, environmental, and societal impacts and implications of your proposed solution. An acceptable “honors” project is expected to require at least 50 clock hours of additional work during the semester in which the project is completed.

The project approval process involves:
- Identifying a topic of interest
- Identifying a faculty advisor to guide the project (if the topic is outside the expertise of your Experiential Honors Advisor).
- Presenting the outcome of your project at the end of the semester in which the course is taken.
- Submitting a project report that includes a reflection on the project and the lessons learned.

The honors design project may be an expansion of the scope of a senior design project. The credit hours for each activity is determined by the Faculty Advisor based on the effort required to complete the activity.

**Study Abroad Opportunities**

Student Exchange Programs with the Jönköping School of Engineering in Jönköping, Sweden and the Ulm University of Applied Sciences in Ulm, Germany

The College of Engineering and Computer Science offers two study abroad opportunities. Our exchange programs with Ulm University of Applied Sciences in Germany and Jönköping University in Sweden are a great way to gain intercultural experience while fulfilling degree requirements. Students register for a full-time course load and pay their normal UM-Dearborn tuition. All courses are taught in English and designed with exchange students in mind. To maintain full-time status and financial aid, students typically enroll in three technical courses and one language/culture course. Courses taken abroad count toward students’ UM-Dearborn GPA. Students register for courses at UM-Dearborn and pay their normal tuition. There is no extra fee to participate, but students should budget for living expenses, such as housing, food, airfare, and travel. All CECS majors in good academic standing are eligible to apply.

Please contact the Office of Advising and Academic Success to discuss these opportunities with your advisor, or visit the Office of International Affairs for information about additional study abroad programs.

**Career Opportunities**

A wide variety of employment opportunities is available to engineering and computer science graduates, as mentioned above. The University’s Office of Career Services offers numerous services to students and graduates in preparing for careers and in searching for professional employment in a chosen field.

**Student Organizations**

CECS students are involved in a wide variety of student organizations at UM-Dearborn. We have nearly two dozen clubs, teams, and professional organizations that will challenge students to problem solve, make connections, and prepare for a fulfilling career in engineering.

**Bioengineering**

Bioengineering is an emerging branch of engineering that primarily deals with problems of medicine, healthcare, and—in general—quality of human life. It is a multidisciplinary field that combines scientific principles of biology, chemistry, physics, and mathematics with the best engineering techniques developed in traditional areas (for example, mechanical, electrical, chemical, and computer engineering) and new breakthrough methods developed in recent years.

Activities of bioengineers are widely spread. They use their knowledge to design and build medical instruments, artificial organs, prosthetic limbs, therapeutic devices, and medical imaging equipment. They help doctors to design new medical procedures, including new rehabilitation techniques. They also assist pharmaceutical and biotechnology industries in developing new, more efficient bioprocessing technologies. Finally, they find solutions for medical and biology-related problems of consumer technology in the areas of safety, ergonomics, and comfort.

Bioengineering is a rapidly growing profession with expanding career opportunities. By virtue of their vigorous cross-training, bioengineers are well-pisned for careers in healthcare, medical device production, pharmaceutical industries, and consulting in health-related fields, as well as other positions in industry, education, and government.

**Undergraduate Degree Program**

The undergraduate program in bioengineering provides first a strong foundation in all of the basic ingredients of engineering: the natural and physical sciences, mathematics, a comprehensive socio-economic-
cultural background, the behavioral sciences, and finally the basic engineering sciences that begin the development of problem-solving skills.

The program integrates natural sciences with engineering analysis and design concepts to advance the fundamental understanding of biological systems and to develop biology-based technologies with applications across a wide spectrum of societal needs. The bioengineering curriculum is designed to cater to students looking to enter the professional world immediately after earning their undergraduate degree, as well as those who are interested in pursuing graduate studies and research. Various fundamental, design, and application oriented courses (e.g. Biomaterials, Biomechanics, Bioinstrumentation, Biotransport, and Bioprocesses) fulfill industrial needs and help students to perform well in biotech, pharmaceutical, and healthcare industries as engineering professionals. At the same time, the exposure to advanced courses and cross-cutting, state-of-the-art research experiences provide a solid foundation to continue graduate studies and emerge as leaders in science and engineering.

Bioengineering 4+1 Option

The accelerated undergraduate/master’s studies option in bioengineering (4+1 option) allows the most qualified UM-Dearborn undergraduate bioengineering students to pursue a program of study in which BSE and MSE degrees are earned in a five-year accelerated format. This is achieved via combining a portion of undergraduate and graduate coursework. Admitted 4+1 students can double-count up to 9 credits of 500-level or above bioengineering elective, core, or cognate courses taken during their junior or senior years. Of these, only one cognate course is allowed. In practice with the usual graduate student program rules, 4+1 students may also transfer a maximum of 6 additional 500 level credits toward the 30-credit master's degree. These additional transfer credits can be taken during the junior and senior years and cannot be used for any portion of the undergraduate degree. Depending on the number of double-counted and transfer credits, 15-21 credits of graduate coursework would be needed to complete the master’s program after completion of the undergraduate degree.

Please see the Bioengineering 4+1 Option (https://umdearborn.edu/cecs/departments/mechanical-engineering/undergraduate-programs/41-bioengineering-program/) webpage for more information.

The Bachelor of Science in Engineering in Biomechanical engineering program is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/)

Program Educational Objectives

The Program Educational Objectives for the Bachelor of Science in Engineering in Bioengineering are:

• Be successfully employed in their discipline or a closely related field, while contributing to the economy and healthcare
• Continue to enhance their knowledge base and skills, through graduate degrees or other professional developments, to keep abreast of the ongoing changes in technology and health-related disciplines
• Be well rounded and well suited to work with colleagues and professionals with diverse technical backgrounds, cultures and wide range of competencies including those related to healthcare

Program Outcomes

To achieve the educational objectives, the graduates of the program will have:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Dearborn Discovery Core

Please see the Dearborn Discovery Core (General Education) (https://umdearborn.edu/faculty-staff/academic-program-and-course-development/dearborn-discovery-core-general-education/) webpage or additional information.

Foundational Studies

Writing and Communication (GEWO) – 6 Credits
Upper-Level Writing Intensive (GEWI) – 3 Credits
Quantitative Thinking and Problem Solving (GEQT) – 3 Credits
Critical and Creative Thinking (GECC) – 3 Credits

Areas of Inquiry

Natural Science (GENS) – 7 Credits
• Lecture/Lab Science Course
• Additional Science Course
Social and Behavioral Analysis (GEB) – 9 Credits
Humanities and the Arts (GEHA) – 6 Credits
Intersections (GEIN) – 6 Credits

Capstone

Capstone (GECE) – 3 Credits

Major Requirements

A candidate for the degree Bachelor of Science in Engineering (Bioengineering) is required to pursue scholastic quality and to complete satisfactorily the following program of study.
In addition to completion of the Dearborn Discovery Core, the following courses are required to earn a BSE degree in Bioengineering from UM-Dearborn.

<table>

- ME 491 Directed Research Problems

**CIS Mathematics**

Current CECS undergraduate students majoring in Computer and Information Science (CIS), Cybersecurity and Information Assurance (CIA), or Software Engineering (SE) may pursue a concurrent Bachelor of Science degree in CIS Mathematics. This makes it possible for CECS students to earn two degrees at the same time: a principal Bachelor of Science degree in CIS, CIA, or in SE and a separate concurrent Bachelor of Science degree in CIS Mathematics. Both degrees must be earned at the same time. The courses for the concurrent Bachelor of Science degree in CIS Mathematics cannot be used as elective credits for the principal degree, but must be taken in addition to the 120-123 credits required for the Bachelor of Science degree in CIS, the Bachelor of Science degree in CIA, or the Bachelor of Science degree in SE.

The educational objectives of the concurrent Bachelor of Science program in CIS Mathematics are to prepare graduates to:

1. Be able to develop innovative mathematical solutions to complex computational problems.
2. Engage in continuous learning to advance their professional careers.

**Major Requirements**

(Concurrent degree only)

The BS in CIS Mathematics degree requires a minimum of thirty credits in mathematics courses as follows:
Fifteen credits of mathematics courses required for the BS degree in CIS, CIA or in SE:

Total Credit Hours 30-31

¹ 8 credit hours can only be fulfilled by taking two 3-credit hour classes from the approved list and two credit hours of topics/independent study in mathematics
² Credit for only one course from MATH 413, MATH 523
³ Credit for only one course from MATH 455, MATH 555.
⁴ Permission required to take a graduate course. Graduate tuition assessment applies.

1. a minimum of nine hours is taken from the Mathematics department (MATH) courses beyond the 15 credit hours required for the CIS degrees
2. permission to take a graduate course is granted.

**Computer Engineering**

Computers and digital technology have dramatically altered many facets of life including entertainment, manufacturing, transportation, public safety and power production. Computer Engineers have many career opportunities in these areas that will only become more important and prevalent in the future. Most of the modern electronic devices and appliances available today contain advanced computer technology. Video game consoles, for example, utilize very powerful special-purpose computers that receive user input (from the joystick or controller), perform computations to control the game and display high-resolution graphics and sound in real time. Such devices require specialized digital circuits that can process massive amounts of data very efficiently. Computer engineers use their specialized knowledge to design a variety of systems that integrate how the hardware (electronic circuits and processors) interacts with the software such as C++ or Java to control the system and process inputs from the user. This type of close interaction between hardware and software is essential for many important applications, such as automotive systems, web and GPS-enabled devices, wireless communication, military applications, and medical imaging.

The Bachelor of Science Engineering in Computer Engineering at UM-Dearborn was developed to meet the increasing demand for engineers with knowledge of both hardware design and software development. The program offers a 125-hour curriculum consisting of core courses and technical electives. In addition to in-depth courses in engineering fundamentals, theory, and design principles, students get hands-on experience with the latest hardware and software, such as microprocessor and DSP-based development boards, system-on-a-chip technology, computer networks, and reconfigurable computing. In the junior year, students learn how to design and implement an instruction set and logic functions for a computer. In the senior year, students work on projects in which they design a complete real-world system, from initial specifications to final design, testing, and documentation. Students with an interest in pursuing graduate studies or wish to pursue a research and development career are encouraged to undertake directed research projects under the supervision of faculty advisors for more advanced design experiences.

A unique feature of the Computer Engineering program is the opportunity for students to work concurrently to earn a second degree in Electrical Engineering by taking an additional 16 credit hours of courses. In this case, a student can earn two Bachelor's Degrees in just 141 credit hours. Since some job listings require a computer engineering background while others require specialization in electrical engineering, a student who pursues the dual degree option is qualified for a much wider variety of engineering positions.

The Bachelor of Science in Engineering in Computer Engineering program is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org/)

**Program Educational Objectives**

The graduates who receive the Bachelor of Science in Engineering degree in Computer Engineering from the University of Michigan-Dearborn
are expected to achieve within a few years of graduation the high professional, ethical, and societal goals demonstrated by accomplishing one or more of the objectives described below.

1. Achieve professional growth in an engineering position in regional and national industries. Growth can be evidenced by promotions and appointment in the workplace (management positions, technical specialization), entrepreneurial activities, and consulting activities.
2. Success in advanced engineering studies evidenced by enrollment in graduate courses, completion of graduate degree programs, presentations and publications at professional events, and awards or licenses associated with advanced studies.
3. Realization of impactful achievements in societal roles demonstrated by attainment of community leadership roles, mentoring activities, civic outreach service, and active roles in professional societies.

Program Outcomes
To achieve the educational objectives, the graduates of the program will have:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

and software engineering, among others. The curriculum is modeled on the recommendations of the two main professional computing societies, the Association of Computing Machinery (ACM) and the Institute for Electrical and Electronic Engineering (IEEE). Written and oral communications skills are emphasized throughout the program. The use of teamwork on projects is practiced in many courses. Professionalism and ethics are also stressed for future computing professionals. The CIS courses include software engineering, algorithm analysis, networking, security, programming languages, game design, computer architecture, data structures, operating systems, artificial intelligence, database management systems, graphics, information systems, robotics, web development and capstone design courses. The CIS curricula prepare students to begin careers as computing professionals or to pursue graduate study in the field.

A candidate for the degree of BS in CIS is required to select one of three concentrations: Computer Science, Information Systems, or Game Design. The program encourages innovation on the part of students, prepares students for graduate education, trains students to communicate effectively, and provides students with the tools needed to become leaders in their profession.

The Computer Science (CS) concentration strengthens your knowledge of how computer systems work and prepares you for positions in system programming, graphics and visualization, networks, and web technology. The Information Systems (IS) concentration is oriented toward the design and development of computer information systems, such as, databases, enterprise computing, system analysis, and web-based information systems. It prepares graduates for positions in applications programming, database management, information systems design, and information engineering.

The Game Design (GD) concentration is tailor-made for those whose dreams include careers in game programming, user experience design and augmented reality applications.

The BS in Computer and Information Science program is accredited by the Computing Accreditation Commission of ABET, https://www.abet.org/

Program Educational Objectives

1. Our graduates will be successfully employed in computer science–related fields or other career paths, including industrial, academic, governmental, and non-governmental organizations, or will be successful graduate students in a program preparing them for such employment.
2. Our graduates will lead and participate in culturally diverse teams, becoming global collaborators.
3. Our graduates will continue their professional development by obtaining continuing education credits, professional registration or certifications, or post-graduate study credits or degrees.

Computer and Information Science

Computing professionals offer expertise in the effective and efficient use of computers for solving human problems, whether that be as a member of a project development team, as a builder of powerful and easy-to-use tools, as an individual researcher, or as an educator.

Required courses in the Computer and Information Science (CIS) major stress theory and application, as well as the role of other fields such as mathematics, statistics, electrical and computer engineering, business, and software engineering, among others. The curriculum is modeled on the recommendations of the two main professional computing societies, the Association of Computing Machinery (ACM) and the Institute for Electrical and Electronic Engineering (IEEE). Written and oral communications skills are emphasized throughout the program. The use of teamwork on projects is practiced in many courses. Professionalism and ethics are also stressed for future computing professionals. The CIS courses include software engineering, algorithm analysis, networking, security, programming languages, game design, computer architecture, data structures, operating systems, artificial intelligence, database management systems, graphics, information systems, robotics, web development and capstone design courses. The CIS curricula prepare students to begin careers as computing professionals or to pursue graduate study in the field.

Program Educational Objectives

1. Our graduates will be successfully employed in computer science–related fields or other career paths, including industrial, academic, governmental, and non-governmental organizations, or will be successful graduate students in a program preparing them for such employment.
2. Our graduates will lead and participate in culturally diverse teams, becoming global collaborators.
3. Our graduates will continue their professional development by obtaining continuing education credits, professional registration or certifications, or post-graduate study credits or degrees.

Computer and Information Science

Computing professionals offer expertise in the effective and efficient use of computers for solving human problems, whether that be as a member of a project development team, as a builder of powerful and easy-to-use tools, as an individual researcher, or as an educator.

Required courses in the Computer and Information Science (CIS) major stress theory and application, as well as the role of other fields such as mathematics, statistics, electrical and computer engineering, business, and software engineering, among others. The curriculum is modeled on the recommendations of the two main professional computing societies, the Association of Computing Machinery (ACM) and the Institute for Electrical and Electronic Engineering (IEEE). Written and oral communications skills are emphasized throughout the program. The use of teamwork on projects is practiced in many courses. Professionalism and ethics are also stressed for future computing professionals. The CIS courses include software engineering, algorithm analysis, networking, security, programming languages, game design, computer architecture, data structures, operating systems, artificial intelligence, database management systems, graphics, information systems, robotics, web development and capstone design courses. The CIS curricula prepare students to begin careers as computing professionals or to pursue graduate study in the field.

A candidate for the degree of BS in CIS is required to select one of three concentrations: Computer Science, Information Systems, or Game Design. The program encourages innovation on the part of students, prepares students for graduate education, trains students to communicate effectively, and provides students with the tools needed to become leaders in their profession.

The Computer Science (CS) concentration strengthens your knowledge of how computer systems work and prepares you for positions in system programming, graphics and visualization, networks, and web technology. The Information Systems (IS) concentration is oriented toward the design and development of computer information systems, such as, databases, enterprise computing, system analysis, and web-based information systems. It prepares graduates for positions in applications programming, database management, information systems design, and information engineering.

The Game Design (GD) concentration is tailor-made for those whose dreams include careers in game programming, user experience design and augmented reality applications.

The BS in Computer and Information Science program is accredited by the Computing Accreditation Commission of ABET, https://www.abet.org/

Program Educational Objectives

1. Our graduates will be successfully employed in computer science–related fields or other career paths, including industrial, academic, governmental, and non-governmental organizations, or will be successful graduate students in a program preparing them for such employment.
2. Our graduates will lead and participate in culturally diverse teams, becoming global collaborators.
3. Our graduates will continue their professional development by obtaining continuing education credits, professional registration or certifications, or post-graduate study credits or degrees.

Program Outcomes

To achieve the educational objectives of the program, graduates of the BS in CIS program will have an ability to:

1. Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions.
2. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.

Technical Electives - Select 2 courses from the following list:

- CSE 318 Analog & Discrete Sig & Sys
- CSE 391 Electromagnetic Compatibility
- ECE 302 Elec Materials and Devices
- ECE 414 Digital Forensics I
- ECE 414 Electronic Systems Design
- ECE 415 Power Electronics
- ECE 428 Cloud Computing

Technical Electives - Select 2 courses from the following list:

- CAE 3171 Analog & Discrete Sig & Sys
- CAE 318 Electromagnetic Compatibility
- CAE 385 Elec Materials and Devices
- CAE 414 Digital Forensics I
- CAE 414 Electronic Systems Design
- CAE 415 Power Electronics
- CAE 428 Cloud Computing

Professional and Technical Electives must equal minimum 16 credits

3. Communicate effectively in a variety of professional contexts.
4. Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
5. Function effectively as a member or leader of a team engaged in activities appropriate to the program’s discipline.
6. Apply computer science theory and software development fundamentals to produce computing-based solutions.

Dearborn Discovery Core

Please see the Dearborn Discovery Core (General Education) (https://umdearborn.edu/faculty-staff/academic-program-and-course-development/dearborn-discovery-core-general-education/) webpage or additional information.

Foundational Studies

Writing and Communication (GEWO) – 6 Credits
Upper-Level Writing Intensive (GEWI) – 3 Credits
Quantitative Thinking and Problem Solving (GEQT) – 3 Credits
Critical and Creative Thinking (GECC) – 3 Credits

Areas of Inquiry

Natural Science (GENS) – 7 Credits
- Lecture/Lab Science Course
- Additional Science Course
Social and Behavioral Analysis (GESB) – 9 Credits
Humanities and the Arts (GEHA) – 6 Credits
Intersections (GEIN) – 6 Credits

Capstone

Capstone (GECE) – 3 Credits

In addition to completion of the Dearborn Discovery Core, the following courses are required to earn a B.S. degree in Computer and Information Science from UM-Dearborn.

Minor in Computer and Information Science
The minor in CIS requires a minimum of 24 credit hours, which must include CIS 150, CIS 200, CIS 275, CIS 350 and eight additional credit hours at the 300 or 400 level approved by the student's faculty advisor in CIS. An introduction to calculus (MATH 115) is required and does not count toward the 24 hours. Completion of MATH 116 is strongly recommended.

Cybersecurity and Information Assurance
In the last ten years, there has been much data demonstrating that there is a rapid rise in the incidence of cyber-attacks targeting individuals, organizations, and even countries. Consequently, cybersecurity and information assurance are the US government's top priorities, as seen in various Presidential Directives and the US Justice Department document High Priority Criminal Justice Technology Needs. The US has identified cybersecurity as one of the rising workforce areas, from both public and private sectors. The Bachelor of Science in Cybersecurity and Information Assurance (CIA) program at the Department of Computer and Information Science aims to educate and train an elite, diverse cadre of students, who are ready to address real-world computer security and criminal justice challenges. It will also benefit any individual who is interested in advancing their knowledge of computer security and privacy.

Cybersecurity and Privacy Concentration
The Cybersecurity and Privacy (CP) concentration educates students in the fundamentals and principles of cybersecurity and privacy and provides students with labs and experiences that encourage creative thinking. It is built upon a rigorous undergraduate background in
computer and information science. Students in this concentration study fundamental security and privacy concepts such as confidentiality, integrity, access control, security architecture and systems, attack/defense. This concentration also provides a sequence of courses that cover unique security and privacy issues in various application areas, ranging from computer security to network security, from wired security to wireless security, from data security to application security, from every day security to enterprise security.

**Digital Forensics Concentration**

Digital Forensics (DF) is the area of computer science concerned with the examination and analysis of computer hard drives, storage devices, cell phones, tablets, or any electronic device that may hold evidence which could be used in a court of law. The device could be as simple as a cell phone or as complex as a main server for a large corporation. The digital forensics analyst uncovers and preserves data for later use as legal evidence, and analyzes the data in light of a particular crime or criminal or civil investigation. This may involve determining how hackers or unauthorized persons gained access to information or computer systems as well as where and how they navigated within the system.

Digital forensics specialists recover files and emails or other electronic correspondence that have been deleted or erased. They also recover data after hardware or software failure, and develop means to harden computer, cyber, and data security against loss, corruption, sabotage, or external attack.

**Dearborn Discovery Core**

Please see the Dearborn Discovery Core (General Education) (https://umdearborn.edu/faculty-staff/academic-program-and-course-development/dearborn-discovery-core-general-education/) webpage or additional information.

**Foundational Studies**

Writing and Communication (GEWO) – 6 Credits

Upper-Level Writing Intensive (GEWI) – 3 Credits

Quantitative Thinking and Problem Solving (GEQT) – 3 Credits

Critical and Creative Thinking (GECC) – 3 Credits

**Areas of Inquiry**

Natural Science (GENS) – 7 Credits

- Lecture/Lab Science Course
- Additional Science Course

Social and Behavioral Analysis (GESB) – 9 Credits

Humanities and the Arts (GEHA) – 6 Credits

Intersections (GEIN) – 6 Credits

**Capstone**

Capstone (GECE) – 3 Credits

In addition to completion of the Dearborn Discovery Core, the following courses are required to earn a B.S. degree in Cybersecurity and Information Assurance from UM-Dearborn.

Data Science

With increasing availability of data, companies, governments, and nonprofits alike are striving to convert information into actionable information and insight. In the past, students trained in singular disciplines such as computer science, operations research, or statistics had the skill set needed to analyze the required data. But the “volume”, “velocity” and “variety” of today’s data and future data streams pose unique challenges and also creates unique opportunities. Present data sets requires more programming, mathematics/statistics, modeling skills, and domain knowledge than a traditional undergraduate curriculum offers. In fact, one of the obstacles that must be removed before government, business and social sectors are prepared to use large datasets to enhance their decision-making, is the acquisition of a trained workforce that can leverage it.

Decision makers require data and evidence before resources are committed. In the current environment, commitments are not made unless evidence supports that the opportunities are both cost effective and yield positive net benefits. Healthcare practitioners seek evidence-based medicine; social scientists engage in impact assessments; business analysts practice decision science and engineers and computer
scientists desire facility with big data sets using a variety of statistical techniques.

The University of Michigan-Dearborn, with its strong Engineering, Mathematics, Social and Behavioral Sciences, and Business Management programs is in a strategic position to enhance both undergraduate and graduate education with data science course offerings and a Bachelor of Science in Data Science. UM-Dearborn’s recent addition of the Department of Health and Human Services is also uniquely positioned in time, developmental stage, and location, to benefit from data science offerings. In other words, a case could be made for data science programming that enhances student education and marketability in all four of UM-Dearborn’s Colleges—the College of Engineering; the College of Arts, Sciences and Letters; the College of Business and the newly formed College of Education, Health and Human Services.

The Bachelor of Science in Data Science degree is housed within the College of Engineering and Computer Science. The interdisciplinary nature of this degree program will require resources from all academic units, namely the College of Business, the College of Engineering and Computer Science, the College of Arts, Sciences, and Letters and the College of Education, Health, and Human Services. Students in this program will take courses and be involved with scholarly activity from a number of departments and disciplines across campus including Management Studies, Computer and Information Science, and Health and Human Services, Behavioral Science, Social Science as well as the Mathematics and Engineering disciplines.

This program requires technical courses from each college on our campus and is highly multidisciplinary. Taking a multidisciplinary approach, the curriculum is designed to leverage existing courses on campus and combine these with foundational courses in data science. This creates synergy among academic units on campus, provides flexibility in scheduling, and allows for timely completion of the program. Students with varied backgrounds can take different courses to suit their needs, based on interest and guided by faculty advisors.

**Dearborn Discovery Core**

Please see the Dearborn Discovery Core (General Education) (https://umdearborn.edu/faculty-staff/academic-program-and-course-development/dearborn-discovery-core-general-education/) webpage or additional information.

**Foundational Studies**

- Writing and Communication (GEWO) – 6 Credits
- Upper-Level Writing Intensive (GEWI) – 3 Credits
- Quantitative Thinking and Problem Solving (GEQT) – 3 Credits
- Critical and Creative Thinking (GECC) – 3 Credits

**Areas of Inquiry**

- Natural Science (GENS) – 7 Credits
  - Lecture/Lab Science Course
  - Additional Science Course
- Social and Behavioral Analysis (GESB) – 9 Credits
- Humanities and the Arts (GEHA) – 6 Credits

**Intersections (GEIN) – 6 Credits**

**Capstone**

Capstone (GECE) – 3 Credits

A candidate for the degree Bachelor of Science in Data Science is required to pursue scholastic quality and to complete satisfactorily the following program of study.

In addition to completion of the Dearborn Discovery Core, the following courses are required to earn a B.S. degree in Data Science from UM-Dearborn.

Data Science Applications 18

Students should complete 18 credit hours in one of the following analytics areas listed below. Application area courses must be approved in advance by Department Chair.

Applied Social and Behavioral Science Analytics
Take 18 credits from any of the following: Anthropology, Criminology and Criminal Justice, Economics, History, Political Science, Psychology, Sociology. Students must meet the prerequisites for each course. These 18 credits must be from the same subject area.

Business Analytics
Take DS 310 (3) Data Mining for Business Intelligence, plus 15 credit hours in one of the following: Accounting, Finance, Information System Management, Marketing, Operation Management. Students must meet the prerequisites for each course. These 15 credits must be from the same subject area.

Computational Analytics
Take an additional 18 credit hours from courses focusing on Applied Statistics, Mathematics or from CECS. The proposed coursework must be approved by a faculty advisor in the Department of Mathematics or CECS, respectively, prior to enrollment in the course.

Health and Medicine Analytics
Take an additional 18 credit hours from courses focusing on health and medicine. The proposed coursework must be approved by a faculty advisor in the Department of Health and Human Services prior to enrollment in the course.

Electrical Engineering
Electrical Engineering is the field that deals with the study and application of electricity, electronics and electromagnetism. An early application of the technology was energy conversion using motors and generators to convert one form of energy to another. As the technology advanced, devices that could amplify and process signals were developed which provided the foundation for modern electronics. Modern electronic devices can perform high-speed computations and process information in a wide variety of formats. Electronic devices have radically changed many aspects of daily life including high-definition television, video game consoles, digital cameras, satellite transmissions, GPS navigation, automotive entertainment systems, surround sound, mp3 players and advanced medical imaging systems. These technological advancements require high-speed electronic circuits that can receive, transmit and process electrical signals using circuits and devices developed by electrical engineers. They have the specialized knowledge required to design circuits and systems to perform a variety of functions, such as store electrical energy (batteries and power electronics), control of electric vehicles, transmit signals and information through wires (cable TV) or free space (TV, AM and FM radio, satellite,
dish networks), provide automatic control of mechanical systems (cruise control, braking, target tracking and factory automation), enable communication between devices (internet, web, cell phones), process digital signals (microprocessors, digital signal processing algorithms and hardware), and ensure safety and performance of complex systems (electromagnetic compatibility).

A unique feature of the Bachelor of Science Engineering in Electrical Engineering program is the opportunity for students to work concurrently to earn a second degree in Computer Engineering by taking an additional 16 credit hours of courses. In this case, a student can earn two Bachelor’s Degrees in just 141 credit hours. Some employment listings require a computer engineering background while others call for specialization in electrical engineering. A student who pursues the dual degree option is qualified for both types of positions and therefore has a distinct advantage in securing employment.

The Bachelor of Science in Engineering in Electrical Engineering program is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/)

Program Educational Objectives
The graduates who receive the Bachelor of Science in Engineering in Electrical Engineering from the University of Michigan-Dearborn are expected to achieve within a few years of graduation the high professional, ethical, and societal goals demonstrated by accomplishing one or more of the objectives described below.

1. Achieve professional growth in an engineering position in regional and national industries. Growth can be evidenced by promotions and appointment in the workplace (management positions, technical specialization), entrepreneurial activities, and consulting activities.
2. Success in advanced engineering studies evidenced by enrollment in graduate courses, completion of graduate degree programs, presentations and publications at professional events, and awards or licenses associated with advanced studies.
3. Realization of impactful achievements in societal roles demonstrated by attainment of community leadership roles, mentoring activities, civic outreach service, and active roles in professional societies.

Program Outcomes
To achieve the educational objectives, the graduates of the program will have:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Dearborn Discovery Core
Please see the Dearborn Discovery Core (General Education) (https://umdearborn.edu/faculty-staff/academic-program-and-course-development/dearborn-discovery-core-general-education/) webpage or additional information.

Foundational Studies
Writing and Communication (GEWO) – 6 Credits

**Engineering Mathematics**

*(Concurrent Degree)*

The Bachelor of Science Engineering in Engineering Mathematics program at UM-Dearborn provides students an opportunity to expand their knowledge in the field of applied mathematics, which is essential in modern engineering. By combining the tools and techniques learned in the engineering mathematics program with those learned in their engineering disciplines, students become more proficient in the application of mathematical reasoning to formulate and solve a wide range of contemporary engineering problems. The combined mathematics and engineering education gained through the program enables the graduates to successfully pursue professional careers in industry, research and development, and elsewhere.

The Engineering Mathematics degree is a concurrent Bachelor of Science in Engineering (B.S.E.) degree in Engineering Mathematics (EMATH) that can be pursued by undergraduate students majoring in Bioengineering, Computer Engineering, Electrical Engineering, Industrial and Systems Engineering, Manufacturing Engineering, Mechanical Engineering, or Robotics Engineering. This makes it possible for a student majoring in one of the engineering disciplines to earn two degrees at the same time: a Bachelor of Science Engineering degree in their principal engineering major and a concurrent Bachelor of Science Engineering degree in Engineering Mathematics. *Both degrees must be earned at the same time.*

**Educational Objectives**

The coursework in the concurrent Bachelor of Science Engineering in Engineering Mathematics prepares graduates to:

1. Be able to develop innovative mathematical tools to model and solve engineering/applied mathematics problems

**Program Outcomes**

1. The ability to apply mathematical tools to model and solve engineering/applied mathematics problems
2. The ability to use techniques and modern mathematical tools to solve engineering/applied mathematics problems.
3. The ability to communicate mathematical ideas.

**Major Requirements**

The Engineering Mathematics degree requires a minimum of 15 credit hours of course work in advanced mathematics beyond the 16 credits of mathematics already required in the degree program of the student’s principal engineering major.

1. Permission of graduate instructor required. Graduate tuition assessment applies.

**Human Centered Engineering Design**

Human Centered Engineering Design (HCED) is concerned with the interactive, iterative, and creative problem solving and/or product and system development by building empathy with the customer to better understand their needs. The human centered design approach is widely being adopted by different industries, including automotive, aerospace, healthcare, information technology, software, consumer electronics, e-commerce, and digital marketing. These industries are actively looking for design professionals with the technical background who can research, identify, translate and document user needs; generate creative product/process design ideas that address user requirements; and implement and evaluate the usability of products or services in a scientific way. Human Centered Engineering Design is an interdisciplinary and inclusive field of study that bridges engineering design, art design, social sciences and business principles.

**Undergraduate Degree Program**

The Bachelor of Science Engineering in Human Centered Engineering Design requires a total of 128 credit hours and provides first, a strong basis in the foundations of engineering: natural and physical sciences, mathematics, the behavioral sciences and the basic engineering sciences which begin the emphasis on creative problem solving. Then, the program develops strong foundation on which human centered design engineering work is founded. This includes studies in design process and creative problem solving, design communication, art design, qualitative and quantitative research methods in need finding, usability engineering, human factors engineering, and prototyping. Innovative problem solving, product/process design and prototyping skills are progressively developed and applied through a 4-year (freshman, sophomore, junior and senior year) individual and team based immersive design project experiences. The program creates an environment that inspires brainstorming for innovative and aesthetic solutions while emphasizing the theoretical, technological and design knowledge.

**Educational Objectives of the BSE (Human Centered Engineering Design) Program**

Consistent with providing a strong academic foundation in the field of Human Centered Engineering Design, the program educational objectives for our graduates are:

- To remain gainfully employed in Human Centered Engineering Design related fields.
- To continue to develop professionally, and
- To serve in leadership roles.

**Program Outcomes**

To achieve the educational objectives, the graduates of the program will have:

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Industrial and Systems Engineering

Industrial and systems engineering is concerned with the study and design of integrated systems of people, materials, equipment, and their interaction with the surrounding environment. Historically, this field developed in the manufacturing industries where industrial engineers applied their engineering knowledge and management techniques to design and efficiently operate industrial and business systems. But the advent of the modern information technology enabled industrial engineers to apply their quantitative methods and organizational skills to a multitude of large-scale systems in addition to industrial systems. Today, industrial and systems engineers are being called upon, with increasing frequency, to design and improve the performance of systems in a wide spectrum of fields such as service, energy, transportation, finance, and health care. Thus, their scope is not limited to tackling industrial problems alone but extends to finding solutions for the endless variety of problems of modern industrial society.

The field of study bridges engineering knowledge, management principles, physical and social sciences, and the life sciences. Simply put, it stresses the scientific and technological approach to the design, development, and the optimal operation of both large-scale and small-scale systems. The industrial and systems engineer is a versatile expert whose talents are vigorously sought, and will be for a long time to come, by various sectors of society.

Undergraduate Degree Program

The Bachelor of Science Engineering in Industrial & Systems Engineering first provides a strong basis in the foundations of engineering: natural and physical sciences, mathematics, socioeconomic-cultural background, the behavioral sciences, and the basic engineering sciences which begin the emphasis on problem solving. Then, the program develops the intermediate bases on which industrial systems and other systems engineering work is founded. This includes studies in production and
operations management, lean concepts, quality engineering methods, system modeling, simulation and optimization, organization and decision theory, and human factors engineering. Contemporary operations research methods are progressively developed and applied through systems-design case studies ending with a capstone design experience.

An opportunity is available to obtain considerable practical experience in the student’s specialty for those who elect the cooperative education option.

Students who do well in their undergraduate program are encouraged to consider graduate work and may take some of their electives in preparation for graduate study. Information and assistance regarding fellowships and assistantships for graduate study may be obtained from the department chairperson.

Industrial and Systems Engineering majors may also pursue a dual Bachelor of Science Engineering in Manufacturing Engineering and thus can earn two Bachelor of Science Engineering degrees at the same time:

• Bachelor of Science Engineering in Industrial and Systems Engineering
• Bachelor of Science Engineering in Manufacturing Engineering.

This requires a minimum of 15 credits of additional and separate courses beyond the 128 credits required for a Bachelor of Science Engineering in Industrial and Systems Engineering alone. Both degrees must be earned at the same time.

The Bachelor of Science in Engineering in Industrial and Systems Engineering is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org.

Program Educational Objectives

Consistent with providing a strong academic foundation in the field of Industrial and Systems Engineering, the program educational objectives for our graduates are:

• To remain gainfully employed in Industrial and Systems Engineering related fields,
• To continue to develop professionally, and
• To serve in leadership roles.

Program Outcomes

To achieve the educational objectives, the graduates of the program will have:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.

5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

The Bachelor of Science in Engineering in Manufacturing Engineering is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/)

Program Educational Objectives
Consistent with providing a strong academic foundation in the field of Manufacturing Engineering, the program educational objectives for our graduates are:

• To remain gainfully employed in Manufacturing Engineering related fields,
• To continue develop professionally, and
• To serve in leadership roles.

Program Outcomes
To achieve the educational objectives, the graduates of the program will have:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

This conversion process is also to understand the basic principles of engine challenges the imagination. Automobile engines are just one acceptable association that implies a knowledge of pistons to a restrictive image. For example, one often associates mechanical things, but this can lead of the mechanical engineer are most interesting and varied. The mechanical engineering field is one of the oldest of the several engineering fields. It is also one of the broadest in scope, for it is not identified with nor restricted to any particular technology (like nuclear engineering), nor to any particular vehicle (like land-based automobiles), nor to any particular device or particular system. It is, in fact, concerned with so many areas of modern technology that the tasks and challenges of the mechanical engineer are most interesting and varied.

The field is logically associated with mechanical things, but this can lead to a restrictive image. For example, one often associates mechanical engineers with automobiles and, thus, with engines. To the non-engineer this is an acceptable association that implies a knowledge of pistons and carburetors. As engineers know, this picture is very shallow; the breadth of understanding implied when one thinks of designing an engine challenges the imagination. Automobile engines are just one of many devices that convert energy into useful work. To understand this conversion process is also to understand the basic principles of energy conversion applicable to solar engines, jet engines, gas turbines, fuel cells, ship-propulsion systems, rocket engines, hydro-electric power plants, and new kinds of converters not yet developed. The mechanical engineer possesses this universally applicable background in thermodynamics, heat transfer, fluid mechanics, aerodynamics, and combustion theory that is basic to all such systems. The mechanical engineer also has a similar understanding of materials from steels to textiles to biological materials to the latest plastics and the most exotic high temperature composites. The point is that everything that is built is achieved by applying these same principles and using these same materials.

To understand the dynamic nature of most mechanical devices and systems requires a thorough mastery of forces and stresses, of vibrations and acoustics, of shock and impact, of deformation and fracture. Yet, these are basic to virtually every product devised by people or found in nature. Automobiles are just one small example of where they are important.

Thus, the mechanical engineer is a designer who creates physical things of all sorts because the mechanical engineer’s breadth of background is everywhere applicable. The mechanical engineer produces machines to build other machines, and thus is in the forefront of new manufacturing technology. In this role the engineer is faced with the task of building new things created by all kinds of engineers. This exposes the engineer to other technologies, and the mechanical engineer must be able to grasp their essence easily. For example, as the builder of energy devices to tap the oceans’ resources, the mechanical engineer is simultaneously one of the oceanographers, one of the chemists, and one of the environmentalists, as well as the master designer.

The mechanical engineer is comfortable working with people as well as with machines. For example, the role in vehicle design is that of making technical advances in performance, efficiency, and cost while simultaneously meeting the life and comfort requirements of operators and passengers. Logically, then, the mechanical engineer is active in the new fields of biomechanics, biomaterials, biomedical fluid mechanics and heat transfer, air and water pollution, water desalinization, sensory aids, and prostheses.

### Undergraduate Degree Program

The Bachelor of Science Engineering in Mechanical Engineering provides first a strong foundation in all of the basic ingredients of engineering: the natural and physical sciences, mathematics, a comprehensive socio-economic-cultural background, the behavioral sciences, and finally the basic engineering sciences that begin the development of problem-solving skills.

The program provides for the detailed study of several advanced topics, including fluid machinery, heat transfer, manufacturing processes, vibration theory, stress analysis, metallurgy, electrical science, and control systems.

The greatest strength of the undergraduate program is the project-oriented design work that requires the student to organize thinking of the multitude of factors on which every design is based - performance, efficiency, esthetics, cost, reliability, safety, reparability, etc. - and to reach sound conclusions that the student must be prepared to defend and implement. This is the art of engineering, and its study permeates the courses and laboratories of the upper-level instruction in this field.

For those who choose the cooperative education option, it is possible to develop a more thorough understanding of how design factors

are considered and how decisions are implemented in industrial organizations.

The Bachelor of Science in Engineering in Mechanical Engineering program is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org.

Program Educational Objectives

The Program Educational Objectives of the mechanical engineering program are that our graduates will:

- Be successfully employed in their discipline or a closely related field and contribute to the economy of the state and the nation
- Continue to enhance their knowledge base and skills, through graduate degrees or other professional development, to keep abreast of ongoing changes in technology and related disciplines
- Be well rounded and well suited to work with colleagues and professionals with diverse backgrounds and cultures, and a wide range of competencies

Program Outcomes

To achieve the educational objectives, the graduates of the program will have:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations, and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Select 4 credits of general elective coursework. Fewer than 4 credits are needed if additional CECS credits were taken from the electives area.

### Practical Aspects of Computer Security

The PACS undergraduate certificate will provide students with essential computer science concepts, basic security principles, and the tools and experience necessary for an entry-level position in IT-Security. This certificate provides a foundational knowledge in computer security principles, firewalls, malware, intrusion detection, physical security, wireless network security, mobile device security, social network security, and web application security.

The PACS undergraduate certificate is comprised of 4 courses (15 credit hours) delivered in a web-based format. All 15 credit hours are transferable into the College of Engineering and Computer Science's Computer & Information Science (CIS) or Cybersecurity and Information Assurance (CIA) B.S. degrees. This certificate is distinctly unique in that it creates a pathway for a student to receive a credential before transitioning into the degree program.

Any individual interested in advancing their knowledge in computer security principles, firewalls, malware, intrusion detection, physical security, wireless network security, mobile device security, social network security, and web application security will benefit from this program.

Data from the US Bureau of Labor Statistics indicates that job growth projections will increase 12% through the year 2022 for individuals with backgrounds in computer security. However, with the increase in cloud computing, this percentage has the potential to be even higher. As the utilization of information technology increases, there is also anticipated job growth in the healthcare industries. This growth, coupled with the impending federal government hiring regulations for military veterans, makes the job prospects extremely favorable for students who possess this credential.

### Certificate Requirements

This web-based 15 credit hour certificate is comprised of 3 required core CIS courses, along with an applications course in practical computer security.

Applicants should have completed a math course equivalent to Calculus 1 (MATH 115) or have received College Level Exam Program (CLEP) credit for Calculus 1. It is also possible to take Calculus 1 (MATH 115) concurrently with CIS 150. Students who have not completed the calculus prerequisite have the option to take the UM-Dearborn Math Placement Test and complete the required mathematic courses as part of the certificate program.

Robotics Engineering

With recent advances in computer hardware and software, as well as 3D printing, the field of robotics is entering a new phase where robots are smaller, faster, cheaper, and smarter. These next generation robots will have applications in a wide variety of fields, including manufacturing, medicine, education, entertainment, military applications, etc.

The Bachelor of Science in Engineering in Robotics Engineering program requires a total of 125 credit hours. The program is designed to provide students with an understanding of important concepts in Robotics, Electrical and Computer Engineering, Systems Engineering, and Mechanical Engineering, as well as an ability to apply these concepts to design robots and robotic systems for diverse applications.

The Bachelor of Science in Engineering in Robotics Engineering program is accredited by the Engineering Accreditation Commission of ABET. https://www.abet.org

Program Educational Objectives

The graduates who receive the Bachelor of Science in Engineering degree in Robotics Engineering from the University of Michigan-Dearborn are expected to achieve within a few years of graduation the high professional, ethical, and societal goals demonstrated by accomplishing one or more of the objectives described below.

- Achieve professional growth in an engineering position in regional and national industries. Growth can be evidenced by promotions and appointment in the workplace (management positions, technical specialization), entrepreneurial activities, and consulting activities.
- Success in advanced engineering studies evidenced by enrollment in graduate courses, completion of graduate degree programs, presentations and publications at professional events, and awards or licenses associated with advanced studies.
- Realization of impactful achievements in societal roles demonstrated by attainment of community leadership roles, mentoring activities, civic outreach service, and active roles in professional societies.

Program Outcomes

To achieve the educational objectives, the graduates of the program will have:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

### Software Engineering

Software Engineering is the computer discipline that is concerned with the theoretical and practical aspects of building high quality software systems, on time, and within budget. Software engineers are tasked with the detailed analysis, design, implementation, testing, maintenance, and management of software product development projects for a broad range of computing applications across society.

The increasing pressure to deliver high-quality, reliable software products in less time is rapidly fueling the demand for computer professionals with specific preparation in software engineering and experience in working on teams. These pressures stem from such widespread development as:

- The use of software for demanding and safety-critical applications that make it imperative to avoid the serious, indeed sometimes fatal, consequences of poorly understood design.
- The need to create consumer and entertainment applications like computer games, in the face of a highly competitive global marketplace.
- The increasing need to develop useful, easy-to-use software tools that reliably meet customer needs and whose features and documentation can be used and understood by their intended user with a high degree of consistency and confidence.
- The need to re-engineer or replace aging legacy software systems to take advantage of modern computer hardware capabilities.

Recent advances in the practice and technology of software engineering have made it possible to offer undergraduate and graduate degree programs in software engineering itself. Notable among these advances are:

- The availability of proven computer tools (such as CASE tools) and processes (such as the Personal Software Process) to standardize and automate software development.
- The increasing importance of formal methods and software quality measurement techniques to ensure more thorough testing of software.
- The success of the agile and object-oriented software engineering methods, as well as the move toward technical and managerial practices that cover the full software development cycle.

Software engineers must know the subset of computer science that is relevant to software development. They must also have knowledge of the principles of effective and reliable design, of mathematics and other sciences that are traditionally known by engineers, and of the skills and applications of project management.

Software engineering includes:

- Software design and development; that is, building commercial, industrial-strength software by the application of validated knowledge
The Software Engineering (SWE) degree program offered by the Department of Computer and Information Science stresses the range of technical, systematic, and managerial aspects of the software engineering process but places primary emphasis on the technical facets of designing, building, and modifying large and complex software systems. This program concentrates on all software development lifecycle phases, including program management, requirements engineering, software architecture design, software implementation, software configuration management, software quality assurance, and software process maturity measurements and improvements. It balances both theoretical and practical aspects by covering fundamentals in the classroom and evaluating student knowledge by implementing team-based work projects. Students complete a minimum of 120 credits and receive a BS degree in Software Engineering. The degree prepares graduates for immediate employment in the software engineering field and for graduate study.

The Bachelor of Science in Software Engineering program is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org.

**Program Educational Objectives**
1. Our graduates will be successfully employed in software engineering–related fields or other career paths, including industrial, academic, governmental, and non-governmental organizations, or will be successful graduate students in a program preparing them for such employment.
2. Our graduates will lead and participate in culturally diverse teams, becoming global collaborators.
3. Our graduates will continue their professional development by obtaining continuing education credits, professional registration or certifications, or post-graduate study credits or degrees.

**Program Outcomes**
To achieve the educational objectives of the program, graduates of the BS in SWE program will have:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**Dearborn Discovery Core**
Please see the Dearborn Discovery Core (General Education) (https://umdearborn.edu/faculty-staff/academic-program-and-course-development/dearborn-discovery-core-general-education/) webpage or additional information.

**Foundational Studies**
Writing and Communication (GEWO) – 6 Credits
Upper-Level Writing Intensive (GEWI) – 3 Credits
Quantitative Thinking and Problem Solving (GEQT) – 3 Credits
Critical and Creative Thinking (GECC) – 3 Credits

**Areas of Inquiry**
Natural Science (GENS) – 7 Credits
- Lecture/Lab Science Course
- Additional Science Course
Social and Behavioral Analysis (GESB) – 9 Credits
Humanities and the Arts (GEHA) – 6 Credits
Intersections (GEIN) – 6 Credits

**Capstone**
Capstone (GECE) – 3 Credits

**Major Requirements**
A candidate for the degree Bachelor of Science in Software Engineering is required to pursue scholastic quality and to complete satisfactorily the following program of study:

In addition to completion of the Dearborn Discovery Core, the following courses are required to earn a BS degree in Software Engineering from UM-Dearborn.

General Electives

Any 100 to 400 level course, as needed, to get a minimum of 120 credits for graduation.
1 The Application Area and Technical Electives must total 14 hrs. Any courses taken in the Application Area cannot also be used for Technical Electives credit.

2 CIS 296 or CIS 298 cannot count as Technical Electives since CIS 297 is required of the Game Design Sequence.

3 Any for-credit courses; that is, courses not on the No Credit list, which is found at the end of the CECS Student Handbook.
Courses A-Z

Accounting (ACC)

ACC 298  Financial Accounting  3 Credit Hours
The first course, of a two-course sequence, to introduce accounting concepts, principles, financial statement preparation, and the uses of accounting information. Topics include fundamental concepts and procedures of financial accounting including income measurement, asset valuation, financial statement preparation and analysis, and uses of accounting information for decision making.
Prerequisite(s): (MATH 104* or MATH 105* or Mathematics Placement with a score of 115 or MATH 113* or MATH 115* or Mathematics Placement with a score of 116)
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior or Graduate

ACC 299  Managerial Accounting  3 Credit Hours
To introduce managerial accounting concepts and applications. Specific topics include: cost terminology, cost behavior, product costing systems, budgeting, standard costing systems and variance analysis, and cost allocation methods. To connect the materials in this course to concepts covered in the prerequisite course, ACC 299 begins with financial statement analysis. Discussion of ethics and globalization issues will be interwoven into the presentation of course materials.
Prerequisite(s): ACC 298

ACC 304  Auditing&Forensic Examinations  3 Credit Hours
To study forensic examination and investigation techniques including typical embezzlement and financial statement fraud scenarios, fraud risk factors, sources and uses of evidence, and interrogation and surveillance techniques. Specifically, the course presents an introduction to forensic accounting and fraud examination by studying the nature of fraud, how it is committed, and the motivations of those who defraud an organization, owners, and capital markets. Fraud detection includes the recognition of fraud symptoms and approaches to act on those symptoms. Fraud investigation includes the examination of a fraud act, methods used to conceal the act, and other methods specific to detect various types of fraud. Other course topics may include expanding assurance services, advanced internal control testing, and risk based investigations. Special attention will be given to the changing role and services offered by internal auditors and fraud examiners, and responsibility to the public.
Prerequisite(s): ACC 298
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if College is Arts, Sciences, and Letters or Engineering and Computer Science or Business

ACC 355  Cost Accounting and Analysis  3 Credit Hours
To study the development, analysis and interpretation of accounting information for planning and controlling costs and revenues. Topics include: cost concepts, cost behavior, product costing systems, cost allocation systems, budgeting, standard costs and variance analysis and performance evaluation techniques.
Prerequisite(s): (ACC 356 or ACC 358) and BE 401

ACC 356  Intermediate Financial Acct 1  3 Credit Hours
To study the accounting function in the business environment; review the operations and operating cycles in service, merchandising, and manufacturing industries; the conceptual accounting base of recording revenue and matching expenses at the traditional point of sale or delivery; the current state of the accounting profession; and an overview of financial accounting statements.
Prerequisite(s): ACC 299 and ACC 380* and ACC 381*

ACC 357  Intermediate Financial Acct 2  3 Credit Hours
To study financing and investing issues in today's international business environment, including financing through various ownership and debt instruments, off-balance-sheet financing and leverage; investing in tangible and intangible operating assets; investing in financial instruments for return and risk management purposes; and investing in financial instruments to influence or control operations of other business units.
Prerequisite(s): ACC 356 and ACC 380 and ACC 381 and FIN 401*

ACC 358  Financial Reporting  3 Credit Hours
This course provides an intermediate level analysis of financial accounting focusing on recognition, measurement, and reporting issues associated with assets, liabilities and owner equity in conjunction with related income determination questions. The course is designed for financial statement information users who need a level of sophistication beyond an introductory level, yet not the complete technical expertise of a financial accountant. (YR).
Prerequisite(s): ACC 298
Restriction(s):
Cannot enroll if Major is Accounting

ACC 360  Federal Income Taxation  3 Credit Hours
To acquaint the student with the federal income tax, tax research, tax planning, and application of tax laws to taxable entities. The course will introduce the student to a broad range of tax concepts within a framework of financial accounting principles. Emphasis will be placed on the taxation of business entities, individual taxpayers, and the differences between financial and tax accounting. The use of technology to research problem assignments will be used to develop students' business communication and problem solving skills.
Prerequisite(s): ACC 356 or ACC 358 or FIN 411

ACC 380  Accounting Information Systems  3 Credit Hours
To study the concepts, theory, organization and application of accounting information systems and the flow of accounting data through transaction cycles. Topics include: the principles of accounting systems design, internal control analysis and development and the overall evaluation of networked computer-based accounting systems. Emphasis is placed on transaction processing systems, internal control systems, and computer-assisted decision making for unstructured problems by employing accounting databases.
Prerequisite(s): ACC 299
Corequisite(s): ACC 381

ACC 381  Accounting Info Sys Lab  1 Credit Hour
ACC 381 is a lab component of ACC 380. Students will complete weekly laboratory assignments to reinforce the concepts of ACC 380 to use information technology to solve business problems. In addition, the use of several common applications (e.g., Word, Excel, Access, and PowerPoint) will also be covered at the beginning to advanced levels.
Prerequisite(s): ACC 299
Corequisite(s): ACC 380
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
ACC 403  Advanced Managerial Accounting  3 Credit Hours
This course is intended to equip students with both theoretical and practical tools to manage all significant facets of production process costs, revenue streams, budgeting, and the related reporting system. The course focuses on topics such as managing "upstream" cost, cost structures, control tools, establishing standards, reporting processes, analysis to improve per unit profitability, and budgeting. The above topics will be used to develop resource plans to achieve management's objectives. (YR).
Prerequisite(s): ACC 355

ACC 416  Advanced Financial Acct 1  3 Credit Hours
To study advanced operating issues of revenue recognition and matching related expenses, including compensation, taxation, and capital costs; and a comprehensive analysis of financial statements, the related disclosures, and their information content.
Prerequisite(s): ACC 357 or ACC 358

ACC 417  Adv Financial Accounting 2  3 Credit Hours
This course is intended to help students gain expertise in preparing financial statements for complex business organizations. Specific topics include: the preparation of segmental and consolidated financial statements; intricate accounting issues associated with business combinations including but not limited to combinations at the date of acquisition and periods post acquisition; analysis of inter-company transactions such as inventory and asset transfers between parent and subsidiary; reporting for segments of a business as well as interim reporting, foreign exchange issues including inter-period reporting and financial statement translation; international reporting issues associated with all of the above, as well as, other topics. (YR)
Prerequisite(s): ACC 357

ACC 438  Advanced Federal Income Tax  3 Credit Hours
To acquaint the student with the concepts of federal taxation, tax research, tax planning, and application of tax laws to taxable entities. The course will introduce the student to a broad range of tax concepts within a framework of financial accounting principles. Emphasis will be placed on the taxation of business entities and the differences between financial and tax accounting. The use of technology to research problem assignments will be used to develop students' business communication and problem solving skills.
Prerequisite(s): ACC 360

ACC 439  Not-for-Profit Accounting  3 Credit Hours
To study the principles and procedures of accounting for not-for-profit entities. Topics may include: state and local government financial accounting, financial accounting for selected other entities, managerial concepts and current issues. Students will not receive credit for both ACC 439 and ACC 539.
Prerequisite(s): ACC 356

ACC 457  Auditing  3 Credit Hours
To introduce students to the audit profession, process, and practice. Topics include general auditing and ethical standards, principles of internal control and audit objectives, audit testing and sampling techniques, as well as the auditor's responsibility for communications and risk assessment.
Prerequisite(s): ACC 357 and BE 401
Restriction(s):
Can enroll if Class is Senior

ACC 480  Information Tech Eval & Control  3 Credit Hours
The course emphasizes the control and evaluation of information systems to ensure accounting and management financial reporting and information processing objectives are accomplished. The course covers the theory of control evaluation, design of internal control, and the evaluation of internal controls in traditional and emerging information technology environments. Emphasis will be placed on current technologies in use by business organizations, emerging technologies, and the application of current profession guidance to evaluate existing and proposed information systems. (YR).
Prerequisite(s): (ACC 380 or MIS 310) and ACC 457*

ACC 482  Seminar: Accounting  1 to 3 Credit Hours
To provide students with an opportunity for intensive study in current areas related to the research activities and/or professional activities of faculty members. Permission of College of Business.
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

ACC 487  Advanced Auditing  3 Credit Hours
To introduce students to advanced audit and assurance service practices, strategies, and techniques. Topics include audit strategy, fraud, internal and operation audits, auditor liability, issues in audit information technologies, and audit practice. (YR)
Prerequisite(s): ACC 457
Restriction(s):
Can enroll if Class is Senior

ACC 492  Research: Accounting  1 to 3 Credit Hours
To provide the advanced student with the opportunity to undertake a research project under the supervision of a faculty member. At least two weeks prior to registration in the term when such a course is to be elected, an interested student must submit to the dean of the school a written request for permission to elect a research course, on a form available in the school office. The request will include a description of the proposed research project. The dean will review the proposal with faculty members to ascertain availability of relevant faculty supervision and to establish appropriate credit. Permission of College of Business.
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

African & African-Amer Studies (AAAS)

AAAS 106  Intro to the African Past  3 Credit Hours
This course is a survey of the social, economic, political, intellectual and cultural heritage of the African peoples from pre-history to the present. The emphasis is on the internal dynamics of the African society through five millennia, as well as the impact of external forces on African life. Themes of particular interest: the roots of African culture, the trans-Atlantic slave trade and the African Diaspora in the New World, the European Conquest and the character of the colonial order and the ongoing struggle to end the legacy of alien domination. (YR)
Restriction(s):
Can enroll if Level is Undergraduate
AAAS 239  Intro to Lit: African American  3 Credit Hours
A study of African-American literature designed to expose students to important periods, works, and authors within historical context. Topics will include slavery, reconstruction, the Great Migration, the Harlem Renaissance, and the contemporary renaissance in Black women's literature. Students will be required to read critically, discuss, analyze, and write their responses to the several literary genres that will be incorporated (fiction, drama, poetry). (YR).

AAAS 300  Introduction to AAAS  3 Credit Hours
This gateway course in the African and African American Studies Program introduces students to the intellectual debates, historical perspectives and cultural issues central to the field of African and African American Studies. The course readings draw from the disciplinary strengths of the Humanities as well as the Social and Behavioral Sciences. Course materials include selections from literature, film, music, art, drama, folk and popular culture. The course content is supplemented by attendance at off-campus events and visits to institutions featuring significant aspects of African and African American history and culture. Restriction(s):

AAAS 304  Detroit History and Culture  3 Credit Hours
This interdisciplinary course explores the political, social, and cultural history of Detroit by examining ways various groups and classes have interacted with and been shaped by structures of power and influence. This course highlights trade and commerce, newcomers, and the influence of organizations and institutions within the contexts of labor, race, ethnic, and religious histories and current affairs, and examines how these fit into the evolution of Detroit from the 19th century to the present. Where pertinent the influence of national and international movements are included. (YR)

AAAS 313  African American Religious Experience  3 Credit Hours
Full Title: African American Religious Experience This lecture course presents a survey of African American expressions across diverse religious traditions including Christianity, Islam, Judaism, Buddhism, and will explore contested forms of spiritual expression such as secularism and new religious movements. The course tracks these experiences from the late 18th to the 21st century in light of the contemporaneous context of social, political, and economic forces in the United States. No prerequisites. (YR).

AAAS 316  African American History  3 Credit Hours
This course will trace the experience of African Americans from their first landing in Virginia in 1619 through slavery and the Civil War. Emphasis will be placed on the origins of racism, the development of the slave system in the United States and the historical developments that led to the Civil War. (YR).

AAAS 320  African-American Music History  3 Credit Hours
A study of African American Music History from its African origins through the present. An understanding of the broad cultural, political, social, economic and media forces that have affected African Americans, their music and history- and in turn, the many important ways that African American music has influenced culture. Course examines multiple genre of music including classical, spiritual, jazz, blues and rap.

Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

AAAS 321  Untold Caribbean: Field Course  3 Credit Hours
Full Course Title: Dark History and Untold Stories: Field Class in Caribbean Historical Archaeology. Field Class: involves international travel and required costs in addition to tuition. This class explores the story behind Caribbean "paradise." We use the analytical methods of historical archaeology to "read" sites of enslavement and resistance, as well as modern museum interpretations of Caribbean heritage, and engage in the production of new archaeological knowledge through excavation. We will ask how negative or "dark" history should be remembered, what life was like on Caribbean plantations, and how histories of slavery are relevant now. Throughout, we will examine how archaeology can tell the untold stories of the many people-black, white, free, and enslaved-who never made it into the history books. We will also contribute new voices with a "mini-field season" of archaeological excavation: students can gain a glimpse into scientific archaeology, and get to try out fieldwork to see if they would gain from a full field school. (S,OC)

AAAS 322  Psychology of Prejudice  3 Credit Hours
A consideration of ethnic (including racial), sexual, and religious prejudice from the psychological point of view, focusing on the mind of both the oppressor and the oppressed. (YR).

Prerequisite(s): PSYC 171 or PSYC 170 or PSYC 101

AAAS 325  Econ of Poverty/Discrimination  3 Credit Hours
An analysis of the economic aspects of poverty and discrimination. Emphasis on the theoretical economic causes of poverty and the economic bases for discriminating behavior, the impact of poverty and discrimination on individuals and society, and the effect of reform policies on the two problems. (AY).

Prerequisite(s): ECON 201 and ECON 202

AAAS 333  Intro to Gospel Music  3 Credit Hours
This course explores the history and aesthetics of Black sacred music within cultural context. Major figures (Thomas A. Dorsey, Mahalia Jackson, The Winans Family, Kirk Franklin), periods (slavery, Great Migration, Civil Rights movement), and styles (folk and arranged Negro spirituals, congregational songs, and gospel songs - traditional to contemporary) will be studied through recordings, videos, films, and at least one field experience. Underlying the course is the theory (Mellonee Burnim and Pearl Williams-Jones) that gospel music is an expression of African American culture that fuses both African and European elements into a unique whole. (OC).

AAAS 340  Beyond Race: Understanding Human Variation  3 Credit Hours
This course examines the concept of race from a biocultural perspective. It focuses on several intertwined themes, including: (1) the nature of human biological variation, (2) how human populations have adapted to diverse environments across the world, (3) how Western scientific thought and colonization influenced ideas about race, and (4) how the concept of race has varied both cross-culturally and over time. Students will be asked to critically evaluate current and historical concepts of race and human variation, and to apply this understanding to contemporary issues. Prerequisite ANTH 101 recommended. (YR).

