GEOL 118  Physical Geology  4 Credit Hours
An introduction to the study of geologic processes at work in the earth's interior and on its surface. Rocks and minerals, the origin and evolution of the continents, and the gradual and catastrophic processes that shape surface and bedrock features. Three hours lecture, three hours laboratory. (W).
Corequisite(s): GEOL 118L

GEOL 218  Historical Geology  4 Credit Hours
A generalized study of the history of the earth, with emphasis on the fossil record of life development, the stratigraphic sequence of deposits and paleogeography. Laboratory work will include the study of geologic and topographic maps and fossils of prominent invertebrate phyla. (YR).
Corequisite(s): GEOL 218L

GEOL 303  Geodesy & Cartog. Principles  3 Credit Hours
Understanding the shape, texture, and structure of the Earth's surface and interior is of critical importance for studying and visualizing the physical world around us. This course focuses on the physical and geographical properties of the Earth's surface, how these properties are measured, and how they are effectively displayed as maps and other visual representations. Surveying, Global Positioning Systems (GPS), and cartographic design both microscales (e.g., meter) and macroscales (e.g., light year) are heavily emphasized. (F, YR)

GEOL 305  Intro to GIS  4 Credit Hours
An introductory course that examines the digital representation, manipulation, and analysis of geographic data, with the emphasis on the analytical capabilities that GIS brings solutions to geographic problems. Students will explore and learn GIS principles using ESRI's mapping software, as well as complete a major GIS project.
Corequisite(s): GEOL 305L

GEOL 305D  Intro to GIS  0 Credit Hours
Required discussion session for GEOL 305.
Corequisite(s): GEOL 305

GEOL 313  Earth Materials  4 Credit Hours
This course provides a detailed look at the physical and chemical components that constitute the Earth's surface and subsurface. Critical elements of mineralogy, igneous and metamorphic petrology, sedimentology, and stratigraphy are covered. Laboratory sessions allow students to master the use of a petrographic microscope and sedimentary processes, among other related topics. Field sessions allow for students to identify geologic materials in their natural exposed settings. (W, AY)
Prerequisite(s): CHEM 134 and GEOL 118

GEOL 332  Hazardous Waste Management  3 Credit Hours
Environmental problems associated with solid and hazardous waste. Regulations governing the generation, transport, and disposal of hazardous waste. Waste management techniques, including reduction, reuse, recycling, treatment, incineration, and land disposal. Three hours lecture.
Prerequisite(s): GEOL 118 or ESCI 275

GEOL 340  Remote Sensing  3 Credit Hours
This course explores the acquisition, processing, and visualization of remotely derived data, with a particular emphasis on local and environmental applications. ENST 340 covers concepts and foundations of aerial and orbital remote sensing, visual interpretation, reflectance and emission spectroscopy, active and passive sensors, topography, and digital image processing software and techniques.

GEOL 342  Physical Oceanography  3 Credit Hours
An introduction to physical and chemical oceanography, fundamental marine processes and plate tectonics. Interactions between the oceans and atmosphere and the effect of greenhouse gases on the oceans and the role of physical processes in global climate change will be studied.

GEOL 350  Geomorphology  4 Credit Hours
This introductory course is designed to familiarize students with the fundamentals of river behavior and the general principles in fluvial morphology, sedimentation, and hydraulics and stream bank erosion. Applications of these principles are shown utilizing a stream classification system. Problem solving techniques for watershed management, stream restoration, non-point source pollution and integration of ecosystem concepts in watershed management are presented. A combination of both lecture and field applications are provided. (F, AY)
Prerequisite(s): GEOL 118 or (GEOG 203 and GEOG 204)
Restriction(s):
Can enroll if Class is Junior or Senior
Can enroll if Level is Undergraduate

GEOL 370  Environmental Geology  3 Credit Hours
Interactions between people and the physical environment. Geological hazards and natural processes, such as earthquakes, volcanism, floods, landslides, and coastal processes. Relationships between geology and environmental health, including chronic disease, water use and pollution, waste disposal, mineral resources, and energy use. Three hours lecture. (AY).
Prerequisite(s): GEOL 118

GEOL 372  Energy Resources  3 Credit Hours
Origin and development of fossil fuels (petroleum, coal, natural gas) and of radioactive ores used in nuclear power. Renewable and alternative energy sources, including hydro, solar, wind, biomass, and geothermal power. Environmental impacts of energy use. Three hours lecture. (AY).  
Prerequisite(s): GEOL 118 or ESCI 275 or ESCI 301

GEOL 375  Groundwater Hydrology  4 Credit Hours
Prerequisite(s): GEOL 118

GEOL 377  Field Methods  1 Credit Hour
A week-long intensive field course dealing with geological field methods and analysis of geological terrains. Use of Brunton compass and clinometer, recognition and identification of geological structures, preparation and interpretation of geological maps, and use of aerial photographs. May be repeated for credit when destination varies. Organizational meeting followed by one-week trip. (YR).
Prerequisite(s): GEOL 118

GEOL 390  Current Topics in Geology  1 to 3 Credit Hours
A course in special topics current to the field of geology. Topics and format for the course may vary. See current Schedule of Classes. (OC).
Prerequisite(s): GEOL 118

GEOL 440  Advanced GIS Applications  3 Credit Hours
This course offers an opportunity for students with a background in the fundamentals of geographic information systems (GIS) to apply the analytical capabilities of geospatial technology to model real-world situations in support of decision making. Particular emphasis is given to data development and management, spatial and statistical analyses, customization, and effective visualization.
Prerequisite(s): GEOL 305 or ESCI 305 or GEOG 305

**Prerequisite(s):**
- GEOL 118
- GEOL 375
- GEOL 118 and GEOL 218
- GEOL 375

**Restriction(s):**
- Can enroll if Class is Junior or Senior

**Frequency of Offering**

The following abbreviations are used to denote the frequency of offering:
- (F) fall term; (W) winter term; (S) summer term; (F, W) fall and winter terms; (YR) once a year; (AY) alternating years; (OC) offered occasionally

*An asterisk denotes that a course may be taken concurrently.*