Prerequisite(s): ANTH 101

Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

AAAS 345  West Africa Since 1800  3 Credit Hours
A history of the West African peoples since 1800, which focuses on their unique cultural heritage. Themes include: West Africa before the advent of alien domination, the European Conquest, West Africa under the Colonial regimes, and the liquidation of colonial rule and the reassertion of West African independence. (AY).
AAAS 3634 History of Islam in the US 3 Credit Hours
This course traces the long history of Islam and of Muslims in the United States (1730s-present), paying careful attention to the interaction among Muslims across the dividing lines of race, gender, immigrant generations, sect, political orientation, and class, and between Muslims and other Americans.
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

AAAS 3640 Black Intellectual History 3 Credit Hours
Full Course Title: Black Intellectual History: From Africa to the Diaspora
This course bridges thinkers in Africa and the African Diaspora, i.e., North America, the Caribbean, and South America. It examines African and Diasporic intellectual movements from Ancient Egypt and Ethiopia to the present. Authors studied will include C.L.R. James, Frederick Douglass, Mary McLeod Bethune, Ida B. Wells-Barnett, Julius Nyerere, David Walker, Nelson Mandela, W.E.B. DuBois, Franz Fanon, Martin Luther King Jr., and Cornel West. (YR)

AAAS 367 Religion and Resistance 3 Credit Hours
This course examines how religion and spirituality as cultural form has been instrumental in influencing social, political, and economic thought and the action of violent and nonviolent resistance. In such, African Americans have affirmed their humanity, their citizenship, and have exerted mechanisms of protest and change that have in-kind influenced similar thought and activity around the globe. When contemporary students are aware of this history at all, it is often without the knowledge or understanding of the various forms of resistance and the range of reason and spirituality behind this activity. The course will present key figures from within this range (AY).

AAAS 368 African American History II: 1865-Present 3 Credit Hours
The history of blacks in America is traced from the Reconstruction era and the rise of Jim Crow segregation to the Civil Rights movement of the 1960's and the current period. Special attention is paid to the migration of blacks to the north and the social-economic situation which they encountered there. (AY).

AAAS 369 Civil Rights Movement in Amer 3 Credit Hours
A survey of race relations and civil rights activities from late 19th century to the present. The principal focus, however, is on the period since World War II, especially on the mass-based civil rights movement (1955-1965) and the various policy debates and initiatives of the past thirty years, most notably affirmative action and busing. We also examine critiques of non-violence and integrationism. (AY).

AAAS 371 African Exper in the Americas 3 Credit Hours
The course is a survey of African populations and cultures from 1500 to the present throughout the Americas. The focus of the course is on the Caribbean and Latin American contexts of these populations, but comparisons to North America will be made. Topics include the slavery, the relationship between Africans and indigenous populations, religions, politics, music, and questions of race and ethnicity. Readings will include ethnographic description, history, biography and fiction. (YR).

AAAS 385 Black Cinema 3 Credit Hours
The course will examine selected films from African American and African film traditions in order to analyze how their cultural production is responsive to the conditions of social oppression, economic under-development, and neo-colonialism. How film traditions define "Black aesthetics" will also be discussed. (AY).

AAAS 388 W. African Music: Trad.&Glob. 3 Credit Hours
West African popular music contains a unique mixture of African, Cuban, European and American influences. With the advent of radio and recording, music that was once locally based is now part of a national and international popular music industry. This course offers an overview of modern West African music, both traditional and popular. The course begins with an introduction to traditional West African instruments and musical genres. Next, there is an exploration of the fusion of traditional African styles with European, Cuban and American styles during and after the colonial era. The course culminates with an examination of the contributions of West African musicians to the World Music scene, focusing on issues of representation and Fair Trade.
Prerequisite(s): MHIS 100 or MHIS 120 or MHIS 130 or MTHY 100 or AAAS 106 or AAAS 275 or HUM 100 or HUM 270

AAAS 389 Odyssey of Black Men in Amer 3 Credit Hours
This course will examine the struggle of African American men for personal, political, and creative expression. This course incorporates several literary genres (narrative, fiction, essay, drama, and poetry) and the literary voices of black men who range from professional writers to politicians, from athletes to actors. Students will be required to critically read, discuss, analyze, and write their own responses to the literature found in the texts. (YR).
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

AAAS 390 Topics in Af & Af Am Studies 3 Credit Hours
This course examines problems and issues in selected areas of African and African American Studies. The specific title of the course will change in the Schedule of Classes according to content. Course may be repeated for credit when specific topic differs. (OC).
Restriction(s):
Can enroll if Level is Undergraduate or Professional Development

AAAS 393 Black Women, Rel & Spirituality 3 Credit Hours
This lecture course surveys descriptive and critical literature relevant to the religious and spiritual experience and thought of African diasporic women. Studying religiosity and spirituality among this population helps students understand this influential, culturally-constructed world view of Black women as they engage in a variety of institutions including healthcare, economic activity, the criminal justice system, politics, and social relationships. The course gives particular attention to Black feminist and Womanist literature on these topics. (F).
Restriction(s):
Cannot enroll if Class is Freshman

AAAS 403 Race and Ethnicity 3 Credit Hours
The status of racial and ethnic minorities in the United States with particular reference to the social dynamics involved with regard to majority-minority relations. Topics of study include inequality, segregation, pluralism, the nature and causes of prejudice and discrimination and the impact that such patterns have upon American life. Students cannot receive credit for both SOC 403 and SOC 503. (F, W).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Cannot enroll if Level is
AAAS 404  Dissed: Differ, Power, Discrim  3 Credit Hours
Have you ever been dissed? Why are some people targets of disrespect? This class examines the unequal distribution of power - social, economic, and political - in the United States and other countries that results in favor for privileged groups. We will examine a variety of institutional practices and individual beliefs that contribute to disrespect. We'll look at ways that beliefs and practices, like viewing inequality as consequence of a 'natural order', obscure the processes that create and sustain social discrimination. We will engage in the intellectual examination of systems, behaviors, and ideologies that maintain discrimination and the unequal distribution of power and resources. Students will not receive credit for both AAAS 404 and AAAS 504.
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if Level is Undergraduate

AAAS 433  Race/Ethnic Health  3 Credit Hours
Full Course Title: Race, Ethnicity and Community Health This course provides a broad overview of health disparities in the United States, with a focus on the three types of social inequality-race ethnicity (and nativity status), socioeconomic status (SES), and gender. Epidemiological issues, health behaviors, health care services, and health and social issues specific to various minority populations in the U.S. are covered. The underlying position of the course is that understanding groups that are at higher risk of developing poor health outcomes is crucial to developing better health care and health policy interventions.  (OC)

AAAS 4401 Seminar: African Diaspora  3 Credit Hours
Research seminar on the history of the African Diaspora in the Atlantic World. This course covers examples of classic texts in the field, as well as significant new scholarship, with an emphasis on critical reading, analysis, and the development of an independent research project. Students gain a deeper understanding of the significance of the African Diaspora in the New World, derived from lectures and discussions providing an overview of this subject, as well as the micro views gleaned from sharing classroom presentation about students' individual research topics. The graduate version of this course includes weightier readings and assignments, with a research paper for potential publication.
Prerequisite(s): HIST 300 or AAAS 275 or HIST 345 or AAAS 345
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore or Graduate

AAAS 449  Black Family in Contemp Amer  3 Credit Hours
The African-American family is examined in relationship to the historical and contemporary forces that have shaped its characteristic patterns of family life. These forces include the influence of slavery, urbanization, racial discrimination and urban poverty. The patterns of family life include parental roles, family structure, kinship relations, and gender roles.  (YR).
Prerequisite(s): SOC 200 or SOC 201

AAAS 469  Contemporary African Amer Lit  3 Credit Hours
An intensive study of major 20th-century African-American writers. Fiction, poetry, autobiography, and drama will be examined but one genre will be stressed in any given term, e.g., the novel. Lectures will provide historical and biographical context for analysis and discussion of the works. Students cannot receive credit for both ENGL 469 and ENGL 569.  (OC).
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)
Restriction(s):
Cannot enroll if Class is Graduate

AAAS 470  Black Women / Lit, Film, Music  3 Credit Hours
This course will examine works produced by Black women authors, activists, filmmakers and musical performers in order to determine the methods they have incorporated in order to challenge and eradicate the prevailing stereotypes about Black women while advancing their own personal and racial agendas. It will also focus on the extent to which race, gender and class have shaped the creative work of Black women. Students will be required to read, discuss, analyze and write their own responses to the works of such firebrands as author Zora Neale Hurston, activist Ida B. Wells, filmmaker Julie Dash, and singer Billie Holiday.
Prerequisite(s): FILM 240 or FILM 248 or FILM 385 or AAAS 239 or AAAS 275 or HUM 303 or HUM 221 or HUM 222 or HUM 223 or HUM 248 or ENGL 200 or ENGL 205 or ENGL 206 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 237 or ENGL 238 or ENGL 239 or ENGL 248 or JASS 248 or ANTH 303 or PSYC 303 or SOC 303 or WGST 303
Restriction(s):
Cannot enroll if Class is Freshman
Cannot enroll if Level is Undergraduate

AAAS 473  Race, Crime, and Justice  3 Credit Hours
This course is an analysis of race and its relation to crime in the criminal justice system. Students will analyze and interpret the perceived connection between race and crime, while exploring the dynamics of race, crime, and justice in the United States. This course is designed to familiarize students with current research and theories of racial discrimination within America's criminal justice system.
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Cannot enroll if Class is Freshman

AAAS 477  African American English  3 Credit Hours
An examination of the structure, history and use of African-American English. Topics will include the pronunciation, grammar and vocabulary of African-American English, theories of origin, linguistic repertoire and code-switching in African-American communities, the Ebonics controversy, and the role of this variety in education and identity formation. Student cannot receive credit for both AAAS 477 and AAAS 577.
Prerequisite(s): LING 280 or LING 281 or LING 480
Restriction(s):
Can enroll if Level is Undergraduate

AAAS 491  Topics in African Diaspora  3 Credit Hours
This course deals with African Diasporan history from the 19th century to the present. The method is by definition cross-cultural and comparative, requiring that the works or figures under study represent a diversity of Diasporan nationalities and/or cultures. The course may focus on a wide range of topics. Students cannot receive credit for AAAS 491 and AAAS 591 when the topic title is the same.

AAAS 491C  Topics in AAAS  3 Credit Hours
Topic: Senior Research Seminar: Africa and the New World Diaspora. A history research seminar exploring the broad history of Africa and its descendants in the New World. Emphasis will be placed on a series of cross-cultural but interconnected themes including: African civilizations, the trans-Atlantic slave trade and comparative systems of servitude, the Haitian Revolution, the American Civil War, the European conquest of Africa, trans-Atlantic systems of inequality, the World Wars, the African intellectual renaissance, the Civil Rights Movement in the United States, and Independence Movements in Africa.
Prerequisite(s): HIST 300
American Studies (AMST)

AMST 300  Comparat. American Identities  3 Credit Hours
This course will confront and complicate the following key questions: what does it mean to be an American? What is American culture? Participants in this course will respond to the questions central to the American Studies field by reading and discussing historical, sociological, literary, artistic, material culture, political, economic, and other sources. Students will use this interdisciplinary study to examine the multiple identities of Americans - as determined by factors such as gender, race, class, ethnicity, and religion. While emphasizing the diversity of American culture, participants will consider some core values and ideas uniting America both in historical and contemporary society. Students will be invited to seek out and share fresh narratives of the American experience.
Prerequisite(s): COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 270 or COMP 280
Restriction(s):
Can enroll if Level is Undergraduate

AMST 390  Topics in American Studies  3 Credit Hours
Examination of problems and issues in selected areas of American Studies. Title in the Schedule of Classes will change according to course content. Course may be repeated for credit when specific topics differ.
Prerequisite(s): AMST 300 or HIST 3602 or ENGL 306 or SOC 306 or COMM 306
Restriction(s):
Can enroll if Class is Senior
Can enroll if Major is American Studies

Anthropology (ANTH)

ANTH 101  Introduction to Anthropology  3 Credit Hours
Anthropology emphasizes the holistic study of human beings, in both the past and the present, and this course introduces students to the four primary subfields of the discipline (sociocultural anthropology, biological anthropology, linguistic anthropology, and archaeology). of the discipline. This course shows students how the sub-fields intersect to explain human biological and cultural diversity, provides students with the ability to better understand their own culture in the context of a globalized world, and discusses the applied skills of the discipline. (F, W, S)

ANTH 201  Introduction to Archaeology  3 Credit Hours
Through hands-on labs and comparison of different sites and research projects, this class provides a survey of the theoretical concepts and methods archaeological anthropologist use to learn about people through material things. Considers topics such as site formation, sampling strategies, excavation methods, lab analyses, museum presentations, heritage laws, the history of archaeology, theoretical approaches, and archaeological ethics.

ANTH 202  World Cultures  3 Credit Hours
A comparative study of politics, economics, family and religion in selected cultures—foraging, tribal, peasant, and industrial. Provides a survey of theoretical concepts in social and cultural anthropology through the comparison of ethnographic case studies. ANTH 101 recommended. (YR)
Prerequisite(s): ANTH 101

ANTH 215  Research Skills BSci  1 Credit Hour
This course teaches foundational research and critical-thinking skills necessary for the success of students in the Behavioral Sciences (including Anthropology, Psychology, and Sociology) in conducting university-level research projects, papers, and other reasearch assignments. Students will learn important research skills like distinguishing between scholarly and non-scholarly sources of information, using library search tools to find peer-reviewed and scholarly sources, evaluating and analyzing information sources and using them to build informed opinions and arguments, integrating and synthesizing sources, and using sources ethically. Students will learn these skills through lectures, practice and by applying them through a series of assignments. (F, W, S)
Restriction(s):
Can enroll if Level is Undergraduate
Can enroll if College is Arts, Sciences, and Letters

ANTH 260  Michigan Archaeology  3 Credit Hours
Our campus and our state sit on more than 10,000 years of culture and change. Long before there was a place called "Michigan", the land saw the shift from gather-hunters to farmers, and the influence of great cities far away. Three hundred years ago it was a crossroads in the rapidly changing colonial world, where traders, voyagers, and different groups of Native peoples met in friendship and in conflict—both way the changed each other's worlds. Even today, the material culture of Michigan and its peoples tells us about culture in ways that even a conversation cannot. This class takes Anthropology's explicitly comparative view towards understanding the connections of past and present through both prehistoric and historical archaeology. Hands-on labs, readings, and field trips trace the development of the state from the earliest traces to the present, and focus on people and ideas left out of written history. (YR)
ANTH 270  Anthropology of Food  3 Credit Hours
The goal of this course is to introduce students to basic food theory and food practices across the world. How do ideas and practices of food and eating relate to such topics as taboo, gender, bodies, religion, kinship, and hierarchy? How are the foods people eat meaningful across multiple cultural contexts? In this course, students will develop and practice basic methodologies for food oriented ethnography including interviews and participant observation. They will also engage cultural politics of food by examining how food intersects with nation building, global networks of food production and consumption, alternative food movements, and sustainability. (OC)

ANTH 303  Intro to Women's & Gender Stud  3 Credit Hours
This course provides an interdisciplinary overview of the key theories and topics in Women's and Gender Studies. Special attention is given to how gender intersects with class, race, nationality, religion and sexuality to structure women's and men's lives. Students are also introduced to methods of gender analysis and will begin to apply these methods to topics such as women and health, gender roles in the family, violence against women, and gendered images in the mass media.

Restriction(s):
Cannot enroll if Class is Freshman

ANTH 307  Forensic Anthropology  3 Credit Hours
Forensic anthropology has recently seen a lot of exposure through popular television shows like CSI and Bones. Have you ever wondered how much of what you were seeing was real? Do the dead really "talk" about their lives and how they died? This course is designed as an introductory course for students interested in demystifying and getting to know the real forensic anthropology. Forensic anthropology is a specialized sub-field of biological anthropology that applies many of the methods of biological anthropology to the discovery, excavation, and identification of human remains in a medico-legal context. In this class we learn about the human skeleton and explore the key methods that are used in the identification of individuals, such as age-at-death estimation, sex determination, stature, ancestry, and personal identification. We also deal with assessment of the different types of trauma, and whether or not we can tell the cause and manner of death. The broader ethical roles and responsibilities of forensic anthropologists are also discussed, including discussions of how we determine race/ancestry, as well as ethical responsibilities we have during the investigation of human rights abuses, disasters and criminal inquiries. (F)

Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

ANTH 311  Archaeology of Inequality  3 Credit Hours
Inequality has a history. This course explores these histories through archaeology with a focus on the material culture of the last 500 years. While we have written records from this time, material remains such as buildings, pottery, and human bones reveal far more. The mundane details of daily life are where inequality and injustice were (and are?) created, enforced, and resisted, and these mundane details are the material of archaeology. (OC)

ANTH 312  Islamophobia  3 Credit Hours
In our post-9/11 world, Islamophobia, literally fear of Islam, has gained an increasingly visible presence in the United States media, our laws and policies. But what is Islamophobia and where does it come from? How is it experienced by Muslims in everyday life? How is it similar or different from racism or other kinds of anti-Semitism? What can we do about it? And finally, what is the term Islamophobia good for? This course explores Islamophobia from the perspective of sociocultural anthropology. Students will discuss the relationships between Islamophobia and orientalism, Islamophobia in the media, in literature, and in the everyday experience of Muslims in the United States and Europe. The course ends with an examination of the Arab immigrant experience of Islamophobia in Metro Detroit. (FAY)

ANTH 320  Culture and Global Business  3 Credit Hours
Culture and Global Business lectures, exercises, and case studies explore anthropological concepts and cultural awareness needed by employees, managers, and consultants in multinational and multi-ethnic work environments. Topics include the global economy in anthropological perspective, national culture and business culture, implicit values about work and time, cross-cultural concepts of gender and cross-cultural communication. Special emphasis is given to Asia and developing societies. (AY).

ANTH 321  Untold Caribbean: Field Course  3 Credit Hours
Full Course Title: Dark History and Untold Stories: Field Class in Caribbean Historical Archaeology. Field Class: involves international travel and required costs in addition to tuition. This class explores the story behind Caribbean "paradise". We use the analytical methods of historical archaeology to "read" sites of enslavement and resistance, as well as modern museum interpretations of Caribbean heritage, and engage in the production of new archaeological knowledge through excavation. We will ask how negative or "dark" history should be remembered, what life was like on Caribbean plantations, and how histories of slavery are relevant now. Throughout, we will examine how archaeology can tell the untold stories of the many people-black, white, free, and enslaved-who never made it into the history books. We will also contribute new voices with a "mini-field season" of archaeological excavation: students can gain a glimpse into scientific archaeology, and get to try out fieldwork to see if they would gain from a full field school. (S,OC)

ANTH 325  Anth of Health and Environment  3 Credit Hours
Cultural conflicts over pollution, disease etiology, development and natural resources often originate and are played out in local ecosystems. Anthropologists are increasingly becoming involved as researchers, developers, and activists in these cultural strifes. This course reviews the work of environmental and medical anthropologists as well as other critical scholars who unravel the values, meanings and ideologies associated with ecological issues in given localities. Drawing on theoretical advances in critical medical anthropology, environmental anthropology and applied anthropology the course seeks to improve the knowledge and abilities of student anthropologists in their environmental health work.

ANTH 331  Biological Anthropology and Human Evolution  3 Credit Hours
As a broad overview of biological anthropology, this course examines human evolution from early primates to anatomically modern Homo sapiens. It covers evolutionary theory, human growth and development, human biodiversity, the relationship of humans to non-human primates, the fossil evidence for human evolution, and human biocultural adaptation to various environments. Prerequisite ANTH 101 recommended. (YR).
ANTH 336  Introduction to Primates  3 Credit Hours
A survey of biological anthropology. This course is a prerequisite for all other upper-division bioanthropology courses. Topics include the human place in nature, primate biology and behavior, evolution theory, genetics, the fossil evidence for human evolution, human growth, and biocultural adaptation to the environment. Prerequisite ANTH 101 or ANTH 331 recommended. (YR)

ANTH 340  Beyond Race: Understanding Human Variation  3 Credit Hours
This course examines the concept of race from a biocultural perspective. It focuses on several intertwined themes, including: (1) the nature of human biological variation, (2) how human populations have adapted to diverse environments across the world, (3) how Western scientific thought and colonization influenced ideas about race, and (4) how the concept of race has varied both cross-culturally and over time. Students will be asked to critically evaluate current and historical concepts of race and human variation, and to apply this understanding to contemporary issues. Prerequisite ANTH 101 recommended. (YR)
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

ANTH 341  Human Paleontology  3 Credit Hours
A survey of the evolutionary history of life through the study of fossils and collaborative field and laboratory material. The evolution of humans and the primate order of mammals is emphasized. (AY).
Prerequisite(s): ANTH 101

ANTH 350  Prehistoric Archaeology  3 Credit Hours
Uses archaeological evidence to explore issues of central importance to the present, such as the creation of new technologies, the switch to farming, the rise of social inequality, and the beginnings of cities. Considers archaeological sites in Michigan, as well as Egypt, India, China, Europe, Mesopotamia, Mexico, Peru, and elsewhere from 2 million to 500 years ago. Prerequisite ANTH 101 recommended.
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

ANTH 371  African Exper in the Americas  3 Credit Hours
This course is a survey of African populations and cultures from 1500 to the present throughout the Americas. The focus is on Caribbean and Latin American contexts of these populations, but comparisons to North America will be made. Topics include slavery, the relationship between Africans and indigenous populations, religions, politics, music, and questions of race and ethnicity. Readings will include ethnographic description, history, biography and fiction. (YR).
Prerequisite(s): ANTH 101

ANTH 372  Anthropology of Latin America  3 Credit Hours
This course is a survey of Latin American people and cultures since the 1500s, with an emphasis on how native populations, Europeans, and Africans have shaped the New World. It focuses on the effects of colonialism, slavery, religion, politics, and economic development, and explores the role of race, gender, family, media, indigenous movements, environmental awareness, and global geopolitics in modern Latin American culture. (YR).
Prerequisite(s): ANTH 101

ANTH 373  Anthropology of Middle East  3 Credit Hours
This course explores contemporary life in the Middle East using an anthropological lens. Topics discussed include the geography and diversity of the Middle East; gender, the veil, and Orientalism; Islam, ritual, and everyday family life; and ethics and politics. The course ends with an examination of the Arab immigrant experience in Metro Detroit. Prerequisite: ANTH 101 recommended (YR).

ANTH 374  Anthropology of Europe  3 Credit Hours
Introduces anthropological approaches to European culture, emphasizing ethnographies and community studies as well as social history from the classical and medieval to the present. Will include cultural implications of industrialism and urbanization. May focus on Western or Eastern Europe during a given semester. (AY).
Prerequisite(s): ANTH 101

ANTH 376  Power & Privilege in SE Mich  3 Credit Hours
An examination of the social and cultural systems that lead to power, privilege, and inequality in American culture. This course takes a local perspective, analyzing systems of inequality as related to such factors as race, ethnicity, gender, social class and sexual orientations. This is an American Service Learning (ASL) course, and requires community service activities outside of class time. (YR).
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

ANTH 390  Topics in Anthropology  3 Credit Hours
Examination of problems and issues in selected areas of anthropology. Title in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

ANTH 391  Topics in Anthropology  3 Credit Hours
Examination of problems and issues in selected areas of anthropology. Title in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. Junior standing required. (OC).

ANTH 398  Independent Studies in Anthr  1 to 6 Credit Hours
Readings or analytical assignments in anthropology in accordance with the needs and interests of those enrolled and agreed upon by the student and instructor. Permission of instructor required. (F/W).

ANTH 399  Independent Studies in Anthr  1 to 6 Credit Hours
Readings or analytical assignments in anthropology in accordance with the needs and interest of those enrolled and agreed upon by the student and instructor. (F/W).

ANTH 406  Culture and Sexuality  3 Credit Hours
The study of women, men, children, socialization practices, and the genesis of sex roles cross-culturally. Students cannot receive credit for both ANTH 406 and ANTH 506. ANTH 101 recommended. (YR).
Prerequisite(s): ANTH 101 or WST 275 or WGST 275 or WGST 303 or PSYC 275 or SOC 275 or ANTH 275 or HUM 275 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303
ANTH 409  Human Body, Growth & Health  3 Credit Hours
This course provides an advanced undergraduate introduction to the topic of human growth and shows how human growth can be a reliable measure of the psychological, social, economic and moral conditions of a society. A major theme will be the interplay of biology and culture in shaping the patterns of human growth and, consequently, the health of populations and individuals.
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Junior or Senior

ANTH 410  Archaeological Field School and Lab Methods  3 Credit Hours
While participating in a primary archaeological research project, students learn the methods and techniques of field archaeology and basic laboratory work, gaining experience in the scientific research process and complex problem-solving. Depending on the project, some aspects included will be survey, excavation, mapping, historical background research, and/or artifact conservation and analysis. Prerequisite ANTH 201 highly recommended.

ANTH 412  Men and Masculinities  3 Credit Hours
This course addresses the question, “What is a man?”, in various historical, cross-cultural, and contemporary contexts. A major focus on the social and cultural factors that underlie and shape conceptions of manhood and masculinity in America as well as in a variety of societies around the globe. Prerequisite ANTH 101 recommended. (AY).
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

ANTH 415  Nutrition and Health  3 Credit Hours
The influence of nutrition on physical and mental development from conception to adulthood. Topics include: 1) the definition and function of the essential nutrients for people, 2) basic principles of human growth and development, 3) the causes and consequences of underand overnutrition, 4) feeding practices for infants and children and the development of food habits, 5) nutrient and food problems in the local region and in global perspective. Students cannot receive credit for both ANTH 415 and ANTH 515. (AY).
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Junior or Senior

ANTH 420  Kinship and Marriage  3 Credit Hours
A study of the diversity of kinship and marriage systems, and of the history of kinship theory which has played a seminal role in the development of general anthropological theory. Students cannot receive credit for both ANTH 420 and ANTH 520. (OC).
Prerequisite(s): ANTH 101 or ANTH 201
Restriction(s):
Can enroll if Level is Undergraduate

ANTH 421  Education and Culture  3 Credit Hours
How and where do people learn? Why are there schools, and how is schooling culturally organized? Why do school experiences tend to vary by “race”, social class, and gender? What insights does anthropology bring to practical problems of learning and teaching? Students cannot receive credit for both ANTH 421 and ANTH 521. ANTH 101 or SOC 200 recommended. (AY).
Restriction(s):
Can enroll if Level is Undergraduate

ANTH 422  Narrative Anthropology  3 Credit Hours
A consideration of alternative approaches to gaining ethnographic understandings by reading anthropological novels (Bohannan, LeGuiton), fiction and poetry by non-western authors (Silko, Achebe), and travel writing (Chatwin, O’Hanlon). Junior standing; ANTH 101 highly recommended. (AY).
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Junior or Senior

ANTH 425  Language and Society  3 Credit Hours
An examination of the social functions of speech through readings and exercises, emphasizing schools and other applied settings. Topics include ethnic and social class dialects, codeswitching, and the organization of conversation. Students cannot receive credit for both ANTH 425 and ANTH 525. (OC).
Prerequisite(s): ANTH 101 or LING 280
Restriction(s):
Can enroll if Level is Undergraduate

ANTH 430  Medical Anthropology  3 Credit Hours
A comprehensive examination of how culture mediates processes of illnesses and healing. Comparative materials examined, which provide a context for an anthropological analysis of modern biomedicine. (AY).
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

ANTH 435  Human Genetics  3 Credit Hours
An analysis of human genetic variation in terms of the theory of population genetics considers such polymorphisms as blood groups and variant hemoglobins as well as morphological characters like stature, skin color, and so on. Emphasis is on the genetics of human populations and particular attention is drawn to cultural factors affecting human biology. Additional prerequisite ANTH 331 is recommended. (OC). (OC).
Prerequisite(s): ANTH 101 or BIOL 130

ANTH 440  Religion and Culture  3 Credit Hours
What is religion and how does it shape us? This course begins to answer these questions by exploring religious diversity around the world through the lens of a variety of topics in the anthropology of religion. These include sacred symbols, ritual and rites of passage, prayer, shamanism, witchcraft, and spirit possession. We examine changing approaches to the study of religion and address the myriad ways religion intersects with other aspects of social life including kinship, food, and politics. Students end the course by conducting their own ethnographic research of a religious event, ritual specialist, or sacred place. (AY). (AY).
Prerequisite(s): ANTH 101 or ANTH 202 or ANTH 303 or PSYC 303 or SOC 303 or WGST 303 or SOC 200

ANTH 444  Political Anthropology  3 Credit Hours
A consideration of some of the major anthropological views of politics, focusing on the relations of power to kinship, stratification, and religion in both states and stateless societies. Sophomore standing; ANTH 101 highly recommended. (OC).
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
ANTH 450  Anthropological Theory  3 Credit Hours
This course explores a full range of anthropological theory, beginning with the development of the discipline and concluding with current issues and developments in anthropology. It will provide a well-rounded conclusion to undergraduate studies in anthropology. This course has three primary goals in mind: 1) to explore selected topics as divers as social change, symbolic thought, exchange, structure, power, and post-colonial theory. How do the questions we ask shape our answers? (OC). (OC).
Prerequisite(s): ANTH 101 or ANTH 202 or ANTH 373 or ANTH 381 or ANTH 303 or HUM 303 or PSYC 303 or SOC 303 or WGST 303 or SOC 200
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

ANTH 451  Family, Sexuality, Rights  3 Credit Hours
Full Course Title: Family, Sexuality, and Human Rights in a Changing World. This course investigates the changing possibilities for forming families and expressing sexuality, with a focus on how nation states and legal and cultural systems construct and respond to these changes. Selected topics include the meanings of sex, love, marriage, and relatedness in different historical moments; struggles for recognition of varied kinship and family arrangements, such as internarital, interfaith, same-sex, polygamous and multi-partner relationships; and new technologies and their implications for family life. (YR)
Prerequisite(s): (WGST 303 or SOC 303 or ANTH 303 or PSYC 303 or HUM 303) or (SOC 200 or SOC 201) or (ANTH 101 or ANTH 202)
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

ANTH 455  Immigrant Cultures and Gender  3 Credit Hours
The history and culture of immigration since 1850, including: (1) formation and perseverance of immigrant communities and interethic boundaries; (2) relations between the homeland and the immigrant; and (3) impact of migration on family life and gender roles. Prerequisite and junior or senior standing. Students may not receive credit for both WGST 4555 and WGST 5555. For graduate credit take WGST 5555. (AY).
Prerequisite(s): ANTH 101 or WGST 275 or WST 275 or PSYC 275 or SOC 275 or ANTH 275 or HUM 275 or WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303
Restriction(s):
Cannot enroll if Class is Junior or Senior

ANTH 459  Human Osteology  3 Credit Hours
An introduction to the methods and theory of human osteology, bone history, pathology, biomechanics and taphonomy. Osteology lecture topics include age, sex, stature and ancestry estimation, the problems of commingling and differential disease diagnosis. The lab component provides hands-on skills. The course investigates how the forensic anthropologist can apply skills to human rights and police investigations and the nuances distinguishing theoretical approaches of forensic anthropology and bioarchaeology.
Prerequisite(s): ANTH 331 or BIOL 130
Restriction(s):
Cannot enroll if Class is Sophomore or Junior or Senior

ANTH 460  Economic Anthropology  3 Credit Hours
A comparative examination of the basis of political economy. Economic problems (the production and distribution of goods and services) will be considered in ecological, evolutionary, and political terms. The primary emphasis will be on traditional economies, on production and exchange at the household level, and on the effect of modern market systems on indigenous cultures. (OC).
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

ANTH 470  Doing Anthropology  3 Credit Hours
A juxtaposition of anthropological theory with hands-on ethnographic interview and participant observation. Students will conduct field research and evaluate results with the help of classmates. Students cannot receive credit for both ANTH 470 and ANTH 570. ANTH 101 or SOC 200 highly recommended. (YR).
Restriction(s):
Can enroll if Level is Undergraduate

ANTH 477  Ethnographic Film  3 Credit Hours
This course will analyze ethnographic films as a medium for the construction of meaning in and across cultures. It will teach students to understand how the putatively "real" content of documentary film creates a mixture of fantasy, news and "science." Covering texts as varied as National Geographic photographic layouts, traditional ethnographic films made by anthropologists, and auto-ethnographies of cultural groups such as Native Americans and the Trobriand Islanders of Papua, New Guinea, the course will aim to deconstruct such oppositions as indigene vs. alien, us vs. them, and self vs. other. Students cannot receive credit for both ANTH 477 and ANTH 577. (AY).
Prerequisite(s): FILM 248 or HUM 248 or ANTH 101 or ENGL 248 or JASS 248

ANTH 481  Gender and Globalization  3 Credit Hours
Mass media, politics, and academia are full of references to globalization, and a future "world without borders." This interdisciplinary course considers the implications of globalization for women's lives, gender relations, and feminism. Topics covered include the global factory, cross-cultural consumption, human rights, global communications, economic restructuring, nationalism, and environmental challenges. Rather than survey international women's movements, this course explores how globalization reconfigures identities and locations and the political possibilities they create. (AY).
Prerequisite(s): ANTH 303 or HUM 303 or SOC 303 or PSYC 303 or WGST 303
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore
Can enroll if Level is Undergraduate
Can enroll if College is Arts, Sciences, and Letters

ANTH 482  Psychological Anthropology  3 Credit Hours
Cross-cultural comparison of theories of human nature, including psychoanalytic anthropology, culture-and-personality, and other theories from Western science, as well as non-Western theories about such concepts as the person, emotions and mental illness. Students cannot receive credit for both ANTH 482 and ANTH 582. ANTH 101 and PSYC 170 or 171 highly recommended. (YR).
Prerequisite(s): ANTH 101

ANTH 495  Anthropology Capstone  3 Credit Hours
Full Title: Anthropology Capstone: Contemporary Issues in Anthropology
This course is designed as a capstone for anthropology majors, and it will provide a well-rounded conclusion to undergraduate studies in anthropology. This course has three primary goals in mind: 1) to explore and critically evaluate contemporary anthropological method and theory around a central theme; 2) to provide students with opportunities to gain real research skills; and 3) to help students prepare for the job market inside and outside of academia. (W, YR)
Prerequisite(s): ANTH 101
Restriction(s):
Can enroll if Class is Junior or Senior
ANTH 498  Independent Study  1 to 6 Credit Hours
Readings or analytical assignments in anthropology in accordance with the interests and needs of students enrolled and agreed upon by the instructor and student. Written permission of instructor required.

ANTH 499  Readings in Anthropology  1 to 3 Credit Hours
For students desiring study not available in the regular course offerings. Students cannot receive credit for both ANTH 499 and ANTH 599. (F,W)

**Applied Music (MAPP)**

MAPP 120  Private Instruct in App Music  1 or 2 Credit Hour
For students who desire credit for private lessons on a musical instrument of voice. The lessons are taken outside the University from an instructor approved by the music faculty of the University. Interested students should contact the music faculty at the beginning of the term to arrange for a teacher. 8 hours of instruction over 16 weeks are required each hour (1) of credit. (2 credits requires 16 hours of instruction). This course may be repeated for up to 8 hours of credit. The student pays the instructor’s fee and also tuition for university credit. Students must submit request to enroll before registering. (F, W).

MAPP 125  Class Piano I  2 Credit Hours
Development of skills at the keyboard in harmonization, improvisation, sight reading, accompanying, repertoire, and technique. Emphasis on group learning for beginners. (OC).

MAPP 126  Class Piano II  2 Credit Hours
Enhancement of skills at the keyboard in harmonization, improvisation, sight reading, accompanying, repertoire, and technique. Emphasis on group learning for beginners. (OC).

MAPP 135  Class Guitar I  2 Credit Hours
Development of skills in reading chord tablature, playing basic accompaniments to folk songs using various strumming and fingerpicking techniques, basic theory, reading, playing rhythms and notes. Emphasis on group learning for beginners. (OC).

MAPP 136  Class Guitar II  2 Credit Hours
Enhancement of skills in reading chord tablature, playing basic accompaniments to folk songs using various strumming and fingerpicking techniques, basic theory, reading, playing rhythms and notes. Emphasis on group learning for beginners. (OC).

MAPP 138  Symphonic Band  1 Credit Hour
Credit may be earned by students who are regular members of approved symphonic bands.

MAPP 145  Choir  1 Credit Hour
One hour of credit per semester may be earned by students who are members of the UM-Dearborn choral ensemble or other approved area ensembles. There will be a concert performance every semester which will be open to the general public. (F, W).

MAPP 299  Independent St in Appl Music  1 to 2 Credit Hours
This course assumes a sound knowledge of basic technique and music theory, as covered in MAPP 126 or MAPP 136. Material covered in the course is selected in accordance with the needs and interests of those enrolled and agreed upon by the instructor and the student. Prerequisite(s): MAPP 126 or MAPP 136

MAPP 320  Adv Private Instr in App Music  1 to 2 Credit Hours
For advanced students in applied music. The lessons are taken outside the University from an instructor approved by the music faculty of the University. Interested students should contact the music faculty at the beginning of the term to arrange for a teacher. 8 hours of instruction over 16 weeks are required for 1 hour of credit. This course may be repeated for up to 8 hours of credit. Each student is required to pass a jury exam or perform publicly during each semester. The student pays the instructor’s fee and also pays tuition for university credit.

MAPP 399  Independent St in Appl Music  1 to 2 Credit Hours
This course is intended for those students who have taken MAPP 299, or students at an advanced level who have previously studied piano or guitar formally for several years. Material covered in the course is selected in accordance with the needs and interests of those enrolled and agreed upon by the instructor and the student. Prerequisite(s): MAPP 299

**Arab American Studies (AAST)**

AAST 238  Intro to Lit: Arab American  3 Credit Hours
This course in an introduction to Arab American literature, its historical and cultural contexts and contemporary relevance. Topics will include the literary and cultural productions of Arab immigrants, their transnational vision, and explorations of such concepts as home, memory and identity; the literary, dramatic and poetic responses of Arab American writers to 9/11 and the ongoing war on terror; the role Arab American literature in offering different versions of Arab and Arab American lives and experiences from the one circulated in mainstream media, Hollywood cinema and culture. Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107

AAST 267  Arab & Arab American Workshop  3 Credit Hours
The Arab and Arab American Writers Workshop is a creative writing workshop focusing on poetry and fiction. Students will explore Arab American literature, writers, and themes. Students are expected to work on their own manuscripts as well as critique outside readings. The workshop will be conducted under the guidance of Arab and Arab American faculty and is open to all students. Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107

AAST 3150  Intro to Arab American Studies  3 Credit Hours
This course explores the local, national, and global conditions through which Arab American identity and its alternatives take shape. It introduces students to humanities and social science approaches to the field of Arab American Studies. Restriction(s): Can enroll if Class is Freshman or Sophomore or Junior or Senior

AAST 3151  Public Cultural Work  3 Credit Hours
Full Title: Public Cultural Work in Arab Detroit. This course explores the field of public humanities work while providing a topical focus on metro-Detroit based Arab American history and culture. Roughly half of the course will be used to explore different approaches to public humanities work undertaken by scholars. The second half of the course will provide the historical and social context for understanding a particular research question to be examined jointly by the instructor, students, and a local cultural institution. Students will engage in intensive research and work with a cultural institution to represent their findings to the public. Students cannot receive credit for both AAST 3151 and HIST 3672. (W)
AASK 3634 History of Islam in the US 3 Credit Hours
This course traces the long history of Islam and of Muslims in the United States (1730s-present), paying careful attention to the interaction among Muslims across the dividing lines of race, gender, immigrant generations, sect, political orientation, and class, and between Muslims and other Americans.
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

AASK 3673 Arabs & Muslims in Media 3 Credit Hours
This course examines how perception of Arabs and Muslims took shape in the U.S. from the late nineteenth century through the present. Using historical developments as a conduit, we explore the treatment of Arabs and Muslims in news outlets, print media, film, and T.V. productions. For example, we analyze the motivation, plot construction, casting, and content of big budget Hollywood movies for patterns of stereotypes and representations/ misrepresentations. (AY, F).

AASK 3676 Arab Americans Since 1890 3 Credit Hours
This is a survey of immigration from the Arab Middle East from 1890 to the present. Readings from available scholarship, discussions, and reports facilitate exploring the Arabic-speaking immigrants’ early and recent experiences as art of U.S. society, including settlement, work, worship, military service, leisure, intellectual life, and primary and formal affiliations across the U.S.

AASK 373 Anthropology of Middle East 3 Credit Hours
This course explores contemporary life in the Middle East using an anthropological lens. Topics discussed include the geography and diversity of the Middle East; gender, the veil, and Orientalism; Islam, ritual, and everyday family life; and ethics and politics. The course ends with an examination of the Arab immigrant experience in Metro Detroit. No Prerequisites, but ANTH 101 is recommended. (AY)

AASK 381 Intro to Postcolonial Studies 3 Credit Hours
This course offers a general introduction to Postcolonial Studies - a field of cultural inquiry that questions how personal identity (specifically race, language and ethnicity) shapes, and is shaped by, the politics of colonization and nationalism. Students will clarify the subject of Postcolonial Studies by examining a variety of cultural and linguistic objects (literature, film, TV-journalism, slave- and middle-passage-narrative, and political manifestos) from a variety of cultural perspectives (Arab American, Anglo-Indian, West African, and Caribbean).
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239 or ENGL 240 or ENGL 250)

AASK 390 Topics in Arab American Study 3 Credit Hours
Examination of various topics dealing with Arab American Studies. Titles will change according to content and schedule of classes. Course may be repeated for credit when specific topic differs. (OC).

AASK 4673 Arab American Women Writers 3 Credit Hours
Examines the literary and cultural contributions of Arab and Arab American women novelists, poets and artists to the development and consolidation of the cultures of understanding and coexistence; explores the tensions between citizenship and belonging, race and the politics of fears, gender and geographical mobility, and ethnic minorities and mainstream consciousness; discerns how Arab women writers and artists retool their various artistic endeavors to channel socio-political disenchantment, critique and civil disobedience; stresses how literary and artistic productions of a heterogeneous number of Arab American women writers and artists can indeed foster alternative visions of socio-cultural coexistence, dialogue and hospitality via artistic commitments to technical and stylistic experimentation and renovation. Students cannot receive credit for both ENGL 473 and ENGL 573. For graduate credit take ENGL 573.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)

AASK 4677 Arab American Identity 3 Credit Hours
Beginning with an overview of the contemporary history and social developments in the Arab Near East, we survey immigration from the region to the U.S., and examine a range of evidence for understanding how Arab immigrants became an integral part of U.S. society. We examine immigrant narratives and immigration paradigms, to appreciate the successes and challenges Arabs and Arab Americans encountered. Readings and discussions explore various disciplinary approaches for understanding Arab Americans’ experiences with race/ racialization, ethnicity, national attachments, sex, and gender. (OC).
Prerequisite(s): HIST 300 or (AASK 3676 or HIST 3676) or (AASK 3150 or HIST 3671)
Restriction(s):
Cannot enroll if Class is Freshman
Can enroll if Level is Undergraduate

AASK 4678 Middle Eastern Diasporas 3 Credit Hours
This course explores the diasporas of Arabs, Turks, Assyrians, and Iranians living in Europe and the Americas that have occurred since the 1880s. It pays careful attention to how “aspects of diaspora” shape, mimic, transact, and undermine the political and economic regimes of which they are part. The reception of Middle Eastern communities in different national contexts and historical periods receive special attention as do their adaptive strategies as religious, ethnic, gendered, and racialized minorities. Those enrolled in the graduate level of the course pursue additional readings and assignments.
Prerequisite(s): AASK 3150 or HIST 300
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

AASK 473 Arab American Women Writers 3 Credit Hours
Examines the literary and cultural contributions of Arab and Arab American women novelists, poets and artists to the development and consolidation of the cultures of understanding and coexistence; explores the tensions between citizenship and belonging, race and the politics of fears, gender and geographical mobility, and ethnic minorities and mainstream consciousness; discerns how Arab women writers and artists retool their various artistic endeavors to channel socio-political disenchantment, critique and civil disobedience; stresses how literary and artistic productions of a heterogeneous number of Arab American women writers and artists can indeed foster alternative visions of socio-cultural coexistence, dialogue and hospitality via artistic commitments to technical and stylistic experimentation and renovation. Students cannot receive credit for both ENGL 473 and ENGL 573. For graduate credit take ENGL 573.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239 or ENGL 240 or ENGL 250)

AASK 473 Arab American Women Writers 3 Credit Hours
Examines the literary and cultural contributions of Arab and Arab American women novelists, poets and artists to the development and consolidation of the cultures of understanding and coexistence; explores the tensions between citizenship and belonging, race and the politics of fears, gender and geographical mobility, and ethnic minorities and mainstream consciousness; discerns how Arab women writers and artists retool their various artistic endeavors to channel socio-political disenchantment, critique and civil disobedience; stresses how literary and artistic productions of a heterogeneous number of Arab American women writers and artists can indeed foster alternative visions of socio-cultural coexistence, dialogue and hospitality via artistic commitments to technical and stylistic experimentation and renovation. Students cannot receive credit for both ENGL 473 and ENGL 573. For graduate credit take ENGL 573.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)

AASK 490 Topics in Arab Amer Studies 3 Credit Hours
The content of this course will vary. All courses which will run under this number will cover Arab American issues.
Arabic (ARBC)

ARBC 101  Introduction to Arabic Language and Culture 1  4 Credit Hours
First course in the two-course elementary Arabic sequence. Listening comprehension, speaking, reading, writing, and culture are emphasized. Course materials promote the use of language to communicate with others and function in Arabic culture. (F;W,S).

ARBC 102  Beginning Arabic II  4 Credit Hours
Second course in the two-course elementary sequence. Continued emphasis on culture and the four skills of listening, speaking, reading, and writing. (F;W,S).
Prerequisite(s): ARBC 101 or MCL 101 or Arabic Language Placement with a score of 102 or Arabic Language Placement with a score of 201 or Arabic Language Placement with a score of 301 or Arabic Language Placement with a score of 302

ARBC 201  Introduction to Arabic Language and Culture 3  4 Credit Hours
An intermediate-level course designed to increase proficiency in listening, speaking, reading, and writing in a cultural context. Emphasis is placed on acquiring new vocabulary and expanding the use of grammar structures. (YR).
Prerequisite(s): ARBC 102 or MCL 102 or Arabic Language Placement with a score of 201 or Arabic Language Placement with a score of 202 or Arabic Language Placement with a score of 301 or Arabic Language Placement with a score of 302

ARBC 202  Introduction to Arabic Language and Culture 4  4 Credit Hours
Second course in the two-course intermediate Arabic sequence. Continued emphasis on the development of the four skills of listening, speaking, reading, and writing. (YR).
Prerequisite(s): ARBC 201 or MCL 201 or Arabic Language Placement with a score of 202 or Arabic Language Placement with a score of 301 or Arabic Language Placement with a score of 302

ARBC 301  Advanced Arabic Writing and Conversation  3 Credit Hours
This course is designed for students who have already had the equivalent of four semesters of Arabic instruction. The course emphasizes the four language skills with specific attention to the productive skills, oral and written. The course introduces authentic reading materials drawn from different disciplines such as religion, literature, history, and politics, reflecting different styles of Arabic and different periods. (F)
Prerequisite(s): ARBC 202 or Arabic Language Placement with a score of 301 or Arabic Language Placement with a score of 302

ARBC 302  Higher Intermediate Arabic II  3 Credit Hours
A continuation of ARBC 301. It continues to develop the four language skills with specific attention to the productive skills, oral and written. The course introduces authentic reading materials drawn from different disciplines such as religion, literature, science, politics, reflecting different styles of Arabic and different periods. (W, YR)
Prerequisite(s): ARBC 301 or Arabic Language Placement with a score of 301 or Arabic Language Placement with a score of 302

ARBC 303  Advanced Arabic Reading and Composition  3 Credit Hours
This course is designed for students who have already had the equivalent of three semesters of Arabic instruction. The course applies such strategies to authentic material. (F, W, YR).
Prerequisite(s): ARBC 302

ARBC 304  The Poetry of Arab Women from the Pre-Islamic Age to Andalusia  3 Credit Hours
The course fills a gap in several disciplines in humanities, namely literary studies, Middle Eastern studies, and gender studies. This class is a comprehensive study of Arab women from the 600s CE to the 1400 CE, a period that is often the focus of historical, political, and religious studies in US academia, especially regarding the cultural and literary impact of Arab women, which is traditionally underrepresented in academia. The course is taught in English and the poem are studied in translation. No prior knowledge of Arabic is necessary. Students of Arabic can take the course and write their assignments and papers in Arabic. (F; W, YR).

ARBC 305  Language of Business  3 Credit Hours
An introduction to the language and cultural practices of the Arab world of business. Particular emphasis will be placed on learning the terminology used in typical business correspondence and documents related to the world of finance, investment, import, and export, and commerce. A variety of businesses will be examined and opportunities for practice in reading and composing business letters will be provided. (W, AY)
Prerequisite(s): ARBC 301

ARBC 310  Arabic Translation Skills: Arabic-English and English-Arabic  3 Credit Hours
Arabic Translation Skills is a practical guide that aims at developing students’ translation skills. Its target learners are advanced students and native speakers of Arabic and English. Offers considerable practice for translation from Arabic into English. Students learn necessary skills to achieve working proficiency in three main genres of translation that are in high demand in the job market: document translation, conference interpreting, and film subtitling. (F, W, YR).
Prerequisite(s): ARBC 202

ARBC 311  Simultaneous Interpreting Arabic-English and English-Arabic  3 Credit Hours
Simultaneous Interpreting is a major skill. In the current situation of increasing flux of immigration and asylum, many instances necessitate the presence of interpreters to facilitate crucial communication for legal, medical, professional, and even personal reasons. With the state of Michigan as a hub of Arab-American communities, the need for simultaneous interpreters cannot be underestimated. This course trains students to work as interpreters of Arabic speakers to English speaking interviewers in medical, legal, and business settings, among others, as well as in conferences and seminars. (F, W, YR).
Prerequisite(s): ARBC 202

ARBC 312  Subtitling Arabic-English and English-Arabic  3 Credit Hours
Subtitling Arabic-English and English-Arabic offers students practical training in a rapidly growing field in translation. Students learn to translate audio-visual material ranging from news videos to documentaries, from songs to film, from recorded political speeches to talk shows. With the recent interest in Middle Eastern current affairs and culture, international media is constantly looking for reliable translations of media produced in Arabic speaking countries. This course covers strategies for translating a variety of Arabic media into English and applies such strategies to authentic material. (F, W, YR).
Prerequisite(s): ARBC 202
ARBC 331 Survey of Arabic Literature 3 Credit Hours
Arabic 331 surveys selections from writings in Arabic prose literature (maqama, novel, short story) and poetry that reflect the intellectual, literary and cultural development of the Arabs from pre-Islamic times, up to the present. The course will also explore the social, political, and cultural changes in the Middle East and the development of modern Arabic literary forms.
Prerequisite(s): ARBC 301

ARBC 332 Arabic Cinema 3 Credit Hours
The course examines the development of Arabic cinema in its socio-cultural contexts through a range of selected films. It covers the different cinematic genres, prevalent themes and diverse trends and schools across the spectrum of Arab countries including Egypt, Tunisia, Lebanon, Morocco, and Palestine. The course elaborates on the careers of film directors and their approaches to film making and to the cultural issues of their time. The course will be conducted in Arabic.
Prerequisite(s): ARBC 301

ARBC 335 Arabic Civilization 3 Credit Hours
This course gives students an appreciation of Arabic civilization through the study of excerpts from the masterworks of the literary and intellectual Arabic heritage. It provides practice in reading pre-modern and modern classical Arabic texts drawn from a variety of intellectual disciplines. Students may not receive credit for both MCL 3350 and ARBC 335.
Prerequisite(s): ARBC 302
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

ARBC 350 Arabic Literature and Culture 3 Credit Hours
An introduction to the literature and other art forms of the modern Arab world in cultural and historical context. Topics include the Arab worldview, religious attitudes and self-expression, and ethnicity and gender. The course assumes no prior knowledge of the region. All readings will be English translation. (YR).

ARBC 351 Contemporary Arabic Literature 3 Credit Hours
This course will explore the literary works of contemporary Arab writers from countries such as Iraq, Lebanon, Palestine, Algeria, France, and the U.S. Although the course covers a variety of literary genres such as the short story, memoirs, and poetry, it puts special emphasis on the Arab contemporary novel. It also provides an in-depth critical analysis of major themes dealt with by authors in their works such as identity, minority, gender, nationality, war, family, ethnicity, religion, homeland and home, politics, society and culture. Major historical, political, social, cultural, artistic and literary factors shaping and driving contemporary Arabic literary writings today also will be thoroughly examined. The course will feature films and documentaries in addition to internet-based activities.
Prerequisite(s): ARBC 301

ARBC 365 Intro to the Quran 3 Credit Hours
Full Course Title: Introduction to the Quran This is an interdisciplinary approach to studying the Qur’an as a religious revelation, literary text, and cultural symbolic language. The course will cover the historical context in which the Qur’an was revealed, disseminated and compiled as a religious scripture. Also, will cover major schools of interpretations and theological doctrines and its political, ideological transformations throughout Islamic history with a special focus on modern times. The class will be conducted in English with no prerequisite of Arabic. However, students minoring in Arabic, in order to receive credits counting for their minor, they are required to write their papers in Arabic. (S.O.C)

ARBC 390 Topics in Arabic 3 Credit Hours
Examination of problems and issues in selected areas of Arabic. Title as listed in Schedule of Classes will change according to content. Course may be repeated when specific topics differ. (OC).

Art Applied (ART)

ART 201 Beginning Painting 3 Credit Hours
Lectures on the fundamentals of painting along with work in the studio. Basic ideas of structure, composition, and color are explored through individual and group instruction. Students work from still-life and from the model. This is a broad introductory painting course designed for the student unfamiliar with fundamentals of design and color. Material: acrylics. (YR).

ART 202 Beginning Drawing 3 Credit Hours
Lectures alternate with studio work in the investigation of drawing fundamentals. Students receive individual and group instruction as they work from still life setups, nature, and from the model. Emphasis is placed on the development of critical skills and perceptual drawing techniques for students with little or no studio experience. Pastel, charcoal, conte, pencil, and inks will be used. (YR).

ART 204 Beginning Watercolor 3 Credit Hours
Through lectures and studio work, students will explore the fundamentals of watercolor painting. To demonstrate the dynamics of the medium, a variety of approaches and techniques will be used, including realistic, abstract, and experimental painting. Subject matter includes still life, the figure, possible outdoor sketching and painting from the imagination. All levels of students are given individual guidance. (YR).

ART 206 Basic Design-Color 3 Credit Hours
Students will be introduced to the complex and diverse subject of color. The areas of study include principles and theories of color, practical application and technique, and the phenomenon of color interaction. The art elements (line, shape, value, space, form, and texture) and design principles will be applied within specific assignments. Compositional concerns and creative problem solving will be emphasized. (YR).

ART 210 Beginning Digital Design 3 Credit Hours
This course introduces students to the fundamentals of digital design, and how it fits into our evolving media landscape. It teaches skills in areas of digital illustration, image making, augmented reality, and web design. Methods of both creating and editing creative digital projects will be covered, including color theory, design concepts, layers, tools, optimization of content for web and multimedia content. In addition, students will be able to identify the impact and development of digital technology on everyday life through readings and discussions related to new media history, visual literacy, and critical theory, while allowing students to apply their own specific interests to each project.

ART 220 Intro to Digital Photography 3 Credit Hours
This course focuses on the creative use of digital imaging software and hardware. Students are exposed to contemporary artists and professionals working in traditional and digital photography. Students also consider critical issues surrounding the aesthetic, ethical and theoretical aspects of digital imaging technology and current photographic practice. Application of these approaches, processes and concepts are discussed in terms of their relevance within and beyond art practices, including art as personal expression and as a professional field. Each assignment engages students’ critical thinking as they explore the artistic possibilities of digital photography while expanding their technological and aesthetic knowledge. During project critiques, students practice articulating their thought processes in relation to their own work and the work of their peers.
ART 306 Intermediate Design-Color 3 Credit Hours
The design emphasis will be on line and movement, positive/negative space, push/pull dynamics and a study of the nature of grids. The color emphasis will focus on tertiary colors, the effect of variations in color intensity and tonal contrast. There will also be a study of various twentieth century design movements such as the Russian Avant Garde, Constructivism and the Bauhaus, with some assignments modeled on these styles.
Prerequisite(s): ART 206
Restriction(s):
Can enroll if Level is Undergraduate

ART 320 Intermediate Digital Photo 3 Credit Hours
Full Title: Intermediate Digital Photography Intermediate Digital Photography builds on skills learned in ART 220: Intro to Digital Photography. Students further develop their digital camera and photo editing software skills through a series of creative projects that explore alternative approaches to photography such as new media and artist books. Students continue to investigate issues related to the processes, theory, history, and reception of photographic imagery through readings and discussions. Projects include lessons on advanced photo editing, photo manipulation, and HDR (High Dynamic Range), while allowing students to build a portfolio of works in their specific areas of photographic interest or career paths.
Prerequisite(s): ART 220

ART 321 Intermediate Painting 3 Credit Hours
Various painting approaches, styles and concepts are explored beyond the basic level through lectures and studio work. Students are encouraged to develop their own personal style as they master new techniques and types of subject matter. This course is repeatable once in order for students to develop their skills. When repeating, the content and assignments are determined in consultation with instructor.
Prerequisite(s): ART 201

ART 322 Intermediate Drawing 3 Credit Hours
The fundamentals of drawing are refined beyond the basic level in a variety of media through lectures and studio work. Students are encouraged to develop their own personal style as they master new techniques and types of subject matter. This course is repeatable once in order for students to develop their skills. When repeating, the content and assignments are determined in consultation with instructor.
Prerequisite(s): ART 202

ART 323 Figure Drawing 3 Credit Hours
This course is designed to teach students about the complex human form through the act of observation, drawing, and memorization of specific anatomical terms. Emphasis will be on proportion, anatomy, composition, and expression. Students will draw from a live model. (W).
Prerequisite(s): ART 202

ART 324 Intermediate Watercolor 3 Credit Hours
Various watercolor painting approaches, styles and concepts are explored beyond the basic level through lectures and studio work. Students are encouraged to develop their own personal style as they master new techniques and types of subject matter (still life, the figure, landscape and painting from the imagination). This course is repeatable once in order for students to develop their skills. When repeating, the content and assignments are determined in consultation with instructor.
Prerequisite(s): ART 204

ART 332 Creating the Graphic Novel 3 Credit Hours
This course focuses on the creation of an original graphic novel from inception to fully developed story. Students work on character, plot development, dialogue, drawing style, and layout planning, and are encouraged to introduce any cross-disciplinary techniques such as digital applications when appropriate. Lectures and readings consider contemporary media. (OC)
Prerequisite(s): ART 202 or ART 206
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

ART 360 Introduction to Printmaking 3 Credit Hours
This studio course is an introduction to the fundamentals of printmaking. The basic techniques of intaglio, lino-cut, chine colle, lithography and monotype printing methods are utilized in projects. As a deeply interdisciplinary practice, printmaking engages with other artistic media of drawing, painting, and collage. Each student is encouraged to incorporate other materials based on her/his major, interests or expertise.
Prerequisite(s): ART 201 or ART 202 or ART 204 or ART 206

ART 390 Topics in Applied Art 3 Credit Hours
Study of various media and techniques in selected areas of applied art. Title as listed in the Schedule of Classes will change according to content. Course may be repeated for credit when the topics differ.
Restriction(s):
Can enroll if Level is Undergraduate

ART 399 Independent Studies in App Art 1 to 3 Credit Hours
Readings or analytical assignments in applied art in accordance with the needs and interests of those enrolled and agreed upon by the student and the instructor. (FW).

ART 410 Advanced Digital Design 3 Credit Hours
This course requires students to create advanced digital design projects while exploring foundational creative principles in processes of artistic production. Students learn about the development of digital art and the impact of technology on the arts, business, education, engineering, and manufacturing. Students consider ideas and issues that define the role of art and design in the community and in society while working on independent projects that aid in the development of professional portfolios. (W).
Prerequisite(s): ART 210

Art History (ARTH)

ARTH 101 Understand Art-Ancient to 1400 3 Credit Hours
Full Course Title: Understanding Western Art from Ancient to Medieval: This course asks the question—what does art tell us about the cultures that make it? The course investigates how culture, religion, and social structures manifest themselves in artworks created in the ancient world, for instance in Egypt or Greece, through the dawn of the Renaissance. Students are introduced to the key terms, concepts, and analytical skills that allow us to think critically about the importance of art during this period of time.

ARTH 102 Understanding Art 1400 to Now 3 Credit Hours
Full Course Title: Understanding Western Art from the Renaissance to Now- This course traces the development of European and American art from the revival of classical humanism in the Italian Renaissance toward the rise of consumer culture during the twentieth century. Students explore key works of Western art from Michelangelo to Andy Warhol. Students are introduced to the key terms, concepts, and analytical skills that allow us to think critically about the cultural importance of art from 1400 to the present.
ARTH 103  Arts of Asia  3 Credit Hours
This course is an introduction to the visual arts of three Asian civilizations: India, China, and Japan. Since this is a survey, the focus will be placed on major monuments that are characteristic of these artistic traditions. To better understand the works of art, the cultural milieu including religion, philosophy, and parallel arts will be considered. (F, W).

ARTH 104  Arts of the Middle East  3 Credit Hours
From the eighth century, a new religious community with no developed artistic heritage spread rapidly over the ancient empires of the Near and Middle East and as far west as Spain and Hungary. Appropriating established forms and traditions, Muslim cultures created a brilliant system of religious and secular art that reveals national diversity and an underlying unity of purpose. This course provides an introduction to the visual traditions of Muslim cultures. (YR).

ARTH 105  Creation of Art  2 Credit Hours
An art appreciation course based on videotapes. Great art does not completely yield its secrets. The course helps the student to understand the subject, the message or content of the creation and the method that the artist used in making it. This course does not fulfill the Art History concentration requirement. (F, W).

ARTH 106  Architecture & Society in Western Civilization  3 Credit Hours
Full Course Title: Architecture & Society in Western Civilization- This course examines how architecture and the built environment both reflect and shape the societies that constructed them. Through a survey of major works of architecture from Antiquity to the present, students will learn about the technical, functional, and aesthetic considerations that determine why buildings look the way they do. Special attention is given to the uses of architecture, engineering innovations, and design choices. (F, W).

ARTH 221  Ancient Monuments then and Now  3 Credit Hours
This course examines the "biographies" of three iconic ancient architectural monuments: the Great Pyramids of Egypt, the Parthenon in Athens, and the Colosseum in Rome. We will explore the design, engineering, and original functions of these buildings. We will also investigate how people's preceptions of and interactions with these monuments changed over time, up to and including modern tourism. (F, W, YR).

ARTH 241  Encountering the Renaissance  3 Credit Hours
Full Course Title: Encountering the Renaissance: Art, Global Exploration, and Social Reform. This class examines the Renaissance through the study of globalization, science and technology, religious reform, and their impact on the visual arts. Students will learn about such topics as the exploration of Africa, Asia, and the Americas, the invention of the printing press, and the revival Classical Art and humanistic learning. (YR).

ARTH 261  Art and Film  3 Credit Hours
Throughout the twentieth-century, painters and sculptors have turned towards the medium of film to make art. This course examines the close relationship between film and visual art when art influences cinema and cinema influences art. Students analyze a movie by a selected filmmaker every week. In addition, concise texts by filmmakers, film historians, and art historians provide context for the development of experimental montage techniques, the relevance of visual art strategies to the art of film, and the discussion of intellectual and societal issues. (OC)

ARTH 303  Exploring Art in the Community  3 Credit Hours
You will explore area libraries, museums, and galleries (their physical holdings and virtual resources) to develop skills in researching and writing about art, documents, and material artifacts for diverse audiences. Ways of researching, interpreting, and presenting art or material artifacts to diverse audiences in various formats whether for display, publication, or virtual presentation are the focus of class assignments that result in a portfolio. (AY).

ARTH 304  Studies in Detroit Culture  3 Credit Hours
This course is an attempt to define a modern cultural history of Detroit. Taught by two faculty members, the emphasis of the course will vary but the following aspects of the city's cultural history will be covered in some detail: its literature, arts, music, and architecture; its social conditions and broader American culture context. (AY).

ARTH 305  The Arts & Culture of Detroit  3 Credit Hours
This interdisciplinary course explores the modern and contemporary cultural history of Detroit, examining the ways in which various population groups have been creative from the nineteenth century to the present. The course highlights the work of architects, designers, photographers, visual artists, poets, and musicians, and situates them in the broader cultural context of American art and history. (OC).

ARTH 311  Art of China  3 Credit Hours
An introduction to representative works of art produced in China from the Neolithic era down to modern times. Examination of the artifact's cultural context will be emphasized, including the study of philosophy (Confucianism and Daoism) and religion (Buddhism).

ARTH 312  Art of Japan  3 Credit Hours
An introduction to representative works of art produced in Japan from the Neolithic era down to modern times. The artifact's cultural context will be examined including religious practice (Shinto and Buddhism), influence from abroad, and other artistic developments in literature, music, and theatre.

ARTH 313  Chinese Painting  3 Credit Hours
This course is a survey of the painting of China from the earliest examples found in tombs through works influenced by the West during the modern period. The course focuses on selected artists who serve as representatives of major traditions of China's cultural and artistic heritage. Students will be introduced to Chinese philosophy and relevant literary genres that provide a context for the development of Chinese painting. (AY).

ARTH 315  Early Chinese Art and Culture  3 Credit Hours
This course covers the art and material culture of China from the Neolithic through the Han dynasty. Topics include the visual arts used in palaces and tombs, religious art, and the rise of new technologies. It incorporates archaeological discoveries that have fundamentally transformed our understanding of Chinese history and culture, including evidence of people who lived at the center and also those at the periphery. Students will analyze literary and philosophical texts in translation to enhance understanding of the cultural context. (OC).

ARTH 319  Egyptian Art  3 Credit Hours
The art of the Ancient world is examined through an intensive review of the visual traditions of Egypt: its monumental architecture, sculpture, painting and decorative artifacts. (AY).

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106
ARTH 106
Prerequisite(s): (OC).

Pattern of these developments in northern European countries as well.

Western art. Beginning with the new developments in 13th-century Italian
the 14th century: one of the great transitional periods in the history of
naturalism in medieval manuscript illumination and panel painting. (AY).

A study of the patrons, builders, the new technology they employed and
cathedrals of Europe, focusing on Chartres, Amiens, Reims, and Bourges.

A survey of the architecture, sculpture and stained glass of the great
cities and political ideology, the re-elevation of sculpture from a mechanical art
such forms as colossal statuary, equestrian sculpture, tomb monuments,
Florence, Rome, and Venice in the 15th and 16th centuries. By examining
Renaissance, with particular attention to major artistic centers like
Santiago de Compostela and of the crusader kingdoms in the Holy Land.

This course explores Roman sculpture, painting, and architecture from
around the entire Mediterranean world and investigates how the Romans
emulated the arts of other civilizations, while expressing its own values and
priorities. It will examine the close connections between art, politics, and
personal identity, and investigate how Romans used their understanding of
engineering to create new ways of experiencing space. Finally, as the
pagan era closes on the Roman Empire, the course will also look at how
classical cultural traditions are transformed into the roots of Christian art.
(AY).

ARTH 322 Roman Art 3 Credit Hours

This course explores Roman sculpture, painting, and architecture from
other mystery cults, the art of early Christianity emerged from the Roman
catacombs to monumental expression under emperors Constantine and
Justinian. (AY).

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or
ARTH 106

ARTH 327 Gods, Myth and Worship 3 Credit Hours

Full Course Title: Gods, Myth and Worship in Classical Art. This course
examines the way that gods, goddesses, heroes, and myths are depicted in
Greek and Roman art, and how they were central to the religious
and cultural life of these civilizations. We study the art, architecture,
literature, and archaeology of ancient Greece and Rome as we explore
how religious priorities, social needs, and political ideologies shaped the
artistic choices behind the representations of deities and legendary
figures and stories.

ARTH 331 Early Christian Byzant Art 3 Credit Hours

Borrowing its formal language from late antiquity and its symbolism from
other mystery cults, the art of early Christianity emerged from the Roman
catacombs to monumental expression under emperors Constantine and
Justinian. (AY).

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or
ARTH 106

ARTH 332 Early Med and Romanesque Art 3 Credit Hours

A study of the dynamic interplay between barbarian, Christian and
classical Mediterranean influences in the early Medieval period with a
consideration of the art and architecture of the pilgrimage routes to
Santiago de Compostela and of the crusader kingdoms in the Holy Land.
(AY).

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or
ARTH 106

ARTH 333 Gothic Art and Architecture 3 Credit Hours

A survey of the architecture, sculpture and stained glass of the great
cathedrals of Europe, focusing on Chartres, Amiens, Reims, and Bourges.
A study of the patrons, builders, the new technology they employed and
the cities in which they worked as well as an analysis of the emergence of
naturalism in medieval manuscript illumination and panel painting. (AY).

ARTH 334 The 14th Century 3 Credit Hours

This is a course that examines the art and architecture of Europe in the
14th century: one of the great transitional periods in the history of
western art. Beginning with the new developments in 13th-century Italian
art by such artists as Giovanni Pisano and Giotto, the course charts the
pattern of these developments in northern European countries as well.
(OC).

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or
ARTH 106

ARTH 335 Women in Medieval Art 3 Credit Hours

Women have often been regarded as the second sex of the middle
ages due to the misogynistic attitudes of that era. Recent scholarship,
however, has unearthed a significantly more complex picture. Through
a study of visual representations of women in medieval art, this course
will examine women's roles in the creation and patronage of art and
literature, economic and family issues, and women's participation in new
and innovative forms of religious piety.

ARTH 341 Art&Arch in Early Ren Flo 3 Credit Hours

This course examines the city of Florence as a work of art, as well
as masterpieces of Florentine sculpture, painting and architecture of the
Early Renaissance (fifteenth century). Statuary, reliefs and tombs;
altarpieces, fresco cycles and mythological pictures; churches and
palaces are all studied within the context of the technical, philosophical,
political and cultural developments of the quattrocento. The ideals of
the Florentine Republic, Humanism, Neo-Platonism, and Millenarianism
provide the historical and intellectual background for the study of
these works of art and architecture. Issues of patronage, placement,
restoration, art criticism, women's roles in society and reception will also
be explored. (OC).

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103

ARTH 342 High Renaissance & Mannerism 3 Credit Hours

A study of the works of Leonardo, Michelangelo and Raphael, masters of the
High Renaissance in Florence and Rome, and an examination of the
Mannerists, a new generation whose art displayed a modern accent on
self-expression and abstraction. (AY).

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or
ARTH 106

ARTH 343 Renaissance & Reformation Art 3 Credit Hours

This course surveys the religious and political forces that shaped art
produced north of the Alps during the fifteen and sixteenth centuries.
Through the study of artworks by such masters as Van Eyck, Dürer, and
Bruegel, students examine the connections between art and devotional
practices, the rise of secular imagery and humanism, and the impact
of the art of Italy. Special attention is also given to the role that art
played during the Protestant Reformation and to the development of
printmaking. (AY).

ARTH 344 Italian Renaissance Sculpture 3 Credit Hours

A study of freestanding and relief sculpture during the Italian
Renaissance, with particular attention to major artistic centers like
Florence, Rome, and Venice in the 15th and 16th centuries. By examining
such forms as colossal statuary, equestrian sculpture, tomb monuments,
garden sculpture, and portrait busts, the course will address the function
of art within the public sphere, the relationship between civic sculpture
and political ideology, the re-elevation of sculpture from a mechanical art
to a liberal art, and the role artistic individuality and technical proficiency.
Artists addressed will include Donatello, Ghiberti, Verrocchio, Antico,
Riccio, Bertoldo, Michelangelo, Cellini, and Giambologna.

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or
ARTH 106

ARTH 351 Southern Baroque Art 3 Credit Hours

A study of the art of the seventeenth century in Italy and Spain, focusing
upon Caravaggio, Annibale Carracci, Guercino, Reni, Cortona, Gaulli,
Murillo, Zurbaran, and Velasquez, among others. (OC).

Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or
ARTH 106
ARTh 352  Northern Baroque Art  3 Credit Hours
Study of the art of the seventeenth century in France, Flanders and Holland, with emphasis on Poussin, Georges de la Tour, the Le Nain brothers, Lebrun, Rubens, Van Dyck, Van Ruisdael, Vermeer, and Rembrandt. (OC).

ARTh 360  Art of Glass  3 Credit Hours
This course focuses on glass as a medium and an art form. From Roman times to the present day, the unique qualities of glass have excited artists and craftsmen to make vessels, sculptures, and architectural ornamentation. The course traces the form and function of glassworks, focusing particularly on the historical trajectory of glass from ancient vessels and medieval stained glass, to the development of "art glass" in the nineteenth century, to contemporary objects. The course is based on lectures, discussion, and readings. Students are required to attend several field trips for "hands-on" work with objects. Enrollment is limited to 15 students.
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106

ARTh 361  American Art  3 Credit Hours
A study of American painting, sculpture, and architecture from the colonial period to the present. In this survey of an arts tradition that has greatly depended upon developments in Europe, efforts will be made to identify what is American about American art. (AY).
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106

ARTh 362  Impressionism and Post-Impressionism  3 Credit Hours
An examination of the origins of modern painting and sculpture in the art of the major Impressionists (Manet, Monet, Degas, Renoir) and Post-Impressionists (Cezanne, Seurat, Gauguin, Van Gogh). (OC).

ARTh 363  Arts of the Twentieth Century  3 Credit Hours
A contextual study of twentieth-century art that seeks to define the relationships between western art and society. In addition to a consideration of painting, sculpture, and architecture, the emergence of new media - including altered and fabricated photography, video, and installation art - will be examined. Although a broad survey of a century rich in artistic achievements, the course will emphasize the dominance and influence of Pablo Picasso, Henri Matisse, and Frank Lloyd Wright. (AY).
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106

ARTh 364  Picasso  3 Credit Hours
A critical examination of Pablo Picasso's art that chronicles the artist's achievements as a painter, sculptor, draftsman, printmaker, and ceramist. Lectures and readings are directed to positioning Picasso's masterworks in relationship to his art as a whole and in the context of twentieth-century art. (AY).
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106

ARTh 365  Modern Architecture  3 Credit Hours
A survey of European and American architecture from the Chicago School to Post-Modernism. The course will trace the stylistic history of modern architecture while considering parallel issues of theory, social context, and building technology. Major architects studied will be Sullivan, Wright, Mies van der Rohe, Le Corbusier, and Johnson. (AY).
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106

ARTh 366  The Modern Print  3 Credit Hours
A history of western printmaking from Post-Impressionism to the present. The course will examine the relationship of printmaking to major movements of the day, the impact of modern technology on traditional print processes, and the developing notion of printmaking as an integral form of expression for the modern painter and sculptor. Special emphasis will be placed on the contributions of Gauguin, Munch, Picasso, Johns, and Stella. (OC).
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106

ARTh 367  Contemporary Art  3 Credit Hours
An examination of the most recent developments in modern art. In addition to painting and sculpture, consideration will be given to related forms of expression in performance art, photography, and video. (OC).

ARTh 368  American Photography  3 Credit Hours
This course explores the history of photography, its aesthetics, and social functions in the United States, beginning with the medium's emergence in the 1830s and concluding with contemporary practices. Lectures and discussions will attend to several threads of inquiry: the history and theory of the medium and its interpretation; the diverse functions of photographs in American society; the relationship between photography and American identity formation; and the status of the photograph in a post-photographic, digital age. (OC)

ARTh 375  Urban Design Perspectives  3 Credit Hours
This course explores the ways in which urban design both creates and reflects past and present urban conditions, cultures, and spatial relationships. The course will look at the built environment architecturally, aesthetically, and anthropologically in order to highlight the ever changing complexities of urban spheres. The placement and design of buildings and public spaces, and the resulting human interactions in those spaces, will be explored in comparative contexts.
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106

ARTh 384  Islamic Architecture  3 Credit Hours
This course is a comprehensive study of history and development of Islamic architecture from its birth in the seventh century to the present time. The course is designed to explain major characteristics of Islamic architecture through the study and analysis of major monumental buildings both religious and secular, Mosques, Madrasas (schools), Mausoleums, Palaces, and other buildings. Detailed analysis also will be applied to different types of art associated with these buildings, such as wall painting, stucco work, wood carving, sculpture, mosaic, and calligraphy.
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 105
Restriction(s):
Can enroll if Level is Undergraduate

ARTh 385  Islamic Decorative Arts  3 Credit Hours
This course in an in-depth investigation of the decorative arts of the Islamic Middle East from the seventh through the eighteenth century including the lands of Islamic Spain and North Africa and extending east to Afghanistan. The course traces the development of decorative styles in objects of daily and courtly life, particularly ceramics, metal work, glass, wood and ivory carving, textiles and rugs. The central role played by calligraphy in all of the arts in emphasized as well as in manuscript production and the Arts of the Book. As a religion, but also a way of life, Islam fostered a distinctive artistic production reflected in these decorative arts.
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106 or RELS 201
ARTh 434 or ARTh 454 or ARTh 469 or ARTh 416 or ARTh 425 or ARTh 426 or ARTh 427 or ARTh 428 or ARTh 375 or ARTh 384 or ARTh 385 or ARTh 392 or ARTh 400 or ARTh 364 or ARTh 365 or ARTh 366 or ARTh 367 or ARTh 352 or ARTh 360 or ARTh 361 or ARTh 362 or ARTh 363

Prerequisite(s):

exhibition. (AY).

discussions with museum professionals (curators, collection managers; cultural property, roles and responsibilities of museum professionals, society. You will discuss critical issues for museums like repatriation of museums, and their role in shaping public discourse on art, history and exploration. You will study the history and missions of diverse museums, and the importance of diversity and inclusion in collecting and exhibiting. This course introduces you to museums as sites of public interaction and exploration. You will study the history and missions of diverse museums, and their role in shaping public discourse on art. You will discuss critical issues for museums like repatriation of cultural property, conservation, administration, research, exhibition and interpretation. Field trips to area institutions are scheduled so students can meet museum and gallery professionals in order to consider career opportunities available in this context.

Prerequisite(s): ARTh 101 or ARTh 102 or ARTh 103 or ARTh 104 or ARTh 106

ARTH 416 Earl Mod Jpn Paint&Wood Prnts 3 Credit Hours

Paintings and woodblock prints of the Edo/Tokugawa (1600-1868) and Meiji (1868-1912) periods are considered in light of competing developments that on the one hand looked to Japan's classical tradition and on the other to the influence of art and artists from China and the West. Special attention is given to female artists and images of women. Students cannot receive credit for both ARTh/WGST 416 and ARTh/ WGST 516. (OC).

Restriction(s):

Cannot enroll if Class is Graduate

ARTH 425 Women in Classical Antiquity 3 Credit Hours

This course examines the evidence for the lives of women in Greek, Etruscan and Roman Antiquity, from the Bronze Age through the Imperial Period. Special emphasis will be placed on the archaeological evidence, especially works of art which illustrate women's lives and their relationships with men. Documents such as dedicatory and funerary inscriptions, the poetry of Sappho and Sulpicia, and selections from the works of Homer, Hesiod, Aristotle, Pliny, Juvenal, and other ancient authors, will also be examined critically, particularly in relationship to the works of art. Students cannot receive credit for both ARTh 425 and ARTh 525. (YR).

Prerequisite(s): ARTh 101 or ARTh 102 or ARTh 103 or ARTh 104 or ARTh 106

Restriction(s):

Cannot enroll if Class is Graduate
ARTH 426  City of Ancient Rome  3 Credit Hours
This course will focus on the ancient city of Rome, from its foundation to its precipitous decline in the fifth century AD. It will explore the public art and architecture of the city, emphasizing the different types of evidence available (topography, architecture, sculpture, texts) for understanding the history, politics, religion, and urban development of Rome, as well as the various art historical and archaeological techniques used to analyze the evidence. (OC)
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103

ARTH 427  Greek Architecture  3 Credit Hours
The architectural vocabulary established during the centuries of classical Greek civilization influences our culture to the present day. This course explores the history and development of this fundamental architectural tradition, focusing on the Greek temple, sanctuaries and holy sites, urban planning and public works, and domestic space. Students discuss the philosophical underpinnings of Greek architectural design, the engineering practices of Greek builders, as well as the cultural and social influences on Greek buildings and cities. This course begins with the emergence of humble mudbrick and timber buildings from the Dark Ages and continues through the height of cosmopolitan urban luxury in the 2nd century AD.
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106
Restriction(s):
Can enroll if Level is Undergraduate

ARTH 428  Roman Art and Memory  3 Credit Hours
In this course, we examine Roman art closely associated with personal commemoration and cultural memory, including portraiture, funerary monuments, imperial monuments, and public architecture. We explore these objects’ relationship to Roman literary culture’s theories of mnemotechnics, and in the social context of the Roman obsession with memory perpetuation. We also examine how art historians apply modern theories of collective and social memory in their scholarship on Roman art, creating new ways of understanding Roman sculpture, painting, and architecture. Finally, we investigate Roman spectacle and performance as a vehicle of cultural memory. Students cannot earn credit for both ARTH 428 and ARTH/LIBS 528.
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106
Restriction(s):
Can enroll if Level is Undergraduate

ARTH 429  Renaissance and Baroque Rome  3 Credit Hours
The return of the papacy in 1420 initiated the reemergence of Rome as a major cultural center. This course examines painting, sculpture, architecture, and urban planning in Rome from the 15th to the 17th century, including the work of Raphael, Michelangelo, Bernini, Borromini, and Caravaggio. Topics to be explored include the birth of Renaissance archaeology and antiquarianism; humanism and the papal curia; urban renewal and conservation; pilgrimage and sacred topography; the “myth of Rome”; architecture of churches, villas, and palaces; tourism and the city as spectacle. This course is structured as a seminar that is writing and research-intensive.
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106

ARTH 454  Rembrandt  3 Credit Hours
Rembrandt’s paintings, drawings, and prints are considered in the full historical and cultural context of the Golden Age of the Northern Netherlands, a period of unprecedented wealth and cultural diversity. Special attention will be given to issues of style, iconography, biography, art criticism, gender, patronage and artistic technique. Students cannot receive credit for both ARTH 454 and ARTH 554. (YR).
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106
Restriction(s):
Cannot enroll if Class is Graduate

ARTH 469  Collage, Montage, Assemblage  3 Credit Hours
Different conceptions of collage, montage, and assemblage have vitally shaped artistic practice in the twentieth century, perhaps even more so than the advent of modernist abstraction. The modern phenomenon of collecting, mixing, and sampling that permeates the last century up to and including the contemporary moment will be traced in the class across the thresholds of painting, sculpture, architecture, photography, and film. We will discuss a wide range of movements, genres, and styles (Cubism, Futurism, Surrealism, Dada, Weimar and Russian photomontage, Soviet film, found footage film, French decollage, postwar assemblage) and their relation to the ever-changing mass media, the urban, and the modernized - in short, the everyday. The last segment of the class addressed more recent interpretations of the collage paradigm, including installation art and digital applications. Student cannot receive credit for both ARTH 469 and ARTH 569.
Prerequisite(s): ARTH 101 or ARTH 102 or ARTH 103 or ARTH 104 or ARTH 106

Astronomy (ASTR)

ASTR 130  Introduction to Astronomy  3 Credit Hours
A one-term introduction for those interested in learning about the present state of knowledge of the Universe, its origin, evolution, organization, and ultimate fate. Exciting new discoveries concerning extrasolar planets, star birth, supermassive black holes, dark matter/dark energy, and cosmology are discussed. Two years of high school math or its equivalent recommended.

ASTR 131  Introductory Astronomy Lab  1 Credit Hour
An introduction to some of the important observational techniques and analytical methods used by astronomers. Ground-based and satellite data will be used to reveal physical and chemical properties of the moon, planets, stars, and the Milky Way. Outdoor exercises involving telescop observation of the sun, variable stars, nebulae, and external galaxies are also included. Constellation identification will be taught using off-campus planetarium facilities.
Prerequisite(s): ASTR 130* or PHYS 130

ASTR 133  Search for Life in Universe  3 Credit Hours
Full Title: The Search for Life in the Universe A one-semester course on the scientific search for life throughout the Universe. The range of environments hospitable for life form an organizing principle by which to examine several aspects of modern Astronomy including, but not limited to: habitats in the Solar System; physical constraints on life and unusual chemistry; the Search for Extraterrestrial Intelligence and the Fermi Paradox. (F)
ASTR 301  Astrophysical Concepts  3 Credit Hours
A one-semester course introducing the Physical concepts used in Modern Astrophysics, with an emphasis on the application of these ideas to Astrophysical objects. The course familiarizes the student with the Astronomical concepts and vocabulary used in other Astronomy courses at the 300-level and beyond. The course begins with an overview of Astronomical objects and terminology, before introducing conservation laws in Physics and their applications in Astronomy. Newtonian mechanics and gravity are then introduced and applied to various self-gravitating systems and scenarios. Electromagnetism, Quantum Mechanics and a small amount of Statistical Physics are covered at sufficient detail to understand the behavior of electromagnetic radiation and thermal emission. Special and General relativity are introduced from the point of view of understanding the behaviors of certain exotic objects in Astronomy. Common statistical distributions used in upper-level Astronomy courses are also introduced with an emphasis on application.
Prerequisite(s): (MATH 114 or MATH 116) and (PHYS 126 or PHYS 151)
Restriction(s):
Can enroll if Level is Graduate or Undergraduate
Can enroll if College is Engineering and Computer Science or Education, Health, and Human Services or Business or Arts, Sciences, and Letters

ASTR 330  The Cosmic Distance Scale  3 Credit Hours
An exploration of the cosmic distance ladder focusing on the systems and techniques that astronomers use in establishing the distances to celestial objects. Direct measures using radar ranging and trigonometric parallax will be discussed for objects in the solar system and for stars within about 3000 light-years of the Sun, respectively. For more remote systems in or just outside the Milky Way, methods based spectroscopic parallax and the period-luminosity relation for various types of variable stars will be introduced. For the extra-galactic objects, use of the Hubble relation and the light curves of Type Ia supernovae will be made to assess the distances. At each rung of the ladder, emphasis will be placed on the astrophysical principles and processes underlying the methodology being applied. 3 hours lecture
Prerequisite(s): (MATH 113 or MATH 115) and (PHYS 126 or PHYS 151)

ASTR 361  Observational Techniques  3 Credit Hours
This course is designed to provide students with an understanding of some of the basic observational techniques use by astronomers in gathering and analyzing data from celestial objects. Practical experience in acquiring, displaying, and interpreting optical and radio observations using the University’s 0.4-m telescope and 2.3-m radio dish will be emphasized. Topics will include astronomical coordinate system and timekeeping, telescope optics, the design and use of CCD detectors, fundamentals of multi-color photometry, an introduction to astronomical spectroscopy, and radio measurements of the Sun and interstellar hydrogen clouds at 21-cm wavelengths. (2 hours lecture, 3 hours laboratory)
Prerequisite(s): (ASTR 130 or PHYS 130) and (PHYS 126 or PHYS 151)

ASTR 390  Topics in Astronomy  3 Credit Hours
A lecture in a topic of current interest in astronomy. Topics vary and are announced in the current Schedule of Classes. Three hours lecture.
Prerequisite(s): ASTR 130 or PHYS 130

ASTR 390A  Topics in Astronomy  3 Credit Hours
Topic: Dark Matter, Dark Energy, Dark Future? An Introduction to 21st Century Cosmology. Modern cosmology, buttressed by increasingly precise observational data provided by space missions like HST, COBE, and WMAP teaches that the universe is composed primarily of matter we cannot see nor properly characterize, the so-called 'dark matter,' and of energy whose source is unknown and may defy knowing, the ubiquitous 'dark energy.' This course will attempt to elucidate what we currently understand about the composition, structure and evolution of the universe based on general relativistic theory and astronomical observations of remote galaxies using both ground- and space-based technologies. Special attention will be given to the means by which important cosmological parameters that determine the structure of the universe, like the critical density, the Hubble parameter, and the curvature and cosmological constants, are established. If time permits, additional consideration will be given to the array of planned future space missions devoted to cosmology-related subjects.
Prerequisite(s): PHYS 305

ASTR 421  Stellar Astrophysics  3 Credit Hours
An application of important physical principles to stars and star clusters. Topics will include gravitational collapse and star formation, radiative transfer and stellar atmospheres, nucleosynthesis and the structure of normal stars, degeneracy and the endpoints of stellar evolution, and general relativistic effects in the vicinity of black holes. 3 hour lecture.
Prerequisite(s): (PHYS 305 or ASTR 301 or ASTR 330) and (MATH 205 or MATH 215)

ASTR 445  Galaxies and Cosmology  3 Credit Hours
A course devoted to our current understanding of the composition, structure, and evolution of the universe based on general relativistic theory and astronomical observations of remote galaxies using both ground- and space-based technologies. Topics include observational characteristics, classification, kinematics and evolution of galaxies, quasars and active galactic nuclei, the cosmic microwave background radiation, concepts of general relativity, single-and multi-component models of the universe, dark matter and dark energy, and the origin of the universe (the big bang, inflation and the creation of the first elements). Three hours lecture. (AY)
Prerequisite(s): (PHYS 305 or ASTR 301 or ASTR 330) and (MATH 114 or MATH 116)

ASTR 498  Directed Studies in Astronomy  1 to 3 Credit Hours
Special topics in astronomy chosen by mutual agreement between the student and the instructor. Course may be repeated for credit. (F, W, S)

ASTR 499  Research in Astronomy  1 to 3 Credit Hours
Observational/experimental studies in astronomy selected by agreement between the student and the instructor. Four to twelve hours laboratory/ independent study. May be repeated for credit. (F, W, S)
Behavioral and Biological Sciences (BBS)

BBS 451 Ethics in Research 1 Credit Hour
This course provides an opportunity for students to explore and evaluate the ethical standing of different forms of research from a variety of perspectives. From a historical perspective, students will learn why federal legal protections are in place for use of human participants and animal subjects, and how this applies to their own research and future aspirations in research. This course will provide a discussion and readings relevant to understanding the foundation of current ethical responsibilities from which students will be able to apply the requirements and policies in conducting research projects with human participants and animal subjects. (YR)
Prerequisite(s): BIOL 140 and (PSYC 101 or PSYC 171)
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

BBS 490 Bio and Beh Science Capstone 3 Credit Hours
This capstone provides an opportunity for students to combine knowledge and skills from their undergraduate courses to address an interdisciplinary topic in the field of Biological Psychology (Biological and Behavioral Sciences) through their own research projects. The course includes research, writing and extended discussion culminating in a final project. (YR)
Prerequisite(s): (BIOL 370 or CHEM 370 or BCHM 370 or BIOL 470 or CHEM 470 or BCHM 470 or BIOL 301 or BIOL 306 or BIOL 474) and (PSYC 370 or BIOL 357) and PSYC 465

BBS 498 Literature Research in Behavioral and Biological Sciences 1 to 3 Credit Hours
Directed research performed under the guidance of faculty member. Undergraduate students will work with faculty to conduct literature research on current topic. Student will undertake a literature search, create an annotated bibliography, and write a research summary or grant proposal. Must be approved by the BBS Director. 1-3 credits; Four to twelve hours per week. Permission of Instructor (F, S, W).

BBS 499 Guided Research in Behavioral and Biological Sciences 1 to 3 Credit Hours
Directed laboratory or clinical research performed under the guidance of faculty member. Undergraduate students will gain hands-on learning in the theory and techniques of research. Must be approved by the BBS Director. 1-3 credits; Four to twelve hours laboratory. Permission of Instructor (F, S, W).
Restriction(s):
Cannot enroll if Class is Sophomore or Junior or Senior

Biochemistry (BCHM)

BCHM 210 Biochemistry Laboratory Techniques 2 Credit Hours
Biochemical Laboratory Techniques in an introduction to the equipment, procedures, and concepts used in the biochemistry laboratory. The class will cover topics such as scientific literature, keeping a laboratory notebook, statistical analysis and computer programs, as they relate to biochemistry. (W,YR)
Prerequisite(s): (CHEM 134 or CHEM 144) and (CHEM 136 or CHEM 146) and BIOL 140
Restriction(s):
Cannot enroll if Major is Biochemistry

BCHM 352 Introduction to Toxicology 3 Credit Hours
An introduction to the principles of toxicology with an emphasis on environmental toxicology. Major topics include toxic agents, toxicological mechanisms, and use of toxicological reference literature. Discussion of chemical carcinogenesis, genetic toxicity, immunotoxicology, teratology, and toxic responses of the skin, eyes, and nervous system. Three hours lecture. (AY).
Prerequisite(s): CHEM 225

BCHM 370 Principles of Biochemistry 3 Credit Hours
A concise but comprehensive survey of various areas of biochemistry designed for non-biochemistry majors. The course follows the standard approach to the subject including a description of cells, their structure and constituent macromolecules (proteins, nucleic acids, carbohydrates and lipids), enzymology, bioenergetics, intermediary metabolism, and gene regulation. Students cannot take both Biochemistry 370 and 470 or 471 for any combination of concentration, cognate or minor requirement. Three hours lecture. (F).
Prerequisite(s): BIOL 140 and CHEM 226

BCHM 390 Current Topics in Biochemistry 1 to 3 Credit Hours
Special topics current to the field of biochemistry. Topics and format for the course may vary. See Schedule of Classes for current topic. Permission of instructor. (OC).
Prerequisite(s): (BCHM 370* or BIOL 370* or CHEM 370*) or (BCHM 470* or BIOL 470* or CHEM 470*)

BCHM 404 Mech. Chronic Human Disease 3 Credit Hours
This course focuses on the biochemical, molecular and cellular mechanisms underlying the progression of chronic diseases, such as diabetes mellitus and atherosclerosis. Techniques in epidemiology, pathology, genetics, molecular biology, and biochemistry are used to understand how relevant physiological processes become pathological. The examination of chronic diseases provides an opportunity to understand biological processes across many scales of life, from extracellular matrix proteins to cells in blood vessel walls to risk factors in patient populations to the pharmacology of treatments. Use of primary literature is emphasized. Three hour lecture.
Prerequisite(s): BIOL 301 or BIOL 306 or BIOL 357 or BCHM 370 or BIOL 370 or CHEM 370 or BCHM 470 or BIOL 471 or CHEM 471

BCHM 430 Bioinorganic Chemistry 3 Credit Hours
This course examines the roles that metals play in biological systems, including the chemical principles that make metal ions well-suited for roles in protein structure, in redox catalysis and in acid base chemistry. The physical and experimental techniques that are applied to explore the subject including a description of cells, their structure and constituent macromolecules (proteins, nucleic acids, carbohydrates and lipids), enzymology, bioenergetics, intermediary metabolism, and gene regulation. Students cannot take both Biochemistry 370 and 470 or 471 for any combination of concentration, cognate or minor requirement. Three hours lecture. (F).
Prerequisite(s): CHEM 136 and BIOL 140

BCHM 470 Biochemistry I 3 Credit Hours
Life processes from a chemical viewpoint: structure/function relationships of biomolecules with emphasis on proteins, enzyme kinetics, and mechanisms of action. Three hours lecture. (W).
Prerequisite(s): (BIOL 130 and BIOL 140 and CHEM 134) or (CHEM 144 and CHEM 136) or (CHEM 146 and CHEM 225)

BCHM 471 Biochemistry II 3 Credit Hours
Intermediary metabolism, bioenergetics, energy transformation, metabolic interrelationships, biochemical regulation, highly structured subcellular biochemical systems. Three hours lecture. (W).
Prerequisite(s): BCHM 470 or CHEM 470 or BIOL 470
BCHM 472  Biochemistry Laboratory I  1 Credit Hour
The techniques of preparative and analytical biochemistry. Preparation and characterization of proteins and nucleic acids. Physical and chemical properties of proteins and nucleic acids. Four hours laboratory. CHEM 344 Recommended. (F).
Prerequisite(s): (BIOL 470* or BCHM 470* or CHEM 470*) and CHEM 227

BCHM 473  Biochemistry Laboratory II  1 Credit Hour
The techniques of preparative and analytical biochemistry. Preparation and characterization of lipids and carbohydrates. Methods in metabolism. Four hours laboratory. (W).
Prerequisite(s): (BCHM 471* or BIOL 471* or CHEM 471*) and (BCHM 472* or BIOL 472* or CHEM 472*)

BCHM 474  Molecular Biology  4 Credit Hours
This course will emphasize the molecular biology of eukaryotes, and topics will include genome organization and complexity, chromatin structure and function, gene expression, DNA replication and repair, genetic rearrangements, and the molecular biology of development. The laboratory will emphasize the application of recombinant DNA technology to the study of biological problems. Three hours lecture, four hours laboratory. (W).
Prerequisite(s): BCHM 470 or BIOL 470 or CHEM 470 or BCHM 370 or BIOL 370 or CHEM 370) and CHEM 227
Corequisite(s): BIOL 474L

BCHM 480  Biochemical Pharmacology  3 Credit Hours
Pharmacology is a study of drugs. In this course, the biochemical and molecular basis of drug action will be emphasized. Different categories of drugs, their use, abuse, and side effects will be presented. Three hours lecture. Permission of instructor. (OC).
Prerequisite(s): BCHM 470 or BIOL 470 or CHEM 470 or BCHM 370 or BIOL 370 or CHEM 370 or CHEM 470 or BIOL 470

BCHM 485  Nutrition and Metabolism  3 Credit Hours
Full Course Title: The Biochemistry of Human Nutrition and Metabolism
Human Nutrition and Metabolism is an introduction to the relationship between food and nutrients, and their integration in the metabolic pathways. An understanding of the molecular basis of nutrition, related diseases, and overall health will be built on previous knowledge of cell biology and biochemistry. (AY)
Prerequisite(s): (BCHM 471 or BIOL 471 or CHEM 471) or (BCHM 370 or BIOL 370 or CHEM 370)

BCHM 490  Topics in Biochemistry  1 to 3 Credit Hours
A course in special topics that examines research problems of current interest in biochemistry. Topics and format may vary. See current Schedule of Classes. One to three hours seminar. (W).

BCHM 495  Off-Campus Research in Biochem  1 to 3 Credit Hours
Participation in ongoing research at an off-campus laboratory. No more than 6 hours combined from any Natural Science courses numbered 495, 498, and 499 may be credited toward the 120 hours required for a degree. Four to twelve hours laboratory. Permission of concentration advisor. (F,W,S).

BCHM 496  Complex Systems  3 Credit Hours
Full Title: Biochemistry Capstone: Complex systems in Biochemistry
A complex system is defined as a system featuring a large number of interacting variables whose combined activity is non-linear and whose seemingly random behavior leads to self-organization. Current topics **are used to explore how complex systems function in biology. All reading material in the class are taken from the scientific literature giving students a chance to become familiar with how biochemists convey ideas and report their findings. Each student will present a paper to the class to demonstrate the ability to communicate concepts of Biochemistry effectively. Students will also learn the process of proposal writing and will have the opportunity to research and write their own proposal and have it peer-reviewed by their classmates. **The topics for this course will change each year, depending on the instructor, and the focus of current advances in Biochemistry/Complex systems. (W,YR)
Prerequisite(s): BCHM 470 and BCHM 472 and BCHM 474
Restriction(s):
Can enroll if Class is Senior

BCHM 497  Seminar in Biochemistry  1 Credit Hour
A seminar course that examines research problems of current interest in biochemistry. The course format may include training students to read and present scientific papers, guest lecturers, and lectures by the instructor on a selected topic. One hour seminar. Permission of instructor. (W).
Prerequisite(s): (BCHM 470 or BIOL 470 or CHEM 470) and (BCHM 474 or BIOL 474)

BCHM 498  Directed Reading in Biochem  1 to 3 Credit Hours
Library research in a specific area of biochemistry performed under the direction of a faculty member. No more than six hours combined from departmental courses numbered 495, 498, and 499 may be credited toward the 120 hours required for a degree. Four to twelve hours readings. Permission of instructor. (F,W,S).

BCHM 499  Laboratory Research in Biochem  1 to 3 Credit Hours
Directed laboratory research performed under the supervision of a faculty member. Research training is encouraged. No more than six hours combined from departmental courses numbered 495, 498, and 499 may be credited toward the 120 hours required for graduation. Four to twelve hours laboratory. Permission of instructor. (F,W,S).

Bioengineering (BENG)

BENG 200  Anatomy and Physiology for Engineers  4 Credit Hours
This course introduces undergraduate students in bioengineering to basic concepts in anatomy and physiology. Topics include cell, tissue, nervous, skeletal and muscular, circulatory, respiratory, digestive, endocrine, and urinary systems. Engineering analyses and principles will be used to describe the systems as applicable. Lab sections will be conducted for relevant selected systems. Performance will be assessed based on examinations and laboratory reports. Upon completion of this course, students will have the basic knowledge of anatomy and physiology relevant to bioengineering. (F, W).
Restriction(s):
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science
BENG 325  Thermofluid for Bioengineering  4 Credit Hours
This course is an introduction into mass and heat transport phenomena in biomedical systems. Basic mechanisms of fluid flow, heat transfer, and diffusion are presented and applied to biological objects (cells, tissues, organisms) and biomedical devices. Topics include mass, momentum, and energy conservation laws, physical properties of common and biological fluids, elements of fluid statics, control volume analysis, basics of fluid mechanics, conduction and convection heat transfer, diffusion, applications to hyper- and hypothermia, thermal ablation, and cryopreservation, basics of mass and heat transfer in the body.
Prerequisite(s): ENGR 216 and ME 230 and (ME 265 or ME 345)
Restriction(s):
Can enroll if College is Engineering and Computer Science

BENG 351  Bio-Sensors & Instrumentation  4 Credit Hours
The course covers measurements in biological materials using a variety of sensor technologies along with electronic instrumentation design and use. Safety and FDA requirements are also presented.
Prerequisite(s): (MATH 216 or MATH 228) and BIOL 103 and BIOL 140 and ECE 305 and (ENGR 216 or ECE 270)
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if College is Engineering and Computer Science or Arts, Sciences, and Letters

BENG 364  Prob&Stat in Bioengineering  3 Credit Hours
Set theory, combinatorial analysis, probability and axioms, random variables, continuous and discrete distribution functions, expectations, Chebyshev's inequity, weak law of large numbers, central limit theorem, sampling statistics and distributions, point and interval estimation, and linear regression.
Prerequisite(s): MATH 116 or MATH 114 or Mathematics Placement with a score of 215
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
Can enroll if College is Engineering and Computer Science

BENG 370  Biomechanics I  4 Credit Hours
The course provides a basic understanding of how the human body functions as a mechanical system. Review of mechanics. Musculoskeletal anatomy, statics and kinematics, muscle force redundancy, joint mechanics. Bone and soft tissue mechanics, muscle active force generation. Implant stress shielding and impact safety. Laboratory experiments directed at rehabilitation engineering, biological bone and tissue property measurement, bone and implant structural analysis, and impact safety.
Prerequisite(s): (ME 265 or ME 345) and (MATH 216 or MATH 228)
Restriction(s):
Can enroll if Program is BSE-Bioengineering

BENG 375  Biomaterial Tissue Engrng  4 Credit Hours
The course provides a basic understanding of the structure, properties and therapeutic applications of biomaterials, as well as the opportunities and scientific and technological challenges of tissue engineering. It also provides an integrated and multidisciplinary biological-engineering approach and probes mechanisms and methods of evaluation of tissue/biomaterials and patient/device interactions. Further the course assesses current outcomes, current challenges and cutting edge technological solutions to medical problems, Laboratory topics include key biological concepts, clinical safety, tissue culture, biological cells/bioactive materials interaction, and scaffold testing.
Prerequisite(s): ENGR 250 and BIOL 140
Restriction(s):
Can enroll if College is Engineering and Computer Science

BENG 381  Bioprocessing  4 Credit Hours
This course will introduce the students to the field of bioprocessing where the engineering concepts are applied to convert raw materials to pharmaceuticals, chemicals and food using biological processes. Discussions will include application of bioprocess-engineering knowledge in designing, building, controlling, and operating the biologically driven processes. Typical applications include bioreactor design, material collection and scale-up considerations. The course will also introduce the pharmacokinetics and pharmacodynamics analysis concepts to the students and will serve as an introductory course to teach how to use these concepts to design bioprocess-engineering systems. 4 credit hours (3 credit hours of lecture and 1 credit hour of lab).
Prerequisite(s): (ME 325 or BENG 325) and BIOL 140 and (CHEM 136 or CHEM 146)
Restriction(s):
Can enroll if College is Engineering and Computer Science

BENG 410  Bioinformatics  3 Credit Hours
This course covers fundamental computer skills for using various bioinformatics tools, querying bioinformatics databases, computational approaches and analysis methods for biological problems, and introduction to various programming languages and toolboxes for bioinformatics, data mining, and data visualization.

Restriction(s):
Can enroll if College is Engineering and Computer Science

BENG 425  Transport in Biosystems  3 Credit Hours
This course introduces transport phenomena in biological and medical systems to students already familiar with basic thermal-fluid sciences. Topics include properties of body fluids and cell membranes, blood flow and solute and oxygen transport in biological systems, basic principles of pharmacokinetic analysis, transport phenomena in medical devices and artificial organs.
Prerequisite(s): ME 375 or BENG 325*
Restriction(s):
Can enroll if College is Engineering and Computer Science

BENG 426  Fundamentals of Drug Delivery  3 Credit Hours
This course is designed to provide students with an understanding on the concepts in drug delivery from an engineering perspective. The course will cover drug delivery mechanisms, quantitative understanding of drug transport, nanotechnology, drug delivery devices, toxicity and immune response, FDA regulations, clinical trials and technology transfer. The course will conclude with a design project on nanoparticles development for targeted drug delivery. (F).
Prerequisite(s): (BENG 325 or ME 325*)
Restriction(s):
Can enroll if College is Engineering and Computer Science
BENG 450  Biophotonics and Optical Metrology  3 Credit Hours
The recent explosion of interest in minimally invasive medical diagnostics and contactless metrology has been fueled in part by the development of novel optics and photonics. A large number of optically-based imaging and sensing have moved beyond research laboratories into medical clinics, materials engineering, and industrial applications. Topics include design principles of optical instrumentation, techniques for diagnostics and metrology, and elastic and inelastic light scattering theory. Applications include optical metrology, confocal and multiphoton microscopy, light propagation and tomographic imaging in tissues, and design of minimally invasive spectroscopic systems. Optical systems design is included as a class project. (YR).
**Prerequisite(s):** PHYS 150 and PHYS 151
**Restriction(s):**
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is

BENG 451  Microfluidics  3 Credit Hours
Microscaled systems and devices have enhanced reaction rates, predictable fluid mechanics, reduced reagent volumes, and a cheaper path to rapid prototyping. These advantages benefit many biomedical and processes engineering applications that require sensitive molecular detection and precise flow controls. In this course, a range of microsystem techniques will be discussed, including those based on microfluidics, MEMS, and optofluidics. Lectures will be accompanied by student-driven design projects that will be conducted in 3-hour laboratories.
**Prerequisite(s):** (BENG 325 or ME 375*)
**Restriction(s):**
Can enroll if College is Engineering and Computer Science

BENG 460  Nanobiosystems Engineering  3 Credit Hours
Nanobiosystems Engineering is an emerging frontier in nanotechnology. It integrates materials science, bioengineering, physics and life science with the biological and biochemical applications. This fast-developing interdisciplinary field holds the promise to solve many of the medical problems of future. The course will introduce advanced concepts related to nanomaterials and nanofabrication and their application in medicine. The course will also focus on design and development of nanodevices for the applications of pharmaceuticals and healthcare. Typical applications include nano-biosensor, targeted drug delivery, and tissue engineering will also be discussed. Students in Bioengineering will have a chance to present and discuss individual application through team project.
**Prerequisite(s):** (ME 325 or BENG 325) and (ME 349 or BENG 351) and BENG 375
**Restriction(s):**
Can enroll if College is Engineering and Computer Science

BENG 4671  Senior Design  4 Credit Hours
A guided design project course where student teams propose design projects, design a device, system or process related to bioengineering and conduct evaluative experiments and/or construct a physical prototype. Engineering ethics and responsibility. At the end of the semester, the students are required to submit written reports and give oral presentations with a demonstration of their projects
**Prerequisite(s):** BENG 325 and BENG 351 and BENG 370 and (BENG 375 or BENG 381) and BENG 364
**Restriction(s):**
Can enroll if Class is Junior or Senior
Can enroll if Major is Bioengineering

BENG 470  Advanced Biomechanics  3 Credit Hours
The course covers intermediate level subject matter on structural biomechanics, analysis and design. Topics include: soft tissue biomechanics, human motion analysis including gait, orthopedic implants, fixation and reconstruction, head impact injury, advanced bone models. (YR).
**Prerequisite(s):** BENG 370
**Restriction(s):**
Can enroll if College is Engineering and Computer Science

BENG 475  Regenerative Engineering  3 Credit Hours
This course will discuss principles of tissue engineering whereby the properties of stem as well as primary cells, growth factors, and extracellular matrix and their impact in the development of engineered tissue constructs will be explored. In addition, the course will also focus on supporting/enabling technologies typically utilized in engineering these constructs including nano- and micro-fabrication techniques, 3D printing, micro-patterning as well as designing principles of bioreactors, and drug and gene delivery techniques. Additionally, various tissue engineering applications will be discussed including synthetic tissues and organs that are currently under development for regenerative medicine application.
**Prerequisite(s):** (ME 265 or ME 260) and BENG 375
**Restriction(s):**
Can enroll if College is Engineering and Computer Science

BENG 481  Biomimetics  3 Credit Hours
The Biomimetic Engineering course will give an overview and in-depth analysis of nature's solutions to specific problems with the aim of determining appropriate engineering analogs. Students will learn mechanical principles in nature and their application to engineering devices. Mechanical behavior of biological materials as governed by underlying microstructure will be discussed. Students will work in teams on projects where they will take examples of designs, concepts and models from biology and determine their potential in specific engineering applications. 3 credit hours
**Prerequisite(s):** (BENG 325 or BENG 325*)
**Restriction(s):**
Can enroll if College is Engineering and Computer Science

BENG 490  Directed Design Project  1 to 3 Credit Hours
Design project involving not only design but also analysis, fabrication, and/or testing. Topics may be chosen from any of the areas of bioengineering. The student will need to submit a report on their project at the end of the term. Enrollment in this course requires approval from the ME department. Registration for more than 1 credit is only permitted in special cases and will be considered on an individual basis. (F, S, W).
**Restriction(s):**
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is

BENG 492  Guided Study in Bioengineering  1 to 3 Credit Hours
Individual study, design, or laboratory research in a field of interest to the student. Topics may be chosen from any areas of bioengineering. The student will need to submit a report on their project at the end of the term. Enrollment in this course requires approval from the ME department. Registration for more than 1 credit is only permitted in special cases and will be considered on an individual basis. (F, S, W).
**Restriction(s):**
Can enroll if Class is Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science
Can enroll if Major is Bioengineering.
Biological Science (BIOL)

Biological Science (BIOL)

BIOL 100 Principles of Biology 3 Credit Hours
A lecture course introducing non-science concentrators to major areas of biology, including cell biology, genetics, human physiology, plant biology, ecology, and evolution. Topics of current interest are discussed. Students cannot use both BIOL 100 and NSCI 120 to satisfy the Natural Sciences distribution requirements. Three hours lecture. (F,W).

BIOL 103 Anatomy and Physiology I 4 Credit Hours
The structural and functional relationships of the human body at the cellular, tissue, organ, and system levels are analyzed. Students identify the major anatomical parts and relate these to the physiological activities of the circulatory, skeletal, nervous, muscular, and digestive systems. The homeostatic effects of fluids, electrolytes, acids and bases throughout the integrated human body are analyzed. Four hours lecture, three hours laboratory. (F).

Prerequisite(s): BIOL 103
Corequisite(s): BIOL 103L

BIOL 105 Anatomy and Physiology IIA 4 Credit Hours
The major anatomical parts of the cardiovascular, respiratory, reproductive, endocrine, nervous, and urinary systems of the human body are identified and related to the physiological activities of these systems. Emphasis is placed on the homeostatic effects of fluids, electrolytes, acids, and bases throughout the integrated human body. Four hours lecture, three hours laboratory. (W)

Prerequisite(s): BIOL 103
Corequisite(s): BIOL 105L

BIOL 130 Intro Org and Environ Biology 4 Credit Hours
An introduction to organismal and environmental biology, with emphasis on plant and animal diversity, structure, physiology, and development; ecology; and evolution. This course complements BIOL 140, which need not be taken as a prerequisite; together they constitute an introduction to biology. This course is intended for science concentrators. Three hours lecture, four hours laboratory/ recitation. (F,W,S).

Prerequisite(s): BIOL 103
Corequisite(s): BIOL 130L

BIOL 140 Intro Molec & Cellular Biology 4 Credit Hours
An introduction to molecular and cellular aspects of biology with an emphasis on cell structure and function, biochemistry, genetics, cell growth, and the origin of life. This course complements BIOL 130; together they constitute an introduction to biology. This course is intended for science concentrators. Three hours lecture, four hours laboratory/recitation.

Prerequisite(s): CHEM 134* or CHEM 144*
Corequisite(s): BIOL 140L

BIOL 301 Cell Biology 4 Credit Hours
Functional and structural features of cells, organelles, and macromolecules. Topics in biochemistry, and physical chemistry of cellular processes are considered. Three hours lecture, four hours laboratory. CHEM 226 is recommended. (W).

Prerequisite(s): BIOL 140
Corequisite(s): BIOL 301L

BIOL 303 Comparative Animal Physiology 4 Credit Hours
Physiological processes and their control in higher animals. Emphasis ranges from the cellular mechanisms and systemic patterns of regulation of body functions to the evolutionary and environmental adaptations determining body form and function in diverse animal types. Three hours lecture, four hours laboratory. MATH 114 is recommended. (YR).

Prerequisite(s): BIOL 130 and BIOL 140 and (CHEM 124 or CHEM 134 or CHEM 144)
Corequisite(s): BIOL 303L

BIOL 304 Ecology 4 Credit Hours
Relationships between organisms and their environments. Patterns in the physical environment, physiological and behavioral adaptations, population dynamics, energy flow, nutrient cycling; succession. Three hours lecture, four hours laboratory (with field trips). (F, S).

Prerequisite(s): BIOL 130 and (MATH 104 or MATH 105 or MATH 113 or MATH 115 or Mathematics Placement with a score of 116)
Corequisite(s): BIOL 304L

BIOL 305 Anatomy and Physiology IIB 4 Credit Hours
The major anatomical parts of the cardiovascular, respiratory, reproductive, endocrine, nervous, and urinary systems of the human body are identified and related to the physiological activities of these systems. Emphasis is placed on the homeostatic effects of fluids, electrolytes, acids, and bases throughout the integrated human body. Students complete additional work beyond what is required in BIOL 105. Four hours lecture, three hours laboratory.

Prerequisite(s): BIOL 103
Corequisite(s): BIOL 305L

BIOL 306 General Genetics 3 Credit Hours
An intermediate course in classical, molecular and evolutionary genetics. The structure, function, and inheritance of genetic material in prokaryotes, eukaryotes and viruses is discussed. Topics include DNA and chromosome structure, genetic linkage and mapping, gene expression and its regulation, human genetic disease, and population genetics. Three hours lecture, one hour recitation. (F).

Prerequisite(s): BIOL 130 and BIOL 140
Corequisite(s): BIOL 306R

BIOL 306R General Genetics Recitation 0 Credit Hours
Recitation component of BIOL 306. Must be taken concurrently with BIOL 306.

Corequisite(s): BIOL 306

BIOL 307 General Genetics Laboratory 1 Credit Hour
A semester-long laboratory course dealing with investigation and analysis in genetics. Laboratory sessions will include genetic crosses of plants and animals and the subsequent analysis to determine linkage and gene mapping location. Computer exercises will also be used to establish genetic tools for modern molecular analysis. Four hours laboratory. (W).

Prerequisite(s): BIOL 306*

BIOL 309 Introduction to Mycology 4 Credit Hours
An introduction to the biology of the fungi. Classification, structure, industrial use, gastronomic qualities, and disease-producing ability of macroscopic and microscopic forms are studied. Laboratories include microscopic and macroscopic examinations of fungi and their growth and field studies on the occurrence and classification of edible and poisonous varieties. Three hours lecture, four hours laboratory. (OC).

Prerequisite(s): BIOL 130 and BIOL 140

BIOL 310 Histology 4 Credit Hours
Descriptive approaches to the study of the microscopic anatomy of animal tissue. The course emphasizes the study of cell and tissue types, selected organs and the interpretation of electron micrographs. Three hours lecture, four hours laboratory. (AY, F).

Prerequisite(s): BIOL 130 and BIOL 140
Corequisite(s): BIOL 310L
BIOL 311   Embryology   4 Credit Hours
Descriptive and experimental approaches to a comparative study of reproduction, morphogenesis, and growth. Emphasis is placed on the vertebrates, but some attention is focused on the development of invertebrates and plants. Three hours lecture, four hours laboratory. (AY, W).
Prerequisite(s): BIOL 130 and BIOL 140
Corequisite(s): BIOL 311L

BIOL 313   Plant Taxonomy and Systematics   4 Credit Hours
Characteristics, distribution, and relationships of plants with special reference to the local Michigan flora. Three hours lecture, four hours laboratory (including field work) per week. (OC).
Prerequisite(s): BIOL 130

BIOL 315   Aquatic Ecosystems   4 Credit Hours
An introduction to the physical, chemical, and biological characteristics of lakes, rivers, and wetlands emphasizing a comparison of ecosystem structure and function. Laboratory emphasizes data collection and analysis to characterize a representative lake, river, and wetland. Lecture and laboratory. (AY, F).
Prerequisite(s): BIOL 130 and (CHEM 124 or GEOL 118)

BIOL 320   Field Biology   4 Credit Hours
Adaptations, taxonomy, systematics, ecology, and behavior of southeastern Michigan flora and fauna. Techniques of field observation and recording are emphasized. Skills in the use of identification keys and guides are developed. The campus Environmental Study Area is used intensively. Three hours lecture, four hours laboratory (with field trips). (S).
Prerequisite(s): BIOL 101 or BIOL 130 or NSCI 120 or NSCI 233

BIOL 324   Invertebrate Zoology   4 Credit Hours
This course introduces students to the diversity of invertebrate animals from a functional evolutionary perspective. The lecture will focus on the unique aspects of the morphology, physiology, and ecology of major phyla in light of the selective forces that have favored their evolution, as well as consider the intersection of invertebrates and humans. Through dissection, prepared slides and field observations, the laboratory will introduce the diversity of invertebrate phyla and subgroups, with emphasis on form and function.
Prerequisite(s): BIOL 130

BIOL 333   Plant Biology   4 Credit Hours
A thorough survey of the evolutionary trends in plant reproduction and morphology will be considered. This survey will extend into the field of plant anatomy, but not plant physiology, which is covered in a separate course. Major groups to be studied include: bacteria, algae, fungi, liverworts, lichens, mosses, ferns, and seed plants. Certain less familiar groups will also be emphasized. Plant diversity will be examined from the perspective of its import to civilizations of the past and future.
Three hours lecture, four hours laboratory. (F, S).
Prerequisite(s): BIOL 130
Corequisite(s): BIOL 333L

BIOL 335   Plant Physiology   4 Credit Hours
Physiological principles as they apply to the major plant groups. Topics include cellular metabolism, water balance, translocation, photosynthesis, mineral nutrition, growth and development and production of secondary substances. Three hours lecture, four hours laboratory. (W).
Prerequisite(s): BIOL 130 and BIOL 140
Corequisite(s): BIOL 335L

BIOL 337   Plant Ecology   3 Credit Hours
This course focuses on different aspects of the relationship between plants and their environment. Topics include: a) interactions of plants with the physical environment; b) ways in which the environment acts to shape plant populations through evolution; c) intra- and interspecific interactions among individuals; and d) large-scale patterns and processes at the landscape-level. Three hours lecture.
Prerequisite(s): BIOL 130

BIOL 350   Introduction to Neurobiology   4 Credit Hours
An introduction to nervous systems and how they function. This course includes the cellular physiology and anatomy of nervous systems in vertebrates and invertebrates, and how these cellular activities are integrated into systems to produce complex, coordinated behavior. Three hours lecture. (W).
Prerequisite(s): BIOL 130 and BIOL 140
Corequisite(s): BIOL 350L

BIOL 352   Endocrinology   3 Credit Hours
This class will provide intermediate and advanced undergraduates with a basic understanding of the function of the endocrine system. The course will progress from a consideration of basic concepts and mechanisms to the physiology (function) of specific endocrine systems. Interactions between organ systems will also be emphasized. Specific sections of the course will focus on function of the endocrine system during stress, fluid balance, metabolism (including calcium, glucose, lipid, and proteins), reproductive growth, development, and aging.
Prerequisite(s): BIOL 140 and BIOL 130 and CHEM 134

BIOL 353   Ornithology   3 Credit Hours
A study of the unique features of birds as representatives of vertebrates, including their morphology, anatomy, physiology, physics of flight, mating systems, social structure, vocalizations, orientation and migration, origin and evolution, growth and development, and issues in avian conservation. Students learn about the current research on bird migration at the Rouge River Bird Observatory on campus. Students develop individual species analysis of life and natural histories. Three hours lecture.
Prerequisite(s): BIOL 130

BIOL 357   Human Physiology   3 Credit Hours
Systems of the human body and their function are investigated individually and as part of an integrated natural living system. Topics include cell structure and function of nerves, muscles, the lungs, heart, blood vessels, kidneys, digestive tract, endocrine glands, brain, and reproductive organs.
Prerequisite(s): (BIOL 130 and BIOL 140) or (BIOL 103 and BIOL 105)

BIOL 360   Population Genetics & Evolution   3 Credit Hours
Processes which change the genetic composition of populations: mutation, gene flow, genetic drift, and natural selection. The origin of subspecies, species, and higher taxa. Evidence of evolution from the geological record, comparative anatomy, comparative biochemistry and other sources. Three hours lecture. (FW)
Prerequisite(s): BIOL 130 and BIOL 140 and (MATH 104 or MATH 105 or MATH 113 or MATH 115 or Mathematics Placement with a score of 116)

BIOL 361   Population Genetics & Evolution Lab   1 Credit Hour
A laboratory course to accompany BIOL 360. Four hours laboratory. (OC).
Prerequisite(s): BIOL 360*
BIOL 370  Principles of Biochemistry  3 Credit Hours
A concise but comprehensive survey of various areas of biochemistry designed for non-biochemistry majors. The course follows the standard approach to the subject including a description of cells, their structure and constituent macromolecules (proteins, nucleic acids, carbohydrates and lipids), enzymology, bioenergetics, intermediary metabolism and gene regulation. Students cannot take both BCHM 370 and 470 or 471 for any combination of concentration, cognate or minor requirement. Three hours lecture. (F).
Prerequisite(s): BIOL 140 and CHEM 226

BIOL 381  Biotechnology & Bioprocessing  4 Credit Hours
Introduces the methods for infectious disease epidemiology (occurrence and spread in population) and case studies of important disease syndromes and entities. Methods include definitions and nomenclature, outbreak investigations, disease surveillance, case-control studies, cohort studies, laboratory diagnosis, molecular epidemiology, dynamics of transmission, and assessment of vaccine field effectiveness. Case-studies focus on acute respiratory infections, diarrheal diseases, hepatitis, HIV, tuberculosis, sexually transmitted diseases, malaria, and other vector-borne diseases. This course emphasizes methods of study that would contribute to understanding diseases etiology.
Prerequisite(s): BIOL 140

BIOL 385  Microbiology  4 Credit Hours
The biology of microorganisms is considered through study of the properties of bacteria, fungi, algae, protozoa, and viruses. Microbial structures are discussed and correlated with their function. Aspects of cellular metabolism pertinent to microorganisms are emphasized. The interaction of microorganisms and their environment, animate and inanimate, is discussed with respect to the beneficial or harmful effects of the different microbial groups. Laboratory exercises introduce the student to basic, practical microbiological techniques and illustrate various principles of microbial life. Three hours lecture, four hours laboratory. (FS).
Prerequisite(s): BIOL 140 and (CHEM 134* or CHEM 144*)
Corequisite(s): BIOL 385L

BIOL 390  Topics in Biology  1 to 4 Credit Hours
Examination of problems and issues in selected areas of biology. Title in Schedule of Classes changes according to content. This course may be repeated for credit when specific topics differ. Permission of Instructor. (OC).

BIOL 385L  Microbiology Laboratory  1 Credit Hour
Laboratory exercises introduce the student to basic, practical microbiological techniques and illustrate various principles of microbial life. Three hours laboratory. (FS).

BIOL 402  Physiology of Excitable Cells  3 Credit Hours
An in-depth analysis of the mechanisms underlying electrical communication within and between mammalian cells. The major emphasis is on excitable cells in the brain, heart, and skeletal muscle and their functional integration. Fulfills the Biology major capstone requirement. (W).
Prerequisite(s): BIOL 130 and BIOL 140 and (BIOL 303 or BIOL 350 or (AY).
Corequisite(s): BIOL 402L
Restriction(s):
Can enroll if Class is Junior or Senior

BIOL 404  Mech. Chronic Human Disease  3 Credit Hours
This course focuses on the biochemical, molecular and cellular mechanisms underlying the progression of chronic diseases, such as diabetes mellitus and atherosclerosis. Techniques in epidemiology, pathology, genetics, molecular biology, and biochemistry are used to understand how relevant physiological processes become pathological. The examination of chronic diseases provides an opportunity to understand biological processes across many scales of life, from extracellular matrix proteins to cells in blood vessel walls to risk factors in patient populations to the pharmacology of treatments. Use of primary literature is emphasized. Three hour lecture.
Prerequisite(s): BIOL 301 or BIOL 306 or BIOL 357 or BCHM 370 or BIOL 370 or CHEM 370 or BCHM 471 or BIOL 471 or CHEM 471
Restriction(s):
Can enroll if Class is Senior

BIOL 405  Applied & Environ Microbiology  4 Credit Hours
The study of the diversity, structure and function of microorganisms as they interact with their environment. Emphasis will be placed on soil microbiology (fungi, bacteria, microalgae) and plant-microbe interactions (pathogens, symbioses). Ecological topics include decomposition, nutrient cycling, bioremediation and agroecosystems. Three hours lecture, four hours laboratory. (W).
Prerequisite(s): BIOL 385 or MICR 385
Restriction(s):
Can enroll if Class is Senior

BIOL 406  Microbial Genetics  3 Credit Hours
This molecular genetics course emphasizes bacteria and viruses. Topics include chromosome structure and replication, recombination, DNA repair, genetic mapping, mechanisms of gene transfer, regulation of gene expression, and mutagenesis. Three hours lecture. (W, YR)
Prerequisite(s): MICR 385 or BIOL 385

BIOL 410  Diversity Issues Health Care  3 Credit Hours
This course will address the effect of race, age, gender, religion, and economic status on medical research and health care. Through an examination of clinical trials and case studies, students will learn how medical research is performed in the United States, and what health care treatments and options for patients are available. Medical treatment and disease topics will be selected and will be evaluated as to how they are influenced by the criteria listed. The examples will focus on both cultural differences and inequity, in national and global settings. (AY).
Prerequisite(s): BIOL 130 and BIOL 140
Restriction(s):
Can enroll if Class is Junior or Senior
BIOL 412  Vertebrates  5 Credit Hours
A comparative study of the morphology of living animals, including an analysis of structural and functional features, diversity, and macroevolution. The major emphasis is on the comparative functional anatomy of living vertebrates. Three hours lecture, eight hours laboratory. Fulfills the biology major capstone requirement. This course was formerly offered as 312; students cannot receive credit for both BIO 312 and 412. (W, AY)
Prerequisite(s): (BIOL 303 or BIOL 305 or BIOL 335) or BIOL 360
Restriction(s):
Can enroll if Class is Senior

BIOL 414  Limnology  4 Credit Hours
The study of the structural and functional relationships and productivity of organisms in lakes and streams as they are regulated by their physical, chemical and biotic environments. Laboratories will emphasize field study of area lakes and streams. Three hours lecture, four hours laboratory. BIOI/ESCI 304 or ESCI 275 recommended.
Prerequisite(s): BIOL 130 and (CHEM 136 or CHEM 146)
Corequisite(s): BIOL 414L

BIOL 416  Stream Ecology  4 Credit Hours
A study of the physical, chemical and biological characteristics of streams and rivers. Three hours lecture, four hours laboratory. (OC).
Prerequisite(s): BIOL 304

BIOL 419  Behavior and Evolution  3 Credit Hours
An in depth examination of how evolutionary processes shape behavior, focusing on the influence of natural, sexual, and kin selection. Topics include behavioral genetics, natural selection, sexual selection, kin selection, optimality, game theory, evolutionary stable strategies, phylogenetics, and the comparative method.
Prerequisite(s): BIOL 140 and BIOL 130
Restriction(s):
Can enroll if Class is Senior
Can enroll if Level is Undergraduate

BIOL 420  Advanced Field Ecology  4 Credit Hours
An intense study of behavioral ecology and field-oriented research at an advanced level, utilizing ecological habitats on campus and in surrounding urban areas. Focus will be on plant/animal interactions and will include pollination ecology, reproduction and distribution ecology, optimal foraging theory, as well as hypothesis testing of animal migration and distribution of species in extreme urban environments. Three hours lecture, four hours laboratory. (OC).
Prerequisite(s): BIOL 304 or BIOL 320
Restriction(s):
Can enroll if Class is Senior

BIOL 422  Conservation Biology  3 Credit Hours
This course is a study of the historical and current preservation of global biodiversity. The value of biodiversity, extinction, threats to biodiversity, and both ex situ and in situ conservation strategies are considered. (W, AY)
Prerequisite(s): BIOL 304 or ESCI 304
Restriction(s):
Can enroll if Class is Senior
Can enroll if Level is Undergraduate

BIOL 424  Biology of Spiders  4 Credit Hours
An introduction to the biology of spiders and related arachnids. Lectures include spider anatomy, natural history, ecology, and evolution. Laboratory work includes specimen preparation, use of dichotomous keys, spider behavior, field methods, rearing and collecting techniques, and identification of spiders and their webs. Three hours lecture, four hours laboratory. Students cannot receive credit for both Biology 424 and Biology 524.
Prerequisite(s): BIOL 130
Restriction(s):
Cannot enroll if Class is Graduate

BIOL 430  Medical Virology  3 Credit Hours
A general description of the history and nature of animal virus disease. Emphasis is placed on the pathogenesis and clinical description of specific diseases.
Prerequisite(s): BIOL 385 or MICR 385

BIOL 440  Micro Genetics & Physi Lab  1 Credit Hour
This course emphasizes the use of advanced microbiological techniques for understanding the genetics and physiology of microorganisms. Experiments focus on the understanding of general microbial phenomena, such as nutrition, metabolism and biochemistry; protein and nucleic acid synthesis; energy generation, enzyme regulation, membrane transport, motility, differentiation, cellular communication and the behavior of populations.
Prerequisite(s): BIOL 385* or MICR 385* or BIOL 301* or BIOL 406* or MICR 406* or MICR 485* or MICR 485*
Restriction(s):
Cannot enroll if Class is Freshman
Can enroll if Level is Undergraduate

BIOL 450  Virology  4 Credit Hours
The first half of this course deals with bacterial viruses, with emphasis on classical events in this field. The second half surveys the field of animal viruses, with emphasis on recent discoveries, including replication, pathogenesis, and viral association with cancers. Three hours lecture, four hours laboratory. (AY,W).
Prerequisite(s): CHEM 226 and (MICR 385 or BIOL 385)

BIOL 452  Med & Env Toxicology  3 Credit Hours
Mechanistic concepts of toxicology at the cellular and molecular levels. The course is taught from a human health perspective focusing on contemporary problems and environmental associations. Three hours lecture. (W, AY)
Prerequisite(s): BIOL 140 and CHEM 225 and (BIOL 370 or BIOL 470 or BIOL 301)
Restriction(s):
Can enroll if Class is Senior
Can enroll if Level is Undergraduate

BIOL 455  Immunology  4 Credit Hours
A detailed study of the field of immunology. Among the topics covered are various aspects of the immunological response, such as humoral or cell-mediated immunity, cell-cell interactions, and immunology as related to the cause and prevention of disease. Three hours lecture, four hours laboratory. (AY,F).
Prerequisite(s): BIOL 385 or BIOL 301 or MICR 385
BIOL 456  Behavioral Ecology  4 Credit Hours
This course uses evolutionary and ecological theory to evaluate behavioral adaptations of organisms to their environment. Topics discussed include game theory, kin selection, sexual selection, eusociality, orientation and navigation, and signal evolution. Laboratory sessions include: observations of animal behavior, working with live animals, and field trips. Three hours of lecture, one four-hour laboratory. Students cannot receive credit for both BIOL 456 and BIOL 556. Students seeking graduate credit should elect BIOL 556. (AY).
Prerequisite(s): BIOL 130
Corequisite(s): BIOL 456L
Restriction(s):
Cannot enroll if Class is Specialist or Graduate or Doctorate

BIOL 459  Pathogenic Microbiology  4 Credit Hours
An introduction to pathogenic microorganisms and mechanisms of microbial pathogenicity. Disease-causing bacteria, fungi, viruses, and protozoa are studied. Laboratories emphasize clinical approaches to isolation, identification, and treatment. Three hours lecture, four hours laboratory. (AY.F).
Prerequisite(s): BIOL 385 or MICR 385

BIOL 470  Biochemistry I  3 Credit Hours
Life processes from a chemical viewpoint: structure/function relationships of biomolecules with emphasis on proteins, enzyme kinetics, and mechanisms of action. Three hours lecture. (W)
Prerequisite(s): (BIOL 130 and BIOL 140 and CHEM 134) or (CHEM 144 and CHEM 136) or (CHEM 146 and CHEM 225)

BIOL 471  Biochemistry II  3 Credit Hours
Intermediary metabolism, bioenergetics, energy transformation, metabolic interrelationships, biochemical regulation, highly structured subcellular biochemical systems. Three hours lecture. (F).
Prerequisite(s): BCHM 470 or BIOL 470 or CHEM 470

BIOL 472  Biochemistry Lab I  1 Credit Hour
The techniques of preparative and analytical biochemistry. Preparation and characterization of proteins and nucleic acids. Physical and chemical properties of proteins and nucleic acids. Four hours laboratory. CHEM 344 Recommended. (F).
Prerequisite(s): (BIOL 470* or BCHM 470* or CHEM 470*) and CHEM 227

BIOL 473  Biochemistry Laboratory II  1 Credit Hour
The techniques of preparative and analytical biochemistry. Preparation and characterization of lipids and carbohydrates. Methods in metabolism. Four hours laboratory. (W).
Prerequisite(s): (BCHM 471* or BIOL 471* or CHEM 471*) and (BCHM 472* or BIOL 472* or CHEM 472*)

BIOL 474  Molecular Biology  4 Credit Hours
This course will emphasize the molecular biology of eukaryotes, and topics will include genome organization and complexity, chromatin structure and function, gene expression, DNA replication and repair, genetic rearrangements, and the molecular biology of development. The laboratory will emphasize the application of recombinant DNA technology to the study of biological problems. Three hours lecture, four hours laboratory. (W).
Prerequisite(s): (BCHM 470 or BIOL 470 or CHEM 470 or BCHM 370 or BIOL 370 or CHEM 370) and CHEM 227
Corequisite(s): BIOL 474L

BIOL 476  Cancer Cell Biology  3 Credit Hours
Cancer is a disease of anti-social cell behavior. This course educates students on the genetics, molecular and cellular changes that normal cells undergo to become cancer cell. Major emphasis is on providing a mechanistic insight into fundamental questions in cancer cell biology. The course also discusses currently available therapeutic treatments and emerging issues in cancer therapy research. Fulfills capstone requirement for biology majors. Three hours lecture.
Prerequisite(s): BIOL 130 and BIOL 140 and (BIOL 301 or BIOL 306 or BIOL 370 or BCHM 370 or CHEM 370 or BIOL 385 or MICR 385)
Restriction(s):
Can enroll if Class is Senior

BIOL 480  Neurobiology of Brain Disorders  3 Credit Hours
This course aims to provide a foundation in the underlying mechanisms of neurological and psychiatric disorders. We will explore through lectures and readings of primary literature a number of important brain disorders, including autism spectrum disorder, traumatic brain injury, amyotrophic lateral sclerosis, Parkinson’s disease, Huntington’s disease, and Alzheimer’s disease. This course focuses on the fundamental molecular and cellular mechanisms that underlie brain disorders and helps students understand the brain dysfunctions or diseases. (W).
Prerequisite(s): BIOL 350 or BIOL 357 or BIOL 305
Restriction(s):
Can enroll if Class is Senior

BIOL 485  Physiology of Micro-organisms  3 Credit Hours
An in-depth examination of the physiology of microorganisms. Areas of emphasis include the growth and nutrition of microorganisms, the development of viruses, the microbial degradation of organic compounds, the regulation of degradation reactions, and the biosynthesis of uniquely microbial compounds and secondary metabolites, such as antibiotics and toxins. Consideration is given to the natural environments of specific microorganisms. Three hours lecture. (W, YR)
Prerequisite(s): (BIOL 385 or MICR 385 or BIOL 370* or CHEM 370 or BCHM 370) and CHEM 225*

BIOL 489  Origins of Biological Sciences  3 to 4 Credit Hours
A study of the development of the science of biology as revealed in the writing and experiments of major biologists of the past and present. (OC).

BIOL 490  Sem in Biology/Microbiology  1 to 6 Credit Hours
Directed research on a problem culminating in the preparation of a paper and presentation of a public seminar. Tutorials, lectures and student seminars are given on selection and formulation of research problems, experimental design, and statistical treatment of data. May be repeated for credit with permission of advisor. (OC).

BIOL 491  Capstone Course in Biology  3 Credit Hours
A culminating course for biology majors which focuses on an area of current biological research and integrates material from different subdisciplines of biology. Topic varies and is announced in the Schedule of Classes. Three hours lecture.
Restriction(s):
Can enroll if Class is Senior
Can enroll if Major is Biological Sciences

BIOL 492  Capstone Research Experience  3 Credit Hours
An approved research experience with a UM-D biology faculty member which integrates material from different sub disciplines of biology. Research results are reported in a poster or seminar presentation or in a manuscript submitted for publication.
Restriction(s):
Can enroll if Class is Senior
Can enroll if Major is Biological Sciences
**BIOL 493  Capstone Teaching Experience  3 Credit Hours**
An approved teaching experience which integrates material from different subdisciplines of biology. Students work as a student teaching assistant/student mentor in the laboratory portion of a biology course.

**Restriction(s):**
- Can enroll if Class is Senior
- Can enroll if Major is Biological Sciences

**BIOL 494  Emergency Medicine Research Associates Program (EMRAP)  2 to 3 Credit Hours**
Full Course Title: Emergency Medicine Research Associates Program (EMRAP) at St. Mary Mercy hospital. This course provides a unique research experience through a partnership with the University of Michigan-Dearborn Biology Discipline in the NSCI Department. Enrolled students will assist in ongoing clinical research programs, will learn the basic principles behind clinical research design, hypothesis testing, results interpretation, including discussions of issues involving human subjects in research, informed consent, and health information privacy. Students will gain knowledge in the aforementioned areas through lecture and through clinical shift work, including clinical provider shadowing, participant enrollment, and data collection for several ongoing trials. This course runs for a full academic year (3 credits Fall and 2 credits Winter). (FW, YR) Registration is by permission of instructor only. (F, W, YR).

**BIOL 495  Off-Campus Research Participant  1 to 3 Credit Hours**
Participation in ongoing experimental research at an off-campus laboratory (or in the field). Arrangements made between the off-campus researcher, the student, and the Biology concentration advisor. No more than six credit hours combined from BIOL 490, 495, 498, and 499 may be counted toward the 120 hours required for a degree. Four to twelve hours laboratory. Permission of instructor. (F).

**BIOL 497  Seminar in Biology  1 Credit Hour**
Topics of current interest in Biology will be presented by guest lecturers, faculty members or students. Topics chosen will vary from term to term. Can be elected up to three times. One hour seminar. (W).

**BIOL 498  Independent Study in Biology  1 to 3 Credit Hours**
Library research and independent study performed under the guidance of a faculty member. Four to twelve hours readings. Permission of instructor. (F).

**BIOL 499  Laboratory in Biological Research  1 to 3 Credit Hours**
Directed laboratory research performed under the guidance of faculty member. Four to twelve hours laboratory. Permission of instructor. (F).

**Business Administration (BA)**

**BA 100  College of Business Foundation  1 Credit Hour**
Business Foundations provides an introduction to a variety of topics critical to student success. Topics presented in this class include an overview of the Bachelor of Business Administration, on-campus resources available to ensure student success, academic advising, internships, student organizations, business communication, team membership, and academic integrity.

**Restriction(s):**
- Can enroll if Class is Freshman or Sophomore or Junior
- Cannot enroll if Major is

**BA 210  Intro to Applied Creativity  3 Credit Hours**
This is a course designed for undergraduate students that is aimed at improving their understanding of creativity and creativity problem solving. In addition, students will develop skills and learn methodologies, useful in a variety of contexts, to enhance personal and organizational creativity. Topics include: exploring the need for creativity, identifying specific creative challenges, methodologies to enhance personal and organizational creativity, and applying creativity to daily situations.

**Restriction(s):**
- Can enroll if Class is Sophomore or Junior or Senior

**BA 300  Career Planning and Development  1 Credit Hour**
This course is designed to provide students with the necessary skills to effectively identify, compete for, and secure career opportunities. Topics include assessment of career interests, exploration of career options, analysis of the job market/trend, effective use of employment search tools, development of job application materials, evaluation of job offers, and successful transition into new jobs or careers. Students will be provided with the opportunity to learn and practice career planning and job search strategies.

**Restriction(s):**
- Can enroll if Class is Sophomore or Junior or Senior
- Can enroll if Level is Undergraduate
- Can enroll if College is Engineering and Computer Science or Business
- Cannot enroll if Major is

**BA 305  College to Career Coaching  0 Credit Hours**
This course focuses on providing students with an ongoing process to help them develop and apply the skills and knowledge necessary to achieve their career goals. Through this course, eligible BBA students in the College of Business will have the opportunity to work, one on one, with an experienced career coach to enable them to successfully launch their career strategy upon graduation from the BBA program. Coaches actively partner with our students in a thought provoking and creative process that inspires them to maximize their personal and professional potential that helps bridge the gap between classroom knowledge and the realities of the business world.

**Prerequisite(s):** BA 300 or BI 350 or BI 355

**Restriction(s):**
- Can enroll if Level is Undergraduate
- Can enroll if College is Business
- Cannot enroll if Major is Prebusiness

**BA 320  Project Management and Leadership Skills  3 Credit Hours**
This course is intended to be a team-oriented, problem-based, interdisciplinary course in project management skills. Topics covered will include benefits of project management, definition of a project, development of a project plan, execution of a plan, and management of change. Leadership skills will be emphasized as they relate to conflict resolution, motivating and coaching team members, and listening to team members. Students will complete and present a project plan using the appropriate project management and presentation software. This course may help students prepare for professional certificates related to project management.

**Restriction(s):**
- Can enroll if Class is Junior or Senior
BA 330 Managerial Communication 3 Credit Hours
This course is designed to improve the student’s ability to communicate effectively within an organizational setting. Communication theory, strategies, techniques and skills that are essential for success in the business environment will be examined. Specific objectives during the semester will be to examine and improve managerial writing ability and to enhance interpersonal communication skills.
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107
Restriction(s):
Can enroll if Class is Junior or Senior

BA 400 Corporate Responsibility 3 Credit Hours
The focus of this writing intensive interdisciplinary course will be on examining the responsibility, if any, that business should have as part of the solution to the challenges of globalization. As part of this examination, the course will focus on corporate responsible behavior and its relationship to corporate governance and maximizing shareholder value. The ethical, business, and legal cases as they relate to corporate responsible behavior in the areas of human rights, labor, environment, and corruption will be examined.
Prerequisite(s): COMP 280 or COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore or Junior
Cannot enroll if Level is Graduate

BA 452 The Legal Environment of Bus 3 Credit Hours

BA 480 Seminar: Bus Administration 1 to 3 Credit Hours
To provide students with an opportunity for intensive study in current selected areas related to the research activities and/or professional activities of faculty members.
Restriction(s):
Can enroll if Class is Senior

BA 480A Seminar: Bus Administration 3 Credit Hours
Topic: Business Planning. This course aims to be a multidisciplinary seminar that requires students to explore a potentially profitable business idea and to develop an appropriate business plan as a document increasingly adopted for the submission and evaluation of business proposals. The interactive business laboratory will lead students from the assessment of their business idea to the definition of a detailed market research and the description of a trustworthy strategic plan. Finally, students will be also required to devise an accurate budget and a basic pro-forma financial statement in order to give accounting consistency to the business idea described in the first part of their business plans. Topics covered include: market analysis, strategic planning and organizational structure, cost definition & analysis, break-even point, budgeting and performance representation. (OC)

BA 480D Entre& Comm: Doing Bus in Det 3 Credit Hours
This entrepreneurship class addresses innovation, creativity, and the commercialization process to explore the implementation and feasibility of new business ideas. Topics include opportunity recognition, creativity and design thinking, market assessment, strategic and financial planning. Students will be exposed to resources from urban areas including speakers with experience and expertise in the entrepreneurial community. Students will use events and organizations like Detroit SOUP or Start Garden to understand urban business needs and idea generation. From there they will work in teams developing an understanding of creative thinking, innovation, market assessment and effective communication of business and commercialization opportunities while taking a business idea through an iterative process toward market realization.
Restriction(s):
Can enroll if Class is Junior or Senior

BA 490 Research: Bus Administration 1 to 3 Credit Hours
To provide the advanced student with the opportunity to undertake a research project under the supervision of a faculty member. At least two weeks prior to registration in the term when such a course is to be elected, an interested student must submit to the dean of the school a written request for permission to elect a research course, on a form available in the school office. The request will include a description of the proposed research project. The dean will review the proposal with faculty members to ascertain availability of relevant faculty supervision and to establish appropriate credit.
Restriction(s):
Can enroll if College is Business

BA 491 Bus Experiential Learning 3 Credit Hours
Full Course Title: Business Experiential Learning To provide an undergraduate student with the opportunity to undertake a business experiential learning project under the supervision of a faculty member. At least two weeks prior to registration in the term when such a course is to be elected, an interested student must submit to the department chair of the college a written request for permission to elect the experiential learning course, on a form available in the school office. The request will include a description of the experiential learning project. The department chair will review the proposal with faculty members to ascertain availability of relevant faculty supervision and to establish appropriate credit. (F,W,S)

Business Economics (BE)

BE 401 Managerial Economics 3 Credit Hours
This intermediate level course presents price theory with business applications. Topics include consumption utility theory, production and cost theory, market structures and pricing strategies. Statistical estimation techniques of economic models are presented as well as modern elaborations of price theory. (YR).
Prerequisite(s): ECON 202 and ECON 201 and (MATH 104* or MATH 113* or MATH 115* or Mathematics Placement with a score of 115 or MATH 105*)
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate
BE 403 Business Conditions Analysis 3 Credit Hours
This course prepares business students to evaluate domestic and global economic conditions, including the influences that business conditions abroad have on conditions here in the United States and how financial market conditions and crises influence the business environment. The course focuses on how decision makers in business can use an understanding of the economic environment to make better decisions.
Prerequisite(s): ECON 201

BE 487 Seminar: Business Economics 1 to 3 Credit Hours
To provide students with an opportunity for intensive study in current selected areas related to the research activities and/or professional activities of faculty members. Permission of College of Business.
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

BE 497 Research: Business Economics 1 to 3 Credit Hours
To provide the advanced student with the opportunity to undertake a research project under the supervision of a faculty member. At least two weeks prior to registration in the term when such a course is to be elected, an interested student must submit to the dean of the school a written request for permission to elect a research course, on a form available in the school office. The request will include a description of the proposed research project. The dean will review the proposal with faculty members to ascertain availability of relevant faculty supervision and to establish appropriate credit. Permission of College of Business.
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business

Business Internship (BI)

BI 350 Business Internship 3 Credit Hours
The internship provides full-time, paid business experience for students in a formal, monitored program. Participating employers hire students within parameters set by the internship program. Students are required to submit a report and other paperwork at the end of each work assignment and participate in an evaluative session with the internship staff.
Restriction(s):
Can enroll if College is Business

BI 355 Part-Time Business Internship 1 Credit Hour
The internship provides part-time, paid and unpaid business experience for students in a formal, monitored program. Participating employers hire students within parameters set by the internship program. Students are required to submit a report and other paperwork at the end of each work assignment and participate in an evaluative session within the internship staff. (A maximum of 6 credit hours of internship course work may be applied toward elective graduation requirements.)
Prerequisite(s): BA 300
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Degree is Bachelor of Business Admin
Can enroll if College is Business

BI 360 Business Internship 0 Credit Hours
This internship provides part-time, paid and unpaid business experience for students in a formal, monitored program. Participating employers hire students within parameters set by the internship program. Students are required to submit a report and other paperwork at the end of each work assignment and participate in an evaluative session with the internship staff.
Prerequisite(s): BA 300
Restriction(s):
Can enroll if Level is Undergraduate
Can enroll if Degree is Bachelor of Business Admin
Can enroll if College is Business

BI 450 Business Internship II 3 Credit Hours
The internship provides full-time, paid business experience for students in a formal, monitored program. Participating employers hire students within parameters set by the internship program. Students are required to submit a report and other paperwork at the end of each work assignment and participate in an evaluative session with the internship staff.
Prerequisite(s): BI 350

BI 455 Part-Time Bus Internship II 1 Credit Hour
The internship provides part-time, paid and unpaid business experience for students in a formal, monitored program. Participating employers hire students within parameters set by the internship program. Students are required to submit a report and other paperwork at the end of each work assignment and participate in an evaluative session within the internship staff. (A maximum of 6 credit hours of internship course work may be applied toward elective graduation requirements.)
Prerequisite(s): BI 355
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Degree is Bachelor of Business Admin

BI 460 International Business Intern 1 to 3 Credit Hours
The internship allows flexibility to engage in applied practical work experience outside of the United States, through paid or unpaid and full or part-time work experiences. Participating organizations hire students within parameters set by the Internship Office throughout their experience. Students are required to submit reports, evaluation documents and participate in an assessment session with the internship staff. Students are responsible for their own legal, housing and transportation issues. This course will satisfy general elective credit.
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if College is Business
Cannot enroll if Major is Prebusiness

BI 470 Business Internship III 3 Credit Hours
The internship provides full-time paid business experience for students in a formal, monitored program. Participating employers hire students within parameters set by the internship program. Students will have an increasing level of responsibility and application of academic knowledge, or students will be involved with application of new academic knowledge. Students are required to submit a report and other paperwork at the end of the work assignment and participate in an evaluative session with the internship staff.
Prerequisite(s): BI 450
Restriction(s):
Can enroll if College is Business
Cannot enroll if Major is Prebusiness
BI 475 Part-Time Bus Internship III 1 Credit Hour
The internship provides part-time paid and unpaid business experience for students in a formal, monitored program. Participating employers hire students within parameters set by the internship program. Student will have an increasing level of responsibility and application of academic knowledge, or students will be involved with application of new academic knowledge. Students are required to submit a report and other paperwork at the end of each work assignment and participate in an evaluative session within the internship staff. (A maximum of 6 credit hours of internship course work may be applied toward elective graduation requirements.)
Prerequisite(s): BI 455
Restriction(s):
Can enroll if Class is Senior or Junior
Can enroll if Degree is Bachelor of Business Admin

Business Policy and Strategy (BPS)

BPS 441 Small Business Management 3 Credit Hours
This course explores the fundamental processes of starting and managing a small business; it will survey a number of business disciplines required to effectively manage small enterprises. Topics covered include modes of business entry, business planning, customers & marketing, and managing growth. The course will culminate in the development and presentation of a comprehensive business plan for a new or small business. (YR)
Prerequisite(s): BA 320 and BA 330 and ACC 299

BPS 451 Strategic Management 3 Credit Hours
This course is intended to be a comprehensive and integrative capstone course for the undergraduate business student. The central focus of this course is strategic management as opposed to the functional orientation that the student has experienced in most of his/her previous courses. Emphasis is on strategy formulation and implementation. Topics covered include the analysis of a company’s external and internal environment; the development of a strategic vision and organizational objectives; the design of strategy at the functional, business, corporate, and international levels; and the creation of the organizational structure, operational policies and procedures, and reward systems.
Prerequisite(s): FIN 401 and (MIS 310 or ITM 310 or ISM 310 or ACC 380) and OB 354 and MKT 352 and OM 300 and BA 330
Restriction(s):
Can enroll if Class is Senior
Can enroll if Degree is Bachelor of Business Admin

Chemistry (CHEM)

CHEM 090 Introduction to Chemistry 3 Credit Hours
An introductory course in chemistry stressing fundamental principles of chemistry and the application of mathematics to chemistry and problem-solving. Topics will include chemical formulas and equations, stoichiometry, descriptive inorganic chemistry, behavior of gases and atomic structure. Students with high school chemistry and three years of high school mathematics should elect CHEM 114. Three hours lecture. (F).

CHEM 091 Introduction to Chemistry II 3 Credit Hours
The course is designed for the Chemistry 134/144 student whose background in chemistry is inadequate for success in 134/144. This course will be offered concurrently with Chem 090 (Introduction to Chemistry). It will begin after the first Chem 134/144 exam and will encompass the final nine weeks of the term. Topics will include chemical formulas and equations, stoichiometry, descriptive inorganic chemistry, behavior of gases, and atomic structure.

CHEM 100 Chemistry and Society 4 Credit Hours
An introductory course for nonscientists that examines the way chemistry impacts our world. The course will focus not only on what modern chemistry has accomplished, but more generally on the way scientists think and how they function. Topics include (a) air and water pollution, the ozone layer, global warming, acid rain, and other environmental chemistry; (b) the chemistry of plastics and polymers; (c) the chemistry of drugs and medicines; and (d) biotechnology and other topics include the influence of the media on scientific issues and the decision-making process in science. Three hours lecture, three hours lab. (YR).

CHEM 124 General Chemistry I 4 Credit Hours
An introduction to phenomena and principles of chemistry with emphasis on developing an understanding of the fundamentals of chemical processes. Concepts to be explored are chemical reactions, thermodynamics, equilibria, and kinetics. For students considering careers in life sciences, physical sciences and engineering. Three hours lecture, one hour recitation, three hours laboratory. Prerequisites are one year of high school chemistry and previous or concurrent enrollment in MATH 104 or 105. (F,W,S).
Prerequisite(s): MATH 104* or MATH 105* or Mathematics Placement with a score of 113
Corequisite(s): CHEM 124L

CHEM 124 General Chemistry IA 4 Credit Hours
An introduction to phenomena and principles of chemistry with emphasis on developing an understanding of the fundamentals of chemical processes. Concepts to be explored are chemical reactions, thermodynamics, equilibria, and kinetics. For students considering careers in life sciences, physical sciences and engineering. Three hours lecture, one hour recitation, three hours laboratory. Primarily designed for students considering careers in life sciences or physical sciences. (F,S,W).
Prerequisite(s): MATH 104* or MATH 105* or MATH 113* or MATH 115* or Mathematics Placement with a score of 105 or Mathematics Placement with a score of 115

CHEM 134 General Chemistry IIA 4 Credit Hours
Continuation of CHEM 134. Concepts explored include conceptual and quantitative treatments of intermolecular forces, physical properties of solutions, chemical kinetics, chemical equilibria, acid-base equilibrium, thermodynamics, and electrochemistry. Primarily designed for students majoring in the physical sciences and the life sciences. (F,W,S)
Prerequisite(s): CHEM 134
CHEM 144 Gen Chemistry IB  4 Credit Hours
This course consists of an introduction to chemistry, its phenomena, and principles explored in the context of real-world examples (e.g. the automobile). Core concepts include states of matter, atomic and electronic structure, types of reactions (acid-base and reduction-oxidation), structure and bonding, gas laws, stoichiometry, thermodynamics, chemical equilibrium, and the chemical composition of the atmosphere and air pollution problems. Three hour lecture, one hour recitation, three hours laboratory. Primarily designed for students considering careers in engineering. (F)
Prerequisite(s): MATH 105* or Mathematics Placement with a score of 113 or Mathematics Placement with a score of 115

CHEM 146 General Chemistry IIB  4 Credit Hours
Continuation of CHEM 144. This course consists of an introduction to chemistry, its phenomena, and principles explored in the context of real-world examples (e.g. the automobile). Core concepts to be explored include the solid state, chemical kinetics, electrochemistry and its applications (e.g. batteries, fuel cells, and corrosion), an introduction to organic functional groups, their reactions, and spectroscopic identification, and the preparation and properties of synthetic polymers. Primarily designed for students considering careers in engineering. (W)
Prerequisite(s): CHEM 144

CHEM 225 Organic Chemistry I  3 Credit Hours
The initial course in organic chemistry. A general introduction to organic chemistry with emphasis on the development of structure theory and functional group chemistry. Three hours lecture, one hour recitation. (FS).
Prerequisite(s): CHEM 136 or CHEM 146
Corequisite(s): CHEM 225R

CHEM 225R Organic Chemistry I Recitation  0 Credit Hours
Recitation component of CHEM 225. Must be taken concurrently with CHEM 225.
Corequisite(s): CHEM 225

CHEM 226 Organic Chemistry II  3 Credit Hours
A continuation of CHEM 225. Topics include functional group chemistry and properties of carbohydrates, amino acids, and aromatic compounds. Three hours lecture, one hour recitation. CHEM 225 and 226 constitute a two-semester sequence in organic chemistry, suitable for students in the basic sciences or engineering or with interests in one of the health professions. (WS).
Prerequisite(s): CHEM 225
Corequisite(s): CHEM 226R

CHEM 226R Organic Chemistry II Rec  0 Credit Hours
Recitation component of CHEM 226. Must be taken concurrently with CHEM 226.
Corequisite(s): CHEM 226

CHEM 227 Organic Chemistry Laboratory  2 Credit Hours
Development of the basic laboratory techniques of organic chemistry. The chemistry of functional groups is studied and various organic compounds are synthesized and purified. Eight hours laboratory. (FWS).
Prerequisite(s): CHEM 226*

CHEM 228 Org Chem Lab for Chem/Bchm  2 Credit Hours
CHEM 228 incorporates chemical reactions and techniques for the synthesis, purification, and characterization of organic molecules. Students will conduct modern organic chemical experiments, collect data using modern instrumentation, analyze that data, and explain their reasoning in written and visual formats. Students will learn techniques to conduct multi-step synthesis, isolation, and purification of organic molecules and use modern techniques for molecular structure elucidation and to analyze pure samples and mixtures. This course is aimed at students majoring in chemistry or biochemistry. Students cannot receive credit for both CHEM 227 and CHEM 228. (FW)
Prerequisite(s): ((CHEM 134 and CHEM 136) or (CHEM 144 and CHEM 146)) and CHEM 225 and CHEM 226*
Restriction(s):
Can enroll if Major is Chemistry (ACS Certified, Biochemistry

CHEM 230 Org Chem Lab for Chem/Bchm  2 Credit Hours
CHEM 230 incorporates chemical reactions and techniques for the synthesis, purification, and characterization of organic molecules. Students will conduct modern organic chemical experiments, collect data using modern instrumentation, analyze that data, and explain their reasoning in written and visual formats. Students will learn techniques to conduct multi-step synthesis, isolation, and purification of organic molecules and use modern techniques for molecular structure elucidation and to analyze pure samples and mixtures. This course is aimed at students majoring in chemistry or biochemistry. Students cannot receive credit for both CHEM 227 and CHEM 230. (FW)
Prerequisite(s): ((CHEM 134 and CHEM 136) or (CHEM 144 and CHEM 146)) and CHEM 225 and CHEM 226*
Restriction(s):
Can enroll if Major is Chemistry (ACS Certified, Biochemistry

CHEM 285 Introduction to Glass Blowing  1 Credit Hour
A study of the nature, properties, and manufacture of glass. Laboratory experience in the manipulation of glass and the construction of scientific apparatus. Discussions, laboratory, and field trips. (AY).

CHEM 303 Inorganic Chemistry I  3 Credit Hours
A study of the chemistry of the elements and their periodic relationship. Bonding theories and structures as well as descriptive chemistry of the representative elements will be emphasized. Three hours lecture. (F).
Prerequisite(s): CHEM 136 or CHEM 146

CHEM 325 Principles of Organic Chem  3 Credit Hours
A one-semester introduction to the compounds of carbon, with an emphasis on structure, preparation, reactivity and characterization of different functional groups. Both aliphatic and aromatic compounds will be examined. The important role of organic compounds in modern society will be highlighted with real world examples including fuels, detergents, plastics, medicines, biomolecules, environmental pollutants and additives. This course may not be used to satisfy the organic chemistry prerequisite for the Biochemistry, Biology, Chemistry, or Microbiology degree programs. Students may not receive credit for both CHEM 225 and 325. CHEM 325 may not be used as a prerequisite for Chemistry 226.
Prerequisite(s): CHEM 124 and (CHEM 136 or CHEM 146)
Restriction(s):
Cannot enroll if Major is Microbiology, Chemistry (ACS Certified), Chemistry (Instructional), Biochemistry, Biological Sciences
CHEM 344  Quantitative Analysis  4 Credit Hours
A survey of theory and practice of volumetric, gravimetric, electrometric and colorimetric analysis. Systematic analysis of complex materials. Two hours lecture, eight hours laboratory. (F).
Prerequisite(s): CHEM 136 or CHEM 146
Corequisite(s): CHEM 344L

CHEM 348  Environmental Chemistry  3 Credit Hours
Description of the concepts, principles, practices, and current problems in the chemistry of natural waters, the soil, and the atmosphere. Three hours lecture. (AY).
Prerequisite(s): CHEM 344 and (CHEM 225 or CHEM 325)

CHEM 349  Environmental Chem Laboratory  1 Credit Hour
Collection and analysis of air, water, soil, and organisms for pollutants such as noxious gases, heavy metals, and trace organics. EPA-approved methods are emphasized. Four hours laboratory. (AY).
Prerequisite(s): CHEM 348* or ESCI 348*

CHEM 352  Introduction to Toxicology  3 Credit Hours
An introduction to the principles of toxicology with an emphasis on environmental toxicology. Major topics include toxic agents, toxicological mechanisms, and use of toxicological reference literature. Discussion of chemical carcinogenesis, genetic toxicology, immunotoxicology, teratology, and toxic responses of the skin, eyes and nervous system. Three hours lecture. (AY).
Prerequisite(s): CHEM 225

CHEM 368  Physical Chemistry I  3 Credit Hours
Nature of the gaseous state, chemical thermodynamics, biochemical and chemical equilibria and kinetics. Three hours lecture, one hour discussion. (W).
Prerequisite(s): CHEM 225 and MATH 115 and (PHYS 125 or PHYS 150)

CHEM 370  Principles of Biochemistry  3 Credit Hours
A concise but comprehensive survey of various areas of biochemistry designed for non-biochemistry majors. The course follows the standard approach to the subject including a description of cells, their structure and constituent macromolecules (proteins, nucleic acids, carbohydrates and lipids), enzymology, bioenergetics, intermediary metabolism and gene regulation. Students cannot take both BCHM 370 and 470 or 471 for any combination of concentration, cognate or minor requirement. Three hours lecture. (AY).
Prerequisite(s): BIOL 140 and CHEM 226

CHEM 390  Current Topics in Chemistry  1 to 3 Credit Hours
A course in special topics current to the field of chemistry. Topics and format for the course may vary. See current Schedule of Classes. One to three hours seminar. Permission of instructor. (OC).

CHEM 397  Current Topics in Chemistry  3 Credit Hours
A course for non-science majors which focuses on the interaction of chemistry and society. Sufficient chemical knowledge will be introduced so that the issues can be discussed and competing statements evaluated. Topics covered will include air and water pollution, fuels, designing drugs, etc. (OC).

CHEM 403  Inorganic Chemistry II  3 Credit Hours
A study of coordination and organometallic compounds through the use of current theories. The structure, reactivity, and descriptive chemistry of transition metal complexes will be examined. Three hours lecture. (W).
Prerequisite(s): CHEM 303 and (CHEM 368* or CHEM 468)

CHEM 426  Advanced Organic Chemistry  3 Credit Hours
Spectral analysis, structure determination, reaction mechanisms, synthesis, stereochemistry, and other selected topics are discussed. Three hours lecture. (AY).
Prerequisite(s): CHEM 226 and CHEM 227

CHEM 430  Bioinorganic Chemistry  3 Credit Hours
This course examines the roles that metals play in biological systems, including the chemical principles that make metal ions well-suited for roles in protein structure, in redox catalysis and in acid base chemistry. The physical and experimental techniques that are applied to explore the structure and function of metals in natural systems will be introduced using case studies from the primary scientific literature in the field. BCHM 370 or its equivalent are strongly recommended but not required.
Prerequisite(s): CHEM 136 and BIOL 140

CHEM 435  Green Chemistry  3 Credit Hours
An examination of green chemistry principles and methods used to assess and improve chemical processes with respect to environmental impact. Topics include: concepts of green chemistry, waste prevention, catalysis, renewable resources, alternative energy resources, and green technologies.
Prerequisite(s): CHEM 226 or CHEM 325
Restriction(s):
Cannot enroll if Class is Graduate

CHEM 436  Polymer Chemistry  3 Credit Hours
The macromolecular concept is introduced and polymerization mechanisms are discussed. The chemistry and physical properties of representative polymeric materials are presented. Topics include the determination and distribution of molecular weights, polymer morphology, mechanical properties of polymers, relaxation phenomena in polymers, and methods of polymer characterization. Three hours lecture. (AY).
Prerequisite(s): CHEM 226 and (CHEM 368* or CHEM 468)

CHEM 437  Nano-Biotechnology  3 Credit Hours
An introduction to the fundamentals of nanotechnology, nano-fabrication processes and its application in different fields with special attention to the life sciences. This course introduces different tools used in nanotechnology and investigates how one can borrow the idea of self-assembly from nature to design structures at the nanometer scale. The course also focuses on different contemporary application areas of nanotechnology like biosensor development, cancer research and drug delivery. The research areas of selected companies that are applying nanotechnology to develop new products will also be explored. This course showcases the interchange of ideas between chemistry, materials science and engineering in solving complex biological problems.
Prerequisite(s): (CHEM 136 or CHEM 146) and (PHYS 126 or PHYS 151) and BIOL 140
Restriction(s):
Can enroll if Class is Junior or Senior

CHEM 447  Instrumental Methods of Analysis  4 Credit Hours
A study of the theory, operation, and application of instrumental methods of chemical analysis including optical, magnetic, electrochemical, and separation techniques. Two hours lecture, eight hours laboratory. (W).
Prerequisite(s): CHEM 344
CHEM 450  Adv Org Syn & Character Lab  1 Credit Hour
Advanced techniques are applied to synthesis and characterization of organic compounds. Spectroscopic and chromatographic data collection and interpretation are critical to success in the course. Formal writing and data presentation is emphasized. Oral presentation and a poster presentation is required. Crossover experiments with CHEM 452 are likely. Four hours laboratory. This course serves as part of the CACS Capstone experience. (W).
Prerequisite(s): CHEM 227 and CHEM 226 and CHEM 447 and CHEM 468
Corequisite(s): CHEM 452

CHEM 452  Adv Inorg Synth & Char Lab  1 Credit Hour
Advanced techniques are applied to the synthesis and characterization of inorganic compounds. The ability to collect and interpret spectroscopic data is an important aspect of the course. Technical writing and data presentation is emphasized. Oral presentation and a poster presentation is required. Crossover experiments with CHEM 450 are likely. Time is expected outside of the course hours. This course serves as part of the CACS Capstone Experience.Four hours laboratory. (W).
Prerequisite(s): CHEM 226 and CHEM 227 and CHEM 136 and CHEM 403 and CHEM 447 and CHEM 481
Corequisite(s): CHEM 450

CHEM 469  Physical Chemistry II  3 Credit Hours
Nature of the liquid state, simple mixtures, heterogeneous equilibria; quantum theory, atomic and molecular structure, spectroscopy; statistical thermodynamics. Three hours lecture, one hour discussion. (F).
Prerequisite(s): CHEM 368

CHEM 470  Biochemistry I  3 Credit Hours
Life processes from a chemical viewpoint: structure/function relationships of biomolecules, with emphasis on proteins, enzyme kinetics, and mechanisms of action. Three hours lecture. (W).
Prerequisite(s): (BIOL 130 and BIOL 140 and CHEM 134) or (CHEM 144 and CHEM 136) or (CHEM 146 and CHEM 225)

CHEM 471  Biochemistry II  3 Credit Hours
Intermediary metabolism, bioenergetics, energy transformation, metabolic interrelationships, biochemical regulation, highly structured subcellular biochemical systems. Three hours lecture. (W).
Prerequisite(s): BCHM 470 or CHEM 470 or BIOL 470

CHEM 472  Biochemistry Laboratory I  1 Credit Hour
The techniques of preparative and analytical biochemistry. Preparation and characterization of proteins and nucleic acids. Physical and chemical properties of proteins and nucleic acids. Four hours laboratory. CHEM 344 Recommended. (F).
Prerequisite(s): (BIOL 470* or BCHM 470* or CHEM 470*) and CHEM 227

CHEM 473  Biochemistry Laboratory II  1 Credit Hour
The techniques of preparative and analytical biochemistry. Preparation and characterization of lipids and carbohydrates. Methods in metabolism. Four hours laboratory. (W).
Prerequisite(s): (BCHM 471* or BIOL 471* or CHEM 471*) and (BCHM 472* or BIOL 472* or CHEM 472*)

CHEM 481  Physicochemical Measurements  2 Credit Hours
This course requires laboratory work including measurements of properties of pure liquids and solutions, studies of phase equilibria, thermochemical measurements, and analysis of atomic and molecular spectra. Eight hours laboratory. (W).
Prerequisite(s): CHEM 469*

CHEM 490  Topics in Chemistry  1 to 3 Credit Hours
Examination of problems and issues in selected areas of chemistry. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. One to three hours lecture. (YR).
Prerequisite(s): CHEM 226
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

CHEM 490D  Topics in Chemistry  3 Credit Hours
Topic: Bioinorganic Chemistry. Introduces the roles metals play in biological systems. Explores chemical principles that make metals particularly well suited for these roles. Introduces physical and experimental techniques used to explore the structure and function of metals in natural systems. Explores case studies from the literature to synthesize results of various experiments to develop a final understanding of the systems. Students will not receive credit for both CHEM 490D and 590B.
Prerequisite(s): CHEM 226 and BIOL 140

CHEM 493  Chemistry Capstone Portfolio  1 Credit Hour
Employment or graduate studies in chemistry involve integration of experiences and knowledge from one's undergraduate courses. This course is designed to help prepare students for their professional endeavors beyond UM-Dearborn. Students will submit a proposal for a senior project, present the completed project in an appropriate forum, and submit a written report on the project. Students will assemble and present a professional portfolio, and complete an exit interview. The experimental work on the project may be done in an advanced laboratory course or an independent study. (F, W).
Restriction(s):
Can enroll if Class is Senior

CHEM 495  Off-Campus Research Participat  1 to 3 Credit Hours
Participation in ongoing experimental research at an off-campus laboratory. Arrangements made between the research laboratory, the student and the chemistry concentration advisor. No more than six hours combined from CHEM 495, 498, and 499 may be credited toward the 120 hours required for a degree. Four to twelve hours laboratory. Permission of concentration advisor. (F,W, S).

CHEM 497  Seminar in Chemistry  1 Credit Hour
Weekly seminars on topics of current chemical interest presented by faculty members, guest lecturers or students. The subject will vary from term to term. The course may be elected up to three times. One hour seminar. (W).
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate
Cannot enroll if Major is Chemistry (Instructional), Chemistry (ACS Certified)

CHEM 498  Readings in Chemistry  1 to 3 Credit Hours
Library research in a specific area of chemistry performed under the guidance of a faculty member. No more than six hours combined from CHEM 495, 498 and 499 may be credited toward the 120 hours required for a degree. Four to twelve hours of readings. Permission of instructor. (F,W, S).

CHEM 499  Laboratory Research in Chem  1 to 3 Credit Hours
Directed laboratory research performed under the guidance of a faculty member. No more than six hours combined from CHEM 495, 498 and 499 may be credited towards the 120 hours required for a degree. Four to twelve hours laboratory. Permission of instructor. (F,W, S).
Chinese (CHIN)

CHIN 101  Beginning Chinese I  4 Credit Hours
First course in a two-course elementary Chinese sequence. Listening comprehension, speaking, reading, writing, and culture are emphasized. Course materials promote the use of language to communicate with others and to function in the Chinese-speaking world. (F)
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science or Education, Health, and Human Services or Business or Arts, Sciences, and Letters

CHIN 102  Beginning Chinese II  4 Credit Hours
Second course in the two-course elementary sequence. Continued emphasis on culture and the four skills of listening, speaking, reading, and writing. (W)
Prerequisite(s): CHIN 101
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if Level is Undergraduate

Civic Engagement (CIVE)

CIVE 333  Service-Learning Practicum  1 Credit Hour
CIVE 333 is a one credit course that links an academic service-learning project to a relevant three or four credit course (not an independent study course) in which the student is or was recently enrolled. Students complete at least 30 hours of pre-approved, unpaid service hours. Students reflect upon their experience and its current and future impact through the writing of reflection papers, other brief writing assignments, and a final project. A student may repeat CIVE 333 up to three times with different linked courses.
Restriction(s):
Can enroll if College is Engineering and Computer Science or Business or Arts, Sciences, and Letters

Communication (COMM)

COMM 220  Intro to Media & Culture  3 Credit Hours
Full Course Title: Introduction to Media and Culture: Course focuses on the role of media as cultural institutions that both maintain and challenge power structures. Includes critical analyses of media such as television, music, film, internet, and print publications, as well as emerging technologies. Course examines media as being shaped by but also shaping cultural, economic, legal, political and other aspects of society. Considers the role of media in a democracy, as crucial forums for the deliberation of pressing issues, and as key sites for the creation of meaning.
Prerequisite(s): COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 270 or COMP 280

COMM 260  Public Relations Principles  3 Credit Hours
Explores how public relations, as an area of communications management and production, can contribute to an organization's success. Provides a comprehensive introduction to the field of public relations, including: history and contemporary professional status of the public relations practitioner; role of public relations as a management discipline; major areas of public relations work, including media relations, public affairs, issues management, lobbying, organizational relations, development; techniques of public relations production - planning and presentation - with attention to the uses of specific tools available to practitioners, i.e., news releases, brochures, multimedia, Internet communications, special events. (YR).
Prerequisite(s): COMM 220

COMM 290  Communications Practicum  3 Credit Hours
COMM 290 (Practicum) provides introductory instruction and practice in a number of practical communications skills, with the field and focus changing each time the course is offered. (AY).
Prerequisite(s): COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 270 or COMP 280

COMM 300  Communication Research Methods  3 Credit Hours
Gives detailed view of landmark research studies in the field. Acquaints students with logic of research inquiry, design and analysis, including questions of validity, reliability, causation, etc. Imparts basics of various research methods used in the communication field, such as survey interviews, depth interviews, focus groups, content analysis, and rhetorical analysis. Students design and conduct at least one study in communication, individually or in groups. (FW).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107

COMM 306  Comparat. American Identities  3 Credit Hours
This course will confront and complicate the following key questions: what does it mean to be an American? What is American culture? Participants in this course will respond to the questions central to the American Studies field by reading and discussing historical, sociological, literary, artistic, material culture, political, economic, and other sources. Students will use this interdisciplinary study to examine the multiple identities of Americans - as determined by factors such as gender, race, class, ethnicity, and religion. While emphasizing the diversity of American culture, participants will consider some core values and ideas unifying America both in historical and contemporary society. Students will be invited to seek out and share fresh narratives of the American experience.
Prerequisite(s): COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 270 or COMP 280
Restriction(s):
Can enroll if Level is Undergraduate
COMM 317  Case Studies in Tech Writing  3 Credit Hours
COMM 317 offers both practical and conceptual studies in technical writing and is open to non-technical as well as technical students. The course offers in-depth treatment of the communication problems and various document designs common to technical writing professionals. Instructional format includes lectures and discussions based on case material derived from actual events, followed up by preparation of written documents. Topics include document design, language barriers, and the role of the technical documents in product liability. (F,W,S).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

COMM 340  Professional Communication  3 Credit Hours
Course covers essential skills of professional written and oral communication within the organization; the purpose, process, and problems of professional communication; the influence of organizational structure; audience analysis; the writing and editing of reports (formal and informal, including memo reports) and of professional correspondence; the preparation of graphics; and the planning and delivery of oral presentations. May count toward Communications minor. (F,W,S).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

COMM 360  Social Media for PR  3 Credit Hours
This course explores the emerging social media technologies and studies their application in contemporary PR practice. It examines the nature and role of social media in organizations and explores technologies including blogs, Microblogs, collaboration tools, podcasts, viral video, social bookmarking, mobile platforms, and other evolving technologies.
Prerequisite(s): COMM 260
Restriction(s):
Cannot enroll if Class is Freshman

COMM 364  Writing for Civic Literacy  3 Credit Hours
In Writing for Civic Literacy, students will study how politicians, the media and critical citizens use language to engage with the broader community. Students themselves will learn to use language to become more active, well-informed citizens. They will study rhetorical awareness, audience analysis and persuasive writing techniques and put those lessons to use in community settings. They will perform community service at agencies of their choosing and use those experiences as objects of analysis, researching the social context in which those agencies operate and writing analytically about the agencies. Further, students will synthesize classroom lessons and real-world experience by executing writing tasks for and with the agencies (these tasks might include editorials for the local press, informational webpages and fundraising materials).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

COMM 365  Health Communication  3 Credit Hours
Provides skills necessary for creating, interpreting, and critically evaluating messages about issues related to health and illness and encouraging active participation in healthcare. Examines theory and research regarding messages related to physical, mental, and social well-being from interpersonal, organizational, and mass communication approaches. (W,YR)
Restriction(s):
Can enroll if Class is Junior or Senior

COMM 366  Public Comm and Culture Stdies  3 Credit Hours
This gateway course provides the theoretical and methodological foundation to embark on the study of three key interrelated spheres of communication: Public and Organizational Culture, Public Advocacy and Democratic Culture, and Intercultural Communication and Global Culture. Students will have the opportunity to examine salient societal issues within each of the major areas, and explore connections between the different areas. Through a variety of class exercises and both individual and collaborative projects, the course will help students to acquire an analytical and practical "toolkit" enabling them to function effectively as communicators in culturally diverse organizations and civic contexts.

COMM 381  Postwar European Cinema  3 Credit Hours
The course will concentrate on a series of films from various European countries with a focus on the socio-political issues, historical events and cultural preoccupations that have defined and also challenged European societies from WWII to the present. Zeroing in on the construction of European identities, the course will analyze and compare modes of narrating national, class, racial, sexual and social differences in different European nations. Themes such as memories of war and the Holocaust, new conflicts, class, immigration, women's rights, gender, and East-West relations will be addressed. The course will thus privilege a cinema that offers a "récit," a story. Particular attention will be given to discourses on otherness and on the ways in which film culture has reflected, reinforced, reshaped and, in some instances, contested Europe's past and current dominant ideologies, and identities. Readings by cultural historians and analysts will provide the context for an understanding of the films. The course will conclude with a discussion of the possible existence of a specific postwar European Cinema.

COMM 398  Independent Studies-Comm  1 to 3 Credit Hours
Readings, supervised practice, or analytical assignments in Communications, determined in accordance with the needs and interests of those enrolled. May count toward Communications minor. (F,W).
COMM 400 Narrative and Identity 3 Credit Hours
This class explores the role that communication plays through storytelling in the creation and management of the identities people inhabit at various levels of society. We examine the ways in which personal, family, subcultural, organizational, mass mediated, and intercultural and transnational narratives can affect the shaping and reshaping of individual and group identities. This includes the study of multiple identities as members of families, communities, civil societies, and businesses, and those that involve different social locations like gender, race, and ethnicity. Students will learn theoretical tools and examine case studies to better understand the communicative aspects of identity creation and recreation. (YR).
Restriction(s):
Can enroll if Class is Junior or Senior

COMM 420 Critical Media Studies 3 Credit Hours
Course presents various critical approaches to the study of the media. Perspectives include political economy, cultural studies, critical theory of the Frankfurt school and feminism. Through readings and first hand analysis of the media students will delve deeply into the institutional underpinnings, content, use and reception of media. There will be special emphasis on how broader economic, cultural and technological changes influence our experience of media in everyday life as creators, citizens, audiences and consumers.
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
Restriction(s):
Can enroll if Class is Junior or Senior

COMM 422 Language and Popular Culture 3 Credit Hours
This course provides an overview of popular culture theories and communication models along with research methods. It offers an accessible, in-depth presentation of popular culture including music, film, television, magazines, comics, animation, and advertising in the US and the beyond. The main focus of the course is to highlight the functions of language, particularly, dialects, accents, and foreign languages, in producing and consuming local and global pop culture texts.
Restriction(s):
Can enroll if Level is Undergraduate

COMM 430 International Communications 3 Credit Hours
Course examines the relationship between globalization and communication from various vantage points such as cultural imperialism, global media flows, and hybridity theory. Students use these theoretical approaches to understand how people in particular locations experience, adapt, resist and modify globally circulating aspects of media, popular culture, news and information. Through critical responses to readings, class exercises, individual and team projects, students also explore how global pressures and changes influence the way people understand and project their identities, buy and sell communication as a commodity, negotiate borders, and create social change.
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
Restriction(s):
Can enroll if Class is Junior or Senior

COMM 44020th Century Public Argument 3 Credit Hours
This class is a survey of American public address in the 20th Century. Students will examine and critically analyze several of the most significant speeches and rhetorical movements of the last one hundred years. Through lectures, discussions, and analysis of speeches and other artifacts, we will focus on the relationship between rhetoric and history, and how theories of rhetorical action help us appreciate the role of discourse in the effective functioning of a democratic system. Students will learn to utilize several critical perspectives as a means of understanding both historical and contemporary political discourse. (W).
Prerequisite(s): SPEE 101

COMM 450 Principle of Organization Comm 3 Credit Hours
Course examines how communication networks function in organizations. Purpose: to provide an organizational context and conceptual framework for the practice of professional writing and speaking skills. Writing projects include a research report, a case study, and several shorter papers, practical and analytical, on assigned topics. Students cannot receive credit for both COMM 450 and COMM 550. (OC).
Prerequisite(s): COMM 340 or COMM 360 or COMM 440
Restriction(s):
Can enroll if Class is Junior or Senior

COMM 455 Gender and Media Studies 3 Credit Hours
The course will focus on several feminist approaches used in understanding the media and attempting to create social change through the media. The role of media in the definition and reproduction of gender-based hierarchies and in the renegotiation of gender boundaries will both be explored. To this end, both mainstream and women's media will be examined. The course will take a multicultural and international perspective, incorporating concerns of class, race, ethnicity, and nation as these intersect with the study of gender and media. Mainstream and alternative media will be analyzed through readings, films, case studies, in-class collaborative exercises and longer term projects. News, entertainment, and advertising genres will be examined in a variety of media such as the printed press, television, video, film, and the Internet. (W).
Prerequisite(s): WGST 275 or WGST 303 or ANTH 275 or PSYC 275 or SOC 275 or ANTH 303 or PSYC 303 or SOC 303 or HUM 275 or HUM 303 or WST 275
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
Can enroll if Level is Undergraduate

COMM 460 Public Relations Campaigns 3 Credit Hours
Focuses on strategies and tactics involved in planning and implementing a public relations campaign. Extends and refines skills acquired in earlier, prerequisite course work by incorporating management, production, and writing within a four-stage model for planning and action. This model provides a framework for role-playing, case study work, and projects done for evaluation by public relations professionals at local firms. The semester's portfolio of finished communications and "mock-ups" - including planning materials, news releases, brochures, newsletters, Internet communications, video and audio scripts - should demonstrate command of entry-level, professional abilities as a public relations campaign manager and producer. (YR).
Prerequisite(s): COMM 260 and (COMM 360 or COMM 440)
**COMM 462**  Transnational Rhetorics  3 Credit Hours  
Full Course Title: Transnational Rhetorics: Writers Across Borders

"Transnational Rhetorics" engages students in reading and writing stories that cross various forms or borders. These borders might be national, as in stories about immigration or displacement. Or, the borders might be more abstract, like the assumed borders between race, class, and gender, or even the possible barriers we perceive between personal experience and world events. In this course, we will read stories about people who reflect on these kinds of border-crossings. We will then take a rhetorical approach to these narratives and examine how they work, what similarities they share, and importantly, how they address their audiences. Then, we will then produce—in turn—our own border-crossing essays that attend to the same issues of audience, context, narrative, and creativity. (OC)

**Prerequisite(s):** COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

**COMM 464**  Contemporary Rhetorical Theory  3 Credit Hours  
An examination of contemporary rhetorical theories through study of representative practitioners and related developments in linguistics, philosophy, psychology, communication, and composition and rhetoric. Students may not receive credit for both COMM 464 and COMP 564.

**Prerequisite(s):** COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

**Restriction(s):**  
Cannot enroll if Class is Junior or Senior

**COMM 466**  Arguing Feminism: Rhetoric, Writing & Advocacy  3 Credit Hours  
Full course title: Arguing Feminism: Rhetoric, Writing & Advocacy. An introduction to the work of major twentieth century feminists working in rhetoric and related fields. Students examine recurring themes of language, meaning, ethics and ideology, and practice writing strategies which address rhetorical and ethical concerns central to feminist/academic writing. (AY).

**Prerequisite(s):** COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107

**Restriction(s):**  
Cannot enroll if Class is Freshman  
Can enroll if Level is Undergraduate

**COMM 477**  Prof Communication Ethics  3 Credit Hours  
An examination of professional communication ethics in the organizational context, focusing on important issues, problems, and concepts. This course is designed to help students become conscious of the role of values in a wide range of professional communication situations; to locate organizational behavior in an ethical framework based on considered definitions, standards, perspectives, and criteria for evaluation and analysis; to consider individuals as well as organizations as moral agents in a changing and complex universe; and to analyze topical cases on emergent issues in communication ethics. Some sample topics: ethics in decision-making and conflict-resolution; privacy and confidentiality; sexual harassment; whistleblowing; the "engineering" of consent; corporate image and ethos; issues in documentation, record-keeping, and technology; "issues management" and corporate responsibility; groupthink; obedience and personal responsibility; employee socialization. Students cannot receive credit for both COMM 477 and COMM 577. (OC).

**Prerequisite(s):** COMM 340 or COMM 360 or COMM 440 or COMM 450

**Restriction(s):**  
Can enroll if Class is Junior or Senior

**COMM 481**  Gender and Globalization  3 Credit Hours  
Mass media, politics, and academia are full of references to globalization, and a future "world without borders." This interdisciplinary course considers the implication of globalization for women's lives, gender relations, and feminism. Topics covered include the global factory, cross-cultural consumption, human rights, global communications, economic restructuring, nationalism, and environmental challenges. Rather than survey international women's movements, this course explores how globalization reformulates identities and locations and the political possibilities they create. (AY).

**Prerequisite(s):** HUM 303 or SOC 303 or PSYC 303 or WGST 303

**Restriction(s):**  
Cannot enroll if Class is Freshman or Sophomore  
Can enroll if Level is Undergraduate  
Can enroll if College is Arts, Sciences, and Letters

**Comparative Literature (COML)**

**COML 221**  Great Books I: Ancient World  3 Credit Hours  
Introduction to masterpieces of Western world literature from the ancient world. Readings include the Bible, Iliad, Odyssey, Greek drama, and Roman authors. (YR).

**COML 222**  Great Books II  3 Credit Hours  
Introduction to masterpieces of Western world literature from the Middle Ages and Renaissance. Readings include Dante, Chaucer, Wolfram, Cervantes, Shakespeare, Moliere, and Racine. (YR).

**COML 223**  Great Books III: Modern Era  3 Credit Hours  
Introduction to masterpieces of Western world literature from the Modern Era. Readings include Swift, Voltaire, Rousseau, English romantic poets, fiction and drama of the 19th and 20th century. (YR).
COML 301  Literary Criticism  3 Credit Hours
This course introduces literary criticism and theory from Aristotle to the present, focusing on the changing concept of literature's nature and function. Lectures, readings, and discussion cover such critics as Aristotle, Dryden, Pope, Johnson, Wordsworth, Coleridge, Arnold, T. E. Hulme, I. A. Richards, T. S. Eliot, and such movements as New Criticism, Phenomenology, Reader-Response, Archetypal Criticism, psychological approaches to literature, New Historicism, Marxism, Feminism, and Deconstruction. (OC).
Pre requisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

COML 302  Arabic and Comparative Literature in English  3 Credit Hours
This course examines the intersectionality of Arabic literature and world literature in a comparative context. Students study Arabic literary works and compare them to works in the European and other literary traditions. The comparative analyses highlight similarities and differences among cultures, literary styles, and themes, that at once unite and diversify the human condition. The course places Arabic literature as a significant contributor to world literature and culture. Classes are conducted in English. Students who wish for this course to count for language credit can do the required writing in Arabic. (F, OC, S, W).

COML 303  The Arabic Novel and Short Story in Translation  3 Credit Hours
This course examines the robust tradition of Arabic fiction, offering examples of short stories, novellas, and novels. The course is designed for non-speakers of Arabic as all the texts are translated in English. The survey of narratives relies on three considerations. First, the analysis that the novels lend themselves to, including narrative strategies, feminism, psychoanalysis and postcolonialism. Second, the novels cover some of the recurrent themes of Arabic fiction, such as war, memory, class struggle, migration, and childhood. Third, the novels and short fiction writers represent the national and cultural diversity of the region, ranging from Morocco to Egypt, Lebanon, Sudan, Iraq, and Yemen. Classes are conducted in English. Students who wish for this course to count for language credit can do the required writing in Arabic. (F, OC, S, W).

COML 304  Modern European Short Fiction  3 Credit Hours
A careful reading of between 10 and 15 short novels (in English translation) with particular attention being paid to the manner in which their plots and characters express contemporary cultural issues. Such works as Dostoyevsky's Notes from Underground, Conrad's Heart of Darkness, and Unamuno's Abel Sanchez will be included.
Pre requisite(s): ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200

COML 341  Mod Eur Poetry in Translation  3 Credit Hours
Movements and genres of modern European poetry, from the Symbolists to the present. Included will be such poets as D'Annunzio, Cavafy, Rilke, Blok, Mayakovsky, Valery, Eliard, Pavese, Seferis, Akhmatova, Mandestraum, Marinetti, Trakl, Mistrale, Vallejo, Morgenstern, Apollinaire, Loren, Transtromer, Brodsky, Milosz, and others in translation. (OC).
Pre requisite(s): ENGL 231

COML 344  Modern Literature: the Novel  3 Credit Hours
A careful examination of five or six significant modern novels in translation, with particular emphasis on their influence on the development of the novel, and their reflection of contemporary cultural issues. The works of such authors as Flaubert, Dostoyevsky, Tolstoy, Gide, Joyce, and Mann will be included.

COML 347  Clas Lit in Engl Translation  3 Credit Hours
A study of masterworks of ancient Greek and Roman literature with special attention to the development of epic, tragedy, comedy, and lyric poetry. Authors studied will include Homer, Virgil, Aeschylus, Sophocles, Euripides, Aristophanes, Terence, and Plautus.
Pre requisite(s): ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200
Restriction(s):
Can enroll if Class is Junior

COML 355  Urban Voices: France and Italy  3 Credit Hours
This course is an interdisciplinary approach to the concepts of urban development and literary, visual and cultural responses to the process of urbanization mainly in Rome and Paris. The readings will illustrate how the city shaped the writers' creativity, as well as how their works interpret urbanization.
Restriction(s):
Can enroll if Class is Freshman

COML 375  The Hero in Literature  3 Credit Hours
Reflections on myth, history, and literature, based on analyses of literary texts. The individual hero may change from term to term. The course, for example, might center on the transition from Faust to anti-Faust. In this instance, some of the writers or works might include: The Faustbook, Marlow's Doctor Faustus, Goethe's Faust, Byron's Manfred, a Faust opera, Thomas Mann's Doktor Faustus, Gunter Grass' The Tin Drum. All reading in English translation. (OC).

COML 390  Topics in Comparative Lit  3 Credit Hours
Examination of problems and issues in selected areas of comparative literature. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

COML 399  Independent Studies  1 to 3 Credit Hours
Readings or analytical assignments in Comparative Literature in accordance with the needs and interests of those enrolled and agreed upon by the student and instructor.

COML 404  Medieval Mystical Writers  3 Credit Hours
A study of the genre of mystical writing as it was developed and practiced throughout the Middle Ages and in 14th century England particularly. Attention will be given to the historical, religious, and cultural contexts that enabled and were created by mystical texts. In addition, the course will explore how traditional and contemporary trends in the fields of religious and literary studies can be brought to bear on the genre of mystical writing. (OC)
Pre requisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)
COML 433  Writing Women in Renaissance  3 Credit Hours
This course will be taught in English, and will focus on the influence of Italian literary models for the construction of female literary types as well as female voices in France and Italy from 1300 to about 1600. Italian authors studied include three very influential Florentines, Dante, Petrarch and Boccaccio, as well as Castiglione and Ariosto. We will read women poets, patrons, prostitutes and queens from Italy and France such as Veronica Gambara, Isabella di Morra, Vittoria Colonna, Christine de Pizan, Louise Labe, and Marguerite de Navarre. At last issue will be women's roles and women's images in city and court culture during the early modern period, and the interaction of their writings with the literary canons of Italy and France. (OC).
Restriction(s):
Can enroll if Level is Undergraduate

COML 455  This American Life  3 Credit Hours
The course "This American Life: Immigrant Literature and the American Dream" is a literary and cultural analysis of the literature of immigration. The readings are from works of fiction in a variety of genres, and are written by American and non-American prize-winning authors. Their common denominator is the pursuit of the American Dream and its many multifaceted aspects. The themes explored include: assimilation, acculturation, diversity, language, subculture, intertextuality, nostalgia, belonging, and double identity. Student wishing to take this course for graduate credit should sign up for COML 555. Students cannot receive credit for both COML 455 and COML 555.
Restriction(s):
Cannot enroll if Class is Freshman or Graduate

Computer & Computational Math (CCM)

CCM 150  Computer Science I  4 Credit Hours
An introduction to structured computer programming covering problem formulation, algorithm development, the C++ programming language, program testing and debugging, capabilities and elements of computer organization, and object-oriented software methodologies.
Prerequisite(s): MATH 115*
Corequisite(s): CCM 150L

CCM 172  Computing Environ for Math  3 Credit Hours
This course covers introductory programming techniques for Mathematics majors. Students will learn to program in sage and python. Topics include data types, variables and assignments, decisions, loops, functions, recursion, arrays and objects. Programming assignments focus on problems that are mathematical in nature, giving students an opportunity to use simulations to understand and verify familiar mathematical results. This course, or CIS/CCM 150, satisfies the programming requirement for the Mathematics concentration.
Prerequisite(s): MATH 115
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior Can enroll if College is Arts, Sciences, and Letters

CCM 305  The Theory of Computation  3 Credit Hours
An introduction to the foundations of computer science including the theory of computability, Turing machines, automata, and formal languages.
Prerequisite(s): CIS 175 and (CIS 200 or IMSE 200)

CCM 390  Topics in Computational Math  1 to 3 Credit Hours
A course designed to offer selected topics in different areas of applied mathematics. The specific topics will be announced together with the prerequisites for each separate offering. Course may be repeated when the topics covered differ.

CCM 399  Independent Studies  1 to 3 Credit Hours
Readings or analytical assignments in Computers and Computational Mathematics in accordance with the needs and interests of those enrolled and agreed upon by the student and advising instructor.

CCM 451  Computer Graphics  3 Credit Hours
Basic geometrical concepts: graphics output primitives, two-dimensional transformations, windowing and clipping, three-dimensional viewing, visible surface detection methods, and graphical user interfaces. (F).
Prerequisite(s): (MATH 216 or MATH 228) and (MATH 217 or MATH 227)
Restriction(s):
Cannot enroll if Class is Sophomore or Junior or Senior

CCM 455  Intro to Numerical Analysis  3 Credit Hours
Solution of linear systems by Gaussian elimination, solution of nonlinear equations by iterative methods, numerical solutions of ordinary differential equations, data fitting with spline functions, numerical integration, optimization. (F).
Prerequisite(s): MATH 217 or MATH 227

CCM 458  Introduction to Wavelets  3 Credit Hours
This course will introduce the students to theory and application of wavelets using linear algebra. Topics will include the discrete Fourier transform, the fast Fourier transform, linear transformations, orthogonal decomposition, discrete wavelet analysis, the filter bank, Haar Wavelet family, Daubechies's Wavelet family, and applications. Students cannot receive credit for both MATH 458 and MATH 558. (OC)
Prerequisite(s): MATH 217 or MATH 227
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

CCM 472  Matrix Computation  3 Credit Hours
A study of the most effective methods for finding the numerical solution of problems which can be expressed in terms of matrices, including simultaneous linear equations, orthogonal projections and least squares, eigenvalues and eigenvectors, positive definite matrices, and difference and differential equations. (AY).
Prerequisite(s): MATH 217 or MATH 227
Computer & Information Science (CIS)

CIS 112 Computer Literacy/Info Mgmt 3 Credit Hours
This is a microcomputer literacy course with primary emphasis on the application tools of the word processor, spreadsheets, and database. Additional topics of computer terms, systems, and use in society are included. The course is intended for undergraduates in the College of Arts, Sciences, and Letters. No previous experience with computers is expected. (YR).

CIS 125 Survey of Computer Science 3 Credit Hours
A survey of computer science topics, including history of computing, office productivity software, the internet, HTML, JavaScript, web design, algorithms, assemblers and compilers, gates and logic design, models of computation, artificial intelligence and expert systems, computing ethics, privacy issues, intellectual property. No credit for CIS majors. (F,W,S).

CIS 150 Computer Science I 4 Credit Hours
This course provides a foundation for further studies in computer and information science and emphasizes a structured approach to problem solving and algorithm development. Topics include principles of program design, coding, debugging, testing, and documentation. Students are introduced to the Unified Modeling Language for requirements analysis using use-cases and activity diagrams, an object oriented programming language, and the fundamentals of computer hardware, system software, and components. The course will consist of three lecture hours and one two-hour laboratory.

Prerequisite(s): MATH 115* or MATH 113* or Mathematics Placement with a score of 116
Corequisite(s): CIS 150L

CIS 1501 CS I for Data Scientists 4 Credit Hours
This course provides a foundation for further studies in computer and information science and emphasizes a structured approach to problem solving and algorithm development using a high-level language more suited to data science applications. Topics include principles of program design, coding, debugging, testing, and documentation. Students are introduced to the Unified Modeling Language for requirements analysis using use-cases and activity diagrams, an object-oriented programming language for data science applications, and the fundamentals of computer hardware, system software, and components. The course will consist of three lecture hours and one two-hour laboratory. The labs will cover various data science applications. (F,W,S)

Prerequisite(s): MATH 115* or MATH 113* or Mathematics Placement with a score of 116

CIS 200 Computer Science II 4 Credit Hours
This course presents techniques for the design, writing, testing, and debugging of medium-sized programs, and an introduction to data structures (stacks, queues, linked lists) using an object-oriented programming language. Topics covered include pointers, templates, and inheritance. The principles of UML modeling are continued. This course will consist of three lecture hours and one two-hour laboratory.

Prerequisite(s): (MATH 115 or Mathematics Placement with a score of 116) and (CIS 150 or IMSE 150 or CCM 150)
Corequisite(s): CIS 200L

CIS 2001 CS II for Data Scientists 4 Credit Hours
This course presents techniques for the design, writing, testing, and debugging of medium-sized programs, and an introduction to data structures (stacks, queues, linked lists) using an object-oriented programming language for data science applications. Topics covered include pointers, templates, and inheritance. The principles of UML modeling are continued. This course will consist of three lecture hours and one two-hour laboratory. The labs will cover various data science applications. (F,W,S)

Prerequisite(s): CIS 1501 and MATH 115 or MATH 113 or Mathematics Placement with a score of 116

CIS 205 Comp Programming for Engineers 3 Credit Hours
Full Course Title: Computer Programming for Engineers- Intermediate topics in computer programming: arrays, files, structured data types, pointers, functions. Overview of digital computer hardware and system software components: machine architecture, operating systems, computer networks, data security, and performance evaluation. No credit for CIS majors.

Prerequisite(s): ENGR 100 or (MATH 105 or Mathematics Placement with a score of 113)

CIS 220 Discrete Structures I 4 Credit Hours
This course introduces students to various topics in discrete mathematics, such as set theory, mathematical logic, trees, and graph theory. Applications to relational databases, modeling reactive systems and program verification are also discussed. (F,W,S)

Prerequisite(s): (MATH 115 or Mathematics Placement with a score of 116) and CIS 200*

CIS 225 Discrete Structures II 4 Credit Hours
This course introduces students to various topics in discrete mathematics, such as set theory, mathematical logic, trees, and graph theory. Applications to relational databases, modeling reactive systems and program verification are also discussed. (F,W,S)

Prerequisite(s): MATH 115* or MATH 113* or Mathematics Placement with a score of 116

CIS 250 Software Engineering Tools 3 Credit Hours
This course covers various CASE tools, such as UML modeling and code generation tools, configuration management tools, defect management tools, an integrated development environment for coding and debugging, unit and testing tools, and build tools. Students will learn these tools in a laboratory environment. This course will be comprised of one lecture hour and one two-hour laboratory. (F,W,S)

Prerequisite(s): CIS 200*

CIS 2501 Topic in Programming Languages 2 Credit Hours
One significant programming language is covered in depth. The particular language changes from term to term. The language chosen might be Ada, C, MODULA 2, USP, PROLOG, or SMALLTALK.

Prerequisite(s): CIS 200

CIS 260 Programming with Visual Basic 3 Credit Hours
An introduction to create professional-looking applications using the graphical user interface of Windows. Students learn how to create graphical objects and controls, write event driven code that responds to clicking on buttons, work with multiple forms and executable files. (F,S)

Prerequisite(s): CIS 200 or IMSE 200

CIS 265 Java Programming 3 Credit Hours
Course covers Java Programming language, focusing on GUI development, distributed computing and network applications.

Prerequisite(s): CIS 200 or CIS 2001

CIS 270 Intro to C Sharp 3 Credit Hours
This course provides an introduction to the C# programming language and the .NET Framework for the development of Windows game applications. Some discussion of DirectX programming and Xbox game development is also included. (W)

Prerequisite(s): CIS 200 or CIS 2001
CIS 298 Intro to Python 3 Credit Hours
Full Title: Introduction to Python. An introduction to the Python programming language and its various libraries, packages, and tools. The focus of this course will be on the development of analytics/data science applications. (W)
Prerequisite(s): CIS 200 or IMSE 200
Restriction(s):
Can enroll if Level is Undergraduate

CIS 299 Internship 1 Credit Hour
Student works with an industrial sponsor in the area of CIS. Approval of Internship Coordinator required. (F,W,S).

CIS 306 Discrete Structures II 4 Credit Hours
This course introduces students to further topics in discrete mathematics, including logic and linear complexity theory, coding theory, and game theory.
Prerequisite(s): CIS 275

CIS 310 Computer Org and Assembly Lang 4 Credit Hours
The architecture of computer systems and associated software. Topics include digital logic circuits, computer interfacing, interrupt systems, input/output systems, memory systems, assemblers and assembly language programming, and computer networks. (F,W,S).
Prerequisite(s): (MATH 115 or Mathematics Placement with a score of 116) and (CIS 200 or IMSE 200) and CIS 275

CIS 316 Prac. Comp. Sec. 3 Credit Hours
Full Title: Practical Aspects of Computer Security. This course provides a practical introduction to a broad range of security topics including legal, ethical and professional issues in information security. Covered topics include: practical computer security principles; firewalls, malware, and intrusion detection; cryptography basics and its applications; mobile devices and related security issues; network technologies and their vulnerabilities. (YR)
Prerequisite(s): CIS 200
Restriction(s):
Can enroll if College is Engineering and Computer Science

CIS 3200 Data Science II 4 Credit Hours
This course provides an overview of what Big Data is and explores its characteristics. It introduces the fundamental technologies, platforms, and methods that enable Big Data analysis, and covers how to acquire, store, and analyze very large amounts of information to complete Big Data analysis tasks. Topics include MapReduce, similarity search, mining real-time data streams, link analysis, clustering, recommender systems, social network graph mining, and large scale data mining tasks. (W)
Prerequisite(s): (CIS 2001 or CIS 200) and (ECE 3100 or STAT 305)

CIS 330 Data Struc and Algorithm Anlys 4 Credit Hours
This course focuses on data design and algorithm design. Data design topics include object-oriented discussions of hashing, advanced tree structures, graphs, and sets. Algorithm design topics include the greedy, divide-and-conquer, dynamic programming, backtracking and branch-and-bound techniques. A significant discussion of algorithm complexity theory, including time and space trade-offs and elementary computability theory, is included. (F,W,S)
Prerequisite(s): (MATH 115 or Mathematics Placement with a score of 116) and (CIS 200 or IMSE 200) and CIS 275

CIS 340 Computer Organization 4 Credit Hours
The architecture of computer systems and associated software. Topics include digital logic circuits, computer interfacing, interrupt systems, input/output systems, memory systems, assemblers and assembly language programming, and computer networks. (F,W,S).
Prerequisite(s): (MATH 115 or Mathematics Placement with a score of 116) and (CIS 200 or IMSE 200) and CIS 275

CIS 3501 Data Struc & Alg Anlys for SE 4 Credit Hours
This course focuses on data design and algorithm design for software engineers. Data design topics include object-oriented discussions of hashing, advanced tree structures, graphs and sets. Algorithm design topics include the greedy, divide-and-conquer, dynamic programming, backtracking and branch-and-bound techniques. A significant discussion of algorithm complexity theory, including time and space trade-offs and elementary computability theory, is included. (F,W,S)
Prerequisite(s): (MATH 115 or Mathematics Placement with a score of 116) and (CIS 200 or IMSE 200) and CIS 275

CIS 375 Software Engineering I 4 Credit Hours
This course presents an in-depth treatment of the following software engineering topics: software engineering paradigms, requirements, specification, functional design, object-oriented design, user interface design, software verification and validation, and the maintenance and management of software engineering artifacts, as well as an introductory discussion of software reliability. Various phases of the software engineering process will be modeled using UML. (F,W)
Prerequisite(s): ((CIS 350 or CIS 3501 or IMSE 350) or (ECE 370 and MATH 276) or (ECE 370 and ECE 276)) and (COMP 270 or COMP 106 or COMP 220 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107)

CIS 376 Software Engineering II 4 Credit Hours
This course continues the formal development of the software engineering material begun in CIS 375. Topics covered include personal software process, team software process, formal methods, security, software architecture, software quality assurance, software fault tolerance, the evaluation of the effectiveness of human computer interaction and software reliability. (W,S)
Prerequisite(s): CIS 375

CIS 380 Industrial Robots 4 Credit Hours
The course introduces students in engineering and computer science to fundamentals of robotics technology, programming and their applications in industrial environment. The emphasis will be on robotics anatomy and configurations, robotics kinematics, end effectors, use of sensors in robotics, robotics programming, design of robot workcell, robotics applications to production problems, cost justifications and robotics safety, rather than on the extensive theory of robotics. Three-hour lecture and three-hour laboratory per week.
Prerequisite(s): MATH 115
Restriction(s):
Can enroll if Class is Junior or Senior

CIS 387 Digital Forensics I 4 Credit Hours
This course takes a detailed, hands-on approach to study the procedures and techniques used to identify, extract, validate, and preserve electronic evidence. Students completing this course will be familiar with the core computer science theory and practical skills necessary to perform basic computer forensic investigations, understand the role of technology in investigating computer-based crime, and be prepared to deal with investigative bodies at a basic level.
Prerequisite(s): (CIS 200 or ECE 270) and (CIS 310* or ECE 370* or ECE 372*)
Restriction(s):
Cannot enroll if Class is Freshman
Can enroll if Level is Undergraduate
CIS 390  Topics in Computer Science  1 to 3 Credit Hours
A course designed to offer selected topics in an area of computer science. The specific topics will be announced (together with special prerequisites) each time offered. Students must elect different topics to take both CIS 390 and CIS 391. (OC).
Prerequisite(s): CIS 350 or CIS 3501 or IMSE 350 or (ECE 370 and ECE 276) or (ECE 370 and MATH 276)

CIS 391  Topics in Computer Science II  1 to 3 Credit Hours
A course designed to offer selected topics in an area of computer science. The specific topics will be announced (together with special prerequisites) each time offered. Students must elect different topics to take both CIS 390 and CIS 391. (OC).
Prerequisite(s): CIS 350 or CIS 3501 or IMSE 350 or (ECE 370 and ECE 276) or (ECE 370 and MATH 276)

CIS 399  Internship  1 Credit Hour
Student works with industrial sponsor in the area of CIS. Permission of Internship Coordinator required. (F,W,S).

CIS 400  Programming Languages  4 Credit Hours
Systematic study of programming languages with regard to their implementation, structures, and use. Languages are compared with regard to their various data types, data structures, operations, control structures, programming environments, and ease of use in solving various programming problems. (F,W).
Prerequisite(s): CIS 350 or IMSE 350 or CIS 3501 or (ECE 370 and MATH 276) or (ECE 370 and ECE 276)

CIS 405  Algorithm Analysis & Design  3 Credit Hours
This course investigates how to design efficient algorithms. Topics include asymptotic analysis, amortized analysis, divide-and-conquer, dynamic programming, greedy algorithms, branch and bound, backtracking, lower bounds, NP-completeness and approximation algorithms.
Prerequisite(s): CIS 350

CIS 411  Natural Language Processing  3 Credit Hours
This course provides an introduction to the theory and practice of natural language processing (NLP), as well as the approaches that allow understanding, generating, and analyzing natural language. The course will cover the three major areas in NLP: syntax, semantics, and pragmatics. The course will introduce both knowledge-based and statistical approaches to NLP. It will illustrate the use of NLP techniques and tools in a variety of application areas, and provide insight into many open research problems. (YR)
Prerequisite(s): CIS 350 or CIS 3501

CIS 421  Database Mgmt Systems  4 Credit Hours
An introduction to database systems, concepts, and techniques. Topics covered include: database environments, ER modeling, relational data model, object-oriented databases, database design theory and methodology, database languages, query processing and optimization, concurrency control, database recovery, and database security.
Prerequisite(s): CIS 350 or CIS 3501 or IMSE 351 or (ECE 370 and MATH 276)

CIS 422  Massive Data Management  4 Credit Hours
An introduction to database systems, concepts, and techniques for big data. The course discusses classical relational technologies, and then covers the more current approaches to managing massive amounts of data for analytics purposes. Topics include database environments, database design, the relational data model, normalization, SQL, query processing, parallel databases, and query processing, in-database analytics, data warehousing, key-value and column stores, NoSQL and NewSQL approaches for managing massive data. (F)
Prerequisite(s): (CIS 2001 or CIS 200) and CIS 3200

CIS 423  Dec Support and Exp Systems  3 Credit Hours
The application of artificial intelligence to building decision support and expert systems for management and other applications. Topics include fundamentals of artificial intelligence, knowledge representation and knowledge processing, tools for building expert systems (logic programming, expert shells), decision support system design (modeling and simulation), expert system design (knowledge engineering, learning). (F).
Prerequisite(s): CIS 421 or CIS 422

CIS 425  Information Systems  4 Credit Hours
This course deals with the study of technologies used to design and implement multimedia web sites. Topics include web servers, HTML, CGI, scripting languages, Java applets, back-end database connectivity, web security, multimedia, XML. (F,W).
Prerequisite(s): CIS 375 and (CIS 421* or CIS 422*)
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

CIS 427  Comp Networks and Dis Process  4 Credit Hours
Study of the management aspects of computing networks and distributed systems. Topics include network architectures (ISO/OSI, TCP/IP, ATM), communication hardware (transmission media, network adaptors, switches), encoding, framing, error detection and correction, reliable transmission, link control and LAN technology, internetworking, routing/congestion control, network design/management.
Prerequisite(s): ((CIS 350 or CIS 3501 or IMSE 351) or (ECE 370 and MATH 276) or (ECE 370 and ECE 276)) and IMSE 317

CIS 435  Web Technology  3 Credit Hours
This course deals with the study of technologies used to design and implement multimedia web sites. Topics include web servers, HTML, CGI, scripting languages, Java applets, back-end database connectivity, web security, multimedia, XML. (F,W).
Prerequisite(s): CIS 375* or CIS 553*
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate
Cannot enroll if Major is

CIS 436  Mobile App Des & Impl  3 Credit Hours
This course introduces students to the development of software applications for programmable mobile and wireless intelligent handheld devices. Topics covered include the different mobile development platforms, best practices in mobile user interaction design, software quality assurance in mobile environment, security and privacy issues, and context-aware computing. Students will participate in a final project.
Prerequisite(s): CIS 375*
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science or Arts, Sciences, and Letters
CIS 437 Advanced Networking 3 Credit Hours
Topics include an overview of the internet, congestion control, quality of service, internet multicasting, multimedia networking, mobile and wireless networks, vehicular networks, overlay networks, peer-to-peer networks, internet management (SNMP), and internet applications (web-HTTP and email-SMTP).
Prerequisite(s): CIS 427
Restriction(s):
Cannot enroll if College is Business

CIS 439 Text Mining and Information Retrieval 3 Credit Hours
This course covers techniques for retrieving ranked relevant documents from a text repository based on user queries, using various techniques for extracting and representing latent knowledge from these documents. Topics also include language models, summarization, topic modeling, entity extraction, sentiment analysis, and embeddings.
Prerequisite(s): (CIS 350 or CIS 3501 or IMSE 350) or (ECE 370 and (ECE 276 or MATH 276))

CIS 446 Wireless & Mobi Comp Security 3 Credit Hours
Full course title: Wireless and Mobile Computing Security. The course focuses on security and privacy issues in the area of wireless networks and mobile computing such as cellular networks, wireless LANs, connected vehicles, smart and mobile devices, sensors and sensor networks, IoT, etc. The course will first present on overview of wireless communication and wireless systems, then focus on attacks, discuss proposed solutions and their limitations. Topics of this course include: (1) introduction to security primitives and wireless networks; (2) security issues in single-hop wireless networks that include cellular networks, RFID, modern vehicle, smartphone security; (3) security issues in multi-hop wireless network that include Mobile Ad Hoc network, wireless sensor network and vehicular network security. (YR)
Prerequisite(s): (CIS 200 or CIS 2001) and MATH 396

CIS 447 Intro Computr & Ntwrk Security 3 Credit Hours
This course will provide a broad-spectrum introduction to the fundamental principles of computer and network security. Topic will include security policies, models and mechanisms for confidentiality, integrity and availability, access control, authorization, cryptography and applications, threats and vulnerabilities in computer networks, key management, firewalls and security services in computer networks.
Prerequisite(s): CIS 450*
Restriction(s):
Cannot enroll if College is Education, Health, and Human Services or Business

CIS 449 Intro to Software Security 3 Credit Hours
This course provides a broad-spectrum introduction to the fundamental principles of software security, as well as the approaches that allow understanding common software practices, analyzing programs for vulnerabilities, and methods for developing secure software systems. The course will cover three major areas: software attacks and defenses, program analysis, and software verification. Various forms of software will be considered in this class including high level applications and system software. The course will also provide insight into many open research problems in this area. (YR)
Prerequisite(s): CIS 350 or CIS 3501 or IMSE 350 or (ECE 370 and ECE 276) or (ECE 370 and MATH 276)

CIS 450 Operating Systems 3 or 4 Credit Hours
Introduction to computer operating systems. Process management, CPU scheduling, memory management, file systems and I/O devices. Advanced topics, e.g., multiprogramming and multitasking, virtual memory, deadlock, I/O, job scheduling, and performance analysis using queuing models, will be introduced. Case studies of modern operating systems. A design project is required.
Prerequisite(s): CIS 310 and (CIS 350 or CIS 3501 or IMSE 350) or (ECE 370 and MATH 276) or (ECE 370 and ECE 276) and IMSE 317*

CIS 451 Computer Graphics 3 Credit Hours
Basic geometrical concepts: graphics output primitives, two-dimensional transformations, windowing and clipping, three-dimensional viewing, visible surface detection methods, and graphical user interfaces. (F).
Prerequisite(s): (MATH 217 or MATH 227 or MATH 228) and ((CIS 350 or CIS 3501 or IMSE 350) or (ECE 370 and MATH 276) or (ECE 370 and ECE 276))

CIS 452 Information Visualization and Virtualization 3 Credit Hours
This course introduces basic techniques for visualization, virtualization, digital animation, computer and video games, and web multimedia. Topics include data visualization, the process of creating animated video clips from start to finish (including story creation, storyboarding, modeling, animation, and post-production), and computer virtualization; several key techniques include graphic design, video editing, motion generation, multimedia, real-time rendering, visualization tools, and virtual machines.
Prerequisite(s): CIS 451 or CIS 487 or CIS 450
Restriction(s):
Cannot enroll if College is Education, Health, and Human Services or Business

CIS 454 Advanced Operating Systems 3 Credit Hours
Extending Operating Systems (CIS 350) to introduce advanced topics in operating systems design. System software issues of contemporary computer systems that are not covered in Operating Systems (CIS 350) will be addressed. A research project will be required. (YR, F)
Prerequisite(s): CIS 350 and (ECE 276 or MATH 276) or (ECE 370 and MATH 276)

CIS 456 Internet Technology 3 Credit Hours
An introduction to the architecture of the Internet, web applications, and internet management (SNMP). The course will also provide insight into many open research problems in this area. (YR)
Prerequisite(s): (CIS 427* or ECE 471*) and (CIS 387 or ECE 387)
Restriction(s):
Cannot enroll if Class is Freshman

CIS 464 Web Application Development 4 Credit Hours
Web application development using industry-standard tools and techniques. Preparation for employment in the application development industry. (F)
Prerequisite(s): CIS 350 or CIS 3501 or IMSE 350 or (ECE 370 and MATH 276)

CIS 465 High Performance Computing 3 Credit Hours
High performance computing, parallel computing, and parallel algorithms. (F)
Prerequisite(s): CIS 450* and (ECE 350 or MATH 276)

CIS 467 Digital Forensics II 4 Credit Hours
This course is a continuation of Digital Forensics I and will focus on Internet Forensics. Students will examine in-depth concepts in Internet evidence collection and preservation, as well as applications of contemporary commercial forensic investigative software.
Prerequisite(s): (CIS 427* or ECE 471*) and (CIS 387 or ECE 387)
Restriction(s):
Cannot enroll if Class is Freshman

CIS 474 Compiler Design 3 Credit Hours
Principles of language compilation. Introduction to formal languages, lexical analysis, top-down and bottom-up parsing, code generation and optimization. Error handling and symbol table management. Run-time storage management. Programming language design. Introduction to compiler-writing tools such as LEX and YACC. (FW).
Prerequisite(s): CIS 350 or CIS 3501 or IMSE 350 or (ECE 370 and MATH 276)

CIS 476 Soft Arch & Design Patterns 3 Credit Hours
This course focuses on design patterns in object-oriented programming. This course begins with an overview of UML and a review of object-oriented programming and then moves on to various structural, behavioral and creational patterns, including: facades, adaptors, bridges, factories and the template method. Analysis of case studies will also be discussed. Using various modern software tools, students will apply various design patterns to real-world software design problems to gain complete practical understanding. (FW)
Prerequisite(s): CIS 375
Restriction(s):
Can enroll if College is Engineering and Computer Science
CIS 479  Intro to Artificial Intel  3 Credit Hours
This course introduces students to basic concepts and methods of artificial intelligence from a computer science perspective. Emphasis of the course will be on the selection of data representations and algorithms useful in the design and implementation of intelligent systems. The course will contain an overview of one AI language and some discussion of important applications of artificial intelligence methodology. (S).
Prerequisite(s): CIS 350 or CIS 3501 or IMSE 350 or (ECE 370 and MATH 276) or (ECE 370 and ECE 276)

CIS 481  Computational Learning  3 Credit Hours
This course covers basic computational aspects of learning to perform a task and improve with experience. Topics include learning frameworks and problem formulations; standard models, methods, computational tools, algorithms and modern techniques; and methodologies to evaluate learning ability and to automatically select optimal models. The main focus is on computer science (e.g., basic runtime, space and complexity analysis, programming, and empirical evaluations?). Simple applications to areas such as computer vision, natural language processing (NLP), and robotics will also motivate the course material. (W)
Prerequisite(s): CIS 306 and (MATH 217* or MATH 227*) and (IMSE 317* or BENG 364* or MATH 425*)
Restriction(s):
Cannot enroll if Class is Graduate or Doctorate

CIS 4851  Data Security and Privacy  3 Credit Hours
This course covers basics of data security and privacy techniques, which can facilitate the use of data in a secure and privacy-sensitive way. Topics include security and privacy challenges due to data collection and analytics, technologies and strategies for data security and privacy (access control mechanism, integrity policy, cryptography and encryption, notice and consent, anonymization or de-identification, deletion and non-retention). (W)
Prerequisite(s): CIS 200 or CIS 2001

CIS 487  Computer Game Design & Implem  3 Credit Hours
This course deals with the study of the technology, science and art in the creation of computer games. The focus of the course will be hands-on development of computer games. Students will study a variety of software technologies relevant to computer game design, including: programming languages, scripting languages, operating systems, files systems, networks, simulation engines and multi-media design systems. Lecture topics will be taken from several areas of computer science: simulation and modeling, computer graphics, artificial intelligence, real-time processing, game theory, software engineering, human computer interaction, graphic design and game aesthetics. (F).
Prerequisite(s): CIS 375*
Restriction(s):
Can enroll if Class is Junior or Senior
Cannot enroll if Major is

CIS 488  Computer Game Design II  3 Credit Hours
This course is a continuation of the material studied in CIS 487. The focus of the course will be hands-on development of computer game development tools (e.g. game engines). Students will study a variety of software technologies relevant to computer game design, including: 3D graphics, computer animation, data-driven game design, multiplayer game programming, and game AI. Lecture topics will be taken from several areas of computer science: simulation and modeling, computer graphics, artificial intelligence, game theory, software engineering, human computer interaction and game content development. (W)
Prerequisite(s): CIS 487
Restriction(s):
Can enroll if Class is Junior or Senior
Cannot enroll if Major is

CIS 490  Advanced Topics  1 to 3 Credit Hours
This course is intended for seniors and graduate-level students in CIS. For specific topics, consult current semester’s Schedule of Classes. (OC).
Prerequisite(s): CIS 350 or CIS 3501 or IMSE 350 or (ECE 270 and ECE 276) or (ECE 370 and MATH 276)

CIS 490H  Advanced Topic: Edge Computing  3 Credit Hours
This course introduces state-of-the-art edge computing technologies and their applications in data-intensive distributed systems like smart homes, Internet of Things, and connected vehicles. Topics include edge computing applications and platforms, edge-based sensor data collection and processing, computation offloading and QoS-optimal task scheduling, and security/privacy. This course will also explore the current challenges facing edge computing. Participation in a project is a requirement in this course.
Prerequisite(s): CIS 350 or CIS 3501 or IMSE 350 or (ECE 270 and ECE 276) or (ECE 370 and MATH 276)

CIS 491  Research Project I  1 to 4 Credit Hours
Provides the advanced student with the opportunity to undertake a research project under the supervision of a faculty member. At least two weeks prior to registration in the semester when such a course is to be elected, an interested student must submit to the CIS chair and one faculty member a written request for permission to elect a research course on the appropriate form available in the CIS Office. The request will include a description of the proposed research project. The CIS chair will review the proposal with faculty members to ascertain availability of relevant faculty supervision and to establish appropriate credit. Grades will be granted on a Pass/Fail (S/E) basis exclusively. (FW,S).
Restriction(s):
Can enroll if Class is Senior
Can enroll if Major is CIS/Information Systems

CIS 492  Research Project II  1 to 4 Credit Hours
This course is a second registration for a research project in CIS. (FW,S).
Restriction(s):
Can enroll if Class is Senior
Can enroll if Major is CIS/Information Systems

CIS 493  Independent Study I  1 to 4 Credit Hours
Readings or analytical assignments in accordance with the needs and interests of those enrolled and agreed upon by the student and an instructor, which shall not duplicate a formal course offering. Permission of instructor required. (FW,S).

CIS 494  Independent Study II  1 to 4 Credit Hours
This course is a second registration for an independent study in CIS. Permission of instructor required. (FW,S).
CIS 4951  Design Seminar I  2 Credit Hours
Students participate in the design and implementation of a major software project. Seminar topics discussed include: computing ethics and professional practice. (F,W,S)
Prerequisite(s): CIS 375 and CIS 310 and (CIS 427 or CIS 450)
Restriction(s):
Can enroll if College is Engineering and Computer Science

CIS 4952  Design Seminar II  2 Credit Hours
Students continue to participate in the design and implementation of a major software project. Seminar topics discussed include: computing ethics and professional practice. (F,W,S)
Prerequisite(s): CIS 4951
Restriction(s):
Can enroll if College is Engineering and Computer Science

CIS 4961  Design Seminar for SE I  2 Credit Hours
Software engineering students participate in the design and implementation of a major software project. Seminar topics discussed include: computing ethics and professional practice in software engineering. (F,W,S)
Prerequisite(s): CIS 376
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Engineering and Computer Science

CIS 4962  Design Seminar for SE II  2 Credit Hours
Software engineering students continue to participate in the design and implementation of a major software project. Seminar topics discussed include: computing ethics and professional practice in software engineering.
Prerequisite(s): CIS 4961 and CIS 476*
Restriction(s):
Can enroll if College is Engineering and Computer Science

CIS 4971  Cap Sem for Data Sci I  2 Credit Hours
Data science students participate in the design and implementation of a major data science project. Seminar topics discussed include: computing ethics and professional practice in data science. (F, W, S)
Prerequisite(s): CIS 3200 and (STAT 325 or IMSE 317)
Restriction(s):
Can enroll if Class is Senior

CIS 4972  Cap Proj for Data Sci II  2 Credit Hours
Data science students continue to participate in the design and implementation of a major data science project. Seminar topics discussed include: computing ethics and professional practice in data science. (F, W, S)
Prerequisite(s): CIS 4971 and STAT 430*
Restriction(s):
Can enroll if Class is Senior

CIS 4981  Design Seminar for CIS-DS I  2 Credit Hours
Full Course Title: Design Seminar for Dual Degree CIS-DS Majors I Dual degree CIS and Data Science students participate in the design and implementation of a major software project involving data science. Seminar topics discussed include computing ethics and professional practice in data science. (F,W,S)
Prerequisite(s): CIS 375 and CIS 3200 and (STAT 325 or IMSE 317) and C S 310 and (CIS 427 or CIS 450)
Restriction(s):
Can enroll if Class is Senior

CIS 4982  Design Seminar for CIS-DS II  2 Credit Hours
Dual Degree CIS and Data Science students participate in the design and implementation of a major software project involving data science. Seminar topics discussed include computing ethics and professional practice in data science. (F,W,S)
Prerequisite(s): CIS 4981 and STAT 430*
Restriction(s):
Can enroll if Class is Senior

CIS 499  Internship  1 Credit Hour
Student works with industrial sponsor in area of CIS. Approval of Internship Coordinator required. (F,W,S).

Criminal Justice Studies (CRJ)

CRJ 200  Intro to Criminal Justice  3 Credit Hours
This course provides an introduction to issues of crime and neighborhood disorder as well as society's responses to these problems. We will examine the nature and causes of crime, criminal law, constitutional safeguards, and the organization and operation of the criminal justice system including the police, courts, and corrections. The history of the criminal justice system, terminology and career opportunities will also be discussed.

CRJ 300  Political Analysis  3 Credit Hours
Introduction to research design, data collection and analysis, sampling, and statistics for social scientists. Should be elected as soon as possible after the declaration of major. POL 101 or equivalent recommended. (F, W).
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 302  Theory of the Law  3 Credit Hours
A comprehensive introduction to the theoretical foundations and the political functions of law, with special emphasis on the different moral justifications of law; the relation between law and justice; the relation between law and freedom; due process and fairness in any legal system. This course is designed to have special relevance for those considering law as a career. POL 101 or equivalent recommended. (OC).
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 307  Forensic Anthropology  3 Credit Hours
Forensic anthropology has recently seen a lot of exposure through popular television shows like CSI and Bones. Have you ever wondered how much of what you were seeing was real? Do the dead really "talk" about their lives and how they died? This course is designed as an introductory course for students interested in demystifying and getting to know the real forensic anthropology. Forensic anthropology is a specialized sub-field of biological anthropology that applies many of the methods of biological anthropology to the discovery, excavation, and identification of human remains in a medico-legal context. In this class we learn about the human skeleton and explore the key methods that are used in the identification of individuals, such as age-at-death estimation, sex determination, stature, ancestry, and personal identification. We also deal with assessment of the different types of trauma, and whether or not we can tell the cause and manner of death. The broader ethical roles and responsibilities of forensic anthropologists are also discussed, including discussions of how we determine race/ancestry, as well as ethical responsibilities we have during the investigation of human rights abuses, disasters and criminal inquiries. (F)
Restriction(s):
Cannot enroll if Class is Freshman
CRJ 308  Moral and Political Dilemmas  2 to 3 Credit Hours
The course focuses on the tensions and relations between personal morality and political action by examining the moral aspect of contemporary policy issues such as the right to life, environmental policy, and discrimination. (YR).
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore
Cannot enroll if Level is

CRJ 309  Introduction to Law & Society  3 Credit Hours
Law and Society is a field of study that examines the interaction between the legal system and society from the perspective of the social sciences and humanities. This course focuses on core components of the legal system including courts, lawmaking bodies, regulatory administration, alternative dispute resolution systems, and the legal profession. Throughout the course, students develop the ability to examine the legal system and its relationship to equality, social change, and public benefits using social science evidence. (YR)
Restriction(s):
Cannot enroll if Class is Freshman

CRJ 316  The American Judicial Process  3 Credit Hours
An analysis of American legal institutions, processes, doctrines, and their relationship to the formulation of public policy and the solution of social problems. POL 101 or equivalent recommended. (AY).
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 322  Psychology of Prejudice  3 Credit Hours
A consideration of ethnic (including racial), sexual, and religious prejudice from the psychological point of view, focusing on the mind of both the oppressor and the oppressed. (YR).
Prerequisite(s): PSYC 171 or PSYC 170 or PSYC 101

CRJ 323  Urban Politics  3 Credit Hours
A survey of the political process in urban areas, giving special attention to the changing roles of cities in American politics. POL 100 or equivalent recommended. (YR).
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 324  Serial and Mass Homicide  3 Credit Hours
The phenomenon of multiple homicide, especially mass shootings and serial murder, is of special interest in the field of criminology. Perpetrators of such acts and their methodologies can be studied for the purpose of primary and secondary prevention. (F,W)

CRJ 325  Psyc of Interpersonal Relation  3 Credit Hours
This course presents an overview of theory and research conducted by social psychologists that has been aimed at understanding interactions between individuals. Topics include an exploration of the research process that is used to investigate interpersonal relationships, the processes underlying social perception, friendship, liking, love, close relationships, aggression and violence in interpersonal relationships. (YR).
Prerequisite(s): PSYC 101 or PSYC 170 or PSYC 171
Restriction(s):
Cannot enroll if Level is

CRJ 335  Philosophy of Law  3 Credit Hours
An examination of some of the important philosophical issues relevant to law and legal theory, including legal punishment, legal responsibility, and the relationship between law and morality. Both classical and contemporary writings will be studied. Students electing this course must have successfully completed a previous course in philosophy or have permission of instructor.
Prerequisite(s): PHIL 100 or PHIL 120 or PHIL 233 or PHIL 234 or PHIL 240 or PHIL 253 or PHIL 301 or PHIL 302 or PHIL 303 or PHIL 304 or PHIL 305 or PHIL 310 or PHIL 315 or PHIL 320 or PHIL 340 or PHIL 350 or PHIL 365 or PHIL 369 or PHIL 370 or PHIL 371 or PHIL 375 or PHIL 380 or PHIL 390 or PHIL 441 or PHIL 442 or PHIL 445 or PHIL 485 or PHIL 490
Restriction(s):
Cannot enroll if Level is

CRJ 350  Poverty and Inequality  3 Credit Hours
In a middle class-oriented culture, the poor experience many problems and are also considered deviant, which tend to make poverty self-perpetuating. This stratum will be explored with respect to life styles, life changes, contributing factors, characteristics, individual and social consequences, and evaluation of attempted solutions. (YR).

CRJ 362  Women, Politics, and the Law  3 Credit Hours
An examination of the political behavior of women in American politics. Included is an analysis of the legal and legislative demands of American women. (AY).
Restriction(s):
Can enroll if Level is Undergraduate
Can enroll if College is Arts, Sciences, and Letters

CRJ 363  Crim Justice Syst and Policy  3 Credit Hours
The structure and processes of criminal justice administration in America, including analysis of current issues in police behavior, courts, and corrections. POL 101 or equivalent recommended. (F, S, W).
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 369  US Civil Rights Movement  3 Credit Hours
A survey of race relations and civil rights activity from the late 19th century to the present. The principal focus, however, is on the period since World War II, especially on the mass-based Southern civil rights movement (1955-1965) and the various policy debates and initiatives of the past thirty years, most notably affirmative action and busing. We also examine critiques of non-violence and integrationism. (AY).
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 382  Social Psychology  3 Credit Hours
This course provides a comprehensive overview of the field of social psychology focusing on a review of the field's founding principles and classic studies, as well as a focus on recent research. Topics include social cognition; interpersonal behavior (e.g., attraction, aggression, and altruism); attitudes; prejudice and discrimination; social influence; group processes (e.g., intergroup relations; conflict resolution); and social issues (e.g., income inequality). (YR).
Prerequisite(s): PSYC 101 or PSYC 170 or PSYC 171

CRJ 390  Topics in Criminal Justice  3 Credit Hours
Examination of problems and issues in selected areas of criminal justice. Title as listed in the Schedule of Classes will change according to content. Course may be repeated when specific topics differ. (OC)
CRJ 402 Probation and Parole  3 Credit Hours
This course deals with corrections in the community with primary focus on the areas of probation and parole. It discusses the history and foundation of probation and parole, and how each functions within the larger system of criminal corrections. The practical daily activities of probation and parole officers are examined, including monitoring techniques, report-writing, offender and risk assessment evaluation, presentence investigations, and court testimony. Students may not receive credit for both CRJ 402 and CRJ 502. (YR).
Prerequisite(s): CRJ 200

CRJ 403 Race and Ethnicity  3 Credit Hours
The status of racial and ethnic minorities in the United States with particular reference to the social dynamics involved with regard to majority-minority relations. Topics of study include inequality, segregation, pluralism, the nature and causes of prejudice and discrimination and the impact that such patterns have upon American life. Students cannot receive credit for both SOC 403 and SOC 503. (F, W).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Cannot enroll if Level is Undergraduate

CRJ 404 Sentencing  3 Credit Hours
This course will familiarize students with the history, structure, and performance of America's sentencing system. Sentencing is the process by which criminal sanctions are imposed in individual cases following criminal convictions. The course examines the laws and policies that guide the determination of punishment in the court system. Topics include the theoretical underpinnings of sentencing, with an application focus on capital punishment; determinate and indeterminate sentencing systems; sentencing guidelines and departures from the guidelines; mandatory minimum sentences; and "3 strikes" and other habitual offender statutes. Students will engage in a graded practical exercise using sentencing guidelines to learn how to calculate sentences based on various facts. Students cannot receive credit for both CRJ 404 and CRJ 504. (YR).
Prerequisite(s): CRJ 200

CRJ 407 Psychology of Adolescence  3 Credit Hours
Considers adolescence as an interaction of rapid biological and social change. Students lacking the prerequisite may elect course with permission of instructor. Examines the theoretical and empirical literature in some detail. Students cannot receive credit both both PSYC 407 and PSYC 507. (YR).
Prerequisite(s): PSYC 170 or PSYC 171 or PSYC 101
Restriction(s):
Cannot enroll if Level is Undergraduate

CRJ 408 Police and the Community  3 Credit Hours
This course examines the diverse roles of the public police and how to achieve effective community policing. After reviewing the evolution of community policing, this course focuses on understanding police mission and culture, involving the community, proactive policing, implementing community policing, communicating with a diverse population, the challenge of gangs, forming partnerships with the media, and building partnerships in the community. (F, W)
Prerequisite(s): CRJ 200

CRJ 409 Intel and Homeland Security  3 Credit Hours
Full Title: Intelligence and Homeland Security This course will provide an in-depth examination of the principles that guide the collection, analysis, and sharing of intelligence in the United States and how these principles impact homeland security. Topics will include the US Intelligence community (CIA, FBI, military intelligence), the National Criminal Intelligence Sharing plan, the National Intelligence Strategy, and the recent emphasis placed on Intelligence-Led Policing. Emphasis will also be placed on the increased role that local and state law enforcement agencies as well as private sector entities play in contributing to the assessment of threats to homeland security. (F,W,S)
Prerequisite(s): CRJ 200

CRJ 410 Quantitative Research and Statistics  4 Credit Hours
Full Course Title: Quantitative Research and Statistics An introduction to methods of data collection and analysis. Elementary statistical data are analyzed using computerized statistics programs. A discussion of research design and the philosophy of social science applied to answering health and human service questions.
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

CRJ 412 Men and Masculinities  3 Credit Hours
This course addresses the question, "What is a man?", in various historical, cross-cultural, and contemporary contexts. A major focus on the social and cultural factors that underlie and shape conceptions of manhood and masculinity in America as well as in a variety of societies around the globe. Prerequisite ANTH 101 recommended. (AY). (AY).
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

CRJ 413 American Constitutional Law  3 Credit Hours
A major theme of this course is the development of the constitution, especially focusing on the themes of judicial review; judicial self-restraint and judicial activism; the expansion of executive and legislative powers; and the rise of "substantive due process of law." POL 101 or equivalent recommended. (AY).
Prerequisite(s): POL 101
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 4130 Qualitative Research  3 Credit Hours
Qualitative research methods involve the observation and study of people in their everyday lives, in their taken-for-granted worlds. Qualitative research seeks to combine close empirical observation with analytic techniques that demand (and teach) personal and social self-consciousness as necessary to an understanding of the social world of "others". This course in qualitative methods is designed to acquaint students with field research theories and techniques. Students will gain hands-on experience in participant observation, interviewing, and the use of sociological scholarship. Qualitative Research Methods will prepare students to gather data, focus the data in a social scientific manner, analyze the data, and then organize it in reportable form. (F, W).
Prerequisite(s): SOC 200
CRJ 414 Civil Rights and Liberties 3 Credit Hours
An analysis of the Bill of Rights and the 14th Amendment, with particular emphasis upon recent landmark or controversial Supreme Court decisions dealing with freedom of speech and religion, rights of criminal defendants; cruel and unusual punishment, right to privacy; civil rights and equal protection clause; and apportionment. POL 101 or equivalent recommended. (YR).
Prerequisite(s): POL 101
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

CRJ 415 Restorative Justice 3 Credit Hours
This course explores the practice of restorative justice as it has been engaged in historical and contemporary criminal justice contexts. Topics addressed include the principles and philosophies underlying restorative justice, differences between retributive and restorative models, victim-offender dialogue, and offender reintegration. Students will be asked to think critically about restorative and retributive systems and to apply these concepts to develop their own approach to restorative justice.
Prerequisite(s): CRJ 200
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Program is

CRJ 416 Criminal Law 3 Credit Hours
A survey of the major judicial, executive, and legislative decisions in the field of criminal law. (AY)
Prerequisite(s): POL 101
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 417 Crimmigration 3 Credit Hours
Full Title: Crimmigration: Intercensions of Immigration and Criminal Justice This course explores the intersection(s) of the criminal justice and immigration systems with special attention to race, class, and gender. It covers the evolution of American immigration policy and its application, the criminalization of immigrants, immigrant offending and victimization, the policing of immigrant communities, and the immigrant experience in the United States.
Prerequisite(s): CRJ 200 or CRJ 468 or CRJ 473 or SOC 200 or SOC 201

CRJ 418 CJ Research Methods 4 Credit Hours
Full Title: Criminal Research Methods This course provides an introduction to methods of data collection and analysis, as well as a discussion of research design and the philosophy of social science, within the context of the field of Criminology and Criminal Justice. Attention is given to quantitative, qualitative, and mixed methodologies.
Prerequisite(s): CRJ 200 and CRJ 468
Restriction(s):
Can enroll if Class is Junior or Senior

CRJ 419 LGBTQ+ Criminology 3 Credit Hours
This course explores matters of crime, crime control, and the law through the lens of Queer Criminology, which draws attention to the stigmatization, criminalization, and rejection of LGBTQ+ populations. Special attention is paid to the intersections of identity (e.g. class, race, gender, sexual orientation) and offending, as well as identity and victimization, as well as the experiences of LGBTQ+ communities with police, courts, and corrections, in the United States and around the world. (YR).

CRJ 423 American Social Classes 3 Credit Hours
Stratification of American communities and society. A review of the findings of major studies and an introduction to methodology. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 425 Lab in Social Psychology 4 Credit Hours
A broad introduction to research methods in basic and applied social psychology. Students will receive training in construction, implementation, and interpretation of scientific procedures used in the study of social psychology. Topics include: questionnaire construction, experimental design, and various multivariate analytic techniques. (YR).
Prerequisite(s): PSYC 381
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 435 Urban Sociology 3 Credit Hours
A descriptive study of the form and development of the urban community with respect to demographic structure, spatial and temporal patterns, and functional organization. The relationship of city and hinterland. Social planning and its problems in the urban community. Students cannot receive credit for both SOC 435 and SOC 535. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 440 Abnormal Psychology 3 Credit Hours
An introduction to the field of psychopathology, the study of mental disorders. Includes exposure to a number of historical and theoretical perspectives, each with their own theories, methodologies, and treatment approaches. Disorders covered will include: anxiety and mood disorders, personality disorders, schizophrenia, sexual disorders, and psychosomatic disorders. Students cannot receive credit for both PSYC 440 and PSYC 540. (YR).
Prerequisite(s): PSYC 171 or PSYC 170 or PSYC 101
Restriction(s):
Cannot enroll if Level is

CRJ 443 Gender Roles 3 Credit Hours
This course will investigate the development of gender roles in childhood and adolescence due to either innate physiological differences or sociological patterning, the effect of gender roles upon male-female relationships within our society, and the possibility of transcending sociological gender roles in alternate modes of living. (FW).
Prerequisite(s): PSYC 170 or PSYC 171 or SOC 200 or SOC 201 or PSYC 101
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 445 Contemporary Ethical Theory 3 Credit Hours
An intensive study of a topic in recent ethical theory. Topics will vary with each offering. Among the topics: ethics and law, utilitarianism, virtue theory, theories of justice, morality and emotion, ethics and partiality. (AY).
Prerequisite(s): PHIL 240
Restriction(s):
Can enroll if Level is Undergraduate
CRJ 446 Marriage and Family Problems  3 Credit Hours
Sociological analysis of problems encountered within the institution of marriage with particular reference to such issues as choosing a marriage partner, sexual adjustment, occupational involvement, conflict resolution, child rearing, divorce and readjustment. Students cannot receive credit for both SOC 446 and SOC 546. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 447 Family Violence  3 Credit Hours
Sociological analysis of various forms of family violence which occur disproportionately in the lives of girls and women. Topics such as incest, sexual abuse, date rape, wife battering, and elder abuse will be situated within the social and cultural context of contemporary gender relationships. Social and political responses to the phenomena will be examined. Permission of instructor is an optional prerequisite. (YR).
Prerequisite(s): SOC 200 or SOC 201 or SOC 301 or SOC 443 or PSYC 405 or WST 405
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 453 Sociology of Law  3 Credit Hours
Various aspects of the relationship between law and society are explored. After a look at processes of law making, attention is turned to the administration of law. This involves a study of the activities of legislatures, courts, police, and correctional agents. Students cannot receive credit for both SOC 453 and SOC 553. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 455 Immigrant Cultures and Gender  3 Credit Hours
The history and culture of immigration since 1850, including: (1) formation and perseverance of immigrant communities and interethic boundaries; (2) relations between the homeland and the immigrant; and (3) impact of migration on family life and gender roles. Prerequisite and junior or senior standing. Students may not receive credit for both WGST 455 and WGST 555. For graduate credit take WGST 555. (AY).
Prerequisite(s): ANTH 101 or WGST 275 or WST 275 or PSYC 275 or SOC 275 or ANTH 275 or HUM 275 or WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303
Restriction(s):
Cannot enroll if Class is Junior or Senior

CRJ 460 Law & Culture  3 Credit Hours
This course explores the ways in which legal norms, and processes are shaped by the societies in which they are created. Issues discussed may include the role of culture in criminal defenses, conflicts between religious and secular law, and how race, gender and ethnicity impact engagement with the law as lawyers and as clients. The class addresses anthropological and sociological theories about the nature of law and disputes, examines related studies of legal structure in non-Western cultures, and considers the uses of sociology and anthropology in studying our own legal system. By examining individual legal institutions in the context of their particular cultural settings, students can begin to make cross-cultural comparisons and contrasts. In doing so, the class confronts the challenge of interpreting and understanding the legal rules and institutions of other cultures while assessing the impact of our own social norms and biases. (W)
Restriction(s):
Can enroll if Class is Junior or Senior

CRJ 461 Cops & Cons: Women in Prison  3 Credit Hours
Course uses contemporary theories of gendered organizations to frame analyses of prison policies and practices in employment and incarceration as they reflect and reproduce gender inequalities. Analyses will be framed within a restorative justice model, that is, a critique of the current criminal justice system of retributive justice and a paradigm of what a alternative system could be.
Prerequisite(s): SOC 200 or SOC 201 or WST 275 or CRJ 240 or CRJ 300 or WGST 275 or PSYC 275 or SOC 275 or ANTH 275 or HUM 275 or WGST 303 or PSYC 303 or SOC 303 or ANTH 303 or HUM 303
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 466 Drugs, Alcohol, and Society  3 Credit Hours
Analyses of the sociology of substance use and abuse. Provides a sociological framework for understanding issues and evaluating our nation’s responses to the phenomenon of drug use. Drawing on sociocultural and social psychological perspectives, this course systematically examines the social structure, social problems, and social policy aspects of drugs in American society. Prerequisite or permission of instructor. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Junior or Senior

CRJ 467 Drugs, Crime, and Justice  3 Credit Hours
Provides a comprehensive analysis of the current state of research on interactions between crime and drug abuse. Examines drug distribution, organization of drug systems, and mechanisms of social control of drug systems. Analyzes the social problems associated with drugs and crime. The course also focuses on drug-law enforcement and public policy strategies for dealing with drugs and crime. Prerequisite or permission of instructor. (YR).
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Can enroll if Class is Junior or Senior

CRJ 468 Criminology  3 Credit Hours
Analysis of criminal behavior in relationship to the institutional framework of society. Emphasis upon the more routinized and persistent forms of criminality along with the joint roles played by victims, the criminal, the police, and all other relevant parties. (F,W)
Restriction(s):
Can enroll if Level is Undergraduate

CRJ 469 Juvenile Delinquency  3 Credit Hours
The analysis of juvenile delinquent behavior in relationship to the institutional framework of society. Emphasis on the extent, causes, and methods of juvenile delinquency in the United States. (YR)
Prerequisite(s): SOC 200 or SOC 201
CRJ 470  Current Issues in Crim Justice  3 Credit Hours
Current issues in the field of criminal justice and law enforcement in the U.S. and other countries. Topics include an evaluation of police activities, problems of apprehensions and prosecution, the courts and the correctional system, and the efficacy of the legal structure in its social context. (F,W,S).
Prerequisite(s): CRJ 200

CRJ 471  Int'l Criminal Justice Systems  3 Credit Hours
Description, analysis, and evaluation of selected criminal justice systems throughout the world. Course focuses on the various systems, theories, structures, methods and functions, including common law systems and socialist law systems. (YR).
Prerequisite(s): CRJ 200

CRJ 472  Correctional Systems  3 Credit Hours
Analysis of the legal, social, and political issues affecting contemporary correctional theory and practice. Topics covered include the history of corrections; the nature of existing institutions; the functions and social structure of correctional institutions; and alternatives to institutional incarceration, probation, and parole. (F, S, W).
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

CRJ 473  Race, Crime and Justice  3 Credit Hours
This course is an analysis of race and its relation to crime in the criminal justice system. Students will analyze and interpret the perceived connection between race and crime, while exploring the dynamics of race, crime, and justice in the United States. This course is designed to familiarize students with current research and theories of racial discrimination within America’s criminal justice system.
Prerequisite(s): SOC 200 or SOC 201
Restriction(s):
Cannot enroll if Class is Freshman

CRJ 474  Cyber Crimes  3 Credit Hours
This course in a hands-on approach investigating cyber crimes (e.g. child exploitation, predators, sexual/vice crimes, identity theft, etc.). Students will explore and discuss legal cases involving cyber technology and predatory practices and review applicable evidentiary rules. Students will also analyze the practical and ethical considerations that apply to undercover internet operations, and evidence collection and use to locate and apprehend offenders.

CRJ 475  Digital Evidence  3 Credit Hours
This course is a detailed approach to how computers and networks function, how they can be involved in virtually any type of crime, and how they can be used as a source of evidence. Students will analyze relevant legal issues and specific investigative and forensic processes related to technology. This course examines how deductive criminal profiling, a systemic approach to focusing an investigation and understanding criminal motivations, is utilized to locate and apprehend offenders.

CRJ 476  Inside Out Prison Exchange  4 Credit Hours
This community-based course, taught in a local correctional facility, brings university students and incarcerated students together to study as peers. Together students explore issues of crime and justice, drawing on one another to create a deeper understanding of how these issues affect our lives as individuals and as a society. The course creates a dynamic partnership between UMD and a correctional facility to allow students to question approaches to issues of crime and justice in order to build a safer and more just society for all. The course encourages outside (UMD) students to contextualize and to think deeply about what they have learned about crime and criminals and to help them pursue the work of creating a restorative criminal justice system; it challenges inside students to place their lives experiences into larger social contexts and to rekindle their intellectual self-confidence and interest in further education. (F, W).
Restriction(s):
Can enroll if Class is Junior or Senior

CRJ 477  Criminal Justice Internship  3 to 6 Credit Hours
Provides field experience in social welfare or criminal justice agencies, e.g., for children/adolescents, in residential programs, in abuse remediation, in probation, for chemical dependencies, in victim advocacy, for the elderly, in prisons, for special needs populations, in court services, in medical/public health, in police services, and for families and communities. Supervision by approved field instructors. An internship of 80 hours is required for three (3) credits. Instructor and student will work together to determine appropriate intern placement. Approval of instructor. (F,W).
Prerequisite(s): CRJ 200

CRJ 478  Women's Studies Internship  3 Credit Hours
Provides field experience in social welfare agencies, e.g., for children/adolescents, abuse, chemical dependencies, the elderly, special needs populations, criminal justice/probation, medical/public health, and families and communities. Supervision by approved field instructors. Focus is on analysis of the social context of agency, the clients, and staff. An internship of 80 hours is required for three (3) credits. Prerequisite: WGST 275 and permission of the Women's Studies Director is required. (F, W).
Prerequisite(s): WST 275

CRJ 479  Criminal Justice Theory  3 Credit Hours
Criminal Justice theorists study of formal and informal mechanisms of social control in specific places, such as bars and night clubs, city parks, schools and shopping malls. Students in this course will learn to apply their theories to practical, real life situations to achieve behavioral changes among individuals and groups toward the objective of effective crime control.
Restriction(s):
Cannot enroll if Major is

CRJ 480  Terrorism & US Natl Security  3 Credit Hours
The United States responded to the events of September 11, 2001 with a series of unprecedented action under the umbrella of homeland security and the ?War on Terror.? This course examines American National security policy by asking a few key questions: What is terrorism and how does it threaten the United States? How has the United States responded to the threat of terrorism over time? What have the consequences of US policy been to date? Finally, how would we balance a desire for security with our desire for civil liberties and ethical action?
Prerequisite(s): CRJ 468
CRJ 482 Legal Ethics 3 Credit Hours
This course will explore the many ethical dilemmas faced by professionals in the legal system. We will pay particular attention to the criminal justice system and to the Rules of Professional Conduct for attorneys. Some of the questions we may address are: How should an attorney consider his/her own ethical beliefs when deciding the appropriate course of action in a case? How should a judge consider his/ her own ethical beliefs when making a juvenile justice decision? How should a police officer determine the ethical course of action when the law's instructions are ambiguous?
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if Level is Undergraduate

CRJ 483 Justice, Crime and Environment 3 Credit Hours
This service-learning course focuses on environmental justice and law. Environmental Justice is defined as the fair treatment of all people with respect to the development, implementation, and enforcement of environmental laws. In the classroom, students learn the theory, history, and enforcement of environmental laws and regulations in Detroit, Michigan, and nationwide. In a required civic engagement project, students apply their substantive knowledge to solve local environmental problems. Through classroom learning and projects with community organizations, students connect law and justice concerns to Detroit's environmental problems.
Restriction(s):
Can enroll if Class is Junior or Senior

CRJ 484 White Collar Crime 3 Credit Hours
This course reviews the history, categories, and problems related to white-collar crime. The course covers these topics by incorporating both legal and empirical perspectives in the study of white collar crime. In this course, we will focus on the substantive and procedural white collar crime laws ('law on the books') and analyze real white collar crime cases. Simultaneously, we will pay special attention to the dynamic relationship between white collar crime and the American regulatory framework. As a result, we will assess the relationship and differences between various types of white collar crime and the regulatory regimes that oversee the business sector ('law in action'). (OC)

CRJ 485 Psychology Internship 3 or 6 Credit Hours
The psychology internship offers experience in a wide variety of placements dealing with human services. These include programs related to child abuse, crisis intervention, geriatrics, human resources/ staff development, cognitive impairment, criminal prosecution, teenage runaways, substance abuse, and women's issues. The program is designed for juniors and seniors with a concentration in psychology or behavioral sciences and involves training in listening and helping skills.
Prerequisite(s): PSYC 171 or PSYC 170 or PSYC 101
Restriction(s):
Can enroll if Class is Junior or Senior

CRJ 486 Criminalistics: CSI to Justice 3 Credit Hours
This course is a hands-on approach to learning about crime scene investigation. The course takes the student from the first response on the crime scene to documenting crime scene evidence and preparing evidence for courtroom presentation. It includes topics such as arson, homicide, suicide, and felony murder. CRJ 486 examines how the police conduct successful investigations, how the associated crime scene evidence is collected, and how to use the evidence to locate, apprehend, and prosecute the suspect.
Prerequisite(s): CRJ 200

CRJ 487 Forensic Science Evidence in Criminal Cases 3 Credit Hours
This class is a study of the increasing use of scientific evidence in criminal cases, gathered by crime scene investigators (CSI) and/or later developed in a crime laboratory. After a review of the history and development of forensic scientific evidence, the class will study the standards used by courts to prevent the admission of so-called "junk science" and the emergence of DNA as a new model for forensic science evidence. Several common forms of scientific evidence, beginning with DNA, will be studied, including fingerprints, handwriting, hair, bite marks, ballistics, fire and arson debris, and blood stains. The study also includes the forensic use of social sciences testimony, including the reliability of eyewitness testimony and several forms of abuse "syndrome" testimony. Each of these forms of evidence will be described and then compared to the "junk science" standards and to the most recent information about their reliability. The class will examine the impact of forensic science evidence or juroors and the so-called "CSI Effect". The reaction of courts, attorneys and police to juror expectations for scientific evidence will be reviewed. Finally, the class will review the impact of DNA exonerations and the National Academy of Sciences report on the reliability of forensic science evidence and how judges and appeals courts are responding to those challenges, particularly the current controversies concerning the validity of such evidence. Students cannot receive credit for both CRJ 487 and CRJ 587. (W)

CRJ 488 Criminal Procedure 3 Credit Hours
This class is a study of Constitutional law regarding criminal procedure in the United States. Initially the class reviews the federal and state court structure relating to criminal prosecutions and the flow of cases through those systems. The focus is then on the nature of individual rights under the Constitution, the case law, and the concept of the "exclusionary rule." The class then examines specific issues and procedures relating to arrests, searches, confessions and identifications, and analyzes the constitutional requirements for each. (W)

CRJ 489 Law, Crime, and Society 3 Credit Hours
This course will incorporate both legal and empirical perspectives to emphasize the dynamic relationship between law, crime, and society. In this course, we will focus on the substantive and procedural criminal law ('law on the books') while we simultaneously focus on empirical research of enforcement, case processing and sentencing in the criminal justice system (the 'law in action'). As a result, we will assess the relationship and differences between what the criminal law says 'on the books' and the criminal justice system 'in action'.
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior

CRJ 490 Topics in Criminal Justice 3 Credit Hours
Examination of problems and issues in selected areas of criminal justice. Title as listed in Schedule of Classes will change according to the content of the course. Course may be repeated when specific topics differ.
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

CRJ 494 Pol Sci Internship Seminar 3 or 6 Credit Hours
This is the academic part of the internship. Students must meet with other interns once a week to analyze political dynamics within their placements. Students are required to keep journals, prepare papers and reports, and do other written work. Anyone taking POL 495 or 496 is required to take POL 494. It may not be taken by itself. Repeatable if topic differs. Only six hours of internship credit is allowable toward concentration requirement. (F,W,S).
CRJ 495  Political Science Internship  3 to 6 Credit Hours
Field study placements in national, state, local government or private agencies. Primarily for junior or senior political science concentrators or other qualified applicants. Maximum of 20 students selected each term. Students must also register for CRJ 494. Only six hours of internship is allowed toward concentration requirement. (F,W,S).

CRJ 497  Washington, D.C. Internship  3 to 6 Credit Hours
Field placements in Washington, D.C. Course is offered only in summer semester. Primarily for junior or senior political science concentrators or other qualified applicants. Only six hours of internship credit is allowed toward concentration requirement.

CRJ 498  Directed Studies  1 to 6 Credit Hours
Directed individual study of any subject agreed upon by the student and the instructor. May not duplicate a formal course offering.
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

Decision Sciences (DS)

DS 300  Quantitative Model and Anlys I  3 Credit Hours
To introduce fundamental concepts and methods in data analysis, probability, estimation, and statistical inference for application in management and management science. Topics include: basic probability theory, discrete and continuous random variables and distributions, sampling and data analysis, sampling distributions, estimation, confidence intervals and hypothesis testing, introductory regression analysis and utilization of statistical software packages.
Prerequisite(s): MATH 104 or MATH 105 or MATH 113 or MATH 115 or Mathematics Placement with a score of 115
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior

DS 301  Intro Business Statistics  3 Credit Hours
Introductory concepts and methods in data analysis and probability, together with their applications to business. Students will be introduced to the use of Excel® to analyze data and communicate data to a business audience through statistical reports. Topics covered are data generation and categorization; visualizing data; numerical descriptive measures; basic probability; random variables (discrete and continuous); and an introduction to sampling methods and sampling distributions. (F,W,S)
Prerequisite(s): (MATH 104 or MATH 105 or MATH 113 or MATH 115 or Mathematics Placement with a score of 115) and (ITM 120 or ISM 120 or MIS 120 or CIS 123)
Restriction(s):
Cannot enroll if Class is Freshman

DS 302  Advanced Business Statistics  3 Credit Hours
Full Title: Advanced Business Statistics using Excel The continuance of DS301: an introduction to the use of estimation and statistical inference in data analysis using Excel and other appropriate statistical packages, with applications to business. Statistical report writing for a business audience will be emphasized. Topics covered are sampling distributions; confidence interval estimation; hypothesis testing (one-sample tests, two-sample tests, Chi-square test, and analysis of variance); and regression models. (F,W,S)
Prerequisite(s): DS 301

DS 310  Data Mining for Bus Intel  3 Credit Hours
Data Mining offers a suite of analytical techniques to examine large sets of data in order to discover, diagnose, and identify new and valuable information to aid the decision-making process. This course is designed to introduce the core concepts of data mining, its techniques, implementation, benefits and outcomes from this technology. Examples from industries such as, retail, marketing, fraud protection, personal security, health care, web and e-commerce will be presented throughout the course to emphasize usage and application of data mining. Among data mining techniques to be discussed in the course are k-means clustering, principal component analysis, factor analysis, linear and logistical regression, neural networks, decision trees, text and web mining. The class format consists of discussion of published articles/cases, presentations by business professionals, class lectures and discussions, and hands-on work with popular data mining software. (F)
Prerequisite(s): DS 300 or DS 302 or STAT 325 or IMSE 317

DS 350  Quantitative Model and Anlys II  3 Credit Hours
To continue from DS 300, during the first half of the course, the study of the concepts and methods in data analysis and statistical inference, as well as to introduce, in the second half of the course, basic linear optimization methods and models applied in the formulation, quantification, analysis, and solution of management decision problems. Topics include: simple and multiple linear regression, analysis of variance, sampling, correlation, formulation and solution of linear programming problems, transportation and transshipment models, utilization of software packages for statistical analysis and optimization.
Prerequisite(s): DS 300

DS 425  Optimization Modeling and Anly  3 Credit Hours
To continue, from DS 350, the study of optimization methods and models applied in the formulation, quantification, analysis and solution of management decision problems. Topics include: network analysis (including PERT-CPM), goal and multi-objective linear programming, integer programming, dynamic programming, Markovian decision processes, nonlinear programming.
Prerequisite(s): DS 350

DS 426  Introduction to Simulation  3 Credit Hours
To introduce the concepts and methods of discrete-event simulation for the modeling and analysis of complex systems. Topics include: basic simulation modeling, modeling complex systems, simulation languages, selection of input probability distributions, random-number generators, generating random variable values, output data analysis for a single system, statistical techniques for comparing alternative systems, validation of simulation models, variance-reduction techniques, experimental design and optimization.
Prerequisite(s): DS 350

DS 489  Seminar: Decision Sciences  1 to 3 Credit Hours
To provide students with an opportunity for intensive study in current selected areas related to the research activities and/or professional activities of faculty members. Permission of College of Business.
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Business
**Economics (ECON)**

**ECON 100  Personal Economics & Finance  3 Credit Hours**

Students in ECON 100 will acquire the knowledge and tools needed to survive and thrive in the economic realities of the 21st century. Students will become familiar with the Michigan and U.S. economies, and will learn how to apply basic economic concepts to common personal choices, for example how to finance their education. They will also learn how to use economic concepts to critically evaluate economic information presented to them by others.

**ECON 2001  Introductory Economics  3 Credit Hours**

Introduction to economic reasoning, basic economic concepts and theories used in microeconomics and macroeconomics. Economic techniques including graphing and marginal analysis will also be introduced and applied to practical problems in everyday life. In addition, this course will focus on the way economic concepts can be taught at the elementary and high school level in a way that integrates economics into a broader understanding of Michigan history, government and geography. (F).

**ECON 201  Prin: Macroeconomics  3 Credit Hours**

Together with ECON 202, this course serves to introduce the student to the basic ideas and concepts of modern economic analysis, and applies them to current economic problems, policies and issues. The focus of this course is on macroeconomics: income and wealth, employment, and prices at the national level in the United States economy. It is recommended that students take ECON 201 before ECON 202. MATH 105 is highly recommended but not required. (F,W,S).

**ECON 202  Prin: Microeconomics  3 Credit Hours**

Together with ECON 201, this course serves to introduce the student to the basic ideas and concepts of modern economic analysis, and applies them to current economic problems, policies, and issues. The focus of this course is on microeconomics, the behavior of consumers and firms and their interactions in specific markets. It is recommended that students take ECON 201 before ECON 202. MATH 104 or 105 is highly recommended but not required. (F,W,S).

**ECON 290  Topics in Economics  3 Credit Hours**

Examination of problems and issues in selected areas of economics. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

**ECON 300  Intermediate Macroeconomics  3 Credit Hours**

A systematic study of the determinants of national output, economic growth, inflation, and unemployment. The effects of monetary policy, fiscal policy and other economic factors are analyzed for both the long run and short run. Debates about various approaches to macroeconomics policy are also discussed. (F,W).

**Prerequisite(s):** ECON 201 and ECON 202 and (MATH 104 or MATH 105 or MATH 113 or MATH 115 or Mathematics Placement with a score of 113)

**ECON 302  Intermediate Microeconomics  3 Credit Hours**

A systematic study of the role of prices in organizing economic activity. The tools necessary for such study will be developed and applied to the analysis of the household, the firm, and the market under varying degrees of competition and monopoly. (F,W).

**Prerequisite(s):** ECON 201 and ECON 202 and (MATH 104 or MATH 105 or MATH 113 or MATH 115 or Mathematics Placement with a score of 113)

**ECON 305  Economic Statistics  3 Credit Hours**

Introduction to the logic and use of statistical analysis, with emphasis on statistical inference. Topics covered include descriptive statistics, probability, estimation, hypothesis testing, and the use of linear regression analysis to study relationships between two variables. (F,W).

**Prerequisite(s):** ECON 201 and ECON 202 and (MATH 104 or MATH 105 or Mathematics Placement with a score of 113)

**ECON 311  Money and Banking  3 Credit Hours**

The structure, workings, and regulation of financial systems, concentrating on bank-like financial institutions. While financial instruments like stocks, bonds, and some derivatives are discussed, the focus is on the economic theory behind financial markets. That is, the study of monetary policy underscores the interaction between the financial system and the economy. (F,W).

**Prerequisite(s):** ECON 201

**ECON 321  Labor in the American Economy  3 Credit Hours**

An analysis of the nature and underlying causes of the problems facing the worker in modern economic society. Includes an examination of wages, unemployment, economic insecurity, the trade union movement, collective bargaining, and labor legislation. (F,W).

**Prerequisite(s):** ECON 201 and ECON 202

**ECON 325  Economics of Pov and Discrm  3 Credit Hours**

An analysis of the economic aspects of poverty and discrimination. Emphasis on the theoretical economic causes of poverty and the economic bases for discriminatory behavior, the impact of poverty and discrimination on individuals and society, and the effect of reform policies on the two problems. (AY).

**Prerequisite(s):** ECON 201 and ECON 202

**ECON 331  Industrial Organization  3 Credit Hours**

Theory and empirical evidence on the causes and effects of market power, especially in industrial markets. The focus is on the relationships between market structure and performance, and policy formation. (YR).

**Prerequisite(s):** ECON 202

**ECON 335  Experimental Economics  3 Credit Hours**

This course on experimental economics is devoted to laboratory experiments on individual behavior in markets as well as in social situations. It focuses on different forms of strategic interactions between agents, including competition, coordination, bargaining, and public choice. We will consider individual decision experiments, choice anomalies, and the role of information in learning and signaling. We will also discuss the design of various economic experiments, such as market bargaining, auctions, trust, gift giving, adverse selection, public goods, common pool resources, etc. Students are recommended (but not required) to take Econ 302 before enrolling in this class. Basic knowledge of Excel is required for this class.

**Prerequisite(s):** ECON 202 or ECON 2001

**Restriction(s):** Cannot enroll if Class is Freshman
ECON 351  Environmental Economics  3 Credit Hours
Course examines the economic aspects of pollution problems. Topics covered in this course include the economic theory of externalities, the theory of public goods, and the optimum use of depletable natural resources. The role of cost-benefit analysis as a part of the decision-making process is also examined. (AY).
Prerequisite(s): ECON 202

ECON 355  Health Economics  3 Credit Hours
Using microeconomic concepts and statistics, this course provides a comprehensive overview of health care markets and determinants of health in high-income countries, particularly the U.S. Even though there is a degree of overlap with health services research, public health, and clinical medicine, the thrust of this course is economic. Topics include the demand and supply of health services, public and private approaches in financing health care and the application of cost-benefit analysis to the provision of healthcare. (AY). (AY).
Prerequisite(s): ECON 202

ECON 361  US Economic History  3 Credit Hours
A survey of the processes of development of the United States economy, their social implications, and the sources of today’s economic problems. (YR).
Prerequisite(s): ECON 201 or ECON 202

ECON 362  Eur and Intl Economic Hist  3 Credit Hours
A survey of the processes of industrialization in the major non-American industrial economies, with a focus on their relevance and implications. (AY).
Prerequisite(s): ECON 201 or ECON 202

ECON 375  Heterodox Economics  3 Credit Hours
This course introduces students to alternative perspectives on economic theory and method. These alternatives include: Post Keynesian, Marxian and radical political economics, Austrian and feminist economics. (OC).
Prerequisite(s): ECON 201 or ECON 202 or ECON 2001

ECON 385  Public Choice  3 Credit Hours
Public policy decision making, particularly governmental decisions regarding economic policies. Emphasis is on the use of economic methodology to analyze resource allocation via the political system rather than through private markets. (OC).
Prerequisite(s): ECON 201 and ECON 202

ECON 390  Topics in Economics  1 to 3 Credit Hours
Examination of problems and issues in selected areas of economics. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).

ECON 390H  Topics in Economics  3 Credit Hours
Topic: The Economics of Religion, Crime, and Marriage. This course uses the tools of economics, particularly microeconomics, to explain key characteristics of religion, criminal behavior, and marriage. For religion, the course will explore church organization, church architecture, beliefs about the afterlife, doctrine about usury, and religious market structure, among others. For crime, the course will evaluate claims about the death penalty, gun control and the demand for crime. For marriage, the course will analyze multiple, marriage payments, family organization, and marriage for love, among others.
Prerequisite(s): ECON 202

ECON 390M  Topics in Economics  3 Credit Hours
Topic Title: Comparative Institutions: Cuba, the US and More. This course will analyze different institutions. This will range from colonialism to the mafia to prison gangs to economic development. A significant part of the class will be a spring break trip to Cuba. Before we go we will study the institutional literature on democracies and dictatorships and then spend a week traveling around one of the last communist countries that still exists.

ECON 398  Economics Internship  3 to 6 Credit Hours
This internship affords the student the opportunity to apply tools learned in economics courses to real-world work situations. The student has 8-16 hours of unpaid work per week under the guidance of a faculty advisor and complementary academic work supervised by an economics professor. Only three credit hours may be applied to meeting the concentration requirements in economics; up to six credit hours may be applied toward graduation credit. The internship is offered only on the S/E grading basis. Students cannot receive credit for both ECON398 and ECON498. (F,W,S). 3.000 TO 6.000 Credit hours

ECON 401  Monetary Economics  3 Credit Hours
This course examines financial institutions in a macroeconomic theoretical context. A rigorous treatment of monetary theory is presented followed by practical discussion of U.S. monetary policy as implemented by the Federal Reserve System. Students cannot receive credit for both ECON 411 and ECON 401.
Prerequisite(s): ECON 311 and ECON 301
Restriction(s):
Can enroll if Level is Undergraduate

ECON 4015  Introduction to Econometrics  3 Credit Hours
The theory and practice of the statistical analysis of economic relationships. Topics covered include the construction and estimation of econometric models and tests of economic theories, emphasizing the use of multiple linear regression. Students cannot receive credit for both ECON 415 and ECON 415. (YR).
Prerequisite(s): (MATH 113 or MATH 115) and ECON 305
Restriction(s):
Can enroll if Level is Undergraduate

ECON 402  Economics of the Labor Sector  3 Credit Hours
Theoretical analysis and empirical studies of the nature and operation of labor markets. Includes theories of wage determination and income distribution, the nature of unemployment, the impact of collective bargaining on the economy, the extent and economic effects of discrimination, and the nature and effects of government wage and employment policies. ECON 321, Labor in the American Economy, is valuable background to this course although it is not a prerequisite. This course counts as a required capstone (4000-level) course in Economics and also counts toward the Economics Honors designation. Students cannot receive credit for both ECON421 and ECON4021.
Prerequisite(s): ECON 302
Restriction(s):
Can enroll if Level is Undergraduate

ECON 406  History of Economic Thought  3 Credit Hours
Course examines the evolution of economic thought and theory from the early origins to the present, focusing on the major contributions to economics, especially from Adam Smith onward, and assesses the current condition of economic analysis. Students cannot receive credit for both ECON 465 and ECON 4065.
Prerequisite(s): ECON 302
Restriction(s):
Can enroll if Level is Undergraduate
ECON 4085  Public Finance  3 Credit Hours
Analysis of the role of government in the economy. Course examines theories of the need for and nature of government intervention in economic activities. Includes analysis of the local, state and Federal US tax system and its labor supply implications, intergovernmental transfers and transfers to individuals, cost-benefit and budget analysis as well as models of political economy and public choice theory. Students cannot receive credit for both ECON 4085 and ECON 481. (AY, F).
Prerequisite(s): ECON 302
Restriction(s):
Can enroll if Level is Undergraduate

ECON 437  Behavioral Public Policy  3 Credit Hours
This course teaches you to apply the insights from behavioral economics and psychology to public policy design. Empirically-based behavioral science offers policy makers the opportunity to decrease the impact of psychological limitations of lazy or boundedly rational individuals. In this course we consider various public policies that are informed by behavioral science research in the areas of retirement savings, household borrowing, health care, energy use and choice of nutrition. Graduate version of the course requires completion of additional assignments.
Prerequisite(s): (ECON 201 and ECON 202) or PPOL 500
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore

ECON 438  Beh Econ for Business & Policy  3 Credit Hours
This course is a reading intensive seminar on behavioral economics, which is the combination of psychology and economics that investigates what happens in markets in which some agents display human limitations and complications. The course focuses on the behavioral economics theory and its' application to business practice and policy decision making. Specifically, in this course we: (1) examine the ways in which people deviate from the standard economics models, including irrationality, preferences for fairness, propensity to cooperate, trust, dual-interest, empathy and emotions; (2) explore behavioral economics theories and models; (3) discuss how the behavioral economics theories and models can be applied to solve business and policy problems. Graduate version of this course requires completion of additional assignments. Students cannot receive credit for ECON 336 and ECON 438 or ECON 538. (FWAY)
Prerequisite(s): ECON 202 or ECON 2001
Restriction(s):
Cannot enroll if Class is Freshman

ECON 442  Economic Development  3 Credit Hours
A survey of economic problems currently affecting third world countries and the various policy options available to them. Topics covered will include agrarian vs. industrial growth, and monetary and fiscal policies, planning problems, foreign exchange and debt problems. Students cannot receive credit for both ECON 442 and ECON 342 (OC).
Prerequisite(s): ECON 201 or ECON 202
Restriction(s):
Can enroll if Level is Undergraduate

ECON 444  Economics of the Middle East  3 Credit Hours
Survey of socio-economic issues of the post-WWII Middle East, using textbooks and web-based readings. Topics include population growth, urbanization, migration, gender issues, land reform, privatization, and stabilization policies. The Arab-Israeli conflict is not a focus of study. Grade based on papers and exams. Students cannot receive credit for both ECON 344 and ECON 444.
Prerequisite(s): ECON 201 or ECON 202
Restriction(s):
Can enroll if Level is Undergraduate

ECON 447  International Finance  3 Credit Hours
This course studies the large-scale economic issues in interdependent economies, such as the behavior of exchange rates, interest rates, income, wealth, prices, and the balance of payments. International finance focuses particularly on economic policies in a world with a multitude of currencies and increasingly integrated goods, financial, and capital markets. Students cannot receive credit for both ECON 447 and ECON 347.
Prerequisite(s): ECON 201
Restriction(s):
Can enroll if Level is Undergraduate

ECON 448  International Trade  3 Credit Hours
Course analyzes in depth the debate of free trade vs. protectionism. Different theoretical models of the "gains from trade" are presented, as well as studies of their empirical validity. Some historical perspective is included, as well as discussion of the current situation of the European Union. Students cannot receive credit for both Econ 348 and ECON 448.
Prerequisite(s): ECON 201 and ECON 202
Restriction(s):
Can enroll if Level is Undergraduate

ECON 482  Regional Economics  3 Credit Hours
Course explores methods of economics evaluation of regions in terms of intra- and inter-regional activity. Regions may smaller than a nation, be a collection of nations, or be composed of portions of more than one nation. Theoretical topics include the theories of (1) the location of the firm, (2) spatial demand, (3) agglomeration economies, and (4) input-output analysis. Regional development policy is discussed using Michigan and Ontario as subjects. Students cannot receive credit for both ECON382 and ECON482.
Prerequisite(s): ECON 201 or ECON 202 or ECON 2001
Restriction(s):
Can enroll if Level is Undergraduate

ECON 483  Urban Economics  3 Credit Hours
The economics of the city and the introduction of space in economic analysis; the determination of land use patterns, the location of firms and industries, and an urban area's growth; economic analysis and policy issues concerning urban poverty, housing, transportation, the local public sector, and other urban problems. Students cannot receive credit for both ECON 483 and ECON 381.
Prerequisite(s): (ECON 201 and ECON 202) or ECON 2001
Restriction(s):
Can enroll if Level is Undergraduate

ECON 497  Economics Seminar  3 Credit Hours
An advanced study in selected areas of Economics. Topics vary; see the current Schedule of Classes for topics and prerequisites. May be offered in satisfaction of 400-level elective requirement for concentration. (OC).
Restriction(s):
Can enroll if Level is Undergraduate

ECON 499  Directed Research  1 to 3 Credit Hours
Independent study under the direction of a faculty supervisor in advanced topic areas. Normally must be elected on the "pass/fail" option, in which case it does not count toward credit hour requirement for concentration. Special consideration for the A through E grading option must be approved by members of the Economics discipline. In all cases students must have faculty supervisor's permission to register.
Restriction(s):
Can enroll if Level is Undergraduate
Educ A-Theoretical Foundations (EDA)

**EDA 205 Introduction to Education** 3 Credit Hours
This course is designed to introduce students to the field of education. In this course students will gain a working knowledge of teacher certification and professionalism, state standards, and high-stakes testing. Additionally, students will be introduced to basic forms of lesson planning, classroom assessment, and instructional techniques. As a part of the course, all students will begin to use the M-Portfolio system. Students will also carryout assignments in schools and therefore must complete the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent). For more information access the Field Placement Office website at: www.umdearborn.edu/cehhs/cehhs_fpo

**Prerequisite(s):** Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1

**Restriction(s):**
- Cannot enroll if Class is Post-baccalaureate NCFD or Undergraduate NCFD or Graduate
- Can enroll if Level is Undergraduate

**EDA 340 Foundations of American Education** 2 to 3 Credit Hours
A general survey of education's theoretical and structural foundations. This course introduces students to the history and philosophy of education as well as to the organization and financing of schools in America. Particular attention will be given to the role of education in a democratic society and to the notion of teaching as a profession.

**Restriction(s):**
- Can enroll if Class is Undergrad Certification only or Post-baccalaureate Certification only or Sophomore or Junior or Senior

**EDA 419 Early Literacy/Language Development** 3 Credit Hours
This course examines early language development, the factors that contribute to its growth and the role that it plays in the development of literacy. Diagnostic techniques for assessing language and literacy and teaching strategies and materials to facilitate language and literacy growth in children birth through third grade will be discussed.

**Restriction(s):**
- Cannot enroll if Class is Freshman or Graduate

**EDA 450 History/Theory of Bilingual Education** 2 to 3 Credit Hours
The course provides an extensive background on bilingual education (programs where two languages are used as media of instruction) in the United States, and the events that led to the inception of such programs on the Federal as well as the State levels. The course provides a background on the concept itself, its rationale and implementation.

**Restriction(s):**
- Can enroll if Class is Junior

**EDA 455 Language, Culture, Literacy & Power in Education** 3 Credit Hours
Full Course Title: Seminar in Language, Culture, Literacy and Power in Education During this course we will examine the social/cultural functions of language with an emphasis on schools and other applied educational settings. Through our readings, discussions, and class activities, students will gain a greater appreciation for the ways in which language varies across cultures, social settings, and situations. (YR)

Educ B-Educational Admin (EDB)

**EDB 421 Current Issues in Early Education** 2 Credit Hours
Examines the expanding field of early childhood in order to understand major issues which are shaping the development and support of early education and child care programs. Designed for present and future teachers, administrators, and other workers in the field of early childhood, and for the general public who must participate in major pending decisions relating to such questions as proposed changes in state licensing, teacher certification, and funding sources.

**Restriction(s):**
- Can enroll if Class is Post-baccalaureate Certification only or Undergrad Certification only or Junior

**EDB 422 Lead, Advoc, Admin Early Ch Prg** 3 Credit Hours
This course promotes role of the early childhood educator as a leader and advocate for young children and families. Designed for present and future teachers, administrators and other professionals who participate in decisions relating to public policy and legislation, state licensing, teacher certification, funding resources, parental involvement and other issues affecting young children and families.

**Prerequisite(s):** EDC 240

**Restriction(s):**
- Can enroll if Class is Undergrad Certification only or Post-baccalaureate Certification only or Junior or Senior

**Other Content**

* An asterisk denotes that a course may be taken concurrently.

**Frequency of Offering**

The following abbreviations are used to denote the frequency of offering:
- (F) fall term
- (W) winter term
- (S) summer term
- (F, W) fall and winter terms
- (YR) once a year
- (AY) alternating years
- (OC) offered occasionally

Educ C-Psychological Foundations (EDC)

**EDC 240 Psych of Child Development** 3 Credit Hours
Full Course Title: Psychology of Child Development: Birth to Age 18
An introductory presentation of facts and theories concerning the development of the child from birth through adolescence. The practical applications of present knowledge in this field will be examined. Field observations and directed interactions with children required. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).

**Prerequisite(s):** Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1

**Corequisite(s):** EDC 241

**Restriction(s):**
- Can enroll if Class is Undergrad Certification only or Post-baccalaureate Certification only or Freshman or Sophomore or Junior or Senior
EDC 241  Psych: Child Devel Practicum  1 Credit Hour
A supervised field experience related to the study of child development. Requires a minimum of 45 clock hours of observation and work spread over a semester in an early childhood setting. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDC 240
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if College is Education, Health, and Human Services

EDC 300  Educational Psychology  3 Credit Hours
Consideration of research findings relevant to the learner in the classroom with emphasis on factors that influence learning. Topics include: the teacher trainer's role in motivation; formulation of generalizations pertaining to the physical, mental, social, and emotional development of learners; analysis of selected aspects of the teaching-learning situation including the dynamics of interaction, classroom control, guidance, and appraisal of growth.
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Certification only or Sophomore or Junior or Senior
Can enroll if College is Engineering and Computer Science or Education, Health, and Human Services or Business or Arts, Sciences, and Letters

EDC 301  Practicum in Ed Psychology  1 Credit Hour
A supervised field experience related to the study of educational psychology involving a minimum of 45 clock hours of participation/observation and work spread over a semester in a school setting. TB clearance and criminal background check are required.
Prerequisite(s): PSYC 170 or PSYC 171
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Certification only or Sophomore or Junior or Senior
Can enroll if College is Education, Health, and Human Services

EDC 302  Adol Devl & Classroom Mgmt  3 Credit Hours
An examination of the current theories and research findings concerning the physical, social, emotional, and cognitive development during the early and late adolescent years. Theory will be related to educational and parenting practices. Significant material will be included addressing classroom management of the middle school and high school classroom using simulation, case studies and videos of actual classrooms.
Corequisite(s): EDC 304
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Certification only or Sophomore or Junior or Senior
Can enroll if College is Education, Health, and Human Services

EDC 303  Mntl Hlth in Med, Hu Srv, Lrn  3 Credit Hours
Full Title: Mental Health Issues in Medical, Human Services, & Learning Environments. This course surveys mental health across the lifespan and the manifestation of mental health issues in medical, human services, and educational environments. Included are developmental factors, diagnostic issues, theoretical formulations, etiology, commonly used evidence-based treatments, and research findings related to the range of mental health issues. Issues related to classification systems, diagnosis, and institutional responses to mental health issues within the context of medical, human services, and learning environments are also addressed. Medical, legal, educational, and social-emotional issues related to mental health and the treatment of people living with mental health issues are addressed. Other issues such as comorbidity, cultural influences related to the expression of mental health, and psychological factors related to physical conditions will also be considered. (F,W,S)
Prerequisite(s): EDC 240 or CHE 101 or SWK 200

EDC 304  Pract Adol Devl&Clsrm Mgmt  1 Credit Hour
A supervised field experience related to adolescent and classroom management in grades 6-12. Requires a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Official admission to and good standing in the teacher certification program are required. Must be taken concurrently with EDC 302. For graduate credit elect EDC 504. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDC 302
Restriction(s):
Can enroll if Class is Post-baccalaureate Certification only or Undergrad Certification only or Post-baccalaureate NCFD or Sophomore or Junior or Senior

EDC 306  Applied Behavior Analysis I  3 Credit Hours
This is the first in a two course sequence in applied behavior analysis, focusing on best practices and current research. General topics to be covered include principles of learning, research methods in applied behavior analysis, skills training and stimulus control techniques, interventions for problem behavior, ethical issues, and the application of behavior analysis across a wide range of populations, settings, and behaviors. (FS)

EDC 307  Applied Behavior Analysis II  3 Credit Hours
This is the second in a two course sequence in applied behavior analysis (ABA) that focuses on the application of the fundamental principles, processes, and concepts of the field that were covered in Applied Behavior Analysis I. Through discussion, demonstration, and analysis, students will learn about specific behavior change procedures based upon the principles of ABA and the process for selecting and implementing those procedures.
Prerequisite(s): EDC 306
EDC 308  Intro Dev Disabilities  3 Credit Hours
Full Title: Introduction to Developmental Disabilities This course will provide an overview of the issues related to the diverse group of individuals with developmental disabilities. Topics include the history and public policy issues related to this population. Special consideration will be given to familial issues within the context of socio-cultural issues and the role of families in the provision of services across the lifespan. Students will be exposed to the range of assessment practices for developmental disabilities, including intellectual, adaptive behavior, psychosocial, behavioral, psychoeducational, and developmental. Specific conditions under the category of developmental disabilities are covered, along with the diagnostic criteria for these conditions. Other topics include educational and behavioral interventions, person centered planning/family centered support, post-school and adult issues, physical and mental health issues, services and supports to improve quality of life, controversial therapies, and ethical issues for individuals with developmental disabilities. (F, S)

EDC 310  RBT Training  3 Credit Hours
Full Course Title: Registered Behavior Technician Training This course provides a practical working knowledge of the basic principles of Applied Behavior Analysis (ABA) in preparation for participants to take the RBT Competency Assessment. This training program is based on the Registered Behavior Technician Task List set forth by the Behavior Analysis Certification Board (BACB) and is designed to meet the 45-hour training requirement for the RBT credential. The program is offered independent of the Behavior Analyst Certification Board (BACB). (F,W,S)

EDC 350  Intro to Ethics for ABA  1 Credit Hour
Full Title: Introduction to Ethics for Applied Behavior Analysts This course provides students pursuing the BCaBA certification with an introduction to the Professional and Ethical Compilance Code for Behavior Analysts. Through reading and discussion of the code students will learn to recognize Code violations and avoid unethical behavior and Code violations in all aspects of practice. Throughout the course, case studies will be used as a basis for demonstrating Code violations. (YR)
Prerequisite(s): EDC 306

EDC 390  Observ and Particip in Ed Set  1 to 3 Credit Hours
An opportunity for supervised observations of, and participation with, children and adolescents in educational settings. For students who need additional laboratory experience prior to student teaching.
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDC 400  Adult Learning/Theory/Practice  3 Credit Hours
This course introduces students to current theory and practice for understanding and working with adult learners in today's society.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Undergrad Certification only or Post-baccalaureate NCFD or Sophomore or Junior or Senior

EDC 401  Introduction to LD  3 Credit Hours
Introduction to LD is designed to provide students with an overview of the field of learning disabilities. Discussions will include physical, social, emotional, and cognitive comparisons of developmental differences and similarities between persons of all ages with and without LD, historical and theoretical perspectives, current trends and issues, assessment, and collaboration among educators.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Undergrad Certification only or Post-baccalaureate NCFD or Sophomore or Junior or Senior
Can enroll if College is Education, Health, and Human Services

EDC 402  Research Methods Beh Analysis  3 Credit Hours
The purpose of this course is to introduce you to the fundamentals of behavior-analytic research methods. The course will review single-case time series methodologies to assess various dimensions of behavior and evaluate the effects of interventions of behavior. Single-case research has played an important role in developing and evaluating interventions designed to modify some aspect of human behavior. This course will encompass a broad range of research areas that utilize single-case designs within both the behavior analytic literature and other disciplines including school psychology, medicine, and business. (F, S)
Prerequisite(s): EDC 306

EDC 410  Dev Peer/Social Relationships  2 Credit Hours
Students will examine the processes of peer relations and socio-emotional development from birth to adolescence. Topics to be covered in this course include attachment, peer popularity and intimacy. As well, students will discuss the importance of the family on social development. Classroom environment and peers as educators will also be covered.
Prerequisite(s): EDC 340 or EDC 240

EDC 412  Social Devl/Pos Guidnce Techn  3 Credit Hours
This course will examine the process of social and emotional development in childhood through adolescence. Positive strategies to promote and guide this development in the classroom will be explored using behaviorist and constructivist frameworks. Topics will include character education, discipline models, conflict resolution and family collaboration. Guiding the development of emotional regulation, perspective taking and peer relationships in children including children with special needs will be investigated.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Sophomore or Junior or Senior
Can enroll if Degree is *Teacher Certificate, Bachelor of Arts
Can enroll if College is Education, Health, and Human Services

EDC 414  Early Child Ed Special Needs  3 Credit Hours
Focuses on the psychological and educational needs of the young child with special needs. Discusses identification techniques and educational strategies for teaching in a regular early childhood classroom with young children having special needs. Special emphasis will be placed on behavioral, linguistic, and intellectual areas. Suitable for classroom teachers, childcare directors, and teachers in training.
Prerequisite(s): EDC 540 or EDC 340 or EDC 240
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Sophomore or Junior or Senior
EDC 417  Mgmt of Classroom Behavior  3 Credit Hours
Provides intervention and management techniques for teachers and teacher candidates using principles of behavior modification. Includes examination of theoretical foundations, research and field reports, participation in self-management projects, and consideration of various applications in regular and special classrooms. Field experience is optional. Course will focus on classroom management in early childhood and elementary environments, allowing a more focused examination of topics and case studies geared to those grade levels. (OC)
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Sophomore or Junior or Senior

EDC 420  Hum Sexuality/Psyc-Ed Concepts  2 Credit Hours
The course is intended to acquaint elementary and secondary teachers with the elements that comprise sexuality as it relates to their lives and those of their students. Although a basic core of information is to be covered, the content of each class will provide for the needs and interests of the teachers. Teachers will be directly involved in identifying problems and the development and collection of strategies for problem resolution.
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

EDC 425  Treat Plan/Eth Prof Cond ABA  3 Credit Hours
Full Title: Treatment Planning/Ethical and Professional Conduct in Applied Behavior Analysis. This course provides a comprehensive approach to treatment planning in Applied Behavior Analysis. The course addresses application of the principles of Applied Behavior Analysis to intervention, assessment, implementation, evaluation, program continuation/maintenance, and data-based clinical decision making. Central to treatment are ethical responsibilities for Applied Behavior Analysts. The Professional and Ethical Compliance Code for Behavior Analysts, as put forth by the Behavior Analyst Certification Board is addressed. Throughout the course, the behavior analytic literature is used as the basis for all coursework, discussion, and evaluation. (YR)
Prerequisite(s): EDC 306

EDC 431  Constructivist Education  3 Credit Hours
An examination of constructivist theory and its application to educational practices. The nature and stages from birth through adolescence of cognitive and social development from the constructivist viewpoints of Piaget, Vygotsky, and others will be discussed. The major focus will be the application of constructivist theory to educational goals, teaching strategies and curriculum. (OC)
Prerequisite(s): (EDC 340 or EDC 240) and (EDC 341 or EDC 241)
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Sophomore or Junior or Senior

EDC 439  Child Maltreatment and Trauma  3 Credit Hours
This course will examine adverse childhood experiences, including the impact of physical abuse, neglect, sexual abuse, and other forms of psychological trauma. Particular emphasis will be placed on the role of trauma informed professionals to identify, assess, and support the needs of children, youth, and families impacted by trauma and child maltreatment. This course will explore various levels of prevention, intervention, and collaborative response to suspected cases of child maltreatment by multi-disciplinary teams, including investigation and treatment. (YR)

EDC 440  The Child: Birth to Three  3 Credit Hours
Full Course Title: The Developing Child: Birth to Three: An examination of current theories and findings concerning the physical, social, emotional, and intellectual development of the young child from prenatal to three years of age. Topics include fetus maturation, capabilities of the newborn, language, cognition, and environmental influences on development. Theory will be related to infant care practices in the home and in early childhood centers.
Restriction(s):
Can enroll if Class is Post-baccalaureate Cert only or Undergraduate NCDF or Undergraduate Certification only or Post-baccalaureate NCDF or Sophomore or Junior or Senior

EDC 442  EC: Fam/Sch/Comm Collaboration  3 Credit Hours
Focuses on factors that influence the building of partnerships among early childhood professionals, families and communities. Includes understanding and working with culturally and linguistically diverse families. Various communication and problem-solving strategies that promote family involvement and community outreach are practiced through discussion and role play.
Prerequisite(s): (EDC 340 or EDC 240) and (EDC 341 or EDC 241)
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDC 443  Family/School/Community Collab  2 Credit Hours
Characteristics, roles, and functions of contemporary families are described. Various communication and training strategies designed to promote collaboration and teamwork within and between the school staff, the families, and community are described and practiced through discussion, problem-solving activities, and role playing. Family effectiveness assessment instruments and strategies are also described and practiced.
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDC 445  Develop Assess of Young Child  3 Credit Hours
Survey and demonstrations of formal and informal measures to assess young children's physical, social, intellectual, and emotional development. Instruction in some techniques appropriate for use by classroom teachers, childcare directors, health care professionals, and others who are interested in assessing the development of children aged birth to nine years. For graduate credit elect EDC 545. (AY)
Prerequisite(s): EDC 240 or EDC 340
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDC 446  Cog/Memory Dev in Children  3 Credit Hours
Examines the theories and recent research on the development of cognition and memory. Selected topics include: perception, language, representation, social cognition and problem solving. Educational implications and strategies for developing children's thinking and memory are explored.
Prerequisite(s): EDC 240 or EDC 340
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate
EDC 454  Formal & Informal Testing & Eval  2 to 3 Credit Hours
In this course students will develop their knowledge and skills in
traditional and non-traditional methods for evaluating classroom
learning, performance technology and training. Students will learn how to
construct evaluations, tests, analyze evaluation results, conduct program
evaluation and educational assessment in relation to performance
technology, training, and teaching and learning. (YR)
Restriction(s):
Can enroll if Class is Junior or Senior

EDC 455  Assess: Sec Lang Learning K-12  2 Credit Hours
In this course students will learn to identify, assess, and place second
language learners for appropriate instruction and instructional programs.
Students will review, evaluate, and implement a variety of assessments
and strategies intended for use with limited English proficient students,
K-12. Students will also examine the impact and issues regarding high-
stakes assessments on English language learners. Official admission to
and good standing in the teacher certification program are required. (W).
Prerequisite(s): EDC 447 and EDC 448
Restriction(s):
Can enroll if Class is Junior or Senior

EDC 456  Learning & Classrm Assessment  3 Credit Hours
In this course students will examine the relationship between curriculum,
instruction and assessment. Students will review different forms of
assessment and evaluate the strengths and weaknesses of each format.
Students gain experience in 1) selection of assessment formats based
on curricular focus and student developmental levels; 2) development
of assessments; 3) decision-making based on the results of the
assessments. (YR)

EDC 460  Educating the Exceptional Child  3 Credit Hours
Characteristics, identification, assessment, and instruction of students
with exceptionalities are addressed. Includes students with learning
disabilities, behavior disorders, emotional impairment, mild mental
retardation, communicative disorders, visual and hearing impairments,
orthopedic impairments, giftedness, and chronic medical conditions.
Service delivery models, general assessment procedures, and curricular
and instructional adaptations that help integrate students with
exceptionalities into the general education classroom will also be
addressed.
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Sophomore or Junior or Senior

EDC 471  Prog Impl, Super, & Management  3 Credit Hours
Full Title: Program Implementation, Supervision & Management
This course seeks to address the selection, development, and integration of
behavior change procedures within the context of the BACB’s Compliance
Code and Disciplinary Systems, and strategies for personnel training,
supervision and management. Through the use of case studies, students
will develop behavioral programming, consider the ethical guidelines
necessary for the development and execution of programming, consider
the personnel issues to consider for effective programming, and examine
strategies that allow for more effective personnel training, monitoring,
and supervision. (YR)
Prerequisite(s): EDC 306

EDC 476  Literacy Assessm for Instr  4 Credit Hours
Topics include various diagnostic tools for reading, writing, speaking,
and listening. Students will learn to implement a variety of diagnostic
techniques for assessing literacy for instructional purposes and
communication with parents, other professionals, and paraprofessionals
about student progress.
Prerequisite(s): EDC 468 and (EDD 419 or EDA 419)
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Junior or Senior
Can enroll if College is Education, Health, and Human Services

EDC 480  Behavioral Assessment  3 Credit Hours
This course will focus on Functional Behavior Assessment, a process
used in the field of Applied Behavior Analysis (ABA) that uses a variety of
techniques and strategies to gather information that allow practitioners
to identify the function, or purpose, of behavior. Essential elements
of the Functional Behavior Assessment/Functional Analysis process
will be addressed with emphasis on the interrelationship between the
assessment results and the development of interventions based upon the
principles of ABA. (YR)
Prerequisite(s): EDC 306 and EDC 307

EDC 490  Litrcy Instr & Assess for Els  3 Credit Hours
Full Title: Literacy Instruction and Assessment for English Language
Learners The course covers current and research-based pedagogy for
literacy instruction and assessment for teaching English language
learners. This course provides the knowledge and skills to effectively
teach literacy to non-native speakers of English. (YR)
Restriction(s):
Cannot enroll if Class is Freshman

* An asterisk denotes that a course may be taken concurrently.

Frequency of Offering
The following abbreviations are used to denote the frequency of offering:
(F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter
terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Edu D-Curriculum & Instructn (EDD)

EDD 301  Directed Teach in Second Schls  6 to 12 Credit Hours
Directed teaching consists of a teaching internship in a selected
classroom for a full term under the direction of an experienced teacher.
Includes a brief period of observation followed by several weeks of
responsible teaching including the writing, implementing, and evaluation
of lesson plans using University-approved practices. Official admission
and good standing in the certification program are required. Methods
courses in the major and minor and valid TB clearance required.
Prerequisite(s): EDC 300 and EDC 301 and EDC 302 and EDA 340 and
EDC 460 and EDD 469
Corequisite(s): EDD 304
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Senior
EDD 304 Seminar: Teach Secondary Grds  1 to 2 Credit Hours
Draws upon the resources found in the directed teaching environment. Considers problems and issues in four broad areas: students in the school, the teacher’s professional responsibilities, curriculum understandings, and administrative/organizational problems. Open only to students enrolled in EDD 301.
Corequisite(s): EDD 301
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only

EDD 305 Direct Teach in Elem School  6 to 12 Credit Hours
Directed teaching consists of a teaching internship in a selected classroom for a full term under the direction of an experienced teacher. Includes a period of brief observation followed by several weeks of responsible teaching including the writing, implementing, and evaluation of lesson plans using University-approved practices. Official admission to and good standing in certification program as well as valid TB clearance are required.
Prerequisite(s): EDC 300 and EDC 301 and (EDC 340 or EDC 240) and EDC 460 and EDD 452 and EDD 467 and EDD 468 and EDD 471 and EDD 485 and EDD 495 and EDF 450
Corequisite(s): EDD 307
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Senior or Graduate
Can enroll if College is Education, Health, and Human Services

EDD 307 Seminar: Teaching Elem Grades  1 to 2 Credit Hours
Draws upon experience in elementary directed teaching. Considers pupils in the school, classroom environment, teaching competencies, professional responsibilities, school curriculum and policies, and administrative/organizational problems. Open only to students enrolled in EDD 305.
Corequisite(s): EDD 305
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Senior
Can enroll if College is Education, Health, and Human Services

EDD 404 Inquiry Based Curr Prim Grades  3 Credit Hours
This course examines how teachers can apply inquiry method to all curriculum areas in the primary grades. Major focus will be designing curriculum to meet state and professional guidelines within a developmentally appropriate context.
Prerequisite(s): (EDC 340 and EDC 341) or (EDC 240 and EDC 241) and Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75
Corequisite(s): EDD 410
Restriction(s):
Can enroll if Class is Junior or Senior

EDD 406 Teach Strategies Early Child  3 Credit Hours
Focuses on the developmentally appropriate educational practices for children from infancy through the primary grades. Introduces various procedures and strategies to stimulate inquiry in the early childhood classroom. Observation skills, planning, and implementing of lessons in the field will be emphasized. Class seminar designed to correlate theory with observation and field work.
Prerequisite(s): (EDC 240 or EDC 340) and (EDC 341 or EDC 241) and Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75
Corequisite(s): EDD 410
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDD 407 Workshop: Global Ed Soc Stds  1 to 3 Credit Hours
A course designed to help elementary and secondary teachers develop strategies that will help them to teach about an interdependent and changing world. Concepts such as change, the culture, and interdependence will be introduced and examined in terms of implementation within the framework of the existing social studies curricula.
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 280 or COMP 270)
Restriction(s):
Can enroll if Class is Junior or Graduate

EDD 410 Practicum in Early Child Ed  1 Credit Hour
A supervised field experience related to the study of early childhood education. Requires a minimum of 45 clock hours of observation and work spread over a semester in an early childhood school setting. Must be taken concurrently with EDD 406. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent). (F,W).
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 406
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior
EDD 411 Directed Tchg: Early Childhood 3 or 4 Credit Hours
Supervised observation and teaching in early childhood programs under the joint direction of university and school personnel. Open only to students in the Early Childhood Education program or Children and Families Program who have been approved by the program director. Must be elected concurrently with EDD 412. TB clearance, FIA clearance, criminal background check, and physician’s statement of good health are required.
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and EDD 406 and EDD 410 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 412
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDD 412 Seminar in Early Childhood Ed 2 Credit Hours
Focuses on developmentally appropriate educational practices for children in early childhood programs. With an emphasis on writing developmentally appropriate lesson plans, the Reggio Emilia Inspired Approach, assessment of young children, classroom and staff management, multiculturalism, family centered approaches, children with special needs and professional development. The seminar provides a theoretical foundation for the field placement (D411, D418 and D494). Open only to students in Early Childhood or Children and Families program who have been approved by the program director. TB clearance and physician’s statement of good health required. EDD 406 and 410 are required for undergraduates.
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and EDD 406 and EDD 410
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior or Graduate

EDD 413 LD Elem Directed Teaching 2 Credit Hours
Field experience with elementary students with learning disabilities in general and special education classrooms. Experiences include delivery of direct instruction through observation, tutoring, small and large group instruction, curriculum development and adaptations, participation in the IEP and ITP process, collaboration and co-teaching with regular classroom teachers in various academic content areas, and other activities under the on-site supervision of a certified teacher of LD and LD certified University field supervisor. Students must complete EDC 401, EDN 401, EDN 403, EDN 404, and EDN 402 prior to registering for their LD directed teaching. General Education Student Teaching is completed the semester prior to LD directed teaching.
Corequisite(s): EDD 420, EDN 408
Restriction(s):
Can enroll if Class is Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services
Can enroll if Major is Special Education

EDD 416 Creativity/Crit Thnk Yng Childr 3 Credit Hours
This course intends to study the processes and products of creativity for both adults and young children. Strategies for promoting the emerging creative disposition of the young child, birth to eight years, will be explored. Areas of focus will include art, music, movement, dramatic play, improvisation, storytelling, and problem-solving. The importance of understanding and encouraging the young child’s capacity for representation skills will be emphasized.
Prerequisite(s): EDC 340 and Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)
Restriction(s):
Can enroll if Class is Junior or Senior or Graduate

EDD 417 Wrkshp: Biling/Bicult Pupils 1 to 4 Credit Hours
The course will focus on developing a) an understanding of bilingual and bicultural pupils by examining their ethnic and racial backgrounds in terms of their values and institutions and how these affect their adjustment in the school and community environments, and b) effective learning strategies, techniques, and materials to use in various content areas.
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)
Restriction(s):
Can enroll if Class is Junior or Graduate

EDD 418 Children and Families Intern 4 Credit Hours
Supervised observation and teaching in an Early Childhood classroom setting, or parent education program in a Family Service Agency under the joint direction of University and school or Agency personnel. Open only to students in the Children and Families program who have been approved for the course by the program director. Must be elected concurrently with EDD 412. FIA clearance, criminal background check, blood borne pathogen, video record consent, and physician’s statement of good health required.
Prerequisite(s): Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 412
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior
EDD 419  Early Literacy/Language Develop  3 Credit Hours
This course examines early language development, the factors that contribute to its growth and the role that it plays in the development of literacy. Diagnostic techniques for assessing language and literacy and teaching strategies and materials to facilitate language and literacy growth in children birth through third grade will be discussed. (YR)
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Reading with a score of P and MTTC Basic Math with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and EDA 340
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if College is Education, Health, and Human Services
Can enroll if Program is
EDD 420  LD Sec Directed Teaching  2 Credit Hours
Field experience with secondary students with learning disabilities in general and special education classrooms. Experiences include delivery of direct instruction through observation, tutoring, small and large group instruction, curriculum development and adaptations, participation in the IEP and ITP process, collaboration and co-teaching with regular classroom teachers in various academic content areas, and other activities under the on-site supervision of a certified teacher of LD and LD certified University field supervisor. Students must complete EDC 401, EDN 401, EDN 403, EDN 404, and EDN 402 prior to registering for their LD directed teaching. General Education Student Teaching is completed the semester prior to LD directed teaching.
Corequisite(s): EDC 408, EDN 413
Restriction(s):
Can enroll if Class is Senior
Can enroll if College is Education, Health, and Human Services
Can enroll if Major is Special Education
EDD 421  Directed Teach Secondary Sch  6 to 12 Credit Hours
Directed teaching consists of a teaching internship in a selected classroom for a full term under the direction of an experienced teacher. Includes a brief period of observation followed by several weeks of responsible teaching including the writing, implementing, and evaluation of lesson plans using University-approved practices. Official admission and good standing in the College of Education, Health, and Human Services’ teacher certification program are required. Completion of methods courses in the major and minor and passing appropriate MTTC tests required. Students cannot receive credit for both EDD 421 and EDD 301.
Corequisite(s): EDD 424
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters
EDD 424  Sem: Teaching Secondary Grds  1 Credit Hour
This course draws upon the resources found in the directed teaching environment. Students will consider problems and issues in four broad areas: students in the school, the teacher’s professional responsibilities, curriculum understandings, and administrative/organizational problems. Open only to students enrolled in EDD 421.
Corequisite(s): EDD 421
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters
EDD 427  Workshop: Art in Elem School  2 Credit Hours
A course which presents the rationale, trends, and principles of art education for elementary teachers. Teachers will have ample opportunities to experiment with various art media such as printmaking, puppetry, paints, and clay. Different strategies that focus on the creative growth of children will be developed.
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)
Restriction(s):
Can enroll if Class is Junior or Graduate
EDD 429  Tch Cntrv Iss at Elem/Sec Lvl  2 to 3 Credit Hours
This course is designed to provide the classroom teacher with the rationale, various approaches, and strategies and techniques to use in teaching controversial issues at the elementary and secondary levels.
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate
EDD 435  Dir Teaching: Elementary Sch  6 to 12 Credit Hours
Directed teaching consists of a teaching internship in a selected classroom for a full term under the direction of an experienced teacher. Includes a brief period of observation followed by several weeks of responsible teaching including the writing, implementing, and evaluation of lesson plans using University-approved practices. Official admission and good standing in the College of Education, Health, and Human Services teacher certification program are required. Completion of methods courses in the major and minor and passing appropriate MTTC tests required. Student may not receive credit for both EDD 435 and EDD 305.
Corequisite(s): EDD 437
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Senior
Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters
EDD 437  
Sem: Teaching Elementary Grds  
1 Credit Hour
This course draws upon the resources found in the directed teaching environment. Students will consider problems and issues in four broad areas: students in the school, the teacher's professional responsibilities, curriculum understandings, and administrative/organizational problems. Open only to students enrolled in EDD 435.
Corequisite(s): EDD 435
Restriction(s):
- Can enroll if Class is Undergrad Certification only or Post-baccalaureate
- Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters

EDD 440  
Teach English in Second Grds  
2 to 3 Credit Hours
Investigates the general and specific goals and objectives of English education. Trends, materials, and strategies are presented. A study of outstanding problems in the teaching of English composition, literature, grammar, and language are discussed. Official admission to and good standing in teacher certification program are required. EDD 441 required concurrently for undergraduate only.
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75
Corequisite(s): EDD 441
Restriction(s):
- Can enroll if Class is Undergrad Certification only or Post-baccalaureate
- Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters

EDD 441  
Practicum: English Second Grd  
1 Credit Hour
A supervised field experience related to the study of English in grades 6-12. Requires a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Official admission to and good standing in the teacher certification program are required. Must be taken concurrently with EDD 440. For graduate credit elect EDD 502. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 440
Restriction(s):
- Can enroll if Class is Undergrad Certification only or Post-baccalaureate
- Can enroll if College is Education, Health, and Human Services or Arts, Sciences, and Letters

EDD 442  
Differentiating Inst K-12 Clrm  
2 to 3 Credit Hours
Individualized instruction combined with the latest information on the brain and our understanding of multiple intelligences leads us to a new method of meeting the needs of students called differentiating instruction. This course will look at the concept of differentiating instruction in-depth. (OC).
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)
Restriction(s):
- Can enroll if Class is Undergrad Certification only or Post-baccalaureate
- Can enroll if College is Education, Health, and Human Services

EDD 443  
Tchg Writ at the Secondary Lvl  
2 to 3 Credit Hours
This course is designed to help the classroom teacher promote functional and creative writing among students at the secondary school level. Attention will be given to both theory and research with emphasis on the development of instructional strategies, teaching materials and practical resources. (OC)
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)
Restriction(s):
- Can enroll if Class is Undergrad Certification only or Junior or Senior
- Can enroll if College is Education, Health, and Human Services

EDD 444  
New Mthds,Strat Mat Soc Stud  
2 Credit Hours
Examines new developments in methodology in relation to learning theory. Investigates systems for evaluating curricular materials. Explores experimental programs, new courses of study, multimedia approaches and current research in the social studies. (OC).
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)
Restriction(s):
- Can enroll if Class is Undergrad Certification only or Junior or Senior
- Can enroll if College is Education, Health, and Human Services

EDD 445  
Intervention Strat EC Spec Ed  
3 Credit Hours
Examines new developments in methodology in relation to learning theory. Investigates systems for evaluating curricular materials. Explores experimental programs, new courses of study, multimedia approaches and current research in the social studies. (OC).
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)
Restriction(s):
- Can enroll if Class is Undergrad Certification only or Junior or Senior
- Can enroll if College is Education, Health, and Human Services

EDD 446  
Tchg English as Second Lang  
3 Credit Hours
This course examines current methodologies and theories for English as a second language learning and instruction. Emphasis will be on addressing family identified priorities and the goals and objectives stated on the Individual Family Service Plan (IFSP) or Individual Educational Plan (IEP) using activity-based intervention, adapting materials, modifying environments and using assistive technology. (W, YR).
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and EDC 414 and (EDC 340 or EDC 240)
Restriction(s):
- Can enroll if Class is Undergrad Certification only or Post-baccalaureate
- Can enroll if College is Education, Health, and Human Services
EDD 448  Pract: Tchng Engl Secnd Lang  1 Credit Hour
A supervised field experience related to the teaching of English as a second language. Required a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Official admission to and good standing in the teacher certification program are required. Must be taken concurrently with EDD 447. For graduate credit elect EDD 548. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 447
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDD 450  Teach Math in Second Grades  3 Credit Hours
This course discusses: 1) the more important parts of recent pedagogical literature, 2) new instructional materials, methods, and curricular trends, and 3) procedures useful in the construction of new units and in the improvement of curricular units. Official admission to and good standing in a teacher certification program are required. EDD 451 required concurrently for undergraduates only. For graduate credit elect EDD 565.
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and (COMP 105 or COMP 110 or COMP 280 or COMP 270)
Corequisite(s): EDD 451
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDD 451  Practicum: Math Second School  1 Credit Hour
A supervised field experience related to the teaching of mathematics in grades 6-12. Requires a minimum of 45 clock hours of observation and work over a semester in a school setting. Official admission to and good standing in the teacher certification program are required. Must be taken concurrently with EDD 450. For graduate credit elect EDD 566. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 450
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior or Graduate

EDD 452  Methods of Teaching Math K-8  3 Credit Hours
The course relates to the teaching of the mathematics curriculum in the elementary and middle school. The emphasis is on the development of teaching techniques that promote problem solving, reasoning, connections, communication, and concept and algorithmic development. Cooperative groups, manipulatives, technology, and alternative assessment will be explored as tools for meeting the special needs of every child in grades K-8. Required of all preservice elementary teachers. Official admission to and good standing in teacher certification program required. The course includes a field experience in an assigned school setting. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): MATH 386 and Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDD 454  Wrkshp: Newspaper in Education  2 Credit Hours
A course designed to familiarize elementary and secondary teachers with the use of newspapers as a classroom resource. Workshop participants will use the daily newspaper and other resource materials to develop activities appropriate for meeting their own professional needs. Emphasis will be on the enhancement of academic skills, practical life skills and creative expression. (OC)
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDD 456  Tchg Gifted Stdnt Reglr Classr  2 Credit Hours
This course introduces classroom teachers to the education of gifted and talented students in the regular classroom. It is designed to help teachers understand the social, emotional, and intellectual needs of gifted students and to show them ways of effectively addressing these needs along with those of the other students present. It will offer specific proposals for structuring the learning environment as well as for selecting appropriate levels and types of subject matter. (OC)
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate
EDD 466  
**Tchg Coll Sci: Clssrm Dynamics  
3 Credit Hours**

A seminar analyzing current methods of college science teaching. Students will be paired with a senior faculty mentor and participate in the planning and teaching of introductory courses. Recommended for advanced undergraduates planning to attend graduate school and/or those interested in teaching. Written permission of instructor required. (OC).

**Prerequisite(s):** None.

**Corequisite(s):** Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Writing with a score of P and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)

EDD 467  
**Practicum in Reading Instruct  
1 Credit Hour**

A supervised field experience related to the teaching of reading in grades K-8. Requires a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Official admission to and good standing in teacher certification program required. Must be taken concurrently with EDD 471. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).

**Prerequisite(s):** EDD 468 and Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Writing with a score of P and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)

**Restriction(s):**

- Can enroll if Class is Undergrad Certification only or Post-baccalaureate
- Can enroll if軽Class is Junior or Senior

EDD 468  
**Teach Read/Lang Arts- Elem Grd  
3 Credit Hours**

Acquaints the student with theory, methods, materials, and research related to the teaching of reading and other communications skills in the elementary school. Includes classroom activities designed to strengthen skills in reading comprehension, content area reading, word attack, and the related language arts. Official admission to and good standing in the College of Education, Health, and Human Services teacher certification program are required.

**Prerequisite(s):** Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75

**Restriction(s):**

- Can enroll if Class is Undergrad Certification only or Post-baccalaureate
- Can enroll if Class is Junior or Senior

EDD 469  
**Reading in the Content Areas  
3 Credit Hours**

Emphasis on developmental and remedial reading activities at the middle grades and the secondary level: diagnosis, testing, and materials; reading in the content subjects; study habits; independent reading activity; exemplary programs. Some attention will be given to related problems in the teaching of written composition. Official admission to and good standing in the College of Education, Health, and Human Services teacher certification program are required. For graduate credit, elect EDD 569.

**Prerequisite(s):** (COMP 106 or COMP 220 or COMP 280 or COMP 270)

**Restriction(s):**

- Can enroll if Class is Undergrad Certification only or Post-baccalaureate
- Can enroll if Class is Junior or Senior

EDD 471  
**Reading Instr: Models and Meth  
3 Credit Hours**

Various approaches to reading instruction are required. The teaching of reading/study skills in content areas and an introduction to different forms of testing will be addressed. Students will be required to complete a reading tutorial in meeting the needs of an elementary student. Not open to students who have taken EDD 472, EDD 532, or EDD 570. Official admission to and good standing in SOE certification program are required.

**Prerequisite(s):** EDD 468 and Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75

**Corequisite(s):** EDD 467

**Restriction(s):**

- Can enroll if Class is Undergrad Certification only or Post-baccalaureate
- Can enroll if Class is Junior or Senior

EDD 474  
**Environmental Education  
2 to 3 Credit Hours**

An analysis of environmental education at both the elementary and secondary school level particularly stressing the environment as a teaching resource. Community resources as they relate to environmental education also are investigated.

**Prerequisite(s):** Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Writing with a score of P and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 105 or COMP 110 or COMP 280 or COMP 270)

**Restriction(s):**

- Can enroll if Class is Undergrad Certification only or Post-baccalaureate
- Can enroll if Class is Junior or Senior

EDD 480  
**Teach of Sci in the Second Grd  
2 to 3 Credit Hours**

A survey of the place of science in the secondary school curriculum, an analysis and evaluation of objectives, and a consideration of modern practices in teaching science. Official admission to and good standing in teacher certification program are required.

**Prerequisite(s):** Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75

**Corequisite(s):** EDD 481

**Restriction(s):**

- Can enroll if Class is Undergrad Certification only or Post-baccalaureate
- Can enroll if Class is Junior or Senior

EDD 481  
**Practicum in Science:Second Grd  
1 Credit Hour**

A supervised field experience related to the teaching of science in grades 6-12. Requires a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Official admission to and good standing in teacher certification program are required. Must be taken concurrently with EDD 480. For graduate credit elect EDD 581. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).

**Prerequisite(s):** Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Writing with a score of P and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 105 or COMP 110 or COMP 280 or COMP 270)

**Restriction(s):**

- Can enroll if Class is Undergrad Certification only or Post-baccalaureate
- Can enroll if Class is Junior or Senior
EDD 482  Teach of Sci in Second Grd II  3 Credit Hours
This course builds upon the concepts and skills developed in EDD 480 as students learn to become effective, reflective science teachers. Students will learn multiple strategies for effective lesson planning, teaching, and assessment in science. Science, technology, engineering and mathematics (STEM) and integration of reading/writing strategies will be emphasized throughout the course. Students cannot receive credit for both EDD 482 and EDD 582. Students seeking graduate credit should enroll in EDD 582.
Prerequisite(s): EDD 480 and EDD 481
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services
or Arts, Sciences, and Letters

EDD 483  Wkshp:Sci Teach Elem/Midd Schl  1 to 3 Credit Hours
Deals with existing and innovative science materials. Offered at various times emphasizing one or more areas from elementary and middle level science. Centers on a laboratory approach. May be elected twice for a total of six credits. (OC).
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

EDD 485  Teach Science in the Elem Grd  2 to 3 Credit Hours
Explores the objectives, methods, and instructional emphasis of elementary school science. Stresses concept development in several areas of elementary science. Provides opportunity for preparation of materials for classroom use. Official admission to and good standing in teacher certification program are required. For graduate credit, elect EDD 585. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 490
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Junior or Senior

EDD 486  Environmental Interpretation  3 Credit Hours
Course deals with the interpretation of the environment, its characteristics, and its presentation to school groups as well as to the general public. Intended to acquaint students with a variety of skills and techniques necessary for interpreting the environment to others. Extensive use is made of the UM-D Environmental Study Area.
Restriction(s):
Can enroll if Class is Junior or Graduate

EDD 489  Practicum in Soc Stud:Sec Sch  1 Credit Hour
A supervised field experience in a selected middle or high school social studies classroom. The course requires a minimum of 45 hours of observation of an experienced teacher as well as the writing, implementation, and assessment of one or more lessons. Official admissions to and good standing in the teacher certification program in required. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 490
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Junior or Senior

EDD 490  Tch of the Soc Stud in Sec Sch  2 to 3 Credit Hours
This course examines theoretical and practical approaches to teaching social studies at the secondary level. Students explore, develop, and evaluate instructional methods. In light of professional standards, they consider diverse strategies for teaching and assessing middle and high school students.
Prerequisite(s): Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75
Corequisite(s): EDD 489
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Junior or Senior

EDD 491  Soc Std Elem Grades Practicum  1 Credit Hour
A supervised field experience related to the methods and strategies associated with the teaching of social studies in grades K-5. Requires a minimum of 45 clock hours of observation and work spread over a semester in a school setting. Must be taken concurrently with EDD 495. Official admission to and good standing in teacher certification program required. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): EXPS 382 and EXPS 283 and Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and Infect Disease/ Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDD 495
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Junior or Senior
Can enroll if College is Education, Health, and Human Services
EDD 493  *Simulation and Gaming*  1 to 3 Credit Hours
This course focuses on simulation and gaming as approaches to learning which are fundamentally different from methods traditionally used in education, industry, business, and psychology. Students will have the opportunity to examine many different types of simulations and games and to participate in selected ones. They will also be able to design one for use in their own area of interest.

**Prerequisite(s):** Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)

**Restriction(s):**
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDD 495  *Social Studies in the Elem Grd*  2 to 3 Credit Hours
Examination and analysis of various programs and materials currently available for teaching social studies at the elementary level. Critical investigation of new developments and trends. Opportunity is provided to experiment with various techniques and to evaluate their effectiveness. Official admission to and good standing in teacher certification program are required.

**Prerequisite(s):** Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75

**Corequisite(s):** EDD 491

**Restriction(s):**
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDD 496  *Second Lang Tchg: Sec Level*  3 Credit Hours
An examination of current methodologies and techniques for instruction in foreign languages in grades 7-12. Emphasis will be placed on a standards-based curriculum with special attention given to the creation of learning scenarios. The use of communicative activities and the assessment of language skill areas will also be emphasized. Official admission to and good standing in teacher certification program are required.

**Prerequisite(s):** (FREN 301 or GER 301 or SPAN 301) and Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 105 or COMP 270 or COMP 280 or COMP 110)

**Corequisite(s):** EDD 497

**Restriction(s):**
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior

EDD 497  *Second Lang Tchg: Sec Level*  1 Credit Hour
A required supervised field experience related to the teaching of a foreign language in grades 7-12. Involves a minimum of 45 clock hours of work and observation spread over one semester in a supervised classroom setting. Methods and techniques learned in EDD 496 will be used to increase the second language proficiency of learners in grades 7-12. Official admission to and good standing in teacher certification program are required. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).

**Prerequisite(s):** (FREN 301 or GER 301 or SPAN 301) and Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1

**Corequisite(s):** EDD 496

**Restriction(s):**
Can enroll if Class is Junior or Graduate

EDD 498  *Writing Meth: Formal&Informal*  3 Credit Hours
This course is designed for those wishing to establish or improve creative writing programs in their elementary school classrooms. Theoretical models will be discussed. Strategies and materials that facilitate the writing of prose and poetry will be emphasized.

**Prerequisite(s):** Phase III ED Students with a score of 1 and Minimum GPA with a score of 2.75 and MTTC Basic Math with a score of P and MTTC Basic Reading with a score of P and MTTC Basic Writing with a score of P and (Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220 or COMP 280 or COMP 270)

**Restriction(s):**
Can enroll if Class is Junior or Graduate

**Frequency of Offering**

The following abbreviations are used to denote the frequency of offering: (F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

**Educ F-Physical Education (EDF)**

EDF 270  *Physical Activity and Health*  2 to 3 Credit Hours
Discussion of topics related to attaining a healthy lifestyle including nutrition, stress management techniques, physical training programs, cardiovascular disease, risk factors and other health-related topics.

EDF 450  *Hlth, Nutr, & PE/Clsrm Tchrs*  2 Credit Hours
Instruction and participation in health, nutrition and physical education concepts and principles as they relate to elementary school curriculum. The six-dimensional model of wellness will be applied to meet legislative goals and objectives for the various grade levels. Required for elementary education majors.

**Restriction(s):**
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Sophomore or Junior or Senior
EDF 455  Principles of Coaching  2 Credit Hours
Instruction in the basic principles and psychology of coaching all age
groups, skill levels and genders. Emphasis will be placed on many factors
which relate to success in athletic/sports, the qualities and qualifications
of coaches, and the administration of programs and organized practices.
For graduate credit, elect EDF 555. (OC).
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Junior or Senior

terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Educ K-Independent Study (EDK)

EDK 380  Undergraduate Reading Research  1 to 2 Credit Hours
Permits qualified students to pursue a program of reading under the
direction of a staff member selected by the student. The faculty member
must agree to serve prior to the course election. May be elected twice for
a total of two hours credit.

EDK 480  Independent Action Research  1 to 4 Credit Hours
Requires the student to initiate and pursue to completion an informal
field-based research study under faculty supervision. The faculty member
must agree to supervise prior to course election. May be elected twice for
a total of two hours credit.

EDK 490  Education Internship  1 to 10 Credit Hours
This internship provides the student with an opportunity to pursue supervised,
non-classroom experience in a school, college, or other educational
setting. Between eight and forty clock hours of unpaid work per week, in
conjunction with an arranged seminar, are required. The course may be
elected twice for a total of four to ten semester credit hours.

Other Content

(F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter
terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Educ M-Community & Bilingual
(EDM)

EDM 405  TESOL Strategies for Classroom  3 Credit Hours
This course examines instructional strategies and assessment for
teaching English to speakers of other languages (TESOL). These
strategies are intended for students who are learning English as a foreign
language. This course is specifically designed for individuals planning
on teaching English to children and adults in non-English speaking
communities abroad.
Restriction(s):
Can enroll if Class is Junior

EDM 4100  Teach Eng Specific Purposes  3 Credit Hours
Full Course Title: Teaching English for Specific Purposes This course is
designed to provide the knowledge and skills to teach adult speakers of
other languages to use English for specific purposes. These are students
who will already have a working knowledge of English, but need to have
more specialized language for professional, academic and/or job-related
skills. (YR)

Other Content

* An asterisk denotes that a course may be taken concurrently.

(F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter
terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Educ N-Special Education (EDN)

EDN 227  Inclusion: Multisens/Direct Inst  2 to 3 Credit Hours
Course addresses developing, implementing, and evaluating teaching
strategies and materials that incorporate principles of direct instruction
and multi-sensory activities that promote inclusion of students with
special needs in general education settings, increase all students’
academic achievement, and improve social interaction among students
from a wide variety of social, economic, and cultural backgrounds. (F, W, S).
Restriction(s):
Can enroll if Class is Undergraduate NCFD or Freshman or Sophomore or
Junior or Senior

EDN 401  Strategies for LD  3 Credit Hours
Content includes strategies for teaching K-12 students with learning
disabilities in special and regular education classes. Course addresses
diagnostic-prescriptive teaching, direct instruction, and specific
strategies and materials addressing each academic area. The
Individualized Education Program (IEP), development of goals and
objectives, linking assessment with instruction, inclusion, and generality
of behavior change will also be included.
Prerequisite(s): EDC 401

Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Post-baccalaureate
Cert only or Sophomore or Junior or Senior
Can enroll if College is Education, Health, and Human Services

EDN 402  Socio-vocational Transitions  3 Credit Hours
This course includes strategies that teach age-appropriate social skills
to students with disabilities in a variety of social settings found in the
school, home and community. This course will also focus on issues
relevant to vocational and community transitions for students with
disabilities. As opposed to rote learning of material the course intends
to provide students with a conceptual understanding of issues related to
social and vocational transitions.
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Post-baccalaureate
Cert only or Sophomore or Junior or Senior
Can enroll if College is Education, Health, and Human Services
EDN 403  Assessment of the Learner 3 Credit Hours
Formal and informal assessment strategies used in the identification and service of students with handicaps are described. Technical and operational aspects of standardized testing, curriculum based assessment, and informal strategies are described.
Prerequisite(s): EDC 401
Corequisite(s): EDN 404
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Post-baccalaureate Cert only or Junior or Senior
EDN 404  Assessment Practicum 1 Credit Hour
Clinical experiences with formal and informal assessment strategies currently used by special educators to identify and program for students with handicaps. Activities include administration, scoring and interpretation of norm- and criterion-referenced tests, Curriculum Based Assessments and informal assessment strategies. Deriving goals, objectives, activities and strategies from assessment data are also included. Must be taken with EDN 403 for the LD endorsement. Students must submit the following clearances as prerequisites in order to register for this class (Blood Borne Pathogen test, Criminal Background Consent, Video Recording Consent).
Prerequisite(s): EDC 401 and Infect Disease/Blood Born Path with a score of 1 and Criminal Background Check with a score of 1 and Video Recording Consent with a score of 1
Corequisite(s): EDN 403
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Post-baccalaureate Cert only or Junior or Senior
Can enroll if College is Education, Health, and Human Services
EDN 406  Collaboration in the Classroom 3 Credit Hours
Techniques for enhancing collaboration between special and regular classroom teachers of mainstreamed exceptional and low-achieving learners at all levels. Included are essential skills for managing and monitoring the learning process and maintaining collaborative partnerships. As opposed to rote learning of material, the course will provide students with a conceptual and practical understanding of issues relevant to collaboration.
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Post-baccalaureate Cert only or Junior or Senior
Can enroll if College is Education, Health, and Human Services
EDN 408  LD Directed Teaching Seminar 2 Credit Hours
Seminar will focus on the discussion, development, and evaluation of Individualized Educational Programs, Individualized Transition Plans, and Behavior Intervention Plans for students with learning disabilities at a variety of directed teaching sites. Topics will include academic and behavior assessment and strategies, curriculum, child study teaming, service delivery options and inclusion strategies. Co-requisite: EDD 420 and EDD 413. Students must complete EDC 401, EDN 401, EDN 403, EDN 404 and EDN 402 prior to registering for their LD directed teaching.
Corequisite(s): EDD 413
Restriction(s):
Can enroll if Class is Senior
Can enroll if Major is Special Education
EDN 410  Intro to Cognitive Impair I 3 Credit Hours
Historical perspectives, definition, terminology, and assessment of the full spectrum of cognitive impairments are addressed. Identification of the behavioral, social, intellectual, communicative, vocational, adaptive, psychological, and educational/instructional needs of individuals with mild cognitive impairments across the lifespan.
Prerequisite(s): EDC 460
Corequisite(s): EDN 411
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services
EDN 411  Cognitive Impair Pract I 1 Credit Hour
Experience in an educational setting with students with mild cognitive impairments for no less than 45 clock hours. Activities include working with the cooperating teacher on tasks such as individual instruction, data collection, informal assessment and program implementation and evaluation of IEP goals and objectives.
Prerequisite(s): EDC 460
Corequisite(s): EDN 410
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services
EDN 412  Intro to Cognitive Impair II 3 Credit Hours
This course is an extension of introduction to Cognitive Impairments I. Identification of the behavioral, social, intellectual, communicative, vocational, adaptive, psychological and educational/instructional needs of individuals with moderate and severe cognitive impairments across the lifespan.
Prerequisite(s): EDC 460 and EDN 401 and EDN 411
Corequisite(s): EDN 413
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services
EDN 413  Cognitive Impair Pract II 1 Credit Hour
Experience in an educational setting with students with moderate and severe cognitive impairments for no less than 45 clock hours. Activities include working with the cooperating teacher on tasks such as individual instruction, data collection, informal assessment and program implementation and evaluation of IEP goals and objectives.
Prerequisite(s): EDC 460 and EDN 410 and EDN 411
Corequisite(s): EDN 412
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services
EDN 414  Assessment Cognitive Impair  3 Credit Hours
Course discusses different theories of intelligence and intellectual development. Students learn to identify and describe different instruments used to assess the intellectual, adaptive behavior, academic, language/communication, vocational and social needs of students with mild, moderate and severe cognitive impairments.
Prerequisite(s): EDC 460 and EDN 410 and EDN 411 and EDN 412 and EDN 413
Corequisite(s): EDN 415
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services

EDN 415  Assessment Pract Cogn Impair  1 Credit Hour
Clinical experience with formal and informal assessment strategies currently used by special educators to identify needs and develop programming for students with mild, moderate and severe cognitive impairments. Activities include practicing observational techniques, completing, analyzing and interpreting various formal and informal assessments, including norm referenced and criterion referenced tests, achievement tests, rating scales and checklists.
Prerequisite(s): EDC 460 and EDN 410 and EDN 411 and EDN 412 and EDN 413
Corequisite(s): EDN 414
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services

EDN 416  Strategies Cognitive Impair I  3 Credit Hours
Course content includes strategies for teaching students with mild cognitive impairments. Strategies for effective teaching and the development of instructional materials and learning environments for students with mild cognitive impairments is addressed. Functional academics, positive behavior supports, community based instructional support, self-determination, the use of instructional technology and supports, communication skills, adaptive behavior skills are covered within the context of the IEP, development of goals and objectives linking assessment with instruction, designing effective learning environments, and integrating students with mild cognitive impairments into the least restrictive environment.
Prerequisite(s): EDC 460 and EDN 410 and EDN 411 and EDN 412 and EDN 413
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services

EDN 417  Strategies Cognitive Impair II  3 Credit Hours
Course content includes strategies for teaching students with moderate and severe cognitive impairments. Strategies for effective teaching and the development of instructional materials and learning environments for students with moderate and severe cognitive impairments are included. Functional academics, positive behavior supports, community based instructional support, self-determination, the use of instructional technology and supports, communication skills, adaptive behavior skills are covered within the context of the IEP, development of goals and objectives linking assessment with instruction, designing effective learning environments and integrating students with moderate and severe cognitive impairments into the least restrictive environment.
Prerequisite(s): EDC 460 and EDN 412 and EDN 413 and EDN 414 and EDN 415
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services

EDN 418  Dir Teach I: Mild CI  2 Credit Hours
Field experience with students with mild cognitive impairments in classroom settings. Experiences include the delivery of direct instruction in functional academic, community based skills, functional living skills, and communication skills. Academic and behavioral assessments leading to the development and implementation of IEPs and BIPs are included. Students will also engage in observations, small and large group instruction, curriculum development, program development and implementation and participation in the EIP process. Collaboration with other classroom teachers in general and special education settings, and other activities under the on-site supervision of a certified CI teacher and university field supervisor. Directed teaching also includes weekly seminar.
Prerequisite(s): EDC 460 and EDN 410 and EDN 411 and EDN 414 and EDN 415 and EDN 416
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services

EDN 419  Dir teach II: Mod/Sev CI  2 Credit Hours
Field experience with students with moderate and severe cognitive impairments in classroom settings. Experiences include the delivery of direct instruction in functional academic, community based skills, functional living skills, and communication skills. Academic and behavioral assessments leading to the development and implementation of IEPs and BIPs are included. Students will also engage in observations, small and large group instruction, curriculum development, program development and implementation and participation in the EIP process. Collaboration with other classroom teachers in general and special education settings, and other activities under the on-site supervision of a certified CI teacher and university field supervisor. Directed teaching also includes weekly seminar.
Prerequisite(s): EDC 460 and EDN 410 and EDN 411 and EDN 414 and EDN 415 and EDN 417
Restriction(s):
Can enroll if Class is Undergrad Certification only or Post-baccalaureate
Cert only or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Education, Health, and Human Services
EDN 420 Intro to Emotional Impairments  3 Credit Hours
Identification of the behavioral characteristics and instructional needs of children with emotional impairments/behavior disorders. Causes of emotional impairments and environmental influences as well as strategies for identification, assessment and interpreting such instruments will be addressed. Finally, instructional strategies for students with emotional impairments will be described and practiced through classroom activities.
Corequisite(s): EDN 421
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Post-baccalaureate Cert only or Junior or Senior
Can enroll if College is Education, Health, and Human Services
EDN 421 Practicum at Psych Facility  1 Credit Hour
Experience in a clinical setting with emotionally impaired individuals, for no less than 45 clock hours. Activities include working with cooperating teacher on tasks such as individual tutoring, data collection, informal assessment, interpretation of psychological data, and program implementation and evaluation. Also included will be the development of individualized instructional strategies, classroom activities, the use of adaptive technology, interdisciplinary approaches and the development of relevant goals and objectives for emotionally impaired students.
Corequisite(s): EDN 420
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Post-baccalaureate Cert only or Junior or Senior
Can enroll if College is Education, Health, and Human Services
EDN 423 Strat: Emotional Impairments  3 Credit Hours
Course content includes strategies for teaching students with emotional impairments, including instruction on reading and mathematics. Course also includes strategies to deal with hyperactive behavior, aggressive behavior, socially withdrawn behavior, and delinquency. Strategies for effective teaching and the development of instructional materials and learning environments for students with emotional impairments are included. The Individualized Education Program (IEP), development of goals and objectives, linking assessment with instruction, and integrating students with emotional impairments into the regular classroom will also be covered.
Prerequisite(s): EDN 320
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Post-baccalaureate Cert only or Junior or Senior
Can enroll if College is Education, Health, and Human Services
EDN 425 Eco-Behavioral Assessment  3 Credit Hours
Formal and informal assessment strategies used in identifying and serving students with emotional impairments are described. Assessment strategies include eco-behavioral assessment, functional analyses, naturalistic observation techniques, norm-referenced and criterion-referenced tests, interviewing, achievement test, and curriculum based assessment. Technical aspects of assessment, interpretation of data, and diagnostic strategies are also addressed, as well as using adaptive technology and assessment instruments to facilitate more effective individualized instruction for students with emotional impairments. Finally, integrating assessment results from other disciplines will also be addressed.
Prerequisite(s): EDN 320
Corequisite(s): EDN 426
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Post-baccalaureate Cert only or Junior or Senior
Can enroll if College is Education, Health, and Human Services
EDN 426 Eco-Behavioral Assessment Pract  1 Credit Hour
Clinical experiences with formal and informal assessment strategies currently used by special educators to identify and program for students with emotional impairments. Activities include practicing observation techniques, and completing and analyzing eco-behavioral assessments and functional analyses. Also included are administration, scoring, and interpretation of norm-referenced and criterion-referenced tests, curriculum based assessments, achievement tests, rating scales and checklists, and informal assessment strategies. Practicum activities will also focus on using assessment results in curriculum design and instructional strategies to meet the individualized instructional needs of EI students.
Prerequisite(s): EDN 320
Corequisite(s): EDN 425
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Post-baccalaureate Cert only or Junior or Senior
Can enroll if College is Education, Health, and Human Services

Other Content
* An asterisk denotes that a course may be taken concurrently.

Frequency of Offering
The following abbreviations are used to denote the frequency of offering:
(F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally
**Educ T-Education Technology (EDT)**

**EDT 210 Tech in Elementary Education  3 Credit Hours**
Introduces students to the application of technology in elementary education. Students experience and become familiar with advanced learning technology tools; learn to use telecommunication tools for emailing, participating in educational listserv and online discussion groups, and accessing electronic resources on the WWW; learn to use productivity tools for word processing, drawing, painting and digital editing, spreadsheet application, database management, and multimedia presentation; learn to use educational multimedia for visual thinking, creativity, and multimedia authoring, learning to practice ethical and legal use of technology resources, and explore the use of such technology tools in the elementary classroom.

**Restriction(s):**
- Can enroll if Class is Undergrad Certification only or Post-baccalaureate Cert only or Sophomore or Junior or Senior
- Can enroll if College is Education, Health, and Human Services

**EDT 211 Design Tech-Based Learn Solutn  3 Credit Hours**
EDT 211 provides students with the opportunity to design and develop technology-based learning solutions for real-world instructional problems. Students will identify an instructional problem, collect data to assess relevant needs of an authentic population of learners and work collaboratively to create learning solutions for face-to-face, blended and/or online environments. Students will also become proficient in the operation of various pieces of hardware and software and develop skills for evaluating and integrating technology into the different learning environments.

**EDT 401 Res, Trends,&Issues in Ed Tech  3 Credit Hours**
This course is designed to acquaint the students with research and issues facing education in the digital era. This course will look at the wide range of developments in technology and investigate the trends that are impacting the field of educational technology. Students explore and analyze key issues related to technology in the classroom of the twenty-first century. (YR)

**Restriction(s):**
- Can enroll if Class is Junior or Senior
- Can enroll if College is Education, Health, and Human Services

**EDT 410 Teaching with Technology  3 Credit Hours**
Introduces students to the management and integration of technology in education. Students experience and become familiar with technologically based teaching and learning materials; learn methodologies for using technology in specific teaching situations including audiovisual and media methods; develop skills in effectively evaluating educational software; explore how technology can be used as a problem-solving tool within the classroom environment; and become familiar with application programs, telecommunications and multimedia. Students also log a minimum of 45 hours of practicum experience in an instructional capacity where they have the opportunity to implement a variety of technology-enhanced learning activities that they create (F,W,S)

**Prerequisite(s):** EDT 210 or EDT 211

**EDT 414 Application of Instrl Design  3 Credit Hours**
The course provides students with necessary skills to apply Technological Pedagogical Content Knowledge (TPCK) instructional design process in a specific subject area. (YR)

**Restriction(s):**
- Can enroll if Class is Junior or Senior
- Can enroll if College is Education, Health, and Human Services

**EDT 420 Intro Teaching Learning Online  3 Credit Hours**
This course will introduce students to best practices in the design, creation and implementation of instructional materials in an online environment. Students will create and implement several instructional activities and assessments in blended, hybrid and online environments. (YR)

**Restriction(s):**
- Can enroll if Class is Junior or Senior
- Can enroll if Level is Undergraduate
- Can enroll if College is Education, Health, and Human Services

**EDT 422 Educating the Digital Learner  3 Credit Hours**
Students are introduced to Universal Design for Learning (UDL) theory and how to apply it to learning activities in the blended, hybrid and online environment. Emphasis is placed on learning how to make accommodations for students in the online environment as well. Students will also learn to critically assess different approaches to online instruction. (YR)

**Restriction(s):**
- Can enroll if Class is Junior or Senior
- Can enroll if Level is Undergraduate
- Can enroll if College is Education, Health, and Human Services

**EDT 430 Assistive Technology  3 Credit Hours**
This course is designed as an introductory course in assistive technology (AT) including the history, relevant legislation and development of assistive technology. Students will be introduced to key AT categories by function including high tech and low tech assistive hardware, software and mobile devices to increase learning opportunities for individuals with disabilities. (YR)

**Restriction(s):**
- Can enroll if Class is Junior or Senior
- Can enroll if Level is Undergraduate
EDT 462 Instructional Technology Internship  3 Credit Hours
A supervised field experience in which students will work as an instructional technology intern for 135 clock hours. Internship students will be placed in organizations and opportunities that align with their career goals and specific interests within the field of instructional technology. Regardless of placement, the internship is designed to provide students with real-world experiences in the development and implementation of learning activities, management of technology resources, and improving competence with various technologies. Students should complete EDT 211, EDT 402, EDT 410, EDT 414 & EDT 420 prior to taking EDT 462. (F, W, S)
Restriction(s):
Can enroll if Level is Undergraduate

Other Content

Frequency of Offering

The following abbreviations are used to denote the frequency of offering:
(F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

Electrical&Computer Engin (ECE)

ECE 210 Circuits  4 Credit Hours
Fundamental laws, electrical elements and sources, energy and power. DC analysis of linear circuits. Node and mesh analysis. Operational amplifiers and op-amp circuits, Thevenin and Norton theorems. Sinusoidal steady-state response and the phasor concept. Introductory concepts on complex frequency, average power in AC circuits. Transient responses. Three lecture hours per week and one three-hour laboratory per week.
Prerequisite(s): (MATH 116 or Mathematics Placement with a score of 215) and PHYS 151*
Corequisite(s): ECE 210L, ECE 210R
Restriction(s):
Can enroll if College is Engineering and Computer Science

ECE 210R Circuits  0 Credit Hours
Recitation component for ECE 210. Must be taken concurrently with ECE 210. (F, S, W)
Corequisite(s): ECE 210

ECE 270 Computer Methods in ECE I  4 Credit Hours
Covers structured and object-oriented computer programming concepts in the context of the C/C++ programming language and engineering applications. Four lecture hours per week with programming assignments.
Prerequisite(s): ENGR 100 and MATH 115*
Corequisite(s): ECE 270R
Restriction(s):
Can enroll if College is Engineering and Computer Science

ECE 270R Computer Methods in ECE I  0 Credit Hours
Recitation component for ECE 270. Must be taken concurrently with ECE 270. (F, S, W)
Corequisite(s): ECE 270

ECE 273 Digital Systems  4 Credit Hours
Introduction to digital logic. Topics include numbers and coding systems; Boolean algebra with applications to logic systems; Karnaugh and Quine-McCluskey minimization; combinatorial logic design; flip-flops; sequential network design; and design of digital logic circuits. Three lecture hours per week and one three-hour laboratory per week.
Prerequisite(s): MATH 115*
Corequisite(s): ECE 273L, ECE 273R
Restriction(s):
Can enroll if College is Engineering and Computer Science

ECE 273R Digital Systems  0 Credit Hours
Recitation component for ECE 273. Must be taken concurrently with ECE 273. (F, S, W).
Corequisite(s): ECE 273

ECE 276 Discrete Math in Computer Engr  4 Credit Hours
An introduction to fundamental concepts of discrete mathematics for computer engineering. Topics will be chosen from set theory, partially ordered sets, lattices, Boolean algebra, semi-groups, rings, graphical representation of algebraic systems, graphs, and directed graphs. Applications in various areas of computer engineering will be discussed.
Prerequisite(s): (MATH 116 or Mathematics Placement with a score of 215)

ECE 299 Internship/ Co-Op  1 Credit Hour
This is a Cooperative Education course. Students wishing to experience a work experience before graduation may elect to participate in the Cooperative Education Program (minimum of two terms). (F,W,S).
Restriction(s):
Can enroll if Class is Junior or Senior

ECE 300 Signals and Systems  4 Credit Hours
Signals and systems representation and classification. Impulse response and convolution integral. Fourier analysis of continuous time signals and systems. Laplace transforms with applications to linear system analysis. Introduction to computer software for solving problems involving signals and systems. Three lecture hours and three recitation hours per week.
Prerequisite(s): ECE 210 and (MATH 217* or MATH 227*) and MATH 216

ECE 305 Intro to Electrical Eng  4 Credit Hours
Introduction to electrical and electronic circuits, machinery, and instrumentation. Topics include Kirchhoff’s Laws, Thevenin and Norton theorems, sinusoidal and transient circuit analysis, numerical methods, solid state electronics, motors and generators, measuring instruments. Three lecture hours and one three-hour laboratory analysis. Not open to ECE students.
Prerequisite(s): PHYS 151 and (MATH 205 or MATH 215) and (MATH 217* or MATH 227* or MATH 228*)
Corequisite(s): ECE 305L
Restriction(s):
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is Electrical Engineering
ECE 3100  Data Science I  4 Credit Hours
This course provides an overview of the mathematical techniques and computer tools needed in the field of data science. The important types of problems addressed in the field of data science are rigorously formulated and analyzed, including regression, pattern recognition and classification, time series prediction, and clustering. Effective mathematical and computational solution methodologies are discussed, including exploratory data analysis, statistical methods, and machine learning. At the end of the course, the student will have an analytic and computational toolkit with which they can solve real problems and “tell a story” with data. (F)
Prerequisite(s): (CIS 1501 or CIS 150 or ECE 270) and (MATH 217 or MATH 227 or MATH 228) and (STAT 325* or IMSE 317* or BENG 364*)
Restriction(s):
Can enroll if Level is Undergraduate

ECE 311  Electronic Circuits I  4 Credit Hours
Terminal characteristics and biasing of semiconductor diodes, bipolar and field-effect transistors, operational amplifiers. Rectifiers, amplifiers, and logic. Design projects. Three lecture hours and one three hour laboratory per week.
Prerequisite(s): ECE 210 and (CHEM 134 or CHEM 144) and (COMP 270 or COMP 106 or COMP 220 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107)
Corequisite(s): ECE 311L
Restriction(s):
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is

ECE 314  Filter Design  3 Credit Hours
Review of filter descriptions, transfer functions, and frequency response characteristics; first and second order passive and active filters; biquad circuits; filter transformations. Butterworth, Chebyshev, and Elliptic filters; OPAMP realization of active filters; sensitivity analysis of active circuits. Three lecture hours per week.
Prerequisite(s): ECE 311 and ECE 317

ECE 316  Computer Electronics  3 Credit Hours
Design of selected electronic circuits such as signal conditioning amplifiers. Switching and digital logic circuits, using FET and BJT devices, A/D and D/A converters. Two-hour lecture and one three-hour lab per week. (YR).
Prerequisite(s): ECE 210 and ECE 273 and (COMP 270 or COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220)

ECE 317  Electronic Signals and Systems  4 Credit Hours
Prerequisite(s): MATH 216 and (MATH 217* or MATH 227*) and ECE 311*
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

ECE 3171  Analog & Discrete Sig & Sys  4 Credit Hours
Signals and systems representation and classification. Impulse response and convolution integral. Laplace and Z transforms with applications to linear system analysis. Fourier series Fourier Transform and Discrete Fourier Transform, Frequency response, Filter design. Four lecture hours per week.
Prerequisite(s): (MATH 216 and MATH 217) or (MATH 216 and MATH 227) or MATH 228
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if College is Engineering and Computer Science

ECE 319  Electromagnetic Compatibility  4 Credit Hours
Introduction, cabling, grounding, balancing and filtering, passive components, shielding, digital circuit noise and PCB layout, radiation, ESD, regulations, demos, experiments, lab projects and guest lectures. Three Lecture hours and one three-hour laboratory per week.
Prerequisite(s): ECE 311
Restriction(s):
Can enroll if College is Engineering and Computer Science

ECE 321  Electromagnetic Fields/Waves  3 Credit Hours
Vector analysis; static electric field; steady electric currents; static magnetic fields; time-varying fields and Maxwell's equations; plane electromagnetic waves. Three lecture hours per week.
Prerequisite(s): ECE 311*

ECE 329  Intro to Computer Music  4 Credit Hours
This course will introduce students to methods and technologies of computer music. The basics of digital audio will be covered, including sampling, quantization, and compression standards. Various analysis tools will be covered, including the Fourier transform and windowing techniques. Mathematical models of physical instruments will be introduced. Various sound synthesis strategies will be introduced: wave tables, additive synthesis, subtractive synthesis, frequency modulation, and granular synthesis.
Prerequisite(s): MATH 105
Restriction(s):
Can enroll if Class is Junior or Senior

ECE 347  Applied Dynamics  4 Credit Hours
Introduction to rigid, multi-body dynamics tailored to the analysis and design of linkage-based robotic systems. Three dimensional kinematics, Eulerian angles, general motion of rigid bodies subjected to various forcing functions. Matrix methods, numerical and software-based problem solving. Project required. Four lecture hours per week.
Prerequisite(s): (MATH 216 and (MATH 217 or MATH 227)) or MATH 228
Restriction(s):
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science

ECE 351  Bio-Sensors & Instrumentation  4 Credit Hours
The course covers measurements in biological materials using a variety of sensor technologies along with electronic instrumentation design and use. Safety and FDA requirements are also presented.
Prerequisite(s): ECE 305 and (ENGR 216 or ECE 270) and MATH 216 and BIOL 103 and BIOL 140
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if College is Engineering and Computer Science or Arts, Sciences, and Letters
ECE 3641 Robotic Manipulation 4 Credit Hours
Design, construction, and testing of field robotic systems. Focus on electronics, instrumentation, and machine elements. Particular attention to modeling dynamic systems, measuring and controlling their behavior, and making decisions about future courses of action. Examples include industrial robots, service robots, mobile robots, and medical robots. Three lecture hours and one three-hour laboratory per week. (F, W).
Prerequisite(s): (ECE 3731 or ECE 372)
Restriction(s):
- Can enroll if Level is Undergraduate
- Can enroll if College is Engineering and Computer Science

ECE 370 Adv Soft Techn in Comp Engr 4 Credit Hours
Advanced concepts and techniques of modular object oriented and structured programming, representative real-world computer engineering applications including data structures, search and sorting. A term project is required. Four lecture hours per week. (F,W,S).
Prerequisite(s): ECE 270 and ECE 273*.
Restriction (s):
- Can enroll if College is Engineering and Computer Science

ECE 371 Information Structures 3 Credit Hours
Fundamentals of computer data structures. Introduction to abstract data types. Characteristics and implementation of structured data types including arrays, stacks, queues, linked lists, generalized lists, trees, and graphs. Algorithms and applications of data structures in sorting and searching. Considerations of algorithm efficiency and complexity. Engineering applications and design. Three lecture hours per week.
Prerequisite(s): ECE 370 or ECE 274

ECE 372 Intro to Microprocessors 4 Credit Hours
Introduction to operation, interfacing, and applications of microcomputers and microprocessor-based systems. Assembly language programming, interrupts and interfacing. Three lecture hours and one three-hour laboratory per week.
Prerequisite(s): (COMP 270 or COMP 106 or COMP 220 or Composition Placement Score with a score of 107 or Composition Placement Score with a score of 40) and ( and (ECE 270 and ECE 273) or CIS 310)

ECE 3731 Microproc and Embedded Sys 4 Credit Hours
This course is an introduction to the operation, interfacing, and applications of microprocessor based systems, and real-time embedded system design. Topics include: microprocessor architecture, embedded C programming, real-time programming. Final project required. Three lecture hours and one three-hour laboratory per week.
Prerequisite(s): (ECE 270 and ECE 273) or CIS 310
Corequisite(s): ECE 3731L
Restriction(s):
- Can enroll if Level is Undergraduate
- Can enroll if College is Engineering and Computer Science

ECE 375 Intro to Comp Architecture 4 Credit Hours
Introduction to architecture of mini- and mainframe computers. CPU, memory, and I/O characteristics. Introduction to parallel architectures and hardware design languages. Case studies of popular computer systems and design considerations. A design project is required. Three lecture hours and one laboratory hour per week.
Prerequisite(s): ECE 270 and ECE 273 and (ECE 276* or MATH 276*) and (ECE 372* or ECE 3731*)
Corequisite(s): ECE 375L
Restriction(s):
- Can enroll if College is Engineering and Computer Science

ECE 3801 Intro to Signals and Systems 3 Credit Hours
Prerequisite(s): ECE 210 and MATH 216
Restriction(s):
- Cannot enroll if Class is Freshman
- Can enroll if Level is Undergraduate
- Cannot enroll if Major is Electrical Engineering

ECE 385 Elec Materials and Devices 3 Credit Hours
Introduction to properties of conductors, semi-conductors, and insulators. Definitions of stress and strain. Description of the mechanical behavior of solids. Characterization of selected materials; circuit models for resistors, capacitors, inductors, junction and field-effect transistors, etc. Three lecture hours per week.
Prerequisite(s): ECE 311* and (CHEM 144 or CHEM 134)
Restriction(s):
- Can enroll if College is Engineering and Computer Science

ECE 3851 Intro Elect Materials & Device 4 Credit Hours
Introduction to properties of conductors, semi-conductors, and insulators. Definitions of stress and strain. Description of the mechanical behavior of solids. Characterization of selected materials; circuit models for resistors, capacitors, inductors, junction and field-effect transistors, etc. Three lecture hours per week and on three-hour laboratory session.
Prerequisite(s): ECE 311* and (CHEM 134 or CHEM 144)
Restriction(s):
- Can enroll if Class is Junior or Senior
- Can enroll if Level is Undergraduate
- Can enroll if College is Engineering and Computer Science

ECE 387 Digital Forensics I 4 Credit Hours
This course takes a detailed, hands-on approach to study the procedures and techniques used to identify, extract, validate, document and preserve electronic evidence. Students completing this course will be familiar with the core computer science theory and practical skills necessary to perform basic computer forensic investigations, understand the role of technology in investigating computer-based crime, and be prepared to deal with investigative bodies at a basic level.
Prerequisite(s): (ECE 270 or CIS 200) and (ECE 370* or ECE 372* or CIS 310*).
Restriction(s):
- Cannot enroll if Class is Freshman
- (ECE 270 or CIS 200) and (ECE 370* or ECE 372* or CIS 310*)

ECE 389 Selected Topics in ECE 1 to 3 Credit Hours
Special topics in ECE according to student's interest and availability of instructors and equipment.

ECE 399 Internship/Co-op 1 Credit Hour
A four-month professional work experience period of the Engineering Internship Program, integrated and alternated with the classroom terms.
Restriction(s):
- Can enroll if Class is Junior or Senior
ECE 411  Electronics II  4 Credit Hours
Review of solid state devices and their physical properties, introduction to the state of art devices, design of operational amplifiers, oscillators, switching and digital circuits. A project will be required. Three lecture hours per week and one three-hour laboratory per week.
Prerequisite(s): ECE 301 and ECE 311

ECE 413  Intro to VLSI Design  3 Credit Hours
Introduction to digital systems and VLSI, CMOS fabrication, layout and CMOS integrated circuits, basic principles of MOSFET theory, CMOS logic circuits, subsystem design, Architecture design and HDL, CLSI chip design, advanced topics, laboratory consist of a series of design projects. Three lecture hours per week.
Prerequisite(s): ECE 273 and ECE 311

ECE 414  Electronic Systems Design  4 Credit Hours
Review of solid state device characteristics and circuit analysis. Design of selected electronic circuits such as operational amplifiers, power amplifiers, power supplies, oscillators, switching and digital circuits to further illustrate analysis and design of representative electronic circuits using classical and computer-aided design techniques. Four lecture/ laboratory per week.
Prerequisite(s): ECE 311 and ECE 270*

ECE 415  Power Electronics  4 Credit Hours
Introduction to power electronic circuit analysis and design. Power electronic circuits, power converters, power semiconductors. Time domain analysis emphasized. A design project is required. Four lecture/ laboratory hours per week.
Prerequisite(s): (ECE 317 or ECE 3171) and ECE 385

ECE 420  EMC Measurement and Testing  3 Credit Hours
Introduction to EMC measurements, RF measurement fundamentals, EM waves, radiation mechanisms, measurement and measurement systems, screened rooms, open field test sites, practical measurements, conducted emission measurements, radiated emission measurements, radiated immunity, conducted immunity and electrostatic discharge. Projects will be assigned. (YR).
Prerequisite(s): ECE 319

ECE 426  Multimedia Forensics  4 Credit Hours
The objective of this course is to introduce current state-of-the-art in digital multimedia editing, its impacts on multimedia tampering, and multimedia forensics techniques to uncover inconsistencies due to tampering. This course will cover existed digital multimedia tampering techniques such as copy-move, cut-and-paste, etc. and multimedia multimedia tamper detection techniques. The course will also cover covert communication methods such as steganography and covert channel detection method steganalysis. This course will cover the limitations of existing state-of-the-art in multimedia forensics. Hands-on experience will be provided in various aspects of multimedia tampering and analysis through the numerous assignments and projects. Three lecture hours per week and one three-hour laboratory per week. (F)
Prerequisite(s): (ECE 387 or CIS 387) or CIS 447 or ECE 317
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is

ECE 427  Digi Content Protec  4 Credit Hours
The objective of this course is to introduce current techniques of information security in general and multimedia security in particular. This course will cover existing information hiding techniques such as digital watermarking, steganography, and fingerprinting. The course will also cover conventional digital content protection methods such as cryptography. This course will explore the pros and cons of conventional and non-conventional digital content protection methods and associated design issues to give the student hands-on experience in various aspects of information security and analysis through the various assignments and projects. (W)
Prerequisite(s): (ECE 387 or CIS 387) or CIS 447 or ECE 317
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is

ECE 428  Cloud Computing  3 Credit Hours
Cloud computing represents the emerging Internet-based services/ platforms with elastic and scalable computation powers operating at costs associated with service. Topics may include advanced web technologies (AJAX and Mashup), distributed computing models and technologies (Hadoop and MapReduce), Infrastructure-as-a-Service (IaaS), Software as a Service (SaaS), Platform-as-a-Service (PaaS), virtualization, parallelization, security/privacy, and other issues in cloud computing. This course will also explore the current challenges facing cloud computing. Course work will include homework assignments, presentations and a term project. Students cannot take both ECE 428 and ECE 528 for degree credit. Three lecture hours per week.
Prerequisite(s): ECE 270
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is

ECE 431  Electrical Eng Design  4 Credit Hours
The course is conducted as a guided project design course with the class divided into teams and assigned a specific design project. Periodic progress reports are submitted during the term. A final written report and an oral presentation including demonstration are required at the end of the term. Cost analysis, evaluation of design alternatives and application of engineering principles are emphasized. Two scheduled contact hours and six hours open laboratories per week.
Prerequisite(s): ECE 311 and ECE 373 and ECE 493*

ECE 432  Electrical Eng Design  6 Credit Hours
The course is conducted as a guided project design course over a two-semester period with the class divided into teams and assigned a specific design project. Periodic progress reports are submitted during the term. A final written report and an oral presentation including demonstration are required at the end of the term. Cost analysis, evaluation of design alternatives and application of engineering principles are emphasized. Two scheduled contact hours and six hours open laboratories per week.
Prerequisite(s): ECE 311 and ECE 372 and ECE 493*
ECE 433 Intr to Multimedia Technolgies  4 Credit Hours
This course will introduce students to basic terminology and methods of multimedia. Basic concepts of digital audio will be reviewed, including frequency, sampling, and popular compression schemes. Concepts of digital images will be introduced, such as resolution, color theory, and compression formats. Basic concepts of digital video and animation will be introduced. Relevant web technologies will be reviewed. Four lecture hours per week.
Prerequisite(s): ECE 311 or ECE 370
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

ECE 434 Machine Learning in Engin  4 Credit Hours
Introduce fundamental theories and basic techniques in machine learning with an emphasis on engineering applications. Topics include learning concepts, search algorithms, neural networks, fuzzy learning, paradigms for problem solving using machine learning. (F, W).
Prerequisite(s): ECE 370
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

ECE 435 Intro to Mobil/Smrt Dev & Tech  4 Credit Hours
This class will introduce students to the technology used in mobile/smart devices and mobile communication networks. Various hardware and software aspects will be introduced, with particular emphasis on the constraints intrinsic to such systems. Students will get an overview of various mobile operating systems and how to develop software for mobile devices. Four lecture hours per week.
Prerequisite(s): ECE 372 or ECE 3731
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Major is Electrical Engineering, Software Engineering, Computer Engineering

ECE 436 Elec Machines & Hybrid Drives  4 Credit Hours
This is an introductory course on electric machines and drive systems and their application in EV, HEV, PHEV and FCV powertrains. The objectives are to familiarize the students with the basic concepts of electromechanical energy conversion and electric drive systems. Students are expected to be able to analyze and design electric drive systems for automotive, industrial, and residential applications. The topics covered in this course include DC machines, induction machines, permanent magnet synchronous machines, and switched reluctance motors and drives. Case studies in automotive applications such as electric and hybrid drivetrains, industrial and residential electric variable speed drive systems, will be discussed. Students cannot take both ECE 436 and ECE 4361 for credit. Four lecture hours per week.
Prerequisite(s): ECE 311
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Major is Electrical Engineering, Software Engineering, Information Science, Electrical Engineering

ECE 4361 Electric Machines and Drives  4 Credit Hours
This is an introductory course on electric machines and drive systems and their application in HEV/PHEV powertrain and other industrial and residential systems. The objectives are to familiarize the students with the basic concepts of electromechanical energy conversion and electric drive systems. Students are expected to be able to analyze and design electric drive systems for automotive, industrial, and residential applications. The topics covered in this course include DC machines, induction machines, permanent magnet synchronous machines, and switched reluctance motors and drives. Case studies in automotive applications such as electric and hybrid drivetrains, industrial and residential electric variable speed drive systems, will be discussed. Students cannot take both ECE 436 and ECE 4361 for credit. Four lecture hours per week.
Prerequisite(s): ECE 311
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Major is Electrical Engineering, Software Engineering, Computer Engineering

ECE 437 Intro to Automotive Cybersec  4 Credit Hours
The objective of this course is to introduce modern vehicles, in-vehicle communication networks and protocols such as CAN, LIN, and so on, threat models, diagnostics, and penetration testing. This course will cover existing in-vehicle communication protocols and associated vulnerabilities. Students are expected to learn penetration testing for automotive systems. This course will cover the limitations of existing state-of-the-art in multimedia forensics. Simulation tools, labs and projects will be used to provide hands-on learning experience in various aspects of in-vehicle communication. (W,YR).
Prerequisite(s): ECE 3731* or ECE 372*
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Major is Computer Engineering, Software Engineering, Industrial & Systems Engin, Mechanical Engineering, Computer & Information Science, Electrical Engineering

ECE 438 Web Engr. Prin & Tech  4 Credit Hours
Advanced concepts and techniques of web technology, focusing on interactive applications; real-world web engineering applications including data persistence, web security, hardware/software issues and asynchronous client/server communication. A term project is required. Four lectures per week.
Prerequisite(s): ECE 311 or ECE 370
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Major is Electrical Engineering, Software Engineering, Computer Engineering

ECE 443 Intr to Electric Power Systems  3 Credit Hours
This course will introduce students to basic methods of electric power systems. Topics include AC circuits, phasors, complex power and complex impedance, transformers, per unit system, transmissions lines, power flow, economic dispatch, real and reactive power control, symmetric and unsymmetric faults, transient stability, relaying and protection. Three lecture hours per week.
Prerequisite(s): ECE 317 or ECE 3171
**ECE 4431 Vehicular Pwr Sys & Loads  4 Credit Hours**
This is an introductory course on power systems and load analysis with focus on automotive applications. The objectives are to familiarize the students with the basic principles and concepts of vehicular power systems and loads. Students are expected to be able to analyze and design basic vehicular power systems. The topics covered in this course include an overview of power systems, vehicular power system architecture, DC and AC power grid in vehicular systems, power system stability, reliability, reactive power control, load flow analysis, short circuit analysis, and vehicular power system protection. Four lecture hours per week.

**Prerequisite(s):** ECE 317 or ECE 3171

**Restriction(s):**
- Can enroll if Class is Junior or Senior
- Can enroll if Major is Computer Engineering, Software Engineering, Industrial & Systems Engin, Mechanical Engineering, Computer & Information Science, Electrical Engineering

**ECE 4432 Renewable Elec Pwr Sys  4 Credit Hours**
This course is an introduction to traditional power grids as well as renewable electric power systems. This course covers long-distance transmission of electric power with emphasis on admittance and impedance modeling of components and systems, complex power-flow studies, symmetrical and unsymmetrical fault calculations, economic operation of large-scale generation and transmission systems, an overview of emerging renewable energy technologies (e.g. wind and solar) and the impact of grid integration of renewable energy on power grids. Students cannot take both ECE 4431 and ECE 4432 for credit. Four lecture hours per week.

**Prerequisite(s):** ECE 3171

**Restriction(s):**
- Can enroll if Class is Junior or Senior
- Can enroll if Major is Computer Engineering, Software Engineering, Industrial & Systems Engin, Mechanical Engineering, Computer & Information Science, Electrical Engineering

**ECE 446 Electromechanical Energy Conv  4 Credit Hours**
Introduces fundamental concepts and specifications of electromechanical energy conversion: AC and DC machines drive, electric and magnetic storage and transfer, transformer, and performance analysis of AC and DC machines. The topics include principles of energy conversion, permanent magnet synchronous machines, induction machines, and DC machines. The lab projects for the course will focus on modeling, evaluation, and practice of AC and DC machine drives based on computer simulation and DSP based experiments; transient and dynamic analysis; linearization and small signal analysis of machines. Four lecture/laboratory hours per week.

**Prerequisite(s):** ECE 311 and (ECE 317* or ECE 3171*)

**ECE 450 Analog and Digital Comm Sys  4 Credit Hours**
Topics include introduction to communication systems, base band communications, sampling theorem, amplitude and frequency modulation system design, statistical analysis of error and performance, digital modulation of analogy signals, digital communication and digital modulation schemes, random processes and applications in digital communications, and noise analysis, optimal receiver. Four lecture hours per week.

**Prerequisite(s):** (ECE 317 or ECE 3171) and IMSE 317

**ECE 451 Signal Detection  3 Credit Hours**
Introduction to signal detection, parameter estimation and information extraction theory and its application to communication systems. Subject areas covered within the context of a digital environment are decision theory, detection and estimation of known and random signals in noise, adaptive recursive digital filtering, optimal linear filtering and pattern recognition. Three lecture hours.

**Prerequisite(s):** ECE 450

**ECE 452 Probabilistic Meth/Signal Alys  3 Credit Hours**
Introduction to probability, random processes, correlation functions, and spectral density. Response of linear systems to random inputs. Applications in the field of communications.

**Prerequisite(s):** ECE 300

**ECE 454 Intr to Modern Wireless Comm  3 Credit Hours**
This course provides an introduction to the fundamentals of modern wireless communication. The focus of this course will be on the (i) basic signal propagation issues and channel impairments, (ii) modulation schemes and bandwidth/power trade-offs, and (iii) overcoming channel impairment using equalizers, diversity and channel coding. Additionally case studies will examine current wireless LANs and cellular system. Three Hours of lecture per week.

**Prerequisite(s):** ECE 450 or ECE 471

**Restriction(s):**
- Cannot enroll if Class is Freshman or Sophomore
- Can enroll if Level is Undergraduate
- Can enroll if College is Engineering and Computer Science

**ECE 456 Intro to Electro-optics  3 Credit Hours**
Laser sources, detectors, imaging systems, optical signal processing, illumination and image acquisition, triangulation, and fiber optics. Three one-hour lecture periods.

**Prerequisite(s):** ECE 311 and ECE 321

**ECE 460 Automatic Control Systems  4 Credit Hours**
Modeling and response of dynamic systems. Transfer functions, poles and zeros and their significance to transient and steady state response of feedback systems. Analysis of stability of closed-loop systems. Steady state errors and transient performance of closed-loop systems. Design of feedback control systems by root locus techniques and by frequency domain methods. Laboratory projects include modeling, controller design, controller realization, system performance evaluation, and simulation studies. Three lecture hours and one three hour laboratory per week.

**Prerequisite(s):** ECE 317 or ECE 3171

**Corequisite(s):** ECE 460L

**ECE 464 Robotics  4 Credit Hours**

**Prerequisite(s):** ECE 3731 and ECE 3171
ECE 4641 Mobile Robots 4 Credit Hours
This is an upper year course introducing foundational theory and applications of robotics engineering. The topics of this course include embedded computing, locomotion, localization, dead reckoning, inertial sensors and perception, navigation, multi-robotics systems, and human-robot interaction, and complex response processes. Three lecture hours and one three hour laboratory per week.
Prerequisite(s): ECE 3731
Restriction(s):
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science

ECE 465 Digital Control Design and Imp 4 Credit Hours
Discrete model of a continuous-time system. Differential equations and Z-transforms. Similarities and differences between discrete-time and continuous-time models. Translation of analog designs to digital designs. State-space methods including state feedback and observers. Hardware limitations and implementation issues. Four lecture/laboratory hours per week.
Prerequisite(s): ECE 460

ECE 467 Digital Forensics II 4 Credit Hours
This course is a continuation of Digital Forensics I and will focus on Internet Forensics. Students will examine in-depth concepts in Internet evidence collection and preservation, as well as applications of contemporary commercial forensic investigative software.
Prerequisite(s): (ECE 387 or CIS 387) and (ECE 471* or CIS 427*)
Restriction(s):
Cannot enroll if Class is Freshman
Cannot enroll if Level is Rackham or Graduate
Cannot enroll if College is Business

ECE 470 Computer Int and Data Comm 4 Credit Hours
Hardware and software techniques used in interfacing between computers and other computers or devices. Analog and digital techniques. Parallel and serial communications. Popular communication protocols. Error detection and correction. Lab project involves interfacing and communicating with a microprocessor.
Prerequisite(s): ECE 372

ECE 471 Comp Networks/Data Comm 4 Credit Hours
Hardware and software techniques used in interfacing between computers and other computers or devices. Data transmission techniques and protocols. Introduction to popular local area network protocols. Forward Error Control Techniques and Data Compression. Introduction to wireless communications with focus on major challenges and obstacles and the cellular phone infrastructure. Term projects involve developing a data link layer protocol for interfacing and communication with microprocessors. Four lecture hours per week.
Prerequisite(s): (ECE 372 or ECE 3731) and (IMSE 317 or BENG 364)

ECE 473 Embedded System Design 4 Credit Hours
This course studies the issues dealing with real-time embedded system design. Topics include: microprocessor architecture, assembly language, real-time programming, space and time limitations, relations between ANSI/Compiler output and assembly language, compiler linkers and using a system development package for C programming. (F.W.S.)
Prerequisite(s): ECE 372 or ECE 3731
Corequisite(s): ECE 473L

ECE 474 Compiler Design 3 Credit Hours
Principles of language compilation. Introduction to formal languages. Lexical analysis, top-down and bottom-up parsing, code generation and optimization. Error handling and symbol table management. Run-time storage management. Programming language design. Introduction to compiler-writing tools. A software design project is required. Three lecture hours per week.
Prerequisite(s): ECE 370

ECE 475 Comp Hardware Org/Design 4 Credit Hours
Design methodology, performance analysis using probability and statistic methods, hardwired and microprogramming in CPU design, hardware design languages and memory design. Advanced concepts in computer architecture. A design project is required. Three lecture hours per week and one three-hour laboratory per week.
Prerequisite(s): ECE 375

ECE 476 Intro to Parallel Processing 3 Credit Hours
Advances in computer architecture, parallel structures, performance evaluation, memory bandwidth considerations, processing bandwidth, communication and synchronization. A design project is required. Three lecture hours per week.
Prerequisite(s): ECE 375

ECE 478 Operating Systems 4 Credit Hours
Introduction to computer operating systems. Process management, threads, CPU scheduling, memory management, process synchronization, file systems and I/O devices. Selected advanced topics, e.g., distributed systems, deadlock, I/O, job scheduling, and performance analysis using queueing models, will be introduced. Case studies of modern operating systems. A design project is required. Four lecture hours per week.
Prerequisite(s): ECE 370 and IMSE 317

ECE 479 Artificial Intelligence 3 Credit Hours
Basic concepts and methodology of artificial intelligence from a computer engineering perspective. Emphasis is placed on the knowledge representations, reasoning and algorithms for the design and implementation of intelligent systems. Introduction to an AI language and representative intelligence systems. A design project is required. Three lecture hours per week.
Prerequisite(s): ECE 370

ECE 480 Intro to Dig Signal Processing 4 Credit Hours
Prerequisite(s): (ECE 317 or ECE 3171) and (MATH 217 or MATH 227 or MATH 228)
Corequisite(s): ECE 480L
Restriction(s):
Can enroll if College is Engineering and Computer Science

ECE 488 Introduction to Machine Vision 4 Credit Hours
Applications to machine vision. Representative topics are: optics and lighting, sensor characteristics, image acquisition, image analysis, segmentation, connectivity, shape description, hardware for vision applications, software considerations, applications including automatic inspection and metrology. Open lab and project will be required.
Prerequisite(s): ECE 270
Restriction(s):
Can enroll if Class is Senior
ECE 4881 Introduction to Robot Vision 3 Credit Hours
This course introduces the theories and modern technologies in robot vision. Topics include sensors, image analysis, region and segmentation, object recognition, stereo vision, optical flow, color image, object tracking and applications. Students cannot receive credit for both ECE 4881 and ECE 588. Three lecture hours per week.
Prerequisite(s): ECE 270
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science
Cannot enroll if Major is

ECE 490 Selected Topics in Elec Eng 1 to 3 Credit Hours
Advanced or applied topics in electrical engineering offered according to student's interest and availability of instructors and equipment. Lecture hours, laboratory, and/or computation period to be arranged.

ECE 491 Directed Studies 1 to 4 Credit Hours
Student in consultation with a faculty advisor will prepare a proposal in sufficient detail describing a subject topic to be studied. The proposal will be subject to approval by the department. A formal written and oral evaluation of the work performed are required for successful completion. Lecture hours, laboratory, and/or computation periods to be arranged.
Restriction(s):
Can enroll if Class is Senior or Graduate

ECE 492 Directed Research 1 to 4 Credit Hours
Student, in consultation with a faculty advisor will prepare a proposal in sufficient detail describing a research problem to be studied. The proposal will be subject to approval by the department. A formal written and oral evaluation of the research performed are required for successful completion. Lecture hours, laboratory, and/or computation period to be arranged.
Restriction(s):
Can enroll if Class is Senior or Graduate
Can enroll if College is Engineering and Computer Science

ECE 493 Design Factors in Eng 2 Credit Hours
This course is comprised of a series of lectures on the subject of design. It will promote awareness of such factors as literature review, performance specifications, design considerations, product liability, standards and ethics, professional registration codes, patents and copyrights, packaging, documentation and report preparation. Two lecture hours.
Restriction(s):
Can enroll if Class is Senior or Graduate

ECE 495 Micro Systems Design 4 Credit Hours
Course content includes discussion and laboratory experience on a number of interfacing topics (timing, serial and parallel communication, ADC/DAC, control loop) and the preparation of a major report on a design topic approved by the course instructor. Team design projects may involve either software or hardware, or both. Two lecture hours and two three-hour laboratories per week.
Prerequisite(s): ECE 373 and (ECE 311 or ECE 316)

ECE 4951 Sys Design and Microcontrollers 3 Credit Hours
Techniques for interfacing actuators and sensors to computers with emphasis on the use of a variety of microprocessors and a broad range of sensors. Topics include introduction to small microprocessors such as PIC16, PIC18, small systems such as opic, basicx as well as using a PC as a controller. Control of motors and other actuators using optoisolators and discrete electronics, use of H-bridges. Interfacing sensors that provide different encoding data, such as analog signals, digital communication using I2C protocol, handshake I/O, pulse width encoding. Interfacing to wireless communication using RF or IR. Includes laboratory experiments, individual midterm project and a final team project. Three lecture hours per week. (F,W)
Prerequisite(s): ECE 311 and (ECE 372 or ECE 3731)

ECE 498 Senior Engineering Design 3 Credit Hours
This course is conducted as a guided project design course over a two-semester period, with the class divided into teams, each assigned a specific design project. Periodic progress reports, a final written report, an oral presentation and project demonstration are required. Cost analysis, evaluation of design alternatives and application of engineering principles will be emphasized. A series of lectures on design issues will be presented in the first semester.
Prerequisite(s): (ECE 311 or ECE 316) and ECE 373

ECE 4981 Electrical Engineering Des I 2 Credit Hours
This course is conducted as a guided project design course over a two-semester period, with the class divided into teams, each assigned a specific design project. Periodic progress reports, a final written report, an oral presentation and project demonstration are required. Cost analysis, societal impact, safety issues, evaluation of design alternatives and application of engineering principles will be emphasized. A series of tutorials will be presented to provide student teams with insight into important system level considerations and trade offs.
Prerequisite(s): (COMP 270 or COMP 106 or COMP 220 or COMP 280) and (ECE 317 or ECE 3171) and (ECE 372 or ECE 3731) and (ECE 414 or ECE 415 or ECE 450 or ECE 460 or ECE 480 or ECE 4951)
Restriction(s):
Can enroll if Class is Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science

ECE 4982 Computer Engineering Des I 2 Credit Hours
This course is conducted as a guided project design course over a two-semester period, with the class divided into teams, each assigned a specific design project. Periodic progress reports, a final written report, an oral presentation and project demonstration are required. Cost analysis, societal impact, safety issues, evaluation of design alternatives and application of engineering principles will be emphasized. A series of tutorials will be presented to provide student teams with insight into important system level considerations and trade offs.
Prerequisite(s): (COMP 270 or COMP 106 or COMP 220 or COMP 280) and (ECE 372 or ECE 3731) and ECE 375 and (ECE 471 or ECE 473 or ECE 475 or ECE 478)
Restriction(s):
Can enroll if Class is Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science
ECE 4983  Electrical Engin Design II   2 Credit Hours
Second Semester ? Electrical Engineering Design This course is conducted as a guided project design course over a two semester period, with the class divided into teams, each assigned a specific design project. Periodic progress reports, a final written report, an oral presentation and project demonstration are required. Cost analysis, societal impact, safety issues, evaluation of design alternatives and application of engineering principles will be emphasized.
Prerequisite(s): ECE 4981
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore or Junior
Can enroll if College is Engineering and Computer Science

ECE 4984  Computer Engin Design II   2 Credit Hours
Second Semester Computer Engineering Design This course is conducted as a guided project design course over a two semester period, with the class divided into teams, each assigned a specific design project. Periodic progress reports, a final written report, an oral presentation and project demonstration are required. Cost analysis, societal impact, safety issues, evaluation of design alternatives and application of engineering principles will be emphasized.
Prerequisite(s): ECE 4982
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore or Junior
Can enroll if College is Engineering and Computer Science

ECE 4985  Electrical Engineering Design   3 Credit Hours
This course is conducted as a guided project design course over a two-semester period, with the class divided into teams, each assigned a specific design project. Periodic progress reports, a final written report, an oral presentation and project demonstration are required. Cost analysis, societal impact, safety issues, evaluation of design alternatives and application of engineering principles will be emphasized. A series of lectures on design issues will be presented in the first semester.
Prerequisite(s): (COMP 270 or COMP 106 or COMP 220 or Composition Placement Score with a score of 107) and (ECE 317 or ECE 3171) and ECE 372 and (ECE 414 or ECE 415 or ECE 450 or ECE 460 or ECE 480 or ECE 4951)
Restriction(s):
Can enroll if Class is Senior

ECE 4986  Computer Engineering Design   3 Credit Hours
This course is conducted as a guided project design course over a two-semester period, with the class divided into teams, each assigned a specific design project. Periodic progress reports, a final written report, an oral presentation, and application of demonstration are required. Cost analysis, societal impact, safety issues, evaluation of design alternatives and application of engineering principles will be emphasized. A series of lectures on design issues will be presented in the first semester.
Prerequisite(s): (COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 106 or COMP 220) and (ECE 317 or ECE 3171) and ECE 372 and ECE 375 and (ECE 471 or ECE 473 or ECE 478 or ECE 475)
Restriction(s):
Can enroll if Class is Senior

ECE 4987  Robotics Engineering Design I   2 Credit Hours
This course is conducted as a guided project design course over a two-course sequence, with the class divided into teams, each assigned a specific design project. Periodic progress reports, a final written report, an oral presentation and project demonstration are required. Cost analysis, societal impact, safety issues, evaluation of design alternatives and application of engineering principles will be emphasized. A series of tutorials will be presented to provide student teams with insight into important system level considerations and trade offs.
Prerequisite(s): ECE 311 and ECE 3171 and (ECE 372 or ECE 3731) and ECE 3641 and (ECE 460 or ECE 4641)
Restriction(s):
Can enroll if Class is Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science

ECE 4988  Robotics Engineering Design II   2 Credit Hours
Second semester Robotics Engineering Design: This course is conducted as a guided project design course over a two-course sequence, with the class divided into teams, each assigned a specific design project. Periodic progress reports, a final written report, an oral presentation and project demonstration are required. Cost analysis, societal impact, safety issues, evaluation of design alternatives and application of engineering principles will be emphasized.
Prerequisite(s): ECE 4987
Restriction(s):
Can enroll if Class is Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science

ECE 499  Internship/Co-op   1 Credit Hour
A four-month professional work experience period of the Engineering Internship Program, integrated and alternated with the classroom terms.
Restriction(s):
Can enroll if Class is Senior

Engineering Core (ENGR)

ENGR 100  Introduction to Engineering and Engineering Design   3 Credit Hours
The purpose of this course is to provide a general introduction to the engineering profession, to engineering design, and programming using MATLAB. The course introduces the design-build-test-learn cycle through lectures, hands-on based laboratory activities, and a team project. Three credit hours (two-hour lecture, three-hour laboratory per week). (F, W).
Corequisite(s): ENGR 100L
Restriction(s):
Can enroll if College is Engineering and Computer Science

ENGR 126  Engineering Computer Graphics   2 Credit Hours
Corequisite(s): ENGR 126L
Restriction(s):
Can enroll if College is Engineering and Computer Science
ENGR 216  Computer Meth for Engineers  2 Credit Hours
Computer programming in C (or one of its derivatives) and application to basic numerical techniques. Numerical integration, solution of systems of linear equations, root finding, curve fitting, error properties, numerical precision. (F,W,S).
Prerequisite(s): ENGR 100 and ENGR 126* and ((MATH 216* and (MATH 217* or MATH 227*) or) or MATH 228*)
Restriction(s):
Can enroll if College is Engineering and Computer Science

ENGR 250  Principles of Eng Materials  3 Credit Hours
An introductory course in engineering materials. Particular emphasis is given to the correlation of material properties and internal structures; structure of materials; stress-strain curves; temperature effects; phase diagrams; ferrous and non-ferrous alloys; ceramics; polymers; composites; electrical, magnetic, and optical properties; corrosion and failure. Two-hour lectures and two one-hour recitations.
Prerequisite(s): (CHEM 144 or CHEM 134) and (CHEM 146* or CHEM 136*) and MATH 115*
Corequisite(s): ENGR 250R
Restriction(s):
Cannot enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if College is Engineering and Computer Science

ENGR 250R  Prin of Eng Materials Rec  0 Credit Hours
Recitation component for ENGR 250. Must be taken concurrently with ENGR 250.
Corequisite(s): ENGR 250

ENGR 290  Study Abroad Technical Subj  1 to 4 Credit Hours
200-level study abroad course in technical subjects.
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if College is Engineering and Computer Science

ENGR 332  Speech for Professionals  3 Credit Hours
Professionals must effectively communicate in the technical and business environment of a company organization. The course pays particular attention to verbal communications within and between organizations, focusing on multiple audiences and their varying needs for information. Stressing audience awareness, organization, clarity and efficiency in speaking, it will improve speaking skills necessary for confident verbal presentations such as professional briefings and conferences.

ENGR 350  Nanoscience and Nanotechnology  4 Credit Hours
The terms “nanoscience” and “nanotechnology” have come to mean many different scientific and technical disciplines. The course will introduce students to the fundamentals of nanoscience and nanotechnology. Interesting phenomena about individual nanometer scale objects will be discussed. The difference in properties of objects of nanometer scale, containing hundreds or thousands of atoms and those exhibited by individual atoms or molecules or the properties of materials at the macroscale with which we are most familiar will be covered. The analytical techniques that are used to characterize these objects will be discussed. The manufacturing techniques used to make these objects along with their applications will be covered. Cost benefit analysis of nanotechnology and its future will be discussed. (YR)
Prerequisite(s): PHYS 151 and (CHEM 124 or CHEM 134 or CHEM 144)
Restriction(s):
Cannot enroll if Major is

ENGR 360  Design Thinking : Process, Method & Practice  4 Credit Hours
Design Thinking: Process, Method and Practice is a highly interactive project-based introduction to design, structured as a hands-on course. This course brings a holistic vision to design innovation. Students work in teams that follow a process of immersion of user experiences, exploration of ideas and prototyping of potential solutions. To work effectively as a team, collaboration and project management concepts and methods are introduced. The course consists of two instructional elements: regular class lectures and in class hands-on exercises based on case studies. In addition, a semester long team based project allows students to apply classroom learnings to real life design problems. Teams present their design concepts, showcase prototypes in engaging and thoughtful ways. (F; W).
Restriction(s):
Cannot enroll if Class is

ENGR 390  Study Abroad Technical Subj  1 to 4 Credit Hours
300-Level study abroad topics in technical subjects.
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if College is Engineering and Computer Science

ENGR 390F  Study Abroad Technicl Subj  3 Credit Hours
Topic: Fuel Cell Principles. In this course the physical laws of thermodynamics and fluid mechanics will be applied to industrial components and equipment. Approved as an upper-level ME elective.
Prerequisite(s): ME 230

ENGR 399  Experiential Honors Prof. Prac  1 Credit Hour
Full Course Title: Experiential Honors Professional Practice-To provide undergraduate engineering and computer science students with an opportunity to develop skills, abilities, and behaviors through both hands-on learning and exposure to the professional work environment. The course provides supervised work experiences relevant to their degree programs with mutually agreed upon engineering work assignments among the student, employer and faculty advisor. (F,W,S)
Prerequisite(s): CIS 275 or (ECE 210 and ECE 273) or (IMSE 255 and IMSE 317) or ((ME 230 or ME 260) and (ENGR 126 and ENGR 216 and ENGR 250))
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate
Can enroll if College is Engineering and Computer Science

ENGR 400  Appl Business Tech for Engr  3 Credit Hours
This course will introduce the students those business skills/tools that will be needed in their jobs soon after graduation and will make them better and well-rounded engineers. They will be able to function better within today's global business environment. The major topics of the course are management finance including cost accounting, organizational behavior, program and project management and business related system thinking. Three hours of lecture per week.
Restriction(s):
Can enroll if Class is Post-baccalaureate NCFD or Senior
Can enroll if Level is Undergraduate or Professional Development

ENGR 490  Study Abroad Technical Subj  1 to 4 Credit Hours
400-level study abroad course in technical subjects.
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if College is Engineering and Computer Science
ENGLISH

ENGL 200  Intro to English Studies  3 Credit Hours
An introduction to English Studies for English concentrators. The course provides students with the interpretive, analytical and basic research skills, the critical vocabulary, the understanding of genre, and the knowledge of major critical approaches necessary for the study of literature. Readings will consist primarily of poetry, fiction, drama, and non-fiction prose written in English by British and American authors, but the course will also include other historical and cultural texts as well as works of criticism. Students will submit at least 20 pages of written work for extensive instructor feedback. (FW)
Prerequisite(s): COMP 105 or COMP 110 or Composition Placement Score with a score of 30 or Composition Placement Score with a score of 106

ENGL 205  Storytelling: Pride and Prejudice  3 Credit Hours
In this introduction to the tools and purpose of collegiate literary analysis, we read Jane Austen’s novel, Pride and Prejudice, for what its popularity suggests about the function of “Literature” during the twenty-first century. Students will read the original novel followed by its adaptations in film, novelistic sequels/prequels, graphic novels, and children’s literature. The course also serves as an introduction to the social value of imaginative fiction. (YR).

ENGL 206  Storytelling: Westerns  3 Credit Hours
This course will study a specific genre, westerns, traditionally made up of stories of cowboys and conquest but more recently an expansive, often radical, mode of expression. We will study a diverse range of texts that can all be described as westerns to help us understand how cultural values are shaped by and can be challenged by imaginative texts, to understand how a diverse range of authors and audiences have used a familiar genre to tell their unique stories, and to understand how literary language works to create thematic meaning and emotional effects. This course will introduce students to the study of literature and the tools of literary analysis through the lens of storytelling, in other words: the way we make meaning about our individual and collective experiences through the act of telling stories. (YR).

ENGL 223  Intro to Creative Writing  3 Credit Hours
An introduction to the writing of poetry, the short story, and/or the play. Considerable writing analysis, criticism, and discussion. (F, W).
Prerequisite(s): COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 270 or COMP 280

ENGL 229  Intro to Lit: African American  3 Credit Hours
A study of African-American literature designed to expose students to important periods, works, and authors within historical context. Topics will include slavery, reconstruction, the Great Migration, the Harlem Renaissance, and the contemporary renaissance in Black women’s literature. Students will be required to read, critically discuss, analyze, and write their responses to several literary genres that will be incorporated (fiction, drama, poetry).
ENGL 301  Literary Criticism  3 Credit Hours
This course introduces literary criticism and theory from Aristotle to the present, focusing on the changing concept of literature's nature and function. Lectures, readings, and discussion cover such critics as Aristotle, Dryden, Pope, Johnson, Wordsworth, Coleridge, Arnold, T. E. Hulme, I. A. Richards, T. S. Eliot, and such movements as New Criticism, Phenomenology, Reader-Response, Archetypal Criticism, psychological approaches to literature, New Historicism, Marxism, Feminism, and Deconstruction. (OC).
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

ENGL 304  Studies in Detroit Culture  3 Credit Hours
This course is an attempt to define a modern cultural history of Detroit. Taught by two faculty members, the emphasis of the course will vary but the following aspects of the city’s cultural history will be covered in some detail: its literature, arts, music, and architecture; its social conditions and broader American culture context. (AY).

ENGL 306  Comparat. American Identities  3 Credit Hours
This course will confront and complicate the following key questions: what does it mean to be an American? What is American culture? Participants in this course will respond to the questions central to the American Studies field by reading and discussing historical, sociological, literary, artistic, material culture, political, economic, and other sources. Students will use this interdisciplinary study to examine the multiple identities of Americans - as determined by factors such as gender, race, class, ethnicity, and religion. While emphasizing the diversity of American culture, participants will consider some core values and ideas uniting America both in historical and contemporary society. Students will be invited to seek out and share fresh narratives of the American experience.
Prerequisite(s): COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 270 or COMP 280
Restriction(s):
Can enroll if Level is Undergraduate

ENGL 310  Narrative Journalism  3 Credit Hours
Students learn to identify, understand, and use the techniques of fiction in the service of nonfiction material. While studying the texts as literature, students are also encouraged to view them as models for writing. Assignments include the writing and revising of articles, based on research and interviews, and writing in story form, drawing on literary techniques. (YR).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 270 or COMP 280

ENGL 311  British Lit: Beowulf to Milton  3 Credit Hours
A study of British literature from the Anglo-Saxon period to the works of John Milton, designed to introduce students to important authors, works, and literary movements in their wider historical and cultural contexts. (YR)
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)

ENGL 312  British Lit: Milton to 1900  3 Credit Hours
A study of British literature from the works of John Milton to 1900, designed to introduce students to important authors, works, and literary movements in their wider historical and cultural contexts. (YR)
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

ENGL 313  American Lit: Colonial to 1900  3 Credit Hours
A study of American literature from the Colonial period to 1900, designed to introduce students to important authors, works, and literary movements in their wider historical and cultural contexts. (YR)
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

ENGL 314  Brit & Amer Lit: 1900-Present  3 Credit Hours
A study of British and American literature from 1900 to the present, designed to introduce students to important authors, works, and literary movements in their wider historical and cultural contexts. (YR)
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

ENGL 322  SiD--Writing in Detroit  3 Credit Hours
Full Title: Semester in Detroit: Writing on Detroit--Beyond the Other. This course serves as an elective course for the Semester in Detroit (SiD) program. It is devoted to short fiction in search of a creative rendering of the people in Detroit, a city which offers rich opportunities to explore the theme of the "other". Students will develop short narratives that capture their impressions of the city through its people. Each student will find Detroiters to "study" and creatively report on. Class discussions will help direct students. (S)

ENGL 323  Advanced Creative Writing  2 to 3 Credit Hours
Practice in writing poetry, the short story, the novel, and/or the play. May be repeated to a maximum of six credit hours. (OC).
Prerequisite(s): ENGL 223 or COMP 223

ENGL 327  Advanced Exposition  3 Credit Hours
A study of rhetorical theory and its application to various types of expository essays. Writing assignments will reflect the types of essays studied. May be repeated to a maximum of 6 credit hours.
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or COMP 280

ENGL 328  The Ethnic-American Short-Story Cycle  3 Credit Hours
This course examines interrelated short stories written by Ethnic-American writers. In addition to analyzing these stories, a writing workshop will be maintained over the course of the semester. Students will be expected to produce short stories that are linked by recurring characters, setting, and/or theme(s). (AY).
Prerequisite(s): ENGL 223 or COMP 223
ENGL 331 Online Reporting, Research, Writing 3 Credit Hours
Course introduces the technical, social, legal and ethical practice of online research, focusing specifically on reporting (i.e. research and interview) skills required by journalists and others. Students use new media technology to generate ideas, to research subjects, and to develop general-audience writing projects in their areas of interest. Course covers the use of Web search engines, directories and databases; finding sources and interviewing people online; evaluating the credibility of online sources and information; using Lexis-Nexis to access archives and public records; and using spreadsheet and database programs. (F, W).
Prerequisite(s): COMP 106 or COMP 110 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if Level is Undergraduate

ENGL 341 Religion and Literature 3 Credit Hours
An investigation of the ways in which religious ideas and practices have informed works of literature, and vice versa. Surveying a variety of genres and themes, the course will focus mainly on British and/or American literature and its engagement with Judeo-Christian religion, though some attention may be devoted to other literary and religious traditions (e.g., ancient and medieval texts, European and world literature, Islam and Eastern religions).
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

ENGL 343 Adaptations of Literary Texts 3 Credit Hours
This course explores the adaptation of literary texts in a variety of literary genres (poetry, drama, fiction) to other artistic mediums (film, graphic novels/comics, paintings, etc.). Moving beyond limited comparisons of "good" originals and "bad" adaptations, this course focuses on the dialogue among multiple versions of the same story across a range of historical periods, asking how and why adaptations modify their sources in a particular manner. This course addresses the difference between adaptation and appropriation as well as imitation, quotation, allusion, pastiche, and parody.
Prerequisite(s): (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200) and (COMP 106 or COMP 220 or COMP 270 or COMP 280)
Restriction(s):
Cannot enroll if Class is Freshman

ENGL 349 The Bible In/As Literature 3 Credit Hours
This course will study selected readings from the Bible, first in regard to their own literary, historical, and cultural contents, and then in regard to their reception, interpretation, and reapplication by later literary tradition. Biblical selections may cover both the Old and New Testaments as well as Apocryphal traditions, while readings from later non-biblical texts will be drawn from various literary periods.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

ENGL 351 Arab Literature in English 3 Credit Hours
This course examines the diverse range of the Arab experience in the Middle East as well as the diaspora in the twentieth and twenty-first centuries in works of literature, including fiction, memoir, poetry, and playwriting. (OC).
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)

ENGL 356 Reading Urban Monstrosity 3 Credit Hours
This course questions the literary techniques and forms the English writers developed between 1660 and 1900 to characterize and imagine London to be a unified community and to counter the growing perception of London as a "monstrous city" This image of "the English-speaking City" as an uncontrollable monster may be explored in writings by Daniel Defoe, Jane Austen, Elizabeth Gaskell, Robert Louis Stevenson, Charles Dickens, Thomas Hardy, and Joseph Conrad.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or COMP 220 or COMP 280 or COMP 270) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

ENGL 358 Shakespeare on Film 3 Credit Hours
The course examines the adaptation of Shakespeare's play-scripts for the screen. It goes beyond a discussion of the relative merits of plays and their respective film adaptions, examining the complex exchanges between the two artistic mediums (e.g. how stage convention such as soliloquies or off-stage action are adapted to the screen; how early silent films were used to market stage productions, etc.). It will approach the issue of adaption by examining the works of key directors, multiple films of a single play, silent films, foreign language adaptions, mass market and art house films, and films which deal with fictive or actual productions of Shakespeare's plays. Special emphasis will be placed on specific stage productions that are later adapted to films. In this course, students will explore a broad range of responses to and interpretations of Shakespeare's works. This class will stress the idea that each staging is an interpretation of the play, its point of view conditioned by the times, the medium, and the director's vision. (OC)
Restriction(s):
Can enroll if Level is Undergraduate

ENGL 368 20C/21C British/Amer Poetry 3 Credit Hours
A survey of 20th- and 21st- century British and/or American poetry and poets, including such authors as Wallace Stevens, W.H. Auden, T.S. Eliot, Dylan Thomas, Langston Hughes, and Sylvia Plath.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 270) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

ENGL 370 Narratives of Film and Lit 3 Credit Hours
Explores the narrative conventions of literary and filmic fictions in a cultural, historical, and psychoanalytic context. Goes beyond a discussion of the relative merits of novels and their respective film adaptions and examines the more complex interchanges between the two narrative forms, the ideological function of narrative in contemporary society, and the effect of the medium of a fictional text on the reader/viewer. (AY).
Prerequisite(s): HUM 248 or ENGL 248 or FILM 248 or JASS 248
ENGL 372  Eng Lit: 1500 to 1600  3 Credit Hours
A survey of English literature from the beginnings of the Renaissance in England through the works of Sidney, Spenser, and Shakespeare (excluding his plays). (OC).
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

ENGL 373  English Lit 1600-1660  3 Credit Hours
A survey of English literature from Jonson, Bacon, and Donne through the Metaphysicals, the Cavaliers, and Milton’s early poems. Representative prose works will also be studied. (OC).
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)

ENGL 374  Restoration and Early Eighteenth-Century Literature  3 Credit Hours
A survey of English literature of the Restoration and early 18th century, with special emphasis on verse satire (Swift, Montague, and Pope), Restoration drama (Behn, Wycherly, and Congreve), and the origins of the English novel (Defoe, Fielding, and Richardson). (OC).
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 240 or ENGL 250)

ENGL 375  The Age of Johnson and Burney  3 Credit Hours
A survey of English Literature of the late 18th century. Readings address the literary gothic, Boswell’s journals, the “graveyard school” of poetry, Samuel Johnson’s poetry and prose, the 1789 revolutionary fervor, and the novels of Frances Burney and Jane Austen.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

ENGL 376  Brit Lit in Romantic Era  2 to 3 Credit Hours
A survey of British literature from 1789 to 1832 with special emphasis on the rise of Romantic poetry.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

ENGL 377  Victorian Poetry and Prose  3 Credit Hours
A survey of British poetry and prose during the reign of Queen Victoria 1837 to 1901.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

ENGL 378  Intro to Postcolonial Studies  3 Credit Hours
This course offers a general introduction to Postcolonial Studies - a field of cultural inquiry that questions how personal identity (specifically race, language and ethnicity) shapes, and is shaped by, the politics of colonization and nationalism. Students will clarify the subject of Postcolonial Studies by examining a variety of cultural and linguistic objects (literature, film, TV-journalism, slave- and middle-passage-narrative, and political manifesto) from a variety of cultural perspectives (Arab American, Anglo-Indian, West African, and Caribbean).
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239 or ENGL 240 or ENGL 250)

ENGL 379  Black Men in America  3 Credit Hours
This course will examine the triumphs and challenges of African American men as they seek personal, political, and creative expression. This course incorporates several genres (narrative, fiction, essay, drama, poetry, music, and film) and the voices of both black men and women who range from professional writers to politicians, from athletes to actors. Throughout the course, students will be asked to examine the writings through the lens of intersectionality and to analyze the extent to which perceptions regarding race, gender, sexual orientation, social class and other aspects of identity shape an individual’s American experience. Students will be required to critically read, discuss, analyze, and write their own responses to the genres covered in the texts. (OC).
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or COMP 220 or COMP 280 or COMP 270) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)

ENGL 380  Topics in English  3 Credit Hours
Examination of problems and issues in selected areas of English. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topics differ. (OC).
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)

ENGL 381  Psychology and Theater  3 Credit Hours
The linkages between psychology and theater are analyzed from the perspective of the actor, the audience, and the analyst (both psychotherapeutic and literary). This includes ties between plays and theories of human behavior, psychodrama, and self-insight through performance. Course involves a significant experiential component.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 223 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239) and PSYC 101
ENGL 399  Independent Studies in English  1 to 3 Credit Hours
Readings or analytical assignments in English, selected in accordance with the needs and interests of those enrolled and agreed upon by the instructor and the student. May be repeated for a maximum of 6 credit hours. (F,W).

ENGL 408  Shakespeare I: Earlier Works  3 Credit Hours
Intensive study of selected works from the first half of Shakespeare's career, designed to increase the student's critical appreciation and understanding. Students cannot receive credit for both ENGL 408 and ENGL 508.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Cannot enroll if Class is Graduate

ENGL 409  Shakespeare II: Later Works  3 Credit Hours
Intensive study of selected works from the second half of Shakespeare's career, designed to increase the student's critical appreciation and understanding. Students cannot receive credit for both ENGL 409 and ENGL 509.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Cannot enroll if Class is Graduate

ENGL 410  Maj Engl Authors of the Renais  2 to 3 Credit Hours
An investigation of significant themes and attitudes current in the Renaissance, as seen through an intensive examination of the works of two or three major authors, such as More, Spenser, Bacon, and Donne.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 205 or ENGL 206 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239 or ENGL 200)

ENGL 413  Shakespeare's Contemporaries  2 to 3 Credit Hours
An examination of the performance and cultural contexts of plays by English Renaissance playwrights (Marlowe, Middleton, Webster, Jonson, etc.), working around the time of Shakespeare. A limited number of Shakespeare's plays may be included.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Can enroll if Level is Undergraduate

ENGL 420  Maj Engl 18th-Century Authors  2 to 3 Credit Hours
An intensive study of two or three authors, such as Dryden, Behn, Pope, Swift, Burney, Austen, or Samuel Johnson. Students cannot receive credit for both ENGL 420 and ENGL 520.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Cannot enroll if Class is Graduate

ENGL 421  Swingers. Flirts, & Libertines  3 Credit Hours
An examination of the functions that writers in English have assigned to literary decadence, libertinism, and aestheticism (or, the study of beauty and "art for art's sake"). We will read writers who identified themselves as libertines as well as writers who represented libertines as we address the Restoration rake (Rochester & Behn), the Regency buck (the Shelleys & DeQuincey), the Victorian dandy (Oscar Wilde, Michael Field, & the Decadents), the modern playboy (Nin, Waugh & Fitzgerald), hippie-swinger (Wolfe & Jagger), and finally, the postmodern player-celebrity (Bret Easton Ellis, Will Self & rock-lyricists).
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

ENGL 422  Satire  3 Credit Hours
An exploration of satirical writing and its functions from its English origins in eighteenth-century London (Montagu, Swift, Pope) to its twenty-first-century reincarnations in both America and Britain (Zadie Smith, Burgess, Schulyer, Hughes, Waugh). The course emphasizes the various goals that writers have assigned to satire, especially in terms of race, gender, and nationalism.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 230 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)

ENGL 423  Restoration Drama  3 Credit Hours
A survey of playwriting and theatrical performance in England from Charles II's opening of the theaters in 1660 to the Licensing Act of 1737. Playwrights and movements include historical drama (Dryden, Rowe), tragicomedy (Southwells), urban social satire (Behn, Etheredge, Gay, Centlivre, and Congreve), subversive comedy (Behn and Wycherley), sentimental comedy (Steele), and revisions of Shakespeare.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
ENGL 424  18th-Century English Novel  3 Credit Hours
A study of the rise and development of the English novel during the 18th century. Consideration is given to such novelists as Defoe, Richardson, Fielding, Sterne, Austen, and Smollett. Students cannot receive credit for both ENGL 424 and ENGL 524.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Cannot enroll if Class is Graduate

ENGL 427  Jane Austen  3 Credit Hours
This course reads all six (6) of Jane Austen's major novels to 1) contextualize Austen's continued popularity within current debates about sexuality and marriage; and 2) study how the narrative arc of a female novelist's career responds to--and helps readers process--the revolutionary upheavals between late eighteenth- and early nineteenth-century Britain. Readings include _Northanger Abbey_, _Sense & Sensibility_, _Pride & Prejudice_, _Mansfield Park_, _Emma_, and _Persuasion_, and may also include Austen's juvenalia, unfinished work, and fiction by her predecessors. (OC)
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

ENGL 430  Stud in 19th-Century Brit Lit  3 Credit Hours
Intensive study of a special topic in 19th-century British literature. The course may treat a single author (e.g., Dickens), a movement (e.g., Postmodernism), a genre (e.g. modern short story), or a theme (e.g. Literature of World War).
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

ENGL 434  The Victorian Novel  3 Credit Hours
A study of the British novel during the reign of Queen Victoria, 1837 to 1901.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)

ENGL 441  Major20C/21C English Authors  3 Credit Hours
An intensive study of several modern English authors, such as Shaw, Joyce, Forster, Dylan Thomas, D.H. Lawrence, and Woolf. Students cannot receive credit for both ENGL 441 and ENGL 541.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 200)
Restriction(s):
Cannot enroll if Class is Graduate
ENGL 450  Major Am Auth to the Civil War  3 Credit Hours
An intensive study of two or three authors, such as Charles Brockton Brown, Nathaniel Hawthorne, or Harriet Beecher Stowe, from the earlier periods of American Literature. Students cannot receive credit for both ENGL 450 and ENGL 550.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENG 230 or ENG 231 or ENG 232 or ENG 233 or ENG 235 or ENG 236 or ENG 237 or ENG 238 or ENG 239)
Restriction(s):
Cannot enroll if Class is Graduate

ENGL 451  Major Am Auth Civ War to WWI  3 Credit Hours
An intensive study of two or three major authors from the period between the Civil War and World War I, such as Emily Dickinson, Charles Chesnutt, or Henry James. Students cannot receive credit for both ENGL 451 and ENGL 551.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENG 230 or ENG 231 or ENG 232 or ENG 233 or ENG 235 or ENG 236 or ENG 237 or ENG 239 or ENG 200)
Restriction(s):
Cannot enroll if Class is Graduate

ENGL 452  Major 20C/21C American Authors  3 Credit Hours
An intensive study of several modern American authors, from the World War I to the present, such as Langston Hughes, Frost, Hemingway, and Faulkner. Students cannot receive credit for both ENGL 452 and ENGL 552.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENG 230 or ENG 231 or ENG 232 or ENG 233 or ENG 235 or ENG 236 or ENG 237 or ENG 239 or ENG 200)
Restriction(s):
Cannot enroll if Class is Graduate

ENGL 453  Contemporary American Novel  3 Credit Hours
Study of selected American novels and novelists since WWII with an eye to their social, political, and literary contexts. Course will focus on major works by major authors and representative works by lesser-known writers in order to explore technical, thematic and critical crosscurrents among the works. Students cannot receive credit for both ENGL 453 and ENGL 553.
Prerequisite(s): (COMP 106 or COMP 220 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280 or COMP 270) and (ENG 230 or ENG 231 or ENG 232 or ENG 233 or ENG 235 or ENG 236 or ENG 237 or ENG 239 or ENG 200)
Restriction(s):
Cannot enroll if Class is Graduate

ENGL 454  Postmodern Literature  3 Credit Hours
This course explores the expression of postmodernism in literature (primarily fiction) and critical theory. Selected works of fiction and creative non-fiction will be analyzed in terms of the problems and issues raised by the postmodern movement. Students cannot receive credit for both ENGL 454 and ENGL 554.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENG 230 or ENG 231 or ENG 232 or ENG 233 or ENG 235 or ENG 236 or ENG 237 or ENG 239 or ENG 200)

ENGL 455  Stud in 19th-Cent Am Lit  3 Credit Hours
Close investigation of a special topic in 19th century American literature. The course may treat a single author (e.g. Whitman), a movement (e.g. transcendentalism), or a theme (e.g. utopianism, technology, or pragmatism), and may draw on work from other field of study.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENG 230 or ENG 231 or ENG 232 or ENG 233 or ENG 235 or ENG 236 or ENG 237 or ENG 239 or ENG 200)

ENGL 461  Modern English Grammar  3 Credit Hours
The morphological and syntactic analysis of the structure of present day English considered in the light of modern linguistic science. Students cannot receive credit for both ENGL 461 and ENGL 561.
Prerequisite(s): LING 280 or LING 281 or LING 480
Restriction(s):
Cannot enroll if Class is Graduate

ENGL 467  Script-Writing Workshop  3 Credit Hours
This writing intensive course will train students to compose a film script, focusing on the substance, structure, and style of an original screenplay. The course will be conducted as a workshop in which students will first study classic scripts (and films based on these) of the film-school generation of directors, then model scenes and sequences of their own scripts on the principles of the above texts, and finally, write their own respective film stories in accordance with an appropriate narrative structure and design. (YR).
Prerequisite(s): JASS 310 or COMP 310 or ENGL 310 or COMM 310

ENGL 468  Writing Young Adult Fiction  3 Credit Hours
In this course participants will explore the young adult novel from the point-of-view of a reader and a writer. They will read recently published and critically acclaimed popular young adult novels. They will use these texts to explore such issues as gender, race and identity as they relate to young adult lives and their respective cultures generally. They will use these texts as models for the production of their own texts and will consider the constraints and benefits of constructing and writing to a particular audience. They will consider if and why young adult novels are abbreviated or limited in relationship to adult literature. In addition to reading about ten novels, they will complete several creative exercises leading up to a final portfolio. Students will not receive credit for both ENGL 468 and ENGL 568.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENG 223 or COMP 223)
Restriction(s):
Cannot enroll if Class is Graduate
ENGL 469 Contemporary African Amer Lit 3 Credit Hours
An intensive study of major 20th-century African-American writers. Fiction, poetry, autobiography, and drama will be examined but one genre will be stressed in any given term, e.g., the novel. Lectures will provide historical and biographical context for analysis and discussion of the works. Students cannot receive credit for both ENGL 469 and ENGL 569. (OC).

Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)

Restriction(s):
Cannot enroll if Class is Graduate

ENGL 4705 Black Women / Lit, Film, Music 3 Credit Hours
This course will examine works produced by Black women authors, activists, filmmakers and musical performers in order to determine the methods they have incorporated in order to challenge and eradicate the prevailing stereotypes about Black women while advancing their own personal and racial agendas. It will also focus on the extent to which race, gender and class have shaped the creative work of Black women. Students will be required to read, discuss, analyze and write their own responses to the works of such firebrands as author Zora Neale Hurston, activist Ida B. Wells, filmmaker Julie Dash, and singer Billie Holiday.

Prerequisite(s): FILM 240 or FILM 248 or FILM 385 or AAAS 239 or AAAS 275 or HUM 303 or HUM 221 or HUM 222 or HUM 223 or HUM 248 or ENGL 200 or ENGL 205 or ENGL 206 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 237 or ENGL 238 or ENGL 239 or ENGL 248 or JASS 248 or ANTH 303 or PSYC 303 or SOC 303 or WGST 303

ENGL 471 LGBTQ Literature 3 Credit Hours
This course surveys primarily contemporary literature by writers who identify as gay, lesbian, bi-sexual, transgender, or queer. By studying the self-representation and culturally unique perspective of this emerging canon of writers, students in this course understand the emergence of LGBTQ literary traditions and understand the cultural diversity within these traditions. Students learn to identify the aesthetic qualities (such as camp, performativity, coded subtexts, homoeroticism, and the relationship between creativity and sexuality), and historical, political, and social concerns that characterize LGBTQ literary and cultural production. Topics covered include the struggle for civil rights before and after Stonewall, coming out narratives, the negotiation of homophobic cultures, post-colonial writers, and memoirs of the LGBTQ experience, as well as the historical emergence of sexual categories and the literary critique of heteronormativity. This course counts toward the English discipline diversity requirement. Students cannot receive credit for ENGL 471 and ENGL/WGST 571.

Prerequisite(s): (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239) and (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107)

ENGL 472 Reading in Multicult Contexts 3 Credit Hours
An examination of the effect of different cultural backgrounds on reading and literature. Topics include contrastive rhetoric, folk narrative, and multicultural juvenile literature. This course does not satisfy requirements for the English concentration. Not open to English concentrators. Students cannot receive credit for both ENGL 472 and ENGL 572. (YR).

Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

Restriction(s):
Cannot enroll if Class is Graduate

ENGL 473 Arab American Women Writers 3 Credit Hours
Examines the literary and cultural contributions of Arab and Arab American women novelists, poets and artists to the development and consolidation of the cultures of understanding and coexistence; explores the tensions between citizenship and belonging, race and the politics of fears, gender and geographical mobility, and ethnic minorities and mainstream consciousness; discerns how Arab women writers and artists retool their various artistic endeavors to channel socio-political disenchantment, critique and civil disobedience; stresses how literary and artistic productions of a heterogeneous number of Arab American women writers and artists can indeed foster alternative visions of socio-cultural coexistence, dialogue and hospitality via artistic commitments to technical and stylistic experimentation and renovation. Students cannot receive credit for both ENGL 473 and ENGL 573. For graduate credit take ENGL 573.

Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)

ENGL 482 History of the English Lang 3 Credit Hours
A thorough grounding in the history and structure of the English language. At issue are the linguistic and ideological origins of the concept of Standard English, and the strengths and limitations of different methods of analyzing the history of the language. The course will emphasize sound change, grammatical change, and their sociolinguistic context. (YR).

Prerequisite(s): LING 280 or LING 480

Restriction(s):
Can enroll if Level is Undergraduate

ENGL 486 Queer Theory & Literature 3 Credit Hours
This course reads theories of sexuality to analyze how writers since 1600 have imagined printed text to reflect and shape desire, particularly same-sex desire. The course questions how same-sex desire appears in literature written before the theorization of "the Homosexual" in the late nineteenth century as well as how writers imagine sexuality before a hetero/homosexual binary appears. Writers may include contemporary theorists (Sedgwick, Foucault, Butler) as well as novelists (Gaskell and Stoker), playwrights (Kushner and Wycherley), and poets.

Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239 or AAAS 239)
ENGL 487  Monsters, Women & the Gothic  3 Credit Hours
This course questions our inheritance of "the gothic" as a district literary style that continues to discipline readers' notions of gender and sexual identity. The course argues that by tracing the gothic's literary history, we may simultaneously witness a history of gender formation. Readings may include English novelists who originated a gothic style in English (Walpole, Radcliffe, Lewis) as well as English and American poets and novelists who have debated as well as resisted the effects of the gothic on readers' (particularly women's) psychology (Christina Rossetti, Austen, King, Stoker).
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 205 or ENGL 206 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 238 or ENGL 239)

ENGL 488  Env Lit & Reps of Nature  3 Credit Hours
An interdisciplinary study of the ways in which the relationship between "nature" and humankind has been represented in literature and other forms of cultural expression. Emphasis on American and British texts of the 19th centuries, but assigned materials may include readings from other cultures and historical periods.
Prerequisite(s): (COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 280 or COMP 270) and (ENGL 230 or ENGL 200 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239 or ENGL 205 or ENGL 206 or ENGL 238)

ENGL 490  Advanced Topics in English  3 Credit Hours
Examination of advanced problems and issues in selected areas of English studies. Title as listed in the Schedule of Classes will change according to content. May be repeated for credit when specific topics differ.
Prerequisite(s): (COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107) and (ENGL 200 or ENGL 230 or ENGL 231 or ENGL 232 or ENGL 233 or ENGL 235 or ENGL 236 or ENGL 237 or ENGL 239)

English Composition (COMP)

COMP 099  Writing Techniques  3 Credit Hours
Course is designed to help the less-prepared student qualify for COMP 105 by providing a review of basic grammar and syntax and frequent practice in writing short papers to develop habits of unified, coherent, and correct composition. Student writing is complemented by the reading and analysis of short prose pieces selected to help students read for understanding and to learn more about writing through the study of professional authors. Must be taken by students who do not qualify for COMP 105. (F.W).

COMP 105  Writing & Rhetoric I  3 Credit Hours
Comp 105: Focuses on the study and practice of writing and rhetoric, with special emphasis on the writing process. Students write and read critically a range of texts, and consider academic and nonacademic genres and conventions. (F.W).
Prerequisite(s): COMP 099 or Composition Placement Score with a score of 20 or Composition Placement Score with a score of 105

COMP 1050  Writing & Rhetoric I with Writing Studio  3 Credit Hours
Focuses on the study and practice of writing and rhetoric, with special emphasis on the writing process. Students write and read critically a range of texts, and consider academic and nonacademic genres and conventions. With Writing Studio co-requisite. (F, S, W).
Prerequisite(s): Composition Placement Score with a score of 104
Corequisite(s): COMP 300

COMP 106  Writing & Rhetoric II  3 Credit Hours
Focuses on the study of writing and rhetoric through composing a range of researched texts. Students study the rhetorical choices effective for writing in different media, and learn practical strategies for academic inquiry and for giving useful feedback in response to the writing of others. Such strategies include those related to the use of electronic and print resources, peer-review and revision. Credit may only be given toward degree one time for Comp 106 or 220 as they are "equivalents".
Prerequisite(s): (COMP 105 or COMP 1050) or (Composition Placement Score with a score of 30 or Composition Placement Score with a score of 106) or COMP 110

COMP 110  Honors Writing & Rhetoric I  3 Credit Hours
Honors Program introductory composition course. Fulfills the Composition I requirement for students in the Honors Program. Course focuses on college-level expository writing techniques through seminar-type analysis of texts read in the Honors Program and through individualized and group writing workshops. Assignments include at least five finished papers incorporating revision. Honors students, like other students in first-semester composition, must pass the standard exit exam for COMP 105 to continue on to COMP 220 (or COMP 106). (F).
Restriction(s):
Can enroll if Attribute is Honors Program

COMP 220  Honors Writing & Rhetoric II  3 Credit Hours
Honors Composition fulfills the Composition II requirement for students in the Honors Program. It is designed to develop research, writing, and editing skills and to give the student experience in argumentation and persuasion and in the interpretation of literary texts. Satisfies for honors students the 200-level prerequisite for upper-division English courses, except for English concentrators. Credit may only be given toward degree one time for Comp 106 or 220 as they are "equivalents". (YR).
Prerequisite(s): COMP 110 or (Composition Placement Score with a score of 30 or Composition Placement Score with a score of 106) or COMP 105

COMP 223  Intro to Creative Writing  3 Credit Hours
An introduction to the writing of poetry, the short story, and/or the play. Considerable writing analysis, criticism, and discussion. (F.W).
Prerequisite(s): COMP 106 or Composition Placement Score with a score of 28 or Composition Placement Score with a score of 12 or COMP 105

COMP 227  Intermed Expo and Arg  3 Credit Hours
Further explorations in exposition and argumentation to develop and enhance the student's ability to write essays and/or articles. Review of basics of grammar and style. Intensive practice in writing and careful examinations of appropriate books and shorter prose works. Written assignments of 500 to 2000 words. (F.W).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
COMP 267 Arab & Arab American Workshop 3 Credit Hours
The Arab and Arab American Writers Workshop is a creative writing workshop focusing on poetry and fiction. Students will explore Arab American literature, writers, and themes. Students are expected to work on their own manuscripts as well as critique outside readings. The workshop will be conducted under the guidance of Arab and Arab American faculty and is open to all students.
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107

COMP 270 Tech Writing for Engineers 3 Credit Hours
Instruction and practice in designing technical reports. Students study the rhetorical problems facing the professional engineer in industry and learn practical strategies for analyzing and communicating technical information to both technical and non-technical audiences. Topics include audience analysis, technical research methods, report formats (written and oral, formal and informal), argumentation and persuasion, editing. This course fulfills the Composition II requirement for engineering students only. (F, W).
Prerequisite(s): (COMP 105 or COMP 1050) or (Composition Placement Score with a score of 30 or Composition Placement Score with a score of 106) or COMP 110
Restriction(s):
Can enroll if Class is Sophomore or Junior or Senior
Can enroll if College is Engineering and Computer Science

COMP 280 Business Writing & Rhetoric 3 Credit Hours
COMP 280 focuses on instruction and practice in composing and designing business documents, including abstracts, memos, email, letters, reports, resumes, proposals, and slide presentations. Students study the rhetorical problems facing business professionals and learn practical strategies for analyzing business information and communicating with professional and non-professional audiences. Such strategies include those related to the use of electronic resources, peer-review and revision. This course fulfills the Composition II requirement for pre-business students.
Prerequisite(s): (COMP 105 or COMP 1050) or COMP 110 or (Composition Placement Score with a score of 30 or Composition Placement Score with a score of 106)
Restriction(s):
Can enroll if Major is Prebusiness, Public Health, Community Health Education

COMP 300 Writing Studio 1 Credit Hour
Concurrent registration in a first-year writing course or an upper-level writing-intensive course required. Writing Studio is a one-credit-hour workshop that provides small-group, student-centered advice on all phases of the writing process, from composing to revising and editing. Special attention given to rhetorical considerations like adapting to audience expectations and critically considering discipline-specific conventions. Focus on drafts-in-progress students are writing concurrently in their Dearborn Discovery Core classes. (F, W, S, YR)

COMP 310 Narrative Journalism 3 Credit Hours
Students learn to identify, understand and use the techniques of fiction in the service of nonfiction material. While studying the texts as literature, students are also encouraged to view them as models for writing. Assignments include the writing and revising of articles, based on research and interviews, and writing in story form, drawing on literary techniques. (YR).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

COMP 320 Science Writing 3 Credit Hours
You will study science writing as a product, a practice, an interdisciplinary study and a craft when synthesizing and distilling data, scientific concepts and scientific trends for a broad, public audience. You will read some popular science writing and also learn about the processes of science writers, including their methods of inquiry. You will also study published academic articles of your interest and use as sources for your three projects which will require interplay of rhetorical synthesis of primary and secondary sources: a feature essay, an informational essay and an infographic. The course will culminate in a final portfolio which will include revisions of your final projects and one reading response. (F).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or COMP 280

COMP 327 Advanced Exposition 3 Credit Hours
A study of rhetorical theory and its application to various types of expository essays. Writing assignments will reflect the types of essays studied. May be repeated to a maximum of 6 credit hours.
Prerequisite(s): COMP 106 or COMP 270 or COMP 220 or Composition Placement Score with a score of 40 or COMP 280

COMP 331 Online Reporting, Research, Writing 3 Credit Hours
Course introduces the technical, social, legal and ethical practice of online research, focusing specifically on reporting (i.e. research and interview) skills required by journalists and others. Students use new media technology to generate ideas, to research subjects, and to develop general-audience writing projects in their areas of interest. Course covers the use of Web search engines, directories and databases; finding sources and interviewing people online; evaluating the credibility of online sources and information; using Lexis-Nexis to access archives and public records; and using spreadsheet and database programs. (F, W).
Prerequisite(s): COMP 106 and COMP 270 or COMP 220 or Composition Placement Score with a score of 40 or COMP 280
Restriction(s):
Can enroll if Class is Freshman or Sophomore or Junior or Senior
Can enroll if Level is Undergraduate

COMP 341 Writing in the Professions 3 Credit Hours
This course involves students in an examination of rhetoric and argumentation in professional and workplace settings. This course introduces relevant theories of cultural and linguistic analysis, including genre analysis. Comp 341 includes an extended research project focused on writing in professional or workplace settings. (AY)
Prerequisite(s): COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 270 or COMP 280

COMP 364 Writing for Civic Literacy 3 Credit Hours
In Writing for Civic Literacy, students will study how politicians, the media and critical citizens use language to engage with the broader community. Students themselves will learn to use language to become more active, well-informed citizens. They will study rhetorical awareness, audience analysis and persuasive writing techniques and put those lessons to use in community settings. They will perform community service at agencies of their choosing and use those experiences as objects of analysis, researching the social context in which those agencies operate and writing analytically about the agencies. Further, students will synthesize classroom lessons and real-world experience by executing writing tasks for and with the agencies (these tasks might include editorials for the local press, informational webpages and fundraising materials).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
COMP 390  Topics in Composition  3 Credit Hours
Examination of problems and issues in selected areas of rhetoric and composition. Title as listed in Schedule of Classes will change according to content. Course may be repeated for credit when specific topic differs. (OC).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

COMP 399  Independent Study  1 to 3 Credit Hours
A significant writing project in non-fiction or fiction prose developed in accordance with the needs and interest of those enrolled and agreed upon by the instructor. Participants may also study texts of published authors. May be repeated for a maximum of 6 credit hours.
Restriction(s):
Can enroll if Level is Undergraduate

COMP 436  Memoir and Travel Writing  3 Credit Hours
A course in narrative non-fiction that focuses on memoir and travel writing. Reading involves several books as well as classic essay-length examples. Assignments include both short analytical papers and the writing and revising of three original articles, based on research, interviews, memory, and observation, and drawing on literary techniques. (YR).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280
Restriction(s):
Can enroll if Level is Undergraduate

COMP 462  Transnational Rhetorics  3 Credit Hours
Full Course Title: Transnational Rhetorics: Writers Across Borders "Transnational Rhetorics" engages students in reading and writing stories that cross various forms or borders. These borders might be national, as in stories about immigration or displacement. Or, the borders might be more abstract, like the assumed borders between race, class, and gender, or even the possible barriers we perceive between personal experience and world events. In this course, we will read stories about people who reflect on these kinds of border-crossings. We will then take a rhetorical approach to these narratives and examine how they work, what similarities they share, and importantly, how they address their audiences. Then, we will then produce--in turn--our own border-crossing essays that attend to the same issues of audience, context, narrative, and creativity. (OC).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

COMP 464  Contemporary Rhetorical Theory  3 Credit Hours
An examination of contemporary rhetorical theories through study of representative practitioners and related developments in linguistics, philosophy, psychology, communication, and composition and rhetoric. Students may not receive credit for both COMP 464 and COMP 564.
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 280

COMP 466  Arguing Feminism: Rhetoric, Writing & Advocacy  3 Credit Hours
Full course title: Arguing Feminism: Rhetoric, Writing & Advocacy. An introduction to the work of major twentieth century feminists working in rhetoric and related fields. Students examine recurring themes of language, meaning, ethics and ideology, and practice writing strategies which address rhetorical and ethical concerns central to feminist/academic writing. (AY).
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or COMP 280 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107
Restriction(s):
Cannot enroll if Class is Freshman
Can enroll if Level is Undergraduate

COMP 468  Read/Writ Young Adult Fiction  3 Credit Hours
In this course participants will explore the young adult novel from the point-of-view of a reader and a writer. They will read recently published and critically acclaimed popular young adult novels. They will use these texts to explore such issues as gender, race and identity as they relate to young adult lives and their respective cultures generally. They will use these texts as models for the production of their own texts and will consider if and why young adult novels are abbreviated or limited in relationship to adult literature. In addition to reading about ten novels, they will complete several creative exercises leading up to a final portfolio.
Prerequisite(s): COMP 106 and (ENGL 223 or COMP 223)
Restriction(s):
Cannot enroll if Class is Graduate

COMP 475  Supporting Literacies  3 Credit Hours
COMP 475 will help prepare advanced undergraduate students to be successful as writing tutors and/or as supporters of literacy development in diverse higher education and community contexts (work in university writing centers, community literacy organizations, service learning courses, etc.) through sustained focus on the theoretical and practical issues involved in the teaching and tutoring of writing. The course also will help students make explicit connections between the teaching and learning of writing in various college classroom contexts (i.e., writing-across-the-curriculum) and other sites of literacy work. A range of writing projects will provide students with opportunities also to hone their own abilities as reflective and critical writers. (F, YR).
Prerequisite(s): COMP 106 or Composition Placement Score with a score of 40 or Composition Placement Score with a score of 107 or COMP 220 or COMP 270 or COMP 280

COMP 485  How Writing Works  3 Credit Hours
In this course we will investigate why and how people write for particular audiences and in a variety of contexts. Subjects will include: cognitive and social theories of writing and the writing process, theories of persuasion, writing across the curriculum, writing for multiple audiences, writing in the workplace, writing for self and for publics, and teaching writing. The course will be useful to students interested in teaching writing at the K-12 level, those interested in careers in communication and those who wish to better understand how writing promotes personal and societal change. (YR)
Prerequisite(s): COMP 106 or COMP 220 or COMP 270 or Composition Placement Score with a score of 40 or CompositionPlacement Score with a score of 107 or COMP 280
Entrepreneurship (ENT)

ENT 400  Entrepreneurial Thinking & Behav  3 Credit Hours
This course introduces entrepreneurship as an approach to one's life and career advancement. It explores how entrepreneurial thought can create change and opportunities in many organizations, including large corporations, small business, and communities. The course will focus on how the entrepreneurial mindset is a toolkit that can be taught and how entrepreneurial skills empower individuals to bring about change. Students will be challenged to push the boundaries to identify unmet customer needs that are demanded by various demographics. Important aspects of the course include a careful analysis of the following: opportunity recognition, design thinking, market assessment, effective communication, operational partners, strategic management, and financial planning. Students will be exposed to resources from urban areas including speakers with experience and expertise in the entrepreneurial community.
Restriction(s):
Can enroll if Class is Junior or Senior

ENT 401  New Venture Planning  3 Credit Hours
Full Title: New Venture Planning and Entrepreneurial Processes. This course focuses on the research, planning, and strategies that are critical in the process of pursuing a new venture. Particular focus will be given to the business model and key resources to support the early stages of both large and small ventures. The business model canvas will be used to understand how a venture creates, delivers, and captures value. Students will critically analyze businesses, products, and services and, in a team, they will create their own plan to implement a venture. (YR)
Prerequisite(s): ENT 400

ENT 402  Entrep, Corp Entrep & Society  3 Credit Hours
Full Title: Entrepreneurship, Corporate Entrepreneurship, and Society. Students in this course examine entrepreneurship from historical, philosophical, economic, and sociological lenses. The course helps students understand the origins of the field and the role of entrepreneurship in the allocation and distribution of scarce resources for wealth and prosperity in society. From this foundation, students examine entrepreneurship's influence on contemporary world issues. The course finishes by examining how different types of entrepreneurship opportunities (i.e., types of business being pursued) result in fundamentally different organizational structures, each with unique requirements for entrepreneurial success. (YR)
Prerequisite(s): ENT 400

ENT 403  Social Entrepreneurship  3 Credit Hours
The purpose of this course is to expose students to social entrepreneurship concepts and theories to help them learn how community leadership can facilitate the social entrepreneurship process for positive community change (i.e., social impact). This experiential learning course is designed for students who wish to integrate entrepreneurial problem-solving skills with strategic social innovation concepts to affect positive social change in underserved communities. This course appeals to students who have a strong desire to become, advise, or support social entrepreneurs, or work in a start-up, early stage, or entrepreneurial-minded company or community organization that creates positive social impact using a for-profit business model. Note that this is an academic service-learning (ASL) course, where students will interact with entrepreneurs and organizations in the community to develop a comprehensive business plan to address a pressing social problem. (YR)
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

Environmental Science (ESCI)

ESCI 275  Intro to Environmental Science  3 Credit Hours
A distribution course which surveys major environmental problems. Concepts discussed are ecology, environmental chemistry, methods of investigating the environment, and possible solutions to environmental problems. Three hours lecture. (YR).

ESCI 301  Environmental Science  4 Credit Hours
A survey of historical and current environmental problems, with emphasis on understanding causes, consequences, and control. Topics include human population growth, air pollution, water pollution, and waste disposal. Laboratory emphasizes an experimental approach to environmental problems, including data collection, analysis, and interpretation. Lecture and laboratory/recitation.
Prerequisite(s): (CHEM 124 or CHEM 134 or CHEM 144) and GEOL 118 and BIOL 130

ESCI 304  Ecology  4 Credit Hours
Relationships between organisms and their environments. Patterns in the physical environment, physiological and behavioral adaptations, population dynamics, energy flow, nutrient cycling; succession. Three hours lecture, four hours laboratory (with field trips). (F).
Prerequisite(s): BIOL 130 and (MATH 104 or MATH 105 or MATH 113 or MATH 115 or Mathematics Placement with a score of 116)
Corequisite(s): ESCI 304L

ESCI 305  Intro to GIS  4 Credit Hours
An introductory course that examines the digital representation, manipulation, and analysis of geographic data, with emphasis on the analytical capabilities that GIS brings solutions to geographic problems. Students will explore and learn GIS principles using ESRI's mapping software, as well as complete a major GIS project.
Prerequisite(s): GEOG 302
Corequisite(s): ESCI 305L

ESCI 305D  Intro to GIS & Cartography Dis  0 Credit Hours
Required discussion session for ESCI 305.
Corequisite(s): ESCI 305
ESCI 315 Aquatic Ecosystems 4 Credit Hours
An introduction to the physical, chemical, and biological characteristics of lakes, rivers, and wetlands emphasizing a comparison of ecosystem structure and function. Laboratory emphasizes data collection and analysis to characterize a representative lake, river, and wetland. Lecture and laboratory. (AY,F).
Prerequisite(s): BIOL 130 and (CHEM 124 or GEOL 118)

ESCI 320 Field Biology 4 Credit Hours
Adaptations, taxonomy, systematics, ecology, and behavior of southeastern Michigan flora and fauna. Techniques of field observation and recording are emphasized. Skills in the use of identification keys and guides are developed. The campus Environmental Study Area is used intensively. Three hours lecture, four hours laboratory (with field trips). (S).
Prerequisite(s): NSCI 120 or NSCI 233

ESCI 330 Land Use Planning and Mgmt 4 Credit Hours
Environmental aspects of land use planning, park planning, and site planning. Consideration of soils, groundwater, topography, and sensitive natural features and their role in determining land-use suitability. Examination of the mechanics and effectiveness of the planning process. Lecture and recitation. (AY,W).
Prerequisite(s): (BIOL 130 and GEOL 118) or ESCI 275

ESCI 332 Hazardous Waste Management 3 Credit Hours
Environmental problems associated with solid and hazardous waste. Regulations governing the generation, transport, and disposal of hazardous waste. Waste management techniques, including reduction, reuse, recycling, treatment, incineration, and land disposal. Three hours lecture. (AY,W).
Prerequisite(s): GEOL 118 or ESCI 275

ESCI 337 Plant Ecology 3 Credit Hours
This course focuses on different aspects of the relationship between plants and their environment. Topics include: a) interactions of plants with the physical environment; b) ways in which the environment acts to shape plant populations through evolution; c) intra- and interspecific interactions among individuals; and d) large-scale patterns and processes at the landscape-level. Three hours lecture.
Prerequisite(s): BIOL 130

ESCI 348 Environmental Chemistry 3 Credit Hours
Description of the concepts, principles, practices, and current problems in the chemistry of natural waters, the soil, and the atmosphere. Three hours lecture. (AY,W).
Prerequisite(s): CHEM 344 and (CHEM 225 or CHEM 325)

ESCI 349 Environmental Chemistry Lab 1 Credit Hour
Collection and analysis of air, water, soil, and organisms for pollutants such as noxious gases, heavy metals, and trace organics. EPA-approved methods are emphasized. Four hours laboratory. (AY,W).
Prerequisite(s): ESCI 348* or CHEM 348*

ESCI 352 Introduction to Toxicology 3 Credit Hours
An introduction to the principles of toxicology with an emphasis on environmental toxicology. Major topics include toxic agents, toxicological mechanisms, and use of toxicological reference literature. Discussion of chemical carcinogenesis, genetic toxicology, immunotoxicology, teratology, and toxic responses of the skin, eyes and nervous system. Three hours lecture. (AY,W).
Prerequisite(s): CHEM 225
ESCI 485 Spatial Analysis 3 Credit Hours
